During development it is easiest to be able to run the Salt master and minion that are installed in the virtualenv you created above, and also to have all the configuration, log, and cache files contained in the virtualenv as well.

The `/path/to/your/virtualenv` referenced multiple times below is also available in the variable `$VIRTUAL_ENV` once the virtual environment is activated.

Copy the master and minion config files into your virtualenv:

```
mkdir -p /path/to/your/virtualenv/etc/salt/pki/{master,minion}
cp ./salt/conf/master ./salt/conf/minion /path/to/your/virtualenv/etc/salt/
```

Edit the master config file:

1. Uncomment and change the `user: root` value to your own user.
2. Uncomment and change the `root_dir: /` value to point to `/path/to/your/virtualenv`.
3. Uncomment and change the `pki_dir: /etc/salt/pki/master` value to point to `/path/to/your/virtualenv/etc/salt/pki/master`
4. If you are running version 0.11.1 or older, uncomment, and change the `pidfile: /var/run/salt-master.pid` value to point to `/path/to/your/virtualenv/salt-master.pid`.
5. If you are also running a non-development version of Salt you will have to change the `publish_port` and `ret_port` values as well.

Edit the minion config file:

1. Repeat the edits you made in the master config for the `user` and `root_dir` values as well as any port changes.
2. Uncomment and change the `pki_dir: /etc/salt/pki/minion` value to point to `/path/to/your/virtualenv/etc/salt/pki/minion`
3. If you are running version 0.11.1 or older, uncomment, and change the `pidfile: /var/run/salt-minion.pid` value to point to `/path/to/your/virtualenv/salt-minion.pid`.
4. Uncomment and change the `master: salt` value to point at `localhost`.
5. Uncomment and change the `id:` value to something descriptive like ```saltdev```. This isn't strictly necessary but it will serve as a reminder of which Salt installation you are working with.
6. If you changed the `ret_port` value in the master config because you are also running a non-development version of Salt, then you will have to change the `master_port` value in the minion config to match.

---

**Note:** Using `salt-call` with a *Standalone Minion*

If you plan to run `salt-call` with this self-contained development environment in a masterless setup, you should invoke `salt-call` with `-c /path/to/your/virtualenv/etc/salt` so that salt can find the minion config file. Without the `-c` option, Salt finds its config files in `/etc/salt`.

---

Start the master and minion, accept the minion's key, and verify your local Salt installation is working:

```
cd /path/to/your/virtualenv
salt-master -c ./etc/salt -d
salt-minion -c ./etc/salt -d
salt-key -c ./etc/salt -L
salt-key -c ./etc/salt -A
salt -c ./etc/salt '*' test.ping
```

Running the master and minion in debug mode can be helpful when developing. To do this, add `-l debug` to the calls to `salt-master` and `salt-minion`. If you would like to log to the console instead of to the log file, remove the `-d`.

---

**Note:** Too long socket path?

Once the minion starts, you may see an error like the following:

```
zmq.core.error.ZMQError: ipc path "/path/to/your/virtualenv/
var/run/salt/minion/minion_event_7824dcbcf7a8f6755939af70b96249f_pub.ipc"
is longer than 107 characters (sizeof(sockaddr_un.sun_path)).
```

This means that the path to the socket the minion is using is too long. This is a system limitation, so the only workaround is to reduce the length of this path. This can be done in a couple different ways:

1. Create your virtualenv in a path that is short enough.
2. Edit the `sock_dir` minion config variable and reduce its length. Remember that this path is relative to the value you set in `root_dir`.

**NOTE:** The socket path is limited to 107 characters on Solaris and Linux, and 103 characters on BSD-based systems.

---

---

**Note:** File descriptor limits

Ensure that the system open file limit is raised to at least 2047:

```
# check your current limit
ulimit -n

# raise the limit. persists only until reboot
# use 'limit descriptors 2047' for c-shell
ulimit -n 2047
```

To set file descriptors on macOS, refer to the [macOS Installation](#) instructions.

---

## Changing Default Paths

Instead of updating your configuration files to point to the new root directory and having to pass the new configuration directory path to all of Salt's CLI tools, you can explicitly tweak the default system paths that Salt expects:

```
GENERATE_SALT_SYSPATHS=1 pip install --global-option='--salt-root-dir=/path/to/your/
→virtualenv/' \
  -e ./salt # the path to the salt git clone from above
```

You can now call all of Salt's CLI tools without explicitly passing the configuration directory.

## Additional Options

If you want to distribute your virtualenv, you probably don't want to include Salt's clone `.git/` directory, and, without it, Salt won't report the accurate version. You can tell `setup.py` to generate the hardcoded version information which is distributable:

```
GENERATE_SALT_SYSPATHS=1 WRITE_SALT_VERSION=1 pip install --global-option='--salt-root-dir=/path/to/your/virtualenv/' \
-e ./salt # the path to the salt git clone from above
```

Instead of passing those two environmental variables, you can just pass a single one which will trigger the other two:

```
MIMIC_SALT_INSTALL=1 pip install --global-option='--salt-root-dir=/path/to/your/virtualenv/' \
-e ./salt # the path to the salt git clone from above
```

This last one will grant you an editable salt installation with hardcoded system paths and version information.

### 19.10.2 Installing Salt from the Python Package Index

If you are installing using `easy_install`, you will need to define a `USE_SETUPTOOLS` environment variable, otherwise dependencies will not be installed:

```
USE_SETUPTOOLS=1 easy_install salt
```

### 19.10.3 Editing and previewing the documentation

You need `sphinx-build` command to build the docs. In Debian/Ubuntu this is provided in the `python-sphinx` package. Sphinx can also be installed to a virtualenv using pip:

```
pip install Sphinx==1.3.1
```

Change to salt documentation directory, then:

```
cd doc; make html
```

- This will build the HTML docs. Run `make` without any arguments to see the available make targets, which include **html**, **man**, and **text**.
- The docs then are built within the `docs/_build/` folder. To update the docs after making changes, run `make` again.
- The docs use `reStructuredText` for markup. See a live demo at <http://rst.ninjs.org/>.
- The help information on each module or state is culled from the python code that runs for that piece. Find them in `salt/modules/` or `salt/states/`.
- To build the docs on Arch Linux, the **python2-sphinx** package is required. Additionally, it is necessary to tell **make** where to find the proper **sphinx-build** binary, like so:

```
make SPHINXBUILD=sphinx-build2 html
```

- To build the docs on RHEL/CentOS 6, the **python-sphinx10** package must be installed from EPEL, and the following make command must be used:

```
make SPHINXBUILD=sphinx-build html
```

Once you've updated the documentation, you can run the following command to launch a simple Python HTTP server to see your changes:

```
cd _build/html; python -m SimpleHTTPServer
```

### 19.10.4 Running unit and integration tests

Run the test suite with following command:

```
./setup.py test
```

See [here](#) for more information regarding the test suite.

### 19.10.5 Issue and Pull Request Labeling System

SaltStack uses several labeling schemes to help facilitate code contributions and bug resolution. See the [Labels and Milestones](#) documentation for more information.

## 19.11 GitHub Labels and Milestones

SaltStack uses several label categories, as well as milestones, to triage incoming issues and pull requests in the GitHub issue tracker. Labels are used to sort issues by type, priority, severity, status, functional area, functional group, and targeted release and pull requests by status, functional area, functional group, type of change, and test status. Milestones are used to indicate whether an issue is fully triaged or is scheduled to be fixed by SaltStack in an upcoming sprint.

### 19.11.1 Milestones

All issues are assigned to a milestone, whereas pull requests are almost never assigned to a milestone as the mean lifetime of pull requests is short enough that there is no need to track them temporally.

SaltStack uses milestones to indicate which issues are blocked on submitter or upstream actions, are approved, or are scheduled to be fixed or implemented in an upcoming sprint. If an issue is not attached to a sprint milestone, you are welcome to work on it at your own desire and convenience. If it is attached to a sprint milestone and you have already begun working on it or have a solution in mind or have other ideas related to the issue, you are encouraged to coordinate with the assignee via the GitHub issue tracker to create the best possible solution or implementation.

**Approved** The issue has been validated and has all necessary information.

**Blocked** The issue is waiting on actions by parties outside of SaltStack, such as receiving more information from the submitter or resolution of an upstream issue. This milestone is usually applied in conjunction with the labels `Info Needed`, `Question`, `Expected Behavior`, `Won't Fix For Now`, or `Upstream Bug`.

**Under Review** The issue is having further validation done by a SaltStack engineer.

**<Sprint>** The issue is being actively worked on by a SaltStack engineer. Sprint milestones names are constructed from the chemical symbol of the next release's codename and the number of sprints until that release is made. For example, if the next release codename is `NEON` and there are five sprints until that release, the corresponding sprint milestone will be called `Ne 5`. See [<version-numbers>](#) for a discussion of Salt's release codenames.

## 19.11.2 Labels

Labels are used to sort and describe issues and pull requests. Some labels are usually reserved for one or the other, though most labels may be applied to both.

New issues will receive at least one label and a milestone, and new pull requests will receive at least one label. Except for the *functional area* and *functional group* label categories, issues will generally receive only up to one label per category.

### Type

Issues are categorized into one of several types. Type labels are almost never used for pull requests. GitHub treats pull requests like issues in many ways, so a pull request could be considered an issue with an implicit `PULL REQUEST` type label applied.

**Feature** The issue is a request for new functionality including changes, enhancements, refactors, etc.

**Bug** The issue documents broken, incorrect, or confusing behavior. This label is always accompanied by a *severity label*.

**Duplicate** The issue is a duplicate of another feature request or bug report.

**Upstream Bug** The issue is a result of an upstream issue.

**Question** The issue is more of a question than a request for new features or a report of broken features, but can sometimes lead to further discussion or changes of confusing or incongruous behavior or documentation.

**Expected Behavior** The issue is a bug report of intended functionality.

### Priority

An issue's priority is relative to its *functional area*. If a bug report, for example, about `gitfs` indicates that all users of `gitfs` will encounter this bug, then a `P1` label will be applied, even though users who are not using `gitfs` will not encounter the bug. If a feature is requested by many users, it may be given a high priority.

**P1** The issue will be seen by all users.

**P2** The issue will be seen by most users.

**P3** The issue will be seen by about half of users.

**P4** The issue will not be seen by most users. Usually the issue is a very specific use case or corner case.

### Severity

Severity labels are almost always only applied to issues labeled `Bug`.

**Blocker** The issue is blocking an impending release.

**Critical** The issue causes data loss, crashes or hangs salt processes, makes the system unresponsive, etc.

**High Severity** The issue reports incorrect functionality, bad functionality, a confusing user experience, etc.

**Medium Severity** The issue reports cosmetic items, formatting, spelling, colors, etc.

## Functional Area

Many major components of Salt have corresponding GitHub labels. These labels are applied to all issues and pull requests as is reasonably appropriate. They are useful in organizing issues and pull requests according to the source code relevant to issues or the source code changed by pull requests.

- Execution Module
- File Servers
- Grains
- Multi-Master
- Packaging Related to packaging of Salt, not Salt's support for package management.
- Pillar
- RAET
- Returners
- Runners
- SPM
- Salt-API
- Salt-Cloud
- Salt-SSH
- Salt-Syndic
- State Module
- Tests
- Transport
- Windows
- ZMQ

## Functional Group

These labels sort issues and pull requests according to the internal SaltStack engineering teams.

**Core** The issue or pull request relates to code that is central or existential to Salt itself.

**Platform** The issue or pull request relates to support and integration with various platforms like traditional operating systems as well as containers, platform-based utilities like filesystems, command schedulers, etc., and system-based applications like web servers, databases, etc.

**RIoT** The issue or pull request relates to support and integration with various abstract systems like cloud providers, hypervisors, API-based services, etc.

**Console** The issue or pull request relates to the SaltStack enterprise console.

**Documentation** The issue or pull request relates to documentation.

## Status

Status labels are used to define and track the state of issues and pull requests. Not all potential statuses correspond to a label, but some statuses are common enough that labels have been created for them. If an issue has not been moved beyond the `Blocked` milestone, it is very likely that it will only have a status label.

**Bugfix -back-port** The pull request needs to be back-ported to an older release branch. This is done by *recreating the pull request* against that branch. Once the back-port is completed, this label is replaced with a `Bugfix -[Done] back-ported` label. Normally, new features should go into the `develop` and bug fixes into the oldest supported release branch, see `<which-salt-branch>`.

**Bugfix -[Done] back-ported** The pull request has been back-ported to an older branch.

**Cannot Reproduce** The issue is a bug and has been reviewed by a SaltStack engineer, but it cannot be replicated with the provided information and context. Those involved with the bug will need to work through additional ideas until the bug can be isolated and verified.

**Confirmed** The issue is a bug and has been confirmed by a SaltStack engineer, who often documents a minimal working example that reproduces the bug.

**Fixed Pending Verification** The issue is a bug and has been fixed by one or more pull requests, which should link to the issue. Closure of the issue is contingent upon confirmation of resolution from the submitter. If the submitter reports a negative confirmation, this label is removed. If no response is given after a few weeks, then the issue will be assumed fixed and closed.

**Info Needed** The issue needs more information before it can be verified and resolved. For a feature request this may include a description of the use cases. Almost all bug reports need to include at least the versions of salt and its dependencies, the system type and version, commands used, debug logs, error messages, and relevant configs.

**Pending Changes** The pull request needs additional changes before it can be merged.

**Pending Discussion** The issue or pull request needs more discussion before it can be closed or merged. The status of the issue or pull request is not clear or apparent enough for definite action to be taken, or additional input from SaltStack, the submitter, or another party has been requested.

If the issue is not a pull request, once the discussion has arrived at a cogent conclusion, this label will be removed and the issue will be accepted. If it is a pull request, the results of the discussion may require additional changes and thus, a `Pending Changes` label.

**Won't Fix for Now** The issue is legitimate, but it is not something the SaltStack team is currently able or willing to fix or implement. Issues having this label may be revisited in the future.

## Type of Change

Every pull request should receive a change label. These labels measure the quantity of change as well as the significance of the change. The amount of change and the importance of the code area changed are considered, but often the depth of secondary code review required and the potential repercussions of the change may also advise the label choice.

Core code areas include: state compiler, crypto engine, master and minion and syndic daemons, transport, pillar rendering, loader, transport layer, event system, `salt.utils`, client, cli, logging, netapi, runner engine, templating engine, top file compilation, file client, file server, mine, `salt-ssh`, test runner, etc.

Non-core code usually constitutes the specific set of plugins for each of the several plugin layers of Salt: execution modules, states, runners, returners, clouds, etc.

### Minor Change

- Less than 64 lines changed, or

- Less than 8 core lines changed

#### **Medium Change**

- Less than 256 lines changed, or
- Less than 64 core lines changed

#### **Master Change**

- More than 256 lines changed, or
- More than 64 core lines changed

#### **Expert Change**

- Needs specialized, in-depth review

#### **Test Status**

These labels relate to the status of the automated tests that run on pull requests. If the tests on a pull request fail and are not overridden by one of these labels, the pull request submitter needs to update the code and/or tests so that the tests pass and the pull request can be merged.

**Lint** The pull request has passed all tests except for the code lint checker.

**Tests Passed** The pull request has passed all tests even though some test results are negative. Sometimes the automated testing infrastructure will encounter internal errors unrelated to the code change in the pull request that cause test runs to fail. These errors can be caused by cloud host and network issues and also Jenkins issues like erroneously accumulating workspace artifacts, resource exhaustion, and bugs that arise from long running Jenkins processes.

#### **Other**

These labels indicate miscellaneous issue types or statuses that are common or important enough to be tracked and sorted with labels.

**Awesome** The pull request implements an especially well crafted solution, or a very difficult but necessary change.

**Help Wanted** The issue appears to have a simple solution. Issues having this label should be a good starting place for new contributors to Salt.

**Needs Testcase** The issue or pull request relates to a feature that needs test coverage. The pull request containing the tests should reference the issue or pull request having this label, whereupon the label should be removed.

**Regression** The issue is a bug that breaks functionality known to work in previous releases.

**Story** The issue is used by a SaltStack engineer to track progress on multiple related issues in a single place.

**Stretch** The issue is an optional goal for the current sprint but may not be delivered.

**ZD** The issue is related to a Zendesk customer support ticket.

**<Release>** The issue is scheduled to be implemented by <Release>. See <version-numbers> for a discussion of Salt's release codenames.

## **19.12 Logging Internals**

TODO

## 19.13 Modular Systems

When first working with Salt, it is not always clear where all of the modular components are and what they do. Salt comes loaded with more modular systems than many users are aware of, making Salt very easy to extend in many places.

The most commonly used modular systems are execution modules and states. But the modular systems extend well beyond the more easily exposed components and are often added to Salt to make the complete system more flexible.

### 19.13.1 Execution Modules

Execution modules make up the core of the functionality used by Salt to interact with client systems. The execution modules create the core system management library used by all Salt systems, including states, which interact with minion systems.

Execution modules are completely open ended in their execution. They can be used to do anything required on a minion, from installing packages to detecting information about the system. The only restraint in execution modules is that the defined functions always return a JSON serializable object.

For a list of all built in execution modules, click [here](#)

For information on writing execution modules, see [this page](#).

### 19.13.2 Interactive Debugging

Sometimes debugging with `print()` and extra logs sprinkled everywhere is not the best strategy.

IPython is a helpful debug tool that has an interactive python environment which can be embedded in python programs.

First the system will require IPython to be installed.

```
# Debian
apt-get install ipython

# Arch Linux
pacman -Syu ipython2

# RHEL/CentOS (via EPEL)
yum install python-ipython
```

Now, in the troubling python module, add the following line at a location where the debugger should be started:

```
test = 'test123'
import IPython; IPython.embed_kernel()
```

After running a Salt command that hits that line, the following will show up in the log file:

```
[CRITICAL] To connect another client to this kernel, use:
[IPKernelApp] --existing kernel-31271.json
```

Now on the system that invoked `embed_kernel`, run the following command from a shell:

```
# NOTE: use ipython2 instead of ipython for Arch Linux
ipython console --existing
```

This provides a console that has access to all the vars and functions, and even supports tab-completion.

```
print(test)
test123
```

To exit IPython and continue running Salt, press `Ctrl-d` to logout.

### 19.13.3 State Modules

State modules are used to define the state interfaces used by Salt States. These modules are restrictive in that they must follow a number of rules to function properly.

---

**Note:** State modules define the available routines in sls files. If calling an execution module directly is desired, take a look at the *module* state.

---

### 19.13.4 Auth

The auth module system allows for external authentication routines to be easily added into Salt. The *auth* function needs to be implemented to satisfy the requirements of an auth module. Use the *pam* module as an example.

### 19.13.5 Fileserver

The fileserver module system is used to create fileserver backends used by the Salt Master. These modules need to implement the functions used in the fileserver subsystem. Use the *gitfs* module as an example.

### 19.13.6 Grains

Grain modules define extra routines to populate grains data. All defined public functions will be executed and MUST return a Python dict object. The dict keys will be added to the grains made available to the minion.

### 19.13.7 Output

The output modules supply the outputter system with routines to display data in the terminal. These modules are very simple and only require the *output* function to execute. The default system outputter is the *nested* module.

### 19.13.8 Pillar

Used to define optional external pillar systems. The pillar generated via the filesystem pillar is passed into external pillars. This is commonly used as a bridge to database data for pillar, but is also the backend to the *libvirt* state used to generate and sign *libvirt* certificates on the fly.

### 19.13.9 Renderers

Renderers are the system used to render sls files into salt highdata for the state compiler. They can be as simple as the *py* renderer and as complex as *stateconf* and *pydsl*.

### 19.13.10 Returners

Returners are used to send data from minions to external sources, commonly databases. A full returner will implement all routines to be supported as an external job cache. Use the `redis` returner as an example.

### 19.13.11 Runners

Runners are purely master-side execution sequences.

### 19.13.12 Tops

Tops modules are used to convert external data sources into top file data for the state system.

### 19.13.13 Wheel

The wheel system is used to manage master side management routines. These routines are primarily intended for the API to enable master configuration.

## 19.14 Package Providers

This page contains guidelines for writing package providers.

### 19.14.1 Package Functions

One of the most important features of Salt is package management. There is no shortage of package managers, so in the interest of providing a consistent experience in *pkg* states, there are certain functions that should be present in a package provider. Note that these are subject to change as new features are added or existing features are enhanced.

#### `list_pkgs`

This function should declare an empty dict, and then add packages to it by calling `pkg_resource.add_pkg`, like so:

```
__salt__['pkg_resource.add_pkg'](ret, name, version)
```

The last thing that should be done before returning is to execute `pkg_resource.sort_pkglist`. This function does not presently do anything to the return dict, but will be used in future versions of Salt.

```
__salt__['pkg_resource.sort_pkglist'](ret)
```

`list_pkgs` returns a dictionary of installed packages, with the keys being the package names and the values being the version installed. Example return data:

```
{'foo': '1.2.3-4',
 'bar': '5.6.7-8'}
```

### latest\_version

Accepts an arbitrary number of arguments. Each argument is a package name. The return value for a package will be an empty string if the package is not found or if the package is up-to-date. The only case in which a non-empty string is returned is if the package is available for new installation (i.e. not already installed) or if there is an upgrade available.

If only one argument was passed, this function return a string, otherwise a dict of name/version pairs is returned.

This function must also accept `**kwargs`, in order to receive the `fromrepo` and `repo` keyword arguments from `pkg` states. Where supported, these arguments should be used to find the install/upgrade candidate in the specified repository. The `fromrepo` kwarg takes precedence over `repo`, so if both of those kwargs are present, the repository specified in `fromrepo` should be used. However, if `repo` is used instead of `fromrepo`, it should still work, to preserve backwards compatibility with older versions of Salt.

### version

Like `latest_version`, accepts an arbitrary number of arguments and returns a string if a single package name was passed, or a dict of name/value pairs if more than one was passed. The only difference is that the return values are the currently-installed versions of whatever packages are passed. If the package is not installed, an empty string is returned for that package.

### upgrade\_available

Deprecated and destined to be removed. For now, should just do the following:

```
return __salt__['pkg.latest_version'](name) != ''
```

### install

The following arguments are required and should default to None:

1. `name` (for single-package `pkg` states)
2. `pkgs` (for multiple-package `pkg` states)
3. `sources` (for binary package file installation)

The first thing that this function should do is call `pkg_resource.parse_targets` (see below). This function will convert the SLS input into a more easily parsed data structure. `pkg_resource.parse_targets` may need to be modified to support your new package provider, as it does things like parsing package metadata which cannot be done for every package management system.

```
pkg_params, pkg_type = __salt__['pkg_resource.parse_targets'](name,  
   pkgs,  
   sources)
```

Two values will be returned to the `install` function. The first of them will be a dictionary. The keys of this dictionary will be package names, though the values will differ depending on what kind of installation is being done:

- If **name** was provided (and **pkgs** was not), then there will be a single key in the dictionary, and its value will be `None`. Once the data has been returned, if the **version** keyword argument was provided, then it should replace the `None` value in the dictionary.

- If **pkgs** was provided, then **name** is ignored, and the dictionary will contain one entry for each package in the **pkgs** list. The values in the dictionary will be `None` if a version was not specified for the package, and the desired version if specified. See the **Multiple Package Installation Options** section of the *pkg.installed* state for more info.
- If **sources** was provided, then **name** is ignored, and the dictionary values will be the path/URI for the package.

The second return value will be a string with two possible values: `repository` or `file`. The **install** function can use this value (if necessary) to build the proper command to install the targeted package(s).

Both before and after the installing the target(s), you should run **list\_pkgs** to obtain a list of the installed packages. You should then return the output of `salt.utils.compare_dicts()`

```
return salt.utils.compare_dicts(old, new)
```

### remove

Removes the passed package and return a list of the packages removed.

## 19.14.2 Package Repo Functions

There are some functions provided by `pkg` which are specific to package repositories, and not to packages themselves. When writing modules for new package managers, these functions should be made available as stated below, in order to provide compatibility with the `pkgrepo` state.

All repo functions should accept a `basedir` option, which defines which directory repository configuration should be found in. The default for this is dictated by the repo manager that is being used, and rarely needs to be changed.

```
basedir = '/etc/yum.repos.d'
__salt__['pkg.list_repos'](basedir)
```

### list\_repos

Lists the repositories that are currently configured on this system.

```
__salt__['pkg.list_repos']()
```

Returns a dictionary, in the following format:

```
{'reponame': 'config_key_1': 'config value 1',
  'config_key_2': 'config value 2',
  'config_key_3': ['list item 1 (when appropriate)',
                  'list item 2 (when appropriate)]}
```

### get\_repo

Displays all local configuration for a specific repository.

```
__salt__['pkg.get_repo'](repo='myrepo')
```

The information is formatted in much the same way as `list_repos`, but is specific to only one repo.

```
{'config_key_1': 'config value 1',
 'config_key_2': 'config value 2',
 'config_key_3': ['list item 1 (when appropriate)',
                  'list item 2 (when appropriate)]}
```

### del\_repo

Removes the local configuration for a specific repository. Requires a *repo* argument, which must match the locally configured name. This function returns a string, which informs the user as to whether or not the operation was a success.

```
__salt__['pkg.del_repo'](repo='myrepo')
```

### mod\_repo

Modify the local configuration for one or more option for a configured repo. This is also the way to create new repository configuration on the local system; if a repo is specified which does not yet exist, it will be created.

The options specified for this function are specific to the system; please refer to the documentation for your specific repo manager for specifics.

```
__salt__['pkg.mod_repo'](repo='myrepo', url='http://myurl.com/repo')
```

## 19.14.3 Low-Package Functions

In general, the standard package functions as describes above will meet your needs. These functions use the system's native repo manager (for instance, yum or the apt tools). In most cases, the repo manager is actually separate from the package manager. For instance, yum is usually a front-end for rpm, and apt is usually a front-end for dpkg. When possible, the package functions that use those package managers directly should do so through the low package functions.

It is normal and sane for `pkg` to make calls to `lowpkgs`, but `lowpkg` must never make calls to `pkg`. This affects functions which are required by both `pkg` and `lowpkg`, but the technique in `pkg` is more performant than what is available to `lowpkg`. When this is the case, the `lowpkg` function that requires that technique must still use the `lowpkg` version.

### list\_pkgs

Returns a dict of packages installed, including the package name and version. Can accept a list of packages; if none are specified, then all installed packages will be listed.

```
installed = __salt__['lowpkg.list_pkgs']('foo', 'bar')
```

Example output:

```
{'foo': '1.2.3-4',
 'bar': '5.6.7-8'}
```

## verify

Many (but not all) package management systems provide a way to verify that the files installed by the package manager have or have not changed. This function accepts a list of packages; if none are specified, all packages will be included.

```
installed = __salt__['lowpkg.verify']('httpd')
```

Example output:

```
{'/etc/httpd/conf/httpd.conf': {'mismatch': ['size', 'md5sum', 'mtime'],
                                  'type': 'config'}}
```

## file\_list

Lists all of the files installed by all packages specified. If not packages are specified, then all files for all known packages are returned.

```
installed = __salt__['lowpkg.file_list']('httpd', 'apache')
```

This function does not return which files belong to which packages; all files are returned as one giant list (hence the *file\_list* function name. However, This information is still returned inside of a dict, so that it can provide any errors to the user in a sane manner.

```
{'errors': ['package apache is not installed'],
 'files': ['/etc/httpd',
           '/etc/httpd/conf',
           '/etc/httpd/conf.d',
           '...SNIP...']}
```

## file\_dict

Lists all of the files installed by all packages specified. If not packages are specified, then all files for all known packages are returned.

```
installed = __salt__['lowpkg.file_dict']('httpd', 'apache', 'kernel')
```

Unlike *file\_list*, this function will break down which files belong to which packages. It will also return errors in the same manner as *file\_list*.

```
{'errors': ['package apache is not installed'],
 'packages': {'httpd': ['/etc/httpd',
                       '/etc/httpd/conf',
                       '...SNIP...'],
              'kernel': ['/boot/.vmlinuz-2.6.32-279.el6.x86_64.hmac',
                        '/boot/System.map-2.6.32-279.el6.x86_64',
                        '...SNIP...']}}
```

## 19.15 Pull Requests

Salt is a large software project with many developers working together. We encourage all Salt users to contribute new features, bug fixes and documentation fixes. For those who haven't contributed to a large software project

before we encourage you to consider the following questions when preparing a pull request.

This isn't an exhaustive list and these aren't necessarily hard and fast rules, but these are things we consider when reviewing a pull request.

- Does this change work on all platforms? In cases where it does not, is an appropriate and easy-to-understand reason presented to the user? Is it documented as-such? Have we thought about all the possible ways this code might be used and accounted as best we can for them?
- Will this code work on versions of all Python we support? Will it work on future versions?
- Are Python reserved keywords used? Are variables named in a way that will make it easy for the next person to understand what's going on?
- Does this code present a security risk in any way? What is the worst possible thing that an attacker could do with this code? If dangerous cases are possible, is it appropriate to document them? If so, has this been done? Would this change pass muster with a professional security audit? Is it obvious to a person using this code what the risks are?
- Is it readable? Does it conform to our [style guide](#)? Is the code documented such that the next person who comes along will be able to read and understand it? Most especially, are edge-cases documented to avoid regressions? Will it be immediately evident to the next person who comes along why this change was made?
- If appropriate, has the person who wrote the code which is being modified been notified and included in the process?
- What are the performance implications of this change? Is there a more efficient way to structure the logic and if so, does making the change balance itself against readability in a sensible way? Do the performance characteristics of the code change based on the way it is being invoked (i.e., through an API or various command-line tools.) Will it be easy to profile this change if it might be a problem?
- Are caveats considered and documented in the change?
- Will the code scale? More critically, will it scale in *both* directions? Salt runs in data-centers and on Raspberry Pi installations in the Sahara. It needs to work on big servers and tiny devices.
- Is appropriate documentation written both in public-facing docs and in-line? How will the user know how to use this? What will they do if it doesn't work as expected? Is this something a new user will understand? Can a user know all they need to about this functionality by reading the public docs?
- Is this a change in behavior? If so, is it in the appropriate branch? Are deprecation warnings necessary? Have those changes been fully documented? Have we fully thought through what implications a change in behavior might have?
- How has the code been tested? If appropriate are there automated tests which cover this? Is it likely to regress? If so, how has the potential of that regression been mitigated? What is the plan for ensuring that this code works going forward?
- If it's asynchronous code, what is the potential for a race condition?
- Is this code an original work? If it's borrowed from another project or found online are the appropriate licensing/attribution considerations handled?
- Is the reason for the change fully explained in the PR? If not for review, this is necessary so that somebody in the future can go back and figure out why it was necessary.
- Is the intended behavior of the change clear? How will that behavior be known to future contributors and to users?
- Does this code handle errors in a reasonable way? Have we gone back through the stack as much as possible to make sure that an error cannot be raised that we do not account for? Are errors tested for as well as proper functionality?

- If the code relies on external libraries, do we properly handle old versions of them? Do we require a specific version and if so is this version check implemented? Is the library available on the same platforms that module in question claims to support? If the code was written and tested against a particular library, have we documented that fact?
- Can this code freeze/hang/crash a running daemon? Can it stall a state run? Are there infinite loops? Are appropriate timeouts implemented?
- Is the function interface well documented? If argument types can not be inferred by introspection, are they documented?
- Are resources such as file-handles cleaned-up after they are used?
- Is it possible that a reference-cycle exists between objects that will leak memory?
- Has the code been linted and does it pass all tests?
- Does the change fully address the problem or is it limited to a small surface area? By this, I mean that it should be clear that the submitter has looked for other cases in the function or module where the given case might also be addressed. If additional changes are necessary are they documented in the code as a FIXME or the PR and in Github as an issue to be tracked?
- Will the code throw errors/warnings/stacktraces to the console during normal operation?
- Has all the debugging been removed?
- Does the code log any sensitive data? Does it show sensitive data in process lists? Does it store sensitive data to disk and if so, does it do so in a secure manner? Are there potential race conditions in between writing the data to disk and setting the appropriate permissions?
- Is it clear from the solution that the problem is well-understood? How can somebody who has never seen the problem feel confident that this proposed change is the best one?
- What's hard-coded that might not need to be? Are we making sensible decisions for the user and allowing them to tune and change things where appropriate?
- Are utility functions used where appropriate? Does this change re-implement something we already have code for?
- Is the right thing being fixed? There are cases where it's appropriate to fix a test and cases where it's appropriate to fix the code that's under test. Which is best for the user? Is this change a shortcut or a solution that will be solid in the months and years to come?
- How will this code react to changes elsewhere in the code base? What is it coupled to and have we fully thought through how best to present a coherent interface to consumers of a given function or method?
- Does this PR try to fix too many bugs/problems at once?
- Should this be split into multiple PRs to make them easier to test and reason about?

## 19.16 Reporting Bugs

Salt uses GitHub to track open issues and feature requests.

To file a bug, please navigate to the [new issue page for the Salt project](#).

In an issue report, please include the following information:

- The output of `salt --versions-report` from the relevant machines. This can also be gathered remotely by using `salt <my_tgt> test.versions_report`.

- A description of the problem including steps taken to cause the issue to occur and the expected behaviour.
- Any steps taken to attempt to remediate the problem.
- Any configuration options set in a configuration file that may be relevant.
- A reproduceable test case. This may be as simple as an SLS file that illustrates a problem or it may be a link to a repository that contains a number of SLS files that can be used together to re-produce a problem. If the problem is transitory, any information that can be used to try and reproduce the problem is helpful.
- [Optional] The output of each salt component (master/minion/CLI) running with the `-ldebug` flag set.

---

**Note:** Please be certain to scrub any logs or SLS files for sensitive data!

---

## 19.17 Salt Topology

Salt is based on a powerful, asynchronous, network topology using ZeroMQ. Many ZeroMQ systems are in place to enable communication. The central idea is to have the fastest communication possible.

### 19.17.1 Servers

The Salt Master runs 2 network services. First is the ZeroMQ PUB system. This service by default runs on port 4505 and can be configured via the `publish_port` option in the master configuration.

Second is the ZeroMQ REP system. This is a separate interface used for all bi-directional communication with minions. By default this system binds to port 4506 and can be configured via the `ret_port` option in the master.

### 19.17.2 PUB/SUB

The commands sent out via the salt client are broadcast out to the minions via ZeroMQ PUB/SUB. This is done by allowing the minions to maintain a connection back to the Salt Master and then all connections are informed to download the command data at once. The command data is kept extremely small (usually less than 1K) so it is not a burden on the network.

### 19.17.3 Return

The PUB/SUB system is a one way communication, so once a publish is sent out the PUB interface on the master has no further communication with the minion. The minion, after running the command, then sends the command's return data back to the master via the `ret_port`.

## 19.18 Translating Documentation

If you wish to help translate the Salt documentation to your language, please head over to the [Transifex](#) website and [signup](#) for an account.

Once registered, head over to the [Salt Translation Project](#), and either click on **Request Language** if you can't find yours, or, select the language for which you wish to contribute and click **Join Team**.

Transifex provides some useful reading resources on their [support domain](#), namely, some useful articles [directed to translators](#).

### 19.18.1 Building A Localized Version of the Documentation

While you're working on your translation on [Transifex](#), you might want to have a look at how it's rendering.

#### Install The Transifex Client

To interact with the [Transifex](#) web service you will need to install the `transifex-client`:

```
pip install transifex-client
```

#### Configure The Transifex Client

Once installed, you will need to set it up on your computer. We created a script to help you with that:

```
.scripts/setup-transifex-config
```

#### Download Remote Translations

There's a little script which simplifies the download process of the translations(which isn't that complicated in the first place). So, let's assume you're translating `pt_PT`, Portuguese(Portugal). To download the translations, execute from the `doc/` directory of your Salt checkout:

```
make download-translations SPHINXLANG=pt_PT
```

To download `pt_PT`, Portuguese(Portugal), and `nl`, Dutch, you can use the helper script directly:

```
.scripts/download-translation-catalog pt_PT nl
```

#### Build Localized Documentation

After the download process finishes, which might take a while, the next step is to build a localized version of the documentation. Following the `pt_PT` example above:

```
make html SPHINXLANG=pt_PT
```

#### View Localized Documentation

Open your browser, point it to the local documentation path and check the localized output you've just build.

## 19.19 Developing Salt Tutorial

This tutorial assumes you have:

- a web browser

- a GitHub account (<my\_account>)
- a command line (CLI)
- git
- a text editor

### 19.19.1 Fork

In your browser, navigate to the [saltstack/salt](https://github.com/saltstack/salt) GitHub repository.

Click on Fork (<https://github.com/saltstack/salt/#fork-destination-box>).

---

**Note:** If you have more than one GitHub presence, for example if you are a member of a team, GitHub will ask you into which area to clone Salt. If you don't know where, then select your personal GitHub account.

---

### 19.19.2 Clone

In your CLI, navigate to the directory into which you want clone the Salt codebase and submit the following command:

```
$ git clone https://github.com/<my_account>/salt.git
```

where <my\_account> is the name of your GitHub account. After the clone has completed, add SaltStack as a second remote and fetch any changes from upstream.

```
$ cd salt
$ git remote add upstream https://github.com/saltstack/salt.git
$ git fetch upstream
```

For this tutorial, we will be working off from the `develop` branch, which is the default branch for the SaltStack GitHub project. This branch needs to track `upstream/develop` so that we will get all upstream changes when they happen.

```
$ git checkout develop
$ git branch --set-upstream-to upstream/develop
```

### 19.19.3 Fetch

Fetch any upstream changes on the `develop` branch and sync them to your local copy of the branch with a single command:

```
$ git pull --rebase
```

---

**Note:** For an explanation on `pull vs pull --rebase` and other excellent points, see [this article](#) by Mislav Marohnić.

---

### 19.19.4 Branch

Now we are ready to get to work. Consult the [sprint beginner bug list](#) and select an execution module whose `__virtual__` function needs to be updated. I'll select the `alternatives` module.

Create a new branch off from `develop`. Be sure to name it something short and descriptive.

```
$ git checkout -b virt_ret
```

### 19.19.5 Edit

Edit the file you have selected, and verify that the changes are correct.

```
$ vim salt/modules/alternatives.py
$ git diff
diff --git a/salt/modules/alternatives.py b/salt/modules/alternatives.py
index 1653e5f..30c0a59 100644
--- a/salt/modules/alternatives.py
+++ b/salt/modules/alternatives.py
@@ -30,7 +30,7 @@ def __virtual__():
     '''
     if os.path.isdir('/etc/alternatives'):
         return True
-    return False
+    return (False, 'Cannot load alternatives module: /etc/alternatives dir not
→found')

def _get_cmd():
```

### 19.19.6 Commit

Stage and commit the changes. Write a descriptive commit summary, but try to keep it less than 50 characters. Review your commit.

```
$ git add salt/modules/alternatives.py
$ git commit -m 'modules.alternatives: __virtual__ return err msg'
$ git show
```

---

**Note:** If you need more room to describe the changes in your commit, run `git commit` (without the `-m`, message, option) and you will be presented with an editor. The first line is the commit summary and should still be 50 characters or less. The following paragraphs you create are free form and will be preserved as part of the commit.

---

### 19.19.7 Push

Push your branch to your GitHub account. You will likely need to enter your GitHub username and password.

```
$ git push origin virt_ret
Username for 'https://github.com': <my_account>
Password for 'https://<my_account>@github.com':
```

**Note:** If authentication over https does not work, you can alternatively setup [ssh keys](#). Once you have done this, you may need add the keys to your git repository configuration

```
$ git config ssh.key ~/.ssh/<key_name>
```

where `<key_name>` is the file name of the private key you created.

---

### 19.19.8 Merge

In your browser, navigate to the [new pull request](#) page on the `saltstack/salt` GitHub repository and click on `compare across forks`. Select `<my_account>` from the list of head forks and the branch you are wanting to merge into `develop` (`virt_ret` in this case).

When you have finished reviewing the changes, click `Create pull request`.

If your pull request contains only a single commit, the title and comment will be taken from that commit's summary and message, otherwise the branch name is used for the title. Edit these fields as necessary and click `Create pull request`.

---

**Note:** Although these instructions seem to be the official pull request procedure on github's website, here are two alternative methods that are simpler.

- If you navigate to your clone of salt, [https://github.com/<my\\_account>/salt](https://github.com/<my_account>/salt), depending on how old your branch is or how recently you pushed updates on it, you may be presented with a button to create a pull request with your branch.
- I find it easiest to edit the following URL:

```
https://github.com/saltstack/salt/compare/develop...<my\_account>:virt\_ret
```

---

### 19.19.9 Resources

GitHub offers many great tutorials on various aspects of the git- and GitHub-centric development workflow:

<https://help.github.com/>

There are many topics covered by the Salt Developer documentation:

<https://docs.saltstack.com/en/latest/topics/development/index.html>

The contributing documentation presents more details on specific contributing topics:

<https://docs.saltstack.com/en/latest/topics/development/contributing.html>

## 19.20 Salt Extend

`salt-extend` is a templating tool for extending SaltStack. If you're looking to add a module to SaltStack, then the `salt-extend` utility can guide you through the process.

You can use Salt Extend to quickly create templated modules for adding new behaviours to some of the module subsystems within Salt.

Salt Extend takes a template directory and merges it into a SaltStack source code directory.

### 19.20.1 Command line usage

See *salt-extend*

### 19.20.2 Choosing a template

The following templates are available:

#### module

Creates a new execution module within `salt/modules/{{module_name}}.py`

#### module\_unit

Creates a new execution module unit test suite within `tests/unit/modules/test_{{module_name}}.py`

#### state

Creates a new state module within `salt/states/{{module_name}}.py`

#### state\_unit

Creates a new state module unit test suite within `tests/unit/states/test_{{module_name}}.py`

### 19.20.3 Adding templates

1. Create a directory under `<src>/templates`
2. Create a file `template.yml` containing properties for
  - `description` - a description of the template
  - `questions` - a collection of additional questions to ask the user, the name of the item will be used as the key in the context dictionary within the jinja template.
    - `question` - The question to ask the user, as a string
    - `default` - (optional) the default value, can contain Jinja2 template syntax and has access to the default context properties

#### Example `template.yml`

```
description: "Execution module"
questions:
  depending_libraries:
    question: "What libraries does this module depend upon?"
  virtual_name:
    question: "What module virtual name to use?"
    default: "{{module_name}}"
```

3. Create the files within `<src>/templates/<your template>` to match the target

---

**Note:** File names can contain Jinja 2 template syntax, e.g. `{{module_name}}.py`

---

### Example file in the template directory

```
print('Hello {{module_name}}')
__virtual__ = '{{__virtual_name__}}'
```

### Default context properties

The default context provides the following properties

- `description` - A description of the template
- `short_description` - A short description of the module as entered by the user
- `version` - The version name of the next release
- `module_name` - The module name as entered by the user
- `release_date` - The current date in the format `YYYY-MM-DD`
- `year` - The current year in the format `YYYY`

As well as any additional properties entered from the questions section of `template.yml`

## 19.20.4 API

### SaltStack Extend

A templating tool for extending SaltStack.

Takes a template directory and merges it into a SaltStack source code directory. This tool uses Jinja2 for templating.

This tool is accessed using `salt-extend`

```
codeauthor :email:`Anthony Shaw <anthonyshaw@apache.org>`
```

```
salt.utils.extend.apply_template(template_dir, output_dir, context)
```

Apply the template from the template directory to the output using the supplied context dict.

#### Parameters

- **src** (str) -- The source path
- **dst** (str) -- The destination path
- **context** (dict) -- The dictionary to inject into the Jinja template as context

```
salt.utils.extend.run(extension=None, name=None, description=None, salt_dir=None, merge=False, temp_dir=None)
```

A template factory for extending the salt ecosystem

#### Parameters

- **extension** (str) -- The extension type, e.g. `'module'`, `'state'`, if omitted, user will be prompted
- **name** (str) -- Python-friendly name for the module, if omitted, user will be prompted
- **description** (str) -- A description of the extension, if omitted, user will be prompted
- **salt\_dir** (str) -- The targeted Salt source directory

- **merge** (bool) -- Merge with salt directory, *False* to keep separate, *True* to merge trees.
- **temp\_dir** (str) -- The directory for generated code, if omitted, system temp will be used

## 19.21 Salt's Test Suite

Salt comes with a powerful integration and unit test suite allowing for the fully automated run of integration and/or unit tests from a single interface.

To learn the basics of how Salt's test suite works, be sure to check out the *Salt's Test Suite: An Introduction* tutorial.

### 19.21.1 Test Directory Structure

Salt's test suite is located in the `tests` directory in the root of Salt's codebase. The test suite is divided into two main groups:

- Integration Tests
- Unit Tests

Within each of these groups, the directory structure roughly mirrors the structure of Salt's own codebase. Notice that there are directories for `states`, `modules`, `runners`, `output`, and more in each testing group.

The files that are housed in the `modules` directory of either the unit or the integration testing factions contain respective integration or unit test files for Salt execution modules.

#### Integration Tests

The Integration section of Salt's test suite start up a number of Salt daemons to test functionality in a live environment. These daemons include two Salt Masters, one Syndic, and two Minions. This allows the Syndic interface to be tested and Master/Minion communication to be verified. All of the integration tests are executed as live Salt commands sent through the started daemons.

Integration tests are particularly good at testing modules, states, and shell commands, among other segments of Salt's ecosystem. By utilizing the integration test daemons, integration tests are easy to write. They are also SaltStack's generally preferred method of adding new tests.

The discussion in the *Integration vs. Unit* section of the *testing tutorial* is beneficial in learning why you might want to write integration tests vs. unit tests. Both testing arenas add value to Salt's test suite and you should consider adding both types of tests if possible and appropriate when contributing to Salt.

- [Integration Test Documentation](#)

#### Unit Tests

Unit tests do not spin up any Salt daemons, but instead find their value in testing singular implementations of individual functions. Instead of testing against specific interactions, unit tests should be used to test a function's logic as well as any `return` or `raises` statements. Unit tests also rely heavily on mocking external resources.

The discussion in the *Integration vs. Unit* section of the *testing tutorial* is useful in determining when you should consider writing unit tests instead of, or in addition to, integration tests when contributing to Salt.

- [Unit Test Documentation](#)

### 19.21.2 Running The Tests

There are requirements, in addition to Salt's requirements, which need to be installed in order to run the test suite. Install one of the lines below, depending on the relevant Python version:

```
pip install -r requirements/dev_python27.txt
pip install -r requirements/dev_python34.txt
```

To be able to run integration tests which utilizes ZeroMQ transport, you also need to install additional requirements for it. Make sure you have installed the C/C++ compiler and development libraries and header files needed for your Python version.

This is an example for RedHat-based operating systems:

```
yum install gcc gcc-c++ python-devel
pip install -r requirements/zeromq.txt
```

On Debian, Ubuntu or their derivatives run the following commands:

```
apt-get install build-essential python-dev
pip install -r requirements/zeromq.txt
```

This will install the latest pycrypto and pyzmq (with bundled libzmq) Python modules required for running integration tests suite.

Once all requirements are installed, use `runtests.py` script to run all of the tests included in Salt's test suite:

```
python tests/runtests.py
```

For more information about options you can pass the test runner, see the `--help` option:

```
python tests/runtests.py --help
```

An alternative way of invoking the test suite is available in `setup.py`:

```
./setup.py test
```

#### Running Test Subsections

Instead of running the entire test suite all at once, which can take a long time, there are several ways to run only specific groups of tests or individual tests:

- Run *unit tests only*: `python tests/runtests.py --unit-tests`
- Run unit and integration tests for states: `python tests/runtests.py --state`
- Run integration tests for an individual module: `python tests/runtests.py -n integration.modules.virt`
- Run unit tests for an individual module: `python tests/runtests.py -n unit.modules.virt_test`
- Run an individual test by using the class and test name (this example is for the `test_default_kvm_profile` test in the `integration.module.virt`): `python tests/runtests.py -n integration.module.virt.VirtTest.test_default_kvm_profile`

For more specific examples of how to run various test subsections or individual tests, please see the [Test Selection Options](#) documentation or the [Running Specific Tests](#) section of the *Salt's Test Suite: An Introduction* tutorial.

## Running Unit Tests Without Integration Test Daemons

Since the unit tests do not require a master or minion to execute, it is often useful to be able to run unit tests individually, or as a whole group, without having to start up the integration testing daemons. Starting up the master, minion, and syndic daemons takes a lot of time before the tests can even start running and is unnecessary to run unit tests. To run unit tests without invoking the integration test daemons, simply run the `runtests.py` script with `--unit` argument:

```
python tests/runtests.py --unit
```

All of the other options to run individual tests, entire classes of tests, or entire test modules still apply.

## Running Destructive Integration Tests

Salt is used to change the settings and behavior of systems. In order to effectively test Salt's functionality, some integration tests are written to make actual changes to the underlying system. These tests are referred to as "destructive tests". Some examples of destructive tests are changes may be testing the addition of a user or installing packages. By default, destructive tests are disabled and will be skipped.

Generally, destructive tests should clean up after themselves by attempting to restore the system to its original state. For instance, if a new user is created during a test, the user should be deleted after the related test(s) have completed. However, no guarantees are made that test clean-up will complete successfully. Therefore, running destructive tests should be done with caution.

---

**Note:** Running destructive tests will change the underlying system. Use caution when running destructive tests.

---

To run tests marked as destructive, set the `--run-destructive` flag:

```
python tests/runtests.py --run-destructive
```

## Running Cloud Provider Tests

Salt's testing suite also includes integration tests to assess the successful creation and deletion of cloud instances using *Salt-Cloud* for providers supported by Salt-Cloud.

The cloud provider tests are off by default and run on sample configuration files provided in `tests/integration/files/conf/cloud.providers.d/`. In order to run the cloud provider tests, valid credentials, which differ per provider, must be supplied. Each credential item that must be supplied is indicated by an empty string value and should be edited by the user before running the tests. For example, DigitalOcean requires a client key and an api key to operate. Therefore, the default cloud provider configuration file for DigitalOcean looks like this:

```
digitalocean-config:
  driver: digital_ocean
  client_key: ''
  api_key: ''
  location: New York 1
```

As indicated by the empty string values, the `client_key` and the `api_key` must be provided:

```
digitalocean-config:
  driver: digital_ocean
  client_key: wFGEwgregeqw3435gDger
```

```
api_key: GDE43t43REGTrkilg43934t34qT43t4dgegerGEgg
location: New York 1
```

**Note:** When providing credential information in cloud provider configuration files, do not include the single quotes.

Once all of the valid credentials for the cloud provider have been supplied, the cloud provider tests can be run by setting the `--cloud-provider-tests` flag:

```
./tests/runtests.py --cloud-provider-tests
```

### Running The Tests In A Docker Container

The test suite can be executed under a `docker` container using the `--docked` option flag. The `docker` container must be properly configured on the system invoking the tests and the container must have access to the internet.

Here's a simple usage example:

```
python tests/runtests.py --docked=ubuntu-12.04 -v
```

The full `docker` container repository can also be provided:

```
python tests/runtests.py --docked=salttest/ubuntu-12.04 -v
```

The SaltStack team is creating some containers which will have the necessary dependencies pre-installed. Running the test suite on a container allows destructive tests to run without making changes to the main system. It also enables the test suite to run under a different distribution than the one the main system is currently using.

The current list of test suite images is on Salt's [docker repository](#).

Custom `docker` containers can be provided by submitting a pull request against Salt's [docker Salt test containers repository](#).

### 19.21.3 Automated Test Runs

SaltStack maintains a Jenkins server to allow for the execution of tests across supported platforms. The tests executed from Salt's Jenkins server create fresh virtual machines for each test run, then execute destructive tests on the new, clean virtual machine.

SaltStack's Jenkins server continuously runs the entire test suite, including destructive tests, on an array of various supported operating systems throughout the day. Each actively supported branch of Salt's repository runs the tests located in the respective branch's code. Each set of branch tests also includes a pylint run. These branch tests help ensure the viability of Salt code at any given point in time as pull requests are merged into branches throughout the day.

In addition to branch tests, SaltStack's Jenkins server also runs tests on pull requests. These pull request tests include a smaller set of virtual machines that run on the branch tests. The pull request tests, like the branch tests, include a pylint test as well.

When a pull request is submitted to Salt's repository on GitHub, the suite of pull request tests are started by Jenkins. These tests are used to gauge the pull request's viability to merge into Salt's codebase. If these initial tests pass, the pull request can then be merged into the Salt branch by one of Salt's core developers, pending their discretion. If the initial tests fail, core developers may request changes to the pull request. If the failure is unrelated to the changes in question, core developers may merge the pull request despite the initial failure.

As soon as the pull request is merged, the changes will be added to the next branch test run on Jenkins.

For a full list of currently running test environments, go to <http://jenkins.saltstack.com>.

### Using Salt-Cloud on Jenkins

For testing Salt on Jenkins, SaltStack uses *Salt-Cloud* to spin up virtual machines. The script using Salt-Cloud to accomplish this is open source and can be found here: <https://github.com/saltstack/salt/blob/develop/tests/jenkins.py>

## 19.21.4 Writing Tests

The salt testing infrastructure is divided into two classes of tests, integration tests and unit tests. These terms may be defined differently in other contexts, but for Salt they are defined this way:

- Unit Test: Tests which validate isolated code blocks and do not require external interfaces such as `salt-call` or any of the salt daemons.
- Integration Test: Tests which validate externally accessible features.

Salt testing uses unittest2 from the python standard library and MagicMock.

- Writing integration tests
- Writing unit tests

### Naming Conventions

Any function in either integration test files or unit test files that is doing the actual testing, such as functions containing assertions, must start with `test_`:

```
def test_user_present(self):
```

When functions in test files are not prepended with `test_`, the function acts as a normal, helper function and is not run as a test by the test suite.

### Submitting New Tests

Which branch of the Salt codebase should new tests be written against? The location of where new tests should be submitted depends largely on the reason you're writing the tests.

### Tests for New Features

If you are adding new functionality to Salt, please write the tests for this new feature in the same pull request as the new feature. New features should always be submitted to the `develop` branch.

If you have already submitted the new feature, but did not write tests in the original pull request that has already been merged, please feel free to submit a new pull request containing tests. If the feature was recently added to Salt's `develop` branch, then the tests should be added there as well. However, if the feature was added to `develop` some time ago and is already present in one or more release branches, please refer to the *Tests for Entire Files or Functions* section below for more details about where to submit tests for functions or files that do not already have tests.

### Tests to Accompany a Bugfix

If you are writing tests for code that fixes a bug in Salt, please write the test in the same pull request as the bugfix. If you're unsure of where to submit your bugfix and accompanying test, please review the [Which Salt Branch?](#) documentation in Salt's [Contributing](#) guide.

### Tests for Entire Files or Functions

Sometimes entire files in Salt are completely untested. If you are writing tests for a file that doesn't have any tests written for it, write your test against the earliest supported release branch that contains the file or function you're testing.

Once your tests are submitted in a pull request and is merged into the branch in question, the tests you wrote will be merged-forward by SaltStack core engineers and the new tests will propagate to the newer release branches. That way the tests you wrote will apply to all current and relevant release branches, and not just the `develop` branch, for example. This methodology will help protect against regressions on older files in Salt's codebase.

There may be times when the tests you write against an older branch fail in the merge-forward process because functionality has changed in newer release branches. In these cases, a Salt core developer may reach out to you for advice on the tests in question if the path forward is unclear.

---

**Note:** If tests are written against a file in an older release branch and then merged forward, there may be new functionality in the file that is present in the new release branch that is untested. It would be wise to see if new functionality could use additional testing once the test file has propagated to newer release branches.

---

### Test Helpers

Several Salt-specific helpers are available. A full list is available by inspecting functions exported in `tests.support.helpers`.

`@expensiveTest` -- Designates a test which typically requires a relatively costly external resource, like a cloud virtual machine. This decorator is not normally used by developers outside of the Salt core team.

`@destructiveTest` -- Marks a test as potentially destructive. It will not be run by the test runner unless the `-run-destructive` test is expressly passed.

`@requires_network` -- Requires a network connection for the test to operate successfully. If a network connection is not detected, the test will not run.

`@requires_salt_modules` -- Requires all the modules in a list of modules in order for the test to be executed. Otherwise, the test is skipped.

`@requires_system_grains` -- Loads and passes the grains on the system as an keyword argument to the test function with the name `grains`.

`@skip_if_binaries_missing(['list', 'of', 'binaries'])` -- If called from inside a test, the test will be skipped if the binaries are not all present on the system.

`@skip_if_not_root` -- If the test is not executed as root, it will be skipped.

`@with_system_user` -- Creates and optionally destroys a system user within a test case. See implementation details in `tests.support.helpers` for details.

`@with_system_group` -- Creates and optionally destroys a system group within a test case. See implementation details in `tests.support.helpers` for details.

`@with_system_user_and_group` -- Creates and optionally destroys a system user and group within a test case. See implementation details in `tests.support.helpers` for details.

## 19.22 raet

# RAET # Reliable Asynchronous Event Transport Protocol

**See also:**

[RAET Overview](#)

### 19.22.1 Protocol

Layering:

OSI Layers

7: Application: Format: Data (Stack to Application interface buffering etc) 6: Presentation: Format: Data (Encrypt-Decrypt convert to machine independent format) 5: Session: Format: Data (Interhost communications. Authentication. Groups) 4: Transport: Format: Segments (Reliable delivery of Message, Transactions, Segmentation, Error checking) 3: Network: Format: Packets/Datagrams (Addressing Routing) 2: Link: Format: Frames ( Reliable per frame communications connection, Media access controller ) 1: Physical: Bits (Transceiver communication connection not reliable)

Link is hidden from Raet Network is IP host address and Udp Port Transport is Raet transactions, service kind, tail error checking, Could include header signing as part of transport reliable delivery serialization of header Session is session id key exchange for signing. Grouping is Road (like 852 channel) Presentation is Encrypt Decrypt body Serialize Deserialize Body Application is body data dictionary

Header signing spans both the Transport and Session layers.

### 19.22.2 Header

JSON Header (Tradeoff some processing speed for extensibility, ease of use, readability)

Body initially JSON but support for ``packed" binary body

### 19.22.3 Packet

Header ASCII Safe JSON Header termination: Empty line given by double pair of carriage return linefeed /r/n/r/n  
10 13 10 13 ADAD 1010 1101 1010 1101

In json carriage return and newline characters cannot appear in a json encoded string unless they are escaped with backslash, so the 4 byte combination is illegal in valid json that does not have multi-byte unicode characters.

These means the header must be ascii safe so no multibyte utf-8 strings allowed in header.

Following Header Terminator is variable length signature block. This is binary and the length is provided in the header.

Following the signature block is the packet body or data. This may either be JSON or packed binary. The format is given in the json header

Finally is an optional tail block for error checking or encryption details

### 19.22.4 Header Fields

In UDP header

sh = source host sp = source port dh = destination host dp = destination port

In RAET Header

hk = header kind hl = header length

vn = version number

sd = Source Device ID dd = Destination Device ID cf = Corresponder Flag mf = Multicast Flag

si = Session ID ti = Transaction ID

sk = Service Kind pk = Packet Kind bf = Burst Flag (Send all Segments or Ordered packets without interleaved acks)

oi = Order Index dt = DateTime Stamp

sn = Segment Number sc = Segment Count

pf = Pending Segment Flag af = All Flag (Resent all Segments not just one)

nk = Auth header kind nl = Auth header length

bk = body kind bl = body length

tk = tail kind tl = tail length

**fg = flags packed (Flags) Default `00' hex string** 2 byte Hex string with bits (0, 0, af, pf, 0, bf, mf, cf) Zeros are TBD flags

### 19.22.5 Session Bootstrap

Minion sends packet with SID of Zero with public key of minions Public Private Key pair Master acks packet with SID of Zero to let minion know it received the request

Some time later Master sends packet with SID of zero that accepts the Minion

Minion

### 19.22.6 Session

Session is important for security. Want one session opened and then multiple transactions within session.

Session ID SID sid

GUID hash to guarantee uniqueness since no guarantee of nonvolatile storage or require file storage to keep last session ID used.

### 19.22.7 Service Types or Modular Services

Four Service Types

1. One or more maybe (unacknowledged repeat) maybe means no guarantee
2. **Exactly one at most (ack with retries) (duplicate detection idempotent)** at most means fixed number of retries has finite probability of failing B1) finite retries B2) infinite retries with exponential back-off up to a maximum delay

3. **Exactly one of sequence at most (sequence numbered)** Receiver requests retry of missing packet with same B1 or B2 retry type
4. **End to End (Application layer Request Response)** This is two B sub transactions

Initially unicast messaging Eventually support for Multicast

The use case for C) is to fragment large packets as once a UDP packet exceeds the frame size its reliability goes way down So its more reliable to fragment large packets.

Better approach might be to have more modularity. Services Levels

1. **Maybe one or more**
  - (a) **Fire and forget** no transaction either side
  - (b) **Repeat, no ack, no dupdet** repeat counter send side, no transaction on receive side
  - (c) **Repeat, no Ack, dupdet** repeat counter send side, dup detection transaction receive side
2. **More or Less Once**
  - (a) **retry finite, ack no dupdet** retry timer send side, finite number of retries ack receive side no dupdet
3. **At most Once**
  - (a) **retry finite, ack, dupdet** retry timer send side, finite number of retries ack receive side dupdet
4. **Exactly once**
  - (a) **ack retry** retry timer send side, ack and duplicate detection receive side Infinite retries with exponential backoff
5. **Sequential sequence number**
  - (a) reorder escrow
  - (b) Segmented packets
6. request response to application layer

Service Features

1. repeats
2. ack retry transaction id
3. sequence number duplicate detection out of order detection sequencing
4. rep-req

Always include transaction id since multiple transactions on same port So get duplicate detection for free if keep transaction alive but if use

A) Maybe one or more B1) At Least One B2) Exactly One C) One of sequence D) End to End

A) Sender creates transaction id for number of repeats but receiver does not keep transaction alive

B1) Sender creates transaction id keeps it for retries. Receiver keeps it to send ack then kills so retry could be duplicate not detected

B2) Sender creates transaction id keeps for retries Receiver keeps tid for acks on any retries so no duplicates.

C) Sender creates TID and Sequence Number. Receiver checks for out of order sequence and can request retry.

D) Application layer sends response. So question is do we keep transaction open or have response be new transaction. No because then we need a rep-req ID so might as well use the same transaction id. Just keep alive until get response.

Little advantage to B1 vs B2 not having duplicates.

So 4 service types

1. Maybe one or more (unacknowledged repeat)
2. Exactly One (At most one) (ack with retry) (duplicate detection idempotent)
3. One of Sequence (sequence numbered)
4. End to End

Also multicast or unicast

Modular Transaction Table

**Sender Side:** Transaction ID plus transaction source sender or receiver generated transaction id Repeat Counter Retry Timer Retry Counter (finite retries) Redo Timer (infinite redos with exponential backoff) Sequence number without acks (look for resend requests) Sequence with ack (wait for ack before sending next in sequence) Segmentation

**Receiver Side:** Nothing just accept packet Acknowledge (can delete transaction after acknowledge) No duplicate detection Transaction timeout (keep transaction until timeout) Duplicate detection save transaction id duplicate detection timeout Request resend of missing packet in sequence Sequence reordering with escrow timeout wait escrow before requesting resend Unsegmentation (request resends of missing segment)

## 19.23 SaltStack Git Policy

The SaltStack team follows a git policy to maintain stability and consistency with the repository.

The git policy has been developed to encourage contributions and make contributing to Salt as easy as possible. Code contributors to SaltStack projects DO NOT NEED TO READ THIS DOCUMENT, because all contributions come into SaltStack via a single gateway to make it as easy as possible for contributors to give us code.

The primary rule of git management in SaltStack is to make life easy on contributors and developers to send in code. Simplicity is always a goal!

### 19.23.1 New Code Entry

All new SaltStack code should be submitted against either the `develop` branch or a point release branch, depending on the nature of the submission. Please see the *Which Salt Branch?* section of Salt's *Contributing* documentation or the Release Branching section below for more information.

### 19.23.2 Release Branching

SaltStack maintains two types of releases, **Feature Releases** and **Point Releases** (also commonly referred to as **Bugfix Releases**). A feature release is managed by incrementing the first or second release point number, so 2015.5.5 -> 2015.8.0 signifies a feature release and 2015.8.0 -> 2015.8.1 signifies a point release.

#### Feature Release Branching

Each feature release is maintained in a dedicated git branch derived from the last applicable release commit on `develop`. All file changes relevant to the feature release will be completed in the `develop` branch prior to the creation of the feature release branch. The feature release branch will be named after the relevant numbers to the feature

release, which constitute the first two numbers. This means that the release branch for the 2015.8.0 series is named 2015.8.

A feature release branch is created with the following command:

```
# git checkout -b 2015.8 # From the develop branch
# git push origin 2015.8
```

## Point Releases

Each point release is derived from its parent release branch. Constructing point releases is a critical aspect of Salt development and is managed by members of the core development team. Point releases comprise bug and security fixes. Bug fixes can be made against a point release branch in one of two ways: the bug fix can be submitted directly against the point release branch, or an attempt can be made to back-port the fix to the point release branch.

Bug fixes should be made against the earliest supported release branch on which the bug is present. The Salt development team regularly merges older point release branches forward into newer point release branches. That way, the bug fixes that are submitted to older release branches can cascade up through all related release branches.

For more information, please see the *Which Salt Branch?* section of Salt's *Contributing* documentation.

Determining when a point release is going to be made is up to the project leader (Thomas Hatch). Generally point releases are made every 2-4 weeks or if there is a security fix they can be made sooner.

The point release is only designated by tagging the commit on the release branch with a release number using the existing convention (version 2015.8.1 is tagged with v2015.8.1). From the tag point a new source tarball is generated and published to PyPI, and a release announcement is made.

## 19.24 Salt Conventions

### 19.24.1 Writing Salt Documentation

Salt's documentation is built using the *Sphinx* documentation system. It can be built in a large variety of output formats including HTML, PDF, ePub, and manpage.

All the documentation is contained in the main Salt repository. Speaking broadly, most of the narrative documentation is contained within the <https://github.com/saltstack/salt/blob/develop/doc> subdirectory and most of the reference and API documentation is written inline with Salt's Python code and extracted using a Sphinx extension.

#### Style

The Salt project recommends the *IEEE style guide* as a general reference for writing guidelines. Those guidelines are not strictly enforced but rather serve as an excellent resource for technical writing questions. The *NCBI style guide* is another very approachable resource.

#### Point-of-view

Use third-person perspective and avoid ``I'', ``we'', ``you'' forms of address. Identify the addressee specifically e.g., ``users should'', ``the compiler does'', etc.

## Active voice

Use active voice and present-tense. Avoid filler words.

## Title capitalization

Document titles and section titles within a page should follow normal sentence capitalization rules. Words that are capitalized as part of a regular sentence should be capitalized in a title and otherwise left as lowercase. Punctuation can be omitted unless it aids the intent of the title (e.g., exclamation points or question marks).

For example:

```
This is a main heading
```

```
=====
```

Paragraph.

```
This is an exciting sub-heading!
```

```
-----
```

Paragraph.

## Serial Commas

According to Wikipedia: In English punctuation, a serial comma or series comma (also called Oxford comma and Harvard comma) is a comma placed immediately before the coordinating conjunction (usually ``and'', ``or'', or ``nor'') in a series of three or more terms. For example, a list of three countries might be punctuated either as ``France, Italy, and Spain'' (with the serial comma), or as ``France, Italy and Spain'' (without the serial comma)."

When writing a list that includes three or more items, the serial comma should always be used.

## Documenting modules

Documentation for Salt's various module types is inline in the code. During the documentation build process it is extracted and formatted into the final HTML, PDF, etc format.

## Inline documentation

Python has special multi-line strings called docstrings as the first element in a function or class. These strings allow documentation to live alongside the code and can contain special formatting. For example:

```
def my_function(value):  
    '''  
    Upper-case the given value  
  
    Usage:  
  
    .. code-block:: python  
  
    val = 'a string'  
    new_val = myfunction(val)  
    print(new_val) # 'A STRING'
```

```

:param value: a string
:return: a copy of ``value`` that has been upper-cased
'''
return value.upper()

```

### Specify a release for additions or changes

New functions or changes to existing functions should include a marker that denotes what Salt release will be affected. For example:

```

def my_function(value):
    '''
    Upper-case the given value

    .. versionadded:: 2014.7.0

    <...snip...>
    '''
    return value.upper()

```

For changes to a function:

```

def my_function(value, strip=False):
    '''
    Upper-case the given value

    .. versionchanged:: 2016.3.0
       Added a flag to also strip whitespace from the string.

    <...snip...>
    '''
    if strip:
        return value.upper().strip()
    return value.upper()

```

### Adding module documentation to the index

Each module type has an index listing all modules of that type. For example: *execution modules*, *state modules*, *renderer modules*. New modules must be added to the index manually.

1. Edit the file for the module type: *execution modules*, *state modules*, *renderer modules*, etc.
2. Add the new module to the alphabetized list.
3. *Build the documentation* which will generate an `.rst` file for the new module in the same directory as the `index.rst`.
4. Commit the changes to `index.rst` and the new `.rst` file and send a pull request.

### Cross-references

The Sphinx documentation system contains a wide variety of cross-referencing capabilities.

## Glossary entries

Link to glossary entries using the [term role](#). A cross-reference should be added the first time a Salt-specific term is used in a document.

```
A common way to encapsulate master-side functionality is by writing a
custom :term:`Runner Function`. Custom Runner Functions are easy to write.
```

## Index entries

Sphinx automatically generates many kinds of index entries, but it is occasionally useful to manually add items to the index.

One method is to use the [index directive](#) above the document or section that should appear in the index.

```
.. index:: ! Event, event bus, event system
   see: Reactor; Event
```

Another method is to use the [index role](#) inline with the text that should appear in the index. The index entry is created and the target text is left otherwise intact.

```
Information about the :index:`Salt Reactor`
-----
```

Paragraph.

## Documents and sections

Each document should contain a unique top-level label of the form:

```
.. _my-page:
```

```
My page
=====
```

Paragraph.

Unique labels can be linked using the [ref role](#). This allows cross-references to survive document renames or movement.

```
For more information see :ref:`my-page`.
```

Note, the `:doc:` role should *not* be used to link documents together.

## Modules

Cross-references to Salt modules can be added using Sphinx's Python domain roles. For example, to create a link to the `test.ping` function:

```
A useful execution module to test active communication with a minion is the
:py:func:`test.ping <salt.modules.test.ping>` function.
```

Salt modules can be referenced as well:

```
The :py:mod:`test module <salt.modules.test>` contains many useful
functions for inspecting an active Salt connection.
```

The same syntax works for all modules types:

```
One of the workhorse state module functions in Salt is the
:py:func:`file.managed <salt.states.file.managed>` function.
```

## Settings

Individual settings in the Salt Master or Salt Minion configuration files are cross-referenced using two custom roles, `conf_master`, and `conf_minion`.

```
The :conf_minion:`minion ID <id>` setting is a unique identifier for a
single minion.
```

## Documentation Changes and Fixes

Documentation changes and fixes should be made against the earliest supported release branch that the update applies to. The practice of updating a release branch instead of making all documentation changes against Salt's main, default branch, `develop`, is necessary in order for the docs to be as up-to-date as possible when the docs are built.

The workflow mentioned above is also in line with the recommendations outlined in Salt's [Contributing](#) page. You can read more about how to choose where to submit documentation fixes by reading the [Salt's Branch Topology](#) section.

For an explanation of how to submit changes against various branches, see the [Sending a GitHub pull request](#) section. Specifically, see the section describing how to `Create a new branch` and the steps that follow.

## Building the documentation

1. Install Sphinx using a system package manager or pip. The package name is often of the form `python-sphinx`. There are no other dependencies.
2. Build the documentation using the provided Makefile or `.bat` file on Windows.

```
cd /path/to/salt/doc
make html
```

3. The generated documentation will be written to the `doc/_build/<format>` directory.
4. A useful method of viewing the HTML documentation locally is to start Python's built-in HTTP server:

```
cd /path/to/salt/doc/_build/html
python -m SimpleHTTPServer
```

Then pull up the documentation in a web browser at <http://localhost:8000/>.

## 19.24.2 Salt Formulas

Formulas are pre-written Salt States. They are as open-ended as Salt States themselves and can be used for tasks such as installing a package, configuring, and starting a service, setting up users or permissions, and many other common tasks.

All official Salt Formulas are found as separate Git repositories in the ``saltstack-formulas" organization on GitHub:

<https://github.com/saltstack-formulas>

As a simple example, to install the popular Apache web server (using the normal defaults for the underlying distro) simply include the `apache-formula` from a top file:

```
base:
  'web*':
    - apache
```

### Installation

Each Salt Formula is an individual Git repository designed as a drop-in addition to an existing Salt State tree. Formulas can be installed in the following ways.

#### Adding a Formula as a GitFS remote

One design goal of Salt's GitFS fileserver backend was to facilitate reusable States. GitFS is a quick and natural way to use Formulas.

1. *Install and configure GitFS.*
2. Add one or more Formula repository URLs as remotes in the `gitfs_remotes` list in the Salt Master configuration file:

```
gitfs_remotes:
  - https://github.com/saltstack-formulas/apache-formula
  - https://github.com/saltstack-formulas/memcached-formula
```

**We strongly recommend forking a formula repository** into your own GitHub account to avoid unexpected changes to your infrastructure.

Many Salt Formulas are highly active repositories so pull new changes with care. Plus any additions you make to your fork can be easily sent back upstream with a quick pull request!

3. Restart the Salt master.

#### Adding a Formula directory manually

Formulas are simply directories that can be copied onto the local file system by using Git to clone the repository or by downloading and expanding a tarball or zip file of the repository. The directory structure is designed to work with `file_roots` in the Salt master configuration.

1. Clone or download the repository into a directory:

```
mkdir -p /srv/formulas
cd /srv/formulas
git clone https://github.com/saltstack-formulas/apache-formula.git
```

```
# or

mkdir -p /srv/formulas
cd /srv/formulas
wget https://github.com/saltstack-formulas/apache-formula/archive/master.tar.gz
tar xf apache-formula-master.tar.gz
```

2. Add the new directory to `file_roots`:

```
file_roots:
  base:
    - /srv/salt
    - /srv/formulas/apache-formula
```

3. Restart the Salt Master.

## Usage

Each Formula is intended to be immediately usable with sane defaults without any additional configuration. Many formulas are also configurable by including data in Pillar; see the `pillar.example` file in each Formula repository for available options.

### Including a Formula in an existing State tree

Formula may be included in an existing `sls` file. This is often useful when a state you are writing needs to `require` or `extend` a state defined in the formula.

Here is an example of a state that uses the `epel-formula` in a `require` declaration which directs Salt to not install the `python26` package until after the EPEL repository has also been installed:

```
include:
  - epel

python26:
  pkg.installed:
    - require:
      - pkg: epel
```

### Including a Formula from a Top File

Some Formula perform completely standalone installations that are not referenced from other state files. It is usually cleanest to include these Formula directly from a Top File.

For example the easiest way to set up an OpenStack deployment on a single machine is to include the `openstack-standalone-formula` directly from a `top.sls` file:

```
base:
  'myopenstackmaster':
    - openstack
```

Quickly deploying OpenStack across several dedicated machines could also be done directly from a Top File and may look something like this:

```
base:
  'controller':
    - openstack.horizon
    - openstack.keystone
  'hyper-*':
    - openstack.nova
    - openstack.glance
  'storage-*':
    - openstack.swift
```

## Configuring Formula using Pillar

Salt Formulas are designed to work out of the box with no additional configuration. However, many Formula support additional configuration and customization through *Pillar*. Examples of available options can be found in a file named `pillar.example` in the root directory of each Formula repository.

## Using Formula with your own states

Remember that Formula are regular Salt States and can be used with all Salt's normal state mechanisms. Formula can be required from other States with *require* declarations, they can be modified using `extend`, they can be made to watch other states with *The\_in versions of requisites*.

The following example uses the stock `apache-formula` alongside a custom state to create a vhost on a Debian/Ubuntu system and to reload the Apache service whenever the vhost is changed.

```
# Include the stock, upstream apache formula.
include:
  - apache

# Use the watch_in requisite to cause the apache service state to reload
# apache whenever the my-example-com-vhost state changes.
my-example-com-vhost:
  file:
    - managed
    - name: /etc/apache2/sites-available/my-example-com
    - watch_in:
      - service: apache
```

Don't be shy to read through the source for each Formula!

## Reporting problems & making additions

Each Formula is a separate repository on GitHub. If you encounter a bug with a Formula please file an issue in the respective repository! Send fixes and additions as a pull request. Add tips and tricks to the repository wiki.

## Writing Formulas

Each Formula is a separate repository in the `saltstack-formulas` organization on GitHub.

---

**Note:** Get involved creating new Formulas

The best way to create new Formula repositories for now is to create a repository in your own account on GitHub and notify a SaltStack employee when it is ready. We will add you to the contributors team on the [saltstack-formulas](#) organization and help you transfer the repository over. Ping a SaltStack employee on IRC (#salt on Freenode) or send an email to the [salt-users](#) mailing list.

There are a lot of repositories in that organization! Team members can manage which repositories they are subscribed to on GitHub's watching page: <https://github.com/watching>.

## Style

Maintainability, readability, and reusability are all marks of a good Salt sls file. This section contains several suggestions and examples.

```
# Deploy the stable master branch unless version overridden by passing
# Pillar at the CLI or via the Reactor.

deploy_myapp:
  git.latest:
    - name: git@github.com/myco/myapp.git
    - version: {{ salt.pillar.get('myapp:version', 'master') }}
```

## Use a descriptive State ID

The ID of a state is used as a unique identifier that may be referenced via other states in *requisites*. It must be unique across the whole state tree (*it is a key in a dictionary*, after all).

In addition a state ID should be descriptive and serve as a high-level hint of what it will do, or manage, or change. For example, `deploy_webapp`, or `apache`, or `reload_firewall`.

## Use `module.function` notation

So-called "short-declaration" notation is preferred for referencing state modules and state functions. It provides a consistent pattern of `module.function` shared between Salt States, the Reactor, Salt Mine, the Scheduler, as well as with the CLI.

```
# Do
apache:
  pkg.installed:
    - name: httpd

# Don't
apache:
  pkg:
    - installed
    - name: httpd
```

Salt's state compiler will transform "short-decs" into the longer format *when compiling the human-friendly highstate structure into the machine-friendly lowstate structure*.

## Specify the `name` parameter

Use a unique and permanent identifier for the state ID and reserve name for data with variability.

The *name declaration* is a required parameter for all state functions. The state ID will implicitly be used as name if it is not explicitly set in the state.

In many state functions the name parameter is used for data that varies such as OS-specific package names, OS-specific file system paths, repository addresses, etc. Any time the ID of a state changes all references to that ID must also be changed. Use a permanent ID when writing a state the first time to future-proof that state and allow for easier refactors down the road.

### Comment state files

YAML allows comments at varying indentation levels. It is a good practice to comment state files. Use vertical whitespace to visually separate different concepts or actions.

```
# Start with a high-level description of the current sls file.
# Explain the scope of what it will do or manage.

# Comment individual states as necessary.
update_a_config_file:
  # Provide details on why an unusual choice was made. For example:
  #
  # This template is fetched from a third-party and does not fit our
  # company norm of using Jinja. This must be processed using Mako.
  file.managed:
    - name: /path/to/file.cfg
    - source: salt://path/to/file.cfg.template
    - template: mako

  # Provide a description or explanation that did not fit within the state
  # ID. For example:
  #
  # Update the application's last-deployed timestamp.
  # This is a workaround until Bob configures Jenkins to automate RPM
  # builds of the app.
  cmd.run:
    # FIXME: Joe needs this to run on Windows by next quarter. Switch these
    # from shell commands to Salt's file.managed and file.replace state
    # modules.
    - name: |
        touch /path/to/file_last_updated
        sed -e 's/foo/bar/g' /path/to/file_environment
    - onchanges:
      - file: a_config_file
```

Be careful to use Jinja comments for commenting Jinja code and YAML comments for commenting YAML code.

```
# BAD EXAMPLE
# The Jinja in this YAML comment is still executed!
# {% set apache_is_installed = 'apache' in salt.pkg.list_pkgs() %}

# GOOD EXAMPLE
# The Jinja in this Jinja comment will not be executed.
{# {% set apache_is_installed = 'apache' in salt.pkg.list_pkgs() %} #}
```

## Easy on the Jinja!

Jinja templating provides vast flexibility and power when building Salt sls files. It can also create an unmaintainable tangle of logic and data. Speaking broadly, Jinja is best used when kept apart from the states (as much as is possible).

Below are guidelines and examples of how Jinja can be used effectively.

## Know the evaluation and execution order

High-level knowledge of how Salt states are compiled and run is useful when writing states.

The default *renderer* setting in Salt is Jinja piped to YAML. Each is a separate step. Each step is not aware of the previous or following step. Jinja is not YAML aware, YAML is not Jinja aware; they cannot share variables or interact.

- Whatever the Jinja step produces must be valid YAML.
- Whatever the YAML step produces must be a valid *highstate data structure*. (This is also true of the final step for *any of the alternate renderers* in Salt.)
- Highstate can be thought of as a human-friendly data structure; easy to write and easy to read.
- Salt's state compiler validates the *highstate* and compiles it to low state.
- Low state can be thought of as a machine-friendly data structure. It is a list of dictionaries that each map directly to a function call.
- Salt's state system finally starts and executes on each "chunk" in the low state. Remember that requisites are evaluated at runtime.
- The return for each function call is added to the "running" dictionary which is the final output at the end of the state run.

The full evaluation and execution order:

```
Jinja -> YAML -> Highstate -> low state -> execution
```

## Avoid changing the underlying system with Jinja

Avoid calling commands from Jinja that change the underlying system. Commands run via Jinja do not respect Salt's dry-run mode (`test=True`)! This is usually in conflict with the idempotent nature of Salt states unless the command being run is also idempotent.

## Inspect the local system

A common use for Jinja in Salt states is to gather information about the underlying system. The `grains` dictionary available in the Jinja context is a great example of common data points that Salt itself has already gathered. Less common values are often found by running commands. For example:

```
{% set is_selinux_enabled = salt.cmd.run('sestatus') == '1' %}
```

This is usually best done with a variable assignment in order to separate the data from the state that will make use of the data.

## Gather external data

One of the most common uses for Jinja is to pull external data into the state file. External data can come from anywhere like API calls or database queries, but it most commonly comes from flat files on the file system or Pillar data from the Salt Master. For example:

```
{% set some_data = salt.pillar.get('some_data', {'sane default': True}) %}

{# or #}

{% import_yaml 'path/to/file.yaml' as some_data %}

{# or #}

{% import_json 'path/to/file.json' as some_data %}

{# or #}

{% import_text 'path/to/ssh_key.pub' as ssh_pub_key %}

{# or #}

{% from 'path/to/other_file.jinja' import some_data with context %}
```

This is usually best done with a variable assignment in order to separate the data from the state that will make use of the data.

## Light conditionals and looping

Jinja is extremely powerful for programmatically generating Salt states. It is also easy to overuse. As a rule of thumb, if it is hard to read it will be hard to maintain!

Separate Jinja control-flow statements from the states as much as is possible to create readable states. Limit Jinja within states to simple variable lookups.

Below is a simple example of a readable loop:

```
{% for user in salt.pillar.get('list_of_users', []) %}

{# Ensure unique state IDs when looping. #}
{{ user.name }}-{{ loop.index }}:
  user.present:
    - name: {{ user.name }}
    - shell: {{ user.shell }}

{% endfor %}
```

Avoid putting a Jinja conditionals within Salt states where possible. Readability suffers and the correct YAML indentation is difficult to see in the surrounding visual noise. Parametrization (discussed below) and variables are both useful techniques to avoid this. For example:

```
{# ---- Bad example ---- #}

apache:
  pkg.installed:
    {% if grains.os_family == 'RedHat' %}
    - name: httpd
```

```

    {% elif grains.os_family == 'Debian' %}
    - name: apache2
    {% endif %}

{# ---- Better example ---- #}

{% if grains.os_family == 'RedHat' %}
{% set name = 'httpd' %}
{% elif grains.os_family == 'Debian' %}
{% set name = 'apache2' %}
{% endif %}

apache:
  pkg.installed:
    - name: {{ name }}

{# ---- Good example ---- #}

{% set name = {
  'RedHat': 'httpd',
  'Debian': 'apache2',
}.get(grains.os_family) %}

apache:
  pkg.installed:
    - name: {{ name }}

```

Dictionaries are useful to effectively ``namespace'' a collection of variables. This is useful with parametrization (discussed below). Dictionaries are also easily combined and merged. And they can be directly serialized into YAML which is often easier than trying to create valid YAML through templating. For example:

```

{# ---- Bad example ---- #}

haproxy_conf:
  file.managed:
    - name: /etc/haproxy/haproxy.cfg
    - template: jinja
    {% if 'external_loadbalancer' in grains.roles %}
    - source: salt://haproxy/external_haproxy.cfg
    {% elif 'internal_loadbalancer' in grains.roles %}
    - source: salt://haproxy/internal_haproxy.cfg
    {% endif %}
    - context:
      {% if 'external_loadbalancer' in grains.roles %}
      ssl_termination: True
      {% elif 'internal_loadbalancer' in grains.roles %}
      ssl_termination: False
      {% endif %}

{# ---- Better example ---- #}

{% load_yaml as haproxy_defaults %}
common_settings:
  bind_port: 80

internal_loadbalancer:
  source: salt://haproxy/internal_haproxy.cfg
  settings:

```

```
bind_port: 8080
ssl_termination: False

external_loadbalancer:
  source: salt://haproxy/external_haproxy.cfg
  settings:
    ssl_termination: True
{% endload %}

{% if 'external_loadbalancer' in grains.roles %}
{% set haproxy = haproxy_defaults['external_loadbalancer'] %}
{% elif 'internal_loadbalancer' in grains.roles %}
{% set haproxy = haproxy_defaults['internal_loadbalancer'] %}
{% endif %}

{% do haproxy.settings.update(haproxy_defaults.common_settings) %}

haproxy_conf:
  file.managed:
    - name: /etc/haproxy/haproxy.cfg
    - template: jinja
    - source: {{ haproxy.source }}
    - context: {{ haproxy.settings | yaml() }}
```

There is still room for improvement in the above example. For example, extracting into an external file or replacing the if-elif conditional with a function call to filter the correct data more succinctly. However, the state itself is simple and legible, the data is separate and also simple and legible. And those suggested improvements can be made at some future date without altering the state at all!

### Avoid heavy logic and programming

Jinja is not Python. It was made by Python programmers and shares many semantics and some syntax but it does not allow for arbitrary Python function calls or Python imports. Jinja is a fast and efficient templating language but the syntax can be verbose and visually noisy.

Once Jinja use within an sls file becomes slightly complicated -- long chains of if-elif-elif-else statements, nested conditionals, complicated dictionary merges, wanting to use sets -- instead consider using a different Salt renderer, such as the Python renderer. As a rule of thumb, if it is hard to read it will be hard to maintain -- switch to a format that is easier to read.

Using alternate renderers is very simple to do using Salt's ``she-bang" syntax at the top of the file. The Python renderer must simply return the correct *highstate data structure*. The following example is a state tree of two sls files, one simple and one complicated.

/srv/salt/top.sls:

```
base:
  '*':
    - common_configuration
    - roles_configuration
```

/srv/salt/common\_configuration.sls:

```
common_users:
  user.present:
    - names: [larry, curly, moe]
```

/srv/salt/roles\_configuration:

```
#!/py
def run():
    list_of_roles = set()

    # This example has the minion id in the form 'web-03-dev'.
    # Easily access the grains dictionary:
    try:
        app, instance_number, environment = __grains__['id'].split('-')
        instance_number = int(instance_number)
    except ValueError:
        app, instance_number, environment = ['Unknown', 0, 'dev']

    list_of_roles.add(app)

    if app == 'web' and environment == 'dev':
        list_of_roles.add('primary')
        list_of_roles.add('secondary')
    elif app == 'web' and environment == 'staging':
        if instance_number == 0:
            list_of_roles.add('primary')
        else:
            list_of_roles.add('secondary')

    # Easily cross-call Salt execution modules:
    if __salt__['myutils.query_valid_ec2_instance']():
        list_of_roles.add('is_ec2_instance')

    return {
        'set_roles_grains': {
            'grains.present': [
                {'name': 'roles'},
                {'value': list(list_of_roles)},
            ],
        },
    }
}
```

## Jinja Macros

In Salt sls files Jinja macros are useful for one thing and one thing only: creating mini templates that can be reused and rendered on demand. Do not fall into the trap of thinking of macros as functions; Jinja is not Python (see above).

Macros are useful for creating reusable, parameterized states. For example:

```
{% macro user_state(state_id, user_name, shell='/bin/bash', groups=[]) %}
{{ state_id }}:
  user.present:
    - name: {{ user_name }}
    - shell: {{ shell }}
    - groups: {{ groups | json() }}
{% endmacro %}

{% for user_info in salt.pillar.get('my_users', []) %}
{{ user_state('user_number_' ~ loop.index, **user_info) }}
{% endfor %}
```

Macros are also useful for creating one-off ``serializers" that can accept a data structure and write that out as a domain-specific configuration file. For example, the following macro could be used to write a php.ini config file:

/srv/salt/php.sls:

```
php_ini:
  file.managed:
    - name: /etc/php.ini
    - source: salt://php.ini.tpl
    - template: jinja
    - context:
      php_ini_settings: {{ salt.pillar.get('php_ini', {}) | json() }}
```

/srv/pillar/php.sls:

```
php_ini:
  PHP:
    engine: 'On'
    short_open_tag: 'Off'
    error_reporting: 'E_ALL & ~E_DEPRECATED & ~E_STRICT'
```

/srv/salt/php.ini.tpl:

```
{% macro php_ini_serializer(data) %}
{% for section_name, name_val_pairs in data.items() %}
[{{ section_name }}]
{% for name, val in name_val_pairs.items() -%}
{{ name }} = "{{ val }}"
{% endfor %}
{% endfor %}
{% endmacro %}

; File managed by Salt at <{{ source }}>.
; Your changes will be overwritten.

{{ php_ini_serializer(php_ini_settings) }}
```

## Abstracting static defaults into a lookup table

Separate data that a state uses from the state itself to increase the flexibility and reusability of a state.

An obvious and common example of this is platform-specific package names and file system paths. Another example is sane defaults for an application, or common settings within a company or organization. Organizing such data as a dictionary (aka hash map, lookup table, associative array) often provides a lightweight namespacing and allows for quick and easy lookups. In addition, using a dictionary allows for easily merging and overriding static values within a lookup table with dynamic values fetched from Pillar.

A strong convention in Salt Formulas is to place platform-specific data, such as package names and file system paths, into a file named `map.jinja` that is placed alongside the state files.

The following is an example from the MySQL Formula. The `grains.filter_by` function performs a lookup on that table using the `os_family` grain (by default).

The result is that the `mysql` variable is assigned to a *subset* of the lookup table for the current platform. This allows states to reference, for example, the name of a package without worrying about the underlying OS. The syntax for referencing a value is a normal dictionary lookup in Jinja, such as `{{ mysql['service'] }}` or the shorthand `{{ mysql.service }}`.

map.jinja:

```
{% set mysql = salt['grains.filter_by']({
    'Debian': {
        'server': 'mysql-server',
        'client': 'mysql-client',
        'service': 'mysql',
        'config': '/etc/mysql/my.cnf',
        'python': 'python-mysqldb',
    },
    'RedHat': {
        'server': 'mysql-server',
        'client': 'mysql',
        'service': 'mysqld',
        'config': '/etc/my.cnf',
        'python': 'MySQL-python',
    },
    'Gentoo': {
        'server': 'dev-db/mysql',
        'client': 'dev-db/mysql',
        'service': 'mysql',
        'config': '/etc/mysql/my.cnf',
        'python': 'dev-python/mysql-python',
    },
}, merge=salt['pillar.get']('mysql:lookup')) %}
```

Values defined in the map file can be fetched for the current platform in any state file using the following syntax:

```
{% from "mysql/map.jinja" import mysql with context %}

mysql-server:
  pkg.installed:
    - name: {{ mysql.server }}
  service.running:
    - name: {{ mysql.service }}
```

### Organizing Pillar data

It is considered a best practice to make formulas expect **all** formula-related parameters to be placed under second-level lookup key, within a main namespace designated for holding data for particular service/software/etc, managed by the formula:

```
mysql:
  lookup:
    version: 5.7.11
```

### Collecting common values

Common values can be collected into a *base* dictionary. This minimizes repetition of identical values in each of the `lookup_dict` sub-dictionaries. Now only the values that are different from the base must be specified by the alternates:

map.jinja:

```
{% set mysql = salt['grains.filter_by']({
    'default': {
        'server': 'mysql-server',
        'client': 'mysql-client',
        'service': 'mysql',
        'config': '/etc/mysql/my.cnf',
        'python': 'python-mysqldb',
    },
    'Debian': {
    },
    'RedHat': {
        'client': 'mysql',
        'service': 'mysqld',
        'config': '/etc/my.cnf',
        'python': 'MySQL-python',
    },
    'Gentoo': {
        'server': 'dev-db/mysql',
        'client': 'dev-db/mysql',
        'python': 'dev-python/mysql-python',
    },
},
merge=salt['pillar.get']('mysql:lookup'), base='default') %}
```

### Overriding values in the lookup table

Allow static values within lookup tables to be overridden. This is a simple pattern which once again increases flexibility and reusability for state files.

The `merge` argument in `filter_by` specifies the location of a dictionary in Pillar that can be used to override values returned from the lookup table. If the value exists in Pillar it will take precedence.

This is useful when software or configuration files is installed to non-standard locations or on unsupported platforms. For example, the following Pillar would replace the `config` value from the call above.

```
mysql:
  lookup:
    config: /usr/local/etc/mysql/my.cnf
```

### Note: Protecting Expansion of Content with Special Characters

When templating keep in mind that YAML does have special characters for quoting, flows, and other special structure and content. When a Jinja substitution may have special characters that will be incorrectly parsed by YAML care must be taken. It is a good policy to use the `yaml_encode` or the `yaml_dquote` Jinja filters:

```
{%- set foo = 7.7 %}
{%- set bar = none %}
{%- set baz = true %}
{%- set zap = 'The word of the day is "salty".' %}
{%- set zip = '"The quick brown fox . . ."' %}

foo: {{ foo|yaml_encode }}
bar: {{ bar|yaml_encode }}
baz: {{ baz|yaml_encode }}
zap: {{ zap|yaml_encode }}
zip: {{ zip|yaml_dquote }}
```

The above will be rendered as below:

```
foo: 7.7
bar: null
baz: true
zap: "The word of the day is \"salty\"."
zip: "\"The quick brown fox . . .\""
```

The `filter_by` function performs a simple dictionary lookup but also allows for fetching data from Pillar and overriding data stored in the lookup table. That same workflow can be easily performed without using `filter_by`; other dictionaries besides data from Pillar can also be used.

```
{% set lookup_table = {...} %}
{% do lookup_table.update(salt.pillar.get('my:custom:data')) %}
```

### When to use lookup tables

The `map.jinja` file is only a convention within Salt Formulas. This greater pattern is useful for a wide variety of data in a wide variety of workflows. This pattern is not limited to pulling data from a single file or data source. This pattern is useful in States, Pillar and the Reactor, for example.

Working with a data structure instead of, say, a config file allows the data to be cobbled together from multiple sources (local files, remote Pillar, database queries, etc), combined, overridden, and searched.

Below are a few examples of what lookup tables may be useful for and how they may be used and represented.

### Platform-specific information

An obvious pattern and one used heavily in Salt Formulas is extracting platform-specific information such as package names and file system paths in a file named `map.jinja`. The pattern is explained in detail above.

### Sane defaults

Application settings can be a good fit for this pattern. Store default settings along with the states themselves and keep overrides and sensitive settings in Pillar. Combine both into a single dictionary and then write the application config or settings file.

The example below stores most of the Apache Tomcat `server.xml` file alongside the Tomcat states and then allows values to be updated or augmented via Pillar. (This example uses the BadgerFish format for transforming JSON to XML.)

`/srv/salt/tomcat/defaults.yaml`:

```
Server:
  '@port': '8005'
  '@shutdown': SHUTDOWN
GlobalNamingResources:
  Resource:
    '@auth': Container
    '@description': User database that can be updated and saved
    '@factory': org.apache.catalina.users.MemoryUserDatabaseFactory
    '@name': UserDatabase
```

```
'@pathname': conf/tomcat-users.xml
'@type': org.apache.catalina.UserDatabase
# <...snip...>
```

/srv/pillar/tomcat.sls:

```
appX:
  server_xml_overrides:
    Server:
      Service:
        '@name': Catalina
      Connector:
        '@port': '8009'
        '@protocol': AJP/1.3
        '@redirectPort': '8443'
    # <...snip...>
```

/srv/salt/tomcat/server\_xml.sls:

```
{% import_yaml 'tomcat/defaults.yaml' as server_xml_defaults %}
{% set server_xml_final_values = salt.pillar.get(
    'appX:server_xml_overrides',
    default=server_xml_defaults,
    merge=True)
%}

appX_server_xml:
  file.serialize:
    - name: /etc/tomcat/server.xml
    - dataset: {{ server_xml_final_values | json() }}
    - formatter: xml_badgerfish
```

The `file.serialize` state can provide a shorthand for creating some files from data structures. There are also many examples within Salt Formulas of creating one-off “serializers” (often as Jinja macros) that reformat a data structure to a specific config file format. For example, ``Nginx vhosts`` [\\_\\_](https://github.com/saltstack-formulas/nginx-formula/blob/5cad4512/nginx/ng/vhosts_config.sls) or the ``php.ini`` [\\_\\_](https://github.com/saltstack-formulas/php-formula/blob/82e2cd3a/php/ng/files/php.ini)

`__`: [https://github.com/saltstack-formulas/nginx-formula/blob/5cad4512/nginx/ng/vhosts\\_config.sls](https://github.com/saltstack-formulas/nginx-formula/blob/5cad4512/nginx/ng/vhosts_config.sls) `__`: <https://github.com/saltstack-formulas/php-formula/blob/82e2cd3a/php/ng/files/php.ini>

## Environment specific information

A single state can be reused when it is parameterized as described in the section below, by separating the data the state will use from the state that performs the work. This can be the difference between deploying *Application X* and *Application Y*, or the difference between production and development. For example:

/srv/salt/app/deploy.sls:

```
{# Load the map file. #}
{% import_yaml 'app/defaults.yaml' as app_defaults %}

{# Extract the relevant subset for the app configured on the current
  machine (configured via a grain in this example). #}
{% app = app_defaults.get(salt.grains.get('role')) %}

{# Allow values from Pillar to (optionally) update values from the lookup
  table. #}
{% do app_defaults.update(salt.pillar.get('myapp', {})) %}
```

```

deploy_application:
  git.latest:
    - name: {{ app.repo_url }}
    - version: {{ app.version }}
    - target: {{ app.deploy_dir }}

myco/myapp/deployed:
  event.send:
    - data:
        version: {{ app.version }}
    - onchanges:
        - git: deploy_application

```

/srv/salt/app/defaults.yaml:

```

appX:
  repo_url: git@github.com/myco/appX.git
  target: /var/www/appX
  version: master
appY:
  repo_url: git@github.com/myco/appY.git
  target: /var/www/appY
  version: v1.2.3.4

```

### Single-purpose SLS files

Each sls file in a Formula should strive to do a single thing. This increases the reusability of this file by keeping unrelated tasks from getting coupled together.

As an example, the base Apache formula should only install the Apache httpd server and start the httpd service. This is the basic, expected behavior when installing Apache. It should not perform additional changes such as set the Apache configuration file or create vhosts.

If a formula is single-purpose as in the example above, other formulas, and also other states can `include` and use that formula with *Requisites and Other Global State Arguments* without also including undesirable or unintended side-effects.

The following is a best-practice example for a reusable Apache formula. (This skips platform-specific options for brevity. See the full [apache-formula](#) for more.)

```

# apache/init.sls
apache:
  pkg.installed:
    [...]
  service.running:
    [...]

# apache/mod_wsgi.sls
include:
  - apache

mod_wsgi:
  pkg.installed:
    [...]
  - require:
    - pkg: apache

```

```
# apache/conf.sls
include:
  - apache

apache_conf:
  file.managed:
    [...]
  - watch_in:
    - service: apache
```

To illustrate a bad example, say the above Apache formula installed Apache and also created a default vhost. The `mod_wsgi` state would not be able to include the Apache formula to create that dependency tree without also installing the unneeded default vhost.

*Formulas should be reusable.* Avoid coupling unrelated actions together.

## Parameterization

*Parameterization is a key feature of Salt Formulas* and also for Salt States. Parameterization allows a single Formula to be reused across many operating systems; to be reused across production, development, or staging environments; and to be reused by many people all with varying goals.

Writing states, specifying ordering and dependencies is the part that takes the longest to write and to test. Filling those states out with data such as users or package names or file locations is the easy part. How many users, what those users are named, or where the files live are all implementation details that **should be parameterized**. This separation between a state and the data that populates a state creates a reusable formula.

In the example below the data that populates the state can come from anywhere -- it can be hard-coded at the top of the state, it can come from an external file, it can come from Pillar, it can come from an execution function call, or it can come from a database query. The state itself doesn't change regardless of where the data comes from. Production data will vary from development data will vary from data from one company to another, however the state itself stays the same.

```
{% set user_list = [
  {'name': 'larry', 'shell': 'bash'},
  {'name': 'curly', 'shell': 'bash'},
  {'name': 'moe', 'shell': 'zsh'},
] %}

{# or #}

{% set user_list = salt['pillar.get']('user_list') %}

{# or #}

{% load_json "default_users.json" as user_list %}

{# or #}

{% set user_list = salt['acme_utils.get_user_list']() %}

{% for user in list_list %}
  {{ user.name }}:
  user.present:
    - name: {{ user.name }}
{% endfor %}
```

```
- shell: {{ user.shell }}
{% endfor %}
```

## Configuration

Formulas should strive to use the defaults of the underlying platform, followed by defaults from the upstream project, followed by sane defaults for the formula itself.

As an example, a formula to install Apache **should not** change the default Apache configuration file installed by the OS package. However, the Apache formula **should** include a state to change or override the default configuration file.

## Pillar overrides

Pillar lookups must use the safe `get()` and must provide a default value. Create local variables using the Jinja `set` construct to increase readability and to avoid potentially hundreds or thousands of function calls across a large state tree.

```
{% from "apache/map.jinja" import apache with context %}
{% set settings = salt['pillar.get']('apache', {}) %}

mod_status:
  file.managed:
    - name: {{ apache.conf_dir }}
    - source: {{ settings.get('mod_status_conf', 'salt://apache/mod_status.conf') }}
    - template: {{ settings.get('template_engine', 'jinja') }}
```

Any default values used in the Formula must also be documented in the `pillar.example` file in the root of the repository. Comments should be used liberally to explain the intent of each configuration value. In addition, users should be able copy-and-paste the contents of this file into their own Pillar to make any desired changes.

## Scripting

Remember that both State files and Pillar files can easily call out to Salt *execution modules* and have access to all the system grains as well.

```
{% if '/storage' in salt['mount.active']() %}
/usr/local/etc/myfile.conf:
  file:
    - symlink
    - target: /storage/myfile.conf
{% endif %}
```

Jinja macros to encapsulate logic or conditionals are discouraged in favor of *writing custom execution modules* in Python.

## Repository structure

A basic Formula repository should have the following layout:

```
foo-formula
|-- foo/
|   |-- map.jinja
|   |-- init.sls
|   `-- bar.sls
|-- CHANGELOG.rst
|-- LICENSE
|-- pillar.example
|-- README.rst
`-- VERSION
```

**See also:**

[template-formula](#)

The [template-formula](#) repository has a pre-built layout that serves as the basic structure for a new formula repository. Just copy the files from there and edit them.

**README.rst**

The README should detail each available `.sls` file by explaining what it does, whether it has any dependencies on other formulas, whether it has a target platform, and any other installation or usage instructions or tips.

A sample skeleton for the `README.rst` file:

```
===
foo
===

Install and configure the F00 service.

.. note::

    See the full `Salt Formulas installation and usage instructions
    <http://docs.saltstack.com/en/latest/topics/development/conventions/formulas.html>
    → `_.

Available states
=====

.. contents::
   :local:

``foo``
-----

Install the ``foo`` package and enable the service.

``foo.bar``
-----

Install the ``bar`` package.
```

## CHANGELOG.rst

The `CHANGELOG.rst` file should detail the individual versions, their release date and a set of bullet points for each version highlighting the overall changes in a given version of the formula.

A sample skeleton for the `CHANGELOG.rst` file:

`CHANGELOG.rst`:

```

foo formula
=====

0.0.2 (2013-01-01)

- Re-organized formula file layout
- Fixed filename used for upstart logger template
- Allow for pillar message to have default if none specified

```

## Versioning

Formula are versioned according to Semantic Versioning, <http://semver.org/>.

**Note:** Given a version number MAJOR.MINOR.PATCH, increment the:

1. MAJOR version when you make incompatible API changes,
2. MINOR version when you add functionality in a backwards-compatible manner, and
3. PATCH version when you make backwards-compatible bug fixes.

Additional labels for pre-release and build metadata are available as extensions to the MAJOR.MINOR.PATCH format.

Formula versions are tracked using Git tags as well as the `VERSION` file in the formula repository. The `VERSION` file should contain the currently released version of the particular formula.

## Testing Formulas

A smoke-test for invalid Jinja, invalid YAML, or an invalid Salt state structure can be performed by with the `state.show_sls` function:

```

salt '*' state.show_sls apache

```

Salt Formulas can then be tested by running each `.sls` file via `state.apply` and checking the output for the success or failure of each state in the Formula. This should be done for each supported platform.

### 19.24.3 SaltStack Packaging Guide

Since Salt provides a powerful toolkit for system management and automation, the package can be spit into a number of sub-tools. While packaging Salt as a single package containing all components is perfectly acceptable, the split packages should follow this convention.

## Patching Salt For Distributions

The occasion may arise where Salt source and default configurations may need to be patched. It is preferable if Salt is only patched to include platform specific additions or to fix release time bugs. It is preferable that configuration settings and operations remain in the default state, as changes here lowers the user experience for users moving across distributions.

In the event where a packager finds a need to change the default configuration it is advised to add the files to the master.d or minion.d directories.

## Source Files

Release packages should always be built from the source tarball distributed via pypi. Release packages should *NEVER* use a git checkout as the source for distribution.

## Single Package

Shipping Salt as a single package, where the minion, master, and all tools are together is perfectly acceptable and practiced by distributions such as FreeBSD.

## Split Package

Salt Should always be split in a standard way, with standard dependencies, this lowers cross distribution confusion about what components are going to be shipped with specific packages. These packages can be defined from the Salt Source as of Salt 2014.1.0:

## Salt Common

The *salt-common* or *salt* package should contain the files provided by the salt python package, or all files distributed from the `salt/` directory in the source distribution packages. The documentation contained under the `doc/` directory can be a part of this package but splitting out a doc package is preferred. Since `salt-call` is the entry point to utilize the libs and is useful for all salt packages it is included in the *salt-common* package.

### Name

- *salt* OR *salt-common*

### Files

- *salt/\**
- *man/salt.7*
- *scripts/salt-call*
- *tests/\**
- *man/salt-call.1*

## Depends

- *Python 2.6-2.7*
- *PyYAML*
- *Jinja2*

## Salt Master

The *salt-master* package contains the applicable scripts, related man pages and init information for the given platform.

## Name

- *salt-master*

## Files

- *scripts/salt-master*
- *scripts/salt*
- *scripts/salt-run*
- *scripts/salt-key*
- *scripts/salt-cp*
- *pkg/<master init data>*
- *man/salt.1*
- *man/salt-master.1*
- *man/salt-run.1*
- *man/salt-key.1*
- *man/salt-cp.1*
- *conf/master*

## Depends

- *Salt Common*
- *ZeroMQ* >= 3.2
- *PyZMQ* >= 2.10
- *PyCrypto*
- *M2Crypto*
- *Python MessagePack* (Messagepack C lib, or msgpack-pure)

## Salt Syndic

The Salt Syndic package can be rolled completely into the Salt Master package. Platforms which start services as part of the package deployment need to maintain a separate *salt-syndic* package (primarily Debian based platforms).

The Syndic may optionally not depend on anything more than the Salt Master since the master will bring in all needed dependencies, but fall back to the platform specific packaging guidelines.

### Name

- *salt-syndic*

### Files

- *scripts/salt-syndic*
- *pkg/<syndic init data>*
- *man/salt-syndic.1*

### Depends

- *Salt Common*
- *Salt Master*
- *ZeroMQ* >= 3.2
- *PyZMQ* >= 2.10
- *PyCrypto*
- *M2Crypto*
- *Python MessagePack* (Messagepack C lib, or msgpack-pure)

## Salt Minion

The Minion is a standalone package and should not be split beyond the *salt-minion* and *salt-common* packages.

### Name

- *salt-minion*

### Files

- *scripts/salt-minion*
- *pkg/<minion init data>*
- *man/salt-minion.1*
- *conf/minion*

## Depends

- *Salt Common*
- *ZeroMQ* >= 3.2
- *PyZMQ* >= 2.10
- *PyCrypto*
- *M2Crypto*
- *Python MessagePack* (Messagepack C lib, or msgpack-pure)

## Salt SSH

Since Salt SSH does not require the same dependencies as the minion and master, it should be split out.

### Name

- *salt-ssh*

### Files

- *scripts/salt-ssh*
- *man/salt-ssh.1*
- *conf/cloud\**

## Depends

- *Salt Common*
- *Python MessagePack* (Messagepack C lib, or msgpack-pure)

## Salt Cloud

As of Salt 2014.1.0 Salt Cloud is included in the same repo as Salt. This can be split out into a separate package or it can be included in the salt-master package.

### Name

- *salt-cloud*

### Files

- *scripts/salt-cloud*
- *man/salt-cloud.1*

### Depends

- *Salt Common*
- *apache libcloud* >= 0.14.0

### Salt Doc

The documentation package is very distribution optional. A completely split package will split out the documentation, but some platform conventions do not prefer this. If the documentation is not split out, it should be included with the *Salt Common* package.

### Name

- *salt-doc*

### Files

- *doc/\**

### Optional Depends

- *Salt Common*
- *Python Sphinx*
- *Make*

## 19.24.4 Salt Release Process

The goal for Salt projects is to cut a new feature release every four to six months. This document outlines the process for these releases, and the subsequent bug fix releases which follow.

### Feature Release Process

When a new release is ready to be cut, the person responsible for cutting the release will follow the following steps (written using the 0.16 release as an example):

1. All open issues on the release milestone should be moved to the next release milestone. (e.g. from the 0.16 milestone to the 0.17 milestone)
2. Release notes should be created documenting the major new features and bugfixes in the release.
3. Create an annotated tag with only the major and minor version numbers, preceded by the letter v. (e.g. v0.16) This tag will reside on the `develop` branch.
4. Create a branch for the new release, using only the major and minor version numbers. (e.g. 0.16)
5. On this new branch, create an annotated tag for the first revision release, which is generally a release candidate. It should be preceded by the letter v. (e.g. v0.16.0rc1)
6. The release should be packaged from this annotated tag and uploaded to PyPI as well as the GitHub releases page for this tag.

7. The packagers should be notified on the [salt-packagers](#) mailing list so they can create packages for all the major operating systems. (note that release candidates should go in the testing repositories)
8. After the packagers have been given a few days to compile the packages, the release is announced on the [salt-users](#) mailing list.
9. Log into RTD and add the new release there. (Have to do it manually)

### Maintenance and Bugfix Releases

Once a feature release branch has been cut from `develop`, the branch moves into a "feature freeze" state. The new release branch enters the merge-forward chain and only bugfixes should be applied against the new branch. Once major bugs have been fixed, a bugfix release can be cut:

1. On the release branch (i.e. `0.16`), create an annotated tag for the revision release. It should be preceded by the letter `v`. (e.g. `v0.16.2`) Release candidates are unnecessary for bugfix releases.
2. The release should be packaged from this annotated tag and uploaded to PyPI.
3. The packagers should be notified on the [salt-packagers](#) mailing list so they can create packages for all the major operating systems.
4. After the packagers have been given a few days to compile the packages, the release is announced on the [salt-users](#) mailing list.

For more information about the difference between the `develop` branch and bugfix release branches, please refer to the [Which Salt Branch?](#) section of Salt's [Contributing](#) documentation.

### 19.24.5 Salt Coding Style

Salt is developed with a certain coding style, while the style is dominantly PEP 8 it is not completely PEP 8. It is also noteworthy that a few development techniques are also employed which should be adhered to. In the end, the code is made to be "Salty".

Most importantly though, we will accept code that violates the coding style and KINDLY ask the contributor to fix it, or go ahead and fix the code on behalf of the contributor. Coding style is NEVER grounds to reject code contributions, and is never grounds to talk down to another member of the community (There are no grounds to treat others without respect, especially people working to improve Salt)!!

#### Linting

Most Salt style conventions are codified in Salt's `.pylintrc` file. Salt's `pylint` file has two dependencies: `pylint` and `saltpylint`. You can install these dependencies with `pip`:

```
pip install pylint
pip install saltpylint
```

The `.pylintrc` file is found in the root of the Salt project and can be passed as an argument to the `pylint` program as follows:

```
pylint --rcfile=/path/to/salt/.pylintrc salt/dir/to/lint
```

## Variables

Variables should be a minimum of three characters and should provide an easy-to-understand name of the object being represented.

When keys and values are iterated over, descriptive names should be used to represent the temporary variables.

Multi-word variables should be separated by an underscore.

Variables which are two-letter words should have an underscore appended to them to pad them to three characters.

## Strings

Salt follows a few rules when formatting strings:

### Single Quotes

In Salt, all strings use single quotes unless there is a good reason not to. This means that docstrings use single quotes, standard strings use single quotes etc.:

```
def foo():
    """
    A function that does things
    """
    name = 'A name'
    return name
```

### Formatting Strings

All strings which require formatting should use the `.format` string method:

```
data = 'some text'
more = '{0} and then some'.format(data)
```

Make sure to use indices or identifiers in the format brackets, since empty brackets are not supported by python 2.6.

Please do NOT use printf formatting.

### Docstring Conventions

Docstrings should always add a newline, docutils takes care of the new line and it makes the code cleaner and more vertical:

*GOOD:*

```
def bar():
    """
    Here lies a docstring with a newline after the quotes and is the salty
    way to handle it! Vertical code is the way to go!
    """
    return
```

*BAD:*

```
def baz():
    '''This is not ok!'''
    return
```

When adding a new function or state, where possible try to use a `versionadded` directive to denote when the function or state was added.

```
def new_func(msg=''):
    '''
    .. versionadded:: 0.16.0

    Prints what was passed to the function.

    msg : None
        The string to be printed.
    '''
    print msg
```

If you are uncertain what version should be used, either consult a core developer in IRC or bring this up when opening your *pull request* and a core developer will add the proper version once your pull request has been merged. Bugfixes will be available in a bugfix release (i.e. 0.17.1, the first bugfix release for 0.17.0), while new features are held for feature releases, and this will affect what version number should be used in the `versionadded` directive.

Similar to the above, when an existing function or state is modified (for example, when an argument is added), then under the explanation of that new argument a `versionadded` directive should be used to note the version in which the new argument was added. If an argument's function changes significantly, the `versionchanged` directive can be used to clarify this:

```
def new_func(msg='', signature=''):
    '''
    .. versionadded:: 0.16.0

    Prints what was passed to the function.

    msg : None
        The string to be printed. Will be prepended with 'Greetings! '.

    .. versionchanged:: 0.17.1

    signature : None
        An optional signature.

    .. versionadded 0.17.0
    '''
    print 'Greetings! {0}\n\n{1}'.format(msg, signature)
```

## Dictionaries

Dictionaries should be initialized using `{}` instead of `dict()`.

See [here](#) for an in-depth discussion of this topic.

## Imports

Salt code prefers importing modules and not explicit functions. This is both a style and functional preference. The functional preference originates around the fact that the module import system used by pluggable modules will

include callable objects (functions) that exist in the direct module namespace. This is not only messy, but may unintentionally expose code python libs to the Salt interface and pose a security problem.

To say this more directly with an example, this is *GOOD*:

```
import os

def minion_path():
    path = os.path.join(self.opts['cachedir'], 'minions')
    return path
```

This on the other hand is *DISCOURAGED*:

```
from os.path import join

def minion_path():
    path = join(self.opts['cachedir'], 'minions')
    return path
```

The time when this is changed is for importing exceptions, generally directly importing exceptions is preferred:

This is a good way to import exceptions:

```
from salt.exceptions import CommandExecutionError
```

## Absolute Imports

Although `absolute imports` seems like an awesome idea, please do not use it. Extra care would be necessary all over salt's code in order for absolute imports to work as supposed. Believe it, it has been tried before and, as a tried example, by renaming `salt.modules.sysmod` to `salt.modules.sys`, all other salt modules which needed to import `sys` would have to also import `absolute_import`, which should be avoided.

---

**Note:** An exception to this rule is the `absolute_import` from `__future__` at the top of each file within the Salt project. This import is necessary for Py3 compatibility. This particular import looks like this:

```
from __future__ import absolute_import
```

This import is required for all new Salt files and is a good idea to add to any custom states or modules. However, the practice of avoiding absolute imports still applies to all other cases as to avoid a name conflict.

---

## Vertical is Better

When writing Salt code, vertical code is generally preferred. This is not a hard rule but more of a guideline. As PEP 8 specifies, Salt code should not exceed 79 characters on a line, but it is preferred to separate code out into more newlines in some cases for better readability:

```
import os

os.chmod(
    os.path.join(self.opts['sock_dir'],
                 'minion_event_pub.ipc'),
    448
)
```

Where there are more line breaks, this is also apparent when constructing a function with many arguments, something very common in state functions for instance:

```
def managed(name,
            source=None,
            source_hash='',
            user=None,
            group=None,
            mode=None,
            template=None,
            makedirs=False,
            context=None,
            replace=True,
            defaults=None,
            saltenv=None,
            backup='',
            **kwargs):
```

**Note:** Making function and class definitions vertical is only required if the arguments are longer than 80 characters. Otherwise, the formatting is optional and both are acceptable.

## Line Length

For function definitions and function calls, Salt adheres to the PEP-8 specification of at most 80 characters per line. Non function definitions or function calls, please adopt a soft limit of 120 characters per line. If breaking the line reduces the code readability, don't break it. Still, try to avoid passing that 120 characters limit and remember, **vertical is better... unless it isn't**

## Indenting

Some confusion exists in the python world about indenting things like function calls, the above examples use 8 spaces when indenting comma-delimited constructs.

The confusion arises because the pep8 program INCORRECTLY flags this as wrong, where PEP 8, the document, cites only using 4 spaces here as wrong, as it doesn't differentiate from a new indent level.

Right:

```
def managed(name,
            source=None,
            source_hash='',
            user=None)
```

WRONG:

```
def managed(name,
            source=None,
            source_hash='',
            user=None)
```

Lining up the indent is also correct:

```
def managed(name,
            source=None,
            source_hash='',
            user=None)
```

This also applies to function calls and other hanging indents.

pep8 and Flake8 (and, by extension, the vim plugin Syntastic) will complain about the double indent for hanging indents. This is a **known conflict** between pep8 (the script) and the actual PEP 8 standard. It is recommended that this particular warning be ignored with the following lines in `~/ .config/flake8`:

```
[flake8]
ignore = E226,E241,E242,E126
```

Make sure your Flake8/pep8 are up to date. The first three errors are ignored by default and are present here to keep the behavior the same. This will also work for pep8 without the Flake8 wrapper -- just replace all instances of ``flake8'` with ``pep8'`, including the filename.

## Code Churn

Many pull requests have been submitted that only churn code in the name of PEP 8. Code churn is a leading source of bugs and is strongly discouraged. While style fixes are encouraged they should be isolated to a single file per commit, and the changes should be legitimate, if there are any questions about whether a style change is legitimate please reference this document and the official PEP 8 (<http://legacy.python.org/dev/peps/pep-0008/>) document before changing code. Many claims that a change is PEP 8 have been invalid, please double check before committing fixes.

## 19.25 Salt code and internals

Reference documentation on Salt's internal code.

### 19.25.1 Contents

#### `salt.aggregation`

#### `salt.utils.aggregation`

This library makes it possible to introspect dataset and aggregate nodes when it is instructed.

---

**Note:** The following examples will be expressed in YAML for convenience's sake:

- `!aggr-scalar` will refer to Scalar python function
  - `!aggr-map` will refer to Map python object
  - `!aggr-seq` will refer for Sequence python object
-

## How to instruct merging

This yaml document has duplicate keys:

```
foo: !aggr-scalar first
foo: !aggr-scalar second
bar: !aggr-map {first: foo}
bar: !aggr-map {second: bar}
baz: !aggr-scalar 42
```

but tagged values instruct Salt that overlapping values they can be merged together:

```
foo: !aggr-seq [first, second]
bar: !aggr-map {first: foo, second: bar}
baz: !aggr-seq [42]
```

## Default merge strategy is keep untouched

For example, this yaml document still has duplicate keys, but does not instruct aggregation:

```
foo: first
foo: second
bar: {first: foo}
bar: {second: bar}
baz: 42
```

So the late found values prevail:

```
foo: second
bar: {second: bar}
baz: 42
```

## Limitations

Aggregation is permitted between tagged objects that share the same type. If not, the default merge strategy prevails.

For example, these examples:

```
foo: {first: value}
foo: !aggr-map {second: value}

bar: !aggr-map {first: value}
bar: 42

baz: !aggr-seq [42]
baz: [fail]

qux: 42
qux: !aggr-scalar fail
```

are interpreted like this:

```
foo: !aggr-map{second: value}
bar: 42
baz: [fail]
qux: !aggr-seq [fail]
```

## Introspection

TODO: write this part

```
salt.utils.aggregation.aggregate(obj_a, obj_b, level=False, map_class=<class
                                `salt.utils.aggregation.Map`>, sequence_class=<class
                                `salt.utils.aggregation.Sequence`>)
```

Merge obj\_b into obj\_a.

```
>>> aggregate('first', 'second', True) == ['first', 'second']
True
```

**class salt.utils.aggregation.Aggregate**

Aggregation base.

**class salt.utils.aggregation.Map**(\*args, \*\*kws)

Map aggregation.

**salt.utils.aggregation.Scalar**(obj)

Shortcut for Sequence creation

```
>>> Scalar('foo') == Sequence(['foo'])
True
```

**class salt.utils.aggregation.Sequence**

Sequence aggregation.

## Exceptions

Salt-specific exceptions should be thrown as often as possible so the various interfaces to Salt (CLI, API, etc) can handle those errors appropriately and display error messages appropriately.

---

*salt.exceptions*

This module is a central location for all salt exceptions

---

### salt.exceptions

This module is a central location for all salt exceptions

**exception salt.exceptions.AuthenticationError**(message='')

If sha256 signature fails during decryption

**exception salt.exceptions.AuthorizationError**(message='')

Thrown when runner or wheel execution fails due to permissions

**exception salt.exceptions.CommandExecutionError**(message='', info=None)

Used when a module runs a command which returns an error and wants to show the user the output gracefully

instead of dying

**exception** `salt.exceptions.CommandNotFoundError` (*message*='')

Used in modules or grains when a required binary is not available

**exception** `salt.exceptions.EauthAuthenticationError` (*message*='')

Thrown when eauth authentication fails

**exception** `salt.exceptions.FileLockError` (*msg*, *time\_start=None*, *\*args*, *\*\*kwargs*)

Used when an error occurs obtaining a file lock

**exception** `salt.exceptions.FileserverConfigError` (*message*='')

Used when invalid fileserver settings are detected

**exception** `salt.exceptions.GitLockError` (*errno*, *sterror*, *\*args*, *\*\*kwargs*)

Raised when an uncaught error occurs in the midst of obtaining an update/checkout lock in `salt.utils.gitfs`.

NOTE: While this uses the `errno` param similar to an `OSError`, this exception class is *not* as subclass of `OSError`. This is done intentionally, so that this exception class can be caught in a `try/except` without being caught as an `OSError`.

**exception** `salt.exceptions.GitRemoteError` (*message*='')

Used by `GitFS` to denote a problem with the existence of the ``origin" remote or part of its configuration

**exception** `salt.exceptions.LoaderError` (*message*='')

Problems loading the right renderer

**exception** `salt.exceptions.MasterExit`

Rise when the master exits

**exception** `salt.exceptions.MinionError` (*message*='')

Minion problems reading uris such as `salt://` or `http://`

**exception** `salt.exceptions.NotImplemented` (*message*='')

Used when a module runs a command which returns an error and wants to show the user the output gracefully instead of dying

**exception** `salt.exceptions.PkgParseError` (*message*='')

Used when of the `pkg` modules cannot correctly parse the output from the CLI tool (`pacman`, `yum`, `apt`, `aptitude`, etc)

**exception** `salt.exceptions.PublishError` (*message*='')

Problems encountered when trying to publish a command

**exception** `salt.exceptions.SaltCacheError` (*message*='')

Thrown when a problem was encountered trying to read or write from the salt cache

**exception** `salt.exceptions.SaltClientError` (*message*='')

Problem reading the master root key

**exception** `salt.exceptions.SaltClientTimeout` (*msg*, *jid=None*, *\*args*, *\*\*kwargs*)

Thrown when a job sent through one of the Client interfaces times out

Takes the `jid` as a parameter

**exception** `salt.exceptions.SaltCloudConfigError` (*message*='')

Raised when a configuration setting is not found and should exist.

**exception** `salt.exceptions.SaltCloudException` (*message*='')

Generic Salt Cloud Exception

**exception** `salt.exceptions.SaltCloudExecutionFailure` (*message*='')

Raised when too much failures have occurred while querying/waiting for data.

- exception** `salt.exceptions.SaltCloudExecutionTimeout` (*message*='')  
Raised when too much time has passed while querying/waiting for data.
- exception** `salt.exceptions.SaltCloudNotFound` (*message*='')  
Raised when some cloud provider function cannot find what's being searched.
- exception** `salt.exceptions.SaltCloudPasswordError` (*message*='')  
Raise when virtual terminal password input failed
- exception** `salt.exceptions.SaltCloudSystemExit` (*message*, *exit\_code*=1)  
This exception is raised when the execution should be stopped.
- exception** `salt.exceptions.SaltConfigurationError` (*message*='')  
Configuration error
- exception** `salt.exceptions.SaltDaemonNotRunning` (*message*='')  
Throw when a running master/minion/syndic is not running but is needed to perform the requested operation (e.g., eauth).
- exception** `salt.exceptions.SaltException` (*message*='')  
Base exception class; all Salt-specific exceptions should subclass this
- pack()**  
Pack this exception into a serializable dictionary that is safe for transport via msgpack
- exception** `salt.exceptions.SaltInvocationError` (*message*='')  
Used when the wrong number of arguments are sent to modules or invalid arguments are specified on the command line
- exception** `salt.exceptions.SaltMasterError` (*message*='')  
Problem reading the master root key
- exception** `salt.exceptions.SaltNoMinionsFound` (*message*='')  
An attempt to retrieve a list of minions failed
- exception** `salt.exceptions.SaltRenderError` (*message*, *line\_num*=None, *buf*='', *marker*='<=====', *trace*=None)  
Used when a renderer needs to raise an explicit error. If a line number and buffer string are passed, `get_context` will be invoked to get the location of the error.
- exception** `salt.exceptions.SaltReqTimeoutError` (*message*='')  
Thrown when a salt master request call fails to return within the timeout
- exception** `salt.exceptions.SaltRunnerError` (*message*='')  
Problem in runner
- exception** `salt.exceptions.SaltSyndicMasterError` (*message*='')  
Problem while proxying a request in the syndication master
- exception** `salt.exceptions.SaltSystemExit` (*code*=0, *msg*=None)  
This exception is raised when an unsolvable problem is found. There's nothing else to do, salt should just exit.
- exception** `salt.exceptions.SaltWheelError` (*message*='')  
Problem in wheel
- exception** `salt.exceptions.TimedProcTimeoutError` (*message*='')  
Thrown when a timed subprocess does not terminate within the timeout, or if the specified timeout is not an int or a float
- exception** `salt.exceptions.TimeoutError` (*message*='')  
Thrown when an operation cannot be completed within a given time limit.
- exception** `salt.exceptions.TokenAuthenticationError` (*message*='')  
Thrown when token authentication fails

**exception** `salt.exceptions.VMwareApiError` (*message='', info=None*)

Used when representing a generic VMware API error

**exception** `salt.exceptions.VMwareConnectionError` (*message='', info=None*)

Used when the client fails to connect to either a VMware vCenter server or to a ESXi host

**exception** `salt.exceptions.VMwareObjectRetrievalError` (*message='', info=None*)

Used when a VMware object cannot be retrieved

**exception** `salt.exceptions.VMwareRuntimeError` (*message='', info=None*)

Used when a runtime error is encountered when communicating with the vCenter

**exception** `salt.exceptions.VMwareSaltError` (*message='', info=None*)

Used when a VMware object cannot be retrieved

**exception** `salt.exceptions.VMwareSystemError` (*message='', info=None*)

Used when representing a generic VMware system error

`salt.exceptions.get_error_message` (*error*)

Get human readable message from Python Exception

## The Salt Fileserver and Client

### Introduction

Salt has a modular fileserver, and multiple client classes which are used to interact with it. This page serves as a developer's reference, to help explain how the fileserver and clients both work.

### Fileserver

The fileserver is not a daemon, so the fileserver and client are not a true server and client in the traditional sense. Instead, the fileserver is simply a class (`salt.fileserver.Fileserver`), located in `salt/fileserver/__init__.py`. This class has access to the configured fileserver backends via a loader instance, referenced as `self.servers`. When a request comes in from the fileclient, it will ultimately result in a `Fileserver` class function being run.

The functions in this class will run corresponding functions in the configured fileserver backends to perform the requested action. So, in summary:

1. A fileclient class makes a request...
2. which triggers the fileserver to run a function...
3. which runs a named function in each of the configured backends.

Not all of the functions will always execute on every configured backend. For instance, the `find_file` function in the fileserver will stop when it finds a match, so if it finds a match for the desired path in the first configured backend, it won't proceed and try to find the file in the next backend in the list.

Additionally, not all backends implement all functions in the `salt.fileserver.Fileserver` class. For instance, there is a function called `update`, which exists to update remote fileservers such as the `git`, `hg`, and `svn` backends. This action has no use however in the `roots` backend, so it is simply not implemented there, and thus the `roots` backend will be skipped if the `update` function is run on the fileserver.

Backends for the fileserver are located in `salt/fileserver/` (the files not named `__init__.py`).

### Fileclient

There are three fileclient classes:

### **salt.fileclient.RemoteClient**

This client is used when *file\_client* is set to `remote`. This is how minions request files from the master.

Functions in this client will craft a payload and send it to the master via the transport channel. This is the same way that the minion asks the master to do other things, such as updating and requesting data from the mine. The payload will be a dictionary with a key called `cmd`, and other values as needed.

Payloads sent via the transport channel are processed by an `MWorker` instance on the master, and the `MWorker`'s `_handle_aes()` function will execute the command. The command will be a function attribute of the `salt.master.AESFuncs` class. The `AESFuncs` class' `__setup_fileservers()` function instantiates a `salt.fileserver.Fileserver` instance and maps its member functions to `AESFuncs` attributes. This is what makes the fileserver functions available remotely. The result of the function is returned back through the transport channel to the minion.

Transporting files is done in chunks, the size of which is decided by the `file_buffer_size` config option. If you look at the `serve_file()` function in any of the fileserver backends, you can see how the `loc` value in the payload determines the offset so that an intermediate chunk of the file can be served. The `RemoteClient`'s `get_file()` function will loop until the end of the file is reached, retrieving one chunk at a time.

### **salt.fileclient.FSClient**

This client is used when *file\_client* is set to `local`. This is how masterless minions request files.

This class inherits from the `RemoteClient`, but instead of using a transport channel (`zmq`, `tcp`, etc.), it uses a "fake" transport channel (`salt.fileserver.FSChan`), which implements its own `send()` function. Thus, when a function that the `FSClient` inherits from the `RemoteClient` runs `self.channel.send()`, it's actually calling `salt.fileserver.FSChan.send()`, which calls corresponding functions in the `salt.fileserver.Fileserver()` class. The result is that local file requests use the same code as remote file requests, they just bypass sending them through an actual transport channel and instead call them on the `FSChan`'s `Fileserver` instance.

### **salt.fileclient.LocalClient**

This client is now used exclusively by Pillar. This used to be used when *file\_client* was set to `local`, but the `FSChan` class was written to allow minions with `file_client: local` to access the full set of backends. This class will probably be renamed at some point as it is often confused with `salt.client.LocalClient`.

## **The cp Module**

Most of the user-facing interaction with the fileclient happens via the `cp` module. The functions in this module instantiate a fileclient instance (if one is not already saved to the `__context__` dunder) and run fileclient functions.

## **Updating the Fileserver**

The master daemon spawns a process dedicated to routine maintenance tasks upon startup. This process runs an instance of `salt.master.Maintenance`, which loops forever, running a series of functions and then sleeping for a length of time determined by the `loop_interval` config option. One of the maintenance tasks is to update the fileserver, and it essentially runs `salt.fileserver.Fileserver.update()`, which as we know from above will run all configured backends' `update()` functions, if present. This is how remote fileservers like `git`, `hg`, and `svn` stay up-to-date.

For the local `file_client` (FSCClient), since it does not interact with the master, upon spawning of its FSCChan it will update the fileserver.

## Salt opts dictionary

It is very common in the Salt codebase to see `opts` referred to in a number of contexts.

For example, it can be seen as `__opts__` in certain cases, or simply as `opts` as an argument to a function in others.

Simply put, this data structure is a dictionary of Salt's runtime configuration information that's passed around in order for functions to know how Salt is configured.

When writing Python code to use specific parts of Salt, it may become necessary to initialize a copy of `opts` from scratch in order to have it available for a given function.

To do so, use the utility functions available in `salt.config`.

As an example, here is how one might generate and print an options dictionary for a minion instance:

```
import salt.config
opts = salt.config.minion_config('/etc/salt/minion')
print(opts)
```

To generate and display `opts` for a master, the process is similar:

```
import salt.config
opts = salt.config.master_config('/etc/salt/master')
print(opts)
```

## Unicode in Salt

Though Unicode handling in large projects can often be complex, Salt adheres to several basic rules to help developers handle Unicode correctly.

(For a basic introduction to this problem, see Ned Batchelder's *excellent introduction to the topic* <<http://nedbatchelder.com/text/unipain/unipain.html>>.

Salt's basic workflow for Unicode handling is as follows:

- 1) Salt should convert whatever data is passed on CLI/API to Unicode. Internally, everything that Salt does should be Unicode unless it is printing to the screen or writing to storage.
2. Modules and various Salt pluggable systems use incoming data assuming Unicode.
  - 2.1) For Salt modules that query an API; the module should convert the data received from the API into Unicode.
  - 2.2) For Salt modules that shell out to get output; the module should convert data received into Unicode. (This does not apply if using the `cmd` execution module, which should handle this for you.
  - 2.3) For Salt modules which print directly to the console (not via an outputter) or which write directly to disk, a string should be encoded when appropriate. To handle this conversion, the global variable `__salt_system_encoding__` is available, which declares the locale of the system that Salt is running on.
3. When a function in a Salt module returns, it should return Unicode.
- 4) When Salt delivers the data to an outputter or a returner, it is the job of the outputter or returner to encode the Unicode before displaying it on the console or writing it to storage.

## 19.26 Salt Community Projects

This page contains links to Salt-related projects created by community members. If you come across a useful project please add it to the list!

### 19.26.1 Hubblestack

Hubble is a modular, open-source security compliance framework built on top of SaltStack. The project provides on-demand profile-based auditing, real-time security event notifications, automated remediation, alerting and reporting.

<http://hubblestack.io/>

### 19.26.2 alkali

alkali is a collections of SaltStack states and pillar data that provide just the basics for provisioning Linux instances that may be built upon. alkali is a starter kit of sorts, to help new users to SaltStack get up-and-running quickly with the most commonly used, core packages.

<https://github.com/zulily/alkali>

### 19.26.3 buoyant

buoyant leverages docker to provide an alternative to VM-centric SaltStack development environments. buoyant containers may be spun up nearly instantly, once an initial docker image has been built.

<https://github.com/zulily/buoyant>

### 19.26.4 Salt Sandbox

Salt Sandbox is a multi-VM Vagrant-based Salt development environment used for creating and testing new Salt state modules outside of your production environment. It's also a great way to learn firsthand about Salt and its remote execution capabilities.

<https://github.com/elasticdog/salt-sandbox>

### 19.26.5 Salt Vagrant Demo

A Salt Demo using Vagrant.

<https://github.com/UtahDave/salt-vagrant-demo>

## 19.27 Salt's Test Suite: An Introduction

---

**Note:** This tutorial makes a couple of assumptions. The first assumption is that you have a basic knowledge of Salt. To get up to speed, check out the Salt Walkthrough.

The second assumption is that your Salt development environment is already configured and that you have a basic understanding of contributing to the Salt codebase. If you're unfamiliar with either of these topics, please refer to the [Installing Salt for Development](#) and the [Contributing](#) pages, respectively.

---

Salt comes with a powerful integration and unit test suite. The test suite allows for the fully automated run of integration and/or unit tests from a single interface.

Salt's test suite is located under the `tests` directory in the root of Salt's code base and is divided into two main types of tests: [unit tests](#) and [integration tests](#). The `unit` and `integration` sub-test-suites are located in the `tests` directory, which is where the majority of Salt's test cases are housed.

### 19.27.1 Getting Set Up For Tests

There are a couple of requirements, in addition to Salt's requirements, that need to be installed in order to run Salt's test suite. You can install these additional requirements using the files located in the `salt/requirements` directory, depending on your relevant version of Python:

```
pip install -r requirements/dev_python27.txt
pip install -r requirements/dev_python34.txt
```

To be able to run integration tests which utilizes ZeroMQ transport, you also need to install additional requirements for it. Make sure you have installed the C/C++ compiler and development libraries and header files needed for your Python version.

This is an example for RedHat-based operating systems:

```
yum install gcc gcc-c++ python-devel
pip install -r requirements/zeromq.txt
```

On Debian, Ubuntu or their derivatives run the following commands:

```
apt-get install build-essential python-dev
pip install -r requirements/zeromq.txt
```

This will install the latest `pycrypto` and `pyzmq` (with bundled `libzmq`) Python modules required for running integration tests suite.

### 19.27.2 Test Directory Structure

As noted in the introduction to this tutorial, Salt's test suite is located in the `tests` directory in the root of Salt's code base. From there, the tests are divided into two groups `integration` and `unit`. Within each of these directories, the directory structure roughly mirrors the directory structure of Salt's own codebase. For example, the files inside `tests/integration/modules` contains tests for the files located within `salt/modules`.

---

**Note:** `tests/integration` and `tests/unit` are the only directories discussed in this tutorial. With the exception of the `tests/runtests.py` file, which is used below in the [Running the Test Suite](#) section, the other directories and files located in `tests` are outside the scope of this tutorial.

---

#### Integration vs. Unit

Given that Salt's test suite contains two powerful, though very different, testing approaches, when should you write integration tests and when should you write unit tests?

Integration tests use Salt masters, minions, and a syndic to test salt functionality directly and focus on testing the interaction of these components. Salt's integration test runner includes functionality to run Salt execution modules, runners, states, shell commands, salt-ssh commands, salt-api commands, and more. This provides a tremendous ability to use Salt to test itself and makes writing such tests a breeze. Integration tests are the preferred method of testing Salt functionality when possible.

Unit tests do not spin up any Salt daemons, but instead find their value in testing singular implementations of individual functions. Instead of testing against specific interactions, unit tests should be used to test a function's logic. Unit tests should be used to test a function's exit point(s) such as any `return` or `raises` statements.

Unit tests are also useful in cases where writing an integration test might not be possible. While the integration test suite is extremely powerful, unfortunately at this time, it does not cover all functional areas of Salt's ecosystem. For example, at the time of this writing, there is not a way to write integration tests for Proxy Minions. Since the test runner will need to be adjusted to account for Proxy Minion processes, unit tests can still provide some testing support in the interim by testing the logic contained inside Proxy Minion functions.

### 19.27.3 Running the Test Suite

Once all of the [requirements](#) are installed, the `runtests.py` file in the `salt/tests` directory is used to instantiate Salt's test suite:

```
python tests/runtests.py [OPTIONS]
```

The command above, if executed without any options, will run the entire suite of integration and unit tests. Some tests require certain flags to run, such as destructive tests. If these flags are not included, then the test suite will only perform the tests that don't require special attention.

At the end of the test run, you will see a summary output of the tests that passed, failed, or were skipped.

The test runner also includes a `--help` option that lists all of the various command line options:

```
python tests/runtests.py --help
```

You can also call the test runner as an executable:

```
./tests/runtests.py --help
```

### Running Integration Tests

Salt's set of integration tests use Salt to test itself. The integration portion of the test suite includes some built-in Salt daemons that will spin up in preparation of the test run. This list of Salt daemon processes includes:

- 2 Salt Masters
- 2 Salt Minions
- 1 Salt Syndic

These various daemons are used to execute Salt commands and functionality within the test suite, allowing you to write tests to assert against expected or unexpected behaviors.

A simple example of a test utilizing a typical master/minion execution module command is the test for the `test_ping` function in the `tests/integration/modules/test_test.py` file:

```
def test_ping(self):  
    '''  
    test.ping
```

```
'''
self.assertTrue(self.run_function('test.ping'))
```

The test above is a very simple example where the `test.ping` function is executed by Salt's test suite runner and is asserting that the minion returned with a `True` response.

### Test Selection Options

If you look in the output of the `--help` command of the test runner, you will see a section called `Tests Selection Options`. The options under this section contain various subsections of the integration test suite such as `--modules`, `--ssh`, or `--states`. By selecting any one of these options, the test daemons will spin up and the integration tests in the named subsection will run.

```
./tests/runtests.py --modules
```

**Note:** The testing subsections listed in the `Tests Selection Options` of the `--help` output *only* apply to the integration tests. They do not run unit tests.

### Running Unit Tests

While `./tests/runtests.py` executes the *entire* test suite (barring any tests requiring special flags), the `--unit` flag can be used to run *only* Salt's unit tests. Salt's unit tests include the tests located in the `tests/unit` directory.

The unit tests do not spin up any Salt testing daemons as the integration tests do and execute very quickly compared to the integration tests.

```
./tests/runtests.py --unit
```

### Running Specific Tests

There are times when a specific test file, test class, or even a single, individual test need to be executed, such as when writing new tests. In these situations, the `--name` option should be used.

For running a single test file, such as the pillar module test file in the integration test directory, you must provide the file path using `.` instead of `/` as separators and no file extension:

```
./tests/runtests.py --name=integration.modules.test_pillar
./tests/runtests.py -n integration.modules.test_pillar
```

Some test files contain only one test class while other test files contain multiple test classes. To run a specific test class within the file, append the name of the test class to the end of the file path:

```
./tests/runtests.py --name=integration.modules.test_pillar.PillarModuleTest
./tests/runtests.py -n integration.modules.test_pillar.PillarModuleTest
```

To run a single test within a file, append both the name of the test class the individual test belongs to, as well as the name of the test itself:

```
./tests/runtests.py \  
--name=integration.modules.test_pillar.PillarModuleTest.test_data  
./tests/runtests.py \  
-n integration.modules.test_pillar.PillarModuleTest.test_data
```

The `--name` and `-n` options can be used for unit tests as well as integration tests. The following command is an example of how to execute a single test found in the `tests/unit/modules/test_cp.py` file:

```
./tests/runtests.py \  
-n unit.modules.test_cp.CpTestCase.test_get_template_success
```

### 19.27.4 Writing Tests for Salt

Once you're comfortable running tests, you can now start writing them! Be sure to review the *Integration vs. Unit* section of this tutorial to determine what type of test makes the most sense for the code you're testing.

---

**Note:** There are many decorators, naming conventions, and code specifications required for Salt test files. We will not be covering all of these specifics in this tutorial. Please refer to the testing documentation links listed below in the *Additional Testing Documentation* section to learn more about these requirements.

In the following sections, the test examples assume the ``new" test is added to a test file that is already present and regularly running in the test suite and is written with the correct requirements.

---

#### Writing Integration Tests

Since integration tests validate against a running environment, as explained in the *Running Integration Tests* section of this tutorial, integration tests are very easy to write and are generally the preferred method of writing Salt tests.

The following integration test is an example taken from the `test.py` file in the `tests/integration/modules` directory. This test uses the `run_function` method to test the functionality of a traditional execution module command.

The `run_function` method uses the integration test daemons to execute a `module.function` command as you would with Salt. The minion runs the function and returns. The test also uses *Python's Assert Functions* to test that the minion's return is expected.

```
def test_ping(self):  
    '''  
    test.ping  
    '''  
    self.assertTrue(self.run_function('test.ping'))
```

Args can be passed in to the `run_function` method as well:

```
def test_echo(self):  
    '''  
    test.echo  
    '''  
    self.assertEqual(self.run_function('test.echo', ['text']), 'text')
```

The next example is taken from the `tests/integration/modules/test_aliases.py` file and demonstrates how to pass kwargs to the `run_function` call. Also note that this test uses another salt function to

ensure the correct data is present (via the `aliases.set_target` call) before attempting to assert what the `aliases.get_target` call should return.

```
def test_set_target(self):
    """
    aliases.set_target and aliases.get_target
    """
    set_ret = self.run_function(
        'aliases.set_target',
        alias='fred',
        target='bob')
    self.assertTrue(set_ret)
    tgt_ret = self.run_function(
        'aliases.get_target',
        alias='fred')
    self.assertEqual(tgt_ret, 'bob')
```

Using multiple Salt commands in this manner provides two useful benefits. The first is that it provides some additional coverage for the `aliases.set_target` function. The second benefit is the call to `aliases.get_target` is not dependent on the presence of any aliases set outside of this test. Tests should not be dependent on the previous execution, success, or failure of other tests. They should be isolated from other tests as much as possible.

While it might be tempting to build out a test file where tests depend on one another before running, this should be avoided. SaltStack recommends that each test should test a single functionality and not rely on other tests. Therefore, when possible, individual tests should also be broken up into singular pieces. These are not hard-and-fast rules, but serve more as recommendations to keep the test suite simple. This helps with debugging code and related tests when failures occur and problems are exposed. There may be instances where large tests use many asserts to set up a use case that protects against potential regressions.

---

**Note:** The examples above all use the `run_function` option to test execution module functions in a traditional master/minion environment. To see examples of how to test other common Salt components such as runners, salt-api, and more, please refer to the Integration Test Class Examples documentation.

---

## Destructive vs Non-destructive Tests

Since Salt is used to change the settings and behavior of systems, often, the best approach to run tests is to make actual changes to an underlying system. This is where the concept of destructive integration tests comes into play. Tests can be written to alter the system they are running on. This capability is what fills in the gap needed to properly test aspects of system management like package installation.

To write a destructive test, import and use the `destructiveTest` decorator for the test method:

```
import integration
from tests.support.helpers import destructiveTest

class PkgTest(integration.ModuleCase):
    @destructiveTest
    def test_pkg_install(self):
        ret = self.run_function('pkg.install', name='finch')
        self.assertSaltTrueReturn(ret)
        ret = self.run_function('pkg.purge', name='finch')
        self.assertSaltTrueReturn(ret)
```

## Writing Unit Tests

As explained in the *Integration vs. Unit* section above, unit tests should be written to test the *logic* of a function. This includes focusing on testing `return` and `raises` statements. Substantial effort should be made to mock external resources that are used in the code being tested.

External resources that should be mocked include, but are not limited to, APIs, function calls, external data either globally available or passed in through function arguments, file data, etc. This practice helps to isolate unit tests to test Salt logic. One handy way to think about writing unit tests is to ```block all of the exits```. More information about how to properly mock external resources can be found in Salt's Unit Test documentation.

Salt's unit tests utilize Python's mock class as well as `MagicMock`. The `@patch` decorator is also heavily used when ```blocking all the exits```.

A simple example of a unit test currently in use in Salt is the `test_get_file_not_found` test in the `tests/unit/modules/test_cp.py` file. This test uses the `@patch` decorator and `MagicMock` to mock the return of the call to Salt's `cp.hash_file` execution module function. This ensures that we're testing the `cp.get_file` function directly, instead of inadvertently testing the call to `cp.hash_file`, which is used in `cp.get_file`.

```
def test_get_file_not_found(self):
    """
    Test if get_file can't find the file.
    """
    with patch('salt.modules.cp.hash_file', MagicMock(return_value=False)):
        path = 'salt://saltines'
        dest = '/srv/salt/cheese'
        ret = ''
        self.assertEqual(cp.get_file(path, dest), ret)
```

Note that Salt's `cp` module is imported at the top of the file, along with all of the other necessary testing imports. The `get_file` function is then called directed in the testing function, instead of using the `run_function` method as the integration test examples do above.

The call to `cp.get_file` returns an empty string when a `hash_file` isn't found. Therefore, the example above is a good illustration of a unit test ```blocking the exits``` via the `@patch` decorator, as well as testing logic via asserting against the return statement in the `if` clause.

There are more examples of writing unit tests of varying complexities available in the following docs:

- [Simple Unit Test Example](#)
- [Complete Unit Test Example](#)
- [Complex Unit Test Example](#)

---

**Note:** Considerable care should be made to ensure that you're testing something useful in your test functions. It is very easy to fall into a situation where you have mocked so much of the original function that the test results in only asserting against the data you have provided. This results in a poor and fragile unit test.

---

### 19.27.5 Checking for Log Messages

To test to see if a given log message has been emitted, the following pattern can be used

```
# Import logging handler
from tests.support.helpers import TestsLoggingHandler
```

```
# .. inside test
with TestsLoggingHandler() as handler:
    for message in handler.messages:
        if message.startswith('ERROR: This is the error message we seek'):
            break
        else:
            raise AssertionError('Did not find error message')
```

### 19.27.6 Automated Test Runs

SaltStack maintains a Jenkins server which can be viewed at <https://jenkins.saltstack.com>. The tests executed from this Jenkins server create fresh virtual machines for each test run, then execute the destructive tests on the new, clean virtual machine. This allows for the execution of tests across supported platforms.

### 19.27.7 Additional Testing Documentation

In addition to this tutorial, there are some other helpful resources and documentation that go into more depth on Salt's test runner, writing tests for Salt code, and general Python testing documentation. Please see the following references for more information:

- *Salt's Test Suite Documentation*
- Integration Tests
- Unit Tests
- MagicMock
- Python Unittest
- Python's Assert Functions

---

## Release Notes

---

See the version numbers page for more information about the version numbering scheme.

### 20.1 Latest Branch Release

Release Candidate

### 20.2 Previous Releases

#### 20.2.1 Salt 2017.7.0 Release Notes - Codename Nitrogen

#### 20.2.2 Python 3

The 2017.7 Salt Release adds initial Python 3 support.

The default Python version of Salt will remain Python 2, although Python 3 packages will be supplied for users who want to help test this new feature.

#### 20.2.3 Python 2.6 Deprecation

Salt will no longer support Python 2.6. We will provide python2.7 packages on our [repo](#) for RedHat and CentOS 6 to ensure users can still run Salt on these platforms.

As this will impact the installation of additional dependencies for salt modules please use pip packages if there is not a package available in a repository. You will need to install the python27-pip package to get access to the correct pip27 executable: `yum install python27-pip`

#### 20.2.4 Known Issues

The following salt-cloud drivers have known issues running with Python 3. These drivers will not work with Python 3, and Python 2.7 should be used instead:

- Joyent
- When running under Python 3, users who require Unicode support should ensure that a locale is set on their machines. Users using the C locale are advised to switch to a UTF-aware locale to ensure proper functionality with Salt with Python 3.

### Remember to update the Salt Master first

Salt's policy has always been that when upgrading, the minion should never be on a newer version than the master. Specifically with this update, because of changes in the fileclient, the 2017.7 minion requires a 2017.7 master.

Backwards compatibility is still maintained, so older minions can still be used.

More information can be found in the [Salt FAQ](#)

### States Added for Management of systemd Unit Masking

The `service.masked` and `service.unmasked` states have been added to allow Salt to manage masking of systemd units.

Additionally, the following functions in the `systemd` execution module have changed to accommodate the fact that indefinite and runtime masks can co-exist for the same unit:

- `service.masked` - The return from this function has changed from previous releases. Before, `False` would be returned if the unit was not masked, and the output of `systemctl is-enabled <unit name>` would be returned if the unit was masked. However, since indefinite and runtime masks can exist for the same unit at the same time, this function has been altered to accept a `runtime` argument. If `True`, the minion will be checked for a runtime mask assigned to the named unit. If `False`, then the minion will be checked for an indefinite mask. If one is found, `True` will be returned. If not, then `False` will be returned.
- `service.unmasked` - This function used to just run `systemctl is-enabled <unit name>` and based on the return from this function the corresponding mask type would be removed. However, if both runtime and indefinite masks are set for the same unit, then `systemctl is-enabled <unit name>` would show just the indefinite mask. The indefinite mask would be removed, but the runtime mask would remain. The function has been modified to accept a `runtime` argument, and will attempt to remove a runtime mask if that argument is set to `True`. If set to `False`, it will attempt to remove an indefinite mask.

These new runtime arguments default to `False`.

### Pillar Encryption

Beginning in 2016.3.0 the CLI pillar data passed to several functions could conditionally be passed through a renderer to be decrypted. This functionality has now been extended to pillar SLS files as well. See [here](#) for detailed documentation on this feature.

### Grains Changes

- The `osmajorrelease` grain has been changed from a string to an integer. State files, especially those using a templating language like Jinja, may need to be adjusted to account for this change.
- Add ability to specify disk backing mode in the VMWare salt cloud profile.

### State Module Changes

- The `service.running` and `service.dead` states now support a `no_block` argument which, when set to `True` on systemd minions, will start/stop the service using the `--no-block` flag in the `systemctl` command. On non-systemd minions, a warning will be issued.
- The `module.run` state has dropped its previous syntax with `m_` prefix for reserved keywords. Additionally, it allows running several functions in a batch.

---

**Note:** It is necessary to explicitly turn on the new behavior (see below)

---

```
# Before
run_something:
  module.run:
    - name: mymodule.something
    - m_name: 'some name'
    - kwargs: {
      first_arg: 'one',
      second_arg: 'two',
      do_stuff: 'True'
    }

# After
run_something:
  module.run:
    - mymodule.something:
      - name: some name
      - first_arg: one
      - second_arg: two
      - do_stuff: True
```

Since a lot of users are already using `module.run` states, this new behavior must currently be explicitly turned on, to allow users to take their time updating their SLS files. However, please keep in mind that the new syntax will take effect in the next feature release of Salt (Oxygen) and the old usage will no longer be supported at that time.

Another feature of the new `module.run` is that it allows calling many functions in a single batch, such as:

```
run_something:
  module.run:
    - mymodule.function_without_parameters:
    - mymodule.another_function:
      - myparam
      - my_other_param
```

In a rare case that you have a function that needs to be called several times but with the different parameters, an additional feature of ``tagging`` is to the rescue. In order to tag a function, use a colon delimiter. For example:

```
run_something:
  module.run:
    - mymodule.same_function:1:
    - mymodule.same_function:2:
      - myparam
      - my_other_param
    - mymodule.same_function:3:
      - foo: bar
```

The example above will run `mymodule.same_function` three times with the different parameters.

To enable the new behavior for `module.run`, add the following to the minion config file:

```
use_superseded:
  - module.run
```

- The default for the `fingerprint_hash_type` option used in the `present` function in the `ssh` state changed from `md5` to `sha256`.

### Execution Module Changes

- Several functions in the `systemd` execution module have gained a `no_block` argument, which when set to `True` will use `--no-block` in the `systemctl` command.
- In the `solarisips` pkg module, the default value for the `refresh` argument to the `list_upgrades` function has been changed from `False` to `True`. This makes the function more consistent with all of the other pkg modules (The other `pkg.list_upgrades` functions all defaulted to `True`).
- The functions which handle masking in the `systemd` module have changed. These changes are described above alongside the information on the new states which have been added to manage masking of systemd units.
- The `pkg.list_repo_pkgs` function for yum/dnf-based distros has had its default output format changed. In prior releases, results would be organized by repository. Now, the default for each package will be a simple list of versions. To get the old behavior, pass `byrepo=True` to the function.
- A `pkg.list_repo_pkgs` function has been added for both *Debian/Ubuntu* and *Arch Linux*-based distros.
- The `system` module changed its return format from ```HH:MM AM/PM``` to ```HH:MM:SS AM/PM``` for `get_system_time`.
- The default for the `fingerprint_hash_type` option used in the `ssh` execution module changed from `md5` to `sha256`.

### Proxy Module Changes

The `proxy_merge_grains_in_module` configuration variable introduced in 2016.3, has been changed, defaulting to `True`.

The connection with the remote device is kept alive by default, when the module implements the `alive` function and `proxy_keep_alive` is set to `True`. The polling interval is set using the `proxy_keep_alive_interval` option which defaults to 1 minute.

The developers are also able to use the `proxy_always_alive`, when designing a proxy module flexible enough to open the connection with the remote device only when required.

### Wildcard Versions in `pkg.installed` States

- The `pkg.installed` state now supports wildcards in package versions, for the following platforms:
  - SUSE/openSUSE Leap/Thumbleweed
  - Debian/Ubuntu
  - RHEL/CentOS
  - Arch Linux

This support also extends to any derivatives of these distros, which use the `aptpkg`, `yumpkg`, or `pacman` providers for the `pkg` virtual module.

Using wildcards can be useful for packages where the release name is built into the version in some way, such as for RHEL/CentOS which typically has version numbers like `1.2.34-5.el7`. An example of the usage for this would be:

```

mypkg:
  pkg.installed:
    - version: '1.2.34*'

```

### Master Configuration Additions

- *syndic\_forward\_all\_events* - Option on multi-syndic or single when connected to multiple masters to be able to send events to all connected masters.
- *eauth\_acl\_module* - In case external auth is enabled master can get authenticate and get the authorization list from different auth modules.
- *keep\_acl\_in\_token* - Option that allows master to build ACL once for each user being authenticated and keep it in the token.

### Minion Configuration Additions

- *pillarenv\_from\_saltenv* - When set to True (default is False), the *pillarenv* option will take the same value as the effective saltenv when running states. This would allow a user to run `salt '*' state.apply mysls saltenv=dev`, and the SLS for both the state and pillar data would be sourced from the dev environment, essentially the equivalent of running `salt '*' state.apply mysls saltenv=dev pillarenv=dev`. Note that if *pillarenv* is set in the minion config file, or if *pillarenv* is provided on the CLI, it will override this option.

### salt-api Changes

The `rest_cherry.py` `netapi` module has received a few minor improvements:

- A CORS bugfix.
- A new `/token` convenience endpoint to generate Salt eauth tokens.
- A proof-of-concept JavaScript single-page application intended to demonstrate how to use the Server-Sent Events stream in an application. It is available in a default install by visiting the `/app` URL in a browser.

### Python API Changes

#### `expr_form` Deprecation

The `LocalClient`'s `expr_form` argument has been deprecated and renamed to `tgt_type`. This change was made due to numerous reports of confusion among community members, since the targeting method is published to minions as `tgt_type`, and appears as `tgt_type` in the job cache as well.

While `expr_form` will continue to be supported until the **Fluorine** release cycle (two major releases after this one), those who are using the `LocalClient` (either directly, or implicitly via a `netapi module`) are encouraged to update their code to use `tgt_type`.

#### `full_return` Argument in `LocalClient` and `RunnerClient`

An `full_return` argument has been added to the `cmd` and `cmd_sync` methods in `LocalClient` and `RunnerClient` which causes the return data structure to include job meta data such as `retcode`.

This is useful at the Python API:

```
>>> import salt.client
>>> client = salt.client.LocalClient()
>>> client.cmd('*', 'cmd.run', ['return 1'], full_return=True)
{'jerry': {'jid': '20170520151213898053', 'ret': '', 'retcode': 1}}
```

As well as from salt-api:

```
% curl -b /tmp/cookies.txt -sS http://localhost:8000 \
  -H 'Content-type: application/json' \
  -d '[{
    "client": "local",
    "tgt": "*",
    "fun": "cmd.run",
    "arg": ["return 1"],
    "full_return": true
  }]'
{"return": [{"jerry": {"jid": "20170520151531477653", "retcode": 1, "ret": ""}]}}
```

## Jinja

### Filters

New filters in 2017.7.0:

- *to\_bool*
- *exactly\_n\_true*
- *exactly\_one\_true*
- *quote*
- *regex\_search*
- *regex\_match*
- *uuid*
- *is\_list*
- *is\_iter*
- *min*
- *max*
- *avg*
- *union*
- *intersect*
- *difference*
- *symmetric\_difference*
- *is\_sorted*
- *compare\_lists*
- *compare\_dicts*

- *is\_hex*
- *contains\_whitespace*
- *substring\_in\_list*
- *check\_whitelist\_blacklist*
- *date\_format*
- *str\_to\_num*
- *to\_bytes*
- *json\_decode\_list*
- *json\_decode\_dict*
- *rand\_str*
- *md5*
- *sha256*
- *sha512*
- *base64\_encode*
- *base64\_decode*
- *hmac*
- *http\_query*
- *is\_ip*
- *is\_ipv4*
- *is\_ipv6*
- *ipaddr*
- *ipv4*
- *ipv6*
- *network\_hosts*
- *network\_size*
- *gen\_mac*
- *mac\_str\_to\_bytes*
- *dns\_check*
- *is\_text\_file*
- *is\_binary\_file*
- *is\_empty\_file*
- *file\_hashsum*
- *list\_files*
- *path\_join*
- *which*

## Logs

Another new feature - although not limited to Jinja only - is being able to log debug messages directly from the template:

```
{%- do salt.log.error('logging from jinja') -%}
```

See the *logs* paragraph.

## Network Automation

### NAPALM

Introduced in 2016.11, the modules for cross-vendor network automation have been improved, enhanced and widened in scope:

- Manage network devices like servers: the NAPALM modules have been transformed so they can run in both proxy and regular minions. That means, if the operating system allows, the salt-minion package can be installed directly on the network gear. Examples of such devices (also covered by NAPALM) include: Arista, Cumulus, Cisco IOS-XR or Cisco Nexus.
- Not always alive: in certain less dynamic environments, maintaining the remote connection permanently open with the network device is not always beneficial. In those particular cases, the user can select to initialize the connection only when needed, by specifying the field `always_alive: false` in the *proxy configuration* or using the *proxy\_always\_alive* option.
- Proxy keepalive: due to external factors, the connection with the remote device can be dropped, e.g.: packet loss, idle time (no commands issued within a couple of minutes or seconds), or simply the device decides to kill the process. In 2017.7.0 we have introduced the functionality to re-establish the connection. One can disable this feature through the *proxy\_keep\_alive* option and adjust the polling frequency specifying a custom value for *proxy\_keep\_alive\_interval*, in minutes.

New modules:

- *Netconfig state module* - Manage the configuration of network devices using arbitrary templates and the Salt-specific advanced templating methodologies.
- *Network ACL execution module* - Generate and load ACL (firewall) configuration on network devices.
- *Network ACL state* - Manage the firewall configuration. It only requires writing the pillar structure correctly!
- *NAPALM YANG execution module* - Parse, generate and load native device configuration in a standard way, using the OpenConfig/IETF models. This module contains also helpers for the states.
- *NAPALM YANG state module* - Manage the network device configuration according to the YANG models (OpenConfig or IETF).
- *NET finder* - Runner to find details easily and fast. It's smart enough to know what you are looking for. It will search in the details of the network interfaces, IP addresses, MAC address tables, ARP tables and LLDP neighbors.
- *BGP finder* - Runner to search BGP neighbors details.
- *NAPALM syslog* - Engine to import events from the napalm-logs library into the Salt event bus. The events are based on the syslog messages from the network devices and structured following the OpenConfig/IETF YANG models.

- *NAPALM Helpers* - Generic helpers for NAPALM-related operations. For example, the *Compliance report* function can be used inside the state modules to compare the expected and the existing configuration.

New functions:

- *Configuration getter* - Return the whole configuration of the network device.
- *Optics getter* - Fetches the power usage on the various transceivers installed on the network device (in dBm).

New grains: *Host*, *Host DNS*, *Username* and *Optional args*.

### Custom Refspecs in GitFS / git\_pillar / winrepo

It is now possible to specify the refspecs to use when fetching from remote repositories for GitFS, git\_pillar, and winrepo. More information on how this feature works can be found [here](#) in the GitFS Walkthrough. The git\_pillar and winrepo versions of this feature work the same as their GitFS counterpart.

### git\_pillar ``mountpoints" Feature Added

See [here](#) for detailed documentation.

### Big Improvements to Docker Support

The old `docker` state and execution modules have been moved to `salt-contrib`. The `dockerng` execution module has been renamed to `docker` and now serves as Salt's official Docker execution module.

The old `dockerng` state module has been split into 4 state modules:

- *docker\_container* - States to manage Docker containers
- *docker\_image* - States to manage Docker images
- *docker\_volume* - States to manage Docker volumes
- *docker\_network* - States to manage Docker networks

The reason for this change was to make states and requisites more clear. For example, imagine this SLS:

```
myuser/appimage:
  docker.image_present:
    - sls: docker.images.appimage

myapp:
  docker.running:
    - image: myuser/appimage
    - require:
      - docker: myuser/appimage
```

The new syntax would be:

```
myuser/appimage:
  docker_image.present:
    - sls: docker.images.appimage

myapp:
  docker_container.running:
    - image: myuser/appimage
```

```
- require:
  - docker_image: myuser/appimage
```

This is similar to how Salt handles MySQL, MongoDB, Zabbix, and other cases where the same execution module is used to manage several different kinds of objects (users, databases, roles, etc.).

---

**Note:** With the [Moby announcement](#) coming at this year's [DockerCon](#), Salt's *docker* execution module (as well as the state modules) work interchangeably when **docker** is replaced with **moby** (e.g. *moby\_container.running*, *moby\_image.present*, *moby.inspect\_container*, etc.)

---

The old syntax will continue to work until the **Fluorine** release of Salt. The old `dockerng` naming will also continue to work until that release, so no immediate changes need to be made to your SLS files (unless you were still using the old `docker` states that have been moved to `salt-contrib`).

The *docker\_container.running* state has undergone a significant change in how it determines whether or not a container needs to be replaced. Rather than comparing individual arguments to their corresponding values in the named container, a temporary container is created (but not started) using the passed arguments. The two containers are then compared to each other to determine whether or not there are changes, and if so, the old container is stopped and destroyed, and the temporary container is renamed and started.

Salt still needs to translate arguments into the format which `docker-py` expects, but if it does not properly do so, the *skip\_translate* argument can be used to skip input translation on an argument-by-argument basis, and you can then format your SLS file to pass the data in the format that the `docker-py` expects. This allows you to work around any changes in Docker's API or issues with the input translation, and continue to manage your Docker containers using Salt. Read the documentation for *skip\_translate* for more information.

---

**Note:** When running the *docker\_container.running* state for the first time after upgrading to 2017.7.0, your container(s) may be replaced. The changes may show diffs for certain parameters which say that the old value was an empty string, and the new value is `None`. This is due to the fact that in prior releases Salt was passing empty strings for these values when creating the container if they were undefined in the SLS file, where now Salt simply does not pass any arguments not explicitly defined in the SLS file. Subsequent runs of the state should not replace the container if the configuration remains unchanged.

---

### New SSH Cache Roster

The *SSH cache Roster* has been rewritten from scratch to increase its usefulness. The new roster supports all minion matchers, so it is now possible to target minions identically through *salt* and *salt-ssh*.

Using the new `roster_order` configuration syntax it's now possible to compose a roster out of any combination of grains, pillar and mine data and even Salt SDB URLs. The new release is also fully IPv4 and IPv6 enabled and even has support for CIDR ranges.

### Salt-SSH Default Options

Defaults for rosters can now be set, so that they don't have to be set on every entry in a roster or specified from the commandline.

The new option is `roster_defaults` and is specified in the master config file.

```
roster_defaults:
  user: daniel
  sudo: True
```

```
priv: /root/.ssh/id_rsa
tty: True
```

### Blacklist or Whitelist Extmod Sync

The modules that are synced to minions can now be limited.

The following configuration options have been added for the master:

- `extmod_whitelist`
- `extmod_blacklist`

and for the minion:

- `extmod_whitelist`
- `extmod_blacklist`

### Additional Features

- The `mine.update` function has a new optional argument `mine_functions` that can be used to refresh mine functions at a more specific interval than scheduled using the `mine_interval` option. However, this argument can be used by explicit schedule. For example, if we need the mines for `net.lldp` to be refreshed every 12 hours:

```
schedule:
  lldp_mine_update:
    function: mine.update
    kwargs:
      mine_functions:
        net.lldp: []
    hours: 12
```

- The salt runner has a new function: `salt.execute`. It is mainly a shortcut to facilitate the execution of various functions from other runners, e.g.:

```
ret1 = __salt__['salt.execute']('*', 'mod.fun')
```

### New Modules

#### Beacons

- `salt.beacons.log`

#### Cache

- `salt.cache.redis_cache`

## Engines

- `salt.engines.stalekey`
- `salt.engines.junos_syslog`
- `salt.engines.napalm_syslog`

## Execution modules

- `salt.modules.apk`
- `salt.modules.at_solaris`
- `salt.modules.boto_kinesis`
- `salt.modules.boto3_elasticache`
- `salt.modules.boto3_route53`
- `salt.modules.capirca_acl`
- `salt.modules.freebsd_update`
- `salt.modules.grafana4`
- `salt.modules.heat`
- `salt.modules.icinga2`
- `salt.modules.kubernetes`
- `salt.modules.logmod`
- `salt.modules.mattermost`
- `salt.modules.namecheap_dns`
- `salt.modules.namecheap_domains`
- `salt.modules.namecheap_ns`
- `salt.modules.namecheap_users`
- `salt.modules.namecheap_ssl`
- `salt.modules.napalm`
- `salt.modules.napalm_acl`
- `salt.modules.napalm_yang_mod`
- `salt.modules.pdbedit`
- `salt.modules.solrcloud`
- `salt.modules.statuspage`
- `salt.modules.zonecfg`
- `salt.modules.zoneadm`

## Grains

- `salt.grains.metadata`
- `salt.grains.mdata`

## Outputters

- `salt.output.table_out`

## Pillar

- `salt.pillar.postgres`
- `salt.pillar.vmware_pillar`

## Returners

- `salt.returners.mattermost_returner`
- `salt.returners.highstate_return`

## Roster

- `salt.roster.cache`

## Runners

- `salt.runners.bgp`
- `salt.runners.mattermost`
- `salt.runners.net`

## SDB

- `salt.sdb.yaml`
- `salt.sdb.tism`
- `salt.sdb.cache`

## States

- `salt.states.boto_kinesis`
- `salt.states.boto_efs`
- `salt.states.boto3_elasticache`
- `salt.states.boto3_route53`

- `salt.states.docker_container`
- `salt.states.docker_image`
- `salt.states.docker_network`
- `salt.states.docker_volume`
- `salt.states.elasticsearch`
- `salt.states.grafana4_dashboard`
- `salt.states.grafana4_datasource`
- `salt.states.grafana4_org`
- `salt.states.grafana4_user`
- `salt.states.heat`
- `salt.states.icinga2`
- `salt.states.influxdb_continuous_query`
- `salt.states.influxdb_retention_policy`
- `salt.states.kubernetes`
- `salt.states.logadm`
- `salt.states.logrotate`
- `salt.states.msteams`
- `salt.states.netacl`
- `salt.states.netconfig`
- `salt.states.netyang`
- `salt.states.nix`
- `salt.states.pdbedit`
- `salt.states.solrcloud`
- `salt.states.statuspage`
- `salt.states.vault`
- `salt.states.win_wua`
- `salt.states.zone`

## Deprecations

### General Deprecations

- Removed support for aliasing `cmd.run` to `cmd.shell`.
- Removed support for Dulwich from *GitFS*.
- Beacon configurations should be lists instead of dictionaries.
- The `PidfileMixin` has been removed. Please use `DaemonMixIn` instead.
- The `use_pending` argument was removed from the `salt.utils.event.get_event` function.

- The `pending_tags` argument was removed from the `salt.utils.event.get_event` function.

### Configuration Option Deprecations

- The `client_acl` configuration option has been removed. Please use `publisher_acl` instead.
- The `client_acl_blacklist` configuration option has been removed. Please use `publisher_acl_blacklist` instead.
- The `win_gitrepos` configuration option has been removed. Please use the `winrepo_remotes` option instead.
- The `win_repo` configuration option has been removed. Please use `winrepo_dir` instead.
- The `win_repo_mastercachefile` configuration option has been removed. Please use the `win_repo_cache_file` option instead.

### Module Deprecations

The `git` execution module had the following changes:

- The `fmt` argument was removed from the `archive` function. Please use `format` instead.
- The `repository` argument was removed from the `clone` function. Please use `url` instead.
- The `is_global` argument was removed from the `config_set` function. Please use `global` instead.
- The `branch` argument was removed from the `merge` function. Please use `rev` instead.
- The `branch` argument was removed from the `push` function. Please use `rev` instead.

The `glusterfs` execution module had the following functions removed:

- `create`: Please use `create_volume` instead.
- `delete`: Please use `delete_volume` instead.
- `list_peers`: Please use `peer_status` instead.

The `htpasswd` execution module had the following function removed:

- `useradd_all`: Please use `useradd` instead.

The `img` execution module has been removed. All of its associated functions were marked for removal in the 2017.7.0 release. The functions removed in this module are mapped as follows:

- `mount_image/mnt_image`: Please use `mount.mount` instead.
- `umount_image`: Please use `mount.umount` instead.
- `bootstrap`: Please use `genesis.bootstrap` instead.

The `smartos_virt` execution module had the following functions removed:

- `create`: Please use `start` instead.
- `destroy`: Please use `stop` instead.
- `list_vms`: Please use `list_domains` instead.

The `virt` execution module had the following functions removed:

- `create`: Please use `start` instead.
- `destroy`: Please use `stop` instead.

- `list_vms`: Please use `list_domains` instead.

The `virtualenv_mod` execution module had the following changes:

- The `package_or_requirement` argument was removed from both the `get_resource_path` and the `get_resource_content` functions. Please use `package` instead.
- The `resource_name` argument was removed from both the `get_resource_path` and `get_resource_content` functions. Please use `resource` instead.

The `win_repo` execution module had the following changes:

- The `win_repo_source_dir` option was removed from the `win_repo` module. Please use `win_repo_source_dir` instead.

The `xapi` execution module had the following functions removed:

- `create`: Please use `start` instead.
- `destroy`: Please use `stop` instead.
- `list_vms`: Please use `list_domains` instead.

The `zypper` execution module had the following function removed:

- `info`: Please use `info_available` instead.

### Pillar Deprecations

- Support for the `raw_data` argument for the `file_tree` ext-pillar has been removed. Please use `keep_newline` instead.
- SQLite3 database connection configuration previously had keys under `pillar`. This legacy compatibility has been removed.

### Proxy Minion Deprecations

- The `proxy_merge_grains_in_module` default has been switched from `False` to `True`.

### Salt-API Deprecations

- The `SaltAPI.run()` function has been removed. Please use the `SaltAPI.start()` function instead.

### Salt-Cloud Deprecations

- Support for using the keyword `provider` in salt-cloud provider config files has been removed. Please use `driver` instead. The `provider` keyword should now only be used in cloud profile config files.

### Salt-SSH Deprecations

- The `wipe_ssh` option for `salt-ssh` has been removed. Please use the `ssh_wipe` option instead.

## State Deprecations

The `apache_conf` state had the following functions removed:

- `disable`: Please use `disabled` instead.
- `enable`: Please use `enabled` instead.

The `apache_module` state had the following functions removed:

- `disable`: Please use `disabled` instead.
- `enable`: Please use `enabled` instead.

The `apache_site` state had the following functions removed:

- `disable`: Please use `disabled` instead.
- `enable`: Please use `enabled` instead.

The `chocolatey` state had the following functions removed:

- `install`: Please use `installed` instead.
- `uninstall`: Please use `uninstalled` instead.

The `git` state had the following changes:

- The `config` function was removed. Please use `config_set` instead.
- The `is_global` option was removed from the `config_set` function. Please use `global` instead.
- The `always_fetch` option was removed from the `latest` function, as it no longer has any effect. Please see the [2015.8.0](#) release notes for more information.
- The `force` option was removed from the `latest` function. Please use `force_clone` instead.
- The `remote_name` option was removed from the `latest` function. Please use `remote` instead.

The `glusterfs` state had the following function removed:

- `created`: Please use `volume_present` instead.

The `openvswitch_port` state had the following change:

- The `type` option was removed from the `present` function. Please use `tunnel_type` instead.

## Build Notes

### Windows Installer Packages

Windows Installer packages have been patched with the following PR: [42347](#)

### 20.2.5 Salt 2017.7.1 Release Notes

Version 2017.7.1 is a bugfix release for [2017.7.0](#).

### Security Fix

CVE-2017-12791 Maliciously crafted minion IDs can cause unwanted directory traversals on the Salt-master

Correct a flaw in minion id validation which could allow certain minions to authenticate to a master despite not having the correct credentials. To exploit the vulnerability, an attacker must create a salt-minion with an ID containing characters that will cause a directory traversal. Credit for discovering the security flaw goes to: [Vernhk@qq.com](mailto:Vernhk@qq.com)

### Changes for v2017.7.0..v2017.7.1

Statistics:

- Total Merges: **11**
- Total Issue references: **9**
- Total PR references: **22**

Changes:

- **PR #42548:** (*gtmanfred*) pass in empty kwarg for reactor @ 2017-07-26T00:41:20Z
  - **ISSUE #460:** (*whiteinge*) Add a topic and a ref for modules/states/returners/renderers/runners | refs: #42548
  - 711b742c54 Merge pull request #42548 from gtmanfred/2017.7.1
  - 0257c1dc32 pass in empty kwarg for reactor
  - b948e980d2 update chunk, not kwarg in chunk
- **PR #42522:** (*gtmanfred*) pacman wildcard is only for repository installs @ 2017-07-24T20:51:05Z
  - **ISSUE #42519:** (*xuhcc*) Error when installing package from file under Arch Linux | refs: #42522
  - 50c1635dcc Merge pull request #42522 from gtmanfred/2017.7.1
  - 7787fb9e1b pacman wildcard is only for repository installs
- **PR #42508:** (*rallytime*) Back-port #42474 to 2017.7.1 @ 2017-07-24T20:49:51Z
  - **PR #42474:** (*whiteinge*) Cmd arg kwarg parsing test | refs: #42508
  - **PR #39646:** (*terminalmage*) Handle deprecation of passing string args to load\_args\_and\_kwarg | refs: #42474
  - 05c07ac049 Merge pull request #42508 from rallytime/bp-42474
  - 76fb074433 Add a test.arg variant that cleans the pub kwarg by default
  - 624f63648e Lint fixes
  - d246a5fc61 Add back support for string kwarg
  - 854e098aa0 Add LocalClient.cmd test for arg/kwarg parsing
- **PR #42472:** (*rallytime*) Back-port #42435 to 2017.7.1 @ 2017-07-24T15:11:13Z
  - **ISSUE #42427:** (*grichmond-salt*) Issue Passing Variables created from load\_json as Inline Pillar Between States | refs: #42435

- **PR #42435:** (*terminalmage*) Modify our custom YAML loader to treat unicode literals as unicode strings | refs: #42472
- 95fe2558e4 Merge pull request #42472 from rallytime/bp-42435
- 5c47af5b98 Modify our custom YAML loader to treat unicode literals as unicode strings
- **PR #42473:** (*rallytime*) Back-port #42436 to 2017.7.1 @ 2017-07-24T15:10:29Z
  - **ISSUE #42374:** (*tyhunt99*) [2017.7.0] salt-run manage.versions throws exception if minion is offline or unresponsive | refs: #42436
  - **PR #42436:** (*garethgreenaway*) Fixes to versions function in manage runner | refs: #42473
  - 5b99d45f54 Merge pull request #42473 from rallytime/bp-42436
  - 82ed919803 Updating the versions function inside the manage runner to account for when a minion is offline and we are unable to determine it's version.
- **PR #42471:** (*rallytime*) Back-port #42399 to 2017.7.1 @ 2017-07-24T15:09:50Z
  - **ISSUE #42381:** (*zebooka*) Git.detached broken in 2017.7.0 | refs: #42399
  - **ISSUE #38878:** (*tomlaredo*) [Naming consistency] git.latest ``rev" option VS git.detached ``ref" option | refs: #38898
  - **PR #42399:** (*rallytime*) Update old ``ref" references to ``rev" in git.detached state | refs: #42471
  - **PR #38898:** (*terminalmage*) git.detached: rename ref to rev for consistency | refs: #42399
  - 3d1a2d3f9f Merge pull request #42471 from rallytime/bp-42399
  - b9a4669e5a Update old ``ref" references to ``rev" in git.detached state
- **PR #42470:** (*rallytime*) Back-port #42031 to 2017.7.1 @ 2017-07-24T15:09:30Z
  - **ISSUE #42400:** (*Enquier*) Conflict in execution of passing pillar data to orch/reactor event executions 2017.7.0 | refs: #42031
  - **PR #42031:** (*skizunov*) Fix: Reactor emits critical error | refs: #42470
  - 09766bccbc Merge pull request #42470 from rallytime/bp-42031
  - 0a0c6287a4 Fix: Reactor emits critical error
- **PR #42469:** (*rallytime*) Back-port #42027 to 2017.7.1 @ 2017-07-21T22:41:02Z
  - **ISSUE #41949:** (*jrporcaro*) Event returner doesn't work with Windows Master | refs: #42027
  - **PR #42027:** (*gtmanfred*) import salt.minion for EventReturn for Windows | refs: #42469
  - d7b172a15b Merge pull request #42469 from rallytime/bp-42027
  - ed612b4ee7 import salt.minion for EventReturn for Windows
- **PR #42466:** (*rallytime*) Back-port #42452 to 2017.7.1 @ 2017-07-21T19:41:24Z
  - **PR #42452:** (*Ch3LL*) update windows urls to new py2/py3 naming scheme | refs: #42466
  - 8777b1a825 Merge pull request #42466 from rallytime/bp-42452
  - c10196f68c update windows urls to new py2/py3 naming scheme
- **PR #42439:** (*rallytime*) Back-port #42409 to 2017.7.1 @ 2017-07-21T17:38:10Z
  - **PR #42409:** (*twangboy*) Add Scripts to build Py3 on Mac | refs: #42439
  - fceaaf41d0 Merge pull request #42439 from rallytime/bp-42409
  - 8176964b41 Remove build and dist, sign pkgs

- 2c14d92a07 Fix hard coded pip path
- 82fdd7c2e1 Add support for Py3
- 2478447246 Update Python and other reqs
- **PR #42441:** (*rallytime*) Back-port #42433 to 2017.7.1 @ 2017-07-21T17:37:01Z
  - **ISSUE #42403:** (*astronouth7303*) [2017.7] Pillar empty when state is applied from orchestrate | refs: #42433
  - **PR #42433:** (*terminalmage*) Only force saltenv/pillarenv to be a string when not None | refs: #42441
  - 660400560b Merge pull request #42441 from rallytime/bp-42433
  - 17f347123a Only force saltenv/pillarenv to be a string when not None

### 20.2.6 Salt 2017.7.2 Release Notes

Version 2017.7.2 is a bugfix release for 2017.7.0.

#### Changes for v2017.7.1..v2017.7.2

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Generated at: 2017-09-26T21:06:19Z

Statistics:

- Total Merges: **326**
- Total Issue references: **133**
- Total PR references: **389**

Changes:

- **PR #43585:** (*rallytime*) Back-port #43330 to 2017.7.2 @ 2017-09-19T17:33:34Z
  - **ISSUE #43077:** (*Manoj2087*) Issue with deleting key via wheel | refs: #43330
  - **PR #43330:** (*terminalmage*) Fix reactor regression + unify reactor config schema | refs: #43585
  - 89f629233f Merge pull request #43585 from rallytime/bp-43330
  - c4f693bae8 Merge branch `2017.7.2' into bp-43330
- **PR #43586:** (*rallytime*) Back-port #43526 to 2017.7.2 @ 2017-09-19T15:36:27Z
  - **ISSUE #43447:** (*UtahDave*) When using Syndic with Multi Master the top level master doesn't reliably get returns from lower minion. | refs: #43526
  - **PR #43526:** (*DmitryKuzmenko*) Forward events to all masters syndic connected to | refs: #43586
  - abb7fe4422 Merge pull request #43586 from rallytime/bp-43526
  - e076e9b634 Forward events to all masters syndic connected to.
  - 7abd07fa07 Simplify client logic
  - b5f10696c2 Improve the reactor documentation
  - 7a2f12b96a Include a better example for reactor in master conf file
  - 531cac610e Rewrite the reactor unit tests

- 2a35ab7f39 Unify reactor configuration, fix caller reactors
- 4afb179bad Un-deprecate passing kwargs outside of `kwarg` param
- **PR #43551:** (*twangboy*) Fix preinstall script on OSX for 2017.7.2 @ 2017-09-18T18:35:35Z
  - 3d3b09302d Merge pull request #43551 from twangboy/osx\_fix\_preinstall\_2017.7.2
  - c3d9fb63f0 Merge branch `2017.7.2' into osx\_fix\_preinstall\_2017.7.2
- **PR #43509:** (*rallytime*) Back-port #43333 to 2017.7.2 @ 2017-09-15T21:21:40Z
  - **ISSUE #2:** (*thatch45*) salt job queries
  - **PR #43333:** (*damon-atkins*) Docs are wrong cache\_dir (bool) and cache\_file (str) cannot be passed as params + 1 bug | refs: #43509
  - 24691da888 Merge pull request #43509 from rallytime/bp-43333-2017.7.2
  - b3dbafb035 Update doco
  - 5cdcdbf428 Update win\_pkg.py
  - c3e16661c3 Docs are wrong cache\_dir (bool) and cache\_file (str) cannot be passed on the cli (#2)
  - f33395f1ee Fix logic in `/etc/paths.d/salt` detection
- **PR #43440:** (*rallytime*) Back-port #43421 to 2017.7.2 @ 2017-09-11T20:59:53Z
  - **PR #43421:** (*gtmanfred*) Revert ``Reduce fileclient.get\_file latency by merging \_file\_find and ... | refs: #43440
  - 8964cacbf8 Merge pull request #43440 from rallytime/bp-43421
  - ea6e661755 Revert ``Reduce fileclient.get\_file latency by merging \_file\_find and \_file\_hash"
- **PR #43377:** (*rallytime*) Back-port #43193 to 2017.7.2 @ 2017-09-11T15:32:23Z
  - **PR #43193:** (*jettero*) Prevent spurious ``Template does not exist" error | refs: #43377
  - **PR #39516:** (*jettero*) Prevent spurious ``Template does not exist" error | refs: #43193
  - 7fda186b18 Merge pull request #43377 from rallytime/bp-43193
  - 842b07fd25 Prevent spurious ``Template does not exist" error
- **PR #43315:** (*rallytime*) Back-port #43283 to 2017.7.2 @ 2017-09-05T20:04:25Z
  - **ISSUE #42459:** (*iavael*) Broken ldap groups retrieval in salt.auth.ldap after upgrade to 2017.7 | refs: #43283
  - **PR #43283:** (*DmitryKuzmenko*) Fix ldap token groups auth. | refs: #43315
  - 85dba1e898 Merge pull request #43315 from rallytime/bp-43283
  - f29f5b0cce Fix for tests: don't require `groups' in the eauth token.
  - 56938d5bf2 Fix ldap token groups auth.
- **PR #43266:** (*gtmanfred*) switch virtualbox cloud driver to use \_\_utils\_\_ @ 2017-08-30T18:36:20Z
  - **ISSUE #43259:** (*mahesh21*) NameError: global name `\_\_opts\_\_' is not defined | refs: #43266
  - 26ff8088cb Merge pull request #43266 from gtmanfred/virtualbox
  - 382bf92de7 switch virtualbox cloud driver to use \_\_utils\_\_
- **PR #43073:** (*Mapel88*) Fix bug #42936 - win\_iis module container settings @ 2017-08-30T18:34:37Z
  - **ISSUE #43110:** (*Mapel88*) bug in iis\_module - create\_cert\_binding

- **ISSUE #42936:** (*Mapel88*) bug in win\_iis module & state - container\_setting | refs: #43073
- ee209b144c Merge pull request #43073 from Mapel88/patch-2
- b1a3d15b28 Remove trailing whitespace for linter
- 25c8190e48 Fix pylint errors
- 1eba8c4b8e Fix pylint errors
- 290d7b54af Fix plint errors
- f4f32421ab Fix plint errors
- ec20e9a19a Fix bug #43110 - win\_iis module
- 009ef6686b Fix dictionary keys from string to int
- dc793f9a05 Fix bug #42936 - win\_iis state
- 13404a47b5 Fix bug #42936 - win\_iis module
- **PR #43254:** (*twangboy*) Fix `unit.modules.test_inspect_collector` on Windows @ 2017-08-30T15:46:07Z
  - ec1bedc646 Merge pull request #43254 from twangboy/win\_fix\_test\_inspect\_collector
  - b401340e6c Fix `unit.modules.test_inspect_collector` on Windows
- **PR #43255:** (*gtmanfred*) always return a dict object @ 2017-08-30T14:47:15Z
  - **ISSUE #43241:** (*mirceaulinic*) Error whilst collecting napalm grains | refs: #43255
  - 1fc7307735 Merge pull request #43255 from gtmanfred/2017.7
  - 83b0bab34b `opt_args` needs to be a dict
- **PR #43229:** (*twangboy*) Bring changes from #43228 to 2017.7 @ 2017-08-30T14:26:55Z
  - **PR #43228:** (*twangboy*) Win fix `pkg.install` | refs: #43229
  - fa904ee225 Merge pull request #43229 from twangboy/win\_fix\_pkg.install-2017.7
  - e007a1c26e Fix regex, add .
  - 23ec47c74c Add \_ to regex search
  - b1788b1e5f Bring changes from #43228 to 2017.7
- **PR #43251:** (*twangboy*) Skips `unit.modules.test_groupadd` on Windows @ 2017-08-30T13:56:36Z
  - 25666f88f7 Merge pull request #43251 from twangboy/win\_skip\_test\_groupadd
  - 5185071d5a Skips `unit.modules.test_groupadd` on Windows
- **PR #43256:** (*twangboy*) Skip mac tests for user and group @ 2017-08-30T13:18:13Z
  - a8e09629b2 Merge pull request #43256 from twangboy/win\_skip\_mac\_tests
  - cec627a60b Skip mac tests for user and group
- **PR #43226:** (*lomerioe*) Fixes for issues in PR #43166 @ 2017-08-29T19:05:39Z
  - **ISSUE #42279:** (*dafyddj*) `win_lgpo` matches multiple policies due to `startswith()` | refs: #43116 #43116 #43166 #43226 #43156
  - **PR #43166:** (*lomerioe*) Backport #43116 to 2017.7 | refs: #43226
  - **PR #43156:** (*lomerioe*) Backport #43116 to 2017.7 | refs: #43166
  - **PR #43116:** (*lomerioe*) Fix 42279 in develop | refs: #43166 #43156

- PR #39773: (*twangboy*) Make win\_file use the win\_dacl salt util | refs: #43226
- ac2189c870 Merge pull request #43226 from lomeroy/fix\_43166
- 0c424dc4a3 Merge branch `2017.7' into fix\_43166
- 324cfd8d1e correcting bad format statement in search for policy to be disabled (fix for #43166) verify that file exists before attempting to remove (fix for commits from #39773)
- PR #43227: (*twangboy*) Fix *unit.fileserver.test\_gitfs* for Windows @ 2017-08-29T19:03:36Z
  - 6199fb46dc Merge pull request #43227 from twangboy/win\_fix\_unit\_test\_gitfs
  - c956d24283 Fix is\_windows detection when USERNAME missing
  - 869e8cc603 Fix *unit.fileserver.test\_gitfs* for Windows
- PR #43217: (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-28T16:36:28Z
  - ISSUE #43101: (*aogier*) genesis.bootstrap fails if no pkg AND exclude\_pkgs (which can't be a string) | refs: #43103
  - ISSUE #42642: (*githubcdr*) state.augeas | refs: #42669 #43202
  - ISSUE #42329: (*jagguli*) State git.latest does not pull latest tags | refs: #42663
  - PR #43202: (*garethgreenaway*) Reverting previous augeas module changes
  - PR #43103: (*aogier*) genesis.bootstrap debootstrap fix
  - PR #42663: (*jagguli*) Check remote tags before deciding to do a fetch #42329
  - 6adc03e4b4 Merge pull request #43217 from rallytime/merge-2017.7
  - 3911df2f4b Merge branch `2016.11' into `2017.7'
  - 5308c27f9f Merge pull request #43202 from garethgreenaway/42642\_2016\_11\_augeas\_module\_revert\_fix
    - \* ef7e93eb3f Reverting this change due to it breaking other uses.
  - f16b7246e4 Merge pull request #43103 from aogier/43101-genesis-bootstrap
    - \* db94f3bb1c better formatting
    - \* e5cc667762 tests: fix a leftover and simplify some parts
    - \* 13e5997457 lint
    - \* 216ced69e5 allow comma-separated pkgs lists, quote args, test deb behaviour
    - \* d8612ae006 fix debootstrap and enhance packages selection/deletion via cmdline
  - 4863771428 Merge pull request #42663 from StreetHawkInc/fix\_git\_tag\_check
    - \* 2b5af5b59d Remove refs/tags prefix from remote tags
    - \* 3f2e96e561 Convert set to list for serializer
    - \* 2728e5d977 Only include new tags in changes
    - \* 4b1df2f223 Exclude annotated tags from checks
    - \* 389c037285 Check remote tags before deciding to do a fetch #42329
- PR #43201: (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-25T22:56:46Z
  - ISSUE #43198: (*corywright*) **disk.format\_** needs to be aliased to disk.format | refs: #43199
  - ISSUE #43143: (*abulford*) git.detached does not fetch if rev is missing from local | refs: #43178

- **ISSUE #495:** (*syphernl*) mysql.\* without having MySQL installed/configured gives traceback | refs: #43196
- **PR #43199:** (*corywright*) Add `disk.format` alias for `disk.format_`
- **PR #43196:** (*gtmanfred*) Pin request install to version for npm tests
- **PR #43179:** (*terminalmage*) Fix missed deprecation
- **PR #43178:** (*terminalmage*) git.detached: Fix traceback when rev is a SHA and is not present locally
- **PR #43173:** (*Ch3LL*) Add New Release Branch Strategy to Contribution Docs
- **PR #43171:** (*terminalmage*) Add warning about adding new functions to salt/utis/\_\_\_init\_\_.py
- a563a9422a Merge pull request #43201 from rallytime/merge-2017.7
- d40eba6b37 Merge branch `2016.11' into `2017.7'
  - \* 4193e7f0a2 Merge pull request #43199 from corywright/disk-format-alias
    - f00d3a9ddc Add `disk.format` alias for `disk.format_`
  - \* 5471f9fe0c Merge pull request #43196 from gtmanfred/2016.11
    - ccd2241777 Pin request install to version
  - \* ace2715c60 Merge pull request #43178 from terminalmage/issue43143
    - 2640833400 git.detached: Fix traceback when rev is a SHA and is not present locally
  - \* 12e9507b9e Merge pull request #43179 from terminalmage/old-deprecation
    - 3adf8ad04b Fix missed deprecation
  - \* b595440d90 Merge pull request #43171 from terminalmage/salt-utis-warning
    - 7b5943a31a Add warning about adding new functions to salt/utis/\_\_\_init\_\_.py
  - \* 4f273cac4f Merge pull request #43173 from Ch3LL/add\_branch\_docs
    - 1b24244bd3 Add New Release Branch Strategy to Contribution Docs
- **PR #42997:** (*twangboy*) Fix `unit.test_test_module_names` for Windows @ 2017-08-25T21:19:11Z
  - ce04ab4286 Merge pull request #42997 from twangboy/win\_fix\_test\_module\_names
  - 2722e9521d Use `os.path.join` to create paths
- **PR #43006:** (*SuperPommeDeTerre*) Try to fix #26995 @ 2017-08-25T21:16:07Z
  - **ISSUE #26995:** (*jbose*) Issue with artifactory.downloaded and snapshot artifacts | refs: #43006 #43006
  - c0279e491e Merge pull request #43006 from SuperPommeDeTerre/SuperPommeDeTerre-patch-#26995
  - 30dd6f5d12 Merge remote-tracking branch `upstream/2017.7' into SuperPommeDeTerre-patch-#26995
  - f42ae9b8cd Merge branch `SuperPommeDeTerre-patch-#26995` of <https://github.com/SuperPommeDeTerre/salt> into SuperPommeDeTerre-patch-#26995
    - \* 50ee3d5682 Merge remote-tracking branch `remotes/origin/2017.7' into SuperPommeDeTerre-patch-#26995
    - \* 0b666e100b Fix typo.
    - \* 1b8729b3e7 Fix for #26995
  - e314102978 Fix typo.
  - db11e1985b Fix for #26995

- **PR #43184:** (*terminalmage*) docker.compare\_container: Perform boolean comparison when one side's value is null/None @ 2017-08-25T18:42:11Z
  - **ISSUE #43162:** (*MorphBonehunter*) docker\_container.running interference with restart\_policy | refs: #43184
  - b6c5314fe9 Merge pull request #43184 from terminalmage/issue43162
  - 081f42ad71 docker.compare\_container: Perform boolean comparison when one side's value is null/None
- **PR #43165:** (*mirceaulinic*) Improve napalm state output in debug mode @ 2017-08-24T23:05:37Z
  - 688125bb4f Merge pull request #43165 from cloudflare/fix-napalm-ret
  - c10717dc89 Lint and fix
  - 1cd33cbaa9 Simplify the loaded\_ret logic
  - 0bbea6b04c Document the new compliance\_report arg
  - 3a906109bd Include compliance reports
  - 3634055e34 Improve napalm state output in debug mode
- **PR #43155:** (*terminalmage*) Resolve image ID during container comparison @ 2017-08-24T22:09:47Z
  - a6a327b1e5 Merge pull request #43155 from terminalmage/issue43001
  - 0186835ebf Fix docstring in test
  - a0bb654e46 Fixing lint issues
  - d5b2a0be68 Resolve image ID during container comparison
- **PR #43170:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-24T19:22:26Z
  - **PR #43151:** (*ushmodin*) state.sls hangs on file.recurse with clean: True on windows
  - **PR #42969:** (*ushmodin*) state.sls hangs on file.recurse with clean: True on windows | refs: #43151
  - c071fd44c8 Merge pull request #43170 from rallytime/merge-2017.7
  - 3daad5a3a2 Merge branch `2016.11' into `2017.7'
    - \* 669b376abf Merge pull request #43151 from ushmodin/2016.11
      - c5841e2ade state.sls hangs on file.recurse with clean: True on windows
- **PR #43168:** (*rallytime*) Back-port #43041 to 2017.7 @ 2017-08-24T19:07:23Z
  - **ISSUE #43040:** (*darcoli*) gitFS ext\_pillar with branch name \_\_env\_\_ results in empty pillars | refs: #43041 #43041
  - **PR #43041:** (*darcoli*) Do not try to match pillarenv with \_\_env\_\_ | refs: #43168
  - 034c325a09 Merge pull request #43168 from rallytime/bp-43041
  - d010b74b87 Do not try to match pillarenv with \_\_env\_\_
- **PR #43172:** (*rallytime*) Move new utils/\_\_init\_\_.py funcs to utils.files.py @ 2017-08-24T19:05:30Z
  - **PR #43056:** (*damon-atkins*) safe\_filename\_leaf(file\_basename) and safe\_filepath(file\_path\_name) | refs: #43172
  - d48938e6b4 Merge pull request #43172 from rallytime/move-utils-funcs
  - 5385c7901e Move new utils/\_\_init\_\_.py funcs to utils.files.py
- **PR #43061:** (*pabloh007*) Have docker.save use the image name when valid if not use image id, i... @ 2017-08-24T16:32:02Z

- **ISSUE #43043:** (*pabloh007*) docker.save and docker.load problem | refs: #43061 #43061
- e60f586442 Merge pull request #43061 from pabloh007/fix-save-image-name-id
- 0ffc57d1df Have docker.save use the image name when valid if not use image id, issue when loading and image is saved with id issue #43043
- **PR #43166:** (*lomeroy*) Backport #43116 to 2017.7 | refs: #43226 @ 2017-08-24T15:01:23Z
  - **ISSUE #42279:** (*dafyddj*) win\_lgpo matches multiple policies due to startswith() | refs: #43116 #43116 #43166 #43226 #43156
  - **PR #43156:** (*lomeroy*) Backport #43116 to 2017.7 | refs: #43166
  - **PR #43116:** (*lomeroy*) Fix 42279 in develop | refs: #43166 #43156
  - 9da57543f8 Merge pull request #43166 from lomeroy/bp-43116-2017.7
  - af181b3257 correct fopen calls from salt.utils for 2017.7
  - f74480f11e lint fix
  - ecd446fd55 track xml namespace to ensure policies w/duplicate IDs or Names do not conflict
  - 9f3047c420 add additional checks for ADM policies that have the same ADMX policy ID (#42279)
- **PR #43056:** (*damon-atkins*) safe\_filename\_leaf(file\_basename) and safe\_filepath(file\_path\_name) | refs: #43172 @ 2017-08-23T17:35:02Z
  - 44b3caead1 Merge pull request #43056 from damon-atkins/2017.7
  - 08ded1546e more lint
  - 6e9c0957fb fix typo
  - ee41171c9f lint fixes
  - 8c864f02c7 fix missing imports
  - 964cebd954 safe\_filename\_leaf(file\_basename) and safe\_filepath(file\_path\_name)
- **PR #43146:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-23T16:56:10Z
  - **ISSUE #43036:** (*mcarlton00*) Linux VMs in Bhyve aren't displayed properly in grains | refs: #43037
  - **PR #43100:** (*vutny*) [DOCS] Add missing *utils* sub-dir listed for *extension\_modules*
  - **PR #43037:** (*mcarlton00*) Issue #43036 Bhyve virtual grain in Linux VMs
  - **PR #42986:** (*renner*) Notify systemd synchronously (via NOTIFY\_SOCKET)
  - 6ca9131a23 Merge pull request #43146 from rallytime/merge-2017.7
  - bcbe180fbc Merge branch `2016.11' into `2017.7'
    - \* ae9d2b7985 Merge pull request #42986 from renner/systemd-notify
      - 79c53f3f81 Fallback to systemd\_notify\_call() in case of socket.error
      - f1765472dd Notify systemd synchronously (via NOTIFY\_SOCKET)
    - \* b420fbe618 Merge pull request #43037 from mcarlton00/fix-bhyve-grains
      - 73315f0cf0 Issue #43036 Bhyve virtual grain in Linux VMs
    - \* 0a86f2d884 Merge pull request #43100 from vutny/doc-add-missing-utils-ext
      - af743ff6c3 [DOCS] Add missing *utils* sub-dir listed for *extension\_modules*
- **PR #43123:** (*twangboy*) Fix *unit.utils.test\_which* for Windows @ 2017-08-23T16:01:39Z

- 03f652159f Merge pull request #43123 from twangboy/win\_fix\_test\_which
- ed97cff5f6 Fix *unit.utils.test\_which* for Windows
- **PR #43142:** (*rallytime*) Back-port #43068 to 2017.7 @ 2017-08-23T15:56:48Z
  - **ISSUE #42505:** (*ikogan*) `selinux.fcontext_policy_present` exception looking for `selinux.filetype_id_to_string` | refs: #43068
  - **PR #43068:** (*ixs*) Mark `selinux._filetype_id_to_string` as public function | refs: #43142
  - 5a4fc07863 Merge pull request #43142 from rallytime/bp-43068
  - efc1c8c506 Mark `selinux._filetype_id_to_string` as public function
- **PR #43038:** (*twangboy*) Fix *unit.utils.test\_url* for Windows @ 2017-08-23T13:35:25Z
  - 0467a0e3bf Merge pull request #43038 from twangboy/win\_unit\_utils\_test\_url
  - 7f5ee55f57 Fix *unit.utils.test\_url* for Windows
- **PR #43097:** (*twangboy*) Fix *group.present* for Windows @ 2017-08-23T13:19:56Z
  - e9ccaa61d2 Merge pull request #43097 from twangboy/win\_fix\_group
  - 43b0360763 Fix lint
  - 9ffe315d7d Add kwargs
  - 4f4e34c79f Fix group state for Windows
- **PR #43115:** (*rallytime*) Back-port #42067 to 2017.7 @ 2017-08-22T20:09:52Z
  - **PR #42067:** (*vitaliyf*) Removed several uses of `name.split('.')` in SoftLayer driver. | refs: #43115
  - 8140855627 Merge pull request #43115 from rallytime/bp-42067
  - 8a6ad0a9cf Fixed typo.
  - 9a5ae2bba1 Removed several uses of `name.split('.')` in SoftLayer driver.
- **PR #42962:** (*twangboy*) Fix *unit.test\_doc test* for Windows @ 2017-08-22T18:06:23Z
  - 1e1a81036c Merge pull request #42962 from twangboy/win\_unit\_test\_doc
  - 201ceae4c4 Fix lint, remove debug statement
  - 37029c1a16 Fix *unit.test\_doc test*
- **PR #42995:** (*twangboy*) Fix malformed requisite for Windows @ 2017-08-22T16:50:01Z
  - d347d1cf8f Merge pull request #42995 from twangboy/win\_fix\_invalid\_requisite
  - 93390de88b Fix malformed requisite for Windows
- **PR #43108:** (*rallytime*) Back-port #42988 to 2017.7 @ 2017-08-22T16:49:27Z
  - **PR #42988:** (*thusoy*) Fix broken negation in iptables | refs: #43108
  - 1c7992a832 Merge pull request #43108 from rallytime/bp-42988
  - 1a987cb948 Fix broken negation in iptables
- **PR #43107:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-22T16:11:25Z
  - **ISSUE #42869:** (*abednarik*) Git Module : Failed to update repository | refs: #43064
  - **ISSUE #42041:** (*lorenogordon*) `pkg.list_repo_pkgs` fails to find pkgs with spaces around yum repo enabled value | refs: #43054
  - **ISSUE #15171:** (*JensRantil*) Maximum recursion limit hit related to requisites | refs: #42985

- **PR #43092:** (*blarghmatey*) Fixed issue with silently passing all tests in Testinfra module
- **PR #43064:** (*terminalmage*) Fix race condition in git.latest
- **PR #43060:** (*twangboy*) Osx update pkg scripts
- **PR #43054:** (*loregordon*) Uses ConfigParser to read yum config files
- **PR #42985:** (*DmitryKuzmenko*) Properly handle *prereq* having lost requisites.
- **PR #42045:** (*arount*) Fix: salt.modules.yumpkg: ConfigParser to read ini like files. | refs: #43054
- c6993f4a84 Merge pull request #43107 from rallytime/merge-2017.7
- 328dd6aa23 Merge branch `2016.11' into `2017.7'
- e2bf2f448e Merge pull request #42985 from DSRCorporation/bugs/15171\_recursion\_limit
  - \* 651b1bab09 Properly handle *prereq* having lost requisites.
- e51333306c Merge pull request #43092 from mitodl/2016.11
  - \* d4b113acdf Fixed issue with silently passing all tests in Testinfra module
- 77a443ce8e Merge pull request #43060 from twangboy/osx\_update\_pkg\_scripts
  - \* ef8a14cdf9 Remove /opt/salt instead of /opt/salt/bin
  - \* 2dd62aa1da Add more information to the description
  - \* f44f5b70dc Only stop services if they are running
  - \* 3b62bf953c Remove salt from the path
  - \* ebdca3a0f5 Update pkg-scripts
- 1b1b6da803 Merge pull request #43064 from terminalmage/issue42869
  - \* 093c0c2f77 Fix race condition in git.latest
- 96e8e836d1 Merge pull request #43054 from lorengordon/fix/yumpkg/config-parser
  - \* 3b2cb81a72 fix typo in salt.modules.yumpkg
  - \* 38add0e4a2 break if leading comments are all fetched
  - \* d7f65dc7a7 fix configparser import & log if error was raised
  - \* ca1b1bb633 use configparser to parse yum repo file
- **PR #42996:** (*twangboy*) Fix *unit.test\_stateconf* for Windows @ 2017-08-21T22:43:58Z
  - f9b4976c02 Merge pull request #42996 from twangboy/win\_fix\_test\_stateconf
  - 92dc3c0ece Use os.sep for path
- **PR #43024:** (*twangboy*) Fix *unit.utils.test\_find* for Windows @ 2017-08-21T22:38:10Z
  - 19fc644c9b Merge pull request #43024 from twangboy/win\_unit\_utils\_test\_find
  - fbe54c9a33 Remove unused import six (lint)
  - b04d1a2f18 Fix *unit.utils.test\_find* for Windows
- **PR #43088:** (*gtmanfred*) allow docker util to be reloaded with reload\_modules @ 2017-08-21T22:14:37Z
  - 1a531169fc Merge pull request #43088 from gtmanfred/2017.7
  - 373a9a0be4 allow docker util to be reloaded with reload\_modules

- **PR #43091:** (*blarghmatey*) Fixed issue with silently passing all tests in Testinfra module @ 2017-08-21T22:06:22Z
  - 83e528f0b3 Merge pull request #43091 from mitodl/2017.7
  - b502560e61 Fixed issue with silently passing all tests in Testinfra module
- **PR #41994:** (*twangboy*) Fix `unit.modules.test_cmdmod` on Windows @ 2017-08-21T21:53:01Z
  - 5482524270 Merge pull request #41994 from twangboy/win\_unit\_test\_cmdmod
  - a5f7288ad9 Skip test that uses `pwd`, not available on Windows
- **PR #42933:** (*garethgreenaway*) Fixes to `osquery` module @ 2017-08-21T20:48:31Z
  - **ISSUE #42873:** (*TheVakman*) `osquery` Data Empty Upon Return / Reporting Not Installed | refs: #42933
  - b33c4abc15 Merge pull request #42933 from garethgreenaway/42873\_2017\_7\_osquery\_fix
  - 8915e62bd9 Removing an import that is not needed.
  - 74bc377eb4 Updating the other function that uses `cmd.run_all`
  - e6a4619ec1 Better approach without using `python_shell=True`.
  - 5ac41f496d When running `osquery` commands through `cmd.run` we should pass `python_shell=True` to ensure everything is formatted right. #42873
- **PR #43093:** (*gtmanfred*) Fix `ec2 list_nodes_full` to work on 2017.7 @ 2017-08-21T20:21:21Z
  - 53c2115769 Merge pull request #43093 from gtmanfred/ec2
  - c7cffb5a04 This block isn't necessary
  - b7283bcc6f `_vm_provider_driver` isn't needed anymore
- **PR #43087:** (*rallytime*) Back-port #42174 to 2017.7 @ 2017-08-21T18:40:18Z
  - **ISSUE #43085:** (*brejoc*) Patch for `Kubernetes` module missing from 2017.7 and 2017.7.1 | refs: #43087
  - **PR #42174:** (*mcalmer*) `kubernetes`: provide client certificate authentication | refs: #43087
  - 32f9ade4db Merge pull request #43087 from rallytime/bp-42174
  - cf6563645b add support for certificate authentication to `kubernetes` module
- **PR #43029:** (*terminalmage*) Normalize the salt caching API @ 2017-08-21T16:54:58Z
  - 882fcd846f Merge pull request #43029 from terminalmage/fix-func-alias
  - f8f74a310c Update `localfs` cache tests to reflect changes to func naming
  - c4ae79b229 Rename other refs to `cache.ls` with `cache.list`
  - ee59d127e8 Normalize the salt caching API
- **PR #43039:** (*gtmanfred*) catch `ImportError` for `kubernetes.client` import @ 2017-08-21T14:32:38Z
  - **ISSUE #42843:** (*brejoc*) `Kubernetes` module won't work with `Kubernetes Python client > 1.0.2` | refs: #42845
  - **PR #42845:** (*brejoc*) API changes for `Kubernetes` version 2.0.0 | refs: #43039
  - dbee735f6e Merge pull request #43039 from gtmanfred/kube
  - 7e269cb368 catch `ImportError` for `kubernetes.client` import
- **PR #43058:** (*rallytime*) Update release version number for `jenkins.run` function @ 2017-08-21T14:13:34Z
  - c56a8499b3 Merge pull request #43058 from rallytime/fix-release-num

- d7eef70df0 Update release version number for jenkins.run function
- **PR #43051:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-18T17:05:57Z
  - **ISSUE #42992:** (*pabloh007*) docker.save flag push does is ignored
  - **ISSUE #42627:** (*taigr8*) salt-cp no longer works. Was working a few months back. | refs: #42890
  - **ISSUE #40490:** (*alxwr*) saltstack x509 incompatible to m2crypto 0.26.0 | refs: #42760
  - **PR #43048:** (*rallytime*) Back-port #43031 to 2016.11
  - **PR #43033:** (*rallytime*) Back-port #42760 to 2016.11
  - **PR #43032:** (*rallytime*) Back-port #42547 to 2016.11
  - **PR #43031:** (*gtmanfred*) use a ruby gem that doesn't have dependencies | refs: #43048
  - **PR #43027:** (*pabloh007*) Fixes ignore push flag for docker.push module issue #42992
  - **PR #43026:** (*rallytime*) Back-port #43020 to 2016.11
  - **PR #43023:** (*terminalmage*) Fixes/improvements to Jenkins state/module
  - **PR #43021:** (*terminalmage*) Use socket.AF\_INET6 to get the correct value instead of doing an OS check
  - **PR #43020:** (*gtmanfred*) test with gem that appears to be abandoned | refs: #43026
  - **PR #43019:** (*rallytime*) Update bootstrap script to latest stable: v2017.08.17
  - **PR #43014:** (*Ch3LL*) Change AF\_INET6 family for mac in test\_host\_to\_ips | refs: #43021
  - **PR #43009:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11
  - **PR #42954:** (*Ch3LL*) [2016.3] Bump latest and previous versions
  - **PR #42949:** (*Ch3LL*) Add Security Notice to 2016.3.7 Release Notes
  - **PR #42942:** (*Ch3LL*) [2016.3] Add clean\_id function to salt.utils.verify.py
  - **PR #42890:** (*DmitryKuzmenko*) Make chunked mode in salt-cp optional
  - **PR #42760:** (*AFriemann*) Catch TypeError thrown by m2crypto when parsing missing subjects in c... | refs: #43033
  - **PR #42547:** (*blarghmatey*) Updated testinfra modules to work with more recent versions | refs: #43032
  - 7b0c94768a Merge pull request #43051 from rallytime/merge-2017.7
  - 153a463b86 Lint: Add missing blank line
  - 84829a6f8c Merge branch '2016.11' into '2017.7'
  - 43aa46f512 Merge pull request #43048 from rallytime/bp-43031
    - \* 35e45049e2 use a ruby gem that doesn't have dependencies
  - ad89ff3104 Merge pull request #43023 from terminalmage/fix-jenkins-xml-caching
    - \* 33fd8ff939 Update jenkins.py
    - \* fc306fc8c3 Add missing colon in *if* statement
    - \* 822eabcc81 Catch exceptions raised when making changes to jenkins
    - \* 91b583b493 Improve and correct exception raising
    - \* f096917a0e Raise an exception if we fail to cache the config xml
  - 2957467ed7 Merge pull request #43026 from rallytime/bp-43020

- \* 0eb15a1f67 test with gem that appears to be abandoned

    - 13b8637d53 Merge pull request #42942 from Ch3LL/2016.3.6\_follow\_up
    - f281e1795f move additional minion config options to 2016.3.8 release notes
    - 168604ba6b remove merge conflict
    - 8a07d95212 update release notes with cve number
    - 149633fdca Add release notes for 2016.3.7 release
    - 7a4cddcd95 Add clean\_id function to salt.utils.verify.py
    - bbb1b29ccb Merge pull request #42954 from Ch3LL/latest\_2016.3
    - b551e66744 [2016.3] Bump latest and previous versions
    - 5d5edc54b7 Merge pull request #42949 from Ch3LL/2016.3.7\_docs
    - d75d3741f8 Add Security Notice to 2016.3.7 Release Notes
- 37c63e7cf2 Merge pull request #43021 from terminalmage/fix-network-test
  - \* 4089b7b1bc Use socket.AF\_INET6 to get the correct value instead of doing an OS check
- 8f6423247c Merge pull request #43019 from rallytime/bootstrap\_2017.08.17
  - \* 2f762b3a17 Update bootstrap script to latest stable: v2017.08.17
- ff1caeee68 Merge pull request #43014 from Ch3LL/fix\_network\_mac
  - \* b8eee4401e Change AF\_INET6 family for mac in test\_host\_to\_ips
- **PR #43035:** (*rallytime*) [2017.7] Merge forward from 2017.7.1 to 2017.7 @ 2017-08-18T12:58:17Z
  - **PR #42948:** (*Ch3LL*) [2017.7.1] Add clean\_id function to salt.utils.verify.py | refs: #43035
  - **PR #42945:** (*Ch3LL*) [2017.7] Add clean\_id function to salt.utils.verify.py | refs: #43035
  - d15b0ca937 Merge pull request #43035 from rallytime/merge-2017.7
  - 756128a896 Merge branch `2017.7.1` into `2017.7`

- \* [ab1b099730](#) Merge pull request [#42948](#) from [Ch3LL/2017.7.0\\_follow\\_up](#)
- **PR #43034:** (*rallytime*) Back-port [#43002](#) to 2017.7 @ [2017-08-17T23:18:16Z](#)
  - **ISSUE #42989:** (*blbradley*) GitFS GitPython performance regression in 2017.7.1 | refs: [#43002](#) [#43002](#)
  - **PR #43002:** (*the-glu*) Try to fix [#42989](#) | refs: [#43034](#)
  - [bcb973a71](#) Merge pull request [#43034](#) from [rallytime/bp-43002](#)
  - [350c0767dc](#) Try to fix [#42989](#) by doing `sslVerify` and `refspecs` for origin remote only if there is no remotes
- **PR #42958:** (*gtmanfred*) runit module should also be loaded as runit @ [2017-08-17T22:30:23Z](#)
  - **ISSUE #42375:** (*dragonpaw*) `salt.modules.*.__virtualname__` doesn't work as documented. | refs: [#42523](#) [#42958](#)
  - [9182f55bbb](#) Merge pull request [#42958](#) from [gtmanfred/2017.7](#)
  - [fd6874668b](#) runit module should also be loaded as runit
- **PR #43031:** (*gtmanfred*) use a ruby gem that doesn't have dependencies | refs: [#43048](#) @ [2017-08-17T22:26:25Z](#)
  - [5985cc4e8e](#) Merge pull request [#43031](#) from [gtmanfred/test\\_gem](#)
  - [ba80a7d4b5](#) use a ruby gem that doesn't have dependencies
- **PR #43030:** (*rallytime*) Small cleanup to `dockermodule.save` @ [2017-08-17T22:26:00Z](#)
  - [246176b1a6](#) Merge pull request [#43030](#) from [rallytime/dockermodule-minor-change](#)
  - [d6a5e85632](#) Small cleanup to `dockermodule.save`
- **PR #42993:** (*pabloh007*) Fixes ignored push flag for `docker.push` module issue [#42992](#) @ [2017-08-17T18:50:37Z](#)
  - **ISSUE #42992:** (*pabloh007*) `docker.save` flag push does is ignored
  - [160001120b](#) Merge pull request [#42993](#) from [pabloh007/fix-docker-save-push](#)
  - [fe7554cfb](#) Fixes ignored push flag for `docker.push` module issue [#42992](#)
- **PR #42967:** (*terminalmage*) Fix bug in `on_header` callback when no `Content-Type` is found in headers @ [2017-08-17T18:48:52Z](#)
  - **ISSUE #42941:** (*danlsgiga*) `pkg.installed` fails on installing from HTTPS rpm source | refs: [#42967](#)
  - [9009a971b1](#) Merge pull request [#42967](#) from [terminalmage/issue42941](#)
  - [b838460816](#) Fix bug in `on_header` callback when no `Content-Type` is found in headers
- **PR #43016:** (*gtmanfred*) service should return false on exception @ [2017-08-17T18:08:05Z](#)
  - **ISSUE #43008:** (*fillarios*) `states.service.running` always succeeds when watched state has changes | refs: [#43016](#)
  - [58f070d7a7](#) Merge pull request [#43016](#) from [gtmanfred/service](#)
  - [21c264fe55](#) service should return false on exception
- **PR #43020:** (*gtmanfred*) test with gem that appears to be abandoned | refs: [#43026](#) @ [2017-08-17T16:40:41Z](#)
  - [973d288eca](#) Merge pull request [#43020](#) from [gtmanfred/test\\_gem](#)
  - [0a1f40a664](#) test with gem that appears to be abandoned
- **PR #42999:** (*garethgreenaway*) Fixes to slack engine @ [2017-08-17T15:46:24Z](#)
  - [9cd0607fd4](#) Merge pull request [#42999](#) from [garethgreenaway/slack\\_engine\\_allow\\_editing\\_messages](#)

- 0ece2a8f0c Fixing a bug that prevented editing Slack messages and having the commands resent to the Slack engine.
- **PR #43010:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-17T15:10:29Z
  - **ISSUE #42803:** (*gmcwhistler*) master\_type: str, not working as expected, parent salt-minion process dies. | refs: #42848
  - **ISSUE #42753:** (*grichmond-salt*) SaltReqTimeout Error on Some Minions when One Master in a Multi-Master Configuration is Unavailable | refs: #42848
  - **ISSUE #42644:** (*stamak*) nova salt-cloud -P Private IPs returned, but not public. Checking for misidentified IPs | refs: #42940
  - **ISSUE #38839:** (*DaveOHenry*) Invoking runner.cloud.action via reactor sls fails | refs: #42291
  - **PR #42968:** (*vutny*) [DOCS] Fix link to Salt Cloud Feature Matrix
  - **PR #42959:** (*rallytime*) Back-port #42883 to 2016.11
  - **PR #42952:** (*Ch3LL*) [2016.11] Bump latest and previous versions
  - **PR #42950:** (*Ch3LL*) Add Security Notice to 2016.11.7 Release Notes
  - **PR #42944:** (*Ch3LL*) [2016.11] Add clean\_id function to salt.utils.verify.py
  - **PR #42940:** (*gtmanfred*) create new ip address before checking list of allocated ips
  - **PR #42919:** (*rallytime*) Back-port #42871 to 2016.11
  - **PR #42918:** (*rallytime*) Back-port #42848 to 2016.11
  - **PR #42883:** (*rallytime*) Fix failing boto tests | refs: #42959
  - **PR #42871:** (*amalleo25*) Update joyent.rst | refs: #42919
  - **PR #42861:** (*twangboy*) Fix pkg.install salt-minion using salt-call
  - **PR #42848:** (*DmitryKuzmenko*) Execute fire\_master asynchronously in the main minion thread. | refs: #42918
  - **PR #42836:** (*aneeshusa*) Backport salt.utils.versions from develop to 2016.11
  - **PR #42835:** (*aneeshusa*) Fix typo in utils/versions.py module | refs: #42836
  - **PR #42798:** (*s-sebastian*) Update return data before calling returners
  - **PR #42291:** (*vutny*) Fix #38839: remove state from Reactor runner kwags
  - 31627a9163 Merge pull request #43010 from rallytime/merge-2017.7
  - 8a0f948e4a Merge branch '2016.11' into '2017.7'
  - 1ee9499d28 Merge pull request #42968 from vutny/doc-salt-cloud-ref
    - \* 44ed53b1df [DOCS] Fix link to Salt Cloud Feature Matrix
  - 923f9741fe Merge pull request #42291 from vutny/fix-38839
    - \* 5f8f98a01f Fix #38839: remove state from Reactor runner kwags
  - c20bc7d515 Merge pull request #42940 from gtmanfred/2016.11
    - \* 253e216a8d fix IP address spelling
    - \* bd63074e7a create new ip address before checking list of allocated ips
  - d6496eca72 Merge pull request #42959 from rallytime/bp-42883
    - \* c6b9ca4b9e Lint fix: add missing space

- \* 5597b1a30e Skip 2 failing tests in Python 3 due to upstream bugs
- \* a0b19bdc27 Update account id value in boto\_secgroup module unit test
- \* 60b406e088 @mock\_elb needs to be changed to @mock\_elb\_deprecated as well
- \* 6ae1111295 Replace @mock\_ec2 calls with @mock\_ec2\_deprecated calls
- 6366e05d0d Merge pull request #42944 from Ch3LL/2016.11.6\_follow\_up
  - \* 7e0a20afca Add release notes for 2016.11.7 release
  - \* 63823f8c3e Add clean\_id function to salt.utils.verify.py
- 49d339c976 Merge pull request #42952 from Ch3LL/latest\_2016.11
  - \* 74e7055d54 [2016.11] Bump latest and previous versions
- b0d2e05a79 Merge pull request #42950 from Ch3LL/2016.11.7\_docs
  - \* a6f902db40 Add Security Notice to 2016.11.77 Release Notes
- c0ff69f88c Merge pull request #42836 from lyft/backport-utils.versions-to-2016.11
  - \* 86ce7004a2 Backport salt.utils.versions from develop to 2016.11
- 64a79dd5ac Merge pull request #42919 from rallytime/bp-42871
  - \* 4e46c968e6 Update joyent.rst
- bea8ec1098 Merge pull request #42918 from rallytime/bp-42848
  - \* cdb48126f7 Make lint happier.
  - \* 62eca9b00b Execute fire\_master asynchronously in the main minion thread.
- 52bce329cb Merge pull request #42861 from twangboy/win\_pkg\_install\_salt
  - \* 0d3789f0c6 Fix pkg.install salt-minion using salt-call
- b9f4f87aa5 Merge pull request #42798 from s-sebastian/2016.11
  - \* 1cc86592ed Update return data before calling returners
- **PR #42884:** (*Giandom*) Convert to dict type the pillar string value passed from slack @ 2017-08-16T22:30:43Z
  - **ISSUE #42842:** (*Giandom*) retrieve kwargs passed with slack engine | refs: #42884
  - 82be9dceb6 Merge pull request #42884 from Giandom/2017.7.1-fix-slack-engine-pillar-args
  - 80fd733c99 Update slack.py
- **PR #42963:** (*twangboy*) Fix `unit.test_fileclient` for Windows @ 2017-08-16T14:18:18Z
  - 42bd553b98 Merge pull request #42963 from twangboy/win\_unit\_test\_fileclient
  - e9febe4893 Fix unit.test\_fileclient
- **PR #42964:** (*twangboy*) Fix `salt.utils.recursive_copy` for Windows @ 2017-08-16T14:17:27Z
  - 7dddeeea8d Merge pull request #42964 from twangboy/win\_fix\_recursive\_copy
  - 121cd4ef81 Fix `salt.utils.recursive_copy` for Windows
- **PR #42946:** (*mirceaulinic*) `extension_modules` should default to `$CACHE_DIR/proxy/extmods` @ 2017-08-15T21:26:36Z
  - **ISSUE #42943:** (*mirceaulinic*) `extension_modules` defaulting to `/var/cache/minion` although running under proxy minion | refs: #42946
  - 6da4d1d95e Merge pull request #42946 from cloudfare/px\_extmods\_42943

- 73f9135340 extension\_modules should default to /proxy/extmods
- **PR #42945:** (*Ch3LL*) [2017.7] Add clean\_id function to salt.utils.verify.py | refs: [#43035](#) @ 2017-08-15T18:04:20Z
  - 95645d49f9 Merge pull request [#42945](#) from Ch3LL/2017.7.0\_follow\_up
  - dcd92042e3 remove extra doc
  - 693a504ef0 update release notes with cve number
- **PR #42812:** (*terminalmage*) Update custom YAML loader tests to properly test unicode literals @ 2017-08-15T17:50:22Z
  - **ISSUE #42427:** (*grichmond-salt*) Issue Passing Variables created from load\_json as Inline Pillar Between States | refs: [#42435](#)
  - **PR #42435:** (*terminalmage*) Modify our custom YAML loader to treat unicode literals as unicode strings | refs: [#42812](#)
  - 47ff9d5627 Merge pull request [#42812](#) from terminalmage/yaml-loader-tests
  - 9d8486a894 Add test for custom YAML loader with unicode literal strings
  - a0118bcece Remove bytestrings and use textwrap.dedent for readability
- **PR #42953:** (*Ch3LL*) [2017.7] Bump latest and previous versions @ 2017-08-15T17:23:28Z
  - 5d0c2198ac Merge pull request [#42953](#) from Ch3LL/latest\_2017.7
  - cbecf65823 [2017.7] Bump latest and previous versions
- **PR #42951:** (*Ch3LL*) Add Security Notice to 2017.7.1 Release Notes @ 2017-08-15T16:49:56Z
  - 730e71db17 Merge pull request [#42951](#) from Ch3LL/2017.7.1\_docs
  - 1d8f827c58 Add Security Notice to 2017.7.1 Release Notes
- **PR #42868:** (*carsonoid*) Stub out required functions in redis\_cache @ 2017-08-15T14:33:54Z
  - c1c8cb9bfa Merge pull request [#42868](#) from carsonoid/redisjobcachefix
  - 885bee2a7d Stub out required functions for redis cache
- **PR #42810:** (*amendlik*) Ignore error values when listing Windows SNMP community strings @ 2017-08-15T03:55:15Z
  - e192d6e0af Merge pull request [#42810](#) from amendlik/win-snmp-community
  - dc20e4651b Ignore error values when listing Windows SNMP community strings
- **PR #42920:** (*cachedout*) pid\_race @ 2017-08-15T03:49:10Z
  - a1817f1de3 Merge pull request [#42920](#) from cachedout/pid\_race
  - 5e930b8cbd If we catch the pid file in a transistory state, return None
- **PR #42925:** (*terminalmage*) Add debug logging to troubleshoot test failures @ 2017-08-15T03:47:51Z
  - 11a33fe692 Merge pull request [#42925](#) from terminalmage/f26-debug-logging
  - 8165f46165 Add debug logging to troubleshoot test failures
- **PR #42913:** (*twangboy*) Change service shutdown timeouts for salt-minion service (Windows) @ 2017-08-14T20:55:24Z
  - a537197030 Merge pull request [#42913](#) from twangboy/win\_change\_timeout
  - ffb23fbe47 Remove the line that wipes out the cache
  - a3becf8342 Change service shutdown timeouts

- **PR #42800:** (*skizunov*) Fix exception when master\_type=disable @ 2017-08-14T20:53:38Z
  - ca0555f616 Merge pull request #42800 from skizunov/develop6
  - fa5822009f Fix exception when master\_type=disable
- **PR #42679:** (*mirceaulinic*) Add multiprocessing option for NAPALM proxy @ 2017-08-14T20:45:06Z
  - 3af264b664 Merge pull request #42679 from cloudflare/napalm-multiprocessing
  - 9c4566db0c multiprocessing option tagged for 2017.7.2
  - 37bca1b902 Add multiprocessing option for NAPALM proxy
  - a2565ba8e5 Add new napalm option: multiprocessing
- **PR #42657:** (*nhavens*) back-port #42612 to 2017.7 @ 2017-08-14T19:42:26Z
  - **ISSUE #42611:** (*nhavens*) selinux.boolean state does not return changes | refs: #42612
  - **PR #42612:** (*nhavens*) fix for issue #42611 | refs: #42657
  - 4fcdab3ae9 Merge pull request #42657 from nhavens/2017.7
  - d73c4b55b7 back-port #42612 to 2017.7
- **PR #42709:** (*whiteinge*) Add token\_expire\_user\_override link to auth runner docstring @ 2017-08-14T19:03:06Z
  - d2b6ce327a Merge pull request #42709 from whiteinge/doc-token\_expire\_user\_override
  - c7ea631558 Add more docs on the token\_expire param
  - 4a9f6ba44f Add token\_expire\_user\_override link to auth runner docstring
- **PR #42848:** (*DmitryKuzmenko*) Execute fire\_master asynchronously in the main minion thread. | refs: #42918 @ 2017-08-14T18:28:38Z
  - **ISSUE #42803:** (*gmcwhistler*) master\_type: str, not working as expected, parent salt-minion process dies. | refs: #42848
  - **ISSUE #42753:** (*grichmond-salt*) SaltReqTimeout Error on Some Minions when One Master in a Multi-Master Configuration is Unavailable | refs: #42848
  - c6a7bf02e9 Merge pull request #42848 from DSRCorporation/bugs/42753\_mmaster\_timeout
  - 7f5412c19e Make lint happier.
  - ff66b7aaf0 Execute fire\_master asynchronously in the main minion thread.
- **PR #42911:** (*gtmanfred*) cloud driver isn't a provider @ 2017-08-14T17:47:16Z
  - 6a3279ea50 Merge pull request #42911 from gtmanfred/2017.7
  - 99046b441f cloud driver isn't a provider
- **PR #42860:** (*skizunov*) hash\_and\_stat\_file should return a 2-tuple @ 2017-08-14T15:44:54Z
  - 4456f7383d Merge pull request #42860 from skizunov/develop7
  - 5f85a03636 hash\_and\_stat\_file should return a 2-tuple
- **PR #42889:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-14T14:16:20Z
  - **ISSUE #41976:** (*abulford*) dockerng network states do not respect test=True | refs: #41977 #41977
  - **ISSUE #41770:** (*Ch3LL*) NPM v5 incompatible with salt.modules.cache\_list | refs: #42856
  - **ISSUE #475:** (*thatch45*) Change yaml to use C bindings | refs: #42856
  - **PR #42886:** (*sarcasticadmin*) Adding missing output flags to salt cli docs

- **PR #42882:** (*gtmanfred*) make sure cmd is not run when npm isn't installed
- **PR #42877:** (*terminalmage*) Add virtual func for cron state module
- **PR #42864:** (*whiteinge*) Make syndic\_log\_file respect root\_dir setting
- **PR #42859:** (*terminalmage*) Add note about git CLI requirement for GitPython to GitFS tutorial
- **PR #42856:** (*gtmanfred*) skip cache\_clean test if npm version is >= 5.0.0
- **PR #42788:** (*amendlik*) Remove waits and retries from Saltify deployment
- **PR #41977:** (*abulford*) Fix dockerng.network\_\* ignoring of tests=True
- c6ca7d639f Merge pull request #42889 from rallytime/merge-2017.7
- fb7117f2ac Use salt.utils.versions.LooseVersion instead of distutils
- 29ff19c587 Merge branch `2016.11' into `2017.7'
  - \* c15d0034fe Merge pull request #41977 from redmatter/fix-dockerng-network-ignores-test
    - 1cc2aa503a Fix dockerng.network\_\* ignoring of tests=True
  - \* 3b9c3c5671 Merge pull request #42886 from sarcasticadmin/adding\_docs\_salt\_outputs
    - 744bf954ff Adding missing output flags to salt cli
  - \* e5b98c8a88 Merge pull request #42882 from gtmanfred/2016.11
    - da3402a53d make sure cmd is not run when npm isn't installed
  - \* 5962c9588b Merge pull request #42788 from amendlik/saltify-timeout
    - 928b523797 Remove waits and retries from Saltify deployment
  - \* 227ecddd13 Merge pull request #42877 from terminalmage/add-cron-state-virtual
    - f1de196740 Add virtual func for cron state module
  - \* ab9f6cef33 Merge pull request #42859 from terminalmage/gitpython-git-cli-note
    - 35e05c9515 Add note about git CLI requirement for GitPython to GitFS tutorial
  - \* 682b4a8d14 Merge pull request #42856 from gtmanfred/2016.11
    - b458b89fb8 skip cache\_clean test if npm version is >= 5.0.0
  - \* 01ea854029 Merge pull request #42864 from whiteinge/syndic-log-root\_dir
    - 4b1f55da9c Make syndic\_log\_file respect root\_dir setting
- **PR #42898:** (*mirceaulinic*) Minor eos doc correction @ 2017-08-14T13:42:21Z
  - 4b6fe2ee59 Merge pull request #42898 from mirceaulinic/patch-11
  - 93be79a135 Index eos under the installation instructions list
  - f903e7bc39 Minor eos doc correction
- **PR #42883:** (*rallytime*) Fix failing boto tests | refs: #42959 @ 2017-08-11T20:29:12Z
  - 1764878754 Merge pull request #42883 from rallytime/fix-boto-tests
  - 6a7bf99848 Lint fix: add missing space
  - 43643227c6 Skip 2 failing tests in Python 3 due to upstream bugs
  - 7f46603e9c Update account id value in boto\_secgroup module unit test
  - 7c1d493fdd @mock\_elb needs to be changed to @mock\_elb\_deprecated as well

- 3055e17ed5 Replace @mock\_ec2 calls with @mock\_ec2\_deprecated calls
- **PR #42885:** (*terminalmage*) Move weird tearDown test to an actual tearDown @ 2017-08-11T19:14:42Z
  - b21778efac Merge pull request #42885 from terminalmage/fix-f26-tests
  - 462d653082 Move weird tearDown test to an actual tearDown
- **PR #42887:** (*rallytime*) Remove extraneous ``deprecated" notation @ 2017-08-11T18:34:25Z
  - **ISSUE #42870:** (*boltronics*) webutil.useradd marked as deprecated:: 2016.3.0 by mistake? | refs: #42887
  - 9868ab6f3b Merge pull request #42887 from rallytime/fix-42870
  - 71e7581a2d Remove extraneous ``deprecated" notation
- **PR #42881:** (*gtmanfred*) fix vmware for python 3.4.2 in salt.utils.vmware @ 2017-08-11T17:52:29Z
  - da71f2a11b Merge pull request #42881 from gtmanfred/vmware
  - 05ecc6ac8d fix vmware for python 3.4.2 in salt.utils.vmware
- **PR #42845:** (*brejoc*) API changes for Kubernetes version 2.0.0 | refs: #43039 @ 2017-08-11T14:04:30Z
  - **ISSUE #42843:** (*brejoc*) Kubernetes module won't work with Kubernetes Python client > 1.0.2 | refs: #42845
  - c7750d5717 Merge pull request #42845 from brejoc/updates-for-kubernetes-2.0.0
  - 81674aa88a Version info in :optdepends: not needed anymore
  - 71995505bc Not depending on specific K8s version anymore
  - d8f7d7a7c0 API changes for Kubernetes version 2.0.0
- **PR #42678:** (*frankiexyz*) Add eos.rst in the installation guide @ 2017-08-11T13:58:37Z
  - 459fdedc67 Merge pull request #42678 from frankiexyz/2017.7
  - 1598571f52 Add eos.rst in the installation guide
- **PR #42778:** (*gtmanfred*) make sure to use the correct out\_file @ 2017-08-11T13:44:48Z
  - **ISSUE #42646:** (*gmacon*) SPM fails to install multiple packages | refs: #42778
  - 4ce96eb1a1 Merge pull request #42778 from gtmanfred/spm
  - 7ef691e8da make sure to use the correct out\_file
- **PR #42857:** (*gtmanfred*) use older name if \_create\_unverified\_context is unavailable @ 2017-08-11T13:37:59Z
  - **ISSUE #480:** (*zyluo*) PEP8 types clean-up | refs: #42857
  - 3d05d89e09 Merge pull request #42857 from gtmanfred/vmware
  - c1f673eca4 use older name if \_create\_unverified\_context is unavailable
- **PR #42866:** (*twangboy*) Change to GitPython version 2.1.1 @ 2017-08-11T13:23:52Z
  - 7e8cfff21c Merge pull request #42866 from twangboy/osx\_downgrade\_gitpython
  - 28053a84a6 Change GitPython version to 2.1.1
- **PR #42855:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-10T21:40:39Z
  - **ISSUE #42747:** (*whiteinge*) Outputters mutate data which can be a problem for Runners and perhaps other things | refs: #42748
  - **ISSUE #42731:** (*infoveinx*) http.query template\_data render exception | refs: #42804
  - **ISSUE #42690:** (*ChristianBeer*) git.latest state with remote set fails on first try | refs: #42694

- **ISSUE #42683:** (*rgcosma*) Gluster module broken in 2017.7 | refs: #42806
- **ISSUE #42600:** (*twangboy*) Unable to set 'Not Configured' using win\_lgpo execution module | refs: #42744 #42794 #42795
- **PR #42851:** (*terminalmage*) Backport #42651 to 2016.11
- **PR #42838:** (*twangboy*) Document requirements for win\_pki
- **PR #42829:** (*twangboy*) Fix passing version in pkgs as shown in docs
- **PR #42826:** (*terminalmage*) Fix misspelling of ``versions"
- **PR #42806:** (*rallytime*) Update doc references in glusterfs.volume\_present
- **PR #42805:** (*rallytime*) Back-port #42552 to 2016.11
- **PR #42804:** (*rallytime*) Back-port #42784 to 2016.11
- **PR #42795:** (*lomeroy*) backport #42744 to 2016.11
- **PR #42786:** (*Ch3LL*) Fix typo for template\_dict in http docs
- **PR #42784:** (*gtmanfred*) only read file if ret is not a string in http.query | refs: #42804
- **PR #42764:** (*amendlik*) Fix infinite loop with salt-cloud and Windows nodes
- **PR #42748:** (*whiteinge*) Workaround Orchestrate problem that highstate outputter mutates data
- **PR #42744:** (*lomeroy*) fix #42600 in develop | refs: #42794 #42795
- **PR #42694:** (*gtmanfred*) allow adding extra remotes to a repository
- **PR #42651:** (*gtmanfred*) python2- prefix for fedora 26 packages
- **PR #42552:** (*remijouannet*) update consul module following this documentation <https://www.consul...> | refs: #42805
- 3ce18637be Merge pull request #42855 from rallytime/merge-2017.7
- 08bbcf5790 Merge branch '2016.11' into '2017.7'
- 2dde1f77e9 Merge pull request #42851 from terminalmage/bp-42651
  - \* a3da86eea8 fix syntax
  - \* 6ecdbcec1d make sure names are correct
  - \* f83b553d6e add py3 for versionlock
  - \* 21934f61bb python2- prefix for fedora 26 packages
- c746f79a3a Merge pull request #42806 from rallytime/fix-42683
  - \* 8c8640d6b8 Update doc references in glusterfs.volume\_present
- 27a8a2695a Merge pull request #42829 from twangboy/win\_pkg\_fix\_install
  - \* 83b9b230cd Add winrepo to docs about supporting versions in pkgs
  - \* 81fefa6e67 Add ability to pass version in pkgs list
- 3c3ac6aeb2 Merge pull request #42838 from twangboy/win\_doc\_pki
  - \* f0a1d06b46 Standardize PKI Client
  - \* 7de687aa57 Document requirements for win\_pki
- b3e2ae3c58 Merge pull request #42805 from rallytime/bp-42552

- \* 5a91c1f2d1 update consul module following this documentation <https://www.consul.io/api/acl.html>
- d2ee7934ed Merge pull request #42804 from rallytime/bp-42784
  - \* dbd29e4aaa only read file if it is not a string
- 4cbf8057b3 Merge pull request #42826 from terminalmage/fix-spelling
  - \* 00f93142e4 Fix misspelling of ``versions"
- de997edd90 Merge pull request #42786 from Ch3LL/fix\_typo
  - \* 90a2fb66a2 Fix typo for template\_dict in http docs
- bf6153ebe5 Merge pull request #42795 from lomerof/`bp-42744`\_\_201611
  - \* 695f8c1ae4 fix #42600 in develop
- 61fad97286 Merge pull request #42748 from whiteinge/save-before-output
  - \* de60b77c82 Workaround Orchestrate problem that highstate outputter mutates data
- a4e3e7e786 Merge pull request #42764 from amendlik/cloud-win-loop
  - \* f3dcfca4e0 Fix infinite loops on failed Windows deployments
- da85326ad4 Merge pull request #42694 from gtmanfred/2016.11
  - \* 1a0457af51 allow adding extra remotes to a repository
- **PR #42808:** (*terminalmage*) Fix regression in yum/dnf version specification @ 2017-08-10T15:59:22Z
  - **ISSUE #42774:** (*rossengeorgiev*) pkg.installed succeeds, but fails when you specify package version | refs: #42808
  - f954f4f33a Merge pull request #42808 from terminalmage/issue42774
  - c69f17dd18 Add integration test for #42774
  - 78d826dd14 Fix regression in yum/dnf version specification
- **PR #42807:** (*rallytime*) Update modules --> states in kubernetes doc module @ 2017-08-10T14:10:40Z
  - **ISSUE #42639:** (*amnonbc*) k8s module needs a way to manage configmaps | refs: #42807
  - d9b0f44885 Merge pull request #42807 from rallytime/fix-42639
  - 152eb88d9f Update modules --> states in kubernetes doc module
- **PR #42841:** (*Mapel88*) Fix bug #42818 in win\_iis module @ 2017-08-10T13:44:21Z
  - **ISSUE #42818:** (*Mapel88*) Bug in win\_iis module - ``create\_cert\_binding" | refs: #42841
  - b8c7bda68d Merge pull request #42841 from Mapel88/patch-1
  - 497241fbcf Fix bug #42818 in win\_iis module
- **PR #42782:** (*rallytime*) Add a cmp compatibility function utility @ 2017-08-09T22:37:29Z
  - **ISSUE #42697:** (*Ch3LL*) [Python3] NameError when running salt-run manage.versions | refs: #42782
  - 135f9522d0 Merge pull request #42782 from rallytime/fix-42697
  - d707f94863 Update all other calls to ``cmp" function
  - 5605104285 Add a cmp compatibility function utility
- **PR #42784:** (*gtmanfred*) only read file if ret is not a string in http.query | refs: #42804 @ 2017-08-08T17:20:13Z
  - ac752223ad Merge pull request #42784 from gtmanfred/http

- d397c90e92 only read file if it is not a string
- **PR #42794:** (*lomeroe*) Backport #42744 to 2017.7 @ 2017-08-08T17:16:31Z
  - **ISSUE #42600:** (*twangboy*) Unable to set 'Not Configured' using win\_lgpo execution module | refs: #42744 #42794 #42795
  - **PR #42744:** (*lomeroe*) fix #42600 in develop | refs: #42794 #42795
  - 44995b1abf Merge pull request #42794 from lomeroe/bp-42744
  - 0acffc6df5 fix #42600 in develop
- **PR #42708:** (*cro*) Do not change the arguments of the function when memoizing @ 2017-08-08T13:47:01Z
  - **ISSUE #42707:** (*cro*) Service module and state fails on FreeBSD | refs: #42708
  - dcf474c47c Merge pull request #42708 from cro/dont\_change\_args\_during\_memoize
  - a260e913b5 Do not change the arguments of the function when memoizing
- **PR #42783:** (*rallytime*) Sort lists before comparing them in python 3 unit test @ 2017-08-08T13:25:15Z
  - **PR #42206:** (*rallytime*) [PY3] Fix test that is flaky in Python 3 | refs: #42783
  - ddb671b8fe Merge pull request #42783 from rallytime/fix-flaky-py3-test
  - 998834fbac Sort lists before comparing them in python 3 unit test
- **PR #42721:** (*hibbert*) Allow no ip sg @ 2017-08-07T22:07:18Z
  - d69822fe93 Merge pull request #42721 from hibbert/allow\_no\_ip\_sg
  - f58256802a allow\_no\_ip\_sg: Allow user to not supply ipaddress or securitygroups when running boto\_efs.create\_mount\_target
- **PR #42769:** (*terminalmage*) Fix domainname parameter input translation @ 2017-08-07T20:46:07Z
  - **ISSUE #42538:** (*marnovdm*) docker\_container.running issue since 2017.7.0: passing domainname gives Error 500: json: cannot unmarshal array into Go value of type string | refs: #42769
  - bf7938fbe0 Merge pull request #42769 from terminalmage/issue42538
  - 665de2d1f9 Fix domainname parameter input translation
- **PR #42388:** (*The-Loeki*) pillar.items pillar\_env & pillar\_override are never used @ 2017-08-07T17:51:48Z
  - 7bf2cdb363 Merge pull request #42388 from The-Loeki/patch-1
  - 664f4b577b pillar.items pillar\_env & pillar\_override are never used
- **PR #42770:** (*rallytime*) [2017.7] Merge forward from 2017.7.1 to 2017.7 @ 2017-08-07T16:21:45Z
  - 9a8c9ebffc Merge pull request #42770 from rallytime/merge-2017.7.1-into-2017.7
  - 6d17c9d227 Merge branch '2017.7.1' into '2017.7'
- **PR #42768:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-07T16:21:17Z
  - **ISSUE #42686:** (*gilbsgilbs*) Unable to set multiple RabbitMQ tags | refs: #42693 #42693
  - **ISSUE #42642:** (*githubcdr*) state.augeas | refs: #42669 #43202
  - **ISSUE #41433:** (*sbojarski*) boto\_cfn.present fails when reporting error for failed state | refs: #42574
  - **PR #42693:** (*gilbsgilbs*) Fix RabbitMQ tags not properly set.
  - **PR #42669:** (*garethgreenaway*) [2016.11] Fixes to augeas module
  - **PR #42655:** (*whiteinge*) Reenable cpstats for rest\_cherrypy

- **PR #42629:** (*xiaoanyunfei*) tornado api
- **PR #42623:** (*terminalmage*) Fix unicode constructor in custom YAML loader
- **PR #42574:** (*sbojarski*) Fixed error reporting in ``boto\_cfn.present`` function.
- **PR #33806:** (*cachedout*) Work around upstream cherry py bug | refs: #42655
- c765e528d0 Merge pull request #42768 from rallytime/merge-2017.7
- 0f75482c37 Merge branch `2016.11` into `2017.7`
  - \* 7b2119fee Merge pull request #42669 from garethgreen-away/42642\_2016\_11\_augeas\_module\_fix
    - 24413084e2 Updating the call to shlex\_split to pass the posix=False argument so that quotes are preserved.
  - \* 30725769ed Merge pull request #42629 from xiaoanyunfei/tornadoapi
    - 1e13383b95 tornado api
  - \* f0f00fcee1 Merge pull request #42655 from whiteinge/rest\_cherry py-reenable-stats
    - deb6316d67 Fix lint errors
    - 6bd91c8b03 Reenable cpstats for rest\_cherry py
  - \* 21cf15f9c3 Merge pull request #42693 from gilbsgilbs/fix-rabbitmq-tags
    - 78fccdc7e2 Cast to list in case tags is a tuple.
    - 287b57b5c5 Fix RabbitMQ tags not properly set.
  - \* f2b0c9b4fa Merge pull request #42574 from sbojarski/boto-cfn-error-reporting
    - 5c945f10c2 Fix debug message in ``boto\_cfn.\_validate`` function.
    - 181a1beecc Fixed error reporting in ``boto\_cfn.present`` function.
  - \* bc1effc4f2 Merge pull request #42623 from terminalmage/fix-unicode-constructor
    - fcf45889dd Fix unicode constructor in custom YAML loader
- **PR #42651:** (*gtmanfred*) python2- prefix for fedora 26 packages @ 2017-08-07T14:35:04Z
  - 3f5827f61e Merge pull request #42651 from gtmanfred/2017.7
  - 8784899942 fix syntax
  - 178cc1bd81 make sure names are correct
  - f179b97b52 add py3 for versionlock
  - 1958d18634 python2- prefix for fedora 26 packages
- **PR #42689:** (*hibbert*) boto\_efs\_fix\_tags: Fix #42688 invalid type for parameter tags @ 2017-08-06T17:47:07Z
  - **ISSUE #42688:** (*hibbert*) salt.modules.boto\_efs module Invalid type for parameter Tags - type: <type `dict`>, valid types: <type `list`>, <type `tuple`> | refs: #42689
  - 791248e398 Merge pull request #42689 from hibbert/boto\_efs\_fix\_tags
  - 157fb28851 boto\_efs\_fix\_tags: Fix #42688 invalid type for parameter tags
- **PR #42745:** (*terminalmage*) docker.compare\_container: treat null oom\_kill\_disable as False @ 2017-08-05T15:28:20Z
  - **ISSUE #42705:** (*hbruch*) salt.states.docker\_container.running replaces container on subsequent runs if oom\_kill\_disable unsupported | refs: #42745

- 1b3407649b Merge pull request #42745 from terminalmage/issue42705
- 710bdf6115 docker.compare\_container: treat null oom\_kill\_disable as False
- **PR #42704:** (*whiteinge*) Add import to work around likely multiprocessing scoping bug @ 2017-08-04T23:03:13Z
  - **ISSUE #42649:** (*tehsu*) local\_batch no longer working in 2017.7.0, 500 error | refs: #42704
  - 5d5b22021b Merge pull request #42704 from whiteinge/expr\_form-warn-scope-bug
  - 03b675a618 Add import to work around likely multiprocessing scoping bug
- **PR #42743:** (*kkoppel*) Fix docker.compare\_container for containers with links @ 2017-08-04T16:00:33Z
  - **ISSUE #42741:** (*kkoppel*) docker\_container.running keeps re-creating containers with links to other containers | refs: #42743
  - 888e954e73 Merge pull request #42743 from kkoppel/fix-issue-42741
  - de6d3cc0cf Update dockermodule.py
  - 58b997c67f Added a helper function that removes container names from container HostConfig:Links values to enable compare\_container() to make the correct decision about differences in links.
- **PR #42710:** (*gtmanfred*) use subtraction instead of or @ 2017-08-04T15:14:14Z
  - **ISSUE #42668:** (*UtahDave*) Minions under syndics don't respond to MoM | refs: #42710
  - **ISSUE #42545:** (*paul-mulvihill*) Salt-api failing to return results for minions connected via syndics. | refs: #42710
  - 03a7f9bbee Merge pull request #42710 from gtmanfred/syndic
  - 683561a711 use subtraction instead of or
- **PR #42670:** (*gtmanfred*) render kubernetes docs @ 2017-08-03T20:30:56Z
  - 005182b6a1 Merge pull request #42670 from gtmanfred/kube
  - bca17902f5 add version added info
  - 4bbfc751ae render kubernetes docs
- **PR #42712:** (*twangboy*) Remove master config file from minion-only installer @ 2017-08-03T20:25:02Z
  - df354ddabf Merge pull request #42712 from twangboy/win\_build\_pkg
  - 8604312a7b Remove master conf in minion install
- **PR #42714:** (*cachedout*) Set fact gathering style to `old` for test\_junos @ 2017-08-03T13:39:40Z
  - bb1dfd4a42 Merge pull request #42714 from cachedout/workaround\_jnpr\_test\_bug
  - 834d6c605e Set fact gathering style to `old` for test\_junos
- **PR #42481:** (*twangboy*) Fix `unit.test_crypt` for Windows @ 2017-08-01T18:10:50Z
  - 4c1d931654 Merge pull request #42481 from twangboy/win\_unit\_test\_crypt
  - 102509029e Remove chown mock, fix path seps
- **PR #42654:** (*morganwillcock*) Disable ZFS in the core grain for NetBSD @ 2017-08-01T17:52:36Z
  - 8bcefb5e67 Merge pull request #42654 from morganwillcock/zfsgrain
  - 49023deb94 Disable ZFS grain on NetBSD
- **PR #42453:** (*gtmanfred*) don't pass user to makedirs on windows @ 2017-07-31T19:57:57Z
  - **ISSUE #42421:** (*bartuss7*) archive.extracted on Windows failed when dir not exist | refs: #42453

- 5baf2650fc Merge pull request [#42453](#) from gtmanfred/makedirs
- 559d432930 fix tests
- afa7a13ce3 use logic from file.directory for makedirs
- **PR #42603:** (*twangboy*) Add runas\_passwd as a global for states @ 2017-07-31T19:49:49Z
  - fb81e78f71 Merge pull request [#42603](#) from twangboy/win\_fix\_runas
  - 0c9e40012b Remove deprecation, add logic to state.py
  - 464ec34713 Fix another instance of runas\_passwd
  - 18d6ce4d55 Add global vars to cmd.call
  - 6c71ab6f80 Remove runas and runas\_password after state run
  - 4ea264e3db Change to runas\_password in docs
  - 61aba35718 Deprecate password, make runas\_password a named arg
  - 41f0f75a06 Add new var to list, change to runas\_password
  - b9c91eba60 Add runas\_passwd as a global for states
- **PR #42541:** (*Mareo*) Avoid confusing warning when using file.line @ 2017-07-31T19:41:58Z
  - 75ba23c253 Merge pull request [#42541](#) from epita/fix-file-line-warning
  - 2fd172e07b Avoid confusing warning when using file.line
- **PR #42625:** (*twangboy*) Fix the list function in the win\_wua execution module @ 2017-07-31T19:27:16Z
  - 3d328eba80 Merge pull request [#42625](#) from twangboy/fix\_win\_wua
  - 1340c15ce7 Add general usage instructions
  - 19f34bda55 Fix docs, formatting
  - b17495c9c8 Fix problem with list when install=True
- **PR #42602:** (*garethgreenaway*) Use superseded and deprecated configuration from pillar @ 2017-07-31T18:53:06Z
  - **ISSUE #42514:** (*rickh563*) `module.run` does not work as expected in 2017.7.0 | refs: [#42602](#)
  - 25094ad9b1 Merge pull request [#42602](#) from garethgreenaway/42514\_2017\_7\_superseded\_deprecated\_from\_pillar
  - 2e132daa73 Slight update to formatting
  - 74bae13939 Small update to something I missed in the first commit. Updating tests to also test for pillar values.
  - 928a4808dd Updating the superseded and deprecated decorators to work when specified as pillar values.
- **PR #42621:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-28T19:45:51Z
  - **ISSUE #42456:** (*gdubroeuq*) Use yum lib | refs: [#42586](#)
  - **ISSUE #41982:** (*abulford*) `dockerng.network_*` matches too easily | refs: [#41988](#) [#41988](#) [#42006](#) [#42006](#)
  - **PR #42586:** (*gdubroeuq*) [Fix] `yumpkg.py`: add option to the command ```check-update```
  - **PR #42515:** (*gtmanfred*) Allow not interpreting backslashes in the repl
  - **PR #41988:** (*abulford*) Fix `dockerng.network_*` name matching | refs: [#42006](#)
  - b7cd30d3ee Merge pull request [#42621](#) from rallytime/merge-2017.7
  - 58dcb58a47 Merge branch ``2016.11`` into ``2017.7``

- \* [cbf752cd73](#) Merge pull request [#42515](#) from [gtmanfred/backslash](#)
  - [cc4e45656d](#) Allow not interpreting backslashes in the repl
- \* [549495831f](#) Merge pull request [#42586](#) from [gdubroeuqc/2016.11](#)
  - [9c0b5cc1d6](#) Remove extra newline
  - [d2ef4483e4](#) yumpkg.py: clean
  - [a96f7c09e0](#) yumpkg.py: add option to the command ``check-update``
- \* [6b45deb728](#) Merge pull request [#41988](#) from [redmatter/fix-dockerng-network-matching](#)
  - [9eea796da8](#) Add regression tests for [#41982](#)
  - [3369f0072f](#) Fix broken unit test `test_network_absent`
  - [0ef6cf634c](#) Add trace logging of `dockerng.networks` result
  - [515c612808](#) Fix `dockerng.network_*` name matching
- **PR [#42618](#)**: (*rallytime*) Back-port [#41690](#) to 2017.7 @ 2017-07-28T19:27:11Z
  - **ISSUE [#34245](#)**: (*Talkless*) `ini.options_present` always report state change | refs: [#41690](#)
  - **PR [#41690](#)**: (*m03*) Fix issue [#34245](#) with `ini.options_present` reporting changes | refs: [#42618](#)
  - [d48749b476](#) Merge pull request [#42618](#) from [rallytime/bp-41690](#)
  - [22c6a7c7ff](#) Improve output precision
  - [ee4ea6b860](#) Fix [#34245](#) `ini.options_present` reporting changes
- **PR [#42619](#)**: (*rallytime*) Back-port [#42589](#) to 2017.7 @ 2017-07-28T19:26:36Z
  - **ISSUE [#42588](#)**: (*ixs*) `salt-ssh` fails when using scan roster and detected minions are uncached | refs: [#42589](#)
  - **PR [#42589](#)**: (*ixs*) Fix `ssh-salt` calls with scan roster for uncached clients | refs: [#42619](#)
  - [e671242a4f](#) Merge pull request [#42619](#) from [rallytime/bp-42589](#)
  - [cd5eb93903](#) Fix `ssh-salt` calls with scan roster for uncached clients
- **PR [#42006](#)**: (*abulford*) Fix `dockerng.network_*` name matching @ 2017-07-28T15:52:52Z
  - **ISSUE [#41982](#)**: (*abulford*) `dockerng.network_*` matches too easily | refs: [#41988](#) [#41988](#) [#42006](#) [#42006](#)
  - **PR [#41988](#)**: (*abulford*) Fix `dockerng.network_*` name matching | refs: [#42006](#)
  - [7d385f8bdc](#) Merge pull request [#42006](#) from [redmatter/fix-dockerng-network-matching-2017.7](#)
  - [f83960c02a](#) Lint: Remove extra line at end of file.
  - [c7d364ec56](#) Add regression tests for [#41982](#)
  - [d31f2913bd](#) Fix broken unit test `test_network_absent`
  - [d42f781c64](#) Add trace logging of `docker.networks` result
  - [8c00c63b55](#) Fix `dockerng.network_*` name matching
- **PR [#42616](#)**: (*amendlik*) Sync cloud modules @ 2017-07-28T15:40:36Z
  - **ISSUE [#12587](#)**: (*Katafalkas*) `salt-cloud` custom functions/actions | refs: [#42616](#)
  - [ee8aee1496](#) Merge pull request [#42616](#) from [amendlik/sync-clouds](#)
  - [ab21bd9b5b](#) Sync cloud modules when `saltutil.sync_all` is run

- **PR #42601:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-27T22:32:07Z
  - **ISSUE #1036125:** (\*\*)
  - **ISSUE #42477:** (*aikar*) Invalid ssh\_interface value prevents salt-cloud provisioning without reason of why | refs: #42479
  - **ISSUE #42405:** (*felrivero*) The documentation is incorrectly compiled (PILLAR section) | refs: #42516
  - **ISSUE #42403:** (*astronouth7303*) [2017.7] Pillar empty when state is applied from orchestrate | refs: #42433
  - **ISSUE #42375:** (*dragonpaw*) salt.modules.\*.\_\_virtualname\_\_ doesn't work as documented. | refs: #42523 #42958
  - **ISSUE #42371:** (*tsaridas*) Minion unresponsive after trying to failover | refs: #42387
  - **ISSUE #41955:** (*root360-AndreasUlm*) rabbitmq 3.6.10 changed output => rabbitmq-module broken | refs: #41968
  - **ISSUE #23516:** (*dkiser*) BUG: cron job scheduler sporadically works | refs: #42077
  - **PR #42573:** (*rallytime*) Back-port #42433 to 2016.11
  - **PR #42571:** (*twangboy*) Avoid loading system PYTHON\* environment vars
  - **PR #42551:** (*binocvlar*) Remove '-s' (--script) argument to parted within align\_check function
  - **PR #42527:** (*twangboy*) Document changes to Windows Update in Windows 10/Server 2016
  - **PR #42523:** (*rallytime*) Add a mention of the True/False returns with \_\_virtual\_\_()
  - **PR #42516:** (*rallytime*) Add info about top file to pillar walk-through example to include edit.vim
  - **PR #42479:** (*gtmanfred*) validate ssh\_interface for ec2
  - **PR #42433:** (*terminalmage*) Only force saltenv/pillarenv to be a string when not None | refs: #42573
  - **PR #42414:** (*vutny*) DOCS: unify hash sum with hash type format
  - **PR #42387:** (*DmitryKuzmenko*) Fix race condition in usage of weakvaluedict
  - **PR #42339:** (*isbm*) Bugfix: Jobs scheduled to run at a future time stay pending for Salt minions (bsc`#1036125`\_)
  - **PR #42077:** (*vutny*) Fix scheduled job run on Master if *when* parameter is a list | refs: #42107
  - **PR #41973:** (*vutny*) Fix Master/Minion scheduled jobs based on Cron expressions | refs: #42077
  - **PR #41968:** (*root360-AndreasUlm*) Fix rabbitmqctl output sanitizer for version 3.6.10
  - e2dd443002 Merge pull request #42601 from rallytime/merge-2017.7
  - 36a1bcf8c5 Merge branch `2016.11' into `2017.7'
    - \* 4b16109122 Merge pull request #42339 from isbm/isbm-jobs-scheduled-in-a-future-bsc1036125
      - bbba84ce2d Bugfix: Jobs scheduled to run at a future time stay pending for Salt minions (bsc`#1036125`\_)
    - \* 6c5a7c604a Merge pull request #42077 from vutny/fix-jobs-scheduled-with-whens
      - b1960cea44 Fix scheduled job run on Master if *when* parameter is a list
    - \* f9cb536589 Merge pull request #42414 from vutny/unify-hash-params-format
      - d1f2a93368 DOCS: unify hash sum with hash type format
    - \* 535c922511 Merge pull request #42523 from rallytime/fix-42375

- 685c2cced6 Add information about returning a tuple with an error message
- fa466519c4 Add a mention of the True/False returns with `__virtual__()`
- \* 0df0e7e749 Merge pull request [#42527](#) from twangboy/win\_wua
  - 0373791f2a Correct capatization
  - af3bcc927b Document changes to Windows Update in 10/2016
- \* 69b06586da Merge pull request [#42551](#) from binocvlar/fix-lack-of-align-check-output
  - c4fabaa192 Remove ``-s' (--script)` argument to parted within `align_check` function
- \* 9e0b4e9faf Merge pull request [#42573](#) from rallytime/bp-42433
  - 0293429e24 Only force saltenv/pillarenv to be a string when not None
- \* e931ed2517 Merge pull request [#42571](#) from twangboy/win\_add\_pythonpath
  - d55a44dd1a Avoid loading user site packages
  - 9af1eb2741 Ignore any PYTHON\* environment vars already on the system
  - 4e2fb03a95 Add pythonpath to batch files and service
- \* de2f397041 Merge pull request [#42387](#) from DSRCorporation/bugs/42371\_KeyError\_WeakValueDict
  - e721c7eee2 Don't use *key in weakvaluedict* because it could lie.
- \* 641a9d7efd Merge pull request [#41968](#) from root360-AndreasUlm/fix-rabbitmqctl-output-handler
  - 76fd941d91 added tests for rabbitmq 3.6.10 output handler
  - 3602af1e1b Fix rabbitmqctl output handler for 3.6.10
- \* 66fede378a Merge pull request [#42479](#) from gtmanfred/interface
  - c32c1b2803 fix pylint
  - 99ec634c6b validate ssh\_interface for ec2
- \* a925c7029a Merge pull request [#42516](#) from rallytime/fix-42405
  - e3a6717efa Add info about top file to pillar walk-through example to include edit.vim
- **PR [#42290](#): (isbm) Backport of [#42270](#) @ 2017-07-27T22:30:05Z**
  - 22eea389fa Merge pull request [#42290](#) from isbm/isbm-module\_run\_parambug\_42270\_217
  - e38d432f90 Fix docs
  - 1e8a56eda5 Describe function tagging
  - 1d7233224b Describe function batching
  - 1391a05d5e Bugfix: syntax error in the example
  - 8c71257a4b Call unnamed parameters properly
  - 94c97a8f25 Update and correct the error message
  - ea8351362c Bugfix: args gets ignored alongside named parameters
  - 74689e3462 Add ability to use tagged functions in the same set
- **PR [#42251](#): (twangboy) Fix `unit.modules.test_win_ip` for Windows @ 2017-07-27T19:22:03Z**
  - 4c20f1cfbb Merge pull request [#42251](#) from twangboy/unit\_win\_test\_win\_ip

- 97261bfe69 Fix win\_inet\_pton check for malformed ip addresses
- **PR #42255:** (*twangboy*) Fix `unit.modules.test_win_system` for Windows @ 2017-07-27T19:12:42Z
  - 2985e4c0e6 Merge pull request #42255 from twangboy/win\_unit\_test\_win\_system
  - acc0345bc8 Fix unit tests
- **PR #42528:** (*twangboy*) Namespace `cmp_to_key` in the pkg state for Windows @ 2017-07-27T18:30:23Z
  - a573386260 Merge pull request #42528 from twangboy/win\_fix\_pkg\_state
  - a040443fa1 Move functools import inside pylint escapes
  - 118d5134e2 Remove namespaced function `cmp_to_key`
  - a02c91adda Namespace `cmp_to_key` in the pkg state for Windows
- **PR #42534:** (*jmarinero*) Fixes AttributeError thrown by chocolatey state @ 2017-07-27T17:59:50Z
  - **ISSUE #42521:** (*rickh563*) chocolatey.installed broken on 2017.7.0 | refs: #42534
  - 62ae12bcd9 Merge pull request #42534 from jmarinero/2017.7
  - b242d2d6b5 Fixes AttributeError thrown by chocolatey state Fixes #42521
- **PR #42557:** (*justincbeard*) Fixing output so --force-color and --no-color override master and min... @ 2017-07-27T17:07:33Z
  - **ISSUE #40354:** (*exc414*) CentOS 6.8 Init Script - Sed unterminated address regex | refs: #42557
  - **ISSUE #37312:** (*gtmanfred*) CLI flags should take overload settings in the config files | refs: #42557
  - 52605c249d Merge pull request #42557 from justincbeard/bugfix\_37312
  - ee3bc6eb10 Fixing output so --force-color and --no-color override master and minion config color value
- **PR #42567:** (*skizunov*) Fix `disable_<tag-name>` config option @ 2017-07-27T17:05:00Z
  - ab33517efb Merge pull request #42567 from skizunov/develop3
  - 0f0b7e3e0a Fix `disable_<tag-name>` config option
- **PR #42577:** (*twangboy*) Compile scripts with -E -s params for Salt on Mac @ 2017-07-26T22:44:37Z
  - 30bb941179 Merge pull request #42577 from twangboy/mac\_scripts
  - 69d5973651 Compile scripts with -E -s params for python
- **PR #42524:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-26T22:41:06Z
  - **ISSUE #42417:** (*clem-compilatio*) salt-cloud - openstack - ``no more floating IP addresses" error - but public\_ip in node | refs: #42509
  - **ISSUE #42413:** (*goten4*) Invalid error message when proxy\_host is set and tornado not installed | refs: #42424
  - **ISSUE #42357:** (*Giandom*) Salt pillarenv problem with slack engine | refs: #42443 #42444
  - **ISSUE #42198:** (*shengis*) state sqlite3.row\_absent fail with ``parameters are of unsupported type" | refs: #42200
  - **PR #42509:** (*clem-compilatio*) Fix `_assign_floating_ips` in openstack.py
  - **PR #42464:** (*garethgreenaway*) [2016.11] Small fix to modules/git.py
  - **PR #42443:** (*garethgreenaway*) [2016.11] Fix to slack engine
  - **PR #42424:** (*goten4*) Fix error message when tornado or pycurl is not installed

- **PR #42200:** (*shengis*) Fix #42198
- 60cd078164 Merge pull request #42524 from rallytime/merge-2017.7
- 14d8d795f6 Merge branch `2016.11' into `2017.7'
  - \* 1bd5bbccc2 Merge pull request #42509 from clem-compilatio/fix-42417
    - 72924b06b8 Fix `_assign_floating_ips` in `openstack.py`
  - \* 4bf35a74de Merge pull request #42464 from garethgreen-away/2016\_11\_remove\_tmp\_identity\_file
    - ff24102d51 Uncomment the line that removes the temporary identity file.
  - \* e2120dbd0e Merge pull request #42443 from garethgreen-away/42357\_pass\_args\_kwargs\_correctly
    - 635810b3e3 Updating the slack engine in 2016.11 to pass the args and kwargs correctly to `LocalClient`
  - \* 8262cc9054 Merge pull request #42200 from shengis/sqlite3\_fix\_row\_absent\_2016.11
    - 407b8f4bb3 Fix #42198 If `where_args` is not set, not using it in the delete request.
  - \* d9df97e5a3 Merge pull request #42424 from goten4/2016.11
    - 1c0574d05e Fix error message when tornado or pycurl is not installed
- **PR #42575:** (*rallytime*) [2017.7] Merge forward from 2017.7.1 to 2017.7 @ 2017-07-26T22:39:10Z
  - 2acde837df Merge pull request #42575 from rallytime/merge-2017.7.1-into-2017.7
  - 63bb0fb2c4 pass in empty kwarg for reactor
  - 2868061ee4 update chunk, not kwarg in chunk
  - 46715e9d94 Merge branch `2017.7.1' into `2017.7'
- **PR #42555:** (*Ch3LL*) add changelog to 2017.7.1 release notes @ 2017-07-26T14:57:43Z
  - 1d93e92194 Merge pull request #42555 from Ch3LL/7.1\_add\_changelog
  - fb69e71093 add changelog to 2017.7.1 release notes
- **PR #42266:** (*twangboy*) Fix `unit.states.test_file` for Windows @ 2017-07-25T20:26:32Z
  - 07c2793e86 Merge pull request #42266 from twangboy/win\_unit\_states\_test\_file
  - 669aaee10d Mock file exists properly
  - a4231c9827 Fix ret mock for linux
  - 0c484f8979 Fix unit tests on Windows
- **PR #42484:** (*shengis*) Fix a potential Exception with an explicit error message @ 2017-07-25T18:34:12Z
  - df417eae17 Merge pull request #42484 from shengis/fix-explicit-error-msg-x509-sign-remote
  - 0b548c72e1 Fix a potential Exception with an explicit error message
- **PR #42529:** (*gtmanfred*) Fix joyent for python3 @ 2017-07-25T16:37:48Z
  - **ISSUE #41720:** (*rallytime*) [Py3] Some salt-cloud drivers do not work using Python 3 | refs: #42529
  - **PR #396:** (*mb0*) add file state template context and defaults | refs: #42529
  - 0f25ec76f9 Merge pull request #42529 from gtmanfred/2017.7
  - b7ebb4d81a these drivers do not actually have an issue.

- e90ca7a114 use salt encoding for joyent on 2017.7
- **PR #42465:** (*garethgreenaway*) [2017.7] Small fix to modules/git.py @ 2017-07-24T17:24:55Z
  - 488457c5a0 Merge pull request #42465 from garethgreenaway/2017\_7\_remove\_tmp\_identity\_file
  - 1920dc6079 Uncomment the line that removes the temporary identity file.
- **PR #42107:** (*vutny*) [2017.7] Fix scheduled jobs if *when* parameter is a list @ 2017-07-24T17:04:12Z
  - **ISSUE #23516:** (*dkiser*) BUG: cron job scheduler sporadically works | refs: #42077
  - **PR #42077:** (*vutny*) Fix scheduled job run on Master if *when* parameter is a list | refs: #42107
  - **PR #41973:** (*vutny*) Fix Master/Minion scheduled jobs based on Cron expressions | refs: #42077
  - 4f044999fa Merge pull request #42107 from vutny/2017.7-fix-jobs-scheduled-with-whens
  - 905be493d4 [2017.7] Fix scheduled jobs if *when* parameter is a list
- **PR #42506:** (*terminalmage*) Add PER\_REMOTE\_ONLY to init\_remotes call in git\_pillar runner @ 2017-07-24T16:59:21Z
  - 6eaa0763e1 Merge pull request #42506 from terminalmage/fix-git-pillar-runner
  - 6352f447ce Add PER\_REMOTE\_ONLY to init\_remotes call in git\_pillar runner
- **PR #42502:** (*shengis*) Fix azure\_rm query to show IPs @ 2017-07-24T15:54:45Z
  - b88e645f10 Merge pull request #42502 from shengis/fix\_azure\_rm\_request\_ips
  - 92f1890701 Fix azure\_rm query to show IPs
- **PR #42180:** (*twangboy*) Fix *unit.modules.test\_timezone* for Windows @ 2017-07-24T14:46:16Z
  - c793d83d26 Merge pull request #42180 from twangboy/win\_unit\_test\_timezone
  - 832a3d86dd Skip tests that use os.symlink on Windows
- **PR #42474:** (*whiteinge*) Cmd arg kwarg parsing test @ 2017-07-24T14:13:30Z
  - **PR #39646:** (*terminalmage*) Handle deprecation of passing string args to *load\_args\_and\_kwarg* | refs: #42474
  - 083ff00410 Merge pull request #42474 from whiteinge/cmd-arg-kwarg-parsing-test
  - 0cc0c0967a Lint fixes
  - 66093738c8 Add back support for string kwarg
  - 622ff5be40 Add LocalClient.cmd test for arg/kwarg parsing
  - 9f4eb80d90 Add a test.arg variant that cleans the pub kwarg by default
- **PR #42425:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-21T22:43:41Z
  - **ISSUE #42333:** (*b3hni4*) Getting "invalid type of dict, a list is required" when trying to configure engines in master config file | refs: #42352
  - **ISSUE #32400:** (*rallytime*) Document Default Config Values | refs: #42319
  - **PR #42370:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11
  - **PR #42368:** (*twangboy*) Remove build and dist directories before install (2016.11)
  - **PR #42360:** (*Ch3LL*) [2016.11] Update version numbers in doc config for 2017.7.0 release
  - **PR #42359:** (*Ch3LL*) [2016.3] Update version numbers in doc config for 2017.7.0 release
  - **PR #42356:** (*meaksh*) Allow to check whether a function is available on the *AliasesLoader* wrapper

- **PR #42352:** (*CorvinM*) Multiple documentation fixes
- **PR #42350:** (*twangboy*) Fixes problem with Version and OS Release related grains on certain versions of Python (2016.11)
- **PR #42319:** (*rallytime*) Add more documentation for config options that are missing from master/minion docs
- c91a5e539e Merge pull request #42425 from rallytime/merge-2017.7
- ea457aa0a5 Remove ALIASES block from template util
- c673b64583 Merge branch `2016.11' into `2017.7'
  - \* 42bb1a64ca Merge pull request #42350 from twangboy/win\_fix\_ver\_grains\_2016.11
    - 8c048403d7 Detect Server OS with a desktop release name
  - \* 0a72e56f6b Merge pull request #42356 from meaksh/2016.11-AliasesLoader-wrapper-fix
    - 915d94219e Allow to check whether a function is available on the AliasesLoader wrapper
  - \* 10eb7b7a79 Merge pull request #42368 from twangboy/win\_fix\_build\_2016.11
    - a7c910c31e Remove build and dist directories before install
  - \* 016189f62f Merge pull request #42370 from rallytime/merge-2016.11
    - 0aa5dde1de Merge branch `2016.3' into `2016.11'
    - e9b0f20f8a Merge pull request #42359 from Ch3LL/doc-update-2016.3
    - dc85b5edbe [2016.3] Update version numbers in doc config for 2017.7.0 release
  - \* f06a6f1796 Merge pull request #42360 from Ch3LL/doc-update-2016.11
    - b90b7a7506 [2016.11] Update version numbers in doc config for 2017.7.0 release
  - \* e0595b0a0f Merge pull request #42319 from rallytime/config-docs
    - b40f980632 Add more documentation for config options that are missing from master/minion docs
  - \* 78940400e3 Merge pull request #42352 from CorvinM/issue42333
    - 526b6ee14d Multiple documentation fixes
- **PR #42444:** (*garethgreenaway*) [2017.7] Fix to slack engine @ 2017-07-21T22:03:48Z
  - **ISSUE #42357:** (*Giandom*) Salt pillarenv problem with slack engine | refs: #42443 #42444
  - 10e4d9234b Merge pull request #42444 from garethgreenaway/42357\_2017\_7\_pass\_args\_kwargs\_correctly
  - f411cfc2a9 Updating the slack engine in 2017.7 to pass the args and kwrgs correctly to LocalClient
- **PR #42461:** (*rallytime*) Bump warning version from Oxygen to Fluorine in roster cache @ 2017-07-21T21:33:25Z
  - 723be49fac Merge pull request #42461 from rallytime/bump-roster-cache-deprecations
  - c0df0137f5 Bump warning version from Oxygen to Fluorine in roster cache
- **PR #42436:** (*garethgreenaway*) Fixes to versions function in manage runner @ 2017-07-21T19:41:07Z
  - **ISSUE #42374:** (*tyhunt99*) [2017.7.0] salt-run mange.versions throws exception if minion is offline or unresponsive | refs: #42436
  - 09521602c1 Merge pull request #42436 from garethgreenaway/42374\_manage\_runner\_minion\_offline
  - 0fd39498c0 Updating the versions function inside the manage runner to account for when a minion is offline and we are unable to determine it's version.

- **PR #42435:** (*terminalmage*) Modify our custom YAML loader to treat unicode literals as unicode strings | refs: #42812 @ 2017-07-21T19:40:34Z
  - **ISSUE #42427:** (*grichmond-salt*) Issue Passing Variables created from load\_json as Inline Pillar Between States | refs: #42435
  - 54193ea543 Merge pull request #42435 from terminalmage/issue42427
  - 31273c7ec1 Modify our custom YAML loader to treat unicode literals as unicode strings
- **PR #42399:** (*rallytime*) Update old ``ref" references to ``rev" in git.detached state @ 2017-07-21T19:38:59Z
  - **ISSUE #42381:** (*zebooka*) Git.detached broken in 2017.7.0 | refs: #42399
  - **ISSUE #38878:** (*tomlaredo*) [Naming consistency] git.latest ``rev" option VS git.detached ``ref" option | refs: #38898
  - **PR #38898:** (*terminalmage*) git.detached: rename ref to rev for consistency | refs: #42399
  - 0b3179135c Merge pull request #42399 from rallytime/fix-42381
  - d9d94fe02f Update old ``ref" references to ``rev" in git.detached state
- **PR #42031:** (*skizunov*) Fix: Reactor emits critical error @ 2017-07-21T19:38:34Z
  - **ISSUE #42400:** (*Enquier*) Conflict in execution of passing pillar data to orch/reactor event executions 2017.7.0 | refs: #42031
  - bd4adb483d Merge pull request #42031 from skizunov/develop3
  - 540977b4b1 Fix: Reactor emits critical error
- **PR #42027:** (*gtmanfred*) import salt.minion for EventReturn for Windows @ 2017-07-21T19:37:03Z
  - **ISSUE #41949:** (*jrporcaro*) Event returner doesn't work with Windows Master | refs: #42027
  - 3abf7ad7d7 Merge pull request #42027 from gtmanfred/2017.7
  - fd4458b6c7 import salt.minion for EventReturn for Windows
- **PR #42454:** (*terminalmage*) Document future renaming of new rand\_str jinja filter @ 2017-07-21T18:47:51Z
  - 994d3dc74a Merge pull request #42454 from terminalmage/jinja-docs-2017.7
  - 98b661406e Document future renaming of new rand\_str jinja filter
- **PR #42452:** (*Ch3LL*) update windows urls to new py2/py3 naming scheme @ 2017-07-21T17:20:47Z
  - 4480075129 Merge pull request #42452 from Ch3LL/fix\_url\_windows
  - 3f4a918f73 update windows urls to new py2/py3 naming scheme
- **PR #42411:** (*seedickcode*) Fix file.managed check\_cmd file not found - Issue #42404 @ 2017-07-20T21:59:17Z
  - **ISSUE #42404:** (*gabekahen*) [2017.7] file.managed with cmd\_check ``No such file or directory" | refs: #42411
  - **ISSUE #33708:** (*pepinje*) visudo check command leaves cache file in /tmp | refs: #42411 #38063
  - **PR #38063:** (*llua*) tmp file clean up in file.manage - fix for #33708 | refs: #42411
  - 33e90be1fe Merge pull request #42411 from seedickcode/check\_cmd\_fix
  - 4ae3911f01 Fix file.managed check\_cmd file not found - Issue #42404
- **PR #42409:** (*twangboy*) Add Scripts to build Py3 on Mac @ 2017-07-20T21:36:34Z
  - edde31376a Merge pull request #42409 from twangboy/mac\_py3\_scripts
  - ac0e04af72 Remove build and dist, sign pkgs

- 9d66e273c4 Fix hard coded pip path
- 7b8d6cbbd2 Add support for Py3
- aa4eed93c8 Update Python and other reqs
- **PR #42433:** (*terminalmage*) Only force saltenv/pillarenv to be a string when not None | refs: #42573 @ 2017-07-20T21:32:24Z
  - **ISSUE #42403:** (*astronouth7303*) [2017.7] Pillar empty when state is applied from orchestrate | refs: #42433
  - 82982f940d Merge pull request #42433 from terminalmage/issue42403
- **PR #42408:** (*CorvinM*) Fix documentation misformat in salt.states.file.replace @ 2017-07-20T00:45:43Z
  - a71938cefe Merge pull request #42408 from CorvinM/file-replace-doc-fix
  - 246a2b3e74 Fix documentation misformat in salt.states.file.replace
- **PR #42347:** (*twangboy*) Fixes problem with Version and OS Release related grains on certain versions of Python @ 2017-07-19T17:05:43Z
  - d385dfd19d Merge pull request #42347 from twangboy/win\_fix\_ver\_grains
  - ef1f663fc9 Detect server OS with a desktop release name
- **PR #42366:** (*twangboy*) Remove build and dist directories before install @ 2017-07-19T16:37:41Z
  - eb9e4206c9 Merge pull request #42366 from twangboy/win\_fix\_build
  - 0946002713 Add blank line after delete
  - f7c0bb4f46 Remove build and dist directories before install
- **PR #42373:** (*Ch3LL*) Add initial 2017.7.1 Release Notes File @ 2017-07-19T16:28:46Z
  - af7820f25d Merge pull request #42373 from Ch3LL/add\_2017.7.1
  - ce1c1b6d28 Add initial 2017.7.1 Release Notes File
- **PR #42150:** (*twangboy*) Fix `unit.modules.test_pip` for Windows @ 2017-07-19T16:01:17Z
  - 59e012b485 Merge pull request #42150 from twangboy/win\_unit\_test\_pip
  - 4ee24202fc Fix unit tests for test\_pip
- **PR #42154:** (*twangboy*) Fix `unit.modules.test_reg_win` for Windows @ 2017-07-19T16:00:38Z
  - ade25c6b34 Merge pull request #42154 from twangboy/win\_unit\_test\_reg
  - 00d9a52802 Fix problem with handling REG\_QWORD in list values
- **PR #42182:** (*twangboy*) Fix `unit.modules.test_useradd` for Windows @ 2017-07-19T15:55:33Z
  - 07593675e2 Merge pull request #42182 from twangboy/win\_unit\_test\_useradd
  - 8260a71c07 Disable tests that require pwd in Windows
- **PR #42364:** (*twangboy*) Windows Package notes for 2017.7.0 @ 2017-07-18T19:24:45Z
  - a175c40c1d Merge pull request #42364 from twangboy/release\_notes\_2017.7.0
  - 96517d1355 Add note about patched windows packages
- **PR #42361:** (*Ch3LL*) [2017.7] Update version numbers in doc config for 2017.7.0 release @ 2017-07-18T19:23:22Z
  - 4dfe50e558 Merge pull request #42361 from Ch3LL/doc-update-2017.7
  - dc5bb301f7 [2017.7] Update version numbers in doc config for 2017.7.0 release

- **PR #42363:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-18T18:40:48Z
  - **ISSUE #42295:** (*lubyou*) file.absent fails on windows if the file to be removed has the ``readonly" attribute set | refs: #42308
  - **ISSUE #42267:** (*gzcwnk*) salt-ssh not creating ssh keys automatically as per documentation | refs: #42314
  - **ISSUE #42240:** (*casselt*) empty\_password in user.present always changes password, even with test=True | refs: #42289
  - **ISSUE #42232:** (*astronouth7303*) Half of dnsutil refers to dig | refs: #42235
  - **ISSUE #42194:** (*jryberg*) pkg version: latest are now broken, appending <package>-latest to filename | refs: #42275
  - **ISSUE #42152:** (*dubb-b*) salt-cloud errors on Rackspace driver using -out=yaml | refs: #42282
  - **ISSUE #42137:** (*kiemlicz*) cmd.run with multiple commands - random order of execution | refs: #42181
  - **ISSUE #42116:** (*terminalmage*) CLI pillar override regression in 2017.7.0rc1 | refs: #42119
  - **ISSUE #42115:** (*nomeelnoj*) Installing EPEL repo breaks salt-cloud | refs: #42163
  - **ISSUE #42114:** (*clallen*) saltenv bug in pillar.get execution module function | refs: #42121
  - **ISSUE #41936:** (*michaelkarrer81*) git.latest identity does not set the correct user for the private key file on the minion | refs: #41945
  - **ISSUE #41721:** (*saizaro*) state.sysrc broken when setting the value to YES or NO | refs: #42269
  - **ISSUE #41116:** (*hrumph*) FAQ has wrong instructions for upgrading Windows minion. | refs: #42264
  - **ISSUE #39365:** (*dglloyd*) service.running fails if sysv script has no status command and enable: True | refs: #39366
  - **ISSUE #1:** (*thatch45*) Enable regex on the salt cli
  - **PR #42353:** (*terminalmage*) is\_windows is a function, not a property/attribute
  - **PR #42314:** (*rallytime*) Add clarification to salt ssh docs about key auto-generation.
  - **PR #42308:** (*lubyou*) Force file removal on Windows. Fixes #42295
  - **PR #42289:** (*CorvinM*) Multiple empty\_password fixes for state.user
  - **PR #42282:** (*rallytime*) Handle libcloud objects that throw RepresenterErrors with --out=yaml
  - **PR #42275:** (*terminalmage*) pkg.installed: pack name/version into pkgs argument
  - **PR #42269:** (*rallytime*) Add some clarity to ``multiple quotes" section of yaml docs
  - **PR #42264:** (*rallytime*) Update minion restart section in FAQ doc for windows
  - **PR #42262:** (*rallytime*) Back-port #42224 to 2016.11
  - **PR #42261:** (*rallytime*) Some minor doc fixes for dnsutil module so they'll render correctly
  - **PR #42253:** (*gtmanfred*) Only use unassociated ips when unable to allocate
  - **PR #42252:** (*UtahDave*) simple docstring updates
  - **PR #42235:** (*astronouth7303*) Abolish references to *dig* in examples.
  - **PR #42224:** (*tdutrion*) Remove duplicate instruction in Openstack Rackspace config example | refs: #42262
  - **PR #42215:** (*twangboy*) Add missing config to example
  - **PR #42211:** (*terminalmage*) Only pass a saltenv in orchestration if one was explicitly passed (2016.11)

- PR #42181: (*garethgreenaway*) fixes to state.py for names parameter
- PR #42176: (*rallytime*) Back-port #42109 to 2016.11
- PR #42175: (*rallytime*) Back-port #39366 to 2016.11
- PR #42173: (*rallytime*) Back-port #37424 to 2016.11
- PR #42172: (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11
- PR #42164: (*Ch3LL*) Fix kerberos create\_keytab doc
- PR #42163: (*vutny*) Fix #42115: parse libcloud ``rc" version correctly
- PR #42155: (*phsteve*) Fix docs for puppet.plugin\_sync
- PR #42142: (*Ch3LL*) Update builds available for rc1
- PR #42141: (*rallytime*) Back-port #42098 to 2016.11
- PR #42140: (*rallytime*) Back-port #42097 to 2016.11
- PR #42123: (*vutny*) DOCS: describe importing custom util classes
- PR #42121: (*terminalmage*) Fix pillar.get when saltenv is passed
- PR #42119: (*terminalmage*) Fix regression in CLI pillar override for salt-call
- PR #42109: (*arthurlogilab*) [doc] Update aws.rst - add Debian default username | refs: #42176
- PR #42098: (*twangboy*) Change repo\_ng to repo-ng | refs: #42141
- PR #42097: (*gtmanfred*) require large timediff for ipv6 warning | refs: #42140
- PR #42095: (*terminalmage*) Add debug logging to dockerng.login
- PR #42094: (*terminalmage*) Prevent command from showing in exception when output\_loglevel=quiet
- PR #41945: (*garethgreenaway*) Fixes to modules/git.py
- PR #41543: (*cri-epita*) Fix user creation with empty password | refs: #42289 #42289
- PR #39366: (*dgllloyd*) Pass sig to service.status in after\_toggle | refs: #42175
- PR #38965: (*toanju*) salt-cloud will use list\_floating\_ips for OpenStack | refs: #42253
- PR #37424: (*kojiromike*) Avoid Early Convert ret['comment'] to String | refs: #42173
- PR #34280: (*kevinanderson1*) salt-cloud will use list\_floating\_ips for Openstack | refs: #38965
- 587138d771 Merge pull request #42363 from rallytime/merge-2017.7
- 7aa31ff030 Merge branch `2016.11' into `2017.7'
  - \* b256001760 Merge pull request #42353 from terminalmage/fix-git-test
    - 14cf6ce322 is\_windows is a function, not a property/attribute
  - \* 866a1febb4 Merge pull request #42264 from rallytime/fix-41116
    - bd638880e3 Add mono-spacing to salt-minion reference for consistency
    - 30d62f43da Update minion restart section in FAQ doc for windows
  - \* 9a707088ad Merge pull request #42275 from terminalmage/issue42194
    - 663874908a pkg.installed: pack name/version into pkgs argument
  - \* e588f235e0 Merge pull request #42269 from rallytime/fix-41721
    - f2250d474a Add a note about using different styles of quotes.

- 38d9b3d553 Add some clarity to ``multiple quotes'' section of yaml docs

  - 2e1dc95500 Make result=true if Docker volume already exists
- **PR #42186:** (*rallytime*) Use long\_range function for IPv6Network hosts() function @ 2017-07-17T18:39:35Z
  - **ISSUE #42166:** (*sjorge*) [2017.7.0rc1] jinja filter network\_hosts fails on large IPv6 networks | refs: [#42186](#)
  - c84d6db548 Merge pull request [#42186](#) from rallytime/fix-42166
  - b8bcc0d599 Add note to various network\_hosts docs about long\_run for IPv6 networks
  - 11862743c2 Use long\_range function for IPv6Network hosts() function
- **PR #42210:** (*terminalmage*) Only pass a saltenv in orchestration if one was explicitly passed (2017.7) @ 2017-07-17T18:22:39Z
  - e7b79e0fd2 Merge pull request [#42210](#) from terminalmage/issue40928-2017.7
  - 771ade5d73 Only pass a saltenv in orchestration if one was explicitly passed (2017.7)
- **PR #42236:** (*mirceaulinic*) New option for napalm proxy/minion: provider @ 2017-07-17T18:19:56Z
  - 0e49021b0e Merge pull request [#42236](#) from cloudflare/napalm-provider
  - 1ac69bd737 Document the provider option and rearrange the doc
  - 4bf4b14161 New option for napalm proxy/minion: provider
- **PR #42257:** (*twangboy*) Fix unit.pillar.test\_git for Windows @ 2017-07-17T17:51:42Z
  - 3ec5bb1c2f Merge pull request [#42257](#) from twangboy/win\_unit\_pillar\_test\_git
  - 45be32666a Add error-handling function to shutil.rmtree
- **PR #42258:** (*twangboy*) Fix unit.states.test\_envron for Windows @ 2017-07-17T17:50:38Z
  - 36395625c2 Merge pull request [#42258](#) from twangboy/win\_unit\_states\_tests\_envron
  - 55b278c478 Mock the reg.read\_value function

- **PR #42265:** (*rallytime*) Gate boto\_elb tests if proper version of moto isn't installed @ 2017-07-17T17:47:52Z
  - 894bdd2b19 Merge pull request #42265 from rallytime/gate-moto-version
  - 78cdee51d5 Gate boto\_elb tests if proper version of moto isn't installed
- **PR #42277:** (*twangboy*) Fix `unit.states.test_winrepo` for Windows @ 2017-07-17T17:37:07Z
  - baf04f2a2d Merge pull request #42277 from twangboy/win\_unit\_states\_test\_winrepo
  - ed89cd0b93 Use `os.sep` for path seps
- **PR #42309:** (*terminalmage*) Change ``TBD`` in `versionadded` to ``2017.7.0`` @ 2017-07-17T17:11:45Z
  - be6b211683 Merge pull request #42309 from terminalmage/fix-versionadded
  - 603f5b7de6 Change ``TBD`` in `versionadded` to ``2017.7.0``
- **PR #42206:** (*rallytime*) [PY3] Fix test that is flaky in Python 3 | refs: #42783 @ 2017-07-17T17:09:53Z
  - acd29f9b38 Merge pull request #42206 from rallytime/fix-flaky-test
  - 2be4865f48 [PY3] Fix test that is flaky in Python 3
- **PR #42126:** (*rallytime*) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-17T17:07:19Z
  - 8f1cb287cf Merge pull request #42126 from rallytime/merge-2017.7
- 8b35b367b3 Merge branch `2016.11` into `2017.7`
- **PR #42078:** (*damon-atkins*) `pkg.install` and `pkg.remove` fix version number input. @ 2017-07-05T06:04:57Z
  - 4780d7830a Merge pull request #42078 from damon-atkins/fix\_convertflt\_str\_version\_on\_cmd\_line
  - 09d37dd892 Fix comment typo
  - 7167549425 Handle `version=None` when converted to a string it becomes `None` parm should default to empty string rather than None, it would fix better with existing code.
  - 4fb2bb1856 Fix typo
  - cf55c3361c `pkg.install` and `pkg.remove` on the command line take number version numbers, store them within a float. However version is a string, to support versions numbers like 1.3.4
- **PR #42105:** (*Ch3LL*) Update `releasecandidate` doc with new 2017.7.0rc1 Release @ 2017-07-04T03:14:42Z
  - 46d575acbc Merge pull request #42105 from Ch3LL/update\_rc
  - d4e7b91608 Update `releasecandidate` doc with new 2017.7.0rc1 Release
- **PR #42099:** (*rallytime*) Remove references in docs to pip install salt-cloud @ 2017-07-03T22:13:44Z
  - **ISSUE #41885:** (*astronouth7303*) Recommended pip installation outdated? | refs: #42099
  - d38548bbbd Merge pull request #42099 from rallytime/fix-41885
  - c2822e05ad Remove references in docs to pip install salt-cloud
- **PR #42086:** (*abulford*) Make `result=true` if Docker volume already exists | refs: #42087 @ 2017-07-03T15:48:33Z
  - **ISSUE #42076:** (*abulford*) `dockerng.volume_present` test looks as though it would cause a change | refs: #42086 #42086 #42087 #42087
  - 81d606a8cb Merge pull request #42086 from redmatter/fix-dockerng-volume-present-result
  - 8d549685a7 Make `result=true` if Docker volume already exists
- **PR #42021:** (*gtmanfred*) Set `concurrent` to True when running states with `sudo` @ 2017-06-30T21:02:15Z

- **ISSUE #25842:** (*shikhartanwar*) Running salt-minion as non-root user to execute sudo commands always returns an error | refs: #42021
- 7160697123 Merge pull request #42021 from gtmanfred/2016.11
- 26beb18aa5 Set concurrent to True when running states with sudo
- **PR #42029:** (*terminalmage*) Mock socket.getaddrinfo in unit.utils.network\_test.NetworkTestCase.test\_host\_to\_ips @ 2017-06-30T20:58:56Z
  - b784fbbdf8 Merge pull request #42029 from terminalmage/host\_to\_ips
  - 26f848e111 Mock socket.getaddrinfo in unit.utils.network\_test.NetworkTestCase.test\_host\_to\_ips
- **PR #42055:** (*dmurphy18*) Upgrade support for gnupg v2.1 and higher @ 2017-06-30T20:54:02Z
  - e067020b9b Merge pull request #42055 from dmurphy18/handle\_gnupgv21
  - e20cea6350 Upgrade support for gnupg v2.1 and higher
- **PR #42048:** (*Ch3LL*) Add initial 2016.11.7 Release Notes @ 2017-06-30T16:00:05Z
  - 74ba2abc48 Merge pull request #42048 from Ch3LL/add\_11.7
  - 1de5e008a0 Add initial 2016.11.7 Release Notes

### Build Notes

### Mac Installer Packages

Mac Installer packages have been patched with the following PR: [43756](#)

## 20.2.7 Salt 2016.11.0 Release Notes - Codename Carbon

### New Features

#### Docker Introspection and Configuration

Major additions have been made to the Docker support in 2016.11.0. The new addition allows Salt to be executed within a Docker container without a minion running or installed in the container. This allows states to be run inside a container, but also all of Salt's remote execution commands to be run inside docker containers as well. This makes container introspection simple and powerful. See the tutorial on using this new feature here:

See Salt in Docker Containers.

#### Advanced Ceph Control

Our friends over at SUSE have delivered a powerful new tool to make the deployment of Ceph storage systems using Salt very easy. These new Ceph tools allow for a storage system to be easily defined using the new *ceph.quorum* state.

#### Thorium Additions and Improvements

The Thorium advanced reactor has undergone extensive testing and updates. These updates include many more Thorium states, a system for automating key management, the ability to use Thorium to easily replace old reactors and a great deal of stability and bug fixes.

## State Rollback Using Snapper

Rollback has been one of the most prevalent requests for Salt. We have researched it extensively and concluded that the only way to accomplish truly reliable rollback would be to execute it at the filesystem layer. To accomplish this we have introduced Snapper integration into Salt States.

Snapper is a tool which allows for simple and reliable snapshots of the filesystem to be made. With the new `snapper_states` option set to `True` in the minion config a snapshot will be made before and after every Salt State run. These snapshots can be viewed, managed and rolled back to via the `snapper` execution module.

## Preserve File Perms in File States

This feature has been requested for years, the ability to set a flag and use the same file permissions for files deployed to a minion as the permissions set to the file on the master. Just set the `keep_mode` option on any file management state to `True`.

## Ponies!

We all agreed that cowsay was just not good enough, install the `ponysay` command and the new `pony` outputter will work. Fun for the whole family!

## Additional Features

- Minions can run in stand-alone mode to use beacons and engines without having to connect to a master. (Thanks @adelcast!)
- Added a `salt` runner to allow running salt modules via salt-run.

```
salt-run salt.cmd test.ping
# call functions with arguments and keyword arguments
salt-run salt.cmd test.arg 1 2 3 a=1
```

- Added SSL support to Cassandra CQL returner. SSL can be enabled by setting `ssl_options` for the returner. Also added support for specifying `protocol_version` when establishing cluster connection.
- The `mode` parameter in the `file.managed` state, and the `file_mode` parameter in the `file.recurse` state, can both now be set to `keep` and the minion will keep the mode of the file from the Salt fileserver. This works only with files coming from sources prefixed with `salt://`, or files local to the minion (i.e. those which are absolute paths, or are prefixed with `file://`). For example:

```
/etc/myapp/myapp.conf:
  file.managed:
    - source: salt://conf/myapp/myapp.conf
    - mode: keep

/var/www/myapp:
  file.recurse:
    - source: salt://path/to/myapp
    - dir_mode: 755
    - file_mode: keep
```

- The `junos` state module is now available. It has all the functions that are present in the `junos` execution module.

- The `junos` state module is now available. It has all the functions that are present in the `junos` execution module.
- The minion data cache is a pluggable data store now. It's configurable with `cache` option. Default is `localfs`.
- User names in `client_acl` support glob matching now.

### New Top File Merging Strategy for States

A new strategy called `merge_all` has been added to provide a new way of merging top file matches when executing a *highstate*. See the *top\_file\_merging\_strategy* documentation for further information.

In addition, the same merging strategy was not functioning as documented. This has now been corrected. While this is technically a bugfix, we decided to hold a change in top file merging until a feature release to minimize user impact.

### Improved Archive Extraction Support

The *archive.extracted* state has been overhauled. Notable changes include the following:

- When enforcing ownership (with the `user` and/or `group` arguments), the `if_missing` argument no longer has any connection to which path(s) have ownership enforced. Instead, the paths are determined using the either the newly-added `archive.list` function, or the newly-added `enforce_ownership_on` argument.
- `if_missing` also is no longer required to skip extraction, as Salt is now able to tell which paths would be present if the archive were extracted. It should, in most cases, only be necessary in cases where a semaphore file is used to conditionally skip extraction of the archive.
- Password-protected ZIP archives are now detected before extraction, and the state fails without attempting to extract the archive if no password was specified.
- By default, a single top-level directory is enforced, to guard against 'tar-bombs'. This enforcement can be disabled by setting `enforce_toplevel` to `False`.
- The `tar_options` and `zip_options` arguments have been deprecated in favor of a single `options` argument.
- The `archive_format` argument is now optional. The ending of the `source` argument is used to guess whether it is a tar, zip or rar file. If the `archive_format` cannot be guessed, then it will need to be specified, but in many cases it can now be omitted.
- Ownership enforcement is now performed irrespective of whether or not the archive needed to be extracted. This means that the state can be re-run after the archive has been fully extracted to repair changes to ownership.

A number of new arguments were also added. See the docs `py:func:docs for the archive.extracted state <salt.states.archive.extracted>` for more information.

Additionally, the following changes have been made to the *archive* execution module:

- A new function (`archive.list`) has been added. This function lists the files/directories in an archive file, and supports a `verbose` argument that gives a more detailed breakdown of which paths are files, which are directories, and which paths are at the top level of the archive.
- A new function (`archive.is_encrypted`) has been added. This function will return `True` if the archive is a password-protected ZIP file, `False` if not. If the archive is not a ZIP file, an error will be raised.

- `archive.cmd_unzip` now supports passing a password, bringing it to feature parity with `archive.unzip`. Note that this is still not considered to be secure, and `archive.unzip` is recommended for dealing with password-protected ZIP archives.
- The default value for the `extract_perms` argument to `archive.unzip` has been changed to `True`.

### Improved Checksum Handling in `file.managed`, `archive.extracted` States

When the `source_hash` argument for these states refers to a file containing checksums, Salt now looks for checksums matching the name of the source URI, as well as the file being managed. Prior releases only looked for checksums matching the filename being managed. Additionally, a new argument (`source_hash_name`) has been added, which allows the user to disambiguate ambiguous matches when more than one matching checksum is found in the `source_hash` file.

A more detailed explanation of this functionality can be found in the `file.managed` documentation, in the section for the new `source_hash_name` argument.

---

**Note:** This improved functionality is also available in the 2016.3 (Boron) release cycle, starting with the 2016.3.5 release.

---

### Config Changes

The following default config values were changed:

- `gitfs_ssl_verify`: Changed from `False` to `True`
- `git_pillar_ssl_verify`: Changed from `False` to `True`
- `winrepo_ssl_verify`: Changed from `False` to `True`

### Grains Changes

- All core grains containing VMWare have been changed to VMware, which is the official capitalization. Additionally, all references to VMWare in the documentation have been changed to VMware [issue 30807](#). Environments using versions of Salt before and after Salt 2016.11.0 should employ case-insensitive grain matching on these grains.

```
{% set on_vmware = grains['virtual'].lower() == 'vmware' %}
```

- On Windows the `cpu_model` grain has been changed to provide the actual cpu model name and not the cpu family.

Old behavior:

```
root@master:~# salt 'testwin200' grains.item cpu_model
testwin200:
-----
  cpu_model:
    Intel64 Family 6 Model 58 Stepping 9, GenuineIntel
```

New behavior:

```
root@master:~# salt 'testwin200' grains.item cpu_model
testwin200:
-----
cpu_model:
  Intel(R) Core(TM) i7-3520M CPU @ 2.90GHz
```

## Beacons Changes

- The `loadavg` beacon now outputs averages as integers instead of strings. (Via [issue 31124](#).)

## Runner Changes

- Runners can now call out to *utility modules* via `__utils__`.
- `ref:Utility modules <writing-utility-modules>` (placed in `salt://_utils/`) are now able to be synced to the master, making it easier to use them in custom runners. A `saltutil.sync_utils` function has been added to the `saltutil runner` to facilitate the syncing of utility modules to the master.

## Pillar Changes

- Thanks to the new `saltutil.sync_utils` runner, it is now easier to get `ref:utility modules <writing-utility-modules>` synced to the correct location on the Master so that they are available in execution modules called from Pillar SLS files.

## Junos Module Changes

- The following new functionalities were added to the `junos` module
  - `facts` - Displays the facts gathered during the connection.
  - `shutdown` - Shut down or reboot a device running Junos OS.
  - `install_config` - Modify the configuration of a Junos device.
  - `install_os` - Install Junos OS software package.
  - `zeroize` - Remove all configuration information on the Routing Engines and reset all key values on a device.
  - `file_copy` - Copy file from proxy to the Junos device.

## Network Automation: NAPALM

Beginning with 2016.11.0, network automation is included by default in the core of Salt. It is based on a the [NAPALM](#) library and provides facilities to manage the configuration and retrieve data from network devices running widely used operating systems such: JunOS, IOS-XR, eOS, IOS, NX-OS etc. - see [the complete list of supported devices](#).

The connection is established via the *NAPALM proxy*.

In the current release, the following modules were included:

- *NAPALM grains* - Select network devices based on their characteristics
- *NET execution module* - Networking basic features
- *NTP execution module*

- *BGP execution module*
- *Routes execution module*
- *SNMP execution module*
- *Users execution module*
- *Probes execution module*
- *NTP peers management state*
- *SNMP configuration management state*
- *Users management state*

### Cisco NXOS Proxy Minion

Beginning with 2016.11.0, there is a proxy minion that can be used to configure nxos cisco devices over ssh.

- *Proxy Minion*
- *Execution Module*
- *State Module*

### Cisco Network Services Orchestrator Proxy Minion

Beginning with 2016.11.0, there is a proxy minion to use the Cisco Network Services Orchestrator as a proxy minion.

- *Proxy Minion*
- *Execution Module*
- *State Module*

### Junos Module Changes

- The following new functionalities were added to the junos module
  - *facts* - Displays the facts gathered during the connection.
  - *shutdown* - Shut down or reboot a device running Junos OS.
  - *install\_config* - Modify the configuration of a Junos device.
  - *install\_os* - Install Junos OS software package.
  - *zeroize* - Remove all configuration information on the Routing Engines and reset all key values on a device.
  - *file\_copy* - Copy file from proxy to the Junos device.

### Returner Changes

- Any returner which implements a *save\_load* function is now required to accept a *minions* keyword argument. All returners which ship with Salt have been modified to do so.

## Renderer Changes

Added the ability to restrict allowed renderers. Two new config parameters, `renderer_whitelist` and `renderer_blacklist` are introduced for this purpose.

## eAuth Changes

- External auth modules' `auth` method can return an ACL list for the given username instead of `True`. This list should be in the same format as described in the [eAuth documentation](#). It will be used for the user instead of one set in master config.

Example of the `auth` method return that allows a user to execute functions in the `test` and `network` modules on the minions that match the `web*` target and allow access to `wheel` and `runner` modules:

```
[{'web*': ['test.*',
          'network.*']},
 '@wheel',
 '@runner']
```

- External auth is supported by `salt-run` and `salt-key` now. Note that master must be started to use them with eAuth.

## External Module Packaging

Modules may now be packaged via entry-points in `setuptools`. See external module packaging tutorial for more information.

## Functionality Changes

- The `onfail` requisite now uses OR logic instead of AND logic. [issue 22370](#)
- The `consul` external pillar now strips leading and trailing whitespace. [issue 31165](#)
- The `win_system.py` state is now case sensitive for computer names. Previously computer names set with a state were converted to all caps. If you have a state setting computer names with lower case letters in the name that has been applied, the computer name will be changed again to apply the case sensitive name.
- The `mac_user.list_groups` function in the `mac_user` execution module now lists all groups for the specified user, including groups beginning with an underscore. In previous releases, groups beginning with an underscore were excluded from the list of groups.
- The `junos.call_rpc` function in the `junos` execution module can now be used to call any valid rpc. Earlier it used to call only `get_software_information`.
- A new option for minions called `master_tries` has been added. This specifies the number of times a minion should attempt to contact a master to attempt a connection. This allows better handling of occasional master downtime in a multi-master topology.
- The default `hash_type` is now `sha256` instead of `md5`. You will need to make sure both your master and minion share the same `hash_type`.
- Nodegroups consisting of a simple list of minion IDs can now also be declared as a `yaml` list. The below two examples are equivalent:

```
# Traditional way
nodegroups:
  - group1: L@host1,host2,host3

# New way (optional)
nodegroups:
  - group1:
    - host1
    - host2
    - host3
```

## New Azure ARM Cloud Driver

A new cloud driver has been added for Azure ARM, aka, the Azure Resource Manager. The older Azure driver is still required to work with the older Azure API. This new driver works with the newer ARM API, which is managed via the newer Azure Portal website.

## New Modules

### Beacons

- `salt.beacons.avahi_announce`
- `salt.beacons.bonjour_announce`
- `salt.beacons.haproxy`
- `salt.beacons.status`

### Clouds

- `salt.cloud.clouds.azurearm`

### Engines

- `salt.engines.hipchat`
- `salt.engines.http_logstash`

### Modules

- `salt.modules.boto_cloudwatch_event`
- `salt.modules.celery`
- `salt.modules.ceph`
- `salt.modules.influx08`
- `salt.modules.inspectlib.entities`
- `salt.modules.inspectlib.fldb`
- `salt.modules.inspectlib.kiwiproc`

- `salt.modules.inspector`
- `salt.modules.libcloud_dns`
- `salt.modules.openstack_mng`
- `salt.modules.servicenow`
- `salt.modules.testinframod`
- `salt.modules.win_lgpo`
- `salt.modules.win_pki`
- `salt.modules.win_psget`
- `salt.modules.win_snmp`
- `salt.modules.xbpspkg`

### Outputters

- `salt.output.pony`

### Pillar

- `salt.pillar.csvpillar`
- `salt.pillar.http_json`
- `salt.pillar.makostack`

### Returners

- `salt.returners.zabbix_return`

### Runners

- `salt.runners.auth`
- `salt.runners.event`
- `salt.runners.smartos_vmadm`
- `salt.runners.vistara`

### SDB

- `salt.sdb.env`

## States

- `salt.states.boto_cloudwatch_event`
- `salt.states.csf`
- `salt.states.ethtool`
- `salt.states.influxdb08_database`
- `salt.states.influxdb08_user`
- `salt.states.libcloud_dns`
- `salt.states.snapper`
- `salt.states.testinframod`
- `salt.states.win_lgpo`
- `salt.states.win_pki`
- `salt.states.win_snmp`

## Thorium

- `salt.thorium.calc`
- `salt.thorium.key`
- `salt.thorium.runner`
- `salt.thorium.status`
- `salt.thorium.wheel`

## Deprecations

### General Deprecations

- `env` to `saltenv`

All occurrences of `env` and some occurrences of `__env__` marked for deprecation in Salt 2016.11.0 have been removed. The new way to use the salt environment setting is with a variable called `saltenv`:

```
def fcn(msg='', env='base', refresh=True, saltenv='base', **kwargs):
```

has been changed to

```
def fcn(msg='', refresh=True, saltenv='base', **kwargs):
```

- If `env` (or `__env__`) is supplied as a keyword argument to a function that also accepts arbitrary keyword arguments, then a new warning informs the user that `env` is no longer used if it is found. This new warning will be removed in Salt 2017.7.0.

```
def fcn(msg='', refresh=True, saltenv='base', **kwargs):
```

```
# will result in a warning log message
fcn(msg='add more salt', env='prod', refresh=False)
```

- If `env` (or `__env__`) is supplied as a keyword argument to a function that does not accept arbitrary keyword arguments, then python will issue an error.

```
def fcn(msg='', refresh=True, saltenv='base'):
```

```
# will result in a python TypeError  
fcn(msg='add more salt', env='prod', refresh=False)
```

- If `env` (or `__env__`) is supplied as a positional argument to a function, then undefined behavior will occur, as the removal of `env` and `__env__` from the function's argument list changes the function's signature.

```
def fcn(msg='', refresh=True, saltenv='base'):
```

```
# will result in refresh evaluating to True and saltenv likely not being a  
↳string at all  
fcn('add more salt', 'prod', False)
```

- Deprecations in `minion.py`:
  - The `salt.minion.parse_args_and_kwargs` function has been removed. Please use the `salt.minion.load_args_and_kwargs` function instead.

## Cloud Deprecations

- The `vsphere` cloud driver has been removed. Please use the `vmware` cloud driver instead.
- The `private_ip` option in the `linode` cloud driver is deprecated and has been removed. Use the `assign_private_ip` option instead.
- The `create_dns_record` and `delete_dns_record` functions are deprecated and have been removed from the `digital_ocean` driver. Use the `post_dns_record` function instead.

## Execution Module Deprecations

- The `blockdev` execution module had four functions removed:
  - `dump`
  - `tune`
  - `resize2fs`
  - `wipe`

The `disk` module should be used instead with the same function names.

- The `boto_vpc` execution module had two functions removed, `boto_vpc.associate_new_dhcp_options_to_vpc` and `boto_vpc.associate_new_network_acl_to_subnet` in favor of more concise function names, `boto_vpc.create_dhcp_options` and `boto_vpc.create_network_acl`, respectively.
- The `data` execution module had `getval` and `getvals` functions removed in favor of one function, `get`, which combines the functionality of the removed functions.
- File module deprecations:
  - The `contains_regex_multiline` function was removed. Use `file.search` instead.

- Additional command line options for `file.grep` should be passed one at a time. Please do not pass more than one in a single argument.
- The `lxc` execution module has the following changes:
  - The `run_cmd` function was removed. Use `lxc.run` instead.
  - The `nic` argument was removed from the `lxc.init` function. Use `network_profile` instead.
  - The `clone` argument was removed from the `lxc.init` function. Use `clone_from` instead.
  - passwords passed to the `lxc.init` function will be assumed to be hashed, unless `password_encrypted=False`.
  - The `restart` argument for `lxc.start` was removed. Use `lxc.restart` instead.
  - The old style of defining `lxc` containers has been removed. Please use keys under which LXC profiles should be configured such as `lxc.container_profile.profile_name`.
- The `env` and `activate` keyword arguments have been removed from the `install` function in the `pip` execution module. The use of `bin_env` replaces both of these options.
- `reg` execution module

Functions in the `reg` execution module had misleading and confusing names for dealing with the Windows registry. They failed to clearly differentiate between hives, keys, and name/value pairs. Keys were treated like value names. There was no way to delete a key.

New functions were added in 2015.5 to properly work with the registry. They also made it possible to edit key default values as well as delete an entire key tree recursively. With the new functions in place, the following functions have been deprecated:

- `read_key`
- `set_key`
- `create_key`
- `delete_key`

Use the following functions instead:

- for `read_key` use `read_value`
- for `set_key` use `set_value`
- for `create_key` use `set_value` with no `vname` and no `vdata`
- for `delete_key` use `delete_key_recursive`. To delete a value, use `delete_value`.

- The `hash_hostname` option was removed from the `salt.modules.ssh` execution module. The `hash_known_hosts` option should be used instead.
- The `human_readable` option was removed from the `uptime` function in the `status` execution module. The function was also updated in 2015.8.9 to return a more complete offering of uptime information, formatted as an easy-to-read dictionary. This updated function replaces the need for the `human_readable` option.
- The `persist` kwarg was removed from the `win_useradd` execution module. This option is no longer supported for Windows. `persist` is only supported as part of user management in UNIX/Linux.
- The `zpool_list` function in the `zpool` execution module was removed. Use `list` instead.

## Outputter Module Deprecations

- The `compact` outputter has been removed. Set `state_verbose` to `False` instead.

## Runner Module Deprecations

- The `grains.cache` runner no longer accepts `outputter` or `minion` as keyword arguments. Users will need to specify an outputter using the `--out` option. `tgt` is replacing the `minion` kwarg.
- The `fileservers` runner no longer accepts the `outputter` keyword argument. Users will need to specify an outputter using the `--out` option.
- The `jobs` runner no longer accepts the `outputter` keyword argument. Users will need to specify an outputter using the `--out` option.
- `virt` runner module:
  - The `hyper` kwarg was removed from the `init`, `list`, and `query` functions. Use the `host` option instead.
  - The `next_hyper` function was removed. Use the `next_host` function instead.
  - The `hyper_info` function was removed. Use the `host_info` function instead.

## State Module Deprecations

- The `env` and `activate` keyword arguments were removed from the `installed` function in the `pip` state module. The use of `bin_env` replaces both of these options.
- `reg` state module

The `reg` state module was modified to work with the new functions in the execution module. Some logic was left in the `reg.present` and the `reg.absent` functions to handle existing state files that used the final key in the name as the value name. That logic has been removed so you now must specify value name (`vname`) and, if needed, value data (`vdata`).

For example, a state file that adds the version value/data pair to the `Software\Salt` key in the `HKEY_LOCAL_MACHINE` hive used to look like this:

```
HKEY_LOCAL_MACHINE\\Software\\Salt\\version:
  reg.present:
    - value: 2016.3.1
```

Now it should look like this:

```
HKEY_LOCAL_MACHINE\\Software\\Salt
  reg.present:
    - vname: version
    - vdata: 2016.3.1
```

A state file for removing the same value added above would have looked like this:

```
HKEY_LOCAL_MACHINE\\Software\\Salt\\version:
  reg.absent:
```

Now it should look like this:

```
HKEY_LOCAL_MACHINE\\Software\\Salt
  reg.absent:
    - vname: version
```

This new structure is important as it allows salt to deal with key default values which was not possible before. If `vname` is not passed, salt will work with the default value for that hivekey.

Additionally, since you could only delete a value from a the state module, a new function (`key_absent`) has been added to allow you to delete a registry key and all subkeys and name/value pairs recursively. It uses the new `delete_key_recursive` function.

For additional information see the documentation for the `reg` execution and state modules.

- `lxc` state module: The following functions were removed from the `lxc` state module:
  - `created`: replaced by the `present` state.
  - `started`: replaced by the `running` state.
  - `cloned`: replaced by the `present` state. Use the `clone_from` argument to set the name of the clone source.
- The `hash_hostname` option was removed from the `salt.states.ssh_known_hosts` state. The `hash_known_hosts` option should be used instead.
- The `always` kwarg used in the `built` function of the `pkgbuild` state module was removed. Use `force` instead.

### Utils Module Deprecations

- The use of `jid_dir` and `jid_load` were removed from the `salt.utils.jid.jid_dir` functionality for `job_cache` management was moved to the `local_cache` returner. `jid_load` data is now retrieved from the `master_job_cache`.
- `ip_in_subnet` function in `salt.utils.network.py` has been removed. Use the `in_subnet` function instead.
- The `iam` utils module had two functions removed: `salt.utils.iam.get_iam_region` and `salt.utils.iam.get_iam_metadata` in favor of the `aws` utils functions `salt.utils.aws.get_region_from_metadata` and `salt.utils.aws.creds`, respectively.

## 20.2.8 Salt 2016.11.1 Release Notes

Version 2016.11.1 is a bugfix release for *2016.11.0*.

### Changes for v2016.11.0..v2016.11.1

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Changes:

- **PR #38182:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ *2016-12-09T21:25:47Z*
  - **PR #38177:** (*vutny*) Correct `cp.get_file_str` docstring and add integration tests
  - **PR #38163:** (*Ch3LL*) enabled ec2 cloud tests
  - **PR #38153:** (*vutny*) Master config includes may contain errors and be safely skipped

- 23c0393 Merge pull request #38182 from rallytime/merge-2016.11
- 627242a Merge branch `2016.3' into `2016.11'
  - \* 65b2ad7 Merge pull request #38163 from Ch3LL/enabled\_ec2\_cloud
    - be74c45 enabled ec2 cloud tests
  - \* b63f74e Merge pull request #38177 from vutny/fix-cp-get-file-str
    - a449980 Correct `cp.get_file_str` docstring and add integration tests
  - \* 7596313 Merge pull request #38153 from vutny/master-includes-error-tolerance
    - cd0154e Master config includes may contain errors and be safely skipped
- **PR #38158:** (*cachedout*) Fix type problem in `grains.filter_by` @ 2016-12-09T21:24:40Z
  - **ISSUE #38094:** (*bartuss7*) `TypeError: object of type `float' has no len()` in `grains.filter_by` | refs: #38158
  - 8355adc Merge pull request #38158 from cachedout/issue\_38094
  - e8196e2 Lint, remove set literal
  - 9f4ebb3 Fix type problem in `grains.filter_by`
- **PR #38156:** (*terminalmage*) Remove `rtag` when windows minion refreshes early in state @ 2016-12-09T21:15:01Z
  - **ISSUE #38090:** (*jf*) `pkg.installed` does not seem to refresh the repo database, no matter what | refs: #38113 #38156
  - 31a157d Merge pull request #38156 from terminalmage/fix-windows-refresh
  - 258bd4c Remove `rtag` when windows minion refreshes early in state
- **PR #38183:** (*cro*) Fix bad set operations when setting up securitygroups in AWS. @ 2016-12-09T21:12:10Z
  - **ISSUE #37981:** (*tazaki*) Salt-cloud ec2 vpc securitygroupid always returning default | refs: #38183
  - **PR #37891:** (*isbm*) rsync port to 2015.8
  - c638952 Merge pull request #38183 from cro/fix\_37891
  - 0527d6f Fix bad set operations when setting up securitygroups in AWS. Fixes #37891.
- fc95045 Reset socket default timeout to None (fixes `daemons_tests` failures) (#38181)
  - **PR #38181:** (*rallytime*) Reset socket default timeout to None (fixes `daemons_tests` failures)
- **PR #38148:** (*whiteinge*) Remove `ssh_async` from `NetapiClient` clients; it is not implemented @ 2016-12-09T18:49:42Z
  - 7ccbadd Merge pull request #38148 from whiteinge/no-ssh-async-client
  - cb58cd4 Remove `ssh_async` from `NetapiClient` clients; it is not implemented
- **PR #38160:** (*terminalmage*) Update information about `xz-utils` in archive state/module docs @ 2016-12-09T18:34:03Z
  - 8d4e194 Merge pull request #38160 from terminalmage/update-archive-docs
  - 8e4ad3c Update information about `xz-utils` in archive state/module docs
- **PR #38164:** (*techhat*) Add Azure ARM docs for 2016.11.0 @ 2016-12-09T18:00:22Z
  - **ISSUE #38024:** (*Ch3LL*) 2016.11.0 release notes missing azure arm reference | refs: #38164
  - 05136f0 Merge pull request #38164 from techhat/azuredocs
  - 71b787e Add Azure ARM docs for 2016.11.0

- **PR #38173:** (*rallytime*) Bump some win\* module deprecations from Nitrogen to Oxygen @ 2016-12-09T16:57:29Z
  - e3c858c Merge pull request #38173 from rallytime/update-win-deprecation-versions
  - 09a50b2 Bump some win\* module deprecations from Nitrogen to Oxygen
- **PR #38036:** (*terminalmage*) archive.extracted: fix problems with overwrite arg @ 2016-12-08T19:08:41Z
  - **PR #37889:** (*isbm*) Allow overwrite archives extraction | refs: #38036
  - 827bf59 Merge pull request #38036 from terminalmage/archive-extracted-override
  - a1c70c7 archive.extracted: fix problems with overwrite arg
- **PR #38133:** (*terminalmage*) Fix edge case in creation of trans tar for salt-thin @ 2016-12-08T17:47:26Z
  - 50773a5 Merge pull request #38133 from terminalmage/zd1067
  - 71e0bd0 Fix edge case in creation of trans tar for salt-thin
- **PR #38138:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2016-12-07T20:15:56Z
  - **PR #38134:** (*rallytime*) Skip daemon unit tests when running on Python 2.6
  - 6026cb2 Merge pull request #38138 from rallytime/merge-2016.11
  - 28b56ea Merge branch `2016.3' into `2016.11'
  - 86091db Skip daemon unit tests when running on Python 2.6 (#38134)
- **PR #38130:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2016-12-07T20:11:19Z
  - **ISSUE #38091:** (*tjyang*) [WARNING ] salt.loaded.int.module.zenoss.\_\_virtual\_\_() is wrongly returning None. | refs: #38102
  - **ISSUE #36707:** (*do3meli*) slow FreeBSD sysctl module with test=true | refs: #36794
  - **PR #38104:** (*rallytime*) Back-port #36794 to 2016.3
  - **PR #38102:** (*rallytime*) Add False + msg tuple return if requests is missing for zenoss module
  - **PR #36794:** (*do3meli*) FreeBSD sysctl module now handels config\_file parameter in show method | refs: #38104
  - 90478ef Merge pull request #38130 from rallytime/merge-2016.11
  - 4d7d9ab Merge branch `2016.3' into `2016.11'
    - \* d3d98fd4 Merge pull request #38102 from rallytime/fix-38091
      - 4f79d5a Add False + msg tuple return if requests is missing for zenoss module
    - \* 8c8cbc2 Merge pull request #38104 from rallytime/bp-36794
      - c906c8a Pylint fixes
      - da3ebf8 FreeBSD sysctl module now handels config\_file parameter in show method
- 1a42e24 Fix beacon index (#38129)
  - **PR #38129:** (*Ch3LL*) Fix beacon index
- bbdfcab Add versionadded tags for network module funcs (#38127)
  - **PR #38127:** (*rallytime*) Add versionadded tags for network module funcs
- **PR #38043:** (*MTecknology*) Debian networking fix @ 2016-12-07T17:32:18Z

- **ISSUE #38042:** (*MTecknology*) [2016.11.0] Invalid interfaces file produced by debian\_ip module | refs: #38043
- fd06bab Merge pull request #38043 from MTecknology/2016.11
- 6d5e132 Removing trailing whitespace from previous commit
- f882674 Adding some options that are valid for inet6 blocks.
- 81cb688 Better check for dual stack.
- 525c746 May Cthulhu take mercy on my soul for this commit.
- 300ca60 I guess this makes the previous commit a bit redundant, but I'm not sure if I want to remove it.
- 6e7fc39 This now seems absurdly obvious, but I'm not ruling out that I'll break everything.
- 82d2b89 Rolling back unit test.
- b3edbcf Adding larger and more complete debian\_ip unit test.
- 3afd7b6 Adding the valid/documented `slaves' option.
- b6b1adc Typo: missing closing parenthesis
- 756e41c Fixing a typo; line should not be commented
- 32a1374 Corrects expected return value
- 88f9d9f Mostly whitespace & comment changes
- 41ffb8d Removing redundant line
- 3a81686 Ensure iface\_dict not being populated will not produce a stacktrace
- 4de2cb2 Corrects regression in debian\_ip/debian\_eth.jinja
- **PR #38107:** (*cachedout*) Status beacon should raise proper exception @ 2016-12-07T17:21:49Z
  - **PR #38088:** (*dmurphy18*) Updated to match formulas and allow for missing functions | refs: #38107
  - 4b9a7f2 Merge pull request #38107 from cachedout/supercede\_38088
  - 73d7248 Change to log.debug per Tom
  - da135b1 Fix docs
  - 792b422 Pylint fix
  - 88e03bb Fix typo
  - a8ce153 Status beacon should raise proper exception
- **PR #38101:** (*loregordon*) Clarifies file.replace behavior on symlinks @ 2016-12-07T13:27:11Z
  - da8f5ac Merge pull request #38101 from loregordon/file-replace-note
  - 345990f Clarifies file.replace behavior on symlinks
- **PR #38113:** (*terminalmage*) Revert changes to refresh tag for pkg states @ 2016-12-07T13:11:14Z
  - **ISSUE #38090:** (*jf*) pkg.installed does not seem to refresh the repo database, no matter what | refs: #38113 #38156
  - d47761f Merge pull request #38113 from terminalmage/issue38090
  - 9f347df Revert changes to refresh tag for pkg states
- **PR #38120:** (*Da-Juan*) Fix status beacon config default values @ 2016-12-07T13:08:33Z
  - **ISSUE #37976:** (*t0nyhays*) Error when status beacon fires (2016.11.0) | refs: #38120

- d4c34e0 Merge pull request #38120 from Da-Juan/2016.11
- 7e4a35e Fix status beacon config default values
- **PR #38114:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2016-12-07T12:45:04Z
  - **ISSUE #38037:** (*dmurphy18*) pkg.latest and yumpkg.latest\_version return incorrect package versions 2016.3 and 2016.11 | refs: #38045
  - **ISSUE #37939:** (*Talkless*) file.comment always report changes in test=True mode | refs: #38039
  - **ISSUE #35342:** (*morganwillcock*) win\_pkg: refresh\_db doesn't remove cached items which have been renamed or removed | refs: #38083
  - **PR #38083:** (*twangboy*) Only delete .sls files from winrepo-ng [DO NOT MERGE FORWARD]
  - **PR #38059:** (*rallytime*) Call exec\_test for the Syndic daemon in tests.unit.daemons\_test.py
  - **PR #38057:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 | refs: #38059
  - **PR #38045:** (*terminalmage*) yumpkg.py: don't include non-upgrade versions found by ``yum list available"
  - **PR #38039:** (*rallytime*) Check to see if a line is already commented before moving on
  - **PR #38034:** (*cachedout*) Modify daemons test to use multiprocessing | refs: #38059
  - 6868089 Merge pull request #38114 from rallytime/merge-2016.11
  - fec9dec Merge branch `2016.3' into `2016.11'
    - \* fbc8776 Merge pull request #38083 from twangboy/fix\_refresh\_db
      - 978af6d Remove only .sls files from the cached winrepo-ng
    - \* 9dcfdee Merge pull request #38059 from rallytime/daemons-test-fix
      - eb372b2 Add missing ``not" statement: The last syndic test should assertFalse()
      - 4e10f8e Call exec\_test for the Syndic daemon in tests.unit.daemons\_test.py
    - \* 9cd42b9 Merge pull request #38039 from rallytime/fix-37939
      - 1da7aac Update unit tests to account for additional file.search call
      - 8a685b1 Check to see if a line is already commented before moving on
      - f2c0455 Write an integration test demonstrating the issue
    - \* a34a763 Merge pull request #38045 from terminalmage/issue38037
      - 6528950 Simplify logic for matching desired pkg arch with actual pkg arch
      - 3babbcd yumpkg.py: don't include non-upgrade versions found by ``yum list available"
- **PR #38109:** (*gtmanfred*) mode needs to be an integer @ 2016-12-07T11:58:24Z
  - b9920e5 Merge pull request #38109 from gtmanfred/2016.11
  - 7546760 mode needs to be an integer
- **PR #38103:** (*rallytime*) Back-port #37283 to 2016.11 @ 2016-12-06T23:12:59Z
  - **PR #37283:** (*jeanpralo*) Handle docker-compose up to version 1.9.0 | refs: #38103
  - **PR #37215:** (*mschneider82*) removed version check | refs: #37283
  - fd77dcb Merge pull request #38103 from rallytime/bp-37283
  - 11944df handle up to version 1.9.0

- **PR #38057:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 | refs: #38059 @ 2016-12-06T23:11:41Z
  - **ISSUE #37945:** (*gstachowiak*) Missing exception handling in salt.master.Maintenance. Process never completes. | refs: #37961
  - **ISSUE #37867:** (*tobiasBora*) Bug into lsb\_release that crash salt | refs: #37962
  - **ISSUE #37737:** (*b-harper*) python client api CloudClient multiple calls needed | refs: #37928
  - **ISSUE #37059:** (*basepi*) Beacon fileserver operations cause scheduled jobs with fileserver operations to hang | refs: #37899
  - **ISSUE #35088:** (*Modulus*) salt/cloud/ec2.py encoding problems. | refs: #37912
  - **PR #38034:** (*cachedout*) Modify daemons test to use multiprocessing | refs: #38059
  - **PR #38002:** (*laleocen*) fix broken yaml code block
  - **PR #37995:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
  - **PR #37978:** (*terminalmage*) Add clarifying language to ext\_pillar\_first docs
  - **PR #37964:** (*terminalmage*) Add clarification on expr\_form usage and future deprecation
  - **PR #37962:** (*cachedout*) Catch possible exception from lsb\_release
  - **PR #37961:** (*cachedout*) Handle empty tokens safely
  - **PR #37950:** (*vutny*) Set default Salt Master address for a Syndic (like for a Minion)
  - **PR #37929:** (*gtmanfred*) add list\_nodes\_min to nova driver
  - **PR #37928:** (*techhat*) Don't modify self.opts directly
  - **PR #37926:** (*kontrolld*) Fixes no IPv6 functionality in /etc/sysconfig/network
  - **PR #37925:** (*kontrolld*) Fix missing ipv6 options centos network
  - **PR #37924:** (*cachedout*) Update test for new gem ver
  - **PR #37921:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
  - **PR #37918:** (*rallytime*) [2015.8] Update version numbers in doc config for 2016.11.0 release
  - **PR #37914:** (*terminalmage*) Update earlier release channels' docs with Carbon release notes
  - **PR #37912:** (*attiasr*) fix encoding problem aws responses
  - **PR #37899:** (*DmitryKuzmenko*) Clear functions context in schedule tasks for ZeroMQ.
  - **PR #37272:** (*vutny*) Get default logging level and log file from default opts dict
  - 5d9d6b9 Merge pull request #38057 from rallytime/merge-2016.11
  - 3428840 Fix SaltKeyOptionParserTestCase test failures
  - 186e2d0 Don't allow libcloud mock module injection in unit/states/libcloud\_dns\_test.py either
  - d513a60 Do not allow libcloud to be injected as a mock value in the libcloud\_dns\_test
  - 74a417e Update the mocked cloud configs to also include master configs
  - f2c8cb1 Better merge conflict resolution from the initial merge
  - 8fd53a4 Merge branch `2016.3' into `2016.11'
    - \* 6724fe4 Modify daemons test to use multiprocessing (#38034)
    - \* 6942d5d Merge pull request #37995 from rallytime/merge-2016.3
      - b44e179 Merge branch `2015.8' into `2016.3'

- 7a7e367 Merge pull request #37978 from terminalmage/ext\_pillar\_first-docs
- 61ed9a8 Add clarifying language to ext\_pillar\_first docs
- \* cd66c17 fix broken yaml code block (#38002)
- \* 3dd45fb Merge pull request #37912 from attiasr/fix\_aws\_response\_encoding
  - ba4ec4e use Requests result encoding to encode the text
  - abe4eb3 fix encoding problem aws responses
- \* 69a74a4 Merge pull request #37950 from vutny/fix-starting-up-syndic
  - 7d9bc9a syndic\_master: correct default value, documentation and example config
  - 92a7c7e Set default Salt Master address for a Syndic (like for a Minion)
- \* 7f269bc Add clarification on expr\_form usage and future deprecation (#37964)
- \* 1001987 Catch possible exception from lsb\_release (#37962)
- \* 330021c Handle empty tokens safely (#37961)
- \* ea46639 Merge pull request #37272 from vutny/fix-getting-default-logging-opts
  - e5ce523 Fix description in the Salt Syndic usage info
  - 518a3dd Add unit tests for Salt parsers processing logging options
  - 83d6a44 Add *ssh\_log\_file* option to master config and documentation
  - c8a0915 Fix configuration example and documentation for *syndic\_log\_file* option
  - e64dd3e Correct default attributes for various parser classes
  - 82a2e21 Fix default usage string for Salt command line programs
  - 45dff2a Fix readding and updating logfile and pidfile config options for Salt API
  - f47253c Fix reading and applying Salt Cloud default configuration
  - fad5bec Work with a copy of default opts dictionaries
  - b7c2481 Fix *log\_level\_logfile* config value type
  - 1bd76a1 Fix setting temporary log level if CLI option omitted
  - 121848c Fix obtaining *log\_granular\_levels* config setting
  - 44cf07f Make CLI options take precedence for setting up logfile\_logger
  - 61afaf1 Fix setting option attributes when processing *log\_level* and *log\_file*
  - 3c60e23 Fix processing of *log\_level\_logfile* config setting
  - 55a0af5 Use attribute functions for getting/setting options and config values
  - c25f2d0 Fix getting Salt API default logfile option
  - f242237 Remove processing of unused and undocumented *cli\_\*\_log\_\** config options
  - 2065e83 Get default logging level and file from default opts dict
- \* f2f957d Merge pull request #37925 from kontrollid/add-ipv6-centos-network
  - ac2b477 Adding IPv6 functionality for CentOS /etc/sysconfig/network
- \* c07ad11 Merge pull request #37899 from DSRCorporation/bugs/37059\_schedule\_task\_hang
  - 9497748 Clear functions context in schedule tasks for ZeroMQ

- \* a55519d Merge pull request #37928 from techhat/issue37737
  - a09a60e Don't modify self.opts directly
- \* 9d17f1c Merge pull request #37929 from gtmanfred/2016.3
  - c7d2c73 add list\_nodes\_min to nova driver
- \* 3bb743b Merge pull request #37926 from kontrollld/fix-ipv6-centos-network
  - 3ed42e5 updated
  - 3b3bc4f Fixes no IPv6 functionality in /etc/sysconfig/network
- \* 271170a Merge pull request #37921 from rallytime/merge-2016.3
  - 523a67c Merge branch `2015.8' into `2016.3'
  - 4cdc6cf Update earlier release channels' docs with Carbon release notes (#37914)
  - d31491a [2015.8] Update version numbers in doc config for 2016.11.0 release (#37918)
- \* 6cd6429 Merge pull request #37924 from cachedout/fix\_gem\_states
  - 894cca3 Update test for new gem ver
- 9969544 Account for case where vim install already exists and is at an older version (#38112)
  - PR #38112: (*rallytime*) Account for case where vim install already exists and is at an older version
- PR #38021: (*mateiw*) Add master\_tops support in salt-ssh @ 2016-12-06T14:26:22Z
  - ISSUE #19502: (*kt97679*) salt-ssh fails to run state.highstate with custom master\_tops | refs: #38021
  - f8c67a9 Merge pull request #38021 from mateiw/salt-ssh\_master\_tops
  - 65a0f10 Add/remove newlines
  - 7037fa1 Add master\_tops support in salt-ssh
- 1bb31bb Start release notes file for 2016.11.1 release (#38084)
  - PR #38084: (*rallytime*) Start release notes file for 2016.11.1 release
- PR #37878: (*kstreee*) Makes threads avoid blocking waiting while communicating using Zeromq. @ 2016-12-05T19:50:46Z
  - 7829551 Merge pull request #37878 from kstreee/2016.11
  - 9103878 Fixes blocking waiting through implementing a socket pool class.
- PR #37987: (*rbjorklin*) consul\_pillar support for limiting pillar exposure via minion targeting @ 2016-12-05T19:48:20Z
  - PR #37985: (*rbjorklin*) consul\_pillar support for limiting pillar exposure via minion targeting | refs: #37987
  - 0809ccd Merge pull request #37987 from rbjorklin/consul-pillar-target
  - 5d0454a Ignore W1401 (anomalous-backslash-in-string)
  - 2e929a5 Linting fixes
  - 171cab1 Fixed possible incorrect behavior if target wasn't on start/end of str
  - 7440582 consul\_pillar support for limiting pillar exposure via minion targeting
- PR #38067: (*terminalmage*) Remove virtual funcs for archive state/module @ 2016-12-05T16:37:23Z
  - ISSUE #38062: (*UtahDave*) archive execution module not loading on Windows in 2016.11.0 | refs: #38067

- 83dcfe8 Merge pull request #38067 from terminalmage/issue38062
- 2e0f26a Remove virtual funcs for archive state/module
- **PR #38058:** (*rallytime*) Remove initdb dependency in postgres module @ 2016-12-04T04:19:02Z
  - **ISSUE #38001:** (*tomlaredo*) Regression on postgres\_group.present ('postgres\_group' \_\_virtual\_\_ returned False) | refs: #38023
  - **ISSUE #37986:** (*marek-obuchowicz*) Module postgres - wrong docs, doesn't work with debian 8.5 | refs: #38023
  - **ISSUE #37935:** (*ipmb*) Postgres module regression on 2016.11 | refs: #37946 #37993 #38023 #38058
  - **PR #38023:** (*gtmanfred*) Expand error message for postgres states | refs: #38058
  - **PR #37993:** (*ticosax*) Remove initdb dependency to consume postgres module. | refs: #38058
  - c993367 Merge pull request #38058 from rallytime/remove-init-db-dep
  - c1ceeca Remove initdb dependency in postgres module
- **PR #38004:** (*terminalmage*) Fix regression in user/group mgmt for archive.extracted @ 2016-12-02T18:28:49Z
  - **ISSUE #37969:** (*lordcirith*) Archive.extracted fails if -user: root is specified | refs: #38004
  - 1ac53e5 Merge pull request #38004 from terminalmage/issue37969
  - 23bb90a Add integration test for archive.extracted with user/group set to root
  - e5ee721 Don't use simple boolean check on uid/gid
- **PR #38051:** (*Ch3LL*) add docs for hash\_type change to sha256 @ 2016-12-02T18:11:36Z
  - **ISSUE #37941:** (*L4rS6*) Outdated documentation for 2016.11.x | refs: #38051
  - e90cbbe Merge pull request #38051 from Ch3LL/fix\_hash\_docs
  - e95f88f add docs for hash\_type change to sha256
- **PR #38028:** (*terminalmage*) Pass full\_return to saltutil.runner @ 2016-12-02T09:49:31Z
  - **ISSUE #38000:** (*morganwillcock*) 2016.11.0: saltutil.runner returns a different dict structure and breaks template rendering | refs: #38028
  - 1b52289 Merge pull request #38028 from terminalmage/issue38000
  - 9bf13d5 Pass full\_return to saltutil.runner
- **PR #38044:** (*terminalmage*) Remove debugging code @ 2016-12-02T09:43:44Z
  - **ISSUE #37980:** (*tveastman*) Having `git` in fileservers\_backends and no gitfs\_remotes defined causes a crash | refs: #38044
  - 41c44ff Merge pull request #38044 from terminalmage/issue37980
  - f70a040 Remove debugging code
- **PR #38035:** (*dmurphy18*) Updated to return status from make\_repo similar to rpmbuild.py @ 2016-12-01T22:30:53Z
  - 9661258 Merge pull request #38035 from dmurphy18/fix\_debbuild
  - 3bca96e Updated to return status from make\_repo similar to rpmbuild.py
- **PR #38023:** (*gtmanfred*) Expand error message for postgres states | refs: #38058 @ 2016-12-01T22:05:06Z
  - **ISSUE #38001:** (*tomlaredo*) Regression on postgres\_group.present ('postgres\_group' \_\_virtual\_\_ returned False) | refs: #38023

- **ISSUE** #37986: (*marek-obuchowicz*) Module postgres - wrong docs, doesn't work with debian 8.5 | refs: #38023
- **ISSUE** #37935: (*ipmb*) Postgres module regression on 2016.11 | refs: #37946 #37993 #38023 #38058
- 141b5c5 Merge pull request #38023 from gtmanfred/2016.11
- 1aa43eb Expand error message for postgres states
- ac72ee6 Revert ``Updated the bins\_dir to default to pg\_bin #37935``
- **PR** #38026: (*rallytime*) Back-port #38015 to 2016.11 @ 2016-12-01T19:16:15Z
  - **PR** #38015: (*morsik*) Typo fix | refs: #38026
  - 7948642 Merge pull request #38026 from rallytime/bp-38015
  - 11becf3 Typo fix
- e51448f Added Carbon release notes. Fixed sphinx errors in the file. (#38022)
  - **PR** #38022: (*DmitryKuzmenko*) Added Carbon release notes. Fixed sphinx errors in the file.
- 6f34332 Adjust code examples to use the actual bootstrap-salt.sh file name (#38011)
  - **PR** #38011: (*rallytime*) Adjust code examples to use the actual bootstrap-salt.sh file name
- **PR** #37954: (*gtmanfred*) use sleep from path for docker.sls\_build @ 2016-11-30T18:08:45Z
  - **ISSUE** #37940: (*alex-zel*) dockerng.sls\_build fails on some distributions | refs: #37954
  - 0a04127 Merge pull request #37954 from gtmanfred/2016.11
  - 9caf0b4 use sleep from path for docker.sls\_build
- **PR** #37993: (*ticosax*) Remove initdb dependency to consume postgres module. | refs: #38058 @ 2016-11-30T18:08:13Z
  - **ISSUE** #37935: (*ipmb*) Postgres module regression on 2016.11 | refs: #37946 #37993 #38023 #38058
  - 4ef5c98 Merge pull request #37993 from ticosax/remove-initdb-requirement
  - c5c7a53 Remove initdb dependency to consume postgres module.
- **PR** #37997: (*cachedout*) Update gem test for 2016.11 @ 2016-11-30T17:13:45Z
  - 2e55656 Merge pull request #37997 from cachedout/gem\_test\_carbon
  - 1d221aa Update gem test for 2016.11
- **PR** #37979: (*terminalmage*) Revert addition of pillar\_roots\_override\_ext\_pillar @ 2016-11-30T14:34:24Z
  - **ISSUE** #36723: (*white-hat*) ext\_pillar\_first option is broken in 2016.3 | refs: #36807
  - **ISSUE** #24501: (*astehlik*) Order in top.sls file is not respected for pillar data in local mode | refs: #31316
  - **ISSUE** #19332: (*QuinnyPig*) Nondeterminism in Pillar | refs: #31316
  - **PR** #36807: (*terminalmage*) Fix pillar merging when ext\_pillar\_first is enabled | refs: #37979 #37979
  - **PR** #31316: (*kraney*) Let ext\_pillar\_first determine the override order | refs: #37979 #37979
  - ca3a948 Merge pull request #37979 from terminalmage/revert-pillar-change
  - 6135dfa Revert addition of pillar\_roots\_override\_ext\_pillar
- 186b3c7 Fix RST link format (#37958) (#37970)
  - **PR** #37970: (*rallytime*) Back-port #37958 to 2016.11
  - **PR** #37958: (*mirceaulinic*) Fix RST link format in Carbon release notes | refs: #37970

- 6976be4 Pylint fix (#37971)
  - PR #37971: (*rallytime*) Lint 2016.11 sooner rather than later
  - PR #37955: (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 | refs: #37971
- PR #37946: (*scott-w*) Updated the bins\_dir to default to pg\_bin @ 2016-11-29T16:48:27Z
  - ISSUE #37935: (*ipmb*) Postgres module regression on 2016.11 | refs: #37946 #37993 #38023 #38058
  - 36f9140 Merge pull request #37946 from scott-w/37935-fix-bin-dir
  - d33d403 Restored missing initdb #37935
  - a041b9f Use Salt deprecation warning #37935
  - a967893 Updated the bins\_dir to default to pg\_bin #37935
- PR #37889: (*isbm*) Allow overwrite archives extraction | refs: #38036 @ 2016-11-29T16:18:57Z
  - d8650c5 Merge pull request #37889 from isbm/isbm-states-archive-fix
  - e67706b Document the behaviour.
  - 1970814 Prevent crash during externally changed archive permissions
  - 91b4257 Add overwrite option so the extraction of the archive can be always performed.
  - e6958f7 Remove nonsense comment and react on generally absent path name
- PR #37869: (*isbm*) Input sanitation (16.11) @ 2016-11-29T16:17:16Z
  - e2b9e58 Merge pull request #37869 from isbm/isbm-input-sanitation-16.11
  - f9ec5d6 Use six instead of builtins
  - 203dfcb Use American spelling instead
  - 91ed307 Sanitise input for the keys and IDs
  - 86623f9 Add a stub for ID sanitiser (at the moment same as hostname)
  - 637144c Rename ``general.py" to ``sanitisers.py"
  - f2571fc Add hostname sanitiser
  - 3ae086a Add filename sanitiser
  - 816b1d1 Add general sanitisers
- PR #37884: (*isbm*) Do not include ``gpg-pubkey" packages, filtering by their name @ 2016-11-28T21:11:37Z
  - e539a94 Merge pull request #37884 from isbm/isbm-zypper-gpgkey-pkg-filter
  - 038374a Do not include ``gpg-pubkey" packages, filtering by their name
- PR #37882: (*attiasr*) multiple issues in boto\_rds state and module @ 2016-11-28T21:09:11Z
  - eb3d81a Merge pull request #37882 from attiasr/fix\_missing\_tags
  - 73b3c5f Add newline
  - 166c42b fix boto\_rds.describe
  - ddd88ba fix boto\_rds.describe parameters and subnetgroup\_present
  - bfe7f92 fix missing\_tags in call to boto\_rds.exists
- 8f986b2 Remove release candidate doc ref from 2016.11.0 release notes (#37931)
  - PR #37931: (*rallytime*) Remove release candidate doc ref from 2016.11.0 release notes

- **PR #37930:** (*cachedout*) Remove dictionary comprehension in netusers @ 2016-11-28T20:27:06Z
  - 3d2dabc Merge pull request #37930 from cachedout/fix\_comp
  - 670e832 Remove dictionary comprehension in netusers
- **PR #37923:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2016-11-28T19:55:03Z
  - **ISSUE #37870:** (*fj40crawler*) salt.states.augeas.change returns None when test=True | refs: #37895
  - **ISSUE #37732:** (*dhaines*) list\_semod() (from modules/selinux.py) incompatible with policycoreutils-2.5 (RHEL 7.3) | refs: #37736
  - **ISSUE #37287:** (*AaronM-Cloudtek*) salt.states.ddns.present: `NS` record type always returns as changed | refs: #37785
  - **ISSUE #32829:** (*tyhunt99*) Dockerng appears to not be using docker registries pillar data | refs: #36893 #36893
  - **PR #37916:** (*rallytime*) [2016.3] Update version numbers in doc config for 2016.11.0 release
  - **PR #37907:** (*Talkless*) Fix server trust in test run of svn.latest
  - **PR #37896:** (*toanju*) rh networking: add missing values
  - **PR #37895:** (*fj40crawler*) Change return value for salt/states/augeas.py to be True instead of N...
  - **PR #37886:** (*bdrung*) Fix various spelling mistakes
  - **PR #37866:** (*meaksh*) Backport #37149 #36938 and #36784 to 2016.3
  - **PR #37863:** (*rallytime*) Back-port #36893 to 2016.3
  - **PR #37857:** (*meaksh*) Backport #37149 and #36938 to 2015.8 | refs: #37866
  - **PR #37856:** (*meaksh*) Backport #36784 to 2015.8 | refs: #37866
  - **PR #37847:** (*laleocen*) add multiline encryption documentation to nacl
  - **PR #37797:** (*clan*) check count of columns after split
  - **PR #37785:** (*AaronM-Cloudtek*) respect trailing dot in ddns name parameter
  - **PR #37762:** (*twangboy*) Add pre\_versions to chocolatey.installed
  - **PR #37736:** (*dhaines*) handle semodule version >=2.4 (#37732) and fix typo
  - **PR #37149:** (*dincamihai*) Fix pkg.latest\_version when latest already installed | refs: #37866 #37857
  - **PR #36938:** (*wanparo*) acl.delfacl: fix position of -X option to setfacl | refs: #37866 #37857
  - **PR #36893:** (*tyhunt99*) add option to force a reauth for a docker registry | refs: #37863
  - **PR #36784:** (*moio*) OS grains for SLES Expanded Support | refs: #37866 #37856
  - 0f8b187 Merge pull request #37923 from rallytime/merge-2016.11
  - da7f551 Don't let 2016.3 doc config changes overwrite the 2016.11 changes
  - dfedd11 Merge branch `2016.3` into `2016.11`
    - \* c35ba1f Merge pull request #37916 from rallytime/doc-update-2016.3
      - bd40592 [2016.3] Update version numbers in doc config for 2016.11.0 release
    - \* e13a248 Merge pull request #37785 from Cloudtek/ddns-respect-trailing-dot
      - 262e3b3 respect trailing dot in ddns name parameter
    - \* c03b389 Merge pull request #37895 from fj40crawler/fix-augeas-return-for-test

- ddc238d Fixed augeas\_test.py to match True v.s. None for test\_change\_in\_test\_mode
- ef75c45 Merge branch `2016.3' of github.com:saltstack/salt into fix-augeas-return-for-test
- b0fe0cd Change return value for salt/states/augeas.py to be True instead of None for cases where salt is run with test=True. Fixes #37870
- \* fdbc31e Merge pull request #37907 from Talkless/patch-2
  - 072a319 Fix server trust in test run of svn.latest
- \* f39fdf4 Merge pull request #37896 from toanju/2016.3
  - c953041 rh networking: add missing values
- \* ea935c5 Merge pull request #37886 from bdrung/fix-typos
  - 9a51ba5 Fix various spelling mistakes
- \* 371b0a8 Merge pull request #37736 from dhaines/issue-37732
  - 7ef590a Update selinux.py
  - 516a67e fix indexing error
  - 4e49c1e fix typo
  - b16f2d8 handle semodule version >=2.4 (#37732) and fix typo
- \* 87aeb66 Merge pull request #37797 from clan/extfs
  - acf0f96 check count of columns after split
- \* f7c7109 Merge pull request #37762 from twangboy/fix\_chocolatey\_state
  - 9696b6d Use keyword args instead of relying on ordering
  - 398eaa0 Add pre\_versions to the available arguments
- \* 56baa92 Merge pull request #37866 from meaksh/2016.3-bp-37149-36938-36784
  - 9d8d578 Fix pkg.latest\_version when latest already installed
  - ffca0d4 - acl.delfacl: fix position of -X option to setfacl
  - 3dfed6b Adjust linux\_acl unit test argument ordering
  - f185ecd core.py: quote style fixed
  - 8404d13 Setting up OS grains for SLES Expanded Support (SUSE's Red Hat compatible platform)
- \* d0cc7f0 Merge pull request #37863 from rallytime/bp-36893
  - 4c70534 Add versionadded to reauth option in dockerng module
  - 5ca2c38 added documentation for the new reuth option in docker registry configuration
  - 5b0c11a add option to force a reauth for a docker registry
- \* b17a118 add multiline encryption documentation to nacl (#37847)
- 1427115 Add a release notes reference to the docker-sls tutorial (#37927)
  - **PR #37927:** (*thatch45*) Add a release notes reference to the docker-sls tutorial
- d204099 [2016.11] Update version numbers in doc config for 2016.11.0 release (#37917)
  - **PR #37917:** (*rallytime*) [2016.11] Update version numbers in doc config for 2016.11.0 release

- **PR #37890:** (*bbinet*) Fix support for extra\_mods='six' to add six module to a thin.tgz tarball @ 2016-11-28T13:53:06Z
  - ee00592 Merge pull request #37890 from bbinet/fix-genthin-six
  - 7fcea3 Fix support for extra\_mods='six' to add six module to a thin.tgz tarball
- 47d21d9 Don't skip pillar compilation when master\_type=='disable' (#37843)
  - **ISSUE #37713:** (*aboe76*) masterless minion can't call pillar.item from pillar stack (development branch) | refs: #37843
  - **PR #37843:** (*terminalmage*) Don't skip pillar compilation when master\_type=='disable'
  - **PR #32521:** (*adelcast*) Fix salt-call on standalone minion case | refs: #37843
- 16ce844 Eliminate warning when `ssl` not set (#37849)
  - **ISSUE #37449:** (*thatch45*) Allow TLS connections in the Tornado TCP transport | refs: #37776 #37859
  - **PR #37849:** (*skizunov*) Eliminate warning when `ssl` not set
  - **PR #37776:** (*DmitryKuzmenko*) Full TLS/SSL options support as provided by Tornado TCPServer. | refs: #37849
- 0c607cc An example configuration for TLS/SSL. (#37859)
  - **ISSUE #37449:** (*thatch45*) Allow TLS connections in the Tornado TCP transport | refs: #37776 #37859
  - **PR #37859:** (*DmitryKuzmenko*) TLS example config
- 7c1cfa8 Clarify the master\_type docs (#37841)
  - **PR #37841:** (*terminalmage*) Clarify the master\_type docs
- 2bc42b8 PY3: Fix exception when handling connect exception in TCP transport (#37831)
  - **PR #37831:** (*skizunov*) PY3: Fix exception when handling connect exception in TCP transport
- **PR #37829:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2016-11-22T15:26:00Z
  - **ISSUE #37787:** (*elyulka*) user.present state fails to change loginclass on FreeBSD | refs: #37827
  - **ISSUE #37751:** (*freach*) Documentation salt.states.dockerng.running: ``privileged" property undocumented | refs: #37789
  - **ISSUE #37653:** (*gravyboat*) Salt.cron docs don't wrap @hourly and @daily correctly in quotes for the examples | refs: #37816
  - **ISSUE #37383:** (*edwardsdanielj*) Orchestration arguments (kwarg) not being interpreted / How I learned to stop worrying about documentation and love experimenting | refs: #37817
  - **ISSUE #31953:** (*sjorge*) Documentation for salt.states.cron is incorrect | refs: #32157
  - **ISSUE #19269:** (*markuskramerlgitt*) Undocumented feature names: of file.directory | refs: #37823
  - **ISSUE #15697:** (*arthurlogilab*) keystone.user\_present should not re-set the password when user exists | refs: #37821
  - **ISSUE #5999:** (*pille*) libvirt.keys does not work | refs: #37820
  - **PR #37827:** (*silenius*) add missing chloginclass
  - **PR #37826:** (*rallytime*) Update branch refs to more relevant branch
  - **PR #37823:** (*rallytime*) Add ``names" option to file state docs: point users to highstate doc examples
  - **PR #37822:** (*laleocen*) add documentation for multiline encryption using nacl | refs: #37826

- **PR #37821:** (*rallytime*) Clarify keystone.user\_present password state docs with default behavior
- **PR #37820:** (*rallytime*) Add some dependency documentation to libvirt docs
- **PR #37817:** (*rallytime*) Update orchestrate runner file.copy doc example
- **PR #37816:** (*rallytime*) Back-port #32157 to 2016.3
- **PR #37812:** (*rallytime*) Back-port #37790 to 2016.3
- **PR #37811:** (*rallytime*) Back-port #37789 to 2016.3
- **PR #37810:** (*rallytime*) Back-port #37775 to 2016.3
- **PR #37790:** (*sofixa*) Update cloud/proxmox.rst with more options and LXC | refs: #37812
- **PR #37789:** (*fedusia*) issue: 37751 | refs: #37811
- **PR #37775:** (*calve*) Document *python* argument in *salt.states.virtualenv\_mod* | refs: #37810
- **PR #37772:** (*bdrung*) Support initializing OpenSSL 1.1
- **PR #32157:** (*cachedout*) Add quotes to cron doc | refs: #37816
- dd81d2f Merge pull request #37829 from rallytime/merge-2016.11
- 3d6d32e Merge branch '2016.3' into '2016.11'
- aa37487 add missing chloginclass (#37827)
- 0e74bad Update branch refs to more relevant branch (#37826)
- 6a9b49c Add ``names" option to file state docs: point users to highstate doc examples (#37823)
- aaf587d Clarify keystone.user\_present password state docs with default behavior (#37821)
- c300863 Add some dependency documentation to libvirt docs (#37820)
- 485270f Merge pull request #37772 from bdrung/openssl1.1
  - \* 819c965 Support initializing OpenSSL 1.1
- 4910912 Update orchestrate runner file.copy doc example (#37817)
- c5d3d8b Merge pull request #37816 from rallytime/bp-32157
  - \* d9c2971 Add quotes to cron doc
- 97e6b6a Merge pull request #37812 from rallytime/bp-37790
  - \* ca3b6e7 Update proxmox.rst with more options and LXC
- 27703c5 Merge pull request #37811 from rallytime/bp-37789
  - \* ba3fef4 fix comment
  - \* a021f76 issue: 37751 Add documentation for option privileged
- adac9d7 Merge pull request #37810 from rallytime/bp-37775
  - \* 2bed914 Document *python* argument in *salt.states.virtualenv\_mod*
- c66b51b network.routes should not raise exception if no interface (#37794)
  - **PR #37794:** (*sjorge*) network.routes should not raise exception if no interface
- **PR #37815:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2016-11-21T20:22:49Z
  - **ISSUE #37742:** (*blakemiller*) Cannot match on nodegroup when checking minions | refs: #37763

- **ISSUE #37725:** (*secumod*) salt-call incorrectly parses master hostname:port from minion config | refs: #37766
- **PR #37766:** (*cachedout*) Fix ip/port issue with salt-call
- **PR #37763:** (*cachedout*) Add nodegroup check to ckminions
- 628c4a3 Merge pull request #37815 from rallytime/merge-2016.11
- c6b5fd3 Merge branch `2016.3' into `2016.11'
  - \* 7de7844 Add nodegroup check to ckminions (#37763)
  - \* d674369 Fix ip/port issue with salt-call (#37766)
- **PR #37776:** (*DmitryKuzmenko*) Full TLS/SSL options support as provided by Tornado TCPServer. | refs: #37849 @ 2016-11-21T20:11:52Z
  - **ISSUE #37449:** (*thatch45*) Allow TLS connections in the Tornado TCP transport | refs: #37776 #37859
  - 0b30b93 Merge pull request #37776 from DSRCorporation/features/37449\_tls
  - 6857b9b Documented new TLS/SSL settings.
  - e42898f Full TLS/SSL options support as provided by Tornado TCPServer.
- **PR #37773:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2016-11-18T19:18:42Z
  - **ISSUE #36629:** (*yhekma*) The pillar run module does not honor saltenv | refs: #37738
  - **ISSUE #33709:** (*msummers42*) Any/All Salt-SSH invocations in 2016.3.0 Fails with AttributeError: `module' object has no attribute `BASE\_THORIUM\_ROOTS\_DIR' | refs: #37767
  - **PR #37767:** (*cachedout*) Add thorium path to syspaths
  - **PR #37760:** (*hu-dabao*) Fix couchbase returner and add couple of more features
  - **PR #37745:** (*cro*) Switch default filter tag for ONE resources from user only to all resources
  - **PR #37738:** (*terminalmage*) Allow pillar.get to retrieve fresh pillar data when saltenv passed
  - 3835f91 Merge pull request #37773 from rallytime/merge-2016.11
  - c859fc9 Merge branch `2016.3' into `2016.11'
  - c62ff6b Add thorium path to syspaths (#37767)
  - bff949f Merge pull request #37760 from hu-dabao/fix\_cb\_returner
    - \* de372f2 1. returner no need to check whether the jid exists for external job cache setup 2. add full\_ret to return doc so that the document will be informative 3. make ttl as a config attribute because salt-minion does not have keep\_jobs attribute 4. add password into config attribute 5. update the documents accordingly
  - 1f976ac Merge pull request #37738 from terminalmage/issue36629
    - \* da46678 Allow pillar.get to retrieve fresh pillar data when saltenv passed
  - 7aee7fc Switch default filter tag for ONE resources from user only to all resources (#37745)
- **PR #37764:** (*mirceaulinic*) Doc fixes and *replace* feature @ 2016-11-18T03:15:31Z
  - 6f0f70c Merge pull request #37764 from cloudflare/NET-UPDATE
  - c3f0202 Replace feature and doc fixes

## 20.2.9 Salt 2016.11.2 Release Notes

Version 2016.11.2 is a bugfix release for *2016.11.0*.

### Security Fixes

CVE-2017-5192: `local_batch` client external authentication not respected

The `LocalClient.cmd_batch()` method client does not accept `external_auth` credentials and so access to it from salt-api has been removed for now. This vulnerability allows code execution for already-authenticated users and is only in effect when running salt-api as the root user.

CVE-2017-5200: Salt-api allows arbitrary command execution on a salt-master via Salt's `ssh_client`

Users of Salt-API and salt-ssh could execute a command on the salt master via a hole when both systems were enabled.

We recommend everyone upgrade to 2016.11.2 as soon as possible.

### Changes for v2016.11.1..v2016.11.2

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

- Total PR references: **200**

Changes:

- **PR #38819:** (*twangboy*) Remove `Users` from `c:\salt` [DO NOT MERGE FORWARD] @ 2017-01-20T20:17:35Z
  - 4913c4f Merge pull request #38819 from twangboy/salt\_perms\_2016.11
  - eb04ed7 Remove `User` from `c:\salt`
- **PR #38815:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-01-20T18:53:01Z
  - **ISSUE #38629:** (*Arabus*) Conflicting documentation about default value of `pillar_opts` | refs: #38792
  - **ISSUE #38622:** (*mikejford*) Incorrect `saltenv` argument documentation in `salt.modules.state` | refs: #38789
  - **ISSUE #38388:** (*johje349*) No INFO logs in minion log file | refs: #38808
  - **ISSUE #36598:** (*ikkaro*) `CloudClient` vmware driver reusing SI bug | refs: #38813
  - **ISSUE #10:** (*thatch45*) `list jobs` option
  - **PR #38813:** (*gtmanfred*) catch SIGPIPE in vmware connection
  - **PR #38812:** (*rallytime*) Update `pyobjects` test to be a list
  - **PR #38809:** (*twangboy*) Fix `get_hostname` to handle longer computer names
  - **PR #38808:** (*vutny*) Fix #38388
  - **PR #38792:** (*rallytime*) Update pillar tutorial lanuage regarding `pillar_opts` settings
  - **PR #38790:** (*cachedout*) Fix typo in `pyobjects` test

- **PR #38789:** (*rallytime*) Update some saltenv refs to environment in salt.modules.state docs
- **PR #38668:** (*terminalmage*) Fix proposal for #38604
- a275b97 Merge pull request #38815 from rallytime/merge-2016.11
- ce6d1b1 Make sure we're using the opts dict mocking in parsers\_test
- 315b2c8 Merge branch `2016.3' into `2016.11'
  - \* d14f0c6 Merge pull request #38812 from rallytime/pyobjects-test
    - f3e84c1 Update pyobjects test to be a list
  - \* 50f03f8 Merge pull request #38813 from gtmanfred/2016.3
    - ce3472c catch SIGPIPE in vmware connection
  - \* 23b8b47 Merge pull request #38809 from twangboy/fix\_hostname\_2016.3
    - d57a51f Fix tests for get\_hostname
    - 7ca3fd7 Fix get\_hostname to handle longer computer names
  - \* 1033bbd Merge pull request #38808 from vutny/fix-38388
    - 9bd203f Fix #38388
  - \* f3ae3cd Merge pull request #38668 from terminalmage/issue38604
    - 0ea97cd Merge pull request #10 from cachedout/pr-38668
    - db81afc Munge retcode into return data for batching
    - a642a99 Return the ret data from batch execution instead of raw data
  - \* c6a19a9 Merge pull request #38789 from rallytime/fix-38622
    - af41fe0 Update some saltenv refs to environment in salt.modules.state docs
  - \* e0bf700 Merge pull request #38790 from cachedout/fix\_pyobjects\_test\_typo
    - a66afb5 Fix typo in pyobjects test
  - \* 6e9785e Merge pull request #38792 from rallytime/fix-38629
    - 1e125e2 Update pillar tutorial lanuage regarding pillar\_opts settings
- **PR #38832:** (*terminalmage*) archive.extracted: Identify symlinks when checking for incorrect types @ 2017-01-20T18:36:15Z
  - efe1bf1 Merge pull request #38832 from terminalmage/issue38711
  - d10c068 Update archive state unit tests to reflect symlinks in archive.list
  - d6adfb6 Identify symlinks when looking for incorrect types
  - 09b9e95 archive.list: organize symlinks separately from files in verbose mode
  - e6483f0 Support removing symlinks in salt.utils.rm\_rf
- **PR #38726:** (*twangboy*) Add VC Redist 2008 SP1 MFC to installer @ 2017-01-19T19:13:42Z
  - 10a3d8b Merge pull request #38726 from twangboy/vcredist
  - f00a653 change extensions .ext to .exe
  - 98c40e2 Add VC Redist 2008 SP1 MFC to installer
- **PR #38810:** (*UtahDave*) Fix beacon doc @ 2017-01-18T21:37:21Z

- d5f2d92 Merge pull request #38810 from UtahDave/fix\_beacon\_doc\_zd1035
- dbe9edb fix reactor example.
- PR #38811: (*techhat*) Show a lot less data when requesting a VM @ 2017-01-18T21:08:03Z
  - 88faf08 Merge pull request #38811 from techhat/sanvm
  - 47c1932 Show a lot less data when requesting a VM
- a8a6215 refine the os detection in archive test (#38807)
  - PR #38807: (*Ch3LL*) refine the os detection in archive test
- PR #38799: (*aosagie*) Parse ansible dynamic inventory output correctly @ 2017-01-18T15:32:47Z
  - e3ca688 Merge pull request #38799 from aosagie/fix-ansible-dynamic-roster
  - 26d6f69 Parse ansible dynamic inventory output correctly
- PR #38787: (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-01-18T08:39:08Z
  - ISSUE #38524: (*rbjorklin*) salt-api seems to ignore rest\_timeout since 2016.11.0 | refs: #38527 #38585
  - ISSUE #38479: (*tyeapple*) api\_logfile setting takes no effect | refs: #38585
  - PR #38796: (*cachedout*) Revert ``Fixed prepending of root\_dir override to the other paths"
  - PR #38774: (*vutny*) DOCS: add C++ compiler installation on RHEL required for bundled 0mg
  - PR #38749: (*vutny*) pkg build modules throw better exception message if keyid wasn't found
  - PR #38707: (*alexbleotu*) Fixed prepending of root\_dir override to the other paths | refs: #38796
  - PR #38585: (*rallytime*) Follow up to PR #38527
  - PR #38570: (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 | refs: #38585
  - PR #38560: (*Ch3LL*) fix api logfile | refs: #38585
  - PR #38527: (*rbjorklin*) salt-api no longer forces the default timeout | refs: #38585 #38585 #38585
  - 76df6a4 Merge pull request #38787 from rallytime/merge-2016.11
  - 2aad54c Merge branch `2016.3' into `2016.11'
    - \* 3417adc Merge pull request #38796 from saltstack/revert-38707-root\_dir\_fix-gh
    - cb080f3 Revert ``Fixed prepending of root\_dir override to the other paths"
  - 64d866f Merge branch `2016.3' into `2016.11'
  - bab3479 Merge pull request #38585 from rallytime/follow-up-38527
    - \* 0558720 Pylint fix: add line at end of file
    - \* fa01367 Keep a copy of the DEFAULT\_API\_OPTS and restore them after the test run
    - \* 2ad0763 Test clean up
    - \* fd2ee7d Add some simple unit tests for salt.config.api\_config function
    - \* 3d2fetc Make sure the pidfile and log\_file values are overridden by api opts
    - \* 1f6b540 Make sure the pidfile and log\_file values are overridden by api opts
    - \* 04d307f salt-api no longer forces the default timeout
  - 0fb6bb7 Merge pull request #38707 from alexbleotu/root\_dir\_fix-gh
    - \* 0bac8c8 Fixed prepending of root\_dir override to the other paths

- 96c9dc1 Merge pull request [#38774](#) from vutny/dev-test-docs
  - \* 4620dc4 DOCS: add C++ compiler installation on RHEL required for bundled 0mq
- aedfbb7 Merge pull request [#38749](#) from vutny/pkg-build-better-exception-msg
  - \* 53f2be5 pkg build modules throw better exception message if keyid wasn't found
- **PR #38660:** (*techhat*) Don't force salt.cache to use cachedir from opts @ 2017-01-17T18:38:35Z
  - 4e6146f Merge pull request [#38660](#) from techhat/cachedir
  - be55b57 One last fix
  - fc24b24 Add correct function name
  - 9bbeef7 Typo fix
  - 436ba28 Change getlist back to list (using \_list)
  - ff734fe Default to CACHE\_DIR in syspaths
  - 380abd3 Add cachedir args to tests
  - deb08c0 Not every module will need cachedir
  - 4489f7c Don't force salt.cache to use cachedir from opts
- **PR #38667:** (*rallytime*) Back-port [#37982](#) to 2016.11 @ 2017-01-17T15:42:13Z
  - **ISSUE #37948:** (*djacobs2016*) ssh\_known\_hosts.present is failing when checking key/host | refs: [#37982](#) [#37982](#)
  - **ISSUE #33932:** (*folti*) ssh\_known\_hosts.present: hashing global known hosts file makes it readable by root only | refs: [#33933](#)
  - **PR #37982:** (*wolfpackmars2*) Update ssh.py | refs: [#38667](#)
  - **PR #33933:** (*folti*) ssh: keep original permissions, when hashing known\_hosts | refs: [#38667](#)
  - 89dc86e Merge pull request [#38667](#) from rallytime/bp-37982
  - be91e46 Update ssh.py
- **PR #38759:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-01-17T15:22:01Z
  - **ISSUE #38674:** (*jackywu*) There is no code to use parameter `event\_publisher\_pub\_hwm` in saltstack-2016.3 | refs: [#38723](#)
  - **ISSUE #20:** (*thatch45*) Sort sys.doc output
  - **ISSUE #19:** (*thatch45*) Sending a faulty command kills all the minions!
  - **PR #38743:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
  - **PR #38739:** (*vutny*) DOCS: correct examples of running test suite
  - **PR #38735:** (*vutny*) DOCS: add links to File State Backups page where necessary
  - **PR #38731:** (*rallytime*) Various follow up fixes
  - **PR #38723:** (*rallytime*) Remove ``event\_publisher\_pub\_hwm" and ``salt\_event\_pub\_hwm" from config/\_\_init\_\_.py
  - **PR #38720:** (*dereckson*) Proofread jinja\_to\_execution\_module tutorial
  - **PR #38693:** (*twangboy*) Update jinja2 to 2.9.4
  - **PR #38669:** (*rallytime*) Update bootstrap script version to latest release

- **PR #38602:** (*terminalmage*) Fix failing unit.states.boto\_vpc\_test.BotoVpcRouteTableTestCase.test\_present\_with\_routes
- **PR #29294:** (*skizunov*) ZeroMQ no longer required when transport is TCP | refs: #38723 #38723
- 751e14c Merge pull request #38759 from rallytime/merge-2016.11
- 30e8a66 Merge branch `2016.3' into `2016.11'
  - \* 8466b34 Merge pull request #38743 from rallytime/merge-2016.3
    - d24776f Merge branch `2015.8' into `2016.3'
    - 6869621 Merge pull request #38731 from rallytime/merge-2015.8
    - 9eb191b Pylint fix
    - b910499 Various follow up fixes
    - e8309a6 Add release notes for 2015.8.13
    - f881f36 Merge pull request #20 from rallytime/2015.8.12\_follow\_up-batch-tests
    - 3428232 Clean up tests and docs for batch execution
    - c80b20b Merge pull request #19 from whiteinge/batchclient
    - 3d8f3d1 Remove batch execution from NetapiClient and Saltnado
    - 97b0f64 Lintfix
    - d151666 Add explanation comment
    - 62f2c87 Add docstring
    - 9b0a786 Explain what it is about and how to configure that
    - 5ea3579 Pick up a specified roster file from the configured locations
    - 3a8614c Disable custom rosters in API
    - c0e5a11 Add roster disable flag
    - e9c59e9 Merge pull request #38602 from terminalmage/fix-boto-test
    - 3424a10 Fix failing unit.states.boto\_vpc\_test.BotoVpcRouteTableTestCase.test\_present\_with\_routes
  - \* a642cde Merge pull request #38723 from rallytime/fix-38674
    - 706c885 Remove ``event\_publisher\_pub\_hwm" and ``salt\_event\_pub\_hwm" from config/\_\_init\_\_.py
  - \* fc545af Merge pull request #38669 from rallytime/update-bootstrap-script
    - 78ba76e Update bootstrap script version to latest release
  - \* 50d417f Merge pull request #38693 from twangboy/update\_jinja
    - e0c7e55 Update jinja2 to 2.9.4
  - \* f4233bb Merge pull request #38739 from vutny/fix-runttests-doc
    - b872bb6 DOCS: correct examples of running test suite
  - \* 51d4707 DOCS: add links to File State Backups page where necessary (#38735)
  - \* 6d3717b Proofread jinja\_to\_execution\_module tutorial (#38720)
- **PR #38778:** (*mirceaulinic*) Fix ``Error using napalm netusers" @ 2017-01-17T15:20:27Z
  - **ISSUE #38775:** (*charburns*) Error using napalm netusers | refs: #38778

- bb6291d Merge pull request #38778 from cloudflare/fix-38775
- b3388f7 Fix #38775
- **PR #38664:** (*clinta*) X509 Improvements. Expose setting permissions, encrypted private keys, and combined key and cert management in one state @ 2017-01-17T02:20:18Z
  - **ISSUE #38528:** (*MorphBonehunter*) x509 make permissions configurable | refs: #38664
  - **ISSUE #38081:** (*haraldrudell*) x509 state or module cannot generate password protected private keys | refs: #38664
  - 6663107 Merge pull request #38664 from clinta/x509-passphrase2
  - 77c7872 pep8
  - a2b20ee No mutable default args, remove unneeded import
  - b48b85c bug fixes
  - f62393b pep8
  - c861324 change documentation
  - 9a0abde expose passphrase functionality to state
  - e47a93d add passphrase to execution module
  - a4d6598 preserve detailed change reports
  - d0ad251 combine private key and cert management
  - 3d1474d cross call file.managed to get permissions options
- **PR #38682:** (*mirceaulinic*) [2016.11.2/napalm] Better error message when NotImplementedError raised @ 2017-01-15T18:34:25Z
  - bf6d74c Merge pull request #38682 from cloudflare/NotImplementedError-MSG
  - f847639 Better error message when NotImplementedError raised
- **PR #38695:** (*rallytime*) Pass in client\_args when calling influxdb execution module funcs @ 2017-01-15T18:33:48Z
  - **ISSUE #37996:** (*stefan-as*) influxdb\_user.present does not pass client\_args | refs: #38695
  - df12e49 Merge pull request #38695 from rallytime/fix-37996
  - 05b0975 Pass in client\_args when calling influxdb execution module funcs
- **PR #38651:** (*rallytime*) Don't lose the set reference for ec2 securitygroup ids @ 2017-01-15T18:06:25Z
  - **ISSUE #38521:** (*vladvasilii*) State cloud.present on AWS: TypeError: `NoneType' object is not iterable | refs: #38651
  - **ISSUE #37981:** (*tazaki*) Salt-cloud ec2 vpc securitygroupid always returning default | refs: #38183
  - **PR #38183:** (*cro*) Fix bad set operations when setting up securitygroups in AWS. | refs: #38651
  - 834e546 Merge pull request #38651 from rallytime/fix-38521
  - 830c03c Don't lose the set reference for ec2 securitygroup ids
- **PR #38659:** (*techhat*) Turn None into an empty string (for minion matching) @ 2017-01-15T18:02:03Z
  - **ISSUE #38216:** (*pgrishin*) salt-run: can't get cache.grains | refs: #38659
  - 8b38cfe Merge pull request #38659 from techhat/issue38216
  - 4073c91 Turn None into an empty string (for minion matching)

- **PR #38703:** (*yhekma*) The `test` option is only valid for the minion, not the master @ 2017-01-15T17:56:22Z
  - 0ad5d22 Merge pull request #38703 from yhekma/docfix
  - 57df3bf The `test` option is only valid for the minion, not the master
- **PR #38718:** (*terminalmage*) Fix for dynamic `git_pillar` when `pillarenv` is used @ 2017-01-15T14:37:30Z
  - 8c1222e Merge pull request #38718 from terminalmage/zd909
  - 12bbea5 Fix for dynamic `git_pillar` when `pillarenv` is used
- **PR #38676:** (*yhekma*) Removed overloading of `list()` @ 2017-01-15T05:42:13Z
  - **ISSUE #38677:** (*yhekma*) consul cache backend broken | refs: #38676
  - aae8b54 Merge pull request #38676 from yhekma/2016.11
  - 3237d23 Localfs should also be changed of course
  - 9d9de67 We do not want to overload the `list()` type because if we do, we turn this function into a recursive one, which results in an exception because `set()` cannot be concatenated with `str ('/')`
- **PR #38713:** (*rallytime*) Add `NameError` to exception in `avahi_announce beacon` @ 2017-01-15T05:33:04Z
  - **ISSUE #38684:** (*rukender*) 2016.11.1 :[ERROR][11182] Failed to import beacons `avahi_announce` | refs: #38713
  - c246ab4 Merge pull request #38713 from rallytime/fix-38684
  - db60bed Add `NameError` to exception in `avahi_announce beacon`
- **PR #38729:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-01-13T23:15:33Z
  - **ISSUE #38648:** (*ericuldall*) No release file error from PPA on Ubuntu | refs: #38650
  - **ISSUE #38572:** (*COLABORATI*) ppa:saltstack/salt failure | refs: #38650
  - **ISSUE #38087:** (*UtahDave*) The ``data'` field in the return from a minion below a syndic is wrapped in an extra ``data'` field. | refs: #38657
  - **ISSUE #36548:** (*abonillasuse*) openstack auth with nova driver | refs: #38647
  - **ISSUE #34504:** (*AvinashDeluxeVR*) Installation documentation for Ubuntu server and Windows minion leads the user to use different salt versions. | refs: #38650
  - **PR #38657:** (*DmitryKuzmenko*) Publish the ``data'` field content for Syndic events
  - **PR #38650:** (*rallytime*) Remove the installation instructions for out-of-date community ppa
  - **PR #38649:** (*Ch3LL*) fix `unit.modules.file_test`
  - **PR #38647:** (*gtmanfred*) Allow novaclient to use keystoneauth1 sessions for authentication
  - 6c14774 Merge pull request #38729 from rallytime/merge-2016.11
  - 4e1e45d Merge branch ``2016.3'` into ``2016.11'`
  - 7b850d4 Merge pull request #38647 from gtmanfred/nova
    - \* 5be9b60 add documentation about using keystoneauth for v3
    - \* 7b657ca add the ability to use keystone v2 and v3
    - \* 5646ae1 add ability to use keystoneauth to authentitcate in nova driver
  - 383768d Merge pull request #38650 from rallytime/remove-ubuntu-ppa-docs
    - \* 30429b2 Remove the installation instructions for out-of-date community ppa

- 7d9f56e Merge pull request #38657 from DSRCorporation/bugs/38087\_syndic\_event\_format\_fix
  - \* 594c33f Publish the `data` field content for Syndic events
- 8398751 Merge pull request #38649 from Ch3LL/test\_apply\_template
  - \* 47f8b68 fix unit.modules.file\_test
- **PR #38635:** (*loregordon*) Sends pass-through params to state module @ 2017-01-10T20:01:59Z
  - **ISSUE #38631:** (*doitian*) In Orchestration, kwargs are not passed to state.sls in masterless mode | refs: #38635
  - cfd82d1 Merge pull request #38635 from lorengordon/issue-38631
  - 1466613 Sends pass-through params to state module
- **PR #38640:** (*mirceaulinic*) Import napalm\_base instead of napalm @ 2017-01-10T19:58:01Z
  - 017094a Merge pull request #38640 from cloudflare/NAPALM-IMPORTS
  - 8f13f63 Import napalm\_base instead of napalm
- **PR #38661:** (*techhat*) Add sane cache defaults for minion and cloud @ 2017-01-10T19:55:15Z
  - 7966313 Merge pull request #38661 from techhat/sanedefault
  - aee4064 Add a sane cache default for cloud
  - c9e01a3 Add a sane cache default for minions
- **PR #38645:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-01-10T19:54:06Z
  - **ISSUE #38558:** (*multani*) pillar.get("...", default=var, merge=true) updates default value | refs: #38579 #38579
  - **ISSUE #37355:** (*Firewire2002*) salt-ssh - ImportError: No module named backports.ssl\_match\_hostname | refs: #37358
  - **ISSUE #34600:** (*davidpsv17*) Error trying a salt-ssh test.ping | refs: #37358
  - **ISSUE #27355:** (*jerob*) salt ssh error with debian 7 on target | refs: #37358
  - **PR #38626:** (*cachedout*) Revert ``Fix/workaround for issue #37355``
  - **PR #38618:** (*rallytime*) Back-port #38579 to 2016.3
  - **PR #38579:** (*zwo-bot*) Fix #38558 - pillar.get with default= ...,merge=true influence subsequent calls of pillar.get | refs: #38618
  - **PR #37358:** (*Firewire2002*) Fix/workaround for issue #37355 | refs: #38626
  - **PR #35390:** (*alexandr-orlov*) Returns back missed proper grains dictionary for file module
  - b0ed91c Merge pull request #38645 from rallytime/merge-2016.11
  - 7a668e9 Merge branch `2016.3` into `2016.11`
  - 74ddc71 Merge pull request #38626 from saltstack/revert-37358-2016.3.3\_issue37355
    - \* e912ac9 Revert ``Fix/workaround for issue #37355``
  - 5e58b32 Merge pull request #37358 from Firewire2002/2016.3.3\_issue37355
    - \* 910da18 fixed typo
    - \* 4fbc5dd fixed wrong renamed variable and spaces
    - \* 92366e6 issue #37355

- \* 7dc87ab issue #37355
- \* 2878180 issue #37355
- 6c2fe61 Merge pull request #35390 from alexandr-orlov/2016.3
  - \* cd5ae17 fxd missed proper grains dictionary
- 2579cfa Merge pull request #38618 from rallytime/bp-38579
  - \* 2052ece Add copy import
  - \* 2c8845a add test for pillar.get() + default value
  - \* c2f98d2 ticket 38558: add unit test, deepcopy() only if necessary
  - \* 30ae0a1 added deepcopy of default if merge=True
- **PR #38627:** (*cachedout*) Pr 38476 @ 2017-01-06T22:05:45Z
  - **PR #38476:** (*amendlik*) Key fingerprints | refs: #38627
  - d67f693 Merge pull request #38627 from cachedout/pr-38476
  - 2a423ff Add changes to raetkey
  - 55ad9d6 Add hash\_type argument to MultiKeyCLI.finger\_all function
  - c868126 Add hash\_type argument to key module fingerprint functions
  - d0f4c30 Add hash\_type argument to wheel fingerprint functions
  - e558ddc Add finger\_master function to wheel.key module
- **PR #38610:** (*yue9944882*) Fix #38595 - Unexpected error log from redis retuner in master's log @ 2017-01-06T21:47:21Z
  - **ISSUE #38595:** (*yue9944882*) Redis ext job cache occurred error | refs: #38610 #38610
  - b13cd13 Merge pull request #38610 from yue9944882/2016.11
  - 54325cf Fix #38595 - Unexpected error log from redis retuner in master's log
- **PR #38406:** (*alex-zel*) Fix eauth error with openLDAP/389 directory server groups @ 2017-01-06T21:40:30Z
  - **ISSUE #36148:** (*alex-zel*) Eauth error with openLDAP groups | refs: #38406 #38406
  - 179d385 Merge pull request #38406 from alex-zel/fix-eauth-groups-permissions
  - 6b9e9d8 Fix eauth error with openLDAP/389 directory server groups
- **PR #38619:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-01-06T17:51:19Z
  - **ISSUE #37498:** (*githubcdr*) service.restart salt-minion fails on Ubuntu 14.04.5 LTS | refs: #38587
  - **PR #38601:** (*terminalmage*) pillar.get: Raise exception when merge=True and default is not a dict
  - **PR #38600:** (*terminalmage*) Avoid errors when sudo\_user is set (2016.3 branch)
  - **PR #38598:** (*terminalmage*) Avoid errors when sudo\_user is set | refs: #38599 #38600
  - **PR #38589:** (*tobithiel*) State Gem: fix incorrect warning about missing rvm/rbenv
  - **PR #38587:** (*rallytime*) Change daemontools \_\_virtualname\_\_ from service to daemontools
  - **PR #38567:** (*pass-by-value*) Create queue if one doesn't exist
  - 82e9b3d Merge pull request #38619 from rallytime/merge-2016.11
  - 0efb2d8 Merge branch `2016.3' into `2016.11'

- \* da676ce Merge pull request #38601 from terminalmage/pillar-get
  - 8613d72 pillar.get: Raise exception when merge=True and default is not a dict
- \* 224fc77 Merge pull request #38600 from terminalmage/issue38459-2016.3
  - 8a45b13 Avoid errors when sudo\_user is set
- \* a376970 Merge pull request #38589 from tobithiel/fix\_rvm\_rbenv\_warning
  - 9ec470b State Gem: fix incorrect warning about missing rvm/rbenv
- \* 02e6a78 Merge pull request #38567 from pass-by-value/pgjsonb\_queue\_changes\_2016.3
  - 67879eb Create queue if one doesn't exist
- \* 0889cbd Merge pull request #38587 from rallytime/fix-37498
  - 2a58809 Change daemontools \_\_virtualname\_\_ from service to daemontools
- **PR #38612:** (*sjorge*) network.ifacestartswith throws exception on Solaris-like platforms @ 2017-01-06T17:20:32Z
  - f64e003 Merge pull request #38612 from sjorge/2016.11-solaris-ifacestartswith
  - 26fae54 network.ifacestartswith throws exception on Solaris-like platforms
- **PR #38615:** (*sjorge*) add note related to issue #37027 @ 2017-01-06T16:38:34Z
  - **ISSUE #37027:** (*sjorge*) Solaris FQDN/UQDN and documentation/consistency | refs: #38615 #38615
  - 5820cee Merge pull request #38615 from sjorge/2016.11-solarisdocs
  - fbdd32f add note related to issue #37027
- **PR #38598:** (*terminalmage*) Avoid errors when sudo\_user is set | refs: #38599 #38600 @ 2017-01-05T23:16:22Z
  - a27fdb4 Merge pull request #38598 from terminalmage/issue38459
  - b37f7ff Avoid errors when sudo\_user is set
- **PR #38599:** (*terminalmage*) archive.extracted: Prevent traceback when state.single cannot be run @ 2017-01-05T23:16:11Z
  - **PR #38598:** (*terminalmage*) Avoid errors when sudo\_user is set | refs: #38599 #38600
  - d6b7019 Merge pull request #38599 from terminalmage/archive-results-handling
  - 9aceb81 archive.extracted: Prevent traceback when state.single cannot be run
- **PR #38520:** (*basdusee*) Fix issue #38517, added time.sleep(1) at line 227 in slack.py @ 2017-01-05T20:35:08Z
  - **ISSUE #38517:** (*basdusee*) Slack.py engine 100% CPU load due to missing time.sleep(1) | refs: #38520
  - d486b42 Merge pull request #38520 from basdusee/fix-issue-38517
  - e3a883c Small fix on the fix regarding indentation
  - 8adeae6 Fix issue #38517, added time.sleep(1) at line 227 in slack.py engine.
- **PR #38577:** (*mirceaulinic*) Fix function headers as per #38499 @ 2017-01-05T18:41:33Z
  - **ISSUE #38485:** (*wasabi222*) bgp.config not working | refs: #38499
  - **PR #38499:** (*mirceaulinic*) Fix #38485 | refs: #38577
  - 0706cde Merge pull request #38577 from cloudflare/PREP-2016.11.2
  - 62bee3c Fix function headers as per #38499
- **PR #38578:** (*mirceaulinic*) [2016.11] Port 5123f11 from develop into 2016.11.2 @ 2017-01-05T18:11:12Z

- 55d1747 Merge pull request #38578 from cloudflare/PORT-5123f1
- dea7866 Update net.load\_template doc: 2016.11.2
- **PR #38584:** (*rallytime*) Allow memusage beacon to load on Windows @ 2017-01-05T18:08:30Z
  - **ISSUE #38462:** (*g-shockfx*) Can't add beacon memusage on Windows | refs: #38584 #38584
  - be69baf Merge pull request #38584 from rallytime/fix-38462
  - 1fe945d Allow memusage beacon to load on Windows
- **PR #38570:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 | refs: #38585 @ 2017-01-05T14:28:38Z
  - **ISSUE #38353:** (*Ch3LL*) salt-cloud gce specifying | refs: #38542 #38542
  - **ISSUE #38187:** (*curiositycasualty*) username/password saved as cleartext when using URIs with user:pass@ format | refs: #38541
  - **ISSUE #30454:** (*favoretti*) Using yaml serializer inside jinja template results in unicode being prepended by '!python/unicode' | refs: #38554 #38554 #30481
  - **PR #38562:** (*rallytime*) Update arch installation docs with correct package name
  - **PR #38560:** (*Ch3LL*) fix api logfile | refs: #38585
  - **PR #38554:** (*multani*) Fix YAML deserialization of unicode
  - **PR #38542:** (*Ch3LL*) fix gce image bug
  - **PR #38541:** (*techhat*) Strip user:pass from cached URLs
  - **PR #38536:** (*UtahDave*) add note about pyVmomi locale workaround
  - **PR #38531:** (*rallytime*) Back-port #33601 to 2016.3
  - **PR #33601:** (*mchugh19*) Fix slack engine to run on python2.6 | refs: #38531
  - **PR #30481:** (*basepi*) Add yaml\_safe jinja filter | refs: #38554
  - 14b643f Merge pull request #38570 from rallytime/merge-2016.11
  - 30f14d1 Merge branch `2016.3' into `2016.11'
  - 7b74436 Merge pull request #38562 from rallytime/arch-install-docs
    - \* 8b1897a Update arch installation docs with correct package name
  - 0186070 Merge pull request #38560 from Ch3LL/fix\_api\_log
    - \* 1b45e96 fix api logfile
  - 0056620 Merge pull request #38531 from rallytime/bp-33601
    - \* c36cb39 remove the unnecessary double trigger
    - \* 3841449 fix spacing lint error
    - \* 8c1defc Remove unnecessary type from alias commands. Deduplicate alias handling to autodetect function selection. Add error reporting to slack connectivity problems. Cleanup slack's unicode conversion
    - \* c2f23bc Fix slack engine to run on python2.6
  - 50242c7 Merge pull request #38541 from techhat/issue38187
    - \* eae3a43 Strip user:pass from cached URLs
  - 325dc56 Merge pull request #38554 from multani/fix/30454

- \* 2e7f743 yamll: support unicode serialization/deserialization
- \* df76113 jinja: test the ``yaml" filter with ordered dicts
- \* f7712d4 Revert ``Add yaml\_safe filter"
- 4ddb2e add note about pyVmomi locale workaround (#38536)
- 1c951d1 fix gce image bug (#38542)
- **PR #38509:** (*mostafahussein*) Stop request from being processed if bad ip @ 2017-01-04T20:05:44Z
  - 9a1550d Merge pull request #38509 from mostafahussein/2016.11
  - 8847289 remove commented code
  - 420817a Stop request from being processed if bad ip
- **PR #38522:** (*kkoppel*) Fix usage of salt.utils.http.query in slack\_notify.call\_hook @ 2017-01-04T20:04:57Z
  - **ISSUE #38518:** (*kkoppel*) slack\_notify.call\_hook returns tracebacks | refs: #38522
  - bc07d42 Merge pull request #38522 from kkoppel/fix-issue-38518
  - ff1e7f0 Fix usage of salt.utils.http.query in slack\_notify.call\_hook
- **PR #38527:** (*rbjorklin*) salt-api no longer forces the default timeout | refs: #38585 #38585 #38585 @ 2017-01-04T17:10:15Z
  - **ISSUE #38524:** (*rbjorklin*) salt-api seems to ignore rest\_timeout since 2016.11.0 | refs: #38527 #38585
  - 42fef27 Merge pull request #38527 from rbjorklin/api-timeout-fix
  - 0202f68 salt-api no longer forces the default timeout
- **PR #38529:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-01-04T17:06:57Z
  - **ISSUE #38472:** (*jinm*) file.managed Unable to manage file: `hash\_type' (2016.3.4) | refs: #38503
  - **ISSUE #38449:** (*swalladge*) Parsing issues in *list\_tab* (salt/modules/cron.py) | refs: #38487
  - **ISSUE #38438:** (*jf*) file.line with mode=delete breaks on empty file | refs: #38467
  - **ISSUE #38282:** (*sash-kan*) file.managed fails when file (which contains utf-characters in the name) exists | refs: #38415
  - **ISSUE #38209:** (*limited*) Accepting a minion causes tornado to exit | refs: #38474
  - **ISSUE #37684:** (*thusoy*) State execution duration is timezone-dependent | refs: #38491
  - **PR #38503:** (*jinm*) Hash type fallback for file management
  - **PR #38491:** (*gtmanfred*) Use UTC for timing in case timezone changes
  - **PR #38487:** (*gtmanfred*) Fix crontab issues with spaces
  - **PR #38474:** (*cachedout*) Allow an existing ioloop to be passed to salt-key
  - **PR #38467:** (*gtmanfred*) file.line fail with mode=delete
  - **PR #38457:** (*bshelton229*) Stops git.latest checking for local changes in a bare repo
  - **PR #38434:** (*slinn0*) Make sysctl.persist fail when failing to set a value into the running kernel
  - **PR #38421:** (*rallytime*) Update deprecation notices to the correct version
  - **PR #38420:** (*rallytime*) Removed various deprecation notices from salt/modules/\* files | refs: #38421
  - **PR #38419:** (*Ch3LL*) fix scsci docs example
  - **PR #38415:** (*terminalmage*) file.managed: Fix failure when filename contains unicode chars

- **PR #38385:** (*dragon788*) Use unambiguous long names with double dashes
- 1895eb7 Merge pull request #38529 from rallytime/merge-2016.11
- 85f4702 Merge branch `2016.3' into `2016.11'
  - \* ec60f9c Merge pull request #38487 from gtmanfred/2016.3
    - 048b9f6 add test
    - c480c11 allow spaces in cron env
    - c529ec8 allow crons to have multiple spaces
  - \* c5ba11b Merge pull request #38491 from gtmanfred/timing
    - 79368c7 Use UTC for timing in case timezone changes
  - \* 86f0aa0 Merge pull request #38503 from jinm/issue\_38472\_jinm
    - 0cd9df2 Hash type fallback for file management
  - \* ed2ba4b Merge pull request #38457 from bshelton229/git-latest-head-bug
    - 558e7a7 Stops git.latest checking for local changes in a bare repo
  - \* 36e21b2 Merge pull request #38385 from dragon788/2016.3-double-dash
    - 86c4b56 Newline for lint compat
    - 9d9b686 Address review comments, consistency of quotes
    - df9bd5e Use unambiguous long names with double dashes
  - \* 59f2560 Merge pull request #38474 from cachedout/key\_loop
    - de50453 Allow an existing ioloop to be passed to salt-key
  - \* 3d0c752 Merge pull request #38467 from gtmanfred/2016.3
    - 7b7c6b3 file.line fail with mode=delete
  - \* 940025d Merge pull request #38434 from slinn0/issue\_38433\_fixes
    - 22af87a Fixes for <https://github.com/saltstack/salt/issues/38433>
  - \* e5eb512 Update deprecation notices to the correct version (#38421)
  - \* 9ce5331 file.managed: Fix failure when filename contains unicode chars (#38415)
  - \* 2cdb59d Merge pull request #38419 from Ch3LL/fix\_doc\_scsi
    - 234043b fix scsci docs example
- **PR #38539:** (*twangboy*) Fix DSC LCM Config int checks @ 2017-01-04T16:56:27Z
  - ec4f118 Merge pull request #38539 from twangboy/dsc\_int\_checks
  - 5657fd1 Add repr flag for str
  - aea4219 Fix DSC LCM Config int checks
- **PR #38549:** (*meaksh*) Adding multiple SUBVOLUME support and some fixes to the Snapper module @ 2017-01-04T15:32:30Z
  - 53449c8 Merge pull request #38549 from meaksh/2016.11-snapper-multiple-subvolumen-support
  - ef26e93 Some fixes and pylint
  - 1e6ba45 Fixes pre/post snapshot order to get the inverse status

- 68d5475 Fixing Snapper unit tests for SUBVOLUME support
- e9919a9 Removing possible double `/' from the file paths
- 8b4f87f Updating and fixing the documentation
- edea452 Raises ``CommandExecutionError" if snapper command fails
- 3841e11 Only include diff in the state response if *include\_diff* is True
- 7803e77 Adds multiple SUBVOLUME support to the Snapper module
- d43beab Move boto\_vpc.describe\_route\_table deprecation version to Oxygen (#38545)
  - **PR #38545:** (*rallytime*) Move boto\_vpc.describe\_route\_table deprecation version to Oxygen
- **PR #38471:** (*twangboy*) Fix Problem with win\_service module @ 2017-01-01T20:30:21Z
  - 5e80104 Merge pull request #38471 from twangboy/fix\_win\_service
  - 810471b Fix problem with some services getting access denied
- **PR #38499:** (*mirceaulinic*) Fix #38485 | refs: #38577 @ 2017-01-01T17:42:15Z
  - **ISSUE #38485:** (*wasabi222*) bgp.config not working | refs: #38499
  - 0a09049 Merge pull request #38499 from cloudflare/FIX-38485
  - 1801813 Fix #38485
- **PR #38501:** (*mvdwalle*) Do not assume every object is a server @ 2017-01-01T17:37:57Z
  - 13f0b80 Merge pull request #38501 from mvdwalle/fix-gogrid-list-password
  - bd7dee9 Do not assume every object is a server
- **PR #38461:** (*anlutro*) Improvements/fixes to kapacitor task change detection @ 2016-12-29T17:08:47Z
  - aa0c843 Merge pull request #38461 from alprs/fix-kapacitor\_changes
  - 52721e9 clean up and fix tests
  - 8648775 if task is not defined, it's not up to date
  - c3ab954 improvements/fixes to kapacitor task change detection
- **PR #38473:** (*twangboy*) Change OSX/OS X to macOS where possible @ 2016-12-29T16:35:11Z
  - 2c51eb9 Merge pull request #38473 from twangboy/osx\_to\_macos
  - e96bfe8 Change OSX/OS X to macOS where possible
- **PR #38412:** (*bbinet*) Update PillarStack stack.py to latest upstream version @ 2016-12-28T19:28:40Z
  - 2497fb5 Merge pull request #38412 from bbinet/pillarstack-updates
  - b66b4bd Fix lint violations in stack.py
  - 6a30fe6 Update PillarStack stack.py to latest upstream version
- **PR #38456:** (*twangboy*) Gate Windows Specific Salt Utils @ 2016-12-28T18:44:33Z
  - 5395d32 Merge pull request #38456 from twangboy/gate\_win\_utils
  - d34d110 Fix lint, fix boto module
  - c201111 Gate Windows Utils
- **PR #38428:** (*gqgunhed*) fixed typo: lq command-line syntax @ 2016-12-27T15:42:02Z
  - 7c77991 Merge pull request #38428 from gqgunhed/fix\_lq\_typo

- d79d682 fixed typo: lq command-line syntax
- **PR #38444:** (*loregordon*) Adds new import required for `extract_hash` @ 2016-12-27T15:37:20Z
  - **ISSUE #38443:** (*loregordon*) 2016.11 breaks `file.managed` on Windows | refs: #38444
  - **ISSUE #34101:** (*windoverwater*) `archive.extracted` breakage due to 2016.3.0 upgrade from 2015.8.10 | refs: #37368
  - **PR #37368:** (*terminalmage*) Overhaul `archive.extracted` state | refs: #38444
  - f5984d0 Merge pull request #38444 from lorengordon/issue-38443
  - b2925ad Adds new import required for `extract_hash`
- **PR #38167:** (*cachedout*) Kill `pkg_resources` for CLI tools [DO NOT MERGE] @ 2016-12-22T22:11:22Z
  - **ISSUE #38071:** (*luochun-95*) `remote.execute` is very slow | refs: #38167
  - 4c4f07c Merge pull request #38167 from cachedout/no\_pkg\_resources
  - ec69017 Remove debugging
  - f28e33b Remove from all but salt cli
  - bb3af72 Remove from salt-call
  - c676846 Kill `pkg_resources` for CLI tools
- **PR #38417:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2016-12-22T19:00:44Z
  - **ISSUE #38372:** (*fanirama*) Issue with `cron.file`. Source: `salt://path/to/crontab_file` not found | refs: #38398
  - **PR #38407:** (*terminalmage*) Improve pillar documentation
  - **PR #38398:** (*terminalmage*) Fix call to `file.get_managed` in `cron.file` state
  - **PR #38390:** (*meaksh*) Add `try-restart` to fix autorestarting on SUSE systems
  - **PR #38382:** (*heewa*) Fix `http.query` when result has no text
  - **PR #38221:** (*UtahDave*) Fix default returner
  - 2fc8c15 Merge pull request #38417 from rallytime/merge-2016.11
  - efb8a8d Merge branch '2016.3' into '2016.11'
  - 2725352 Improve pillar documentation (#38407)
  - 423b1fd Merge pull request #38398 from terminalmage/issue38372
    - \* c80dbaa Fix call to `file.get_managed` in `cron.file` state
  - 5a33d1e Fix `http.query` when result has no text (#38382)
  - b74b5c7 Merge pull request #38390 from meaksh/2016.3-fix-try-restart-for-autorestarting-on-SUSE-systems
    - \* de6ec05 add `try-restart` to fix autorestarting on SUSE systems
  - 2c3a397 Merge pull request #38221 from UtahDave/fix\_default\_returner
    - \* 3856407 remove a blank line to satisfy linter
    - \* 9c248aa validate return opt, remove default.
    - \* 8bb37f9 specify allowed types and default for `returner`
    - \* 11863a4 add examples of default minion returners

\* e7c6012 add support for default returners using *return*

- **PR #38342:** (*scthi*) Bugfix ext pillar nodegroups @ 2016-12-22T16:47:42Z
  - bbc149c Merge pull request #38342 from scthi/bugfix-ext-pillar-nodegroups
  - dba315c ext-pillar nodegroups works for all minions now.
- **PR #38403:** (*terminalmage*) git\_pillar: Document the transition from env to saltenv in the jinja context @ 2016-12-22T16:34:48Z
  - 453476d Merge pull request #38403 from terminalmage/document-saltenv
  - 0a72e0f git\_pillar: Document the transition from env to saltenv in the jinja context
- **PR #38354:** (*gmacon*) Use --all when calling pip.py @ 2016-12-20T20:40:21Z
  - **ISSUE #38253:** (*gmacon*) There was no error installing package `setuptools` although it does not show when calling `pip.freeze`. | refs: #38354
  - 12436ef Merge pull request #38354 from gmacon/pip-freeze-all
  - dca24b2 Use --all when calling pip.py
- **PR #38348:** (*rallytime*) Update autodoc topics for new modules added in 2016.11 @ 2016-12-20T20:36:20Z
  - 68430b1 Merge pull request #38348 from rallytime/mod-docs-2016.11
  - b31c241 Add `__iter__` and next options to doc/conf.py
  - b8c1609 Revert ``Move import/error messaging logic for snapper module into `__virtual__()```
  - 640db5b Move import/error messaging logic for snapper module into `__virtual__()`
  - 366271f Add snapper to state index doc module list
  - 135d254 Remove netapi autodoc files: they should not be added as their doc structure is different
  - 0006139 Update autodoc topics for new modules added in 2016.11
- **PR #38377:** (*DmitryKuzmenko*) Implementation and docs for Consul key-value store plugin for minion data cache. @ 2016-12-20T20:36:02Z
  - 6ee7b2b Merge pull request #38377 from DSRCorporation/features/consul\_cache
  - 6fb4430 Configuration options and documentation for Consul data cache plugin.
  - dad748f Data cache plugin configuration documentation.
  - c7209cd Consul data cache plugin.
- **PR #38373:** (*rallytime*) Back-port #38212 to 2016.11 @ 2016-12-20T20:35:09Z
  - **PR #38212:** (*disaster123*) ZMQ: add an option for zmq.BACKLOG to salt master (zmq\_backlog) | refs: #38373
  - f6d1b55 Merge pull request #38373 from rallytime/bp-38212
  - 52fc6da ZMQ: add an option for zmq.BACKLOG to salt master (zmq\_backlog)
- **PR #38374:** (*mirceaulinic*) NAPALM proxy module: Fix optional\_args key issue @ 2016-12-20T20:34:59Z
  - 69c3f19 Merge pull request #38374 from cloudflare/FIX-NAPALM-PROXY
  - 4416931 Fix optional\_args key issue
- **PR #38073:** (*ezh*) 2016.11 @ 2016-12-20T14:51:11Z
  - **ISSUE #38048:** (*ezh*) [2016.11.0] Salt-cloud throws TypeError exception | refs: #38073

- 530f495 Merge pull request #38073 from doublescoring/2016.11
- 42d3d26 [38073] Fix test assertion
- 9b37ead Fix broken os.write without string.encode
- **PR #38344:** (*bbinet*) Fix influxdb\_database.present state @ 2016-12-20T13:57:45Z
  - 67908d5 Merge pull request #38344 from bbinet/fix-influx-createdb
  - c6b075d Fix influxdb\_database.present state
- **PR #38358:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2016-12-20T00:11:48Z
  - **ISSUE #12788:** (*whiteinge*) Comb through docs to replace :doc: roles with :ref: | refs: #38320
  - **PR #38320:** (*rallytime*) Cleanup doc internal markup references
  - **PR #38312:** (*cro*) Backport feature allowing proxy config to live in pillar OR /etc/salt/proxy
  - **PR #38288:** (*terminalmage*) archive.extracted: don't try to cache local sources (2016.3 branch)
  - 04d6898 Merge pull request #38358 from rallytime/merge-2016.11
  - c6e191a Remove doc markup references from 2016.11 branch
  - 5130589 Merge branch `2016.3' into `2016.11'
  - 09d9cff Merge pull request #38288 from terminalmage/archive-extracted-local-source-2016.3
    - \* 845e3d0 Update tests to reflect change in cache behavior
    - \* 5a08d7c archive.extracted: don't try to cache local sources (2016.3 branch)
  - bf37667 Merge pull request #38312 from cro/proxy\_config\_in\_cfg
    - \* 2006c40 Typo
    - \* 689d95b Backport feature allowing proxy config to live in pillar OR /etc/salt/proxy.
  - c83db5a Merge pull request #38320 from rallytime/cleanup-doc-refs
    - \* 62978cb Don't check the doc/conf.py file for doc markup refs
    - \* 770e732 Add a unit test to search for new doc markup refs
    - \* 5c42a36 Remove ":doc:" references from all doc/topics/installation/\* files
    - \* 23bce1c Remove ":doc:" references from all doc/topics/releases/\* files
    - \* 4aafa41 Remove ":doc:" references from a bunch of doc/\* files
    - \* 02bfe79 Remove more ":doc:" references from doc/\* files
    - \* 6e32267 Remove ":doc:" references in salt/\* files
- 79231a5 archive.extracted: don't try to cache local sources (#38285)
  - **PR #38285:** (*terminalmage*) archive.extracted: don't try to cache local sources
- **PR #37947:** (*vutny*) Fix salt-minion initscript for RHEL5 (SysV) to pick up proper python version @ 2016-12-19T21:03:50Z
  - 1341494 Merge pull request #37947 from vutny/fix-rhel5-minion-init
  - c94e798 SysV init script for rpm: get and show unique PIDs only
  - 8ff68c4 Fix initscript for RHEL5 (SysV) to pick up proper python version
- **PR #38106:** (*techhat*) ``test" is not necessarily in opts, for thorium @ 2016-12-19T14:40:32Z

- 4d072ca Merge pull request #38106 from techhat/stateget
- 5edc16f ``test" is not necessarily in opts, for thorium
- **PR #38333:** (*amendlik*) Suppress errors when checking if an alternative exists @ 2016-12-19T13:40:49Z
  - a01fade Merge pull request #38333 from amendlik/states-alternatives
  - 8bfcd5b Adjust alternatives test for updated error message
  - 09dee3c Suppress errors when checking if an alternative exists
- **PR #38340:** (*ewapptus*) Backport PR #38251: Fixed nested orchestrate not respecting failures @ 2016-12-19T13:31:16Z
  - **PR #38251:** (*ewapptus*) Fixed nested orchestrate not respecting failures | refs: #38340
  - 15d3b47 Merge pull request #38340 from ewapptus/bp-38251
  - 266e0a4 Fixed nested orchestrate not respecting failures
- **PR #38229:** (*mcalmer*) provide kwargs of sls\_build to dockerng.create @ 2016-12-18T13:13:10Z
  - ecd441d Merge pull request #38229 from mcalmer/dockerng-sls\_build-kwargs
  - e7292fa make it explicit that we want to delete these keys
  - 4c71013 use default values for pop() to prevent KeyError raised
  - 455c183 provide kwargs to dockerng.create to provide all features to sls\_build as well
- **PR #38309:** (*ewapptus*) Backport PR #37333: Fixed state.salt.runner() reporting success on exceptions @ 2016-12-18T12:39:53Z
  - **ISSUE #36204:** (*sv852*) Salt-Cloud: salt.runners.cloud.create exits with True on Python process (ec2.py) exception | refs: #37333
  - **PR #37333:** (*benediktweiner*) Fixed state.salt.runner() reporting success on exceptions | refs: #38309
  - d2ce9c3 Merge pull request #38309 from ewapptus/bp-37333
  - a2b1259 Fixed display of errors
  - 14a39f9 Fixed state.salt.runner return value on exceptions
- **PR #38323:** (*rallytime*) Update the Cloud Provider Specifics links in cloud docs @ 2016-12-18T12:30:49Z
  - ebb9f6c Merge pull request #38323 from rallytime/update-cloud-provider-links
  - 022caf2 Update the Cloud Provider Specifics links in cloud docs
- **PR #38324:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2016-12-18T12:30:26Z
  - **ISSUE #38290:** (*dragon788*) Need to use machine automation friendly output | refs: #38313
  - **ISSUE #38174:** (*NickDubelman*) [syndic] Why can't a syndic node signal when all of it's minions have returned? | refs: #38279
  - **ISSUE #32400:** (*rallytime*) Document Default Config Values | refs: #38279
  - **PR #38313:** (*dragon788*) 2016.3 chocolatey fix
  - **PR #38281:** (*mikejford*) Add nick to args for create\_multi
  - **PR #38279:** (*rallytime*) Add docs for syndic\_wait setting
  - 5bd7471 Merge pull request #38324 from rallytime/merge-2016.11
  - 5940db5 Merge branch `2016.3' into `2016.11'

- \* 6367ca7 Add nick to args for create\_multi (#38281)
- \* 235682b Merge pull request #38313 from dragon788/2016.3-chocolatey-fix
  - 1f5fc17 Use machine readable output for list
  - cdbd2fb Added limit-output to eliminate false packages
- \* 9e78ddc Merge pull request #38279 from rallytime/fix-38174
  - 4a62d01 Add docs for syndic\_wait setting
- **PR #38325:** (*rallytime*) Back-port #38247 to 2016.11 @ 2016-12-18T12:28:41Z
  - **ISSUE #38246:** (*martintamare*) Windows Minion unable to start via nssm | refs: #38247
  - **PR #38247:** (*martintamare*) fix(win\_function): handle other language | refs: #38325
  - 83523d2 Merge pull request #38325 from rallytime/bp-38247
  - 4b6c543 fix(win\_functions): syntax
  - e602f17 fix(win\_function): handle other language
- **PR #38326:** (*yopito*) fix runit init support (grain init) in 2016.11 @ 2016-12-18T12:07:25Z
  - **ISSUE #30195:** (*Vaelatern*) Add Void Linux support in Salt | refs: #38326 #31262
  - **PR #31262:** (*Vaelatern*) Add support for Void Linux | refs: #38326
  - 54a2bb9 Merge pull request #38326 from yopito/fix-runit-init-support
  - 25b91bb fix detection of runit as init system (grain init)
- 9e35f5d Add azurearm module to doc index (#38322)
  - **PR #38322:** (*rallytime*) Add azurearm module to doc index
- **PR #38305:** (*dereckson*) Avoid normalization call for normalized mode value @ 2016-12-16T17:31:25Z
  - 1e4f299 Merge pull request #38305 from dereckson/fix-mode-extraneous-normalization
  - 573ac35 Avoid normalization call for normalized mode value
- 05e423a Improve documentation for archive.extracted in 2016.11 (#38291)
  - **PR #38291:** (*terminalmage*) Improve documentation for archive.extracted in 2016.11
- **PR #38298:** (*rallytime*) Back-port #37967 to 2016.11 @ 2016-12-16T15:20:04Z
  - **ISSUE #37966:** (*CyboLic*) salt-cloud EC2 instance can't be initiated | refs: #37967
  - **PR #37967:** (*CyboLic*) Fixed faulty logic preventing instance initialisation. | refs: #38298
  - 3cf0135 Merge pull request #38298 from rallytime/bp-37967
  - 42d367f Fixed faulty logic preventing instance initialisation.
- **PR #38076:** (*ezh*) Fix decoding of broken string from remote sources @ 2016-12-15T19:05:25Z
  - **ISSUE #38070:** (*ezh*) [2016.11.0] Salt-cloud throws UnicodeDecodeError exception | refs: #38076 #38076
  - **ISSUE #2016:** (*seanchannel*) status.custom failing on any arguments
  - f4f0036 Merge pull request #38076 from doublescoring/fix-2016.11-38070
  - 70c8db5 Fix decoding of broken string from remote sources
- **PR #38278:** (*rallytime*) Back-port #38207 to 2016.11 @ 2016-12-15T18:09:27Z

- **PR #38207:** (*tsaridas*) remove empty strings from list but not ones with one empty space char | refs: #38278
- **PR #38188:** (*tsaridas*) fix for push\_dir in different OS | refs: #38203 #38207 #38207
- 2ccab22 Merge pull request #38278 from rallytime/bp-38207
- 5e8bf57 python3 compatibility and fix pylint
- e0df047 remove empty strings from list but not ones with one empty space char
- **PR #38277:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2016-12-15T18:09:10Z
  - **PR #38256:** (*rallytime*) [2016.3] Bump latest release version to 2016.11.1
  - **PR #38254:** (*terminalmage*) Also check if pillarenv is in opts
  - **PR #38248:** (*meaksh*) Successfully exit of salt-api child processes when SIGTERM is received
  - a748e84 Merge pull request #38277 from rallytime/merge-2016.11
  - 49a3355 Merge branch `2016.3' into `2016.11'
  - fc9e1df Merge pull request #38248 from meaksh/salt-api-successfully-close-child-processes
    - \* ee6eae9 Successfully exit of salt-api child processes when SIGTERM.
  - 3c718ed Merge pull request #38254 from terminalmage/check-pillarenv
    - \* fa9ad31 Also check if pillarenv is in opts
  - 6b9060c [2016.3] Bump latest release version to 2016.11.1 (#38256)
- **PR #38232:** (*rallytime*) Strip final `e' in key cmd to correct ``deleteed'' misspelling @ 2016-12-15T10:38:49Z
  - **ISSUE #38231:** (*tjuup*) Typo: salt-key deleteed | refs: #38232
  - 0af343e Merge pull request #38232 from rallytime/fix-38231
  - 26e1ee3 Strip final `e' in key cmd to correct ``deleteed'' misspelling
- **PR #38236:** (*gtmanfred*) SELINUXTYPE should not be changed @ 2016-12-15T10:37:06Z
  - **ISSUE #38200:** (*sebw*) selinux.mode doesn't return any output and doesn't persist | refs: #38236
  - 6c1ca9d Merge pull request #38236 from gtmanfred/2016.11
  - d1b070c clean up selinux unit test
  - 96eabd4 SELINUXTYPE should not be changed
- **PR #38262:** (*terminalmage*) Fix archive.extracted when --strip or --strip-components is in the options @ 2016-12-15T08:57:18Z
  - **ISSUE #38228:** (*vquiering*) archive.extracted with options and user/group | refs: #38262
  - fd32dc3 Merge pull request #38262 from terminalmage/issue38228
  - 6442f8a Add tests for --strip/--strip-components
  - c502e68 Detect --strip/--strip-components in tar options and handle properly
  - e957705 Add strip\_components arg to archive.list
- **PR #38264:** (*mirceaulinic*) Port #37862 into 2016.11 @ 2016-12-15T08:51:20Z
  - **PR #37862:** (*mirceaulinic*) [2016.11.1] Docstring fixes and new features for napalm\_network | refs: #38264
  - b232bd8 Merge pull request #38264 from cloudflare/PORT-37862

- 28bbb73 Import from napalm\_base instead of napalm
- 0a675af Vice-versa docstring
- 09c5017 More docfix
- 215b8f3 Lint cleanup
- 56a8fa3 Add 2016.11.2 release notes (#38260)
  - PR #38260: (*rallytime*) Add 2016.11.2 release notes
- 702d462 [2016.11] Bump latest release version to 2016.11.1 (#38257)
  - PR #38257: (*rallytime*) [2016.11] Bump latest release version to 2016.11.1
- 82b1b77 Correct an inaccurate warning when top\_file\_merging\_strategy == merge\_all (#38233)
  - PR #38233: (*terminalmage*) Correct an inaccurate warning when top\_file\_merging\_strategy == merge\_all
- PR #38234: (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2016-12-13T18:28:02Z
  - PR #38224: (*whiteinge*) Allow CORS OPTIONS requests to be unauthenticated
  - PR #38223: (*whiteinge*) Add root\_dir to salt-api file paths
  - PR #38213: (*rallytime*) Skip test\_cert\_info tls unit test on pyOpenSSL upstream errors
  - PR #38198: (*vutny*) Add missing requirements for running unit tests: libcloud and boto3
  - PR #37272: (*vutny*) Get default logging level and log file from default opts dict | refs: #38223
  - ba62fcf Merge pull request #38234 from rallytime/merge-2016.11
  - 6a327d1 Merge branch `2016.3' into `2016.11'
  - 004e46a Merge pull request #38198 from vutny/unit-tests-require-libcloud-boto3
    - \* a6098ba Remove note about SaltTesting installation, now it is in the requirements
    - \* 004bff1 Add missing requirements for running unit tests: libcloud and boto3
  - 9d497bc Merge pull request #38213 from rallytime/skip-tls-test
    - \* bdb807f Skip test\_cert\_info tls unit test on pyOpenSSL upstream errors
  - 203109d Merge pull request #38224 from whiteinge/cors-options-unauthed
    - \* de4d322 Allow CORS OPTIONS requests to be unauthenticated
  - 721a5fe Merge pull request #38223 from whiteinge/salt-api-root\_dirs
    - \* bfbf390 Add root\_dir to salt-api file paths
- PR #38205: (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2016-12-12T18:13:18Z
  - ISSUE #38162: (*747project*) git\_pillar does not detect changes to remote repository when told to update | refs: #38191
  - PR #38194: (*vutny*) Document the requirements for running ZeroMQ-based integration tests
  - PR #38191: (*terminalmage*) Clarify the fact that git\_pillar.update does not fast-forward
  - PR #38185: (*rallytime*) Back-port #38181 to 2016.3
  - PR #38181: (*rallytime*) Reset socket default timeout to None (fixes daemons\_tests failures) | refs: #38185
  - 7ead1ed Merge pull request #38205 from rallytime/merge-2016.11
  - e31f97c Merge branch `2016.3' into `2016.11'

- 70f7d22 Merge pull request #38191 from terminalmage/issue38162
  - \* 1ae543a Clarify the fact that git\_pillar.update does not fast-forward
- 28171cb Merge pull request #38194 from vutny/integration-test-requirements-doc
  - \* e9f419f Document the requirements for running ZeroMQ-based integration tests
- a4ef037 Merge pull request #38185 from rallytime/bp-38181
- 609f814 Reset socket default timeout to None (fixes daemons\_tests failures)
- **PR #38203:** (*rallytime*) Back-port #38188 to 2016.11 @ 2016-12-12T17:48:51Z
  - **PR #38188:** (*tsaridas*) fix for push\_dir in different OS | refs: #38203 #38207 #38207
  - 669409d Merge pull request #38203 from rallytime/bp-38188
  - 50d3200 removing not needed join
  - 7af708e fix for push\_dir in different OS

### 20.2.10 Salt 2016.11.3 Release Notes

Version 2016.11.3 is a bugfix release for *2016.11.0*.

#### Changes for v2016.11.2..v2016.11.3

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

*Generated at: 2017-02-22T23:01:16Z*

Statistics:

- Total Merges: **139**
- Total Issue references: **78**
- Total PR references: **217**

Changes:

- **PR #39536:** (*twangboy*) Namespace `status` functions in `win\_status` @ 2017-02-21T23:45:31Z
  - **PR #39005:** (*cro*) Ungate the status.py module and raise unsupported errors in functions not executable on Windows. | refs: #39536
  - 40f72db Merge pull request #39536 from twangboy/fix\_win\_status
  - d5453e2 Remove unused import (lint)
  - 837c32e Remove list2cmdline
  - c258cb3 Streamline wmic command returns for easier parsing
  - 6d2cf81 Fix `ping\_master` function
  - d946d10 Namespace `status` functions in `win\_status`
- **PR #39534:** (*rallytime*) Fix breakage in aptpkg and dpkg execution modules @ 2017-02-21T20:31:15Z
  - **PR #39418:** (*anlutro*) Allow aptpkg.info\_installed on package names that aren't installed | refs: #39534
  - dc8f578 Merge pull request #39534 from rallytime/fix-pkg-function-specs
  - d34a8fe Fix breakage in aptpkg and dpkg execution modules

- 1d0d7b2 Upgrade SaltTesting to run test suite for 2016.11 and add SaltPyLint (#39521)
  - **ISSUE #34712:** (*richardscollin*) Salt Test Suite Error - develop | refs: #37366
  - **PR #39521:** (*vutny*) Upgrade SaltTesting to run test suite for 2016.11 and add SaltPyLint
  - **PR #37366:** (*eradman*) dev\_python\*.txt: use current SaltTesting and SaltPyLint modules | refs: #39521
- **PR #39370:** (*twangboy*) Gate win\_osinfo and winservice @ 2017-02-17T23:53:58Z
  - e4c7168 Merge pull request #39370 from twangboy/gate\_win\_utils
  - 167cdb3 Gate windows specific imports, add \_\_virtual\_\_
  - e67387d Add option to return a Non instantiated class
  - 315b0cc Clarify return value for win\_osinfo
  - 994314e Fix more docs
  - 2bbe3cb Fix some docs
  - 4103563 Merge branch 'gate\_win\_utils' of <https://github.com/twangboy/salt> into gate\_win\_utils
    - \* 24c1bd0 Remove extra newlines
  - 82a86ce Add helper function for winservice
  - 0051b5a Put the win\_osinfo classes in a helper function
  - 4e08534 Gate win\_osinfo and winservice better
- **PR #39486:** (*twangboy*) Remove orphaned function list\_configurable\_policies @ 2017-02-17T22:21:50Z
  - a3e71b6 Merge pull request #39486 from twangboy/win\_remove\_orphaned
  - 1328055 Remove orphaned function list\_configurable\_policies
- **PR #39418:** (*anlutro*) Allow aptpkg.info\_installed on package names that aren't installed | refs: #39534 @ 2017-02-17T18:34:19Z
  - 87b269f Merge pull request #39418 from alprs/fix-aptpkg\_info\_nonexistent\_pkg
  - 246bf1e add failhard argument to various apt pkg functions
- **PR #39438:** (*mirceaulinic*) file.get\_managed: refetch source when file hashsum is changed @ 2017-02-17T17:58:29Z
  - e816d6c Merge pull request #39438 from cloudflare/fix\_39422
  - 8453800 file.get\_managed: refetch cached file when hashsum chnaged
- **PR #39432:** (*dmaziuk*) Quick and dirty fix for GECOS fields with more than 3 commas @ 2017-02-17T17:57:30Z
  - **ISSUE #39203:** (*dmaziuk*) salt.users gecoss field | refs: #39432 #39432
  - a5fe8f0 Merge pull request #39432 from dmaziuk/issue39203
  - 41c0463 Remove #
  - 4f877c6 Quick and dirty fix for GECOS fields with more than 3 commas
- **PR #39484:** (*corywright*) The Reactor docs should use pillar='{}' instead of `pillar={}` @ 2017-02-17T17:50:57Z
  - 3665229 Merge pull request #39484 from corywright/fix-reactor-docs-pillar-keyword-args
  - cc90d0d The Reactor docs should use pillar='{}' instead of `pillar={}`
- **PR #39456:** (*twangboy*) Add salt icon to buildenv directory @ 2017-02-16T22:47:58Z
  - 2e3a9c5 Merge pull request #39456 from twangboy/win\_fix\_icon

- 8dd915d Add salt icon to buildenv directory
- **PR #39462:** (*twangboy*) Use url\_path instead of url\_data.path @ 2017-02-16T22:44:18Z
  - 63adc03 Merge pull request #39462 from twangboy/win\_fix\_fileclient
  - a96bc13 Use url\_path instead of url\_data.path
- **PR #39458:** (*rallytime*) Fix more warnings in doc build @ 2017-02-16T21:45:52Z
  - e9b034f Merge pull request #39458 from rallytime/fixup-more-doc-build-warnings
  - e698bc3 Fix more warnings in doc build
- **PR #39437:** (*sakateka*) Fixes about saltfile @ 2017-02-16T20:32:15Z
  - e4f8c2b Merge pull request #39437 from sakateka/fixes\_about\_saltfile
  - ab68524 less pylint: salt/utills/parsers.py
  - 9e7d9dc Revert ``pylint: salt/utills/parsers.py``
  - f3f129c document ~/.salt/Saltfile
  - 33f3614 pylint: salt/utills/parsers.py
  - 0f36e10 expand config\_dir and `~/.salt/Saltfile` as last resort
- 1acf00d add 2016.11.3 changelog to release notes (#39451)
  - **PR #39451:** (*Ch3LL*) add 2016.11.3 changelog to release notes
- **PR #39448:** (*gtmanfred*) Add release notes for cisco proxy minions added in Carbon @ 2017-02-16T17:29:48Z
  - **ISSUE #38032:** (*meggiebot*) Add missing Carbon docs | refs: #39448
  - 8e2cbd2 Merge pull request #39448 from gtmanfred/2016.11
  - 3172e88 Add release notes for cisco proxy minions added in Carbon
- **PR #39428:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-02-16T00:01:15Z
  - **PR #39409:** (*terminalmage*) salt.filesserver.roots: Fix regression in symlink\_list
  - **PR #39400:** (*meaksh*) Prevents `OSError` exception in case certain job cache path doesn't exist
  - **PR #39380:** (*joe-niland*) Quote numeric user names so pwd.getpwnam handles them properly
  - **PR #39362:** (*dincamihai*) Add cp.push test
  - **PR #39339:** (*cro*) Add link to external pillar documentation for clarification.
  - **PR #39337:** (*terminalmage*) Don't re-walk the roots filesserver in symlink\_list() | refs: #39409
  - **PR #39316:** (*terminalmage*) Document the upstream RedHat bug with their pygit2 package
  - **PR #39300:** (*terminalmage*) Replace more usage of str.format in the loader
  - **PR #39227:** (*terminalmage*) Loader optimization | refs: #39300
  - 070904b Merge pull request #39428 from rallytime/merge-2016.11
  - 2acb188 Change path value from a tuple to a list
  - 6d78adb Merge branch `2016.3` into `2016.11`
    - \* 4ff13ac salt.filesserver.roots: Fix regression in symlink\_list (#39409)
    - \* 8b8ab8e Merge pull request #39362 from dincamihai/cp-push-test-2016.3
      - 91383c5 Add cp.push test

- \* 4b726f9 Merge pull request [#39380](#) from joe-niland/quote-numeric-usernames
  - c2edfdd Quote numeric user names so pwd.getpwnam handles them properly
- \* 1116d32 Merge pull request [#39400](#) from meaksh/2016.3-fix-local-cache-issue
  - e7e559e Prevents `OSError` exception in case path doesn't exist
- \* 6c854da Merge pull request [#39300](#) from terminalmage/loader-optimization
  - d3e5d15 Replace more usage of str.format in the loader
- \* 5286b5f Merge pull request [#39337](#) from terminalmage/issue34428
  - a7d2135 Don't re-walk the roots fileservers in symlink\_list()
- \* ce781de Merge pull request [#39339](#) from cro/pillar\_filetree\_doc
  - 410810c Clarification on external pillar usage.
- \* fa30143 Document the upstream RedHat bug with their pygit2 package ([#39316](#))
- **PR [#39429](#)**: (*rallytime*) Back-port [#39364](#) to 2016.11 @ 2017-02-15T21:27:21Z
  - **ISSUE [#39360](#)**: (*bbinet*) file.symlink should not try to set ownership to root:root | refs: [#39364](#)
  - **PR [#39364](#)**: (*gtmanfred*) set default user variable to the user cmd runs as | refs: [#39429](#)
  - 54a572e Merge pull request [#39429](#) from rallytime/bp-39364
  - 157f4dc set default user variable to the user cmd runs as
- **PR [#39424](#)**: (*twangboy*) Fix problem with too many connection attempts in Windows @ 2017-02-15T18:51:35Z
  - 881ebf2 Merge pull request [#39424](#) from twangboy/win\_fix\_dos
  - d3f7dd7 Add sleep to eval\_master
- **PR [#39419](#)**: (*The-Loeki*) Backport Salt-SSH IPv6 fixes to 2016.11 @ 2017-02-15T17:33:13Z
  - **ISSUE [#30561](#)**: (*jfindlay*) salt-ssh fails with IPv6 address | refs: [#39419](#) [#38831](#)
  - **ISSUE [#22984](#)**: (*tomasfejfar*) salt-ssh problem possibly related to ipv6 | refs: [#39419](#) [#38831](#)
  - **PR [#38877](#)**: (*The-Loeki*) Salt-SSH client: Don't overwrite self.host w/IPv6 brackets | refs: [#39419](#) [#39419](#)
  - **PR [#38831](#)**: (*The-Loeki*) Salt-SSH deal with raw IPv6 addresses | refs: [#39419](#) [#39419](#) [#38877](#)
  - 4787235 Merge pull request [#39419](#) from The-Loeki/bp-ssh-ipv6
  - 4fc5626 Don't overwrite self.host w/IPv6 brackets
  - dd12234 Salt-SSH deal with raw IPv6 addresses
- **PR [#39379](#)**: (*terminalmage*) win\_pkg: remove all installed versions when no explicit version passed @ 2017-02-14T18:41:28Z
  - 878946d Merge pull request [#39379](#) from terminalmage/issue34821
  - fd9ab8e Remove extra newline
  - 5871825 win\_pkg: remove all installed versions when no explicit version passed
- **PR [#39392](#)**: (*anlutro*) Make sure OrderedDict order is preserved in nested output @ 2017-02-14T17:50:15Z
  - caffef8 Merge pull request [#39392](#) from alprs/fix-nested\_output\_ordered\_dict
  - 625a770 make sure OrderedDict order is preserved in output
- **PR [#39378](#)**: (*dmurphy18*) Update make\_repo in debbuild.py execution module to utilize timeout @ 2017-02-14T17:10:15Z

- f2459e3 Merge pull request #39378 from dmurphy18/deb\_pkg\_fix
- 4bd47cc Updated all make\_repo loops to use timeout value for retries
- **PR #39369:** (*rallytime*) Back-port #37338 to 2016.11 @ 2017-02-13T21:41:19Z
  - **ISSUE #39358:** (*Kimamisa*) Backport the RDS fix in Carbon | refs: #39369
  - **PR #37338:** (*bailsman*) Fix wait\_status in boto\_rds.create() | refs: #39369
  - 99554d9 Merge pull request #39369 from rallytime/bp-37338
  - 2e7f6e8 Fix wait\_status in boto\_rds.create()
- **PR #39303:** (*kstreee*) Removes a redundant test case after removed `batch` in `netapi`. @ 2017-02-13T19:55:46Z
  - 03ab8b1 Merge pull request #39303 from kstreee/fix-testcase-rm-batch-in-netapi
  - 51972d0 Removes a redundant test case after removed `batch` in `netapi`.
- **PR #39315:** (*Ch3LL*) improve salt-run salt.cmd test @ 2017-02-13T19:00:14Z
  - 60640f7 Merge pull request #39315 from Ch3LL/fix\_run\_salt\_test
  - b3cbc5a improve salt-run salt.cmd test
- **PR #39311:** (*morganwillcock*) win\_system: return False from a skipped reboot @ 2017-02-13T18:59:11Z
  - **ISSUE #39243:** (*morganwillcock*) win\_system.reboot: can return True without rebooting | refs: #39311
  - 2ca63a9 Merge pull request #39311 from morganwillcock/skip-reboot
  - 0f3abb6 Clarify success for shutdown function
  - dcb4d05 win\_system: return False from a skipped reboot
- **PR #39346:** (*joe-niland*) Ignore non-HTTP IIS bindings @ 2017-02-13T18:18:36Z
  - 082105f Merge pull request #39346 from joe-niland/handle-iis-bindings
  - 8d5afdb win\_iis module: list\_sites - when retrieving bindings, ignore bindigs whose protocols do not have host headers
- **PR #39361:** (*gtmanfred*) make sure both variables are strings. @ 2017-02-13T17:20:17Z
  - **ISSUE #39321:** (*mgresser*) Grain matching failing where grain value is an INT | refs: #39361
  - a3a9a8e Merge pull request #39361 from gtmanfred/2016.11
  - ee2275a make sure both variables are strings.
- 2021f5b Add creation/configuration of Salt PKI dirs to hacking docs (#39341)
  - **PR #39341:** (*eliasp*) Add creation/configuration of Salt PKI dirs to hacking docs
- **PR #39317:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-02-10T23:07:32Z
  - **ISSUE #39220:** (*lvg01*) state file.line skips leading spaces in content with mode:ensure and indent:False | refs: #39221 #39221 #39221 #39221
  - **ISSUE #38595:** (*yue9944882*) Redis ext job cache occurred error | refs: #38610 #38610
  - **ISSUE #36913:** (*terminalmage*) Support custom refsspecs in GitFS | refs: #39210
  - **PR #39313:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
  - **PR #39299:** (*rallytime*) Back-port #38610 to 2016.3
  - **PR #39297:** (*cro*) Add doc to recommend pgjsonb for master job caches
  - **PR #39296:** (*sergeizv*) Whitespace fix in docs Makefile

- **PR #39295:** (*sergeizv*) Fix typo
- **PR #39294:** (*sergeizv*) Fix link in proxyminion guide
- **PR #39293:** (*sergeizv*) Grammar fix
- **PR #39286:** (*terminalmage*) Allow minion/CLI saltenv/pillarenv to override master when compiling pillar
- **PR #39280:** (*terminalmage*) Add warning for Dulwich removal
- **PR #39221:** (*lvg01*) Fix bug 39220
- **PR #39210:** (*terminalmage*) salt.utils.gitfs: remove dulwich support, make refsspecs configurable | refs: #39280
- **PR #38610:** (*yue9944882*) Fix #38595 - Unexpected error log from redis retuner in master's log | refs: #39299
- ce1f01f Merge pull request #39317 from rallytime/merge-2016.11
- c1df446 Merge branch `2016.3' into `2016.11'
- 9de559f Merge pull request #39313 from rallytime/merge-2016.3
  - \* 0b8dddf Merge branch `2015.8' into `2016.3'
  - \* fc551bc Merge pull request #39293 from sergeizv/grammar-fix
    - 70f2b58 Rewrap paragraph
    - e6ab517 Grammar fix
  - \* 8a1b456 Merge pull request #39295 from sergeizv/typo-fix
    - 5d9f36d Fix typo
  - \* cfaafec Merge pull request #39296 from sergeizv/whitespace-fix
    - 1d4c1dc Whitespace fix in docs Makefile
  - \* 0b4dcf4 Merge pull request #39294 from sergeizv/fix-link
    - 04bde6e Fix link in proxyminion guide
- dd3ca0e Fix #38595 - Unexpected error log from redis retuner in master's log (#39299)
- f16027d Merge pull request #39297 from cro/pg\_returner\_docs
  - \* 28bac64 Typo
  - \* 19fedcd Add doc to recommend pgjsonb for master job caches
- 77e50ed Merge pull request #39286 from terminalmage/fix-pillarenv-precedence
  - \* 3cb9833 Allow minion/CLI saltenv/pillarenv to override master when compiling pillar
- 5244041 Merge pull request #39221 from lvg01/fix-bug-39220
  - \* e8a41d6 Removes to early content stripping (stripping is already done when needed with ident:true), fixes #39220
  - \* a4b169e Fixed wrong logic, fixes #39220
- 5a27207 Add warning for Dulwich removal (#39280)
- **PR #38464:** (*ezh*) [38451] Fix file.replace 2016.11 @ 2017-02-09T23:07:49Z
  - **ISSUE #38451:** (*ezh*) 2016.11 file.replace has multiple errors under python 3 | refs: #38464
  - **ISSUE #2016:** (*seanchannel*) status.custom failing on any arguments

- c3c621a Merge pull request #38464 from doublescoring/fix-2016.11-38451
- 81f0337 [38451] Fix few bugs after review
- 1bdab25 [38451] Fix pylint W1699(incompatible-py3-code)
- 3bfc654 [38451] Fix file.replace to make it suitable to python 3
- **PR #39291:** (*terminalmage*) Add note about using saltenv jinja var in pillar top files @ 2017-02-09T21:43:50Z
  - 6365211 Merge pull request #39291 from terminalmage/pillar-docs
  - fbd551e Add note about using saltenv jinja var in pillar top files
- **PR #39281:** (*twangboy*) Require VCRedist on 2008R2 and below instead of 2008 @ 2017-02-09T17:59:57Z
  - a496ec2 Merge pull request #39281 from twangboy/win\_installer
  - ef50787 Capitalize the `r` for 2008R2
  - 1b6bd63 Require VCRedist on 2008R2 and below instead of 2008
- **PR #39264:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-02-09T17:10:14Z
  - **ISSUE #38856:** (*fhaynes*) salt-cloud throws an exception when ec2 does not return encoding | refs: #39228
  - **ISSUE #38697:** (*fboismenu*) On Windows, ip.get\_all\_interfaces returns at most 2 DNS/WINS Servers | refs: #38793
  - **ISSUE #37174:** (*mikeadamz*) The State execution failed to record the order in which all states were executed spam while running pkg.upgrade from orchestration runner | refs: #39206
  - **ISSUE #33536:** (*murzick*) pkgrepo.managed does not disable a yum repo with ``disabled: True" | refs: #35055
  - **ISSUE #33187:** (*usbportnoy*) Deploy to jboss TypeError at boss7.py:469 | refs: #39170
  - **PR #39260:** (*terminalmage*) Update jsonschema tests to reflect change in jsonschema 2.6.0
  - **PR #39251:** (*terminalmage*) Better handling of enabled/disabled arguments in pkgrepo.managed
  - **PR #39232:** (*terminalmage*) Avoid recursion in s3/svn ext\_pillars
  - **PR #39231:** (*terminalmage*) Add clarification for jenkins execution module
  - **PR #39230:** (*rallytime*) Fix the win\_ip\_test failures
  - **PR #39228:** (*gtmanfred*) default to utf8 encoding if not specified
  - **PR #39227:** (*terminalmage*) Loader optimization | refs: #39300
  - **PR #39209:** (*terminalmage*) Sort the return list from the fileserver.envs runner
  - **PR #39206:** (*cachedout*) Ignore empty dicts in highstate outputter
  - **PR #39202:** (*rallytime*) [2016.3] Pylint fix
  - **PR #39199:** (*rallytime*) Back-port #39170 to 2016.3
  - **PR #39197:** (*cachedout*) Pr 38793
  - **PR #39170:** (*grep4linux*) Added missing source\_hash\_name argument in get\_managed function | refs: #39199
  - **PR #38793:** (*fboismenu*) Fix for #38697 | refs: #39197 #39230
  - **PR #35055:** (*galet*) #33536 pkgrepo.managed does not disable a yum repo with ``disabled: True" | refs: #39251

- db6140a Merge pull request #39264 from rallytime/merge-2016.11
- a9c2c10 Pylint fix
- f6aad99 Merge branch `2016.3' into `2016.11'
  - \* 1b9217d Update jsonschema tests to reflect change in jsonschema 2.6.0 (#39260)
  - \* c1d16cc Better handling of enabled/disabled arguments in pkgrepo.managed (#39251)
  - \* 8e88f71 Merge pull request #39227 from terminalmage/loader-optimization
    - c750662 Loader optimization
  - \* bc89b29 Merge pull request #39228 from gtmanfred/2016.3
    - afee047 default to utf8 encoding if not specified
  - \* d9b0671 Merge pull request #39231 from terminalmage/clarify-jenkins-depends
    - ad1b125 Add clarification for jenkins execution module
  - \* ddcff89 Merge pull request #39232 from terminalmage/issue21342
    - c88896c Avoid recursion in s3/svn ext\_pillars
  - \* ef4e437 Fix the win\_ip\_test failures (#39230)
  - \* df5f934 Merge pull request #39199 from rallytime/bp-39170
    - c129905 Added missing source\_hash\_name argument in get\_managed function Additional fix to #33187 Customer was still seeing errors, this should now work. Tested with 2015.8.13 and 2016.11.2
  - \* 2621c11 Merge pull request #39206 from cachedout/issue\_issue\_37174
    - be31e05 Ignore empty dicts in highstate outputter
  - \* dd44045 Merge pull request #39209 from terminalmage/sorted-envs
    - e6dda4a Sort the return list from the filesrvr.envs runner
  - \* 7bed687 [2016.3] Pylint fix (#39202)
  - \* ab76054 Merge pull request #39197 from cachedout/pr-38793
    - f3d35fb Lint fixes
    - 624f25b Fix for #38697
- **PR #39276:** (*gtmanfred*) `_device_mismatch_ignored` will never be True @ 2017-02-09T17:05:28Z
  - **ISSUE #39269:** (*alexharrington*) Remount forced with lizardfs fuse filesystem due to device mismatch | refs: #39276
  - **ISSUE #39106:** (*carsten-AEI*) CVMFS fuse mount gets remounted every time | refs: #39276
  - 304eb19 Merge pull request #39276 from gtmanfred/2016.11
  - 6635a9f `_device_mismatch_ignored` will never be True
- **PR #39238:** (*dmurphy18*) Update disk fstype, inodeusage, percent and mount.active functions for AIX support @ 2017-02-08T21:53:32Z
  - 7611698 Merge pull request #39238 from dmurphy18/fix\_aix\_disk\_mount
  - a8a519c Removed space for pylint
  - 8fa0ffa Updates due to code review comments

- 97c59a8 Updated mount functionality for active on AIX
- 1a32b2c Updated disk functionality for fstype, inodeusage and percent on AIX
- **PR #39233:** (*rallytime*) Various doc updates to fix warnings in doc build @ 2017-02-08T19:29:53Z
  - 99bfa7d Merge pull request #39233 from rallytime/fixup-more-doc-build-warnings
  - 2f74dcf Various doc updates to fix warnings in doc build
- **PR #39237:** (*axmetishe*) fix rds subnet group creation @ 2017-02-08T19:04:31Z
  - 59e927b Merge pull request #39237 from axmetishe/2016.11
  - 6f4be8b fix rds subnet group creation
- 84ff638 [2016.11] Merge forward from 2016.3 to 2016.11 (#39234)
  - **PR #39234:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11
- fd3284f Put legacy git\_pillar on a deprecation path for Oxygen (#39225)
  - **PR #39225:** (*terminalmage*) Put legacy git\_pillar on a deprecation path for Oxygen
- **PR #39180:** (*morganwillcock*) setup.py: Remove global options from install command @ 2017-02-07T16:20:49Z
  - **ISSUE #39078:** (*morganwillcock*) setup.py: cannot install without setting global options | refs: #39180
  - 19c3d90 Merge pull request #39180 from morganwillcock/setup
  - d7e0509 Remove global options from Install
- **PR #38863:** (*hujunya*) fix django auth not work @ 2017-02-07T15:43:00Z
  - a0907bc Merge pull request #38863 from hujunya/fix\_django\_auth
  - 2a99ff4 check if django\_auth\_path has been in sys.path
  - 933ebf1 fix pylint violations
  - 6b5a7f4 fix django auth not work
- **PR #39198:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-02-06T21:01:56Z
  - **PR #39173:** (*rallytime*) Restore ``Salt Community" doc section
  - **PR #39166:** (*Ch3LL*) fix boto ec2 module create\_image doc
  - **PR #30770:** (*jacobhammons*) Doc restructuring, organization, and cleanup | refs: #39173
  - **PR #10792:** (*cachedout*) Documentation overhaul | refs: #39173
  - c3e541e Merge pull request #39198 from rallytime/merge-2016.11
  - 7ea5f7f Merge branch `2016.3' into `2016.11'
    - \* fa45cbc Merge pull request #39166 from Ch3LL/fix\_boto\_ec2\_docs
      - 90af696 fix boto ec2 module create\_image doc
    - \* a40cb46 Merge pull request #39173 from rallytime/restore-community-docs
      - 5aedd4 Restore ``Salt Community" doc section
- **PR #39063:** (*mirceaulinic*) Avoid KeyError: `multiprocessing' in the master logs @ 2017-02-06T19:37:35Z
  - **ISSUE #39059:** (*mirceaulinic*) KeyError: `multiprocessing' in the master logs (proxy minions) | refs: #39063
  - 2a85d73 Merge pull request #39063 from cloudflare/ISS-39059

- 7118eff Avoid KeyError: `multiprocessing`
- **PR #39083:** (*lomeroy*) Backport #36336 to 2016.11 @ 2017-02-06T18:50:52Z
  - **ISSUE #38782:** (*lomeroy*) win\_lgpo unable to find some Administrative Template policies | refs: #39083 #39090 #38783
  - **ISSUE #38761:** (*DaveOHenry*) Cannot apply state that contains lgpo.set | refs: #39083 #39088
  - **ISSUE #38689:** (*lomeroy*) win\_lgpo state fails to set single policy due to case sensitive check | refs: #39083 #39084 #38690
  - **ISSUE #38100:** (*skjaro*) Problem with win\_lgpo.py in salt 2016.11.0 | refs: #38779 #39083 #39089
  - **ISSUE #21485:** (*lorenogordon*) Feature Request: Manage Windows Local Security Policy Settings | refs: #36336
  - **PR #36336:** (*lomeroy*) add additional static policies to computer configuration policy class | refs: #39083
  - 91c25bd Merge pull request #39083 from lomeroy/bp-36336
  - 03e5319 Merge branch `2016.11` into bp-36336
  - 981ec89 update command line example to correct policy name
  - e2574da Fix/Add documentation, 80 char line lengths
  - 5e94a30 add additional static policies to computer configuration policy class duplicate code cleanup/misc code efficiencies
- **PR #39153:** (*nicholasmhughes*) Fix selinux.mode state config file handling @ 2017-02-06T18:37:34Z
  - 3045507 Merge pull request #39153 from nicholasmhughes/fix-selinux.mode-config-predictability
  - 8d8ba9c added the new getconfig function to the test
  - a6a24e1 Addressed edge case when attempting to set the config file to `Disabled`. The state should only check the file, since the in-memory setting won't disappear until after reboot.
  - 6858658 The selinux.mode state only checked the current status of SELinux in memory (getenforce) when determining if changes needed to be made. The /etc/selinux/config file could have a different value, and it would not be changed. This commit enhances idempotency of the state in regards to both the in-memory and configuration file enforcement of SELinux.
- **PR #39159:** (*clinta*) Csr crl passphrase @ 2017-02-06T18:36:05Z
  - **ISSUE #38081:** (*haraldrudell*) x509 state or module cannot generate password protected private keys | refs: #39159
  - 7b5eb17 Merge pull request #39159 from clinta/csr-crl-passphrase
  - cf548ac Remove unnecessary pass
  - 4ebf7a3 Remove unnecessary pass statement
  - 6a80469 fix csr bugs and pep8
  - 36dcf5f only overwrite if overwrite option is specified
  - 403000d recreate cert on bad password
  - 6497094 passphrase for crl
  - 3ef809f passphrase for csr
- **PR #39162:** (*meaksh*) Adding more function to Snapper module @ 2017-02-06T18:33:53Z
  - b240468 Merge pull request #39162 from meaksh/snapper-module-improvements

- f950732 pylint fixes
- aa2f990 Removing extra spaces
- 9d6a33f Adds `snapper.create\_config` unit tests
- d38ed50 Adds `snapper.modify\_snapshots` unit tests
- d5496cc Adds `snapper.delete\_snapshots` unit tests
- 3eecb60 Snapper: Adding support for creating configurations
- 041e54d Snapper: Adding support for snapshot metadata modification
- eaf5de9 Snapper: Adding support for deleting snapshots
- **PR #39171:** (*techhat*) Raise an error for a disk size that is too small @ 2017-02-06T18:19:46Z
  - **ISSUE #38370:** (*tjyang*) Salt-Cloud: There was a query error: Required field ``deviceChange" not provided (not @optional) | refs: #39171
  - 6f9251e Merge pull request #39171 from techhat/issue38370
  - ec57a39 Typo
  - 2ed2932 Clean up debug logs
  - 6712826 Raise an error for a disk size that is too small
- **PR #39179:** (*mcalker*) fix error parsing @ 2017-02-06T17:57:00Z
  - 036f36d Merge pull request #39179 from mcalker/fix-dockereng-error-parsing
  - 6750ccd fix error parsing
- **PR #39189:** (*morganwillcock*) Fix NetBSD sockstat parsing @ 2017-02-06T17:28:08Z
  - 30f8315 Merge pull request #39189 from morganwillcock/sockstat
  - 344d13e Fix NetBSD sockstat example
  - 64b6931 Fix NetBSD sockstat parsing
- **PR #39141:** (*UtahDave*) Don't overwrite the minion\_ids var that was passed @ 2017-02-03T20:56:25Z
  - **ISSUE #38003:** (*morganwillcock*) salt.runners.cache functions seem to ignore minion targeting parameter | refs: #39141 #39141
  - 6a97041 Merge pull request #39141 from UtahDave/fix\_cache\_lookup\_ZD1187
  - 0340614 return all minions' grains if no tgt
  - f833bf3 Don't overwrite the minion\_ids var that was passed
- **PR #39164:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-02-03T17:57:07Z
  - **ISSUE #39118:** (*bobrik*) Minion ipv6 option is not documented
  - **ISSUE #38704:** (*nasenbaer13*) Archive extracted fails when another state run is queued | refs: #38705
  - **ISSUE #2016:** (*seanchannel*) status.custom failing on any arguments
  - **ISSUE #3:** (*thatch45*) libvirt module
  - **ISSUE #1:** (*thatch45*) Enable regex on the salt cli
  - **PR #39146:** (*gtmanfred*) update vmware getting started doc
  - **PR #39145:** (*garethgreenaway*) [2016.3] Fix when targeting via pillar with Salt syndic
  - **PR #39131:** (*bobrik*) Clarify ipv6 option for minion and interface for master, closes #39118

- **PR #39116:** (*terminalmage*) Don't abort pillar.get with merge=True if default is None
- **PR #39077:** (*terminalmage*) Apply fix from #38705 to 2016.3 branch
- **PR #38804:** (*alexbleotu*) Second attempt to fix prepending of root\_dir to paths
- **PR #38705:** (*nasenbaer13*) Fix for #38704 archive extracted and dockerio states | refs: #39076
- d19cee7 Merge pull request #39164 from rallytime/merge-2016.11
- 6504bb6 Merge branch `2016.3' into `2016.11'
  - \* 9de08af Apply fix from #38705 to 2016.3 branch (#39077)
  - \* da3053e update vmware getting started doc (#39146)
  - \* e78ca0f Fixing a weird edge case when using salt syndics and targetting via pillar. Without this fix the master of masters ends up in an infinite loop since the data returned from the minions is differently structured than if a sync was not in use. (#39145)
  - \* cd8077a Merge pull request #38804 from alexbleotu/root\_dir\_`fix-2016`\_3-gh
    - b3bdd3b Add missing whiteline
    - c7715ac Merge pull request #3 from cro/ab\_rootdirfix
    - e8cbafa When running testsuite, salt.syspaths.ROOT\_DIR is often empty.
    - b12dd44 Merge pull request #1 from cro/ab\_rootdirfix
    - bffc537 Remove extra if statements (rstrip will check for the presence anyway).
    - 97521b3 Second attempt to fix prepending of root\_dir to paths
  - \* 6ffeda3 Clarify ipv6 option for minion and interface for master, closes #39118 (#39131)
  - \* 646b9ea Don't abort pillar.get with merge=True if default is None (#39116)
- **PR #39152:** (*twangboy*) Remove files not needed by salt-minion @ 2017-02-03T17:11:11Z
  - ed12512 Merge pull request #39152 from twangboy/win\_installer
  - 5ff8a14 Fix problem deleting files
  - 4524dd4 Remove files not needed by salt-minion
- 8c0dc91 correct issue when running get with return\_not\_configured=True (#39085)
  - **ISSUE #38691:** (*lomerioe*) win\_lgpo module throws a key error when run with return\_not\_configured=True | refs: #39085
  - **PR #39085:** (*lomerioe*) Backport #38666 to 2016.11
- 26eea61 have \_in\_range\_inclusive function attempt to convert a string to an int for the test (allow string based numbers to be verified to be in range). Specifically, this allows the CachedLogonsCount policy to be set (stored in the registry as a REG\_SZ and specified as a string number when passed to the module) (#39086)
  - **PR #39086:** (*lomerioe*) Backport #38165 to 2016.11
  - **PR #38165:** (*lomerioe*) have \_in\_range\_inclusive function attempt to convert a string to an i... | refs: #39086
- **PR #38970:** (*gtmanfred*) when using local\_cache we have to pass the list of minions @ 2017-02-02T19:24:39Z
  - **ISSUE #38241:** (*frogunder*) mine.get and salt-ssh gives error message | refs: #38970
  - 4eec641 Merge pull request #38970 from gtmanfred/2016.11
  - ebb9df3 when using local\_cache we have to pass the list of minions

- 75da6f4 Fix archive.list on Windows (#39128)
  - **ISSUE** #39110: (*morganwillcock*) archive.extracted: 2016.11.2 returns state failure for some zip formats, if already extracted | refs: #39128
  - **PR** #39128: (*terminalmage*) Fix archive.list on Windows
- f2c309a Back-port #36714 to 2016.11 (#39133)
  - **ISSUE** #36712: (*dmitrievav*) s3.put function does not create s3 bucket | refs: #36714
  - **PR** #39133: (*rallytime*) Back-port #36714 to 2016.11
  - **PR** #36714: (*dmitrievav*) s3.put can't create s3 bucket | refs: #39133
- 8b34fcd correct checking of policy\_class to compare with lower() version of the specified string (#39084)
  - **ISSUE** #38689: (*lomerioe*) win\_lgpo state fails to set single policy due to case sensitive check | refs: #39083 #39084 #38690
  - **PR** #39084: (*lomerioe*) Backport #38690 to 2016.11
  - **PR** #38690: (*lomerioe*) correct checking of policy\_class to compare with lower() version of t... | refs: #39084
- 8ce928f Backport #38779 to 2016.11 (#39089)
  - **ISSUE** #38100: (*skjaro*) Problem with win\_lgpo.py in salt 2016.11.0 | refs: #38779 #39083 #39089
  - **PR** #39089: (*lomerioe*) Backport #38779 to 2016.11
  - **PR** #38779: (*lomerioe*) win\_lgpo handle errors when `encoding="unicode"` exists in ADMX file | refs: #39089
- 8a00ecf update adml text search to use `starts-with` as some policies text has trailing spaces (#39090)
  - **ISSUE** #38782: (*lomerioe*) win\_lgpo unable to find some Administrative Template policies | refs: #39083 #39090 #38783
  - **PR** #39090: (*lomerioe*) Backport #38783 to 2016.11
  - **PR** #38783: (*lomerioe*) Perform a `starts-with` search to match ADML text names | refs: #39090
- 9dccb9f correctly handle scenario when `storeAsText` is True on a decimal/longDecimal element object (#39088)
  - **ISSUE** #38761: (*DaveOHenry*) Cannot apply state that contains lgpo.set | refs: #39083 #39088
  - **PR** #39088: (*lomerioe*) Backport #37262 to 2016.11
  - **PR** #37262: (*lomerioe*) correct issues in win\_lgpo module | refs: #39088
- **PR** #39122: (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-02-01T21:41:59Z
  - **PR** #39091: (*terminalmage*) Run test\_valid\_docs in batches
  - **PR** #39081: (*terminalmage*) Move fileclient tests to tests/integration/fileserver/fileclient\_test.py
  - **PR** #39067: (*rallytime*) Bump openstack deprecation notice to Oxygen
  - 50d72da Merge pull request #39122 from rallytime/merge-2016.11
  - a782b00 Merge branch `2016.3` into `2016.11`
  - cc9b69b Merge pull request #39091 from terminalmage/update-test-valid-docs
    - \* d76f038 add debug logging for batch vars
    - \* b4afea2 Don't fail test if data is empty

- \* b3a5d54 Account for trimmed value in `salt -d` output
- \* 909916c Run test\_valid\_docs in batches
- bcee3d1 Move fileclient tests to tests/integration/fileserver/fileclient\_test.py (#39081)
- 122422b Bump openstack deprecation notice to Oxygen (#39067)
- **PR #39087:** (*lomeroe*) Backport #37375 to 2016.11 @ 2017-02-01T19:02:58Z
  - **PR #37375:** (*lomeroe*) add updating gpt.ini file when ADM template policies are modified (gp... | refs: #39087)
  - f8a6863 Merge pull request #39087 from lomeroe/bp-37375
  - c3aaa53 \_in\_range\_inclusive class method incorrectly called isinstance
  - ce263f9 set\_computer\_policy and set\_user\_policy call ``set" by the original function name (set) instead of the aliased function name set\_
  - ff7d74b correct tool extension guid for user registry policies
  - 08f0078 spelling correction
  - 5fc4048 add updating gpt.ini file when ADM template policies are modified (gpt.ini file must exist with proper data for ADM policies to apply)
- **PR #39094:** (*rallytime*) Add a bunch of missing doc module references @ 2017-02-01T18:56:27Z
  - c4c6e70 Merge pull request #39094 from rallytime/doc-build-warnings
  - b866427 Add a bunch of missing doc module references
- **PR #39108:** (*janhorstmann*) [Bugfix] Fix state x509.crl\_managed @ 2017-02-01T18:32:43Z
  - d302bb7 Merge pull request #39108 from janhorstmann/fix-x509-state
  - 9f5c532 [Bugfix] Fix state x509.crl\_managed
- **PR #39107:** (*mirceaulinic*) Check if data['return'] is dict type @ 2017-02-01T18:21:46Z
  - **ISSUE #39100:** (*whytewolf*) salt-run fileserver.update Exception | refs: #39107
  - **ISSUE #39098:** (*dougofthemoment*) state.event runner fails with TypeError: argument of type `None-Type' is not iterable | refs: #39107
  - **ISSUE #38638:** (*mirceaulinic*) salt.cmd runner raises TypeError when function returns bool | refs: #39107
  - bf61ec9 Merge pull request #39107 from cloudflare/FIX-38638
  - 7c34815 Check if data['return'] is dict type
- cac0bec Update primary bonding option in rh\_ip.py (#39069)
  - **ISSUE #39065:** (*jak3kaj*) primary bonding option is not applied | refs: #39068 #39069
  - **PR #39069:** (*jak3kaj*) Update primary bonding option in rh\_ip.py
- a0861f0 Update primary bonding option in debian\_ip.py (#39068)
  - **ISSUE #39065:** (*jak3kaj*) primary bonding option is not applied | refs: #39068 #39069
  - **PR #39068:** (*jak3kaj*) Update primary bonding option in debian\_ip.py
- **PR #39076:** (*terminalmage*) Re-submit PR #38705 against 2016.11 branch @ 2017-01-31T20:11:55Z
  - **ISSUE #38704:** (*nasenbaer13*) Archive extracted fails when another state run is queued | refs: #38705
  - **PR #38705:** (*nasenbaer13*) Fix for #38704 archive extracted and dockerio states | refs: #39076

- 9836d7d Merge pull request #39076 from terminalmage/pr-38705
- 15db8d4 Fix for #38704 archive extracted and dockerio states
- **PR #39058:** (*sergeizv*) Fix salt.modules.linux\_lvm.fullversion @ 2017-01-31T19:01:12Z
  - **ISSUE #39057:** (*sergeizv*) modules.linux\_lvm.fullversion provides incomplete info | refs: #39058
  - 86b4b77 Merge pull request #39058 from sergeizv/fix-lvm-fullversion
  - e46c89f Fix salt.modules.linux\_lvm.fullversion
  - fb7ef99 Fix mock emulating lvm version
- **PR #39066:** (*techhat*) 127.0.0.0/8 is all loopback @ 2017-01-31T18:43:22Z
  - **ISSUE #39051:** (*afletch*) salt.roster.cache / salt.utils.cloud is\_public\_ip - incorrect public IP address | refs: #39066
  - 721b245 Merge pull request #39066 from techhat/issue39051
  - ea43bb8 127.0.0.0/8 is all loopback
- **PR #39071:** (*sergeizv*) Fix modules.linux\_lvm.pvcreate on existing LVM PVs @ 2017-01-31T18:36:54Z
  - **ISSUE #39070:** (*sergeizv*) modules.linux\_lvm.pvcreate misbehaves if all submitted devices are already LVM PVs | refs: #39071
  - c54d9f4 Merge pull request #39071 from sergeizv/fix-lvm-pvcreate
  - f1e3e86 Fix modules.linux\_lvm.pvcreate on existing LVM PVs
  - 0f84ca2 Add test for modules.linux\_lvm.pvcreate on existing LVM PVs
  - 3967992 Fix test for modules.linux\_lvm.pvcreate
- **PR #39048:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-01-31T15:55:49Z
  - **ISSUE #38753:** (*alexbleotu*) \_\_proxy\_\_ dunder is not injected when invoking the salt variable in sls files | refs: #38899 #38900 #38829
  - **ISSUE #38557:** (*alexbleotu*) Proxy not working on develop | refs: #38829
  - **ISSUE #38265:** (*mirceaulinic*) \_\_utils\_\_ object not available in proxy module | refs: #38899 #38900 #38829 #38829
  - **ISSUE #32918:** (*mirceaulinic*) Proxy minions reconnection | refs: #38829
  - **PR #39047:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
  - **PR #39046:** (*rallytime*) Add 2015.8.14 release notes file
  - **PR #39045:** (*rallytime*) Add 2016.3.6 release notes file
  - **PR #39042:** (*rallytime*) [2016.3] Update release numbers for doc build
  - **PR #39038:** (*rallytime*) Update 2016.3.5 release notes
  - **PR #39037:** (*rallytime*) Update 2015.8.13 release notes
  - **PR #39030:** (*rallytime*) Back-port #38972 to 2016.3
  - **PR #39028:** (*terminalmage*) Clarify delimiter argument
  - **PR #38972:** (*rallytime*) Add CLI Example for rest\_sample\_utils.get\_test\_string function | refs: #39030
  - **PR #38899:** (*cro*) Enable \_\_proxy\_\_ availability in states, highstate, and utils. Enable \_\_utils\_\_ for proxies. | refs: #38900

- **PR #38829:** (*cro*) MANY dunder variable fixes for proxies + proxy keepalive from @mirceaulinic | refs: #38899 #38900
- **PR #37864:** (*mirceaulinic*) Proxy keepalive feature | refs: #38829
- 88b171f Merge pull request #39048 from rallytime/merge-2016.11
- b2b3989 Merge branch `2016.3' into `2016.11'
  - \* a24af5a Merge pull request #39047 from rallytime/merge-2016.3
    - b732a1f Merge branch `2015.8' into `2016.3'
    - 56ccae6 Add 2015.8.14 release notes file (#39046)
    - 5943fe6 Update 2015.8.13 release notes (#39037)
  - \* fef1b11 Add 2016.3.6 release notes file (#39045)
  - \* 7c43f4a [2016.3] Update release numbers for doc build (#39042)
  - \* ff32459 Update 2016.3.5 release notes (#39038)
  - \* 5b09dc4 Merge pull request #39028 from terminalmage/clarify-delimiter-argument
    - f29ef07 Clarify delimiter argument
  - \* 1ff359f Add CLI Example for rest\_sample\_utils.get\_test\_string function (#39030)
  - \* f13fb9e Enable \_\_proxy\_\_ availability in states, highstate, and utils. Enable \_\_utils\_\_ availability in proxies. (#38899)
- 92a542f Add CLI Examples so tests will pass (#39035)
  - **PR #39035:** (*cro*) Add CLI Examples so tests will pass
- 0943872 Add 2016.11.3 release notes file (#39044)
  - **PR #39044:** (*rallytime*) Add 2016.11.3 release notes file
- 27081d6 [2016.11] Update release numbers for doc build (#39040)
  - **PR #39040:** (*rallytime*) [2016.11] Update release numbers for doc build
- 424e684 Update 2016.11.2 release notes (#39039)
  - **PR #39039:** (*rallytime*) Update 2016.11.2 release notes
- a7fc02e Ungate the status.py module and raise unsupported errors in functions not executable on Windows. (#39005)
  - **PR #39005:** (*cro*) Ungate the status.py module and raise unsupported errors in functions not executable on Windows. | refs: #39536
- **PR #39012:** (*terminalmage*) Fix ``invalid lexer" errors in docs build @ 2017-01-28T06:47:45Z
  - e70904c Merge pull request #39012 from terminalmage/invalid-lexer
  - 868001b Fix ``invalid lexer" errors in docs build
- **PR #39003:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-01-28T00:09:09Z
  - **ISSUE #37938:** (*johje349*) Memory leak in Reactor | refs: #38951
  - **ISSUE #34780:** (*joehoyle*) S3fs broken in 2016.3.1 | refs: #38982
  - **ISSUE #33890:** (*hvnstweeting*) salt memleak when running state.sls | refs: #38951
  - **PR #39000:** (*rallytime*) Skip the test\_badload test until Jenkins move is complete

- **PR #38995:** (*terminalmage*) Fix pillar.item docstring
- **PR #38989:** (*anlutro*) Documentation: fix SLS in environment variable examples
- **PR #38982:** (*rallytime*) Set response when using ``GET" method in s3 utils
- **PR #38951:** (*DmitryKuzmenko*) Keep the only one record per module-function in depends decorator.
- cea0f32 Merge pull request #39003 from rallytime/merge-2016.11
- 76e9508 Merge branch `2016.3' into `2016.11'
- da96221 Merge pull request #38951 from DSRCorporation/bugs/37938\_fix\_depends\_decorator\_memleak
  - \* 0b18f34 Keep the only one record per module-function in depends decorator.
- 85165ed Merge pull request #38982 from rallytime/fix-34780
  - \* 1583c55 Set response when using ``GET" method in s3 utils
- cfd9c99 Merge pull request #38989 from alprs/docfix-state\_pt3\_envron
  - \* 52a9ad1 fix SLS in environment variable examples
- 55e4d25 Merge pull request #39000 from rallytime/skip-badload-test
  - \* 4b3ff0f Skip the test\_badload test until Jenkins move is complete
- fe054eb Merge pull request #38995 from terminalmage/fix-pillar.item-docstring
  - \* 06d094d Fix pillar.item docstring
- **PR #38908:** (*bobrik*) Deprecate show\_diff for file.serialize to mimic file.managed, closes #38853 @ 2017-01-27T17:15:37Z
  - **ISSUE #38853:** (*bobrik*) file.serialize still expects show\_diff instead of show\_changes
  - 58543d5 Merge pull request #38908 from bobrik/show-changes-for-serialize
  - e0af212 Remove unnecessary blank lines
  - a08c1ca Deprecate show\_diff for file.serialize to mimic file.managed, closes #38853
- **PR #38978:** (*sjorge*) fixes saltstack/salt-bootstrap`#1021`\_ @ 2017-01-27T17:05:10Z
  - **ISSUE #1021:** (*SEJeff*) Document needing the ``RHEL Server Optional" channel for installing on RHEL6 | refs: #38978
  - 4b75dfa Merge pull request #38978 from sjorge/2016.11-bootstrap
  - 26eb35f fixes salt/salt-bootstrap`#1021`\_
- **PR #38991:** (*isbm*) Isbm zypper state unknown pkg crash @ 2017-01-27T16:59:38Z
  - b40f369 Merge pull request #38991 from isbm/isbm-zypper-state-unknown-pkg-crash
  - 35f620e Prevent crash on unknown to the repo package
- **PR #38979:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-01-26T22:56:13Z
  - **ISSUE #38540:** (*amendlik*) API wheel client throws exception and success=true | refs: #38925
  - **ISSUE #38537:** (*amendlik*) API client wheel\_async always returns status 500 | refs: #38925
  - **ISSUE #35777:** (*rallytime*) Properly deprecate template context data in Oxygen | refs: #38948
  - **ISSUE #34551:** (*mbom2004*) salt.engines.logstash not loading | refs: #38950
  - **PR #38973:** (*rallytime*) Handle changing ``is\_default" value in moto package for boto test mock
  - **PR #38952:** (*terminalmage*) Make the ext\_pillars available to pillar.ext tunable

- PR #38950: (*mbom2004*) Fixed Logstash Engine in file logstash.py
- PR #38948: (*rallytime*) Bump the template context deprecation version to Oxygen
- PR #38946: (*rallytime*) Back-port #37632 to 2016.3
- PR #38926: (*gtmanfred*) add note about pysss for pam eauth
- PR #38925: (*terminalmage*) Fix two wheel issues in netapi
- PR #38917: (*twangboy*) Update Jinja2 to 2.9.4
- PR #38913: (*Adaephon-GH*) Ignore plist files without Label key
- PR #37632: (*twangboy*) Fix versions report for Windows Server platforms | refs: #38946
- 3e76662 Merge pull request #38979 from rallytime/merge-2016.11
- fdaa5ac Merge branch `2016.3' into `2016.11'
- b66b6f6 Merge pull request #38950 from mbom2004/2016.3
  - \* c09f39d Remove unused json import
  - \* 249efa3 Fixed Logstash Engine in file logstash.py
- a6c6e47 Handle changing ``is\_default" value in moto package for boto test mock (#38973)
- b965b5d Merge pull request #38952 from terminalmage/zd1168
  - \* 6b014e5 Rename on\_demand\_pillar to on\_demand\_ext\_pillar
  - \* d216f90 Document new on\_demand\_pillar option and add to config template
  - \* 426b20f Add documentation for on-demand pillar to pillar.ext docstring
  - \* 7b10274 Make on-demand ext\_pillars tunable
  - \* d54723c Add on\_demand\_pillar config option
- 2c4ad85 Merge pull request #38948 from rallytime/bump-template-context-deprecation
  - \* 749e003 Bump the template context deprecation version to Oxygen
- e4514ca Merge pull request #38946 from rallytime/bp-37632
  - \* ee37cda Fix some lint
  - \* c08071e Fix versions report for server OSs
- 953a203 Merge pull request #38913 from Adaephon-GH/patch-1
  - \* e2f4a16 Removing trailing whitespace
  - \* 616292c Ignore plist files without Label key
- 826dce1 Merge pull request #38917 from twangboy/update\_jinja\_mac
  - \* 62e608b Update Jinja2 to 2.9.4
- b27733c Merge pull request #38925 from terminalmage/issue38540
  - \* 76392fc Fix traceback when a netapi module uses wheel\_async
  - \* bd4474f Fix `success' value for wheel commands
- 618596f Merge pull request #38926 from gtmanfred/2016.3
  - \* 9cae953 add note about pysss for pam eauth
- PR #38937: (*arthru*) Fix smtp ret require gnupg @ 2017-01-26T20:08:16Z

- 0660cc3 Merge pull request #38937 from HashBangDev/fix-smtp-ret-require-gnupg
- 399556b Remove trailing whitespace
- f308d13 log an error on gnupg absence instead of raising an exception
- 0427879 fails if gpgowner is set in smtp returner config but the installation lacks gnupg module
- 27449c5 smtp returner does not require gnupg to be installed
- **PR #38955:** (*techhat*) Do a better job at error detection in runners @ 2017-01-26T20:00:18Z
  - **ISSUE #38816:** (*grichmond-salt*) Errors in cloud runners are not reliably being captured as failures. | refs: #38955

  - 76a9920 Call correct function for resetting a VM
- **PR #38891:** (*UtahDave*) Proper function parameter default @ 2017-01-24T15:06:09Z
  - 53d0aa8 Merge pull request #38891 from UtahDave/fix\_cassandra\_protocol\_version
  - c475609 Proper function parameter default
- **PR #38904:** (*terminalmage*) Add top file merging docs to the master config file documentation @ 2017-01-24T14:59:26Z
  - c680ee3 Merge pull request #38904 from terminalmage/docs
  - 42a3652 Add top file merging docs to the master config file documentation
- **PR #38885:** (*meaksh*) Increasing timeouts for running integrations tests @ 2017-01-23T18:59:50Z
  - 41a3055 Merge pull request #38885 from meaksh/2016.11-fix-tests-issues
  - 4311b0b Increasing timeouts for running integrations tests
- **PR #38639:** (*isbm*) Isbm disable custom roster for api 2016.11 @ 2017-01-23T18:59:11Z
  - bde6d3e Merge pull request #38639 from isbm/isbm-disable-custom-roster-for-api-2016.11
  - ffb450 Explain what it is about and how to configure that
- **PR #38859:** (*alxwr*) fix parsing of sockstat -4 @ 2017-01-23T16:47:22Z
  - ec59ae6 Merge pull request #38859 from alxwr/2016.11
  - 30fe564 fix parsing of sockstat -4
- **PR #38850:** (*techhat*) Strip .p from cache file names @ 2017-01-23T16:28:46Z
  - 5fe6db6 Merge pull request #38850 from techhat/stripcache
  - 109cb62 Remove .p from test
  - 534aa3f Strip .p from cache file names

## 20.2.11 Salt 2016.11.4 Release Notes

Version 2016.11.4 is a bugfix release for *2016.11.0*.

### AIX Fixes

Added module execution support for user and group Added module execution support for timezone Added module execution support for network and status Added module execution support for beacon.status Added module execution support for disk.iostat

## Minion Data Cache Fixes

Added Memcache booster for the minion data cache. Memcache is an additional cache layer that keeps a limited amount of data fetched from the minion data cache for a limited period of time in memory that makes cache operations faster. It doesn't make much sense for the `localfs` cache driver but helps for more complex drivers like `consul`. For more details see `memcache_expire_seconds` and other `memcache_*` options in the master config reverence.

## Docker Fixes

- Docker authentication has been re-organized. Instead of attempting a login for each push/pull (which was unnecessary), a new function called `dockerng.login` has been added, which authenticates to the registry and adds the credential token to the `~/ .docker/config.json`. After upgrading, if you have not already performed a `docker login` on the minion using the docker CLI, you will need to run `dockerng.login` to login. This only needs to be done once.
- A bug in resolving the tag name for images in a custom registry (where a colon can appear in the image name, e.g. `myregistry.com:5000/image:tagname`) has been fixed. In previous releases, Salt would use the colon to separate the tag name from the image name, and if there was no colon, the default tag name of `latest` would be assumed. However, this caused custom registry images to be misidentified when no explicit tag name was passed (e.g. `myregistry.com:5000/image`). To work around this in earlier releases, simply specify the tag name.

## Salt-Cloud Fixes

2016.11.0 added support for templating userdata files for the `ec2` driver, using the `renderer` option from the master config file. However, as the default renderer first evaluates jinja templating, followed by loading the data as a YAML dictionary, this results in unpredictable results when userdata files are comprised of non-YAML data (which they generally are).

2016.11.4 fixes this by only templating the `userdata_file` when it is explicitly configured to do so. This is done by adding a new optional parameter to the cloud profile called `userdata_template`. This option is used in the same way as the `template` argument in *file.managed* states, it is simply set to the desired templating renderer:

```
my-ec2-config:
  # Pass userdata to the instance to be created
  userdata_file: /etc/salt/my-userdata-file
  userdata_template: jinja
```

If no `userdata_template` option is set in the cloud profile, then salt-cloud will check for the presence of the master configuration parameter `userdata_renderer`. If this is also not set, then no templating will be performed on the `userdata_file`.

In addition, the other cloud drivers which support setting a `userdata_file` (`azurearm`, `nova`, and `openstack`) have had templating support added to bring them to feature parity with the `ec2` driver's implementation of the `userdata_file` option.

## Changes for v2016.11.3..v2016.11.4

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Statistics:

- Total Merges: 275
- Total Issue references: 98
- Total PR references: 334

## Changes:

- **PR #40685:** (*Ch3LL*) Fix errno code for filecache test for other operating systems. @ 2017-04-14T16:54:25Z
  - 77028a6 Merge pull request #40685 from Ch3LL/fix\_mac\_file
  - 9ea6e8b remove io and change to EROFS
  - 688791f remove try-except and change errno
  - e30afc4 add exception type
  - acf333d change errno code for fileclient test
- **PR #40689:** (*jbadson*) Fixes bug that prevents syslog returner from working under Python 2.6 @ 2017-04-14T10:45:13Z
  - **ISSUE #40688:** (*jbadson*) Syslog returner does not work with Python 2.6 | refs: #40689 #40689
  - bc70772 Merge pull request #40689 from jbadson/fix-syslog-returner
  - e5a3a7d Fixes bug that prevents syslog returner from working under Python 2.6
- **PR #40690:** (*thor*) Fixes #40658: even clearer and working(!) Tomcat version handling @ 2017-04-14T10:44:02Z
  - **ISSUE #40658:** (*sebw*) State tomcat.war\_deployed regression when WAR filename contains version | refs: #40690
  - 983d35a Merge pull request #40690 from thor/2016.11-tomcat
  - 09145ea Fixes unindexed strfmt curly braces for python 2.6
  - b78fc46 Fixes #40658: clearer version handling
- **PR #40686:** (*twangboy*) Fix `salt-minion` service for Win 10 Creators Update 1703 @ 2017-04-13T20:00:12Z
  - 3cd9a50 Merge pull request #40686 from twangboy/fix\_service
  - b6ac4aa Fix service for win10 update
- **PR #40675:** (*gtmanfred*) use loader for getting war version @ 2017-04-13T19:58:30Z
  - ad4d683 Merge pull request #40675 from gtmanfred/2016.11
  - a61fc82 use loader for war extraction
- **PR #40680:** (*rallytime*) Back-port #40598 to 2016.11 @ 2017-04-13T19:58:16Z
  - **ISSUE #38497:** (*chrisLeeTW*) local\_batch client ignore external auth | refs: #40598
  - **PR #40598:** (*mchugh19*) Ensure batch uses passed eauth token or credentials | refs: #40680
  - 7ea526f Merge pull request #40680 from rallytime/bp-40598
  - cc1643e Fix netapi lint
  - e790930 re-add batch support to cherryppy saltapi
  - 6eec04b pop out of kwargs
  - 260dd84 Create eauth dict for passing into batch class
  - 5fb8190 Ensure batch uses passed eauth token or credentials
- **PR #40681:** (*cachedout*) Allow status beacon to run on all operating systems @ 2017-04-13T19:33:10Z

- db68df2 Merge pull request #40681 from cachedout/status\_beacon
- ecbb0d1 Allow status beacon to run on all operating systems
- **PR #40678:** (*Ch3LL*) fix test\_fstype test for mac @ 2017-04-13T19:20:32Z
  - 39dd6e2 Merge pull request #40678 from Ch3LL/fix\_mac\_fstype
  - 6072498 fix test\_fstype test for mac
- **PR #40665:** (*rallytime*) Back-port #35665 to 2016.11 @ 2017-04-12T21:06:36Z
  - **PR #35665:** (*sthrasher*) Speed up /jobs for salt-api when run under cherrypy. | refs: #40665
  - 6df76f6 Merge pull request #40665 from rallytime/bp-35665
  - 0f897b2 Switch from comprehension to logic used in jobs runner. This makes it easier to deal with potential unicode in returns.
  - 78dd629 Fix compat issues with /jobs return values.
  - 4778bc7 Speed up /jobs for salt-api when run under cherrypy.
- **PR #40666:** (*gtmanfred*) make sure userdata is always defined in ec2 @ 2017-04-12T21:06:00Z
  - 3e41a24 Merge pull request #40666 from gtmanfred/userdata
  - 5e92fd0 make sure userdata is always defined in ec2
- **PR #40662:** (*twangboy*) Backport msi-conformant-version function @ 2017-04-12T18:49:23Z
  - b245abb Merge pull request #40662 from twangboy/backport\_msi\_versioning
  - 8258328 Backport msi-conformant-version function
- **PR #40551:** (*terminalmage*) Fix four issues in archive.extracted state @ 2017-04-12T18:37:52Z
  - **ISSUE #39868:** (*amontalban*) archive.extracted issue when source\_hash\_update=True and extracted files does not exist | refs: #40551 #40551
  - 92b5f03 Merge pull request #40551 from terminalmage/issue39868
  - a722ca9 archive.extracted: also cleanup fileclient's cached location
  - 5ea1f60 Fix mocking in unit tests
  - 8dfa51f Moar fixes for source\_hash\_update
  - 7103707 Remove unnecessary versionadded lines
  - a717881 Just get a hash for the source archive
  - 9da4eb1 Check hash of cached source against source\_hash before downloading archive
  - ad24faa Fix three issues in archive.extracted state
- **PR #40637:** (*twangboy*) Add unicode\_literals import @ 2017-04-12T16:55:03Z
  - 0638418 Merge pull request #40637 from twangboy/fix\_unicode\_issues
  - 021783d Add unicode\_literals import
- **PR #40651:** (*twangboy*) Fix status.diskusage for Windows on Py3 @ 2017-04-12T16:21:29Z
  - 491661f Merge pull request #40651 from twangboy/fix\_diskusage\_py3
  - 7c5079e Correct capitalization problem with api call
- **PR #40631:** (*gtmanfred*) if grain is defined as None still convert in append @ 2017-04-12T16:19:16Z
  - **ISSUE #40624:** (*sumeetisp*) Issue - grains.append | refs: #40631

- 3aab85 Merge pull request #40631 from gtmanfred/grains
- b0bd99c add comment and unit test
- b21bc75 if grain is defined as None still convert in append
- **PR #40629:** (*aabognah*) Fixing issue # 40167 @ 2017-04-11T22:45:08Z
  - **ISSUE #40167:** (*alias454*) file.replace diff results output showing additional characters | refs: #40629
  - 3737289 Merge pull request #40629 from aabognah/fix-bug-40167
  - 28f7744 Fixing issue # 40167 with file.replace where the diff output does not display correctly.
- **PR #40646:** (*twangboy*) Keep network.py execution module @ 2017-04-11T22:03:02Z
  - 2a22bea Merge pull request #40646 from twangboy/fix\_win\_network
  - 0f7a81c Keep network.py execution module
- **PR #40645:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-04-11T20:59:13Z
  - **ISSUE #39778:** (*Talkless*) pkgrepo.managed state always report changes with test=True on APT system | refs: #40571
  - **PR #40638:** (*rallytime*) Back-port #40571 to 2016.3
  - **PR #40571:** (*terminalmage*) pkgrepo.managed: properly handle comments for debian | refs: #40638
  - e1f5a5d Merge pull request #40645 from rallytime/merge-2016.11
  - 8de6497 Merge branch `2016.3' into `2016.11'
    - \* 2ae9eaa Merge pull request #40638 from rallytime/bp-40571
      - 2d1c4be pkgrepo.managed: properly handle comments for debian
- **PR #40642:** (*DmitryKuzmenko*) Correctly resolve relative cache path to absolute. @ 2017-04-11T20:43:57Z
  - **ISSUE #40594:** (*anlutro*) salt-ssh file.recurse adds a lot of unwanted directories | refs: #40642 #40642
  - **ISSUE #38458:** (*duk3luk3*) salt-ssh uses sudo to create cache dir, later fails to access it | refs: #40442
  - **PR #40442:** (*gtmanfred*) allow file\_client to figure out cachedir | refs: #40642 #40642
  - 6c4ae3c Merge pull request #40642 from DSRCorporation/bugs/40594\_ssh\_cachedir
  - 055256c Correctly resolve relative cache path to absolute.
- **PR #40609:** (*gtmanfred*) stat\_file when keep is set, instead of mirroring all file permissions @ 2017-04-11T18:48:47Z
  - **ISSUE #40075:** (*afletch*) salt-ssh temporary files - insecure permissions | refs: #40609
  - 8492cef Merge pull request #40609 from gtmanfred/2016.11
  - 6e34c2b stat file when placing it on server instead of caching
- **PR #40620:** (*mateiw*) SUSE specific changes to salt-api.service @ 2017-04-11T14:45:00Z
  - 05ac613 Merge pull request #40620 from mateiw/2016.11-suse-saltapi-service
  - ee911a7 suse specific changes to salt-api.service
- **PR #40614:** (*gtmanfred*) add retries on authentications of the salt minion reconnecting @ 2017-04-10T22:42:16Z
  - **ISSUE #39463:** (*githubcdr*) Transport TCP minions don't reconnect/recover | refs: #40614
  - b0a2414 Merge pull request #40614 from gtmanfred/tcp
  - a86b101 add retries on authentications of the salt minion reconnecting

- **PR #40606:** (*kaszuba*) Use correct `exec_driver` in `dockerng.sls` module @ 2017-04-10T22:25:31Z
  - f7e121a Merge pull request #40606 from kaszuba/fix-dockerng-sls
  - 3a0d61f Use correct `exec_driver` in `dockerng.sls` module
- **PR #40615:** (*rallytime*) Call out to `_pki_minions()` once, rather than in a loop in `_check_list_minions()` @ 2017-04-10T22:22:18Z
  - **ISSUE #39863:** (*daswathn*) Salt-Master not responding when the list of minions are high after upgrade to 2016.11.2 | refs: #40615
  - **PR #34920:** (*cachedout*) Key cache | refs: #40615
  - b6cf948 Merge pull request #40615 from rallytime/fix-39863
  - 1a9f03a Call out to `_pki_minions()` once, rather than in a loop in `_check_list_minions()`
- **PR #40588:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-04-07T19:30:14Z
  - **PR #40567:** (*terminalmage*) Allow `pillar.get` to merge list as well as dictionaries
  - **PR #40562:** (*terminalmage*) Fix `dockerng _get_client()` regression | refs: #40563 #40563
  - **PR #40552:** (*terminalmage*) Don't use `__opts__.get()` for `hash_type`
  - **PR #40548:** (*Ch3LL*) Fix `vultrpy`
  - **PR #40481:** (*terminalmage*) Backport auth and custom registry fixes from #40480 to 2016.3 branch | refs: #40562 #40563
  - 4fa58be Merge pull request #40588 from rallytime/merge-2016.11
  - 5a419b8 Merge branch '2016.3' into '2016.11'
  - 83f6d3d Merge pull request #40567 from terminalmage/fix-pillar-get-merge-lists
    - \* cb4db56 Allow `pillar.get` to merge list as well as dictionaries
  - a8304cd Merge pull request #40552 from terminalmage/fix-hash-type-refs
    - \* 8c61f33 Don't use `__opts__.get()` for `hash_type`
  - 705e1d8 Merge pull request #40562 from terminalmage/fix-get-client
    - \* 7f1ef72 Fix `dockerng _get_client()` regression
  - 00f8ef0 Merge pull request #40548 from Ch3LL/fix\_vultrpy
    - \* 7710355 check for salt install fail on vultur test
    - \* aae3d14 fix vultr cloud race condition to match on 0\*
- **PR #40575:** (*rallytime*) Back-port #40559 to 2016.11 @ 2017-04-07T15:42:26Z
  - **PR #40559:** (*jinm*) Fix v3 for <https://github.com/saltstack/salt/issues/38472> | refs: #40575
  - 3d07f63 Merge pull request #40575 from rallytime/bp-40559
  - 8280e52 Fix v3 for <https://github.com/saltstack/salt/issues/38472>
- **PR #40576:** (*rallytime*) Back-port #40573 to 2016.11 @ 2017-04-07T15:20:11Z
  - **PR #40573:** (*ardakuyumcu*) Fix typo in IAM state for managed policies | refs: #40576
  - 9041ca2 Merge pull request #40576 from rallytime/bp-40573
  - 1218080 Fix typo in IAM state for managed policies
- **PR #40563:** (*terminalmage*) Merge-forward 2016.3 -> 2016.11 @ 2017-04-07T15:08:20Z

- **ISSUE #40279:** (*pstengel*) Salt fails to enable/disable services using systemd | refs: #40306
- **ISSUE #39892:** (*The-Loeki*) Salt-SSH reflects certain minion's opts as master opts for rendering | refs: #40534
- **ISSUE #31363:** (*eykd*) git.latest with force\_clone fails when it can't create a target directory that already exists
- **PR #40562:** (*terminalmage*) Fix dockerng \_get\_client() regression | refs: #40563 #40563
- **PR #40534:** (*terminalmage*) Check master's ssh\_minion\_opts for fileserver/pillar values and ignore them
- **PR #40505:** (*gtmanfred*) update docs for logging handlers
- **PR #40481:** (*terminalmage*) Backport auth and custom registry fixes from #40480 to 2016.3 branch | refs: #40562 #40563
- **PR #40480:** (*terminalmage*) Improved Docker auth handling and other misc. Docker improvements
- **PR #40306:** (*terminalmage*) Don't use context caching for gathering systemd services
- f8bc423 Merge pull request #40563 from terminalmage/merge-2016.3-2016.11
- 0c608d7 Add client\_args\_mock back to test
- a7a78da remove unused imports
- a6d68f5 Merge remote-tracking branch `upstream/2016.3' into merge-2016.3-2016.11
  - \* 0918311 Don't mark files that already were deleted as errors
  - \* 51d88a1 Merge branch `zer0def-fix-31363` into 2016.3
    - 7f3cbd5 Merge branch `fix-31363` of <https://github.com/zer0def/salt> into zer0def-fix-31363
    - 3c750c2 Changed rm\_rf's argument to actually remove intended file. (refs #31363)
    - 9ed85f3 Remove directory content instead of directory itself when using *force\_clone* in *git.latest* state. (refs #31363)
  - \* cfba4cb Merge pull request #40534 from terminalmage/issue39892
    - ad88c58 Check master's ssh\_minion\_opts for fileserver/pillar values and ignore them
  - \* 8da27c9 Merge pull request #40306 from terminalmage/issue40279
    - 57ace1f Merge branch `issue40279` of <https://github.com/terminalmage/salt> into issue40279
    - 8bcdf1a Remove unused import for lint
    - 808ad76 systemd.py: when getting all services, don't repeat gathering of systemd services
    - 2d219af Don't use context caching for gathering systemd services
  - \* 97caac4 Merge pull request #40481 from terminalmage/docker-auth-handling-2016.3
    - dcef1e0 Make sure we keep the cached client when clearing context
    - 1e2a04c Backport auth and custom registry fixes from #40480 to 2016.3 branch
  - \* e62603d Merge pull request #40505 from gtmanfred/2016.3
    - 6e2f908 update docs for logging handlers
- **PR #40571:** (*terminalmage*) pkgrepo.managed: properly handle comments for debian | refs: #40638 @ 2017-04-06T21:55:46Z

- **ISSUE #39778:** (*Talkless*) pkgrepo.managed state always report changes with test=True on APT system | refs: #40571
- fd757ff Merge pull request #40571 from terminalmage/issue39778
- 1916104 pkgrepo.managed: properly handle comments for debian
- **PR #40572:** (*rallytime*) Clean out kwargs dict in cloud.action before calling cloud driver function @ 2017-04-06T21:53:40Z
  - **ISSUE #40278:** (*UtahDave*) cloud.action giving errors on 2016.11.1 | refs: #40572
  - b1698e8 Merge pull request #40572 from rallytime/fix-40278
  - c978486 Clean out kwargs dict in cloud.action before calling cloud driver function
- **PR #39882:** (*smarsching*) Fix handling of trailing newlines on Windows @ 2017-04-06T21:12:24Z
  - **ISSUE #39842:** (*smarsching*) File module removes trailing newline on Windows | refs: #39882
  - 62d8ad2 Merge pull request #39882 from smarsching/issue-39842
  - d485d1a Fix context for `_splitlines_preserving_trailing_newline`.
  - 76cb7bf Fix trailing newlines on Windows (#39842).
- **PR #40451:** (*isbm*) Fileclient testcase (2016.11) @ 2017-04-06T19:53:31Z
  - ae13de6 Merge pull request #40451 from isbm/isbm-fileclient-testcase-2016.11
  - 74c6555 Add space before in-lint comment for lint
  - 35fcb8b Fix race condition on cache directory creation
  - aba9449 Lintfix (Py3 code compat)
  - 9f9dc6e Add unit test case for fileclient
- **PR #40564:** (*techhat*) Update Azure ARM docs @ 2017-04-06T18:17:32Z
  - **ISSUE #40084:** (*podstava*) profile fields in azurearm salt-cloud need to be actualized to sources | refs: #40564
  - 74366c5 Merge pull request #40564 from techhat/azuredocs
  - 08d071b Update Azure ARM docs
- **PR #40543:** (*rallytime*) Add the ```fingerprint_hash_type``` option to ssh state and module @ 2017-04-05T21:21:16Z
  - **ISSUE #40005:** (*vutny*) `ssh_known_hosts.present` does not support SHA256 key fingerprints | refs: #40543
  - cb9dcb1 Merge pull request #40543 from rallytime/fix-40005
  - 1ef81e6 Add the ```fingerprint_hash_type``` option to ssh state and module
- **PR #40540:** (*DmitryKuzmenko*) A quick fix for Cache has no `list` attribute. @ 2017-04-05T18:50:18Z
  - **PR #40494:** (*rallytime*) [develop] Merge forward from 2016.11 to develop | refs: #40540 #40540
  - 3f06955 Merge pull request #40540 from DSRCorporation/bugs/40494\_merge\_forward\_cache\_list\_fix
  - c0fd563 A quick fix for Cache has no `list` attribute.
- **PR #40464:** (*terminalmage*) salt-cloud: Do not pass userdata\_file through yaml renderer @ 2017-04-05T17:32:07Z
  - **ISSUE #32662:** (*anlutro*) salt-cloud: allow templating of EC2 userdata, similar to deploy script | refs: #32698

- **PR #32698:** (*techhat*) Allow EC2 userdata to be templated | refs: #40464
- 28fc048 Merge pull request #40464 from terminalmage/userdata-renderer
- 84ee693 Nova and openstack don't accept base64-encoded userdata
- 73f4c43 Allow for userdata\_template to be disabled in a cloud\_profile
- 78b4798 Update compile\_template test to use StringIO
- 5f7c561 Properly handle renderers which return StringIO objects
- d551b0d Bring in salt.utils.stringio from develop branch
- 6a6ef0a Move userdata templating to salt.utils.cloud
- b440d0c Update 2016.11.4 release notes for userdata\_renderer -> userdata\_template
- a6183d9 Preserve windows newlines in salt.template.compile\_template()
- 04f02df Try to read compiled template as StringIO
- 79cc253b Only template the userdata\_file if explicitly configured to do so
- b580654 Update cloud docs to reflect userdata\_renderer -> userdata\_template
- a6064fb Rename userdata\_renderer -> userdata\_template in master config docs
- 50f2b28 Remove userdata\_renderer value
- cc2186f Add templating support for other cloud drivers that support userdata\_file
- be8d34c ec2: Add support for using userdata\_renderer to template userdata\_file
- eddbd41 Openstack did not have templating support for userdata\_file before 2016.11.4
- a85a416 Add userdata\_renderer fix info to 2016.11.4 release notes
- 1111887 Add documentation for userdata\_renderer
- 9ee2dcf Add userdata\_renderer master config param
- **PR #40530:** (*dmurphy18*) Update release information for 2016.11.4 for additional AIX support @ 2017-04-05T16:20:22Z
  - 990bde4 Merge pull request #40530 from dmurphy18/aix\_docupd
  - fd93caf Added further support for functionality on AIX for 2016.11.4
  - 17b5891 Update release information for new AIX support
- **PR #40528:** (*dmurphy18*) Allow for nightly build designations in Salt versions @ 2017-04-04T20:34:26Z
  - 4d93269 Merge pull request #40528 from dmurphy18/salt\_nightlybuild
  - d62a119 Allow for nightly build designations in Salt versions
- **PR #40465:** (*rallytime*) Artifactory Execution & State Module: Fixup Error Handling @ 2017-04-04T20:12:21Z
  - **ISSUE #37699:** (*gstachowiak*) Artifactory state. Incorrect timeout error reporting. | refs: #40465
  - 0ed3852 Merge pull request #40465 from rallytime/fix-37699
  - 8f084f7 Update unit test to look for actual string comment
  - ef664b4 Artifactory State: Only wrap main function call to module in try/except and wrap exc comment in str()
  - f1015e3 Artifactory Module: catch URLErrors as well as HTTPErrors
- **PR #40497:** (*DmitryKuzmenko*) Memcache documentation and minor updates. @ 2017-04-04T19:55:18Z

- **ISSUE #39275:** (*yhekma*) Cache backend gets hit a *lot* | refs: #40429 #40497
- **PR #40429:** (*DmitryKuzmenko*) MemCache - a minion data cache booster. | refs: #40468 #40468 #40497
- 7a04ed2 Merge pull request #40497 from DSRCorporation/features/39275\_memcache
- 82c45b1 Memcache documentation and minor updates.
- **PR #40504:** (*rallytime*) Group checks for failhard setting in () in state.check\_failhard function @ 2017-04-04T19:53:48Z
  - **ISSUE #38683:** (*gstachowiak*) require/order/failhard combination error | refs: #40504
  - d654de5 Merge pull request #40504 from rallytime/fix-38683
  - ede4c28 Group checks for failhard setting in () in state.check\_failhard function
- **PR #40503:** (*thatch45*) first pass at adding support for pycryptodome installed as @ 2017-04-04T19:39:02Z
  - 4d5d7d9 Merge pull request #40503 from thatch45/2016.11
  - e21fd54 fix lint on the lint ignores...
  - 6011324 pycryptodome adds RSA to the key header which the openssl
  - 206dec6 fix the cryptodome version lookup for the versions report
  - d3b7709 good catch
  - 31c6a10 first pass at adding support for pycryptodome installed as
- **PR #40525:** (*dmurphy18*) Add support for disk.iostat on AIX @ 2017-04-04T19:31:41Z
  - 0dd92c6 Merge pull request #40525 from dmurphy18/aix\_dskiostat
  - 7125372 Added support on AIX for disk.iostat
- **PR #40496:** (*rallytime*) Back-port #40415 to 2016.11 @ 2017-04-04T17:19:39Z
  - **PR #40415:** (*defanator*) Fix boto\_vpc.create\_route() to work with interface\_id | refs: #40496
  - a6291b1 Merge pull request #40496 from rallytime/bp-40415
  - f8b3006 Fix boto\_vpc.create\_route() to work with interface\_id
- **PR #40468:** (*techhat*) Add \_\_func\_alias\_\_ back in @ 2017-04-04T17:02:43Z
  - **ISSUE #39275:** (*yhekma*) Cache backend gets hit a *lot* | refs: #40429 #40497
  - **PR #40429:** (*DmitryKuzmenko*) MemCache - a minion data cache booster. | refs: #40468 #40468 #40497
  - 3eb8e0b Merge pull request #40468 from techhat/cachealias
  - 6ec0baa Swap around aliases
  - 76e54a2 Add \_\_func\_alias\_\_ back in
- **PR #39109:** (*bdrung*) Fix top\_file\_merging\_strategy warning if env\_order is set @ 2017-04-04T14:20:56Z
  - **ISSUE #29104:** (*adithec*) Merging Order warning | refs: #39109
  - 8c0befa Merge pull request #39109 from bdrung/fix-merge-order-warning
  - fbf8fcf Simplify \_get\_envs() by using list comprehensions
  - 74a3b06 Fix top\_file\_merging\_strategy warning if env\_order is set
  - ec219b5 Remove duplicate client\_envs variable definitions
- 85b9bb4 Fix label for RST link

- 16e19ea Merge branch `thatch45-rand\_m\_doc' into 2016.11
  - 6279f7c fix do to pre correct on python randome function
  - 66b9515 Fix up the doc for failover clarity
- **PR #40495:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-04-03T18:36:16Z
  - **ISSUE #37322:** (*kiemlicz*) master\_tops generating improper top file | refs: #40427
  - **PR #40427:** (*terminalmage*) Clarify the master\_tops documentation
  - 02a1f64 Merge pull request #40495 from rallytime/merge-2016.11
  - 8111909 Merge branch `2016.3' into `2016.11'
  - 3d45a00 Merge pull request #40427 from terminalmage/clarify-master-tops-docs
    - \* bda781d Grammar fix
    - \* 0d7b0c4 Improve the master\_tops documentation
    - \* d27340a Add saltutil.sync\_tops runner func
- **PR #40466:** (*dmurphy18*) Support for execution module status on AIX @ 2017-04-01T00:28:51Z
  - ac82972 Merge pull request #40466 from dmurphy18/aix\_status
  - 7c0b30d Support for AIX
- **PR #40429:** (*DmitryKuzmenko*) MemCache - a minion data cache booster. | refs: #40468 #40468 #40497 @ 2017-03-31T20:21:00Z
  - **ISSUE #39275:** (*yhekma*) Cache backend gets hit a *lot* | refs: #40429 #40497
  - fdb0250 Merge pull request #40429 from DSRCorporation/features/39275\_memcache
  - 4475d17 In-memory minion data cache.
- **PR #40442:** (*gtmanfred*) allow file\_client to figure out cachedir | refs: #40642 #40642 @ 2017-03-31T20:14:27Z
  - **ISSUE #38458:** (*duk3luk3*) salt-ssh uses sudo to create cache dir, later fails to access it | refs: #40442
  - 31d4e69 Merge pull request #40442 from gtmanfred/salt-ssh
  - 8367735 allow file\_client to figure out cachedir
- **PR #40456:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-03-31T17:51:11Z
  - **ISSUE #39854:** (*Foxlik*) quoted space in authorized\_keys confuses ssh.py | refs: #39855
  - **PR #40379:** (*rallytime*) Create a unit test for the \_replace\_auth\_key function in the ssh module
  - **PR #40371:** (*terminalmage*) Fix path handling for masterless gitfs on Windows
  - **PR #39855:** (*Foxlik*) Use regular expression instead of split when replacing authorized\_keys | refs: #40379
  - 0cfdc18 Merge pull request #40456 from rallytime/merge-2016.11
  - 0da4c46 Merge branch `2016.3' into `2016.11'
  - c26f4cc Merge pull request #40371 from terminalmage/pr-40344
    - \* a8bcaa7 Force use of posixpath when joining salt fileserver paths in gitfs
    - \* cafa08d Add ability for salt.utils.path\_join to force the use of posixpath
  - df9df82 Merge pull request #40379 from rallytime/tests-for-39855
    - \* 96259d6 Lint fix

- \* 4f7ac14 Create a unit test for the `_replace_auth_key` function in the `ssh` module
- **PR #40443:** (*gtmanfred*) prepend `ssh_log_file` with `root_dir` @ 2017-03-31T09:23:46Z
  - 8617be9 Merge pull request #40443 from gtmanfred/sshlog
  - 7f6046d prepend `ssh_log_file` with `root_dir`
- **PR #40376:** (*nmadhok*) Backporting changes in `vmware` cloud driver from `develop` branch to `2016.11` branch @ 2017-03-30T22:35:13Z
  - 132d8b7 Merge pull request #40376 from nmadhok/2016.11
  - dd62310 Adding unit tests for `vmware_test`
  - 36edf0a Add additional VMware related exceptions
  - 034ef30 Remove old `vmware` unit tests
  - 7c14488 Backporting changes in `vmware` cloud driver from `develop` branch to `2016.11` branch
- **PR #40387:** (*redbaron4*) More complete fix for 39692 @ 2017-03-30T22:29:05Z
  - **ISSUE #39692:** (*djsly*) tuned module and state are broken on 7.3 families. | refs: #39719 #39768 #40387 #40387
  - dfaa670 Merge pull request #40387 from redbaron4/fix-39692
  - 77a40a0 Lint fixes
  - 8c1adfa More complete fix for 39692
- **PR #40404:** (*roaldnefs*) Fix for fixtures in the `djangomod` module @ 2017-03-30T22:26:09Z
  - **ISSUE #7287:** (*dragozov*) `django.loaddata` treats fixture list as arguments and prepends ```--"` for each | refs: #40404 #40404
  - 313d216 Merge pull request #40404 from roaldnefs/fix-djangomod-loaddata
  - 92285cb Fix for fixtures in the `djangomod` module
- **PR #40416:** (*loregordon*) Adds some missing file functions on Windows @ 2017-03-30T22:22:44Z
  - 5379899 Merge pull request #40416 from lorengordon/win-file-funcs
  - 8edaf25 Adds some missing file functions on Windows
- **PR #40418:** (*loregordon*) Closes handle to temporary file before returning the path @ 2017-03-30T22:22:03Z
  - **ISSUE #40417:** (*loregordon*) `temp.file` does not close the file handle | refs: #40418
  - 1f5d6b8 Merge pull request #40418 from lorengordon/close-temp-file
  - 7baf280 Closes handle to temporary file before returning the path
- **PR #40430:** (*twangboy*) Fix logic for `__virtual__` in `win_dsc` and `win_psget` @ 2017-03-30T22:06:16Z
  - 5c78d55 Merge pull request #40430 from twangboy/fix\_virtual
  - 08e95ce Add logging on `__virtual__` failures
  - 43ecb1a Fix logic for `__virtual__`
- **PR #40431:** (*rallytime*) [2016.11] Merge forward from `2016.3` to `2016.11` @ 2017-03-30T21:37:39Z
  - **ISSUE #40396:** (*aesdana*) `rabbitmq` module fails on version comparison if version contains `debian_revision` | refs: #40407
  - **PR #40424:** (*terminalmage*) Fix open filehandles

- **PR #40407:** (*aesdana*) Added split to cut off debian\_revision from rabbitmq-server version
- **PR #40399:** (*terminalmage*) Add docker-py version to the versions report
- **PR #40391:** (*Ch3LL*) initial commit of the 2016.3.7 release notes
- **PR #40368:** (*Ch3LL*) [2016.3] Bump previous version to 2016.3.6
- b855f29 Merge pull request #40431 from rallytime/merge-2016.11
- d5576d7 Merge branch `2016.3' into `2016.11'
- b6770fd Merge pull request #40407 from aesdana/fix\_rabbitmq\_version\_check
  - \* 4c0763f Added split to cut off debian\_revision from rabbitmq-server version Fixes #40396
- d4fb45d Merge pull request #40424 from terminalmage/fix-open-filehandle
  - \* 6625126 Fix open filehandles
- 8708096 Merge pull request #40399 from terminalmage/docker-py\_version
  - \* 14c6575 Add docker-py version to the versions report
- ff1266b Merge pull request #40391 from Ch3LL/2016.3.7\_release\_notes
  - \* f532ec5 initial 2016.3.7 release notes
- 96bf942 Merge pull request #40368 from Ch3LL/bump\_version\_3
  - \* a02fa7d [2016.3] Bump previous version to 2016.3.6
- **PR #40401:** (*roaldnefs*) fix Ubuntu notation in docs/faq.rst @ 2017-03-29T20:28:31Z
  - 7d900d3 Merge pull request #40401 from roaldnefs/fix-doc-faq
  - 21f161f fix Ubuntu notation in docs/faq.rst
- **PR #40390:** (*rallytime*) Back-port #37795 to 2016.11 @ 2017-03-29T19:05:12Z
  - **ISSUE #29028:** (*kevins9*) state.sls fails to render state with pillar data: Jinja variable `dict object' has no attribute | refs: #37795
  - **PR #37795:** (*jettero*) please tell me where is the "error: `dict' object has no ..." | refs: #40390
  - 70a3f96 Merge pull request #40390 from rallytime/bp-37795
  - 1ba1557 Pylint fix
  - ec65924 please tell me where is the ``error: `dict' object has no attribute `seek'" ??
- **PR #40395:** (*rallytime*) Handle AttributeError for dockerng\_mod.docker attempt fails and docker is installed @ 2017-03-29T17:47:11Z
  - f8fbfff Merge pull request #40395 from rallytime/catch-attribute-error-docker-test
  - 99c8dcc Handle AttributeError for dockerng\_mod.docker attempt fails and docker is installed
- **PR #40362:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-03-28T22:50:32Z
  - **PR #40264:** (*meaksh*) Makes sure ``gather\_job\_timeout" is an Integer
  - d7d3d68 Merge pull request #40362 from rallytime/merge-2016.11
  - 4f1543c Merge branch `2016.3' into `2016.11'
    - \* 1381f97 Merge pull request #40264 from meaksh/2016.3-gather\_job\_timeout-fix
      - 68dcae Makes sure ``gather\_job\_timeout" is an integer
- **PR #40372:** (*zer0def*) Fixes related to cache directory argument changes in pip>=6. @ 2017-03-28T22:48:41Z

- 2feb05 Merge pull request #40372 from zer0def/pip-cache-fixes
- d68067f Merge remote-tracking branch `main/2016.11' into pip-cache-fixes
- 4f23a23 Fixed the `test_install_download_cache_argument_in_resulting_command` to accommodate introduced cache directory argument fixes and renamed it to `test_install_download_cache_dir_arguments_in_resulting_command`.
- 9d0f94e Fixed unnecessary API changes introduced with suggested changes.
- **PR #40369:** (*Ch3LL*) [2016.11] Bump previous version to 2016.3.6 @ 2017-03-28T18:50:39Z
  - 6162698 Merge pull request #40369 from Ch3LL/bump\_version\_11
  - 7597d96 [2016.11] Bump previous version to 2016.3.6
- **PR #40333:** (*gtmanfred*) fix some test=True comments @ 2017-03-28T16:11:01Z
  - **ISSUE #40322:** (*Whissi*) ssh\_auth.absent: Wrong comment when test=True | refs: #40333
  - **ISSUE #40321:** (*Whissi*) state.alternatives: Wrong comment when test=True | refs: #40333
  - 2d2cb5b Merge pull request #40333 from gtmanfred/2016.11
  - 5596620 fix some test=True comments
- **PR #40347:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-03-28T02:39:31Z
  - **PR #40345:** (*twangboy*) Fix osx build
  - **PR #40338:** (*UtahDave*) Upstream cherryry moved to Github from Bitbucket
  - bb37f13 Merge pull request #40347 from rallytime/merge-2016.11
  - e77e86d Merge branch `2016.3' into `2016.11'
  - 17ab1da Merge pull request #40345 from twangboy/fix\_osx\_build
    - \* 3207d67 Fix osx build
  - 7ab1049 Merge pull request #40338 from UtahDave/fix\_cherryry\_ssl\_error\_link
    - \* 280b501 Upstream cherryry moved to Github from Bitbucket
- **PR #40346:** (*cachedout*) Revert ``Fixes related to cache directory argument changes in pip>=6." @ 2017-03-27T23:17:29Z
  - **PR #40332:** (*zer0def*) Fixes related to cache directory argument changes in pip>=6. | refs: #40346
  - a572b46 Merge pull request #40346 from saltstack/revert-40332-pip-cache-fixes
  - b4753d1 Revert ``Fixes related to cache directory argument changes in pip>=6."
- **PR #40326:** (*L4rS6*) Update mount state documentation (Fixes: #40296) @ 2017-03-27T23:15:53Z
  - **ISSUE #40296:** (*L4rS6*) Wrong documentation in mount.mounted | refs: #40326
  - a91bab8 Merge pull request #40326 from L4rS6/update-mount-state-doc
  - a717c52 Update mount state documentation (Fixes: #40296)
- **PR #40328:** (*L4rS6*) Fixes wrong compared extra\_mount\_ignore\_fs\_keys key. @ 2017-03-27T23:14:22Z
  - ca2980c Merge pull request #40328 from L4rS6/fix-mount-state-extra-ignore-fs-key
  - f0f68b9 Fixes wrong compared extra\_mount\_ignore\_fs\_keys key.
- **PR #40329:** (*isbm*) Merge tops (backport) @ 2017-03-27T23:13:47Z
  - 3a6c5d0 Merge pull request #40329 from isbm/isbm-merge-tops-201611

- a762c9e Merge output from master\_tops
- **PR #40285:** (*rallytime*) Dockerng unit tests fixes: isolate global variables @ 2017-03-27T23:05:03Z
  - 2b7b2f1 Merge pull request #40285 from rallytime/docker-test-fixes
  - 0f263a5 Mock out the get\_client\_args mocks in the dockerng module tests more aggressively
  - f1352fe Add one more dockerng.version mock that was missed previously
  - 0d31d2c Add a couple more patches for docker.version information
  - a9c5eeb Clean up dockerng unit tests to avoid global variables and fixup some patching
- **PR #40341:** (*twangboy*) Fix service.create, fix docs @ 2017-03-27T21:46:19Z
  - 01efc84 Merge pull request #40341 from twangboy/fix\_win\_service
  - 6736457 Docs for create
  - 652cf08 Fix service.create, fix docs
- **PR #40332:** (*zer0def*) Fixes related to cache directory argument changes in pip>=6. | refs: #40346 @ 2017-03-27T21:01:15Z
  - 8eabcca Merge pull request #40332 from zer0def/pip-cache-fixes
  - 7976840 Fixes related to cache directory changes in pip>=6.
- **PR #40337:** (*Ch3LL*) Add archive.extracted with use\_cmd\_unzip argument @ 2017-03-27T21:00:23Z
  - ceba1b9 Merge pull request #40337 from Ch3LL/add\_unzip\_test
  - 8b21b4c add use\_cmd\_unzip test
- **PR #40312:** (*rallytime*) Update minion data cache documentation @ 2017-03-27T20:56:55Z
  - a192597 Merge pull request #40312 from rallytime/cache-docs
  - 5363e0b Update minion data cache documentation
- **PR #40315:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-03-27T15:11:25Z
  - **PR #40300:** (*meaksh*) Fixes 'timeout' and 'gather\_job\_timeout' kwargs parameters for 'local\_batch' client
  - 7f16754 Merge pull request #40315 from rallytime/merge-2016.11
  - c65d602 Merge branch '2016.3' into '2016.11'
    - \* 7c21153 Merge pull request #40300 from meaksh/2016.3-adding-timeouts-parameters-to-cmd\_batch
      - 9174e6f Fixes testing opts dict for batch unit tests
      - b1de79a Adds custom 'timeout' and 'gather\_job\_timeout' to 'local\_batch' client
- **PR #40313:** (*techhat*) Add minimum and maximum to calls to calc @ 2017-03-27T14:54:15Z
  - a9a73bf Merge pull request #40313 from techhat/calcref
  - 7106a86 Use named kwargs
  - 822f3b8 Add minimum and maximum to calls to calc
- **PR #40277:** (*eldadru*) Fixing boto\_rds.py delete() wait\_for\_deletion, if statement was inco... @ 2017-03-24T22:29:25Z
  - **ISSUE #40247:** (*eldadru*) boto\_rds.delete wait\_for\_deletion checks rds status incorrectly and always loop until timeout | refs: #40277

- 9d0762d Merge pull request #40277 from eldadru/Fix-40247-boto\_rds-delete-wait-for-deletion-failure
- 3c15a32 Fixing boto\_rds.py delete() wait\_for\_deletion, if statement was incorrectly checking the return value of boto\_rds.py exists() method.
- **PR #40280:** (*bewing*) Clean up temporary file in net.load\_template @ 2017-03-24T22:27:04Z
  - **PR #40273:** (*bewing*) Clean up temporary file in net.load\_template | refs: #40280
  - 6c29c81 Merge pull request #40280 from bewing/bp\_40273
  - f028e93 Clean up temporary file in net.load\_template
- **PR #40310:** (*gtmanfred*) add warning when no host/dns record is found for fqdn\_ip @ 2017-03-24T21:55:20Z
  - **ISSUE #37972:** (*ebauman*) salt-run execution for master with no AAAA record adds significant execution time | refs: #40310
  - 839b620 Merge pull request #40310 from gtmanfred/2016.11
  - cff027d add warning when no host/dns record is found for fqdn
- **PR #40288:** (*dmurphy18*) Execution module network support for AIX @ 2017-03-24T20:10:36Z
  - eb86d55 Merge pull request #40288 from dmurphy18/aix\_network
  - b53a95d Further update to us in similar to review comments
  - 59c0bdc Updated for review comments
  - 031c945 Execution module network support for AIX
- **PR #40308:** (*rallytime*) Back-port #38835 to 2016.11 @ 2017-03-24T19:00:46Z
  - **PR #38835:** (*UtahDave*) Cache docs | refs: #40308
  - 4928026 Merge pull request #40308 from rallytime/bp-38835
  - 3ba50d3 add info about what is cached
  - 77e8f6a fix config example
  - 61f2fa9 Add documentation for the Minion data cache
- **PR #40287:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-03-24T16:50:23Z
  - **ISSUE #40251:** (*sergeizv*) Cloud roster doesn't work | refs: #40201
  - **ISSUE #40219:** (*Azidburn*) Broken pkg.installed with sources | refs: #40265
  - **ISSUE #31005:** (*jfindlay*) cloud roster not working | refs: #40201
  - **PR #40275:** (*UtahDave*) remove reference to auth\_minion.
  - **PR #40265:** (*terminalmage*) Fix two mod\_aggregate bugs in pkg states
  - **PR #40260:** (*lubyu*) Use win32api.FormatMessage to cover more system codes
  - **PR #40201:** (*sergeizv*) Cloud roster fixes
  - 12a9fc4 Merge pull request #40287 from rallytime/merge-2016.11
  - 7741536 Merge branch `2016.3' into `2016.11'
  - 0e2d52c Merge pull request #40260 from lubyu/fix-join\_domain
    - \* 1cb15d1 use win32api.FormatMessage() to get the error message for the system code
  - 0c62bb3 Merge pull request #40275 from UtahDave/2016.3local
    - \* 9f0c980 remove reference to auth\_minion.

- 57ce474 Merge pull request #40265 from terminalmage/issue40219
  - \* 1a731e0 Pop off the version when aggregating pkg states
  - \* 0055fda Properly aggregate version when passed with name
  - \* 62d76f5 Don't aggregate both name/pkgs and sources in pkg states
- b208630 Merge pull request #40201 from sergeizv/cloud-roster-fixes-2016.3

  - d8f0b79 Merge pull request [#40199](#) from whiteinge/ponysay-emergency-hotfix
  - 85ea61b Add depends note
  - 5a271ac Fix ponysay outputter hardcoded path
- **PR #40194:** (*terminalmage*) Change imports for dockerng tests @ 2017-03-21T19:34:55Z
  - 82cee58 Merge pull request [#40194](#) from terminalmage/fix-docker-test-imports
  - 6caedb0 Change imports for dockerng tests
- **PR #40189:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-03-21T18:02:51Z
  - **PR #40182:** (*terminalmage*) Add support for ``stopped" state to dockerng's `mod_watch`
  - **PR #40171:** (*Ch3LL*) additional PRs/issues for 2016.3.6 release notes
  - **PR #40159:** (*cro*) Turn on `sign_pub_messages` by default.
  - **PR #40122:** (*meaksh*) Adding ```pkg.install downloadonly=True`" support to yum/dnf execution module
  - **PR #40120:** (*sergeizv*) gce: Exclude GCENodeDriver objects from `_expand_node` result
  - 0b512f9 Merge pull request [#40189](#) from rallytime/merge-2016.11
  - a55c413 Merge branch `2016.3' into `2016.11'

- \* d4e6c58 Merge pull request #40182 from terminalmage/dockerng-mod\_watch-stopped
  - 4629a26 Add support for ``stopped" state to dockerng's mod\_watch
- \* a0b4082 Merge pull request #40171 from Ch3LL/2016.3.6\_release
  - 9c6d8d8 additional PRs/issues for 2016.3.6 release notes
- \* 33ba782 Merge pull request #40120 from sergeizv/gce-expand-node-fix
  - 9d0fbe7 gce: Exclude GCENodeDriver objects from \_expand\_node result
- \* 4884397 Merge pull request #40122 from meaksh/2016.3-yum-downloadonly-support
  - 067f3f7 Adding downloadonly support to yum/dnf module
- \* 60e1d4e Merge pull request #40159 from cro/sign\_pub
  - e663b76 Fix small syntax error
  - 0a0f46f Turn on sign\_pub\_messages by default. Make sure messages with no `sig' are dropped with error when sign\_pub\_messages is True.
- **PR #40034:** (*sp1r*) Disallow modification of jobs from pillar with schedule execution module @ 2017-03-21T16:36:34Z
  - **ISSUE #39779:** (*sp1r*) Pillar scheduling is broken | refs: #40034
  - **ISSUE #38523:** (*MorphBonehunter*) schedule not changed on pillar update after minion restart | refs: #40034
  - **ISSUE #36134:** (*Ch3LL*) carbon: multi-master with failover does not failover when master goes down | refs: #36437
  - **PR #36437:** (*DmitryKuzmenko*) Keep the schedule jobs in ONE place. | refs: #40034 #40034
  - d9cb222 Merge pull request #40034 from sp1r/fix-pillar-scheduling
  - 595f786 fix evaluating jobs when ``pillar" is missing in opts
  - 9d5db19 fix initial data structure for schedule tests
  - d3a2489 schedule tests to ensure pillar jobs are not modified
  - 27385ff added a check ensuring schedule is a dict before merging
  - 14d7191 Fixes #39779
- **PR #40160:** (*eldadru*) Fix this issue: <https://github.com/saltstack/salt/issues/40073>, descr... @ 2017-03-20T21:37:43Z
  - 257c862 Merge pull request #40160 from eldadru/fix-issue-40073-boto-rds-describe-empty-dict
  - 954c871 Fix this issue: <https://github.com/saltstack/salt/issues/40073>, describe return dictionary returned empty , probably as result of incorrect past merge (see discussion on issue)
- **PR #40162:** (*rallytime*) Make sure the tornado web server is stopped at the end of the test class @ 2017-03-20T20:35:21Z
  - aec5041 Merge pull request #40162 from rallytime/archive-integration-test-fixes
  - dd193cc Make sure the tornado web server is stopped at the end of the test class
- **PR #40158:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-03-20T20:34:23Z
  - **ISSUE #39995:** (*frogunder*) Head of Develop - Multimaster error | refs: #40141
  - **ISSUE #39118:** (*bobrik*) Minion ipv6 option is not documented | refs: #39289

- **PR #40141:** (*bobrik*) Use the first address if cannot connect to any
- **PR #40123:** (*twangboy*) Adds support for `inet_pton` in Windows to network util
- **PR #39289:** (*bobrik*) Autodetect IPv6 connectivity from minion to master | refs: #39766 #40141
- 461e15f Merge pull request #40158 from rallytime/merge-2016.11
- 88f3ebd Remove extra ``connect" kwarg caught by linter
- f4d4768 Merge branch `2016.3' into `2016.11'
  - \* 28e4fc1 Merge pull request #40123 from twangboy/win\_fix\_network
    - 06dfd55 Adds support for `inet_pton` in Windows to network util
  - \* 35ddb79 Merge pull request #40141 from bobrik/fallback-resolve
    - af1545d Use the first address if cannot connect to any
- **PR #40165:** (*rallytime*) Don't try to run the dockerng unit tests if docker-py is missing @ 2017-03-20T20:33:19Z
  - b235f09 Merge pull request #40165 from rallytime/gate-docker-unit-tests
  - f32d8a8 Don't try to run the dockerng unit tests if docker-py is missing
- **PR #40085:** (*mirceaulinic*) VRF arg and better doc for ping and traceroute @ 2017-03-20T19:48:57Z
  - db9fb58 Merge pull request #40085 from cloudflare/fix-ping-tr
  - 6cbdd61 Strip trailing whitespaces
  - 897a2a3 VRF arg and better doc for ping and traceroute
- **PR #40095:** (*skizunov*) dns\_check should not try to connect when connect=False @ 2017-03-17T17:31:42Z
  - 3bac06f Merge pull request #40095 from skizunov/develop2
  - 880790f dns\_check should not try to connect when connect=False

  - aabbbff Full support to execution module timezone on AIX
  - 16d5c7c WIP: timezone support for AIX
- **PR #39924:** (*dmurphy18*) Add AIX support for user and group execution modules @ 2017-03-14T21:04:02Z
  - 60066da Merge pull request #39924 from dmurphy18/salt\_aix\_fixMar
  - 5077c98 Updated changes file for added AIX support
  - 8e107bd WIP: support for useradd on AIX
  - 2f87d72 WIP: group support for AIX
- **PR #40010:** (*jettero*) S3 bucket path broken @ 2017-03-14T19:01:01Z
  - cd73eaf Merge pull request #40010 from jettero/s3-bucket-path-broken
  - acee5bf clarify this, because it messes people up in the mailing lists, and myself briefly before I thought about it
  - 8102ac8 same here
  - 21b79e0 In order for the heredoc to be correct, bucket and path have to default to ``, not None
- **PR #39991:** (*terminalmage*) Document the fact that the checksum type can be omitted in file.managed states @ 2017-03-14T15:58:11Z
  - 61f1fb0 Merge pull request #39991 from terminalmage/source\_hash-docs
  - 537fc36 Document the fact that the checksum type can be omitted in file.managed states
- **PR #39984:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-03-13T18:30:16Z
  - **PR #39973:** (*terminalmage*) Don't use docker.Client instance from context if missing attributes
  - 53d14d8 Merge pull request #39984 from rallytime/merge-2016.11
  - ef6f4b1 Merge branch `2016.3` into `2016.11`
  - cd0336e Merge pull request #39973 from terminalmage/dockerng-timeout
    - \* 869416e Don't use docker.Client instance from context if missing attributes
- **PR #39967:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-03-10T23:45:33Z
  - **PR #39962:** (*cachedout*) Disable mention bot delay on 2016.3
  - **PR #39937:** (*cachedout*) Fix --non-gpg-checks in zipper module
  - 31c0074 Merge pull request #39967 from rallytime/merge-2016.11
  - 3022466 Merge branch `2016.3` into `2016.11`

- 282c607 Merge pull request #39962 from cachedout/disable\_mentionbot\_delay\_3
  - \* 7a638f2 Disable mention bot delay on 2016.3
- 1e0c88a Merge pull request #39937 from cachedout/gpg\_zypper
  - \* 13ed0d1 Fix --non-gpg-checks in zypper module
- **PR #39963:** (*cachedout*) Mention bot delay disable for 2016.11 @ 2017-03-10T20:25:25Z
  - 269a2fd Merge pull request #39963 from cachedout/disable\_mentionbot\_delay\_11
  - 5fcea05 Mention bot delay disable for 2016.11
- **PR #39952:** (*vutny*) Fix #7997: describe how to upgrade Salt Minion in a proper way @ 2017-03-10T18:41:57Z
  - **ISSUE #7997:** (*shantanub*) Proper way to upgrade salt-minions / salt-master packages without losing minion connectivity | refs: #39952
  - 6350b07 Merge pull request #39952 from vutny/doc-faq-minion-upgrade-restart
  - d989d74 Fix #7997: describe how to upgrade Salt Minion in a proper way
- **PR #39935:** (*cro*) Add special token to insert the minion id into the default\_include path | refs: #40202 @ 2017-03-10T17:51:55Z
  - **ISSUE #39775:** (*mirceaulinic*) Proxy *mine\_interval* config ignored | refs: #39776 #39935
  - dc7d4f4 Merge pull request #39935 from cro/namespace\_proxy\_cfg
  - e4aef54 Add special token to insert the minion id into the default\_include path
- **PR #39936:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-03-10T17:05:04Z
  - **ISSUE #39782:** (*sergeizv*) salt-cloud show\_instance action fails on EC2 instances | refs: #39784
  - **ISSUE #39622:** (*drawsmcgraw*) boto\_vpc.create\_subnet does not properly assign tags | refs: #39624
  - **ISSUE #39336:** (*GevatterGaul*) salt-minion fails with IPv6 | refs: #39766
  - **ISSUE #39333:** (*jagguli*) Not Available error - Scheduling custom runner functions | refs: #39791
  - **ISSUE #39119:** (*frogunder*) Head of 2016.3 - Salt-Master uses 90 seconds to restart | refs: #39796
  - **ISSUE #39118:** (*bobrik*) Minion ipv6 option is not documented | refs: #39289
  - **ISSUE #38514:** (*githubcdr*) Unable to schedule runners | refs: #39791
  - **ISSUE #33162:** (*jfindlay*) Key error with salt.utils.cloud.cache\_node and EC2 | refs: #33164 #39784
  - **ISSUE #22080:** (*The-Loeki*) CIDR matching for IPv6 / improve IPv6 support in utils.network | refs: #39919
  - **PR #39929:** (*terminalmage*) Scrap event-based approach for refreshing grains (2016.3 branch)
  - **PR #39919:** (*The-Loeki*) CIDR matching supports IPv6, update docs
  - **PR #39899:** (*techhat*) Update cleanup function for azure
  - **PR #39871:** (*terminalmage*) Squelch warning for pygit2 import
  - **PR #39826:** (*cachedout*) Add group func to yubikey auth
  - **PR #39820:** (*ni3mm4nd*) Add missing apostrophe in Beacons topic documentation
  - **PR #39819:** (*terminalmage*) Improve the Top File matching docs
  - **PR #39796:** (*cachedout*) Stop the process manager when it no longer has processes to manage
  - **PR #39794:** (*cachedout*) Clean up errors which might be thrown when the monitor socket shuts down
  - **PR #39791:** (*gtmanfred*) load runners if role is master

- **PR #39784:** (*sergeizv*) Fix 39782
- **PR #39766:** (*rallytime*) Restore ipv6 connectivity and ``master: <ip>:<port>" support
- **PR #39624:** (*drawsmcgraw*) Address issue 39622
- **PR #39289:** (*bobrik*) Autodetect IPv6 connectivity from minion to master | refs: #39766 #40141
- **PR #33164:** (*jfindlay*) cloud.clouds.ec2: cache each named node | refs: #39784 #39784
- **PR #25021:** (*GideonRed*) Introduce ip:port minion config | refs: #39766
- 9503a1d Merge pull request #39936 from rallytime/merge-2016.11
- c8b5d39 Merge branch `2016.3' into `2016.11'
  - \* 4526fc6 Merge pull request #39929 from terminalmage/pr-39770-2016.3
    - cf0100d Scrap event-based approach for refreshing grains
  - \* 111110c Merge pull request #39919 from The-Loeki/patch-1
    - 170cbad CIDR matching supports IPv6, update docs
  - \* caf10e9 Merge pull request #39899 from techhat/cleanupdisks
    - baf4579 Update cleanup function for azure
  - \* fcf95f3 Merge pull request #39871 from terminalmage/squelch-import-warning
    - 2b2ec69 Squelch warning for pygit2 import
  - \* f223fa8 Merge pull request #39794 from cachedout/clean\_monitor\_socket\_shutdown
    - 2e683e7 Clean up errors which might be thrown when the monitor socket shuts down
  - \* 4002dc1 Merge pull request #39819 from terminalmage/top-file-matching-docs
    - 7178e77 Improve the Top File matching docs
  - \* c08aaeb Merge pull request #39820 from ni3mm4nd/beacons\_topic\_doc\_typo
    - 804b120 Add missing apostrophe
  - \* cbd2a4e Merge pull request #39826 from cachedout/yubikey\_fix
    - 6125eff Add group func to yubikey auth
  - \* f575ef4 Merge pull request #39624 from drawsmcgraw/39622
    - 13da50b Fix indention lint errors
    - 5450263 Address issue 39622
  - \* 1f3619c Merge pull request #39796 from cachedout/master\_shutdown
    - e31d46c Stop the process manager when it no longer has processes to manage
  - \* 53341cf Merge pull request #39791 from gtmanfred/2016.3
    - 3ab4f84 load runners if role is master
  - \* c234c25 Merge pull request #39784 from sergeizv/fix-39782
    - b71c3fe Revert ``cloud.clouds.ec2: cache each named node (#33164)"
  - \* 4ee59be Merge pull request #39766 from rallytime/fix-ipv6-connection
    - 65b2396 Restore ipv6 connectivity and ``master: <ip>:<port>" support
- **PR #39932:** (*rallytime*) Cherry-pick the beacon fixes made in #39930 to 2016.11 @ 2017-03-10T00:21:09Z

- **ISSUE #38121:** (*Da-Juan*) Beacon configuration doesn't work as a list | refs: #39932 #39930
- **PR #39930:** (*s0undt3ch*) Moar Py3 and a fix for #38121 | refs: #39932
- 899e037 Merge pull request #39932 from rallytime/cp-beacon-fixes
- 4a52cca Pylint fixes
- 4627c4e Code cleanup and make sure the beacons config file is deleted after testing
- c7fc09f Support the new list configuration format.
- be06df9 Remove *\*args*, *\*\*kwargs*. Not needed, not useful.
- 4a24282 These tests aren't even using mock!
- 6408b12 These tests are not destructive
- 50e51b5 The beacons configuration is now a list. Handle it!
- **PR #39933:** (*hkrist*) Fixed rawfile\_json returner output format. @ 2017-03-10T00:20:52Z
  - 2e68ede Merge pull request #39933 from hkrist/fix-rawfile\_json\_returner-format
  - 4d0ddcd Fixed rawfile\_json returner output format. It outputted python object instead of standard json.
- **PR #39934:** (*dmurphy18*) Correct comment lines output from execution module's host.list\_hosts @ 2017-03-10T00:20:14Z
  - fb0dc33 Merge pull request #39934 from dmurphy18/fix\_host\_list
  - e7b9a45 Correct comment lines output got list\_hosts
- **PR #39900:** (*twangboy*) Namespace the line function properly in win\_file @ 2017-03-09T22:19:12Z
  - a6f88d0 Merge pull request #39900 from twangboy/win\_fix\_line
  - 462bdec Namespace the line function properly in win\_file
- **PR #39910:** (*rallytime*) Back-port #37743 to 2016.11 @ 2017-03-09T22:16:58Z
  - **ISSUE #37741:** (*discountbin*) Check in file.replace state for ignore\_if\_missing | refs: #37743 #39910
  - **PR #37743:** (*discountbin*) Adding check for ignore\_if\_missing param when calling \_check\_file. | refs: #39910
  - 77ecff4 Merge pull request #39910 from rallytime/bp-37743
  - ca306c0 Replace pass with updated comment for return
  - 1a78878 Adding check for ignore\_if\_missing param when calling \_check\_file.
- **PR #39770:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-03-09T22:00:17Z
  - **ISSUE #33187:** (*usbportnoy*) Deploy to jboss TypeError at boss7.py:469 | refs: #39761
  - **PR #39761:** (*cachedout*) Properly display error in jboss7 state
  - **PR #39728:** (*rallytime*) [2016.3] Bump latest release version to 2016.11.3
  - **PR #39619:** (*terminalmage*) Add a function to simply refresh the grains
  - c2d4d17 Merge pull request #39770 from rallytime/merge-2016.11
  - dbaea3d Remove extra refresh reference that snuck in
  - d9f48ac Don't shadow refresh\_pillar
  - d86b03d Remove manual refresh code from minion.py
  - a7e419e Scrap event-based approach for refreshing grains

- 776a943 Merge branch `2016.3` into `2016.11`
  - \* a24da31 Merge pull request #39761 from cachedout/issue\_33187
    - c2df29e Properly display error in jboss7 state
  - \* 0888bc3 Merge pull request #39728 from rallytime/update-release-ver-2016.3
    - c9bc8af [2016.3] Bump latest release version to 2016.11.3
  - \* b52dbee Merge pull request #39619 from terminalmage/zd1207
    - c7dfb49 Fix mocking for grains refresh
    - 7e0ced3 Properly hand proxy minions
    - 692c456 Add a function to simply refresh the grains
- **PR #39872:** (*techhat*) Add installation tips for azurearm driver @ 2017-03-07T23:18:04Z
  - 801ff28 Merge pull request #39872 from techhat/fixdocs
  - 35440c5 Add installation tips for azure
  - 2a1ae0b Change example master in azure docs
- **PR #39837:** (*terminalmage*) Fix regression in archive.extracted when it runs file.directory @ 2017-03-07T04:09:51Z
  - 6d0f15c Merge pull request #39837 from terminalmage/more-issue39751
  - 0285ff3 Fix regression in archive.extracted when it runs file.directory
- **PR #39858:** (*techhat*) Reorder keys that were being declared in the wrong place @ 2017-03-07T03:51:56Z
  - 68752a2 Merge pull request #39858 from techhat/statuskey
  - 507a4f7 Reorder keys that were being declared in the wrong place
- **PR #39862:** (*rallytime*) Back-port #38943 to 2016.11 @ 2017-03-07T03:34:40Z
  - **ISSUE #38830:** (*danielmotalaite*) salt-ssh: vault fails to use config | refs: #38943
  - **PR #38943:** (*thatch45*) When we generate the pillar we should send in the master opts | refs: #39862
  - 49c8faa Merge pull request #39862 from rallytime/bp-38943
  - e21b16c try it with a different init sequence
  - 92cac0f make it a deepcopy
  - 58cb8cd make sure to copy the top dict reference since we are moding it
  - a0b671e When we generate the pillar we should send in the master opts
- **PR #39852:** (*rallytime*) Back-port #39651 to 2016.11 @ 2017-03-06T21:18:34Z
  - **PR #39651:** (*DennisHarper*) Checking Instance when calling a function that can return None | refs: #39852
  - 8ecc719 Merge pull request #39852 from rallytime/bp-39651
  - bb5ddbe Checking instance exists in master.\_get\_cached\_minion\_data when cache.fetch returns None
  - 79f2a7c Update \_\_init\_\_.py
  - e2a2329 Checking instance exists in master.\_get\_cached\_minion\_data when cache.fetch returns None
  - 8387742 Update \_\_init\_\_.py
  - ff6f63e Checking instance exists in master.\_get\_cached\_minion\_data when cache.fetch returns None

- 855f875 Checking instance exists in master.\_get\_cached\_minion\_data when cache.fetch returns None
- **PR #39851:** (*rallytime*) Back-port #39104 to 2016.11 @ 2017-03-06T21:17:43Z
  - **ISSUE #39052:** (*githubcdr*) Minion restart very slow since 2016.11.2 | refs: #39104
  - **PR #39104:** (*githubcdr*) Do not use name resolving for --notrim check | refs: #39851
  - 897275a Merge pull request #39851 from rallytime/bp-39104
  - 6539dbd Do not use name resolving for --notrim check
- **PR #39799:** (*Ch3LL*) Fix deleted message when key is deleted @ 2017-03-03T05:17:43Z
  - **ISSUE #38231:** (*tjuup*) Typo: salt-key deleted | refs: #39799
  - d0440e2 Merge pull request #39799 from Ch3LL/fix\_salt\_key\_msg
  - 8346682 Fix deleted message when key is deleted
- **PR #39472:** (*whiteinge*) Update \_reformat\_low to not run kwarg dicts through parse\_input @ 2017-03-02T17:46:20Z
  - **ISSUE #38962:** (*gstachowiak*) Broken /jobs in salt-api in salt 2016.11.1 (Carbon) | refs: #39472
  - **PR #32005:** (*Ashald*) Bugfix: *RunnerClient* keyword argument values processing
  - 9f70ad7 Merge pull request #39472 from whiteinge/\_reformat\_low-update
  - d11f538 Add RunnerClient test for old/new-style arg/kwarg parsing
  - ec377ab Re-enable skipped RunnerClient tests
  - 27f7fd9 Update \_reformat\_low to run arg through parse\_input
  - 5177153 Revert parse\_input change from #32005
- **PR #39727:** (*terminalmage*) salt.modules.state: check gathered pillar for errors instead of in-memory pillar @ 2017-03-02T17:06:43Z
  - 7dfc4b5 Merge pull request #39727 from terminalmage/issue39627
  - 3bb0ebd Update tests for PR 39727
  - c334b59 salt.modules.state: check gathered pillar for errors instead of in-memory pillar
  - 97dd8a1 Ensure that ext\_pillar begins with pillar\_override if ext\_pillar\_first is True
  - f951266 Add log message for successful makostack processing
- **PR #39776:** (*mirceaulinic*) WIP: Save \_schedule.conf under <proxy ID> dir @ 2017-03-02T16:27:45Z
  - **ISSUE #39775:** (*mirceaulinic*) Proxy *mine\_interval* config ignored | refs: #39776 #39935
  - 965f474 Merge pull request #39776 from cloudflare/proxy-schedule
  - 35b8b8f Save \_schedule.conf under <minion ID> dir
- **PR #39788:** (*cachedout*) Disable one API test that is flaky @ 2017-03-02T16:17:31Z
  - 555f147 Merge pull request #39788 from cachedout/disable\_api\_test
  - 523e377 Disable one API test that is flaky
- **PR #39762:** (*terminalmage*) Fix regression in file.get\_managed @ 2017-03-02T02:59:34Z
  - 793979c Merge pull request #39762 from terminalmage/issue39751
  - 64db0b8 Add integration tests for remote file sources
  - f9f894d Fix regression in file.get\_managed when skip\_verify=True

- 28651a6 Remove next(iter()) extraction
- **PR #39767:** (*rallytime*) Back-port #38316 to 2016.11 @ 2017-03-02T02:54:57Z
  - **ISSUE #35088:** (*Modulus*) salt/cloud/ec2.py encoding problems. | refs: #37912
  - **PR #38316:** (*mlalpho*) salt utils aws encoding fix | refs: #39767
  - **PR #37912:** (*attiasr*) fix encoding problem aws responses | refs: #38316 #38316
  - 91a9337 Merge pull request #39767 from rallytime/bp-38316
  - 1dcf018 requests api says Response.encoding can sometimes be None <http://docs.python-requests.org/en/master/api/#requests.Response.encoding> and result.text.encode() doesn't accept None and expects a string.
- **PR #39768:** (*rallytime*) Back-port #39719 to 2016.11 @ 2017-03-02T02:54:40Z
  - **ISSUE #39692:** (*djsly*) tuned module and state are broken on 7.3 families. | refs: #39719 #39768 #40387 #40387
  - **PR #39719:** (*Seb-Solon*) Support new version of tuned-adm binary | refs: #39768
  - 4a01bd6 Merge pull request #39768 from rallytime/bp-39719
  - d7cb70f Enh: Support new version of tuned-adm binary
- **PR #39760:** (*Ch3LL*) Initial 2016.11.4 Release Notes Doc @ 2017-03-01T18:43:39Z
  - 780457f Merge pull request #39760 from Ch3LL/2016.11.4\_notes
  - 1853c99 add initial 2016.11.4 release notes
- **PR #39731:** (*twangboy*) Add docs for Kwargs in pkg.refresh\_db @ 2017-02-28T22:02:59Z
  - 0147f78 Merge pull request #39731 from twangboy/win\_pkg\_docs
  - 423e6f7 Add docs for Kwargs in pkg.refresh\_db
- **PR #39734:** (*garethgreenaway*) Missing parameter in the schedule.add function @ 2017-02-28T20:43:08Z
  - **ISSUE #39710:** (*huangfupeng*) schedule.add parameter can not use “after“ | refs: #39734
  - fce2d18 Merge pull request #39734 from garethgreenaway/39710\_missing\_schedule\_add\_parameter
  - 63eb610 Per #39710, missing parameter in the schedule.add function
- **PR #39729:** (*rallytime*) [2016.11] Bump latest release version to 2016.11.3 @ 2017-02-28T18:08:25Z
  - 7b4865c Merge pull request #39729 from rallytime/update-release-ver-2016.11
  - b5a7111 [2016.11] Bump latest release version to 2016.11.3
- **PR #39721:** (*vutny*) DOCS: add 2nd level header for advanced targeting methods @ 2017-02-28T17:57:46Z
  - 47e494f Merge pull request #39721 from vutny/doc-targeting
  - 1d86cf1 DOCS: add 2nd level header for advanced targeting methods
- **PR #39711:** (*alankrita*) Fix error in Saltstack's rest auth ``Authentication module threw `status' `` @ 2017-02-28T15:56:09Z
  - **ISSUE #39683:** (*alankrita*) Error in Saltstack's rest auth ``Authentication module threw `status' `` | refs: #39711
  - d39b679 Merge pull request #39711 from alankrita/fix-rest-eauth
  - ee42656 Fix error in Saltstack's rest auth ``Authentication module threw `status' ``
- **PR #39699:** (*techhat*) Strip shabang line from rendered HTTP data @ 2017-02-28T00:05:01Z

- 3940321 Merge pull request #39699 from techhat/httpshabang
- 559eb93 Strip shabang line from rendered HTTP data
- **PR #39694:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-02-27T22:13:49Z
  - **ISSUE #39482:** (*bobrik*) file.managed and file mode don't mention default mode | refs: #39487
  - **ISSUE #39169:** (*blueyed*) Using batch-mode with *salt.state* in orchestration runner considers all minions to have failed | refs: #39641 #39641
  - **PR #39641:** (*smarsching*) Return runner return code in a way compatible with check\_state\_result
  - **PR #39633:** (*terminalmage*) Fix misspelled argument in salt.modules.systemd.disable()
  - **PR #39613:** (*terminalmage*) Fix inaccurate documentation
  - **PR #39487:** (*bobrik*) Document default permission modes for file module
  - 00f121e Merge pull request #39694 from rallytime/merge-2016.11
  - 756f1de Merge branch `2016.3' into `2016.11'
    - \* 3f8b5e6 Merge pull request #39487 from bobrik/mode-docs
      - 41ef69b Document default permission modes for file module
    - \* f7389bf Merge pull request #39641 from smarsching/issue-39169-2016.3
      - 88c2d9a Fix return data structure for runner (issue #39169).
    - \* fc970b6 Merge pull request #39633 from terminalmage/fix-systemd-typo
      - ca54541 Add missing unit test for disable func
      - 17109e1 Fix misspelled argument in salt.modules.systemd.disable()
    - \* 53e78d6 Merge pull request #39613 from terminalmage/fix-docs
      - 9342eda Fix inaccurate documentation
- **PR #39643:** (*drawsmcgraw*) issue 39642 - boto\_vpc.nat\_gateway\_present should accept parameter al... @ 2017-02-27T20:19:09Z
  - **ISSUE #39642:** (*drawsmcgraw*) boto\_vpc.nat\_gateway\_present does not honor the allocation\_id parameter like the module does | refs: #39643 #39643
  - 2c919e3 Merge pull request #39643 from drawsmcgraw/39642
  - 56d9adf issue 39642 - boto\_vpc.nat\_gateway\_present should accept parameter allocation\_id.
- **PR #39666:** (*terminalmage*) Rewrite the test\_valid\_docs test @ 2017-02-26T20:14:33Z
  - df013c5 Merge pull request #39666 from terminalmage/test\_valid\_docs
  - 5a3c099 Rewrite the tests\_valid\_docs test
- **PR #39662:** (*The-Loeki*) Py3 compat: Force minions to be a list for local serialized caches @ 2017-02-26T02:36:46Z
  - a29a7be Merge pull request #39662 from The-Loeki/py3cachefix
  - b02ef98 Add comment
  - 0fe5c90 Py3 compat: Force minions to be a list for local serialized caches
- **PR #39644:** (*vutny*) Improve and align dockerng execution module docs @ 2017-02-25T04:16:28Z
  - bd6efd1 Merge pull request #39644 from vutny/dockerng-docs

- c4988e8 Improve and align dockerng execution module docs
- **PR #39516:** (*jettero*) Prevent spurious ``Template does not exist" error @ 2017-02-24T23:41:36Z
  - fffab54 Merge pull request #39516 from jettero/give-pillarenv-tops-similar-treatment
  - 8fe48fa prevent billions of inexplicable lines of this:
- **PR #39654:** (*skizunov*) Fix issue where compile\_pillar failure causes minion to exit @ 2017-02-24T22:47:52Z
  - be9629b Merge pull request #39654 from skizunov/develop2
  - 9f80bbc Fix issue where compile\_pillar failure causes minion to exit
- **PR #39653:** (*cachedout*) Use salt's ordereddict for comparison @ 2017-02-24T22:46:24Z
  - e63cbba Merge pull request #39653 from cachedout/26\_odict
  - 91eb721 Use salt's ordereddict for comparison
- **PR #39609:** (*gtmanfred*) initialize the Client stuff in FSClient @ 2017-02-24T18:50:55Z
  - **ISSUE #38836:** (*toanctruong*) file.managed with S3 Source errors out with obscure message | refs: #39589 #39609
  - 0bc6027 Merge pull request #39609 from gtmanfred/2016.11
  - 0820620 initialize the Client stuff in FSClient
- **PR #39615:** (*skizunov*) Bonjour/Avahi beacons: Make sure TXT record length is valid @ 2017-02-24T18:47:05Z
  - 28035c0 Merge pull request #39615 from skizunov/develop2
  - b1c7e9b Bonjour/Avahi beacons: Make sure TXT record length is valid
- **PR #39617:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-02-24T16:07:55Z
  - **PR #39600:** (*vutny*) state.file: drop non-relevant examples for *source\_hash* parameter
  - **PR #39584:** (*cachedout*) A note in the docs about mentionbot
  - **PR #39583:** (*cachedout*) Add empty blacklist to mention bot
  - e9410fb Merge pull request #39617 from rallytime/merge-2016.11
  - 1362289 Merge branch `2016.3' into `2016.11'
  - 4e2b852 Merge pull request #39600 from vutny/state-file-docs
    - \* 9b0427c state.file: drop non-relevant examples for *source\_hash* parameter
  - ed83420 Merge pull request #39584 from cachedout/mentionbot\_docs
    - \* 652044b A note in the docs about mentionbot
  - d3e50b4 Merge pull request #39583 from cachedout/mentionbot\_blacklist
    - \* 62491c9 Add empty blacklist to mention bot
- **PR #39505:** (*cachedout*) Threadsafety option for context dictionaries @ 2017-02-23T19:38:13Z
  - **ISSUE #38758:** (*bobrik*) Remote state execution is much slower on 2016.11.1 compared to 2016.3.4 | refs: #39505
  - **ISSUE #33575:** (*anlutro*) File states seem slower in 2016.3, especially on first cache retrieval | refs: #33896
  - **ISSUE #29643:** (*matthayes*) Can't get batch mode and --failhard to work as expected | refs: #31164
  - **ISSUE #28569:** (*andrejohansson*) Reactor alert on highstate fail | refs: #31164
  - **PR #37378:** (*skizunov*) Fix `__context__` to properly sandbox | refs: #39505

- **PR #33896:** (*DmitryKuzmenko*) Don't deep copy context dict values. | refs: #39505
- **PR #31164:** (*DmitryKuzmenko*) Issues/29643 fix invalid retcode | refs: #33896
- 0d31201 Merge pull request #39505 from cachedout/issue\_38758
- 1dba2f9 Add warning in docs
- 9cf654b Threadsafety option for context dictionaries
- **PR #39507:** (*joe-niland*) Detect IIS version and vary certificate association command depending on version @ 2017-02-23T19:15:40Z
  - c0d4357 Merge pull request #39507 from joe-niland/iis-7-cert-binding
  - c94f0b8 Fix additional issue whereby existing certificate bindings were not found in IIS 7.5, due to the fact that IIS earlier than 8 doesn't support SNI
  - 18effe0 Detect IIS version and vary certificate association command depending on version
- **PR #39565:** (*terminalmage*) states.file.patch/modules.file.check\_hash: use hash length to determine type @ 2017-02-23T19:14:28Z
  - e6f5e8a Merge pull request #39565 from terminalmage/issue39512
  - cbd905 Update test to reflect new state comment
  - 650dbac states.file.patch/modules.file.check\_hash: use hash length to determine type
- **PR #39591:** (*mcalker*) fix case in os\_family for Suse @ 2017-02-23T19:07:17Z
  - 53e22b8 Merge pull request #39591 from mcalker/fix-case-in-os\_family
  - 81bd96e fix case in os\_family for Suse
- **PR #39592:** (*skazi0*) Ensure user/group/file\_mode after line edit @ 2017-02-23T18:40:05Z
  - **ISSUE #38452:** (*jf*) file.line with mode=delete does not preserve ownership of a file | refs: #39592

Changes:

### Patched Packages

Due to the critical nature of issue #41230 we have decided to patch the 2016.11.5 packages with PR #41244. This issue affects all calls to a salt-minion if there is an ipv6 nameserver set on the minion's host. The patched packages on [repo.saltstack.com](http://repo.saltstack.com) will divert from the v2016.11.5 tag and pypi packages due to the additional PR applied to the packages.

- **PR #41244:** (*cachedout*) Fix ipv6 nameserver grains @ 2017-05-15T17:55:39Z
  - **ISSUE #41230:** (*RealKelsar*) 2016.11.5 IPv6 nameserver in resolv.conf leads to minion exception | refs: #41244 #41244
  - **ISSUE #40912:** (*razed11*) IPV6 Warning when ipv6 set to False | refs: #40934
  - **PR #40934:** (*gtmanfred*) Only display IPvX warning if role is master | refs: #41244 #41244
  - 53d5b3e Merge pull request #41244 from cachedout/fix\_ipv6\_nameserver\_grains
  - f745db1 Lint
  - 6e1ab69 Partial revert of #40934
  - 88f49f9 Revert ``Only display IPvX warning if role is master''
- **PR #41173:** (*twangboy*) Add silent action to MsgBox for Path Actions @ 2017-05-10T17:22:18Z
  - **ISSUE #41099:** (*lomeroy*) Windows 2016.11.4 minion installer silent mode issue | refs: #41173
  - 96918dc Add silent action to MsgBox for Path Actions
- **PR #41134:** (*twangboy*) Fix *pkg.install* on Windows on 2016.11 @ 2017-05-09T15:10:19Z
  - a10f014 Merge pull request #41134 from twangboy/fix\_get\_msiexec
  - d808a60 Remove redundant if statement
  - b4d6d5a Fix for version\_num of None and Latest
  - 0f31822 Fix problem when use\_msiexec is a bool
- **PR #41102:** (*gtmanfred*) don't pass jid to list\_jobs @ 2017-05-08T17:45:40Z
  - **ISSUE #41100:** (*frogunder*) Exception occurred in runner jobs.list\_jobs | refs: #41102
  - 4ecab68 Merge pull request #41102 from gtmanfred/2016.11
  - 83057d0 don't pass jid to list\_jobs
- ffe4bc3 update unit test to reflect new behavior
- 482a5e3 Merge branch `L4rS6-fix-file-blockreplace-diff-in-test-mode' into 2016.11

- 505cb45 Merge branch 'fix-file-blockreplace-diff-in-test-mode' of <https://github.com/L4rS6/salt> into L4rS6-fix-file-blockreplace-diff-in-test-mode
- de9f66b show changes in file.blockreplace function in testing mode. also used same programming style as in file.managed function: (ret['changes']['diff'] = ret['pchanges']['diff'])
- **PR #41103:** (*loregordon*) Adds a `get_route()` function to `win_network.py` @ 2017-05-06T06:19:42Z
  - 2af89be Merge pull request #41103 from lorengordon/win.get\_route
  - 93ce564 Adds test for `win_network.get_route`
  - b9cbbc0 Adds a `get_route()` function to `win_network.py`
- **PR #41098:** (*rallytime*) Back-port #41088 to 2016.11 @ 2017-05-05T19:04:03Z
  - **PR #41088:** (*sjorge*) Fix docs for `zfs` state module | refs: #41098
  - 2f9b5a4 Merge pull request #41098 from rallytime/bp-41088
  - dc6cd2e Fix docs for `zfs` state module
- **PR #41097:** (*rallytime*) Back-port #41079 to 2016.11 @ 2017-05-05T19:03:43Z
  - **PR #41079:** (*brd*) Remove an extra colon that is causing rendering issues | refs: #41097
  - 2123001 Merge pull request #41097 from rallytime/bp-41079
  - 845b49c Remove and extra colon that is causing rendering issues
- **PR #41093:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-05-05T17:22:09Z
  - **PR #41083:** (*rallytime*) Git state: `head_ref` should be `head_rev` in ``latest" function
  - ff6fa2b Merge pull request #41093 from rallytime/merge-2016.11
  - a670eaa Merge branch '2016.3' into '2016.11'
  - 247400c Merge pull request #41083 from rallytime/git-state-fix
    - \* b85ee48 Git state: `head_ref` should be `head_rev` in ``latest" function
- **PR #41084:** (*rallytime*) Skip the `test_salt_documentation_arguments_not_assumed` test for Arch @ 2017-05-04T21:56:29Z
  - **PR #41074:** (*rallytime*) Skip `integration.shell.matcher.MatchTest.test_salt_documentation` test for Arch | refs: #41084
  - 4c2e636 Merge pull request #41084 from rallytime/disable-matcher-test-arch
  - da811fe Skip the correct test for the matcher tests in Arch
  - b9d1ce9 Revert ``Skip `integration.shell.matcher.MatchTest.test_salt_documentation` test for Arch"
- **PR #41069:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-05-04T20:34:58Z
  - **ISSUE #40835:** (*willkil*) non-root: `module.mac_system.__virtual__()` is wrongly returning `None` | refs: #41048
  - **PR #41070:** (*rallytime*) Pylint: remove extra line in `mac_system` module
  - **PR #41048:** (*willkil*) `mac_system`: return `False` for non-root user | refs: #41070
  - 1179720 Merge pull request #41069 from rallytime/merge-2016.11
  - 08c5891 Merge branch '2016.3' into '2016.11'
    - \* 6941809 Merge pull request #41070 from rallytime/lint-2016.3
      - 486e2ba Pylint: remove extra line in `mac_system` module

- db70b2d Pylint: remove extra line in mac\_system module
- 855d157 Merge branch `2016.3' into `2016.11'
  - \* 3101694 Merge pull request #41048 from willkil/mac\_system\_non\_root
    - b65b82a mac\_system: return False for non-root user
- **PR #41074:** (*rallytime*) Skip integration.shell.matcher.MatchTest.test\_salt\_documentation test for Arch | refs: #41084 @ 2017-05-04T19:26:16Z
  - 9d638ab Merge pull request #41074 from rallytime/disable-matcher-test-arch
  - 9eb482d Skip integration.shell.matcher.MatchTest.test\_salt\_documentation test for Arch
- **PR #41078:** (*Ch3LL*) Add 2016.11.5 release notes and change log @ 2017-05-04T19:00:58Z
  - 72c854d Merge pull request #41078 from Ch3LL/add\_2016.11.5\_release
  - 96ed815 Add 2016.11.5 release notes and change log
- **PR #40879:** (*peter-funktionIT*) Update win\_pki.py @ 2017-05-04T16:12:00Z
  - eac8401 Merge pull request #40879 from peter-funktionIT/2016.11
  - 80fa9e5 Update win\_pki.py
  - a48b05f Update win\_pki.py
  - 3a4e6d9 Update win\_pki.py
- **PR #41036:** (*terminalmage*) Do not force effective saltenv when running states via orchestration @ 2017-05-04T15:44:14Z
  - **ISSUE #40928:** (*sokratisg*) Orchestration runner, highstate and environment question | refs: #41036
  - 547a973 Merge pull request #41036 from terminalmage/issue40928
  - 72ef34c Do not force effective saltenv when running states via orchestration
- **PR #41039:** (*terminalmage*) Look for currently-running python's pip first @ 2017-05-04T15:43:52Z
  - 6e2458e Merge pull request #41039 from terminalmage/improve-pip-bin
  - effe8b9 Look for currently-running python's pip first
- **PR #41049:** (*Ch3LL*) fix integration wheel test\_gen test @ 2017-05-04T15:33:59Z
  - ff39613 Merge pull request #41049 from Ch3LL/fix\_wheel\_test
  - ba22382 fix integration wheel test\_gen test
- **PR #41054:** (*terminalmage*) Update package targets for Arch pkg tests @ 2017-05-04T14:59:42Z
  - 4e4b351 Merge pull request #41054 from terminalmage/salt-jenkins-315
  - ee493ba Update package targets for Arch pkg tests
- **PR #41046:** (*twangboy*) Fix pkg.remove @ 2017-05-04T14:58:57Z
  - 62dff52 Merge pull request #41046 from twangboy/fix\_pkg\_remove
  - 2af38e5 Use target instead of version\_num
- **PR #41045:** (*terminalmage*) Clarify gitfs docs @ 2017-05-03T22:24:55Z
  - 2b47b7b Merge pull request #41045 from terminalmage/clarify-gitfs-docs
  - c757eda Clarify gitfs docs
- **PR #41032:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-05-03T19:31:58Z

- **PR #41011:** (*terminalmage*) Use proposed docker-py reload\_config() function
- 819007c Merge pull request #41032 from rallytime/merge-2016.11
- d26fd0b Merge branch `2016.3' into `2016.11'
  - \* b00acb0 Merge pull request #41011 from terminalmage/docker-refresh-credentials
  - b8d1dcc Use proposed docker-py reload\_config() func
- **PR #41007:** (*jleproust*) Recognize LVM2 pv with empty vg as orphan @ 2017-05-03T18:24:51Z
  - **ISSUE #35699:** (*jleproust*) LVM state fails to add new device, volume group name is empty string | refs: #41007
  - d7fbd38 Merge pull request #41007 from jleproust/fix\_lvm\_empty\_vg
  - 3b9a845 Recognize LVM2 pv with empty vg as orphan
- **PR #41029:** (*rallytime*) Back-port #38565 to 2016.11 @ 2017-05-03T17:05:10Z
  - **PR #38565:** (*drawsmcgraw*) Update management of ip addresses for salt cloud azurearm module | refs: #41029
  - 4eab962 Merge pull request #41029 from rallytime/bp-38565
  - 2df93ae Update management of ip addresses. - Assign static, private IP addresses. - Ability to not assign a public IP to a VM.
- **PR #41012:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-05-02T22:06:40Z
  - **PR #40952:** (*terminalmage*) Fix documentation for docker login function in pre-nitrogen release branches
  - **PR #40724:** (*cro*) Minion key revoke cfg
  - 97500f0 Merge pull request #41012 from rallytime/merge-2016.11
  - fc756c5 Merge branch `2016.3' into `2016.11'
  - 19894f6 Merge pull request #40724 from cro/minion\_key\_revoke\_cfg
    - \* cbc7019 Change message level when minion requests key revoke and feature is turned off.
    - \* 65ea899 Add allow\_minion\_key\_revoke config option
    - \* 8920495 Add config option to prevent minions from revoking their own keys.
  - 129859f Merge pull request #40952 from terminalmage/fix-dockerng.login-docs
    - \* dfbbeb5 Fix documentation for docker login function in pre-nitrogen release branches
- **PR #40726:** (*benediktwner*) Fixed minion keys remaining pending after auto signing and fixed typo (Resubmitted to 2016.3) @ 2017-05-02T16:57:34Z
  - e210eae Merge pull request #40726 from benediktwner/fix-minions-remain-pending-after-autosign-and-typo
  - 82c144e Fixed minion keys remaining pending after auto signing and fixed typo
- **PR #40960:** (*danlsgiga*) Fix consul module ``AttributeError: `dict' object has no attribute `json'"" @ 2017-05-02T16:16:57Z
  - 4f342e2 Merge pull request #40960 from danlsgiga/2016.11
  - 6e4cc6d Fix consul module ``AttributeError: `dict' object has no attribute `json'""
- **PR #40963:** (*twangboy*) Fix fullname parameter for add function @ 2017-05-02T16:08:59Z
  - c3b329b Merge pull request #40963 from twangboy/fix\_win\_useradd

- 5371b6b Fix fullname parameter for add function
- **PR #40995:** (*twangboy*) Remove unused code fragments @ 2017-05-02T15:31:58Z
  - d79c033 Merge pull request #40995 from twangboy/remove\_utils
  - 8c01aac Remove unused code fragments
- **PR #40991:** (*rallytime*) Back-port #40982 to 2016.11 @ 2017-05-01T22:31:30Z
  - **ISSUE #40981:** (*ezh*) docker-events engine is broken with modern docker | refs: #40982
  - **PR #40982:** (*ezh*) Fix docker\_events field handling | refs: #40991
  - c616287 Merge pull request #40991 from rallytime/bp-40982
  - 8fcb720 Fix docker\_events field handling
- **PR #40987:** (*gtmanfred*) get sudo\_password correctly @ 2017-05-01T19:39:55Z
  - **ISSUE #40965:** (*weirdbricks*) salt-cloud sudo failing | refs: #40987
  - 3fb2492 Merge pull request #40987 from gtmanfred/2016.11
  - 2ed694c get sudo\_password correctly
- **PR #40992:** (*gtmanfred*) fix bug in status.netdev @ 2017-05-01T19:38:35Z
  - **ISSUE #40988:** (*santzi*) status.netdev tx\_bytes is always zero | refs: #40992
  - ecbac13 Merge pull request #40992 from gtmanfred/netdev
  - a9eed7f fix bug in status.netdev
- **PR #40993:** (*gtmanfred*) smtp state can use profile or sender @ 2017-05-01T19:35:47Z
  - **ISSUE #40976:** (*sjorge*) smtp.send\_msg state oddities | refs: #40993
  - d852320 Merge pull request #40993 from gtmanfred/smtp
  - 068ebfd smtp state can use profile or sender
- **PR #40958:** (*rallytime*) Back-port #40939 to 2016.11 @ 2017-04-28T18:01:17Z
  - **PR #40939:** (*Ch3LL*) Allow vmware to query deploy arg from opts | refs: #40958
  - fc26fb8 Merge pull request #40958 from rallytime/bp-40939
  - 3e93948 allow vmware to query deploy arg from opts
- **PR #40957:** (*rallytime*) Back-port #38115 to 2016.11 @ 2017-04-28T18:01:02Z
  - **ISSUE #34640:** (*nevins-b*) utils.shlex\_split removing quotes which are required for augeas | refs: #34643
  - **PR #38115:** (*cro*) Revert ``fix augeas module so shlex doesn't strip quotes" | refs: #40957
  - **PR #34643:** (*nevins-b*) fix augeas module so shlex doesn't strip quotes | refs: #38115
  - a586e12 Merge pull request #40957 from rallytime/bp-38115
  - eb88917 Revert ``fix augeas module so shlex doesn't strip quotes"
- **PR #40905:** (*rkgrunt*) Fixed issue with parsing of master minion returns when batching is en... @ 2017-04-28T17:52:32Z
  - **ISSUE #40635:** (*promorphus*) Orchestrate + Batches returns false failed information | refs: #40905 #40905
  - 00a15eb Merge pull request #40905 from rkgrunt/40635
  - 4f9c92a Fixed issue with parsing of master minion returns when batching is enabled.

- **PR #40954:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-04-28T16:41:49Z
  - **ISSUE #36644:** (*b1naryth1ef*) `env_vars` not properly validated/casted to strings w/ `virtualenv.manage/pip.install` | refs: #36706
  - **PR #40930:** (*rallytime*) Back-port #40811 to 2016.3
  - **PR #40927:** (*terminalmage*) Add documentation for PyYAML's loading of time expressions
  - **PR #40891:** (*terminalmage*) Fix two issues with `pip.install`
  - **PR #40811:** (*UtahDave*) get `config_dir` based off `conf_file` if `__opts__['config_dir']` doesn't exist | refs: #40930
  - **PR #36706:** (*siccrusher*) Add basic sanity checks for `env_vars` in `pip.install` function | refs: #40891 #40891
  - bb50d4f Merge pull request #40954 from rallytime/merge-2016.11
  - 7f31e41 Merge branch `2016.3' into `2016.11'
  - 55a3995 Merge pull request #40930 from rallytime/bp-40811
    - \* 3ccb553 get `config_dir` based off `conf_file`
  - 7bc01be Merge pull request #40927 from terminalmage/docs
    - \* 8c078f1 Add additional note about quoting within `load_yaml`
    - \* 123b5cd Add documentation for PyYAML's loading of time expressions
  - 7eab9c6 Merge pull request #40891 from terminalmage/pip-installed
    - \* 75e6bc0 Fix two issues with `pip.install`
- **PR #40751:** (*rallytime*) Use Salt's `SaltYamlSafeLoader` and `SafeOrderedDumper` classes for `yaml.load/dump` @ 2017-04-28T12:56:06Z
  - **ISSUE #39531:** (*ypid*) Use `yaml.safe_*` instead of `yaml.load / yaml.dump / ...` | refs: #40751
  - 909d519 Merge pull request #40751 from rallytime/fix-39531
  - 85dc416 Don't change the `salt.utils.jinja` `yaml Dumper` class
  - 4fe6ac9 Add extra line for lint
  - 55cfa12 Use `salt.utils.yamldumper` with `SafeOrderedDumper` as the `Dumper` in `yaml.dump`
  - 62c4d37 Use `salt.utils.yamlloader` with `SaltYamlSafeLoader` as the `Loader` with `yaml.load`
- **PR #40861:** (*DmitryKuzmenko*) Don't run `status.master` while minion is failing-over. @ 2017-04-28T12:14:56Z
  - **ISSUE #37307:** (*szjur*) Minions run every job twice and open 2 connections to the same syndic - apparently after reconnection between masters | refs: #40861
  - 18fdd8c Merge pull request #40861 from DSRCorporation/bugs/37307\_minion\_run\_jobs\_twice
  - f0d46d0 Don't run `status.master` while minion is failing-over.
- **PR #40923:** (*terminalmage*) `aptpkg`: fix temp pkg unhold when version is specified @ 2017-04-28T11:59:54Z
  - 62cb7b1 Merge pull request #40923 from terminalmage/aptpkg-install-fix-unhold
  - 6dda4f2 `aptpkg`: fix temp pkg unhold when version is specified
- **PR #40933:** (*gtmanfred*) allow `master_port` to be a string @ 2017-04-28T11:54:58Z
  - **ISSUE #40908:** (*nicksloan*) If `master_port` is a string the minion cannot connect and prints an unhelpful error message | refs: #40933
  - **ISSUE #39118:** (*bobrik*) Minion `ipv6` option is not documented | refs: #39289

- **PR #39289:** (*bobrik*) Autodetect IPv6 connectivity from minion to master | refs: #40933
- 9d92ba7 Merge pull request #40933 from gtmanfred/2016.11
- 194423c allow master\_port to be a string
- **PR #40934:** (*gtmanfred*) Only display IPvX warning if role is master @ 2017-04-28T11:53:50Z
  - **ISSUE #40912:** (*razed11*) IPV6 Warning when ipv6 set to False | refs: #40934
  - d5e0b8b Merge pull request #40934 from gtmanfred/ipv6
  - 7855cd6 Only display IPvX warning if role is master
- **PR #40935:** (*gtmanfred*) Attempt to connect to public ip address in softlayer @ 2017-04-28T11:43:57Z
  - **ISSUE #40881:** (*stamak*) 2016.11 SoftLayer salt-cloud driver connects on private IP instead of public IP | refs: #40935
  - 8fdfe4e Merge pull request #40935 from gtmanfred/softlayer
  - d6eb114 Attempt to connect to public ip address in softlayer
- **PR #40936:** (*terminalmage*) Add dockerng fixes to 2016.11.4 release notes @ 2017-04-27T19:54:16Z
  - 7404309 Merge pull request #40936 from terminalmage/release\_notes
  - e494ae4 Add dockerng fixes to 2016.11.4 release notes
- **PR #40929:** (*rallytime*) Back-port #37696 to 2016.11 @ 2017-04-27T17:43:26Z
  - **ISSUE #33093:** (*gtmanfred*) [salt-cloud][nova] race condition when assigning floating ips to cloud servers | refs: #37696
  - **PR #37696:** (*SolarisYan*) if vm state is not ACTIVE, it will fail | refs: #40929
  - a622518 Merge pull request #40929 from rallytime/bp-37696
  - 1a28722 Pylint fix
  - 8e0a986 if vm state is not ACTIVE, associate floating ip to it will fail. So we should wait for state of vm is ACTIVE, then associate the assigned floating ip to it
- **PR #40921:** (*corywright*) Make salt.auth.rest heading consistent with all other salt.auth documentation @ 2017-04-27T17:36:47Z
  - f88ce8e Merge pull request #40921 from corywright/consistent-salt-auth-headings
  - 2995a05 Make salt.auth.rest heading consistent with all other salt.auth documentation
- **PR #40752:** (*Enquier*) Add ability to specify a custom SSL certificate or disable SSL verification in KeystoneAuth v3 @ 2017-04-27T17:29:09Z
  - **ISSUE #37824:** (*dxiri*) SSLError Trying to use v3 API of Openstack Newton as provider. | refs: #40752
  - **ISSUE #5:** (*thatch45*) cmd module
  - 26be306 Merge pull request #40752 from Enquier/nova\_ssl\_2
  - 817f492 fixing lint errors in keystone auth error
  - f683636 fix trailing whitespace
  - 4a70b8c fixing minor error in security\_groups security groups parser had incorrect split action which caused errors
  - c9d6f8e adding note in documentation
  - c24dfe3 adding support for cacert verification

- bfa5e3 Merge pull request #5 from saltstack/2016.11
- **PR #40894:** (*senthilkumar-e*) Fix for broken /jobs/<jid> in 2016.11.4 @ 2017-04-27T11:33:00Z
  - **ISSUE #40845:** (*e-senthilkumar*) /jobs call is broken in 2016.11.4 | refs: #40894
  - 0f2ec1e Merge pull request #40894 from senthilkumar-e/broken\_jobs\_api\_fix
  - 2f55b26 Fixing the pylint issue
  - fb607ba Fix for broken /jobs/<jid> in 2016.11.4
- **PR #40876:** (*BenoitKnecht*) states: sqlite3: fix table\_present with multi-line schema @ 2017-04-26T15:21:19Z
  - ea55c15 Merge pull request #40876 from BenoitKnecht/fix-sqlite3-table-present-with-multiline-schema
  - 2ca627d states: sqlite3: fix table\_present with multi-line schema
- **PR #40742:** (*clinta*) Fix #40741 @ 2017-04-25T22:52:06Z
  - **ISSUE #40741:** (*clinta*) Regression in 2016.11.3. File.managed downloads every time. | refs: #40742
  - e09bafd Merge pull request #40742 from clinta/40741
  - 72bf5af Set sfn if cached\_sum == source\_sum
- **PR #40859:** (*skizunov*) Fix TCP Transport to work with Tornado 4.5 @ 2017-04-25T04:29:00Z
  - 5249496 Merge pull request #40859 from skizunov/develop2
  - 958ecda Fix TCP Transport to work with Tornado 4.5
- **PR #40862:** (*gtmanfred*) status should be an int @ 2017-04-24T23:11:31Z
  - ca80f28 Merge pull request #40862 from gtmanfred/2016.11
  - 87ec1da status should be an int
- **PR #40865:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-04-24T23:06:28Z
  - **PR #40854:** (*Ch3LL*) [2016.3] Bump latest release version to 2016.11.4
  - **PR #40822:** (*lordcirrh*) rsync.py: Don't return changes when clean
  - c953419 Merge pull request #40865 from rallytime/merge-2016.11
  - 53ad315 Merge branch `2016.3' into `2016.11'
  - 2a71dc3 Merge pull request #40854 from Ch3LL/11.4\_release\_2016.3
    - \* 889540a [2016.3] Bump latest release version to 2016.11.4
  - b5f67f0 Merge pull request #40822 from lordcirrh/fix-rsync-changes
    - \* 1b304bb Extra space before inline comment
    - \* ea4592d rsync.py: Don't return changes when clean
- **PR #40855:** (*Ch3LL*) [2016.11] Bump latest release version to 2016.11.4 @ 2017-04-24T17:37:47Z
  - 7861f12 Merge pull request #40855 from Ch3LL/11.4\_release\_2016.11
  - e7b6043 [2016.11] Bump latest release version to 2016.11.4
- **PR #40817:** (*isbm*) Some UT for cloud @ 2017-04-23T10:01:40Z
  - 25b62ae Merge pull request #40817 from isbm/isbm-skip-false-values-from-preferred-ip-201611
  - 7c5714b Describe debug information
  - e0210ff Reformat idents, fix typos

- fb777e3 PEP8: fix unused variable
- b2e85de Fix lint, typos and readability
- 116c96a Fix UT parameter changes
- 61558f0 Lintfix E0602
- ed84420 Add unit test for node ip filtering
- 82582cf Skip test, if libcloud is not around
- f005d53 Fix name error exception
- b668e60 Move out nested function for testing purposes
- 5e574a2 Add unit test for nova connector
- 181d078 Lintfix
- 8e9ce1a Move out nested function to be unit-testable
- cd43805 Add initial unit test for openstack cloud module
- 177f314 Add fake preferred IP function for testing
- d1aeb13 Move out openstack's nested function to be testable
- **PR #40824:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-04-21T20:03:10Z
  - **ISSUE #38914:** (*hgfisher*) Uppercase checksums are not accepted by archive.extracted | refs: #40754
  - **PR #40754:** (*lordcirth*) file.manage\_file: uppercase checksums now work
  - 50ddf21 Merge pull request #40824 from rallytime/merge-2016.11
  - f31f951 Merge branch `2016.3' into `2016.11'
    - \* 3b9ebeb Merge pull request #40754 from lordcirth/fix-uppercase-checksums
      - c80c792 remove too many newlines for lint
      - a7d8f37 file.manage\_file: uppercase checksums now work
- **PR #40811:** (*UtahDave*) get config\_dir based off conf\_file if \_\_opts\_\_['config\_dir'] doesn't exist | refs: #40930 @ 2017-04-21T17:44:42Z
  - d6e26d1 Merge pull request #40811 from UtahDave/2016.11local
  - 9f6e2e9 get config\_dir based off conf\_file
- **PR #40820:** (*gtmanfred*) remove deprecated firstgen rackspace cloud driver @ 2017-04-21T17:42:19Z
  - ddedf05 Merge pull request #40820 from gtmanfred/2016.11
  - b60a8d0 remove rackspace from index
  - 559aa1d remove deprecated firstgen rackspace cloud driver
- **PR #40797:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-04-20T19:42:04Z
  - **ISSUE #40790:** (*a-powell*) s3.query util buffering objects to memory | refs: #40791
  - **PR #40791:** (*a-powell*) S3 util get memory fix
  - 2ab4248 Merge pull request #40797 from rallytime/merge-2016.11
  - 22500a7 Merge branch `2016.3' into `2016.11'
    - \* 623e2eb Merge pull request #40791 from a-powell/s3-util-get-memory-fix

- 36f6521 Merge remote-tracking branch `upstream/2016.3' into s3-util-get-memory-fix
- 04637cd Fixing objects being loaded into memory when performing a GET request with a local file specified.
- **PR #40800:** (*rallytime*) Back-port #40720 to 2016.11 @ 2017-04-20T19:41:41Z
  - **PR #40720:** (*oeuftete*) Call `tornado.httputil.url_concat` compatibly | refs: #40800
  - ced839f Merge pull request #40800 from rallytime/bp-40720
  - 6c0124a Call `tornado.httputil.url_concat` compatibly
- **PR #40785:** (*alexproca*) `win_pkg`: backport 2016.11 add `msiexec` override to enable selection of 32 or 64 `msiexec.exe` @ 2017-04-20T16:45:14Z
  - **ISSUE #19137:** (*jeffclay*) MSI installer(s) for windows minion | refs: #40716
  - **PR #40716:** (*alexproca*) `win_pkg`: add `msiexec` override to enable selection of 32 or 64 `msiexec.exe` | refs: #40785
  - 5388ffa Merge pull request #40785 from alexproca/backport-winexec-selection
  - 91cafd5 Add option to select 32 or 64 version of `msiexec`
- **PR #40796:** (*terminalmage*) Fix inaccurate `nodegroup` docs @ 2017-04-20T16:08:22Z
  - f0f135c Merge pull request #40796 from terminalmage/fix-nodegroup-docs
  - f99259a Fix inaccurate `nodegroup` docs
- **PR #40769:** (*rallytime*) Back-port #40760 to 2016.11 @ 2017-04-19T20:23:22Z
  - **ISSUE #40737:** (*jf*) Fix `consul_pillar` documentation: `root=' canNOT start with a slash | refs: #40760
  - **PR #40760:** (*jf*) Fix `root=/'! references in `consul_pillar` documentation: `keys should not start with a forward slash!' | refs: #40769
  - d8f7855 Merge pull request #40769 from rallytime/bp-40760
  - 71ac15f Fix `root=/'! references in `consul_pillar` documentation: `keys should not start with a forward slash!'!
- **PR #40756:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-04-19T17:47:51Z
  - **ISSUE #40712:** (*idokaplan*) `user.update - account_disabled` | refs: #40721
  - **PR #40721:** (*gtmanfred*) unset the bitwise instead of toggle
  - 61f8de4 Merge pull request #40756 from rallytime/merge-2016.11
  - 0e08732 Merge branch `2016.3' into `2016.11'
  - f4f3ee6 Merge pull request #40721 from gtmanfred/2016.3
    - \* 58b8885 unset the bitwise instead of toggle
- **PR #40735:** (*rallytime*) Handle stacktraces in `cloud.action` function in module and runner @ 2017-04-18T20:05:06Z
  - **ISSUE #29602:** (*multani*) `cloud.action` start raises ``got an unexpected keyword argument `kwargs'` | refs: #40735
  - 3557b51 Merge pull request #40735 from rallytime/handle-cloud-traces
  - 87154a9 Use `log.error` instead of `log.err`
  - b35bf91 Handle stacktraces in `cloud.action` function in module and runner

- **PR #40745:** (*cro*) Backport *Add support for specifying a datastore for new disks.* PR #36457 @ 2017-04-18T20:00:51Z
  - e700d81 Merge pull request #40745 from cro/vmware\_disk\_datastore\_bp
  - 1460f82 Remove leftover conflict markers (oops! :-/)
  - b26be65 Remove leftover conflict markers (oops! :-/)
  - 096f063 Remove leftover conflict markers (oops! :-/)
  - d24078d Add docs for ``datastore" param for disks
  - 500d6b2 Document validity of a datastore key inside a disk definition.
  - 7608b10 Add support for specifying a datastore for new disks.
- **PR #40740:** (*cro*) Backport pr #39802 to add random\_startup\_delay @ 2017-04-18T19:47:55Z
  - **PR #39802:** (*cachedout*) A random startup delay option for minions | refs: #40740
  - 78dbab0 Merge pull request #40740 from cro/minion\_delay\_start
  - 2ab95b7 Set minion test to use default opts
  - 785e606 Add requested docs
  - 8ab321f A random startup delay option for minions
- **PR #40728:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-04-17T21:13:15Z
  - **ISSUE #37787:** (*elyulka*) user.present state fails to change loginclass on FreeBSD | refs: #40714
  - **PR #40719:** (*rallytime*) Back-port #40714 to 2016.3
  - **PR #40718:** (*terminalmage*) Fix copypasta in the pw\_user docstring
  - **PR #40714:** (*woodsbo2*) Make salt.modules.pw\_user.get\_loginclass return string rather than dict | refs: #40719
  - a48ecc4 Merge pull request #40728 from rallytime/merge-2016.11
  - 0a5e05a Merge branch `2016.3' into `2016.11'
  - bf8bb0f Merge pull request #40719 from rallytime/bp-40714
    - \* d6c4362 Make salt.modules.pw\_user.get\_loginclass return string rather than dict
  - 4145d33 Merge pull request #40718 from terminalmage/fix-docstring
  - 14e8b85 Fix copypasta in the pw\_user docstring
- **PR #40707:** (*gtmanfred*) Use markers when s3 bucket list is truncated @ 2017-04-17T16:45:21Z
  - **ISSUE #36967:** (*gmykhailiuta*) S3fs objects list gets truncated | refs: #40707
  - c5cbfc2 Merge pull request #40707 from gtmanfred/2016.11
  - 1932f72 Use markers when s3 bucket list is truncated

### 20.2.13 Salt 2016.11.6 Release Notes

Version 2016.11.6 is a bugfix release for *2016.11.0*.

## Changes for v2016.11.5..v2016.11.6

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Statistics:

- Total Merges: **137**
- Total Issue references: **65**
- Total PR references: **167**

Changes:

- **PR #41861:** (*twangboy*) Fix problems with `get_rule` and `delete_rule` @ 2017-06-20T20:37:23Z
  - `afc61ffe63` Merge pull request #41861 from twangboy/fix\_win\_firewall
  - `78892074f5` Fix problems with `get_rule` and `delete_rule`
- **PR #41787:** (*skizunov*) Fix #41778 @ 2017-06-20T20:11:23Z
  - **ISSUE #41778:** (*frogunder*) 2016.11.6 - TCP Transport gives Exception | refs: #41787 #41787
  - **PR #41436:** (*skizunov*) TCP transport: Fix occasional errors when using salt command | refs: #41787 #41787 #41787
  - `938d4fddf1` Merge pull request #41787 from skizunov/develop3
  - `2ffd20cedc` Fix #41778
- **PR #41812:** (*skizunov*) TCP: Fix salt-master in bad state if remote side closed connection @ 2017-06-20T19:46:53Z
  - `03b6ae5ea8` Merge pull request #41812 from skizunov/develop4
  - `736420eb83` TCP: Fix salt-master in bad state if remote side closed connection
- **PR #41857:** (*dmurphy18*) Modified support for deprecated netstat being removed by utilizing ss @ 2017-06-20T18:46:27Z
  - `cf2252bcea` Merge pull request #41857 from dmurphy18/netstat\_fix
  - `017fbdbc53` Modified support for deprecated netstat being removed by utilizing ss
- **PR #41837:** (*rallytime*) Add fingerprint\_hash\_type option to ssh\_auth state and related functions @ 2017-06-20T18:14:53Z
  - **ISSUE #40878:** (*joewreschnig*) SSH modules spam warning about MD5 fingerprints when there aren't any | refs: #41837 #41837
  - **ISSUE #40005:** (*vutny*) `ssh_known_hosts.present` does not support SHA256 key fingerprints | refs: #40543
  - **PR #40543:** (*rallytime*) Add the `"fingerprint_hash_type"` option to ssh state and module | refs: #41837
  - `12ec5f9f23` Merge pull request #41837 from rallytime/fix-40878
  - `48ff5d2a62` Add fingerprint\_hash\_type option to ssh\_auth state and related functions
- **PR #41839:** (*cro*) Extend proxy to jinja @ 2017-06-19T23:03:00Z
  - `e7fc30f482` Merge pull request #41839 from cro/extend\_proxy\_to\_jinja
  - `172d3520ea` Merge branch `'extend_proxy_to_jinja'` of github.com:cro/salt into `extend_proxy_to_jinja`
    - \* `2e4a0633da` Extend `__proxy__` to jinja as `proxy` (like `__salt__->salt`)

- 2ffad2af35 Extend `__proxy__` to jinja as `proxy` (like `__salt__->salt`)
- **PR #41786:** (*whiteinge*) Runner arg parsing regressions @ 2017-06-19T23:00:07Z
  - **ISSUE #41733:** (*sumeetisp*) Salt Rest Api call | refs: #41786
  - **ISSUE #40845:** (*e-senthilkumar*) /jobs call is broken in 2016.11.4 | refs: #41786
  - **ISSUE #38962:** (*gstachowiak*) Broken /jobs in salt-api in salt 2016.11.1 (Carbon) | refs: #39472
  - **PR #39472:** (*whiteinge*) Update `_reformat_low` to not run kwarg dicts through `parse_input` | refs: #41786
  - 58387b127a Merge pull request #41786 from whiteinge/runner-arg-parsing-regressions
  - bf15c0bb5f Restore sending `__current_eauth_*` through to the function
  - 6be975da2c Fix regressions from not calling `load_args_and_kwargs`
  - 9d1cc1a176 Add test to check that runners ignore invalid kwargs
- **PR #41776:** (*gtmanfred*) npm 5.0.0 added a second line after `fsevents` @ 2017-06-19T16:53:43Z
  - be0e9abedb Merge pull request #41776 from gtmanfred/2016.11
  - 733a2279ca npm 5.0.0 added a second line after `fsevents`
- **PR #41783:** (*rallytime*) Add a bunch of config options to the various master/minion files that are missing @ 2017-06-19T16:42:54Z
  - **ISSUE #32400:** (*rallytime*) Document Default Config Values | refs: #41783
  - d94d4e4d19 Merge pull request #41783 from rallytime/config-doc-updates
  - c828ad803a Add a bunch of config options to the various master/minion files that are missing
- **PR #41816:** (*twangboy*) Upgrade `psutil` to version 5.2.2 @ 2017-06-17T01:51:29Z
  - 2c681887d3 Merge pull request #41816 from twangboy/update\_psutil\_req
  - 8b4e3ad77d Upgrade `psutil` to version 5.2.2
- **PR #41803:** (*terminalmage*) Don't log an error when no `top.sls` is found @ 2017-06-16T22:49:08Z
  - **ISSUE #41785:** (*UtahDave*) Using master tops without a `top.sls` file causes extra errors in minion log | refs: #41803
  - 3e5fe7ca4b Merge pull request #41803 from terminalmage/issue41785
  - f9f4d49f05 Don't log an error when no `top.sls` is found
- **PR #41801:** (*terminalmage*) Don't take hostname from name param when creating docker container (2016.11 branch) @ 2017-06-16T17:02:02Z
  - d12bc4ee68 Merge pull request #41801 from terminalmage/issue41781-2016.11
  - 8236d3e1c3 Don't take hostname from name param when creating docker container (2016.11 branch)
- **PR #41768:** (*rallytime*) Manually back-port the changes in PR #41615 @ 2017-06-15T20:41:45Z
  - **PR #41615:** (*Ch3LL*) Fix `get_hwclock_aix` test on MacOSX | refs: #41768
  - 87e2e72d94 Merge pull request #41768 from rallytime/bp-41615
  - b6cc0b6bf0 Manually backport the changes in PR #41615
- **PR #41740:** (*terminalmage*) Fix spurious error when glob/regex used in `publisher_acl` @ 2017-06-15T15:14:56Z
  - 36cb223ab2 Merge pull request #41740 from terminalmage/zd1532
  - e5f3d08751 Fix spurious error when glob/regex used in `publisher_acl`

- **PR #41749:** (*terminalmage*) Fix bug in `pkg_resource.parse_targets` when version passed @ 2017-06-15T15:05:52Z
  - 126a36747b Merge pull request #41749 from terminalmage/parse\_targets
  - 698806fb09 No need to manually create `pkg_params` dict when name and version passed
  - 7484bcc6c6 `parse_targets`: include version in packed return data
- **PR #41753:** (*rallytime*) Back-port #41449 to 2016.11 @ 2017-06-14T22:16:10Z
  - **PR #41449:** (*sebw*) Fix state ``svn.latest"` diff output in test mode | refs: #41753
  - 2c24012ded Merge pull request #41753 from rallytime/bp-41449
  - fae41c2875 Adjusting SVN unit test
  - eac6b151eb Improved SVN output in test mode
- **PR #41750:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-06-14T22:15:41Z
  - **PR #41695:** (*xiaoanyunfei*) fix max RecursionError, Ellipsis
  - **PR #41585:** (*cro*) Sign\_minion\_messages support
  - e685858269 Merge pull request #41750 from rallytime/merge-2016.11
  - 89834e49c2 Merge branch `2016.3' into `2016.11'
    - \* c5a79a1ea6 Merge pull request #41695 from xiaoanyunfei/fixRecursion
      - c54fde69a0 fix spell error
      - bc855b4711 fix swallow exception
      - c0b1f57fc0 add exception
      - aacf9f0a44 fix maximum recursion depth exceeded
    - \* 4b43ba3366 Merge pull request #41585 from cro/sign\_minion\_messages
      - 628f709c3c Correct test--caching requires files on disk but the test just supplies what would have been read from disk.
      - 687872a488 Lint
      - dadf4b851c Add documentation to the example master and minion configuration files. Move minion event signing to a saner place. Enable dropping messages when signature does not verify or when minion is not adding the signature to its payloads.
      - e44673cdae Add caching of key.
      - c3917d1e91 Fat finger fix.
      - 3b9326fda7 Sign\_minion\_messages support
- **PR #41756:** (*Ch3LL*) Add Change Log to 2016.11.6 Release Notes @ 2017-06-14T20:57:08Z
  - 36cc8f1e35 Merge pull request #41756 from Ch3LL/2016.11.6\_release
  - fa368f21ac Add Change Log to 2016.11.6 Release Notes
- **PR #41692:** (*rallytime*) Add boto and boto3 version dependencies to `boto_vpc` state docs @ 2017-06-14T19:05:07Z
  - **ISSUE #40155:** (*grichmond-salt*) State module `boto_vpc` not working with boto 2 | refs: #41692
  - edcafc6a26 Merge pull request #41692 from rallytime/fix-40155
  - 539c1b0692 Add boto and boto3 version dependencies to `boto_vpc` state docs

- **PR #40902:** (*loregordon*) Removes duplicates when merging pillar lists and adds pillar.get override for pillar\_merge\_lists @ 2017-06-14T18:39:09Z
  - **ISSUE #39918:** (*kivoli*) Enabling list merging leads to multiplying of unique list items | refs: #40902
  - bdaeb55a77 Merge pull request #40902 from lorengordon/pillar-get-merge-lists
  - 6e35673fe3 Preserves order when removing duplicates
  - 18eda7084c Updates list merge tests to check for sorted, unique lists
  - 74bf91f99e Sorts the list when removing duplicates
  - 26a4b1b17f Adds pillar.get param to control list merge/overwrite behavior
  - ed04bae94c Removes duplicate values when merging lists
- **PR #41723:** (*rallytime*) Support apache-libcloud work-around for issue #32743 for versions older than 2.0.0 @ 2017-06-14T17:13:38Z
  - **ISSUE #32743:** (*tonybaloney*) Issue with salt-cloud on OpenSUSE | refs: #41723 #41723
  - **PR #40837:** (*tonybaloney*) Upgrade apache-libcloud package dependency for 2.0 | refs: #41723 #41723
  - 203ec6730f Merge pull request #41723 from rallytime/libcloud-support
  - 1e9a06000b Bump version check down to 1.4.0 and use distutils.version lib
  - a30f654b04 Support apache-libcloud work-around for issue #32743 for versions older than 2.0.0
- **PR #41655:** (*Enquier*) Allow Nova cloud module to set a specific floating ip address @ 2017-06-14T16:44:05Z
  - **ISSUE #41654:** (*Enquier*) Nova Cloud module doesn't work for python-novaclient 8.0.0+ | refs: #41655
  - 62dbf5083c Merge pull request #41655 from Enquier/nova-cloud-set\_ip\_address
  - 293bc64158 Removed empty debug log
  - 3d9871fe11 Cleaning up, removing debugging tests
  - c78e5feea9 Fixing error message
  - 404dff6b68 Debugging variable format
  - 6fa3b976a5 removing string call
  - 005995e1b0 modifying variable calls
  - 9e5e7a38ec Testing variable changes
  - 05e240f37f Debugging Format of floating\_ip variable
  - 366aca00a8 Adding Max version check for Nova since Cloud no longer operates at higher versions
  - 6f66c9d10c Fixing response of floating\_ip\_show to align with other floating ip's. Spelling fix
  - 58459adbe8 Adding ability to set a Floating IP by a specific IP address
- **PR #41731:** (*terminalmage*) Clarify that archive\_format is required pre-2016.11.0 @ 2017-06-14T15:05:21Z
  - 82eab84883 Merge pull request #41731 from terminalmage/docs
  - d3f4ea1a84 Clarify that archive\_format is required pre-2016.11.0
- **PR #41663:** (*skizunov*) Don't invoke lspci if enable\_lspci is False @ 2017-06-13T21:19:42Z
  - b6d27beac2 Merge pull request #41663 from skizunov/develop3
  - 154d6ce59e Don't invoke lspci if enable\_lspci is False
- **PR #41693:** (*rallytime*) Document available kwargs for ec2.create\_volume function @ 2017-06-13T19:51:10Z

- **ISSUE #40446:** (*sumeetisp*) [Documentation] include list of kwargs for ec2.create\_volume in cloud driver | refs: #41693
- 46b8d5dc4b Merge pull request #41693 from rallytime/fix-40446
- 569eb2bf7e Document available kwargs for ec2.create\_volume function
- **PR #41696:** (*terminalmage*) Handle a few edge/corner cases with non-string input to cmd.run @ 2017-06-13T18:48:56Z
  - **ISSUE #41691:** (*jdono728*) Can't pass integers as cmd.run environment variables | refs: #41696
  - aab55d304a Merge pull request #41696 from terminalmage/issue41691
  - 0623e40d33 Apparently some funcs are passing tuples to cmd.run\_\*
  - cdbfb94cfe Handle a few edge/corner cases with non-string input to cmd.run
- **PR #41697:** (*terminalmage*) Resubmit #41545 against 2016.11 branch @ 2017-06-13T16:10:37Z
  - 97897d7a7a Merge pull request #41697 from terminalmage/pr-41545
  - faaacf88bf Use error name instead of error number
  - 7eacda5cbf Make print\_cli resilient on slow systems
- **PR #41711:** (*rallytime*) Update deprecated version info in manage.bootstrap func for root\_user @ 2017-06-13T16:04:32Z
  - **ISSUE #40605:** (*sumeetisp*) Salt-run manage.bootstrap | refs: #41711
  - 09260d7c08 Merge pull request #41711 from rallytime/fix-40605
  - 903c2ffca5 Update deprecated version info in manage.bootstrap func for root\_user
- **PR #41658:** (*garethgreenaway*) Fixes to the salt scheduler @ 2017-06-13T16:00:57Z
  - **ISSUE #39668:** (*mirceaulinic*) Master scheduled job not recorded on the event bus | refs: #41658
  - d563b3e345 Merge pull request #41658 from garethgreenaway/39668\_schedule\_runners\_fire\_events
  - d688a1cd88 Enable jobs scheduled on the master to fire their return data to the event bus
- **PR #41706:** (*twangboy*) Add missing batch files @ 2017-06-13T15:32:53Z
  - 3c3b9343b7 Merge pull request #41706 from twangboy/batch\_files
  - 0d4be0220b Add batch files for master
- **PR #41710:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-06-13T15:11:38Z
  - **ISSUE #41688:** (*yannj-fr*) Parted module command ``mkfs" fails creating swap | refs: #41689
  - **ISSUE #37322:** (*kiemlicz*) master\_tops generating improper top file | refs: #41707
  - **PR #41707:** (*terminalmage*) Update version in master-tops docs
  - **PR #41689:** (*yannj-fr*) Fix #41688 : fix mkfs command linux-swap support
  - 1afc4adc5a Merge pull request #41710 from rallytime/merge-2016.11
  - 5150916556 Merge branch `2016.3' into `2016.11'
  - 5058b0de1f Merge pull request #41707 from terminalmage/master-tops-docs
    - \* 6ec9dfb7f3 Update version in master-tops docs
  - 1c1964d807 Merge pull request #41689 from yannj-fr/fix-41688
    - \* a47eddc22 Fix #41688 : fix mkfs command linux-swap support

- **PR #41702:** (*gtmanfred*) npm 5 and greater requires --force for cache clean @ 2017-06-12T23:21:56Z
  - 5d763b9b7f Merge pull request #41702 from gtmanfred/2016.11
  - 8bd19fcc17 fix version number
  - 0fa380f75c npm 5 and greater requires --force for cache clean
- **PR #41704:** (*rallytime*) Back-port #41670 to 2016.11 @ 2017-06-12T23:20:31Z
  - **ISSUE #41668:** (*yannj-fr*) Parted modules mkfs command does not work with NTFS | refs: #41670
  - **PR #41670:** (*yannj-fr*) fixes #41668 ntfs case problem in parted module | refs: #41704
  - f6519e7f80 Merge pull request #41704 from rallytime/bp-41670
  - 8afc8792d1 fixes #41668 ntfs case problem in parted module
- **PR #41700:** (*terminalmage*) roots: return actual link destination when listing symlinks @ 2017-06-12T22:07:03Z
  - **ISSUE #39939:** (*martinschipper*) Relative symlinks are changed with file.recurse 2016.11.3 | refs: #41700
  - 0b89377dce Merge pull request #41700 from terminalmage/issue39939
  - bdbb265a0b roots: return actual link destination when listing symlinks
- **PR #41699:** (*rallytime*) Remove note about version incompatibility with salt-cloud @ 2017-06-12T19:44:28Z
  - 7cf47f9651 Merge pull request #41699 from rallytime/troubleshooting-doc-update
  - c91ca5f809 Remove note about version incompatibility with salt-cloud
- **PR #41694:** (*rallytime*) Add ipcidr options to ``Allowed Values" list in LocalClient expr\_form docs @ 2017-06-12T19:06:16Z
  - **ISSUE #40410:** (*DarrenDai*) Targeting Minions by IP Range via restful API doesn't work | refs: #41694
  - d68a6316b8 Merge pull request #41694 from rallytime/fix-40410
  - 6de9da1d5d Add ipcidr options to ``Allowed Values" list in LocalClient expr\_form docs
- **PR #41659:** (*lubyu*) Use re.escape to escape paths before handing them to re.match @ 2017-06-12T18:10:53Z
  - **ISSUE #41365:** (*lubyu*) file.managed chokes on windows paths when source\_hash is set to the URI of a file that contains source hash strings | refs: #41659
  - 80d4a3ab98 Merge pull request #41659 from lubyu/41365-fix-file-managed
  - d49a1579b0 Use re.escape to escape paths, before handing them to re.match
  - ac240facca use correct variable
  - c777eba2c1 Use re.escape to escape paths, before handing them to re.match
- **PR #41661:** (*whiteinge*) Add note about avoiding the -i flag for the /keys endpoint @ 2017-06-09T15:03:40Z
  - 564d5fd9d3 Merge pull request #41661 from whiteinge/rest\_cherrypy-keys-headers
  - a66ffc9d3e Add note about avoiding the -i flag for the /keys endpoint
- **PR #41660:** (*garethgreenaway*) Fix to modules/aptpkg.py for unheld @ 2017-06-09T14:53:23Z
  - **ISSUE #41651:** (*Sakorah*) pkg.installed fails when unholding and test=true | refs: #41660
  - 38424f3e3e Merge pull request #41660 from garethgreenaway/41651\_fixing\_aptpkg\_held\_unheld\_with\_test
  - 30da2370a4 Fix when test=True and packages were being set to unheld.
- **PR #41656:** (*rallytime*) Back-port #41575 to 2016.11 @ 2017-06-08T22:43:23Z
  - **PR #41575:** (*dschaller*) Fix 41562 | refs: #41656

- a308b960d8 Merge pull request [#41656](#) from rallytime/bp-41575
- 4374e6b034 Replace ``tbd`` with release version information
- 81413896d1 Lint: Add index numbers to format {} calls
- 384570384e only list top level npm modules during {un}install
- **PR #41456:** (*bdrung*) Fix pkgrepo.managed always return changes for test=true @ 2017-06-08T18:21:05Z
  - e6d37b5f3e Merge pull request [#41456](#) from bdrung/fix-pkgrepo.managed-changes-check
  - d3ce7bf05f Fix pkgrepo.managed always return changes for test=true
  - 1592687294 Document aptpkg architectures parameter
- **PR #41530:** (*gtmanfred*) Set default for consul\_pillar to None @ 2017-06-08T18:13:15Z
  - **ISSUE #41478:** (*jf*) security / information leak with consul pillar when substitution values are not present | refs: [#41530](#)
  - 721e5b6cb9 Merge pull request [#41530](#) from gtmanfred/2016.11
  - 2a4633ce16 Set default for consul\_pillar to None
- **PR #41638:** (*gtmanfred*) don't overwrite args if they are passed to the script @ 2017-06-08T17:48:48Z
  - **ISSUE #41629:** (*lubyu*) salt.states.cmd.script: Parameter ``args`` is overwritten if ``name/id`` contains spaces | refs: [#41638](#)
  - 8926d1c731 Merge pull request [#41638](#) from gtmanfred/cmdscript
  - 6c7d68b97d don't overwrite args if they are passed to the script
- **PR #41639:** (*dmurphy18*) Update notrim check, netstat takes minutes if large number connections @ 2017-06-07T23:03:24Z
  - ecb09b8694 Merge pull request [#41639](#) from dmurphy18/minion\_netstat\_check
  - 7ab3319090 Update notrim check, netstat takes minutes if large number connections - 260K
- **PR #41611:** (*garethgreenaway*) Additional fixes to states/saltmod.py @ 2017-06-07T22:58:24Z
  - **ISSUE #38894:** (*amendlik*) salt.runner and salt.wheel ignore test=True | refs: [#41309](#) [#41611](#)
  - 2913a33b27 Merge pull request [#41611](#) from garethgreenaway/41309\_right\_return\_res
  - fda41ede76 Updating result values to be None for test cases.
  - 003f2d9323 Following the documentation, when passed the test=True argument the runner and wheel functions should return a result value of False.
- **PR #41637:** (*gtmanfred*) never run bg for onlyif or unless cmd states @ 2017-06-07T17:37:47Z
  - **ISSUE #41626:** (*ruiaylin*) When onlyif and bg are used together the | refs: [#41637](#)
  - 334a5fc2a0 Merge pull request [#41637](#) from gtmanfred/cmd
  - 40fb6c6249 never run bg for onlyif or unless cmd states
- **PR #41255:** (*lordcirrh*) linux\_sysctl.default\_config(): only return path, don't create it @ 2017-06-07T14:13:07Z
  - 34dd9ea862 Merge pull request [#41255](#) from lordcirrh/fix-sysctl-test-11
  - 0089be4440 linux\_sysctl: use dirname() as suggested
  - 262d95e41d linux\_sysctl.default\_config(): only return path, don't create it
  - 277232b3ac linux\_sysctl.persist(): create config dir if needed

- **PR #41616:** (*rallytime*) Back-port #41551 to 2016.11 @ 2017-06-06T22:44:09Z
  - **ISSUE #35481:** (*giany*) global\_identifier does not work when using Softlayer driver | refs: #41551 #41551
  - **PR #41551:** (*darenjacobs*) Update \_\_init\_\_.py | refs: #41616
  - 4cf577771b Merge pull request #41616 from rallytime/bp-41551
  - 53bca96328 Update \_\_init\_\_.py
- **PR #41552:** (*Enquier*) Adding logic so that update\_floatingip can disassociate floatingip's @ 2017-06-06T18:25:56Z
  - 846ca54688 Merge pull request #41552 from Enquier/neutron-floatingip-remove
  - aeed51c1e3 Adding port=None default and documentation
  - fccc05e1e4 Adding logic so that update\_floatingip can disassociate floatingip's Previously update\_floatingip would cause an error if port is set to None.
- **PR #41569:** (*gtmanfred*) Check all entries in result @ 2017-06-06T18:18:17Z
  - b720ecb732 Merge pull request #41569 from gtmanfred/fix\_test\_result\_check
  - 19ea5481b6 remove test that never passed
  - e2a4d5e1e2 Check all entries in result
- **PR #41599:** (*garethgreenaway*) Fixes to modules/archive.py @ 2017-06-06T18:02:14Z
  - **ISSUE #41540:** (*UtahDave*) archive.extracted fails on second run | refs: #41599 #41599
  - d9546c6283 Merge pull request #41599 from garethgreenaway/41540\_fixes\_to\_archive\_module
  - 66a136e6d8 Fixing issues raised in #41540 when a zip file is created on a Windows system. The issue has two parts, first directories that end up in the archive end up in the results of aarchive.list twice as they show up as both files and directories because of the logic to handle the fact that Windows doesn't mark them as directories. This issue shows up when an extraction is run a second time since the module verified the file types and the subdirectory is not a file. The second issue is related to permissions, if Salt is told to extract permissions (which is the default) then the directory and files end up being unreadable since the permissions are not available. This change sets the permissions to what the default umask for the user running Salt is.
- **PR #41453:** (*peter-funktionIT*) Update win\_pki.py @ 2017-06-06T17:15:55Z
  - **ISSUE #40950:** (*idokaplan*) Import certificate | refs: #41383 #41453
  - **PR #41383:** (*peter-funktionIT*) Update win\_pki.py | refs: #41453
  - 10ac80ee96 Merge pull request #41453 from peter-funktionIT/fix\_win\_pki\_state\_import\_cert
  - d146fd029c Update win\_pki.py
  - ef8e3ef569 Update win\_pki.py
- **PR #41557:** (*dmurphy18*) Add symbolic link for salt-proxy service similar to other service files @ 2017-06-06T17:13:52Z
  - 3335fcbc7d Merge pull request #41557 from dmurphy18/fix-proxy-service
  - ffe492d6a9 Add symbolic link salt-proxy service similar to other service files
- **PR #41597:** (*rallytime*) Back-port #41533 to 2016.11 @ 2017-06-06T15:15:09Z
  - **PR #41533:** (*svinota*) unit tests: add pyroute2 interface dict test | refs: #41597
  - 65ed230f45 Merge pull request #41597 from rallytime/bp-41533

- 535b8e8d8e Update new pyroute2 unit test to conform with 2016.11 branch standards
- 5c86dee73c unit tests: test\_pyroute2 -- add skipIf
- 026b39493f unit tests: add encoding clause into test\_pyroute2
- 9ab203d54b unit tests: fix absolute imports in test\_pyroute2
- 1f507cfa7a unit tests: add pyroute2 interface dict test
- **PR #41596:** (*rallytime*) Back-port #41487 to 2016.11 @ 2017-06-06T02:44:17Z
  - **PR #41487:** (*svinota*) clean up *change* attribute from interface dict | refs: #41596
  - bf8aed153d Merge pull request #41596 from rallytime/bp-41487
  - 7b497d9ec6 clean up *change* attribute from interface dict
- **PR #41509:** (*seanjnkns*) Add keystone V3 API support for keystone.endpoint\_present|absent @ 2017-06-03T03:01:05Z
  - **ISSUE #41435:** (*seanjnkns*) 2016.11: Keystone.endpoint\_present overwrites all interfaces | refs: #41509
  - cc6c98a8d8 Merge pull request #41509 from seanjnkns/fix-keystone-v3-endpoint\_present
  - 095e5949a3 Fix unit tests for PR #41509
  - eb7ef3c856 Add keystone V3 API support for keystone.endpoint\_present|get, endpoint\_absent|delete.
- **PR #41539:** (*gtmanfred*) allow digest to be empty in create\_crl @ 2017-06-02T17:00:04Z
  - **ISSUE #38061:** (*Ch3LL*) x509.crl\_managed ValueError when digest is not specified in the module | refs: #41539
  - 0a08649637 Merge pull request #41539 from gtmanfred/x509
  - 0989be8919 allow digest to be empty in create\_crl
- **PR #41561:** (*terminalmage*) Redact HTTP basic authentication in archive.extracted @ 2017-06-02T15:33:14Z
  - **ISSUE #41154:** (*mephi42*) archive.extracted outputs password embedded in archive URL | refs: #41561
  - 3ae8336895 Merge pull request #41561 from terminalmage/issue41154
  - cbf8acbafe Redact HTTP basic authentication in archive.extracted
- **PR #41436:** (*skizunov*) TCP transport: Fix occasional errors when using salt command | refs: #41787 #41787 #41787 @ 2017-06-01T16:37:43Z
  - 39840bfe4e Merge pull request #41436 from skizunov/develop2
  - 07d5862773 unit.transport.tcp\_test: Clean up channel after use
  - 4b6aec7154 Preserve original IO Loop on cleanup
  - 892c6d4d24 TCP transport: Fix occasional errors when using salt command
- **PR #41337:** (*Foxlik*) Fix #41335 - list index out of range on empty line in authorized\_keys @ 2017-05-31T19:59:17Z
  - **ISSUE #41335:** (*syphernl*) [2016.11.5] ssh\_auth.present: IndexError: list index out of range | refs: #41337
  - 06ed4f077b Merge pull request #41337 from Foxlik/2016.11
  - 916fecb64f modify ssh\_test.py, to check empty lines and comments in authorized\_keys #41335
  - 011d6d65e7 Fix #41335 - list index out of range on empty line in authorized\_keys
- **PR #41512:** (*twangboy*) Use psutil where possible in win\_status.py @ 2017-05-31T19:56:00Z

- 1ace72d871 Merge pull request #41512 from twangboy/fix\_win\_status
- 582d09b484 Get psutil import
- fd88bb277f Remove unused imports (lint)
- 41a39dff00 Use psutil where possible
- **PR #41490:** (*t0fik*) Backport of SELinux module installation and removal @ 2017-05-31T19:38:00Z
  - 683cc5f414 Merge pull request #41490 from jdsieci/2016.11\_selinux
  - e2fbada1c1 Backport of SELinux module installation and removal
- **PR #41522:** (*jettero*) Sadly, you can't have `!`s and `\$`s in dict keys in a mongodb doc. @ 2017-05-31T15:55:24Z
  - 2e7e84b8f2 Merge pull request #41522 from jettero/mongodb-keys-are-stupid
  - 12648f5439 dang, thought I already got that. Apparently only got the bottom one. This should do it.
  - 7c4a763518 ugh, forgot about this lint too. This one looks especially terrible.
  - c973988d8d forgot about the linter pass `â` fixed
  - da0d9e4045 Sadly, you can't have `!`s and `\$`s in dict keys in a mongodb doc.
- **PR #41506:** (*gtmanfred*) check for integer types @ 2017-05-31T00:48:21Z
  - **ISSUE #41504:** (*mtkennerly*) Can't set REG\_DWORD registry value larger than 0x7FFFFFFF | refs: #41506
  - 30ad4fd9a0 Merge pull request #41506 from gtmanfred/2016.11
  - 5fe2e9bbf5 check for integer types
- **PR #41469:** (*Ch3LL*) Fix keep\_jobs keyerror in redis returner @ 2017-05-30T18:37:42Z
  - 06ef17dec3 Merge pull request #41469 from Ch3LL/fix\_redis\_error
  - 8ee1251a3a Fix keep\_jobs keyerror in redis returner
- **PR #41473:** (*twangboy*) Fix win\_firewall execution and state modules @ 2017-05-30T18:35:24Z
  - 7a09b2b678 Merge pull request #41473 from twangboy/fix\_win\_firewall
  - e503b455c3 Fix lint error
  - d3f0f8bcd2 Fix win\_firewall execution and state modules
- **PR #41499:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-05-30T18:06:03Z
  - **PR #41439:** (*terminalmage*) base64 encode binary data sent using salt-cp
  - f635cb11c4 Merge pull request #41499 from rallytime/merge-2016.11
  - 20d893d397 Merge branch `2016.3` into `2016.11`
  - 964b1ee027 Merge pull request #41439 from terminalmage/salt-cp-base64
    - \* ebf6cc78c7 base64 encode binary data sent using salt-cp
- **PR #41464:** (*rallytime*) Back-port #39850 to 2016.11 @ 2017-05-26T21:22:44Z
  - **ISSUE #35874:** (*epcim*) keystone.endpoint\_present deletes RegionOne endpoints
  - **PR #39850:** (*epcim*) Fix endpoint handling per region | refs: #41464
  - 83f1e48241 Merge pull request #41464 from rallytime/bp-39850
  - 9b84b751b2 Pylint fixes

- 6db8915021 Endpoint handling per region, fixes #35874 - extend tests for multiple regions - region arg by default set to None - print verbose changes to be exec.
- **PR #41443:** (*UtahDave*) use proper arg number @ 2017-05-26T20:36:37Z
  - 960c5767fa Merge pull request #41443 from UtahDave/fix\_args\_masterpy
  - dfbdc275ca use proper arg number
- **PR #41350:** (*loregordon*) Supports quoted values in /etc/sysconfig/network @ 2017-05-26T16:22:03Z
  - **ISSUE #41341:** (*loregordon*) TypeError traceback in network.system with retain\_settings=True | refs: #41350
  - 88c28c18c3 Merge pull request #41350 from lorengordon/issue-41341
  - f2f6da7039 Supports quoted values in /etc/sysconfig/network
- **PR #41398:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-05-26T15:17:49Z
  - **ISSUE #41234:** (*non7top*) rpm fails to detect already installed packages | refs: #41265
  - **ISSUE #16592:** (*spoonman*) salt-cp fails with large files, cp.get\_file succeeds | refs: #41216
  - **ISSUE #22:** (*thatch45*) Make as many modules as we can think of
  - **PR #41316:** (*Ch3LL*) [2016.3] Bump latest release version to 2016.11.5
  - **PR #41265:** (*terminalmage*) yumpkg: fix latest\_version() when showdupesfromrepos=1 set in /etc/yum.conf
  - **PR #41216:** (*terminalmage*) Make salt-cp work with larger files
  - 824f2d3b69 Merge pull request #41398 from rallytime/merge-2016.11
  - 2941e9c923 Merge pull request #22 from terminalmage/merge-2016.11
    - \* 087a958afc base64 encode binary data sent using salt-cp
  - 503f925275 Add missing import
  - d2d9a3d29f Merge branch `2016.3' into `2016.11'
    - \* d617c9fe72 Merge pull request #41265 from terminalmage/issue41234
      - edf552fe9a Update PKG\_TARGETS for RHEL-based distros
      - 0ecc7b9b20 yumpkg: fix latest\_version() when showdupesfromrepos=1 set in /etc/yum.conf
    - \* 26bd914580 Merge pull request #41316 from Ch3LL/update\_latest\_2016.3
      - 520740d862 [2016.13] Bump latest release version to 2016.11.5
    - \* 18898b7d1f Merge pull request #41216 from terminalmage/issue16592
      - 0e15fdbb1a Update salt-cp integration test to reflect recent changes
      - 10dc695cc4 Make salt-cp work with larger files
      - c078180539 Make KeyErrors more specific when interpreting returns
      - fc401c9eb4 Add generator functions for reading files
- **PR #41442:** (*UtahDave*) use proper arg number @ 2017-05-26T13:42:50Z
  - ec08064b99 Merge pull request #41442 from UtahDave/fix\_args
  - 0324833c9e use proper arg number

- **PR #41397:** (*Enquier*) Updating Nova/Neutron modules to support KeystoneAuth and SSLVerify @ 2017-05-25T21:16:14Z
  - **ISSUE #37824:** (*dxiri*) SSLError Trying to use v3 API of Openstack Newton as provider. | refs: #41397 #40752
  - **ISSUE #36548:** (*abonillasuse*) openstack auth with nova driver | refs: #38647
  - **PR #40752:** (*Enquier*) Add ability to specify a custom SSL certificate or disable SSL verification in KeystoneAuth v3 | refs: #41397
  - **PR #38647:** (*gtmanfred*) Allow novaclient to use keystoneauth1 sessions for authentication | refs: #41397
  - 22096d9213 Merge pull request #41397 from Enquier/neutron-ssl-verify
  - d25dcf61d5 Small error in nova that was preventing execution
  - 0e7a1009ed Updated module docs to include changes made
  - 05e0192665 Adding missing os\_auth\_system
  - 4e0f4981e4 allow service\_type to be specified default is now `network`
  - 991e84343f Added non-profile and defaults for Neutron
  - c93f112c9b Updating Nova Module to include use\_keystone Auth
  - 66ab1e5184 Re-adding neutron dependency check
  - cce07eefc2 Updating Neutron module to suport KeystoneAuth
- **PR #41409:** (*garethgreenaway*) Fixes to ipc transport @ 2017-05-25T21:06:27Z
  - **ISSUE #34460:** (*Ch3LL*) Receive an error when using salt-api to call a runner | refs: #41409
  - 14a58cf536 Merge pull request #41409 from garethgreenaway/34460\_fixes\_ipc\_transport
  - 5613b72dfe Updating the exception variable to be more in line with the rest of the exception code
  - 41eee8b333 Fixing a potential lint issue
  - 760d561dfa Fixing a potential lint issue
  - c11bcd0d12 Changing the approaching and including an except for the action socket.error exception, then logging a trace log if error number is 0 and an error log otherwise.
  - 3f950596f4 Fixing lint issues.
  - f3a6531a69 On occasion an exception will occur which results in the event not returning properly, even though the wire\_bytes is correctly populated. In this situation, we log to trace and continue. #34460
- **PR #41421:** (*UtahDave*) Correct doc to actually blacklist a module @ 2017-05-25T21:01:46Z
  - 824428700d Merge pull request #41421 from UtahDave/fix\_blacklist\_docs
  - 5eb27571a0 Correct doc to actually blacklist a module
- **PR #41431:** (*terminalmage*) Fix regression in state orchestration @ 2017-05-25T18:44:53Z
  - **ISSUE #41353:** (*rmarchei*) Orchestrate runner needs saltenv on 2016.11.5 | refs: #41431
  - b98d5e00d4 Merge pull request #41431 from terminalmage/issue41353
  - 16eae64cca Fix regression in state orchestration
- **PR #41429:** (*ricohouse*) Issue #41338: Return false when compare config fails @ 2017-05-25T17:18:02Z
  - **ISSUE #41338:** (*ricohouse*) Exception not raised when running config compare and the device (Juniper) returns error | refs: #41429

- eeff3dd7fb Merge pull request [#41429](#) from ricohouse/fix-compare-bug
- 9b61665c4c Issue [#41338](#): Return false when compare config fails
- **PR [#41414](#)**: (*Ch3LL*) Update bootstrap script version to latest release(v2017.05.24) @ 2017-05-24T19:51:49Z
  - 561a416cf3 Merge pull request [#41414](#) from Ch3LL/update\_bootstrap
  - d8c03eef60 Update bootstrap script version to latest release(v2017.05.24)
- **PR [#41336](#)**: (*mcalmer*) fix setting and getting locale on SUSE systems @ 2017-05-24T17:46:08Z
  - 88fd3c0ed9 Merge pull request [#41336](#) from mcalmer/fix-locale-on-SUSE
  - f30f5c8a25 fix unit tests
  - 428baa9bce fix setting and getting locale on SUSE systems
- **PR [#41393](#)**: (*rallytime*) Back-port [#41235](#) to 2016.11 @ 2017-05-24T16:08:56Z
  - **PR [#41235](#)**: (*moio*) rest\_cherry.py: remove sleep call | refs: [#41393](#)
  - 4265959647 Merge pull request [#41393](#) from rallytime/bp-41235
  - c79c0e3f43 rest\_cherry.py: remove sleep call
- **PR [#41394](#)**: (*rallytime*) Back-port [#41243](#) to 2016.11 @ 2017-05-24T16:00:17Z
  - **PR [#41243](#)**: (*arif-ali*) Remove the keys that don't exist in the new change | refs: [#41394](#)
  - 83f54694f9 Merge pull request [#41394](#) from rallytime/bp-41243
  - a5351302af Lint fix
  - 05fadcd0af3 Remove the keys that don't exist in the new change
- **PR [#41401](#)**: (*bdrung*) Add documentation key to systemd service files @ 2017-05-24T15:49:54Z
  - 3a45ac30f0 Merge pull request [#41401](#) from bdrung/systemd-service-documentation-key
  - 3f7f30895d Add documentation key to systemd service files
- **PR [#41404](#)**: (*bdrung*) Fix typos @ 2017-05-24T14:42:44Z
  - d34333c30b Merge pull request [#41404](#) from bdrung/fix-typos
  - 33a7f8b2ec Fix typos
- **PR [#41388](#)**: (*bdrung*) Do not require sphinx-build for cleaning docs @ 2017-05-23T19:32:41Z
  - 3083764195 Merge pull request [#41388](#) from bdrung/clean-doc-without-sphinx
  - 5b79a0a9f8 Do not require sphinx-build for cleaning docs
- **PR [#41364](#)**: (*automate-solutions*) Fix issue [#41362](#) invalid parameter used: KeyName.1 instead of KeyName @ 2017-05-23T17:32:10Z
  - **ISSUE [#41362](#)**: (*automate-solutions*) On AWS EC2: salt-cloud -f delete\_keypair ec2 keyname=mykeypair doesn't delete the keypair
  - 842875e590 Merge pull request [#41364](#) from automate-solutions/fix-issue-41362
  - cfd8eb7a87 Set DescribeKeyPairs back to KeyName.1 according to documentation
  - 6a82ddc6fc Fix issue [#41362](#) invalid parameter used: KeyName.1 instead of KeyName
- **PR [#41383](#)**: (*peter-funktionIT*) Update win\_pki.py | refs: [#41453](#) @ 2017-05-23T17:26:43Z
  - **ISSUE [#40950](#)**: (*idokaplan*) Import certificate | refs: [#41383](#) [#41453](#)
  - 92f94e66bc Merge pull request [#41383](#) from peter-funktionIT/fix-win\_pki-get\_cert\_file

- 4d9bd06176 Update win\_pki.py
- **PR #41113:** (*cro*) Rescue proxy\_auto\_tests PR from git rebase hell @ 2017-05-22T17:05:07Z
  - **PR #39575:** (*cro*) WIP: Proxy auto test, feedback appreciated | refs: #41113
  - 1ba95684a9 Merge pull request #41113 from cro/proxy\_auto\_test2
  - 19db038b99 Fix test--use proxy\_config instead of minion\_config
  - 7749ceadb6 Change default proxy minion opts so only the proxy-specific ones are listed, and the rest are taken from DEFAULT\_MINION\_OPTS.
  - 106394c80c Lint.
  - 3be90cc9f4 Rescue proxy\_auto\_tests PR from git rebase hell
- **PR #41360:** (*cro*) Sysrc on FreeBSD, YAML overeager to coerce to bool and int @ 2017-05-22T15:54:31Z
  - 375892d910 Merge pull request #41360 from cro/sysrc\_fix
  - 6db31ce52a Fix problem with sysrc on FreeBSD, YAML overeager to coerce to bool and int.
- **PR #41372:** (*terminalmage*) Don't use intermediate file when listing contents of tar.xz file @ 2017-05-22T15:36:45Z
  - **ISSUE #41190:** (*jheidbrink*) Cannot extract tar.xz archive when it exceeds size of /tmp | refs: #41372
  - 01b71c75c1 Merge pull request #41372 from terminalmage/issue41190
  - 1f08936d9c Remove unused import
  - 68cb897520 Replace reference to fileobj
  - 788874408a Remove `\*` from mode
  - 3d4b833627 Don't use intermediate file when listing contents of tar.xz file
- **PR #41373:** (*alex-zel*) Allow HTTP authentication to ES. @ 2017-05-22T15:32:09Z
  - 5edfcf972c Merge pull request #41373 from alex-zel/patch-3
  - 3192eab128 Allow HTTP authentication to ES.
- **PR #41287:** (*garethgreenaway*) Fix to consul cache @ 2017-05-19T18:32:56Z
  - **ISSUE #40748:** (*djhasikin987*) Consul backend minion cache does not work | refs: #41287
  - 29bd7f48b7 Merge pull request #41287 from garethgreenaway/40748\_2016\_11\_consul
  - 5039fe12fb Removing chdir as it is no needed with this change
  - 4550c3ce49 Updating the code that is pulling in the list of cached minions to use self.cache.list instead of relying on checking the local file system, which only works for the localfs cache method. #40748
- **PR #41309:** (*garethgreenaway*) Adding test argument for runners & wheel orchestration modules @ 2017-05-19T18:26:09Z
  - **ISSUE #38894:** (*amendlik*) salt.runner and salt.wheel ignore test=True | refs: #41309 #41611
  - 672aaa88d3 Merge pull request #41309 from garethgreenaway/38894\_allowing\_test\_argument
  - e1a88e8bf7 Allowing test=True to be passed for salt.runner and salt.wheel when used with orchestration
- **PR #41319:** (*lomerioe*) backport #41307 to 2016.11, properly pack version numbers into single @ 2017-05-19T18:25:00Z
  - **ISSUE #41306:** (*lomerioe*) win\_lgpo does not properly pack group policy version number in gpt.ini | refs: #41319 #41307

- **PR #41307:** (*lomeroe*) properly pack/unpack the version numbers into a number | refs: #41319
- 140b0427e1 Merge pull request #41319 from lomeroe/bp\_41307
- 4f0aa577a5 backport 41307 to 2016.11, properly pack version numbers into single number
- **PR #41327:** (*Ch3LL*) Add 2016.11.6 Release Notes @ 2017-05-19T18:05:09Z
  - 6bdb7cca7d Merge pull request #41327 from Ch3LL/add\_2016.11.6\_release
  - e5fc0aeb9c Add 2016.11.6 Release Notes
- **PR #41329:** (*loregordon*) Corrects versionadded for win\_network.get\_route @ 2017-05-19T17:47:57Z
  - 1faffd3932 Merge pull request #41329 from loregordon/doc-fix
  - 3c471247f0 Corrects versionadded for win\_network.get\_route
- **PR #41322:** (*Ch3LL*) Add patched packages warning to 2016.11.5 release notes @ 2017-05-18T21:53:26Z
  - 6ca65592da Merge pull request #41322 from Ch3LL/fix\_release\_2016.11.5\_notes
  - 9a1bf4205f fix url refs in rst
  - cde008ff77 Add patched packages warning to 2016.11.5 release notes
- **PR #41208:** (*pkazmierczak*) Fix: zypper handling of multiple version packages @ 2017-05-18T15:44:26Z
  - 9f359d841f Merge pull request #41208 from pkazmierczak/pkazmierczak-zypper-multiple-ver-pkgs
  - d411a91676 Reverted back to cascading with statements for python 2.6 compat
  - 7204013653 Compacted with statements in the unit test.
  - 6c4c08042c Added unit tests and copied the behavior to .upgrade method, too.
  - 5f952007f6 Fix: zypper handling of multiple version packages
- **PR #41317:** (*Ch3LL*) [2016.11] Bump latest release version to 2016.11.5 @ 2017-05-18T15:34:13Z
  - bcef99adb6 Merge pull request #41317 from Ch3LL/update\_latest\_2016.11
  - cdb072c207 [2016.11] Bump latest release version to 2016.11.5
- **PR #41232:** (*axmetishe*) Add basic auth for SPM @ 2017-05-17T19:08:56Z
  - b8ddd7ee08 Merge pull request #41232 from axmetishe/2016.11
  - 76104f23b4 Add basic auth for SPM
- **PR #41236:** (*BenoitKnecht*) states: cron: show correct changes when using *special* @ 2017-05-17T18:51:58Z
  - 7bdb66d969 Merge pull request #41236 from BenoitKnecht/2016.11
  - 33211d032e states: cron: show correct changes when using *special*
- **PR #41269:** (*isbm*) Bugfix: Unable to use ``127" as hostname for the Minion ID @ 2017-05-17T18:31:15Z
  - 1c1e092f56 Merge pull request #41269 from isbm/isbm-minion-id-127-name
  - 5168ef8959 Add unit test for hostname can be started from 127
  - 0d0354198b Harden to 127. IP part
  - d9c8324a6b Unit test for accepting hosts names as 127
  - 65b03c667b Bugfix: unable to use 127 as hostname
- **PR #41289:** (*garethgreenaway*) Fixing consul cache @ 2017-05-17T16:54:12Z
  - d0fa31d4ca Merge pull request #41289 from garethgreenaway/2016\_11\_5\_fix\_consul\_cache\_ls

- 780a28c9a0 Swapping the order in the func\_alias so the ls function is available.
- **PR #41303:** (*lomeroy*) backport #41301 -- properly convert packed string to decimal values @ 2017-05-17T16:32:22Z
  - **ISSUE #41291:** (*lomeroy*) win\_lgpo does not properly convert large decimal values in regpol data | refs: #41301 #41303
  - **PR #41301:** (*lomeroy*) properly convert packed string to decimal values | refs: #41303
  - 6566648948 Merge pull request #41303 from lomeroy/bp-41301
  - f4b93f9d9a properly convert packed string to decimal values
- **PR #41283:** (*terminalmage*) Backport #41251 to 2016.11 @ 2017-05-16T18:01:17Z
  - **ISSUE #41231:** (*kaihowl*) PR #30777 misses an update to the documentation for pkg.installed and hold:true | refs: #41251
  - **ISSUE #30733:** (*ealphonse*) version-controlled packages with hold: True can no longer be upgraded by salt | refs: #30777
  - **PR #41251:** (*abednarik*) Update apt module regarding upgrade against hold packages.
  - **PR #30777:** (*abednarik*) Fix update apt hold pkgs | refs: #41251
  - 44598617be Merge pull request #41283 from terminalmage/bp-41251
  - ed03ca534f Update apt module regarding upgrade against hold packages.
- **PR #41181:** (*gtmanfred*) add resolving extra flags to yum upgrade @ 2017-05-16T04:07:47Z
  - d8e9676fcf Merge pull request #41181 from gtmanfred/2016.11
  - 2ca71713b1 use six and clean\_kwargs
  - c9bf09a5a1 add resolving extra flags to yum upgrade
- **PR #41220:** (*rallytime*) Back-port #40246 to 2016.11 @ 2017-05-15T17:59:38Z
  - **ISSUE #40177:** (*eldadru*) libcloud\_dns state "`global name `\_\_salt\_\_` is not defined" in salt.cmd runner | refs: #40246 #40246
  - **PR #40246:** (*tonybaloney*) Fix libcloud\_dns state module bug | refs: #41220
  - 75942235f0 Merge pull request #41220 from rallytime/bp-40246
  - 79f1bb2bba Remove unused/duplicate imports leftover from merge-conflict resolution
  - 2f610680e5 remove unused imports
  - 9b7de2e7d7 fix unit tests
  - 49d94559ab linting
  - 4b260a4594 linting
  - 41d1adab5f fix up tests
  - b3822e03fc add fixes for incorrectly importing modules directly instead of using \_\_salt\_\_
- **PR #41244:** (*cachedout*) Fix ipv6 nameserver grains @ 2017-05-15T17:55:39Z
  - **ISSUE #41230:** (*RealKelsar*) 2016.11.5 IPv6 nameserver in resolv.conf leads to minion exception | refs: #41244 #41244
  - **ISSUE #40912:** (*razed11*) IPV6 Warning when ipv6 set to False | refs: #40934
  - **PR #40934:** (*gtmanfred*) Only display IPvX warning if role is master | refs: #41244 #41244

- 53d5b3e816 Merge pull request #41244 from cachedout/fix\_ipv6\_nameserver\_grains
- f745db1a43 Lint
- 6e1ab69710 Partial revert of #40934
- 88f49f9146 Revert ``Only display IPvX warning if role is master"
- **PR #41242:** (*prrkut*) Fix changing a mysql user to unix socket authentication. @ 2017-05-15T17:00:06Z
  - 895fe582eb Merge pull request #41242 from M2Mobi/mysql\_socket\_auth
  - 7d8359766d Fix changing a mysql user to unix socket authentication.
- **PR #41101:** (*terminalmage*) Fix ``latest" keyword for version specification when used with aggregation @ 2017-05-15T16:52:35Z
  - **ISSUE #40940:** (*djhaskin987*) When *state\_aggregate* is set to *True*, the *latest* keyword doesn't work with `pkg.installed` | refs: #41101
  - 50d8fde123 Merge pull request #41101 from terminalmage/issue40940
  - 7fe64219ae Add rtag check to integration test for `pkg.refresh_db`
  - 88a08aa3bf Add comments to explain what removing the rtag file actually does
  - 92011dbe5f Fix ``latest" keyword for version specification when used with aggregation
- **PR #41146:** (*terminalmage*) gitfs: Backport performance fixes for getting tree objects @ 2017-05-12T17:35:47Z
  - **ISSUE #34775:** (*babilen*) Please allow users to disable branch environment mapping in GitFS | refs: #41144
  - **PR #41144:** (*terminalmage*) gitfs: Add two new options to affect saltenv mapping | refs: #41146
  - 049712ba53 Merge pull request #41146 from terminalmage/backport-get\_tree-performance-improvement
  - f9d6734afe gitfs: Backport performance fixes for getting tree objects
- **PR #41161:** (*The-Loeki*) gpg renderer: fix `gpg_keydir` always reverting to default @ 2017-05-12T17:19:07Z
  - **ISSUE #41135:** (*shallot*) gpg renderer doesn't seem to work with salt-ssh, tries to execute gpg on the minion? | refs: #41161
  - 4215a0b99d Merge pull request #41161 from The-Loeki/2016.11
  - 24946fef18 gpg renderer: fix `gpg_keydir` always reverting to default
- **PR #41163:** (*onlyanegg*) Elasticsearch - pass hosts and profile to `index_exists()` @ 2017-05-12T17:18:06Z
  - **ISSUE #41162:** (*onlyanegg*) Elasticsearch module functions should pass hosts and profile to `index_exists()` | refs: #41163
  - 5b10fc58ba Merge pull request #41163 from onlyanegg/elasticsearch-pass\_profile\_to\_index\_exists
  - 7f512c701b Pass hosts and profile to `index_exists()` method
- **PR #41186:** (*jmarinero*) Fix package name collisions in chocolatey state @ 2017-05-12T17:01:31Z
  - **ISSUE #41185:** (*jmarinero*) package name collisions in chocolatey state | refs: #41186
  - d433cf850d Merge pull request #41186 from jmarinero/fix-chocolatey-package-collision
  - 229f3bf9f3 apply changes to `uninstalled` function
  - ffd4c7ef04 Fix package name collisions in chocolatey state

- **PR #41189:** (*github-abcde*) `utils/minions.py`: Fixed case where data is an empty dict resulting in... @ 2017-05-12T16:32:25Z
  - bb5ef41ce0 Merge pull request #41189 from github-abcde/utils-minions-fix
  - 853dc5406c `utils/minions.py`: Fixed case where data is an empty dict resulting in errors.
- **PR #41104:** (*Ch3LL*) Add test to query results of `/jobs` call in api @ 2017-05-10T20:11:08Z
  - b136b15330 Merge pull request #41104 from Ch3LL/add\_jobs\_test
  - dac16583b7 add test to query results of `/jobs` call in api
- **PR #41170:** (*lomeroy*) Backport #41081 to 2016.11 @ 2017-05-10T19:58:52Z
  - **PR #41081:** (*lomeroy*) Update `win_dns_client` to use `reg.read_value` and `set_value` | refs: #41170
  - ca18b4df93 Merge pull request #41170 from lomeroy/bp-41081
  - 2af89f2165 update mock data
  - b7fa115a59 update `win_dns_client` tests with correct module names
  - 4d05a22675 Update `win_dns_client` to use `reg.read_value` and `set_value`
- **PR #41173:** (*twangboy*) Add silent action to `MsgBox` for Path Actions @ 2017-05-10T19:57:06Z
  - d7ec37b003 Merge pull request #41173 from twangboy/fix\_installer
  - 24b11ffdc2 Add release notes
  - 96918dcfa6 Add silent action to `MsgBox` for Path Actions
- **PR #41158:** (*Ch3LL*) 2016.11.5 release notes: add additional commits @ 2017-05-09T22:41:40Z
  - 88e93b7fe5 Merge pull request #41158 from Ch3LL/update\_2016.11.5
  - 28371aa035 2016.11.5 release notes: add additional commits
- **PR #41148:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-05-09T20:23:28Z
  - **PR #41123:** (*terminalmage*) Add note on lack of support for VSTS in older `libssh2` releases.
  - **PR #41122:** (*terminalmage*) `gitfs`: refresh env cache during update in `masterless`
  - **PR #41090:** (*bbinet*) `rdurations` should be floats so that they can be summed when profiling
  - d2ae7deff2 Merge pull request #41148 from rallytime/merge-2016.11
  - aba35e20dd Merge branch `2016.3` into `2016.11`
    - \* 2969153097 Merge pull request #41122 from terminalmage/masterless-env\_cache-fix
      - be732f0577 `gitfs`: refresh env cache during update in `masterless`
    - \* b8f0a4f108 Merge pull request #41123 from terminalmage/gitfs-vsts-note
      - f6a16956a0 Add note on lack of support for VSTS in older `libssh2` releases.
    - \* 8f79b6f537 Merge pull request #41090 from bbinet/rdurations\_float
    - \* fd48a63653 `rdurations` should be floats so that they can be summed when profiling
- **PR #41147:** (*rallytime*) Back-port #39676 to 2016.11 @ 2017-05-09T18:40:44Z
  - **PR #39676:** (*F30*) Fix comments about the ```hash_type"` option | refs: #41147
  - 2156395b2e Merge pull request #41147 from rallytime/bp-39676
  - 5b55fb2452 Fix comments about the ```hash_type"` option

- **PR #40852:** (*isbm*) Isbm fix coregrains constants bsc`#1032931`\_@ 2017-05-09T18:35:46Z
  - **ISSUE #1032931:** (\*\*)
  - a2f359fa13 Merge pull request #40852 from isbm/isbm-fix-coregrains-constants-bsc`#1032931`\_
  - f3b12a3f5b Do not use multiple variables in ``with" statement as of lint issues
  - 35a8d99934 Disable the test for a while
  - 76cb1b7150 Rewrite test case for using no patch decorators
  - f71af0b625 Fix lint issues
  - 0e6abb3e37 Add UT on set\_hw\_clock on Gentoo
  - a2b1d4638c Add UT for set\_hwclock on Debian
  - 5356a0821a Bugfix: use correct grain name for SUSE platform
  - 88e8184702 Add UT set\_hwclock on SUSE
  - 0cd590f927 Fix UT names
  - bee94ade63 Add UT for set\_hwclock on RedHat
  - dfe2610d05 Add UT for set\_hwclock on Arch
  - d000a8a6f5 Add UT for set\_hwclock on solaris
  - d2614aadaa Fix docstrings
  - 6d782191dc Add UT for set\_hwclock on AIX
  - d303e0dd8a Add UT for AIX on get\_hwclock
  - 86f2d83781 Add UT on Solaris
  - c3cafed6d5 Add UT for Debian on get\_hwclock
  - d337c09357 Add UT for RedHat/SUSE platforms on get\_hwclock
  - 501a59ca7e Bugfix: use correct grain for SUSE and RedHat platform
  - f25dc5c56c Add UT for get\_hwclock on SUSE platform
  - 08e00c865c Remove dead code
  - 1216a0bf12 Add UT for get\_hwclock on UTC/localtime
  - 39332c71d3 Remove duplicate code
  - 58676c568d Add UT for Debian on set\_zone
  - 1b9ce37b1b Add UT for gentoo on set\_zone
  - cf7f766a68 Bugfix: use correct os\_family grain value for SUSE series
  - 6ed9be985e Adjust UT to use correct grain for SUSE series
  - ce4c836a60 Add UT for set\_zone on SUSE series
  - 155a498b49 Doc fix
  - a40876cdac Remove unnecessary mock patch
  - ffab2db213 Fix doc for RH UT
  - 72388f7ae2 Add UT for RedHat's set\_zone
  - 11595d3a42 Refactor with setup/teardown

- ce6a06de98 Bugfix: use correct grain constant for platform
- 28072c9e41 Adjust the test so it is using the right grain for SUSE systems
- 7a0e4be4f8 Add unit test for get\_zone and various platforms
- **PR #41111:** (*terminalmage*) Allow `ssl_verify: False` to work with pygit2 @ 2017-05-09T17:56:12Z
  - **ISSUE #41105:** (*terminalmage*) `ssl_verify gitfs/git_pillar` option does not work with pygit2 | refs: #41111
  - 6fa41dc89d Merge pull request #41111 from terminalmage/issue41105
  - 8c6410e3cd Add notices about `ssl_verify` only working in 0.23.2 and newer
  - 98ce829729 Support `ssl_verify` in pygit2
  - f73c4b7167 Add `http(s) auth config docs` for GitPython
- **PR #41008:** (*cro*) Look in `/opt/lib` instead of just `/opt/local/lib` on Illumos distros. @ \*2017-05-09T16:56:00Z
  - 81add1b944 Merge pull request #41008 from cro/rsax\_smos
  - a4f7aa145e Look for `libcrypto` in both `/opt/tools` and `/opt/local` on Illumos-based distros.
- **PR #41124:** (*gtmanfred*) add `user_data` to digitalocean @ 2017-05-09T16:47:42Z
  - c649725e9b Merge pull request #41124 from gtmanfred/do
  - 2370d9316b add `user_data` to digital ocean
- **PR #41127:** (*tmeneau*) Fix incorrect `service.running` state response when `enable=None` and `init script` returns 0 @ 2017-05-09T16:43:35Z
  - **ISSUE #41125:** (*tmeneau*) `service.running` returns `True` if `enable=None` and `init script` returns 0 | refs: #41127
  - d0a3fcf33a Merge pull request #41127 from xetus-oss/fix-41125-service-running
  - d8766562c9 fix incorrect `service.running` success response

## 20.2.14 Salt 2016.11.7 Release Notes

Version 2016.11.7 is a bugfix release for *2016.11.0*.

### Changes for v2016.11.6..v2016.11.7

#### Security Fix

CVE-2017-12791 Maliciously crafted minion IDs can cause unwanted directory traversals on the Salt-master

Correct a flaw in minion id validation which could allow certain minions to authenticate to a master despite not having the correct credentials. To exploit the vulnerability, an attacker must create a salt-minion with an ID containing characters that will cause a directory traversal. Credit for discovering the security flaw goes to: [Vernhk@qq.com](mailto:Vernhk@qq.com)

## 20.2.15 Salt 2016.11.8 Release Notes

Version 2016.11.8 is a bugfix release for *2016.11.0*.]

## Changes for v2016.11.7..v2016.11.8

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Statistics:

- Total Merges: **169**
- Total Issue references: **70**
- Total PR references: **206**

Changes:

- **PR #43271:** (*twangboy*) Fix minor formatting issue @ 2017-08-30T18:35:12Z
  - cf21f91 Merge pull request #43271 from twangboy/win\_fix\_pkg.install
  - 91b062f Fix formatting issue, spaces surrounding +
- **PR #43228:** (*twangboy*) Win fix pkg.install @ 2017-08-30T14:26:21Z
  - 3a0b02f Merge pull request #43228 from twangboy/win\_fix\_pkg.install
  - 13dfabb Fix regex statement, add .
  - 31ff69f Add underscore to regex search
  - 3cf2b65 Fix spelling
  - ed030a3 Use regex to detect salt-minion install
  - e5daff4 Fix pkg.install
- **PR #43191:** (*viktorkrivak*) Fix apache.config with multiple statement @ 2017-08-28T18:13:44Z
  - b4c689d Merge pull request #43191 from viktorkrivak/fix-apache-config-multi-entity
  - c15bcbe Merge remote-tracking branch `upstream/2016.11' into fix-apache-config-multi-entity
  - 4164047 Fix apache.config with multiple statement At this moment when you post more than one statement in config only last is used. Also file is rewritten multiple times until last statement is written. Example: salt `\*` apache.config /etc/httpd/conf.d/ports.conf config="[{'Listen': `8080'}, {'Proxy': ``Something"}]" Ends only with Proxy Something and ignore Listen 8080, This patch fix this issue.
- **PR #43154:** (*lomeroy*) Backport #43116 to 2016.11 @ 2017-08-28T16:40:41Z
  - **ISSUE #42279:** (*dafyddj*) win\_lgpo matches multiple policies due to startswith() | refs: #43116 #43116 #43154
  - **PR #43116:** (*lomeroy*) Fix 42279 in develop | refs: #43154
  - b90e59e Merge pull request #43154 from lomeroy/bp-43116-2016.11
  - 8f593b0 verify that files exist before trying to remove them, win\_file.remove raises an exception if the file does not exist
  - 33a30ba correcting bad format statement in search for policy to be disabled
  - acc3d7a correct fopen calls from salt.utils for 2016.11's utils function
  - 2da1cdd lint fix
  - 61bd12c track xml namespace to ensure policies w/duplicate IDs or Names do not conflict
  - f232bed add additional checks for ADM policies that have the same ADMX policy ID (#42279)

- **PR #43202:** (*garethgreenaway*) Reverting previous augeas module changes @ 2017-08-28T13:14:27Z
  - **ISSUE #42642:** (*githubcdr*) state.augeas | refs: #42669 #43202
  - 5308c27 Merge pull request #43202 from garethgreenaway/42642\_2016\_11\_augeas\_module\_revert\_fix
  - ef7e93e Reverting this change due to it breaking other uses.
- **PR #43103:** (*aogier*) genesis.bootstrap debootstrap fix @ 2017-08-25T20:48:23Z
  - **ISSUE #43101:** (*aogier*) genesis.bootstrap fails if no pkg AND exclude\_pkgs (which can't be a string) | refs: #43103
  - f16b724 Merge pull request #43103 from aogier/43101-genesis-bootstrap
  - db94f3b better formatting
  - e5cc667 tests: fix a leftover and simplify some parts
  - 13e5997 lint
  - 216ced6 allow comma-separated pkgs lists, quote args, test deb behaviour
  - d8612ae fix debootstrap and enhance packages selection/deletion via cmdline
- **PR #42663:** (*jagguli*) Check remote tags before deciding to do a fetch #42329 @ 2017-08-25T20:14:32Z
  - **ISSUE #42329:** (*jagguli*) State git.latest does not pull latest tags | refs: #42663
  - 4863771 Merge pull request #42663 from StreetHawkInc/fix\_git\_tag\_check
  - 2b5af5b Remove refs/tags prefix from remote tags
  - 3f2e96e Convert set to list for serializer
  - 2728e5d Only include new tags in changes
  - 4b1df2f Exclude annotated tags from checks
  - 389c037 Check remote tags before deciding to do a fetch #42329
- **PR #43199:** (*corywright*) Add `disk.format` alias for `disk.format_` @ 2017-08-25T19:21:07Z
  - **ISSUE #43198:** (*corywright*) `disk.format_` needs to be aliased to `disk.format` | refs: #43199
  - 4193e7f Merge pull request #43199 from corywright/disk-format-alias
  - f00d3a9 Add `disk.format` alias for `disk.format_`
- **PR #43196:** (*gtmanfred*) Pin request install to version for npm tests @ 2017-08-25T18:43:06Z
  - **ISSUE #495:** (*syphernl*) `mysql.*` without having MySQL installed/configured gives traceback | refs: #43196
  - 5471f9f Merge pull request #43196 from gtmanfred/2016.11
  - ccd2241 Pin request install to version
- **PR #43178:** (*terminalmage*) git.detached: Fix traceback when rev is a SHA and is not present locally @ 2017-08-25T13:58:37Z
  - **ISSUE #43143:** (*abulford*) git.detached does not fetch if rev is missing from local | refs: #43178
  - ace2715 Merge pull request #43178 from terminalmage/issue43143
  - 2640833 git.detached: Fix traceback when rev is a SHA and is not present locally
- **PR #43179:** (*terminalmage*) Fix missed deprecation @ 2017-08-24T22:52:34Z
  - 12e9507 Merge pull request #43179 from terminalmage/old-deprecation

- 3adf8ad Fix missed deprecation
- **PR #43171:** (*terminalmage*) Add warning about adding new functions to salt/utils/\_\_init\_\_.py @ 2017-08-24T19:10:23Z
  - b595440 Merge pull request #43171 from terminalmage/salt-utils-warning
  - 7b5943a Add warning about adding new functions to salt/utils/\_\_init\_\_.py
- **PR #43173:** (*Ch3LL*) Add New Release Branch Strategy to Contribution Docs @ 2017-08-24T19:04:56Z
  - 4f273ca Merge pull request #43173 from Ch3LL/add\_branch\_docs
  - 1b24244 Add New Release Branch Strategy to Contribution Docs
- **PR #43151:** (*ushmodin*) state.sls hangs on file.recurse with clean: True on windows @ 2017-08-23T17:25:33Z
  - **PR #42969:** (*ushmodin*) state.sls hangs on file.recurse with clean: True on windows | refs: #43151
  - 669b376 Merge pull request #43151 from ushmodin/2016.11
  - c5841e2 state.sls hangs on file.recurse with clean: True on windows
- **PR #42986:** (*renner*) Notify systemd synchronously (via NOTIFY\_SOCKET) @ 2017-08-22T16:52:56Z
  - ae9d2b7 Merge pull request #42986 from renner/systemd-notify
  - 79c53f3 Fallback to systemd\_notify\_call() in case of socket.error
  - f176547 Notify systemd synchronously (via NOTIFY\_SOCKET)
- **PR #43037:** (*mcarlton00*) Issue #43036 Bhyve virtual grain in Linux VMs @ 2017-08-22T16:43:40Z
  - **ISSUE #43036:** (*mcarlton00*) Linux VMs in Bhyve aren't displayed properly in grains | refs: #43037
  - b420fbe Merge pull request #43037 from mcarlton00/fix-bhyve-grains
  - 73315f0 Issue #43036 Bhyve virtual grain in Linux VMs
- **PR #43100:** (*vutny*) [DOCS] Add missing *utils* sub-dir listed for *extension\_modules* @ 2017-08-22T15:40:09Z
  - 0a86f2d Merge pull request #43100 from vutny/doc-add-missing-utils-ext
  - af743ff [DOCS] Add missing *utils* sub-dir listed for *extension\_modules*
- **PR #42985:** (*DmitryKuzmenko*) Properly handle *prereq* having lost requisites. @ 2017-08-21T22:49:39Z
  - **ISSUE #15171:** (*JensRantil*) Maximum recursion limit hit related to requisites | refs: #42985
  - e2bf2f4 Merge pull request #42985 from DSRCorporation/bugs/15171\_recursion\_limit
  - 651b1ba Properly handle *prereq* having lost requisites.
- **PR #43092:** (*blarghmatey*) Fixed issue with silently passing all tests in Testinfra module @ 2017-08-21T20:22:08Z
  - e513333 Merge pull request #43092 from mitodl/2016.11
  - d4b113a Fixed issue with silently passing all tests in Testinfra module
- **PR #43060:** (*twangboy*) Osx update pkg scripts @ 2017-08-21T20:06:12Z
  - 77a443c Merge pull request #43060 from twangboy/osx\_update\_pkg\_scripts
  - ef8a14c Remove /opt/salt instead of /opt/salt/bin
  - 2dd62aa Add more information to the description
  - f44f5b7 Only stop services if they are running
  - 3b62bf9 Remove salt from the path

- ebdca3a Update pkg-scripts
- **PR #43064:** (*terminalmage*) Fix race condition in git.latest @ 2017-08-21T14:29:52Z
  - **ISSUE #42869:** (*abednarik*) Git Module : Failed to update repository | refs: #43064
  - 1b1b6da Merge pull request #43064 from terminalmage/issue42869
  - 093c0c2 Fix race condition in git.latest
- **PR #43054:** (*loregordon*) Uses ConfigParser to read yum config files @ 2017-08-18T20:49:44Z
  - **ISSUE #42041:** (*loregordon*) pkg.list\_repo\_pkgs fails to find pkgs with spaces around yum repo enabled value | refs: #43054
  - **PR #42045:** (*arount*) Fix: salt.modules.yumpkg: ConfigParser to read ini like files. | refs: #43054
  - 96e8e83 Merge pull request #43054 from lorengordon/fix/yumpkg/config-parser
  - 3b2cb81 fix typo in salt.modules.yumpkg
  - 38add0e break if leading comments are all fetched
  - d7f65dc fix configparser import & log if error was raised
  - ca1b1bb use configparser to parse yum repo file
- **PR #43048:** (*rallytime*) Back-port #43031 to 2016.11 @ 2017-08-18T12:56:04Z
  - **PR #43031:** (*gtmanfred*) use a ruby gem that doesn't have dependencies | refs: #43048
  - 43aa46f Merge pull request #43048 from rallytime/bp-43031
  - 35e4504 use a ruby gem that doesn't have dependencies
- **PR #43023:** (*terminalmage*) Fixes/improvements to Jenkins state/module @ 2017-08-18T01:33:10Z
  - ad89ff3 Merge pull request #43023 from terminalmage/fix-jenkins-xml-caching
  - 33fd8ff Update jenkins.py
  - fc306fc Add missing colon in *if* statement
  - 822eabc Catch exceptions raised when making changes to jenkins
  - 91b583b Improve and correct exception raising
  - f096917 Raise an exception if we fail to cache the config xml
- **PR #43026:** (*rallytime*) Back-port #43020 to 2016.11 @ 2017-08-17T23:19:46Z
  - **PR #43020:** (*gtmanfred*) test with gem that appears to be abandoned | refs: #43026
  - 2957467 Merge pull request #43026 from rallytime/bp-43020
  - 0eb15a1 test with gem that appears to be abandoned
- **PR #43033:** (*rallytime*) Back-port #42760 to 2016.11 @ 2017-08-17T22:24:43Z
  - **ISSUE #40490:** (*alxwr*) saltstack x509 incompatible to m2crypto 0.26.0 | refs: #42760
  - **PR #42760:** (*AFriemann*) Catch TypeError thrown by m2crypto when parsing missing subjects in c... | refs: #43033
  - 4150b09 Merge pull request #43033 from rallytime/bp-42760
  - 3e3f7f5 Catch TypeError thrown by m2crypto when parsing missing subjects in certificate files.
- **PR #43032:** (*rallytime*) Back-port #42547 to 2016.11 @ 2017-08-17T21:53:50Z
  - **PR #42547:** (*blarghmatey*) Updated testinfra modules to work with more recent versions | refs: #43032

- b124d36 Merge pull request #43032 from rallytime/bp-42547
- ea4d7f4 Updated testinfra modules to work with more recent versions
- **PR #43027:** (*pabloh007*) Fixes ignore push flag for docker.push module issue #42992 @ 2017-08-17T19:55:37Z
  - **ISSUE #42992:** (*pabloh007*) docker.save flag push does is ignored
  - a88386a Merge pull request #43027 from pabloh007/fix-docker-save-push-2016-11
  - d0fd949 Fixes ignore push flag for docker.push module issue #42992
- **PR #42890:** (*DmitryKuzmenko*) Make chunked mode in salt-cp optional @ 2017-08-17T18:37:44Z
  - **ISSUE #42627:** (*taigr8*) salt-cp no longer works. Was working a few months back. | refs: #42890
  - 51d1684 Merge pull request #42890 from DSRCorporation/bugs/42627\_salt-cp
  - cfddb1 Apply code review: update the doc
  - afedd3b Typos and version fixes in the doc.
  - 9fedf60 Fixed `test\_valid\_docs` test.
  - 9993886 Make chunked mode in salt-cp optional (disabled by default).
- **PR #43009:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-08-17T18:00:09Z
  - **PR #42954:** (*Ch3LL*) [2016.3] Bump latest and previous versions
  - **PR #42949:** (*Ch3LL*) Add Security Notice to 2016.3.7 Release Notes
  - **PR #42942:** (*Ch3LL*) [2016.3] Add clean\_id function to salt.utils.verify.py
  - b3c253c Merge pull request #43009 from rallytime/merge-2016.11
  - 566ba4f Merge branch `2016.3` into `2016.11`
    - \* 13b8637 Merge pull request #42942 from Ch3LL/2016.3.6\_follow\_up
      - f281e17 move additional minion config options to 2016.3.8 release notes
      - 168604b remove merge conflict
      - 8a07d95 update release notes with cve number
      - 149633f Add release notes for 2016.3.7 release
      - 7a4cddc Add clean\_id function to salt.utils.verify.py
    - \* bbb1b29 Merge pull request #42954 from Ch3LL/latest\_2016.3
      - b551e66 [2016.3] Bump latest and previous versions
    - \* 5d5edc5 Merge pull request #42949 from Ch3LL/2016.3.7\_docs
      - d75d374 Add Security Notice to 2016.3.7 Release Notes
- **PR #43021:** (*terminalmage*) Use socket.AF\_INET6 to get the correct value instead of doing an OS check @ 2017-08-17T17:57:09Z
  - **PR #43014:** (*Ch3LL*) Change AF\_INET6 family for mac in test\_host\_to\_ips | refs: #43021
  - 37c63e7 Merge pull request #43021 from terminalmage/fix-network-test
  - 4089b7b Use socket.AF\_INET6 to get the correct value instead of doing an OS check
- **PR #43019:** (*rallytime*) Update bootstrap script to latest stable: v2017.08.17 @ 2017-08-17T17:56:41Z
  - 8f64232 Merge pull request #43019 from rallytime/bootstrap\_2017.08.17

- 2f762b3 Update bootstrap script to latest stable: v2017.08.17
- **PR #43014:** (*Ch3LL*) Change AF\_INET6 family for mac in test\_host\_to\_ips | refs: #43021 @ 2017-08-17T16:17:51Z
  - ff1caeee Merge pull request #43014 from Ch3LL/fix\_network\_mac
  - b8eee44 Change AF\_INET6 family for mac in test\_host\_to\_ips
- **PR #42968:** (*vutny*) [DOCS] Fix link to Salt Cloud Feature Matrix @ 2017-08-16T13:16:16Z
  - 1ee9499 Merge pull request #42968 from vutny/doc-salt-cloud-ref
  - 44ed53b [DOCS] Fix link to Salt Cloud Feature Matrix
- **PR #42291:** (*vutny*) Fix #38839: remove *state* from Reactor runner kwags @ 2017-08-15T23:01:08Z
  - **ISSUE #38839:** (*DaveOHenry*) Invoking runner.cloud.action via reactor sls fails | refs: #42291
  - 923f974 Merge pull request #42291 from vutny/fix-38839
  - 5f8f98a Fix #38839: remove *state* from Reactor runner kwags
- **PR #42940:** (*gtmanfred*) create new ip address before checking list of allocated ips @ 2017-08-15T21:47:18Z
  - **ISSUE #42644:** (*stamak*) nova salt-cloud -P Private IPs returned, but not public. Checking for misidentified IPs | refs: #42940
  - c20bc7d Merge pull request #42940 from gtmanfred/2016.11
  - 253e216 fix IP address spelling
  - bd63074 create new ip address before checking list of allocated ips
- **PR #42959:** (*rallytime*) Back-port #42883 to 2016.11 @ 2017-08-15T21:25:48Z
  - **PR #42883:** (*rallytime*) Fix failing boto tests | refs: #42959
  - d6496ec Merge pull request #42959 from rallytime/bp-42883
  - c6b9ca4 Lint fix: add missing space
  - 5597b1a Skip 2 failing tests in Python 3 due to upstream bugs
  - a0b19bd Update account id value in boto\_secgroup module unit test
  - 60b406e @mock\_elb needs to be changed to @mock\_elb\_deprecated as well
  - 6ae1111 Replace @mock\_ec2 calls with @mock\_ec2\_deprecated calls
- **PR #42944:** (*Ch3LL*) [2016.11] Add clean\_id function to salt.utils.verify.py @ 2017-08-15T18:06:12Z
  - 6366e05 Merge pull request #42944 from Ch3LL/2016.11.6\_follow\_up
  - 7e0a20a Add release notes for 2016.11.7 release
  - 63823f8 Add clean\_id function to salt.utils.verify.py
- **PR #42952:** (*Ch3LL*) [2016.11] Bump latest and previous versions @ 2017-08-15T17:23:02Z
  - 49d339c Merge pull request #42952 from Ch3LL/latest\_2016.11
  - 74e7055 [2016.11] Bump latest and previous versions
- **PR #42950:** (*Ch3LL*) Add Security Notice to 2016.11.7 Release Notes @ 2017-08-15T16:50:23Z
  - b0d2e05 Merge pull request #42950 from Ch3LL/2016.11.7\_docs
  - a6f902d Add Security Notice to 2016.11.77 Release Notes
- **PR #42836:** (*aneeshusa*) Backport salt.utils.versions from develop to 2016.11 @ 2017-08-14T20:56:54Z

- **PR #42835:** (*aneeshusa*) Fix typo in utils/versions.py module | refs: #42836
- c0ff69f Merge pull request #42836 from lyft/backport-utils.versions-to-2016.11
- 86ce700 Backport salt.utils.versions from develop to 2016.11
- **PR #42919:** (*rallytime*) Back-port #42871 to 2016.11 @ 2017-08-14T20:44:00Z
  - **PR #42871:** (*amalleo25*) Update joyent.rst | refs: #42919
  - 64a79dd Merge pull request #42919 from rallytime/bp-42871
  - 4e46c96 Update joyent.rst
- **PR #42918:** (*rallytime*) Back-port #42848 to 2016.11 @ 2017-08-14T20:43:43Z
  - **ISSUE #42803:** (*gmcwhistler*) master\_type: str, not working as expected, parent salt-minion process dies. | refs: #42848
  - **ISSUE #42753:** (*grichmond-salt*) SaltReqTimeout Error on Some Minions when One Master in a Multi-Master Configuration is Unavailable | refs: #42848
  - **PR #42848:** (*DmitryKuzmenko*) Execute fire\_master asynchronously in the main minion thread. | refs: #42918
  - bea8ec1 Merge pull request #42918 from rallytime/bp-42848
  - cdb4812 Make lint happier.
  - 62eca9b Execute fire\_master asynchronously in the main minion thread.
- **PR #42861:** (*twangboy*) Fix pkg.install salt-minion using salt-call @ 2017-08-14T19:07:22Z
  - 52bce32 Merge pull request #42861 from twangboy/win\_pkg\_install\_salt
  - 0d3789f Fix pkg.install salt-minion using salt-call
- **PR #42798:** (*s-sebastian*) Update return data before calling returners @ 2017-08-14T15:51:30Z
  - b9f4f87 Merge pull request #42798 from s-sebastian/2016.11
  - 1cc8659 Update return data before calling returners
- **PR #41977:** (*abulford*) Fix dockerng.network\_\* ignoring of tests=True @ 2017-08-11T18:37:20Z
  - **ISSUE #41976:** (*abulford*) dockerng network states do not respect test=True | refs: #41977 #41977
  - c15d003 Merge pull request #41977 from redmatter/fix-dockerng-network-ignores-test
  - 1cc2aa5 Fix dockerng.network\_\* ignoring of tests=True
- **PR #42886:** (*sarcasticadmin*) Adding missing output flags to salt cli docs @ 2017-08-11T18:35:19Z
  - 3b9c3c5 Merge pull request #42886 from sarcasticadmin/adding\_docs\_salt\_outputs
  - 744bf95 Adding missing output flags to salt cli
- **PR #42882:** (*gtmanfred*) make sure cmd is not run when npm isn't installed @ 2017-08-11T17:53:14Z
  - e5b98c8 Merge pull request #42882 from gtmanfred/2016.11
  - da3402a make sure cmd is not run when npm isn't installed
- **PR #42788:** (*amendlik*) Remove waits and retries from Saltify deployment @ 2017-08-11T15:38:05Z
  - 5962c95 Merge pull request #42788 from amendlik/saltify-timeout
  - 928b523 Remove waits and retries from Saltify deployment
- **PR #42877:** (*terminalmage*) Add virtual func for cron state module @ 2017-08-11T15:33:09Z

- 227ecdd Merge pull request #42877 from terminalmage/add-cron-state-virtual
- f1de196 Add virtual func for cron state module
- **PR #42859:** (*terminalmage*) Add note about git CLI requirement for GitPython to GitFS tutorial @ 2017-08-11T14:53:03Z
  - ab9f6ce Merge pull request #42859 from terminalmage/gitpython-git-cli-note
  - 35e05c9 Add note about git CLI requirement for GitPython to GitFS tutorial
- **PR #42856:** (*gtmanfred*) skip cache\_clean test if npm version is >= 5.0.0 @ 2017-08-11T13:39:20Z
  - **ISSUE #41770:** (*Ch3LL*) NPM v5 incompatible with salt.modules.cache\_list | refs: #42856
  - **ISSUE #475:** (*thatch45*) Change yaml to use C bindings | refs: #42856
  - 682b4a8 Merge pull request #42856 from gtmanfred/2016.11
  - b458b89 skip cache\_clean test if npm version is >= 5.0.0
- **PR #42864:** (*whiteinge*) Make syndic\_log\_file respect root\_dir setting @ 2017-08-11T13:28:21Z
  - 01ea854 Merge pull request #42864 from whiteinge/syndic-log-root\_dir
  - 4b1f55d Make syndic\_log\_file respect root\_dir setting
- **PR #42851:** (*terminalmage*) Backport #42651 to 2016.11 @ 2017-08-10T18:02:39Z
  - **PR #42651:** (*gtmanfred*) python2- prefix for fedora 26 packages
  - 2dde1f7 Merge pull request #42851 from terminalmage/bp-42651
  - a3da86e fix syntax
  - 6ecdbce make sure names are correct
  - f83b553 add py3 for versionlock
  - 21934f6 python2- prefix for fedora 26 packages
- **PR #42806:** (*rallytime*) Update doc references in glusterfs.volume\_present @ 2017-08-10T14:10:16Z
  - **ISSUE #42683:** (*rgcosma*) Gluster module broken in 2017.7 | refs: #42806
  - c746f79 Merge pull request #42806 from rallytime/fix-42683
  - 8c8640d Update doc references in glusterfs.volume\_present
- **PR #42829:** (*twangboy*) Fix passing version in pkgs as shown in docs @ 2017-08-10T14:07:24Z
  - 27a8a26 Merge pull request #42829 from twangboy/win\_pkg\_fix\_install
  - 83b9b23 Add winrepo to docs about supporting versions in pkgs
  - 81fefa6 Add ability to pass version in pkgs list
- **PR #42838:** (*twangboy*) Document requirements for win\_pki @ 2017-08-10T13:59:46Z
  - 3c3ac6a Merge pull request #42838 from twangboy/win\_doc\_pki
  - f0a1d06 Standardize PKI Client
  - 7de687a Document requirements for win\_pki
- **PR #42805:** (*rallytime*) Back-port #42552 to 2016.11 @ 2017-08-09T22:37:56Z
  - **PR #42552:** (*remijouannet*) update consul module following this documentation <https://www.consul...> | refs: #42805
  - b3e2ae3 Merge pull request #42805 from rallytime/bp-42552

- 5a91c1f update consul module following this documentation <https://www.consul.io/api/acl.html>
- **PR #42804:** (*rallytime*) Back-port #42784 to 2016.11 @ 2017-08-09T22:37:40Z
  - **ISSUE #42731:** (*infoveinx*) http.query template\_data render exception | refs: #42804
  - **PR #42784:** (*gtmanfred*) only read file if ret is not a string in http.query | refs: #42804
  - d2ee793 Merge pull request #42804 from rallytime/bp-42784
  - dbd29e4 only read file if it is not a string
- **PR #42826:** (*terminalmage*) Fix misspelling of ``versions" @ 2017-08-09T19:39:43Z
  - 4cbf805 Merge pull request #42826 from terminalmage/fix-spelling
  - 00f9314 Fix misspelling of ``versions"
- **PR #42786:** (*Ch3LL*) Fix typo for template\_dict in http docs @ 2017-08-08T18:14:50Z
  - de997ed Merge pull request #42786 from Ch3LL/fix\_typo
  - 90a2fb6 Fix typo for template\_dict in http docs
- **PR #42795:** (*lomeroy*) backport #42744 to 2016.11 @ 2017-08-08T17:17:15Z
  - **ISSUE #42600:** (*twangboy*) Unable to set `Not Configured' using win\_lgpo execution module | refs: #42744 #42795
  - **PR #42744:** (*lomeroy*) fix #42600 in develop | refs: #42795
  - bf6153e Merge pull request #42795 from lomeroy/`bp-42744`\_\_201611
  - 695f8c1 fix #42600 in develop
- **PR #42748:** (*whiteinge*) Workaround Orchestrate problem that highstate outputter mutates data @ 2017-08-07T21:11:33Z
  - **ISSUE #42747:** (*whiteinge*) Outputters mutate data which can be a problem for Runners and perhaps other things | refs: #42748
  - 61fad97 Merge pull request #42748 from whiteinge/save-before-output
  - de60b77 Workaround Orchestrate problem that highstate outputter mutates data
- **PR #42764:** (*amendlik*) Fix infinite loop with salt-cloud and Windows nodes @ 2017-08-07T20:47:07Z
  - a4e3e7e Merge pull request #42764 from amendlik/cloud-win-loop
  - f3dcfca Fix infinite loops on failed Windows deployments
- **PR #42694:** (*gtmanfred*) allow adding extra remotes to a repository @ 2017-08-07T18:08:11Z
  - **ISSUE #42690:** (*ChristianBeer*) git.latest state with remote set fails on first try | refs: #42694
  - da85326 Merge pull request #42694 from gtmanfred/2016.11
  - 1a0457a allow adding extra remotes to a repository
- **PR #42669:** (*garthgreenaway*) [2016.11] Fixes to augeas module @ 2017-08-06T17:58:03Z
  - **ISSUE #42642:** (*githubcdr*) state.augeas | refs: #42669 #43202
  - 7b2119f Merge pull request #42669 from garthgreenaway/42642\_2016\_11\_augeas\_module\_fix
  - 2441308 Updating the call to shlex\_split to pass the posix=False argument so that quotes are preserved.
- **PR #42629:** (*xiaoanyunfei*) tornado api @ 2017-08-03T22:21:20Z
  - 3072576 Merge pull request #42629 from xiaoanyunfei/tornadoapi

- 1e13383 tornado api
- **PR #42655:** (*whiteinge*) Reenable cpstats for rest\_cherry.py @ 2017-08-03T20:44:10Z
  - **PR #33806:** (*cachedout*) Work around upstream cherry.py bug | refs: #42655
  - f0f00fc Merge pull request #42655 from whiteinge/rest\_cherry.py-reenable-stats
  - deb6316 Fix lint errors
  - 6bd91c8 Reenable cpstats for rest\_cherry.py
- **PR #42693:** (*gilbsgilbs*) Fix RabbitMQ tags not properly set. @ 2017-08-03T20:23:08Z
  - **ISSUE #42686:** (*gilbsgilbs*) Unable to set multiple RabbitMQ tags | refs: #42693 #42693
  - 21cf15f Merge pull request #42693 from gilbsgilbs/fix-rabbitmq-tags
  - 78fccdc Cast to list in case tags is a tuple.
  - 287b57b Fix RabbitMQ tags not properly set.
- **PR #42574:** (*sbojarski*) Fixed error reporting in ``boto\_cfn.present`` function. @ 2017-08-01T17:55:29Z
  - **ISSUE #41433:** (*sbojarski*) boto\_cfn.present fails when reporting error for failed state | refs: #42574
  - f2b0c9b Merge pull request #42574 from sbojarski/boto-cfn-error-reporting
  - 5c945f1 Fix debug message in ``boto\_cfn.\_validate`` function.
  - 181a1be Fixed error reporting in ``boto\_cfn.present`` function.
- **PR #42623:** (*terminalmage*) Fix unicode constructor in custom YAML loader @ 2017-07-31T19:25:18Z
  - bc1effc Merge pull request #42623 from terminalmage/fix-unicode-constructor
  - fcf4588 Fix unicode constructor in custom YAML loader
- **PR #42515:** (*gtmanfred*) Allow not interpreting backslashes in the repl @ 2017-07-28T16:00:09Z
  - cbf752c Merge pull request #42515 from gtmanfred/backslash
  - cc4e456 Allow not interpreting backslashes in the repl
- **PR #42586:** (*gdubroeuq*) [Fix] yumpkg.py: add option to the command ``check-update`` @ 2017-07-27T23:52:00Z
  - **ISSUE #42456:** (*gdubroeuq*) Use yum lib | refs: #42586
  - 5494958 Merge pull request #42586 from gdubroeuq/2016.11
  - 9c0b5cc Remove extra newline
  - d2ef448 yumpkg.py: clean
  - a96f7c0 yumpkg.py: add option to the command ``check-update``
- **PR #41988:** (*abulford*) Fix dockerng.network\_\* name matching @ 2017-07-27T21:25:06Z
  - **ISSUE #41982:** (*abulford*) dockerng.network\_\* matches too easily | refs: #41988 #41988
  - 6b45deb Merge pull request #41988 from redmatter/fix-dockerng-network-matching
  - 9eea796 Add regression tests for #41982
  - 3369f00 Fix broken unit test test\_network\_absent
  - 0ef6cf6 Add trace logging of dockerng.networks result
  - 515c612 Fix dockerng.network\_\* name matching

- **PR #42339:** (*isbm*) Bugfix: Jobs scheduled to run at a future time stay pending for Salt minions (bsc`#1036125`) @ 2017-07-27T19:05:51Z
  - **ISSUE #1036125:** (\*\*)
  - 4b16109 Merge pull request #42339 from isbm/isbm-jobs-scheduled-in-a-future-bsc1036125
  - bbba84c Bugfix: Jobs scheduled to run at a future time stay pending for Salt minions (bsc`#1036125`)
- **PR #42077:** (*vutny*) Fix scheduled job run on Master if *when* parameter is a list @ 2017-07-27T19:04:23Z
  - **ISSUE #23516:** (*dkiser*) BUG: cron job scheduler sporadically works | refs: #42077
  - **PR #41973:** (*vutny*) Fix Master/Minion scheduled jobs based on Cron expressions | refs: #42077
  - 6c5a7c6 Merge pull request #42077 from vutny/fix-jobs-scheduled-with-whens
  - b1960ce Fix scheduled job run on Master if *when* parameter is a list
- **PR #42414:** (*vutny*) DOCS: unify hash sum with hash type format @ 2017-07-27T18:48:40Z
  - f9cb536 Merge pull request #42414 from vutny/unify-hash-params-format
  - d1f2a93 DOCS: unify hash sum with hash type format
- **PR #42523:** (*rallytime*) Add a mention of the True/False returns with `__virtual__()` @ 2017-07-27T18:13:07Z
  - **ISSUE #42375:** (*dragonpaw*) salt.modules.\*.\_\_virtualname\_\_ doesn't work as documented. | refs: #42523
  - 535c922 Merge pull request #42523 from rallytime/fix-42375
  - 685c2cc Add information about returning a tuple with an error message
  - fa46651 Add a mention of the True/False returns with `__virtual__()`
- **PR #42527:** (*twangboy*) Document changes to Windows Update in Windows 10/Server 2016 @ 2017-07-27T17:45:38Z
  - 0df0e7e Merge pull request #42527 from twangboy/win\_wua
  - 0373791 Correct capatlization
  - af3bcc9 Document changes to Windows Update in 10/2016
- **PR #42551:** (*binocvlar*) Remove `-s` (`--script`) argument to parted within `align_check` function @ 2017-07-27T17:35:31Z
  - 69b0658 Merge pull request #42551 from binocvlar/fix-lack-of-align-check-output
  - c4fabaa Remove `-s` (`--script`) argument to parted within `align_check` function
- **PR #42573:** (*rallytime*) Back-port #42433 to 2016.11 @ 2017-07-27T13:51:21Z
  - **ISSUE #42403:** (*astronouth7303*) [2017.7] Pillar empty when state is applied from orchestrate | refs: #42433
  - **PR #42433:** (*terminalmage*) Only force saltenv/pillarenv to be a string when not None | refs: #42573
  - 9e0b4e9 Merge pull request #42573 from rallytime/bp-42433
  - 0293429 Only force saltenv/pillarenv to be a string when not None
- **PR #42571:** (*twangboy*) Avoid loading system PYTHON\* environment vars @ 2017-07-26T22:48:55Z
  - e931ed2 Merge pull request #42571 from twangboy/win\_add\_pythonpath
  - d55a44d Avoid loading user site packages
  - 9af1eb2 Ignore any PYTHON\* environment vars already on the system

- 4e2fb03 Add pythonpath to batch files and service
- **PR #42387:** (*DmitryKuzmenko*) Fix race condition in usage of weakvaluedict @ 2017-07-25T20:57:42Z
  - **ISSUE #42371:** (*tsaridas*) Minion unresponsive after trying to failover | refs: #42387
  - de2f397 Merge pull request #42387 from DSRCorporation/bugs/42371\_KeyError\_WeakValueDict
  - e721c7e Don't use *key in weakvaluedict* because it could lie.
- **PR #41968:** (*root360-AndreasUlm*) Fix rabbitmqctl output sanitizer for version 3.6.10 @ 2017-07-25T19:12:36Z
  - **ISSUE #41955:** (*root360-AndreasUlm*) rabbitmq 3.6.10 changed output => rabbitmq-module broken | refs: #41968
  - 641a9d7 Merge pull request #41968 from root360-AndreasUlm/fix-rabbitmqctl-output-handler
  - 76fd941 added tests for rabbitmq 3.6.10 output handler
  - 3602af1 Fix rabbitmqctl output handler for 3.6.10
- **PR #42479:** (*gtmanfred*) validate ssh\_interface for ec2 @ 2017-07-25T18:37:18Z
  - **ISSUE #42477:** (*aikar*) Invalid ssh\_interface value prevents salt-cloud provisioning without reason of why | refs: #42479
  - 66fede3 Merge pull request #42479 from gtmanfred/interface
  - c32c1b2 fix pylint
  - 99ec634 validate ssh\_interface for ec2
- **PR #42516:** (*rallytime*) Add info about top file to pillar walk-through example to include edit.vim @ 2017-07-25T17:01:12Z
  - **ISSUE #42405:** (*felrivero*) The documentation is incorrectly compiled (PILLAR section) | refs: #42516
  - a925c70 Merge pull request #42516 from rallytime/fix-42405
  - e3a6717 Add info about top file to pillar walk-through example to include edit.vim
- **PR #42509:** (*clem-compilatio*) Fix \_assign\_floating\_ips in openstack.py @ 2017-07-24T17:14:13Z
  - **ISSUE #42417:** (*clem-compilatio*) salt-cloud - openstack - "no more floating IP addresses" error - but public\_ip in node | refs: #42509
  - 1bd5bbc Merge pull request #42509 from clem-compilatio/fix-42417
  - 72924b0 Fix \_assign\_floating\_ips in openstack.py
- **PR #42464:** (*garethgreenaway*) [2016.11] Small fix to modules/git.py @ 2017-07-21T21:28:57Z
  - 4bf35a7 Merge pull request #42464 from garethgreenaway/2016\_11\_remove\_tmp\_identity\_file
  - ff24102 Uncomment the line that removes the temporary identity file.
- **PR #42443:** (*garethgreenaway*) [2016.11] Fix to slack engine @ 2017-07-21T15:48:57Z
  - **ISSUE #42357:** (*Giandom*) Salt pillarenv problem with slack engine | refs: #42443
  - e2120db Merge pull request #42443 from garethgreenaway/42357\_pass\_args\_kwargs\_correctly
  - 635810b Updating the slack engine in 2016.11 to pass the args and kwargs correctly to LocalClient
- **PR #42200:** (*shengis*) Fix #42198 @ 2017-07-21T14:47:29Z
  - **ISSUE #42198:** (*shengis*) state sqlite3.row\_absent fail with "parameters are of unsupported type" | refs: #42200
  - 8262cc9 Merge pull request #42200 from shengis/sqlite3\_fix\_row\_absent\_2016.11

- 407b8f4 Fix [#42198](#) If where\_args is not set, not using it in the delete request.
- **PR #42424:** (*goten4*) Fix error message when tornado or pycurl is not installed @ 2017-07-20T21:53:40Z
  - **ISSUE #42413:** (*goten4*) Invalid error message when proxy\_host is set and tornado not installed | refs: [#42424](#)
  - d9df97e Merge pull request [#42424](#) from goten4/2016.11
  - 1c0574d Fix error message when tornado or pycurl is not installed
- **PR #42350:** (*twangboy*) Fixes problem with Version and OS Release related grains on certain versions of Python (2016.11) @ 2017-07-19T17:07:26Z
  - 42bb1a6 Merge pull request [#42350](#) from twangboy/win\_fix\_ver\_grains\_2016.11
  - 8c04840 Detect Server OS with a desktop release name
- **PR #42356:** (*meaksh*) Allow to check whether a function is available on the AliasesLoader wrapper @ 2017-07-19T16:56:41Z
  - 0a72e56 Merge pull request [#42356](#) from meaksh/2016.11-AliasesLoader-wrapper-fix
  - 915d942 Allow to check whether a function is available on the AliasesLoader wrapper
- **PR #42368:** (*twangboy*) Remove build and dist directories before install (2016.11) @ 2017-07-19T16:47:28Z
  - 10eb7b7 Merge pull request [#42368](#) from twangboy/win\_fix\_build\_2016.11
  - a7c910c Remove build and dist directories before install
- **PR #42370:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-07-18T22:39:41Z
  - **PR #42359:** (*Ch3LL*) [2016.3] Update version numbers in doc config for 2017.7.0 release
  - 016189f Merge pull request [#42370](#) from rallytime/merge-2016.11
  - 0aa5dde Merge branch `2016.3` into `2016.11`
  - e9b0f20 Merge pull request [#42359](#) from Ch3LL/doc-update-2016.3
    - \* dc85b5e [2016.3] Update version numbers in doc config for 2017.7.0 release
- **PR #42360:** (*Ch3LL*) [2016.11] Update version numbers in doc config for 2017.7.0 release @ 2017-07-18T19:23:30Z
  - f06a6f1 Merge pull request [#42360](#) from Ch3LL/doc-update-2016.11
  - b90b7a7 [2016.11] Update version numbers in doc config for 2017.7.0 release
- **PR #42319:** (*rallytime*) Add more documentation for config options that are missing from master/minion docs @ 2017-07-18T18:02:32Z
  - **ISSUE #32400:** (*rallytime*) Document Default Config Values | refs: [#42319](#)
  - e0595b0 Merge pull request [#42319](#) from rallytime/config-docs
  - b40f980 Add more documentation for config options that are missing from master/minion docs
- **PR #42352:** (*CorvinM*) Multiple documentation fixes @ 2017-07-18T15:10:37Z
  - **ISSUE #42333:** (*b3hni4*) Getting ``invalid type of dict, a list is required" when trying to configure engines in master config file | refs: [#42352](#)
  - 7894040 Merge pull request [#42352](#) from CorvinM/issue42333
  - 526b6ee Multiple documentation fixes
- **PR #42353:** (*terminalmage*) is\_windows is a function, not a property/attribute @ 2017-07-18T14:38:51Z

- b256001 Merge pull request #42353 from terminalmage/fix-git-test
- 14cf6ce is\_windows is a function, not a property/attribute
- **PR #42264:** (*rallytime*) Update minion restart section in FAQ doc for windows @ 2017-07-17T17:40:40Z
  - **ISSUE #41116:** (*hrumph*) FAQ has wrong instructions for upgrading Windows minion. | refs: #42264
  - 866a1fe Merge pull request #42264 from rallytime/fix-41116
  - bd63888 Add mono-spacing to salt-minion reference for consistency
  - 30d62f4 Update minion restart section in FAQ doc for windows
- **PR #42275:** (*terminalmage*) pkg.installed: pack name/version into pkgs argument @ 2017-07-17T17:38:39Z
  - **ISSUE #42194:** (*jryberg*) pkg version: latest are now broken, appending <package>-latest to filename | refs: #42275
  - 9a70708 Merge pull request #42275 from terminalmage/issue42194
  - 6638749 pkg.installed: pack name/version into pkgs argument
- **PR #42269:** (*rallytime*) Add some clarity to ``multiple quotes" section of yaml docs @ 2017-07-17T17:38:18Z
  - **ISSUE #41721:** (*sazaro*) state.sysrc broken when setting the value to YES or NO | refs: #42269
  - e588f23 Merge pull request #42269 from rallytime/fix-41721
  - f2250d4 Add a note about using different styles of quotes.
  - 38d9b3d Add some clarity to ``multiple quotes" section of yaml docs
- **PR #42282:** (*rallytime*) Handle libcloud objects that throw RepresenterErrors with --out=yaml @ 2017-07-17T17:36:35Z
  - **ISSUE #42152:** (*dubb-b*) salt-cloud errors on Rackspace driver using -out=yaml | refs: #42282
  - 5aaa214 Merge pull request #42282 from rallytime/fix-42152
  - f032223 Handle libcloud objects that throw RepresenterErrors with --out=yaml
- **PR #42308:** (*lubyou*) Force file removal on Windows. Fixes #42295 @ 2017-07-17T17:12:13Z
  - **ISSUE #42295:** (*lubyou*) file.absent fails on windows if the file to be removed has the ``readonly" attribute set | refs: #42308
  - fb5697a Merge pull request #42308 from lubyou/42295-fix-file-absent-windows
  - 026ccf4 Force file removal on Windows. Fixes #42295
- **PR #42314:** (*rallytime*) Add clarification to salt ssh docs about key auto-generation. @ 2017-07-17T14:07:49Z
  - **ISSUE #42267:** (*gzcwnk*) salt-ssh not creating ssh keys automatically as per documentation | refs: #42314
  - da2a8a5 Merge pull request #42314 from rallytime/fix-42267
  - c406046 Add clarification to salt ssh docs about key auto-generation.
- **PR #41945:** (*garethgreenaway*) Fixes to modules/git.py @ 2017-07-14T17:46:10Z
  - **ISSUE #41936:** (*michaelkarrer81*) git.latest identity does not set the correct user for the private key file on the minion | refs: #41945
  - **ISSUE #1:** (*thatch45*) Enable regex on the salt cli
  - acadd54 Merge pull request #41945 from garethgreenaway/41936\_allow\_identity\_files\_with\_user
  - 44841e5 Moving the call to cp.get\_file inside the with block to ensure the umask is preserved when we grab the file.

- f9ba60e Merge pull request #1 from terminalmage/pr-41945
  - \* 1b60261 Restrict set\_umask to mkstemp call only
- 68549f3 Fixing umask to we can set files as executable.
- 4949bf3 Updating to swap on the new salt.utils.files.set\_umask context\_manager
- 8faa9f6 Updating PR with requested changes.
- 494765e Updating the git module to allow an identity file to be used when passing the user parameter
- **PR #42289:** (*CorvinM*) Multiple empty\_password fixes for state.user @ 2017-07-14T16:14:02Z
  - **ISSUE #42240:** (*casselt*) empty\_password in user.present always changes password, even with test=True | refs: #42289
  - **PR #41543:** (*cri-epita*) Fix user creation with empty password | refs: #42289 #42289
  - f90e04a Merge pull request #42289 from CorvinM/bp-41543
  - 357dc22 Fix user creation with empty password
- **PR #42123:** (*vutny*) DOCS: describe importing custom util classes @ 2017-07-12T15:53:24Z
  - a91a3f8 Merge pull request #42123 from vutny/fix-master-utils-import
  - 6bb8b8f Add missing doc for `utils_dirs` Minion config option
  - f1bc58f Utils: add example of module import
- **PR #42261:** (*rallytime*) Some minor doc fixes for dnsutil module so they'll render correctly @ 2017-07-11T23:14:53Z
  - e2aa511 Merge pull request #42261 from rallytime/minor-doc-fix
  - 8c76bbb Some minor doc fixes for dnsutil module so they'll render correctly
- **PR #42262:** (*rallytime*) Back-port #42224 to 2016.11 @ 2017-07-11T23:14:25Z
  - **PR #42224:** (*tdutrion*) Remove duplicate instruction in Openstack Rackspace config example | refs: #42262
  - 3e9dfbc Merge pull request #42262 from rallytime/bp-42224
  - c31ded3 Remove duplicate instruction in Openstack Rackspace config example
- **PR #42181:** (*garethgreenaway*) fixes to state.py for names parameter @ 2017-07-11T21:21:32Z
  - **ISSUE #42137:** (*kiemlicz*) cmd.run with multiple commands - random order of execution | refs: #42181
  - 7780579 Merge pull request #42181 from garethgreenaway/42137\_backport\_fix\_from\_2017\_7
  - a34970b Back porting the fix for 2017.7 that ensures the order of the names parameter.
- **PR #42253:** (*gtmanfred*) Only use unassociated ips when unable to allocate @ 2017-07-11T20:53:51Z
  - **PR #38965:** (*toanju*) salt-cloud will use list\_floating\_ips for OpenStack | refs: #42253
  - **PR #34280:** (*kevinanderson1*) salt-cloud will use list\_floating\_ips for Openstack | refs: #38965
  - 7253786 Merge pull request #42253 from gtmanfred/2016.11
  - 53e2576 Only use unassociated ips when unable to allocate
- **PR #42252:** (*UtahDave*) simple docstring updates @ 2017-07-11T20:48:33Z
  - b2a4698 Merge pull request #42252 from UtahDave/2016.11local
  - e6a9563 simple doc updates

- **PR #42235:** (*astronouth7303*) Abolish references to *dig* in examples. @ 2017-07-10T20:06:11Z
  - **ISSUE #42232:** (*astronouth7303*) Half of dnstool refers to dig | refs: #42235
  - 781fe13 Merge pull request #42235 from astronouth7303/patch-1-2016.3
  - 4cb51bd Make note of dig partial requirement.
  - 08e7d83 Abolish references to *dig* in examples.
- **PR #42215:** (*twangboy*) Add missing config to example @ 2017-07-07T20:18:44Z
  - 83cbd76 Merge pull request #42215 from twangboy/win\_iis\_docs
  - c07e220 Add missing config to example
- **PR #42211:** (*terminalmage*) Only pass a saltenv in orchestration if one was explicitly passed (2016.11) @ 2017-07-07T20:16:35Z
  - 274946a Merge pull request #42211 from terminalmage/issue40928
  - 22a18fa Only pass a saltenv in orchestration if one was explicitly passed (2016.11)
- **PR #42173:** (*rallytime*) Back-port #37424 to 2016.11 @ 2017-07-07T16:39:59Z
  - **PR #37424:** (*kojiromike*) Avoid Early Convert ret['comment'] to String | refs: #42173
  - 89261cf Merge pull request #42173 from rallytime/bp-37424
  - 01addb6 Avoid Early Convert ret['comment'] to String
- **PR #42175:** (*rallytime*) Back-port #39366 to 2016.11 @ 2017-07-06T19:51:47Z
  - **ISSUE #39365:** (*dgllloyd*) service.running fails if sysv script has no status command and enable: True | refs: #39366
  - **PR #39366:** (*dgllloyd*) Pass sig to service.status in after\_toggle | refs: #42175
  - 3b17fb7 Merge pull request #42175 from rallytime/bp-39366
  - 53f7b98 Pass sig to service.status in after\_toggle
- **PR #42172:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-07-06T18:16:29Z
  - **PR #42155:** (*phsteve*) Fix docs for puppet.plugin\_sync
  - ea16f47 Merge pull request #42172 from rallytime/merge-2016.11
  - b1fa332 Merge branch `2016.3' into `2016.11'
    - \* 8fa1fa5 Merge pull request #42155 from phsteve/doc-fix-puppet
      - fb2cb78 Fix docs for puppet.plugin\_sync so code-block renders properly and sync is spelled consistently
- **PR #42176:** (*rallytime*) Back-port #42109 to 2016.11 @ 2017-07-06T18:15:35Z
  - **PR #42109:** (*arthurlogilab*) [doc] Update aws.rst - add Debian default username | refs: #42176
  - 6307b98 Merge pull request #42176 from rallytime/bp-42109
  - 686926d Update aws.rst - add Debian default username
- **PR #42095:** (*terminalmage*) Add debug logging to dockerng.login @ 2017-07-06T17:13:05Z
  - 28c4e4c Merge pull request #42095 from terminalmage/docker-login-debugging
  - bd27870 Add debug logging to dockerng.login
- **PR #42119:** (*terminalmage*) Fix regression in CLI pillar override for salt-call @ 2017-07-06T17:02:52Z

- **ISSUE #42116:** (*terminalmage*) CLI pillar override regression in 2017.7.0rc1 | refs: #42119
- 2b754bc Merge pull request #42119 from terminalmage/issue42116
- 9a26894 Add integration test for 42116
- 1bb42bb Fix regression when CLI pillar override is used with salt-call
- **PR #42121:** (*terminalmage*) Fix pillar.get when saltenv is passed @ 2017-07-06T16:52:34Z
  - **ISSUE #42114:** (*clallen*) saltenv bug in pillar.get execution module function | refs: #42121
  - 8c0a83c Merge pull request #42121 from terminalmage/issue42114
  - d142912 Fix pillar.get when saltenv is passed
- **PR #42094:** (*terminalmage*) Prevent command from showing in exception when output\_loglevel=quiet @ 2017-07-06T16:18:09Z
  - 687992c Merge pull request #42094 from terminalmage/quiet-exception
  - 47d61f4 Prevent command from showing in exception when output\_loglevel=quiet
- **PR #42163:** (*vutny*) Fix #42115: parse libcloud ``rc" version correctly @ 2017-07-06T16:15:07Z
  - **ISSUE #42115:** (*nomeelnoj*) Installing EPEL repo breaks salt-cloud | refs: #42163
  - dad2551 Merge pull request #42163 from vutny/fix-42115
  - b27b1e3 Fix #42115: parse libcloud ``rc" version correctly
- **PR #42164:** (*Ch3LL*) Fix kerberos create\_keytab doc @ 2017-07-06T15:55:33Z
  - 2a8ae2b Merge pull request #42164 from Ch3LL/fix\_kerb\_doc
  - 7c0fb24 Fix kerberos create\_keytab doc
- **PR #42141:** (*rallytime*) Back-port #42098 to 2016.11 @ 2017-07-06T15:11:49Z
  - **PR #42098:** (*twangboy*) Change repo\_ng to repo-ng | refs: #42141
  - 678d4d4 Merge pull request #42141 from rallytime/bp-42098
  - bd80243 Change repo\_ng to repo-ng
- **PR #42140:** (*rallytime*) Back-port #42097 to 2016.11 @ 2017-07-06T15:11:29Z
  - **PR #42097:** (*gtmanfred*) require large timediff for ipv6 warning | refs: #42140
  - c8afd7a Merge pull request #42140 from rallytime/bp-42097
  - 9c4e132 Import datetime
  - 1435bf1 require large timediff for ipv6 warning
- **PR #42142:** (*Ch3LL*) Update builds available for rc1 @ 2017-07-05T21:11:56Z
  - c239664 Merge pull request #42142 from Ch3LL/change\_builds
  - e1694af Update builds available for rc1
- **PR #42078:** (*damon-atkins*) pkg.install and pkg.remove fix version number input. @ 2017-07-05T06:04:57Z
  - 4780d78 Merge pull request #42078 from damon-atkins/fix\_convert\_flt\_str\_version\_on\_cmd\_line
  - 09d37dd Fix comment typo
  - 7167549 Handle version=None when converted to a string it becomes `None' parm should default to empty string rather than None, it would fix better with existing code.
  - 4fb2bb1 Fix typo

- cf55c33 pkg.install and pkg.remove on the command line take number version numbers, store them within a float. However version is a string, to support versions numbers like 1.3.4
- **PR #42105:** (*Ch3LL*) Update releasecandidate doc with new 2017.7.0rc1 Release @ 2017-07-04T03:14:42Z
  - 46d575a Merge pull request #42105 from Ch3LL/update\_rc
  - d4e7b91 Update releasecandidate doc with new 2017.7.0rc1 Release
- **PR #42099:** (*rallytime*) Remove references in docs to pip install salt-cloud @ 2017-07-03T22:13:44Z
  - **ISSUE #41885:** (*astronouth7303*) Recommended pip installation outdated? | refs: #42099
  - d38548b Merge pull request #42099 from rallytime/fix-41885
  - c2822e0 Remove references in docs to pip install salt-cloud
- **PR #42086:** (*abulford*) Make result=true if Docker volume already exists @ 2017-07-03T15:48:33Z
  - **ISSUE #42076:** (*abulford*) dockerng.volume\_present test looks as though it would cause a change | refs: #42086 #42086
  - 81d606a Merge pull request #42086 from redmatter/fix-dockerng-volume-present-result
  - 8d54968 Make result=true if Docker volume already exists
- **PR #42021:** (*gtmanfred*) Set concurrent to True when running states with sudo @ 2017-06-30T21:02:15Z
  - **ISSUE #25842:** (*shikhartanwar*) Running salt-minion as non-root user to execute sudo commands always returns an error | refs: #42021
  - 7160697 Merge pull request #42021 from gtmanfred/2016.11
  - 26beb18 Set concurrent to True when running states with sudo
- **PR #42029:** (*terminalmage*) Mock socket.getaddrinfo in unit.utils.network\_test.NetworkTestCase.test\_host\_to\_ips @ 2017-06-30T20:58:56Z
  - b784fbb Merge pull request #42029 from terminalmage/host\_to\_ips
  - 26f848e Mock socket.getaddrinfo in unit.utils.network\_test.NetworkTestCase.test\_host\_to\_ips
- **PR #42055:** (*dmurphy18*) Upgrade support for gnupg v2.1 and higher @ 2017-06-30T20:54:02Z
  - e067020 Merge pull request #42055 from dmurphy18/handle\_gnupgv21
  - e20cea6 Upgrade support for gnupg v2.1 and higher
- **PR #42048:** (*Ch3LL*) Add initial 2016.11.7 Release Notes @ 2017-06-30T16:00:05Z
  - 74ba2ab Merge pull request #42048 from Ch3LL/add\_11.7
  - 1de5e00 Add initial 2016.11.7 Release Notes
- **PR #42024:** (*leeclemens*) doc: Specify versionadded for SELinux policy install/uninstall @ 2017-06-29T23:29:50Z
  - ca4e619 Merge pull request #42024 from leeclemens/doc/selinux
  - b63a3c0 doc: Specify versionadded for SELinux policy install/uninstall
- **PR #42030:** (*whiteinge*) Re-add msgpack to mocked imports @ 2017-06-29T20:47:59Z
  - **PR #42028:** (*whiteinge*) Revert ``Allow docs to be built under Python 3" | refs: #42030
  - **PR #41961:** (*cachedout*) Allow docs to be built under Python 3 | refs: #42028
  - 50856d0 Merge pull request #42030 from whiteinge/revert-py3-doc-chagnes-pt-2
  - 18dfa98 Re-add msgpack to mocked imports

- **PR #42028:** (*whiteinge*) Revert ``Allow docs to be built under Python 3" | refs: #42030 @ 2017-06-29T19:47:46Z
  - **PR #41961:** (*cachedout*) Allow docs to be built under Python 3 | refs: #42028
  - 53031d2 Merge pull request #42028 from saltstack/revert-41961-py3\_doc
  - 5592e6e Revert ``Allow docs to be built under Python 3"
- **PR #42017:** (*loregordon*) Fixes typo ``nozerconf" -> ``nozeroconf" @ 2017-06-29T17:30:48Z
  - **ISSUE #42013:** (*dusto*) Misspelled nozeroconf in salt/modules/rh\_ip.py | refs: #42017
  - 1416bf7 Merge pull request #42017 from lorengordon/issue-42013
  - b6cf5f2 Fixes typo nozerconf -> nozeroconf
- **PR #41906:** (*terminalmage*) Better support for numeric saltenvs @ 2017-06-29T17:19:33Z
  - 0ebb50b Merge pull request #41906 from terminalmage/numeric-saltenv
  - 2d798de Better support for numeric saltenvs
- **PR #41995:** (*terminalmage*) Temporarily set the umask before writing an auth token @ 2017-06-29T01:09:48Z
  - 6a3c03c Merge pull request #41995 from terminalmage/token-umask
  - 4f54b00 Temporarily set the umask before writing an auth token
- **PR #41999:** (*terminalmage*) Update IP address for unit.utils.network\_test.NetworkTestCase.test\_host\_to\_ips @ 2017-06-29T01:01:31Z
  - e3801b0 Merge pull request #41999 from terminalmage/fix-network-test
  - fb6a933 Update IP address for unit.utils.network\_test.NetworkTestCase.test\_host\_to\_ips
- **PR #41991:** (*Da-Juan*) Accept a list for state\_aggregate global setting @ 2017-06-29T00:58:59Z
  - **ISSUE #18659:** (*whiteinge*) mod\_aggregate not working for list-form configuration | refs: #41991
  - a7f3892 Merge pull request #41991 from Da-Juan/fix-state\_aggregate-list
  - c9075b8 Accept a list for state\_aggregate setting
- **PR #41993:** (*UtahDave*) change out salt support link to SaltConf link @ 2017-06-29T00:55:20Z
  - 7424f87 Merge pull request #41993 from UtahDave/2016.11local
  - bff050a change out salt support link to SaltConf link
- **PR #41987:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ 2017-06-28T20:19:11Z
  - **PR #41981:** (*Ch3LL*) [2016.3] Bump latest release version to 2016.11.6
  - 3b9ccf0 Merge pull request #41987 from rallytime/merge-2016.11
  - 48867c4 Merge branch `2016.3' into `2016.11'
    - \* c589eae Merge pull request #41981 from Ch3LL/11.6\_3
    - \* 2516ae1 [2016.3] Bump latest release version to 2016.11.6
- **PR #41985:** (*rallytime*) Back-port #41780 to 2016.11 @ 2017-06-28T20:18:57Z
  - **PR #41780:** (*ferringb*) Fix salt.util.render\_jinja\_tmpl usage for when not used in an environmnet | refs: #41985
  - 768339d Merge pull request #41985 from rallytime/bp-41780
  - 8f8d3a4 Fix salt.util.render\_jinja\_tmpl usage for when not used in an environment.
- **PR #41986:** (*rallytime*) Back-port #41820 to 2016.11 @ 2017-06-28T20:18:43Z

- **ISSUE #34963:** (*craigafinch*) Incorrect behavior or documentation for comments in `salt.states.pkgrepo.managed` | refs: [#41820](#)
- **PR #41820:** (*nhavens*) Fix yum repo file comments to work as documented in `pkgrepo.managed` | refs: [#41986](#)
- [bd9090c](#) Merge pull request [#41986](#) from rallytime/bp-41820
- [72320e3](#) Fix yum repo file comments to work as documented in `pkgrepo.managed`
- **PR #41973:** (*vutny*) Fix Master/Minion scheduled jobs based on Cron expressions | refs: [#42077](#) @ 2017-06-28T16:39:02Z
  - [a31da52](#) Merge pull request [#41973](#) from vutny/fix-croniter-scheduled-jobs
  - [148788e](#) Fix Master/Minion scheduled jobs based on Cron expressions
- **PR #41980:** (*Ch3LL*) [2016.11] Bump latest release version to 2016.11.6 @ 2017-06-28T15:35:11Z
  - [689ff93](#) Merge pull request [#41980](#) from Ch3LL/11.6\_11
  - [fe4f571](#) [2016.11] Bump latest release version to 2016.11.6
- **PR #41961:** (*cachedout*) Allow docs to be built under Python 3 | refs: [#42028](#) @ 2017-06-27T21:11:54Z
  - [82b1eb2](#) Merge pull request [#41961](#) from cachedout/py3\_doc
  - [7aacddf](#) Allow docs to be built under Python 3
- **PR #41948:** (*davidjb*) Fix Composer state's `name` docs; formatting @ 2017-06-27T17:51:29Z
  - **PR #41933:** (*davidjb*) Fix Composer state's `name` docs and improve formatting | refs: [#41948](#)
  - [f0eb51d](#) Merge pull request [#41948](#) from davidjb/patch-9
  - [0e4b3d9](#) Fix Composer state's `name` docs; formatting
- **PR #41914:** (*vutny*) `archive.extracted`: fix hash sum verification for local archives @ 2017-06-26T17:59:27Z
  - [e28e10d](#) Merge pull request [#41914](#) from vutny/fix-archive-extracted-local-file-hash
  - [54910fe](#) `archive.extracted`: fix hash sum verification for local archives
- **PR #41912:** (*Ch3LL*) Allow `pacman` module to run on Manjaro @ 2017-06-26T15:35:20Z
  - [76ad6ff](#) Merge pull request [#41912](#) from Ch3LL/fix\_manjaro
  - [e4dd72a](#) Update `os_name_map` in core grains for new manjaro systems
  - [aa7c839](#) Allow `pacman` module to run on Manjaro
- **PR #41516:** (*kstreee*) Implements `MessageClientPool` to avoid blocking waiting for zeromq and tcp communications. @ 2017-06-26T14:41:38Z
  - **ISSUE #38093:** (*DmitryKuzmenko*) Make threads avoid blocking waiting while communicating using TCP transport. | refs: [#41516](#) [#41516](#)
  - **PR #37878:** (*kstreee*) Makes threads avoid blocking waiting while communicating using Zeromq. | refs: [#41516](#) [#41516](#)
  - [ff67d47](#) Merge pull request [#41516](#) from kstreee/fix-blocking-waiting-tcp-connection
  - [df96969](#) Removes redundant closing statements.
  - [94b9ea5](#) Implements `MessageClientPool` to avoid blocking waiting for zeromq and tcp communications.
- **PR #41888:** (*Ch3LL*) Add additional commits to 2016.11.6 release notes @ 2017-06-22T16:19:00Z
  - [c90cb67](#) Merge pull request [#41888](#) from Ch3LL/change\_release

- 4e1239d Add additional commits to 2016.11.6 release notes
- **PR #41882:** (*Ch3LL*) Add pycryptodome to crypt\_test @ 2017-06-21T19:51:10Z
  - 4a32644 Merge pull request #41882 from Ch3LL/fix\_crypt\_test
  - 6f70dbd Add pycryptodome to crypt\_test
- **PR #41877:** (*Ch3LL*) Fix netstat and routes test @ 2017-06-21T16:16:58Z
  - 13df29e Merge pull request #41877 from Ch3LL/fix\_netstat\_test
  - d2076a6 Patch salt.utils.which for test\_route test
  - 51f7e10 Patch salt.utils.which for test\_netstat test
- **PR #41566:** (*morganwillcock*) win\_certutil: workaround for reading serial numbers with non-English languages @ 2017-06-21T15:40:29Z
  - **ISSUE #41367:** (*lubyu*) certutil.add\_store does not work on non english windows versions or on Windows 10 (localised or English) | refs: #41566
  - 66f8c83 Merge pull request #41566 from morganwillcock/certutil
  - c337d52 Fix test data for test\_get\_serial, and a typo
  - 7f69613 test and lint fixes
  - 8ee4843 Suppress output of crypt context and be more specific with whitespace vs. serial
  - 61f817d Match serials based on output position (fix for non-English languages)
- **PR #41679:** (*terminalmage*) Prevent unnecessary duplicate pillar compilation @ 2017-06-21T15:32:42Z
  - 4d0f5c4 Merge pull request #41679 from terminalmage/get-top-file-envs
  - a916e8d Improve normalization of saltenv/pillarenv usage for states
  - 02f293a Update state unit tests to reflect recent changes
  - b7e5c11 Don't compile pillar data when getting top file envs
  - 8d6fdb7 Don't compile pillar twice for salt-call
  - d2abfbf Add initial\_pillar argument to salt.state
  - 70186de salt.pillar: rename the ``pillar" argument to ``pillar\_override"
- **PR #41853:** (*vutny*) Fix master side scheduled jobs to return events @ 2017-06-20T22:06:29Z
  - **ISSUE #39668:** (*mirceaulinic*) Master scheduled job not recorded on the event bus | refs: #41658
  - **ISSUE #12653:** (*pengyao*) salt schedule doesn't return jobs result info to master | refs: #41853
  - **PR #41695:** (*xiaoanyunfei*) fix max RecursionError, Ellipsis | refs: #41853
  - **PR #41658:** (*garethgreenaway*) Fixes to the salt scheduler | refs: #41853
  - 29b0acc Merge pull request #41853 from vutny/fix-master-schedule-event
  - e206c38 Fix master side scheduled jobs to return events

## 20.2.16 Salt 2016.3.0 Release Notes - Codename Boron

### Known Issues

**Warning: Some Salt Masters may need to apply a patch for Default Job Cache to prevent a possible crash**

An issue exists that prevents the Salt master from cleaning the default job cache. This issue can cause an overconsumption of resources resulting in a crash. 2016.3.0 Salt masters should apply the patch in [:PR: `33555`](#). This issue will be addressed in 2016.3.1.

- [issue 33516](#): When upgrading from 2015.8.10 to 2016.3.0 on centos7/redhat7 salt-minion must be restarted twice.
- [issue 33517](#): SPM does not work on amazon linux 2015 in 2016.3.0.

### Backwards-incompatible Changes

- The default path for the `extension_modules` master config option has been changed. Prior to this release, the location was a directory named `extmods` in the Salt cachedir. On most platforms, this would put the `extension_modules` directory in `/var/cache/salt/extmods`. It has been moved one directory down, into the master cachedir. On most platforms, this is `/var/cache/salt/master/extmods`. Most users won't have to worry about this, but those who have been manually placing custom runners into `/var/cache/salt/extmods/runners`, or outputters into `/var/cache/salt/extmods/output`, etc. will be affected by this. To transition, it is recommended not to simply move the `extmods` directory into `/var/cache/salt/master`, but to copy the custom modules into the salt fileserver under `salt://_runners`, `salt://_output`, etc. and sync them using the functions in the new `saltutil runner`.
- The `pkg.check_db` function has been removed for yum/dnf.

### Core Changes

- The `onchanges` requisite now fires if **any** watched state changes. [issue 19592](#).
- The `ext_pillar` functions **must** now accept a minion ID as the first argument. This stops the deprecation path started in Salt 0.17.x. Before this minion ID first argument was introduced, the minion ID could be retrieved accessing `__opts__['id']` losing the reference to the master ID initially set in `opts`. This is no longer the case, `__opts__['id']` will be kept as the master ID.
- Custom types can now be synced to the master using the new `saltutil runner`. Before, these needed to manually be placed under the `extension_modules` directory. This allows custom modules to easily be synced to the master to make them available when compiling Pillar data. Just place custom runners into `salt://_runners`, custom outputters into `salt://_output`, etc. and use the functions from the `saltutil runner` to sync them.
- The `client_acl` configuration options were renamed to `publisher_acl`.
- Added a new `--config-dump` option ([issue 26639](#)).
- TCP Transport presence events were updated to work with a NAT ([PR 30629](#)).
- A `minion_pillar_cache` setting was added to save rendered pillar data to cachedir for later use when `file_client` is set to `local` ([PR 30428](#)).

- Added the ability for binary data (such as a license key) to be distributed via pillar using the *file.managed* (issue 9569).
- Scheduled jobs now include `success` and `retcode` (issue 24237).
- The `saltversioninfo` grain was changed from a string to a list to enable reading values by index. (PR 30082).
- A *pillar\_merge\_lists* option was added to enable recursively merging pillar lists by aggregating them instead of replacing them (PR 30062).
- Grain values reported by Debian 8 (jessie) when `lsb-release` is installed were updated for consistency (PR 28649).
- A new option for minions called `master_tries` has been added. This specifies the number of times a minion should attempt to contact a master to attempt a connection. This allows better handling of occasional master downtime in a multi-master topology.
- The default directory for deploying the salt-thin tarball has changed for salt-ssh. It is now `/var/tmp` instead of `/tmp`. Users may also wish to delete any directories in `/tmp` ending with `_salt/`. (issue 32771)

### External Module Packaging

Modules may now be packaged via entry-points in `setuptools`. See external module packaging tutorial for more information.

### Cloud Changes

- Refactored the OpenNebula driver and added numerous `--function` and `--action` commands to enhance Salt support for image, template, security group, virtual network and virtual machine management in OpenNebula.
- Added execution/state modules to support the deployment of AWS cognito identity pools (PR 31094).
- Added ability to set tags and listener policies on a AWS ELB (PR 27552).

### Platform Changes

- Renamed modules related to macOS. The following module filenames were changed. The virtual name remained unchanged.
- PR #30558: renamed `osxdesktop.py` to `mac_desktop.py`
- PR #30557: renamed `macports.py` to `mac_ports.py`
- PR #30556: renamed `darwin_sysctl.py` to `mac_sysctl.py`
- PR #30555: renamed `brew.py` to `mac_brew.py`
- PR #30552: renamed `darwin_pkgutil.py` to `mac_pkgutil.py`

### Package Support

- Ubuntu Xenial: Packages for Ubuntu Xenial (16.04) are available for 2016.3.0 and onwards. See [repo.saltstack.com](http://repo.saltstack.com) for more information. Note that Xenial comes with Debian's packaged version of Salt 2015.8.8 and official [repo.saltstack.com](http://repo.saltstack.com) packages are available for 2015.8 releases beginning with Salt 2015.8.11.

## Proxy Minion Changes

The deprecated config option `enumerate_proxy_minions` has been removed.

As mentioned in earlier documentation, the `add_proxymodule_to_opts` configuration variable defaults to `False` in this release. This means if you have proxymodules or other code looking in `__opts__['proxymodule']` you will need to set this variable in your `/etc/salt/proxy` file, or modify your code to use the `__proxy__` injected variable.

The `__proxyenabled__` directive now only applies to grains and proxy modules themselves. Standard execution modules and state modules are not prevented from loading for proxy minions.

Support has been added to Salt's loader allowing custom proxymodules to be placed in `salt://_proxy`. Proxy minions that need these modules will need to be restarted to pick up any changes. A corresponding utility function, `saltutil.sync_proxymodules`, has been added to sync these modules to minions.

Enhancements in grains processing have made the `__proxyenabled__` directive somewhat redundant in dynamic grains code. It is still required, but best practices for the `__virtual__` function in grains files have changed. It is now recommended that the `__virtual__` functions check to make sure they are being loaded for the correct proxytype, example below:

```
def __virtual__():
    """
    Only work on proxy
    """
    try:
        if salt.utils.is_proxy() and \
            __opts__['proxy']['proxytype'] == 'ssh_sample':
            return __virtualname__
    except KeyError:
        pass

    return False
```

The try/except block above exists because grains are processed very early in the proxy minion startup process, sometimes earlier than the proxy key in the `__opts__` dictionary is populated.

Grains are loaded so early in startup that no dunder dictionaries are present, so `__proxy__`, `__salt__`, etc. are not available. Custom grains located in `/srv/salt/_grains` and in the salt install grains directory can now take a single argument, `proxy`, that is identical to `__proxy__`. This enables patterns like

```
def get_ip(proxy):
    """
    Ask the remote device what IP it has
    """
    return {'ip': proxy['proxymodulename.get_ip']()}
```

Then the grain `ip` will contain the result of calling the `get_ip()` function in the proxymodule called `proxymodulename`.

Proxy modules now benefit from including a function called `initialized()`. This function should return `True` if the proxy's `init()` function has been successfully called. This is needed to make grains processing easier.

Finally, if there is a function called `grains` in the proxymodule, it will be executed on proxy-minion startup and its contents will be merged with the rest of the proxy's grains. Since older proxy-minions might have used other methods to call such a function and add its results to grains, this is config-gated by a new proxy configuration option called `proxy_merge_grains_in_module`. This defaults to `False` in this release. It will default to `True` in the release after next. The next release is codenamed **Carbon**, the following is **Nitrogen**.

The example proxy minions `rest_sample` and `ssh_sample` have been updated to reflect these changes.

## Syndic Updates

A major performance and management issue was found and fixed in the syndic. This makes the Salt Syndic substantially more reliable and performant. Please make sure that the syndic and the master of masters which syndics attach to are updated, otherwise the syndic fixes alone can cause minor performance issues with older master of masters. Please update masters first, then syndics. Minions do not need to be updated for this fix to work.

## Module Changes

- *file execution module*: `show_diff` is deprecated in favor of `show_changes`. (PR 30988)
- *reg execution module*:
  - Removed the following deprecated functions from the `reg` module (PR 30956):
    - \* `read_key`
    - \* `set_key`
    - \* `create_key`
    - \* `delete_key`
  - Removed `force` parameter from `reg state` module
  - Fixed virtual function in `state`
  - Improved error information for `reg.delete_value` function
- *jboss7 execution module*: `deployed` function was decoupled from Artifactory by removing Artifactory-specific functionality. Note that the changes in some of the function arguments break existing state files, see [issue 30515](#) and [PR 3080](#) for details.
- *pkg state module*: The `wait` function was removed, the functionality was replaced with the `on-changes` requisite (PR 30297).
- *firewalld state module*: A permanent argument was added `add_port`. Note that permanent defaults to `True`, which changes previous behavior (PR 30275). A `bind` function was also added that allows binding zones to interfaces and sources (PR 29497).
- *journalld beacon module*: The event string was updated to include a tag. Note this might impact existing reactors based on this beacon. (PR 30116).
- *postgres\_privileges state module*: The default value of the `prepend` argument was changed from `None` to `public`.
- *zenoss execution module*: The `add_device` function was updated with a default value of `1000` for `prod_state` to match the documentation (PR 28924).
- The `etcd` execution module, `state` module, `returner` module, and `util` module were refactor (PR 28599). This refactor changes error returns for several functions (primarily edge cases):
  - `get`: Used to return `''` on key-not-found. Now returns `None`.
  - `set`: Used to return `''` on issues setting keys. Now returns `None`.
  - `ls`: Used to return `{path: {}}` on key-not-found. Now returns `None`.
  - `Tree`: Used to return `{}` on key-not-found. Now returns `None`.
- *smartos\_virt execution module*: Updated to use most of the new `smartos_vmadm` (PR 28284).

- *apache\_conf state module*, *apache\_module state module*, and *apache\_site state module*: the `enable` and `disable` functions were renamed to `enabled` and `disabled`, respectively. In PR 33562, these functions were readded and properly deprecated and will be removed in Salt 2017.7.0. This fix will be available in 2016.3.1. As a workaround, try

```
apache_module.enable{{ 'd' if grains.saltversioninfo == [2016, 3, 0] else '' }}
```

## New Features

### Thorium - Provisional New Reactor

The 2016.3 release introduces the new Thorium Reactor. This reactor is an experimental new feature that implements a flow programming interface using the salt state system as the engine. This means that the Thorium reactor uses a classic state tree approach to create a reactor that can aggregate event data from multiple sources and make aggregate decisions about executing reactions.

This feature is both experimental and provisional, it may be removed and APIs may be changed. This system should be considered as ambitious as the Salt State System in that the scope of adding a programmable logic engine of this scale into the event systems is non trivial.

See Thorium Complex Reactor.

### Improved Mac OS Support

### Improved Solaris Support

A lot of work was done to improve support for SmartOS. This work also resulted in improvements for Solaris and illumos as SmartOS.

- rewrite of *vmadm module* (SmartOS)
- rewrite of *imgadm module* (SmartOS)
- deprecation of *virt module* in favor of *vmadm* (SmartOS)
- implemented *smartos state* (SmartOS)
- improved *zpool module* add SmartOS, illumos and Solaris support
- improved *zfs module* add SmartOS, illumos and Solaris support
- implemented *zpool state*
- implemented *zfs state* implemented *solaris\_system* system module to provide better Solaris support (PR 30519)
- other minor fixes to grains, localmod, ...

### Tornado Transport

---

**Important:** The Tornado Transport wire protocol was changed in 2016.3, making it incompatible with 2015.8 (PR 29339).

---

## Windows DSC Integration (Experimental)

### Dimension Data Cloud Support

A SaltStack Cloud driver for [Dimension Data Public Cloud](#), provides the driver functionality to service automation for any of the Dimension Data Public Cloud locations:

- Deploy new virtual machines
- List and query virtual machine images
- Destroy and query virtual machines

Documentation of the Dimension Data SaltStack integration is found on [developer.dimensiondata.com](http://developer.dimensiondata.com)

### Minion Blackout

During a blackout, minions will not execute any remote execution commands, except for `saltutil.refresh_pillar`. Blackouts are enabled using a special pillar key, `minion_blackout` set to True.

See *Minion Blackout*.

### Splunk Returner

A Splunk Returner that uses HTTP Event Collector is now available ([PR 30718](#)).

### SQLCIPHER Pillar Module

Support was added for retrieving pillar data via queries to SQLCIPHER databases ([PR 29782](#)).

### New Modules

The following list contains a link to the new modules added in this release.

#### Beacons

- `beacons.adb`
- `beacons.glxinfo`
- `beacons.memusage`
- `beacons.network_settings`
- `beacons.proxy_example`
- `beacons.salt_proxy`

## Engines

- `engines.docker_events`
- `engines.redis_sentinel`
- `engines.slack`
- `engines.sqs_events`
- `engines.thorium`

## Execution Modules

- `modules.bcache`
- `modules.beacons`
- `modules.boto_cloudtrail`
- `modules.boto_datapipeline`
- `modules.boto_iot`
- `modules.boto_lambda`
- `modules.boto_s3_bucket`
- `modules.chronos`
- `modules.cyttest`
- `modules.dockercompose`
- `modules.dsc`
- `modules.ethtool`
- `modules.github`
- `modules.infoblox`
- `modules.iwtools`
- `modules.jenkins`
- `modules.linux_ip`
- `modules.mac_assistive`
- `modules.mac_brew`
- `modules.mac_defaults`
- `modules.mac_desktop`
- `modules.mac_keychain`
- `modules.mac_pkgutil`
- `modules.mac_ports`
- `modules.mac_power`
- `modules.mac_service`
- `modules.mac_shadow`

- `modules.mac_softwareupdate`
- `modules.mac_sysctl`
- `modules.mac_system`
- `modules.mac_timezone`
- `modules.mac_xattr`
- `modules.marathon`
- `modules.minion`
- `modules.openvswitch`
- `modules.opkg`
- `modules.philips_hue`
- `modules.proxy`
- `modules.pushbullet`
- `modules.restartcheck`
- `modules.s6`
- `modules.salt_proxy`
- `modules.ssh_package`
- `modules.ssh_service`
- `modules.sysfs`
- `modules.vboxmanage`
- `modules.win_certutil`
- `modules.win_dism`
- `modules.win_dism`
- `modules.win_license`
- `modules.win_iis`
- `modules.win_task`
- `modules.zabbix`

## Pillar

- `pillar.http_yaml`
- `pillar.stack`

## Proxy

- `proxy.chronos`
- `proxy.junos`
- `proxy.marathon`

- `proxy.phillips_hue`
- `proxy.ssh_sample`

### Roster

- `roster.range`

### States

- `states.apache_conf`
- `states.apache_site`
- `states.boto_cloudtrail`
- `states.boto_datapipeline`
- `states.boto_iot`
- `states.boto_lambda`
- `states.boto_s3_bucket`
- `states.chocolatey`
- `states.chronos_job`
- `states.firewall`
- `states.github`
- `states.gpg`
- `states.grafana_dashboard`
- `states.grafana_datasource`
- `states.infoblox`
- `states.jenkins`
- `states.mac_assistive`
- `states.mac_defaults`
- `states.mac_keychain`
- `states.mac_xattr`
- `states.marathon_app`
- `states.openvswitch_bridge`
- `states.openvswitch_port`
- `states.postgres_cluster`
- `states.proxy`
- `states.salt_proxy`
- `states.virt`
- `states.win_certutil`

- `states.win_dism`
- `states.win_license`
- `states.zabbix_host`
- `states.zabbix_hostgroup`
- `states.zabbix_user`
- `states.zabbix_usergroup`

## 20.2.17 Salt 2016.3.1 Release Notes

Version 2016.3.1 is a bugfix release for *2016.3.0*.

### Final Release of Debian 7 Packages

Regular security support for Debian 7 ended on April 25th 2016. As a result, 2016.3.1 and 2015.8.10 will be the last Salt releases for which Debian 7 packages are created.

### Changes for v2016.3.0..v2016.3.1

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Generated at: 2016-06-08T22:43:50Z

Total Merges: 87

Changes:

- **PR #33866:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #33860:** (*cachedout*) Allow socket closes when the socket is disconnected
- b183a36 Set master and cloud to log level warning (#33861)
- **PR #33698:** (*opdude*) Vsphere fixes
- **PR #33771:** (*twangboy*) Additional functionality to win\_dism.py
- **PR #33851:** (*ticosax*) [dockerng] Add support for edge case when *Cmd* and *Entrypoint* can't be blanked
- **PR #33821:** (*cachedout*) Restore default log level to warning
- **PR #33767:** (*amontalban*) Fix #33604 implementation when `geom disk list` does not output rotat...
- **PR #33806:** (*cachedout*) Work around upstream cherrypy bug
- **PR #33776:** (*danslimmon*) Fixed ACL user comparison. Resolves #33754.
- **PR #33763:** (*abednarik*) Insert --no-refresh before install in Zypper.
- **PR #33764:** (*terminalmage*) Merge instead of update pillar overrides
- **PR #33772:** (*danslimmon*) Fixed spelling of ``through"
- **PR #33651:** (*cachedout*) Restore grains context to renderers
- **PR #33757:** (*cachedout*) Reminder not to return non-serializable data from states
- **PR #33670:** (*rallytime*) Handle non-ascii package names in state.format\_log
- **PR #33723:** (*rallytime*) Back-port #33641 to 2016.3
- **PR #33748:** (*ticosax*) HostConfig has been introduced by docker api version 1.15

- PR #33745: (*eliasp*) Typo (*privilages* → *privileges*)
- PR #33562: (*jfindlay*) states.apache\_\*: readd and deprecate enable and disable
- PR #33659: (*danslimmon*) Added test mode to states.dockerng. Resolves #33632.
- PR #33696: (*clburlison*) Update mac native package for upcoming release
- PR #33710: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- e87c310 backport #33599 to 2016.3 (#33682)
- 377556a Undo \_\_repr\_\_() and \_\_str\_\_() parts of d5a7dcc (#33688)
- 778b290 Remove explicit PW column default from mysql\_user (#33690)
- PR #33680: (*rallytime*) Back-port #32942 to 2016.3
- PR #33677: (*twangboy*) Pass kwargs to cmd.run
- PR #33648: (*terminalmage*) salt.modules.pkgng: Fix incorrect usage of \_pkg()
- PR #33646: (*jfindlay*) Fix more tmp paths on MacOS
- PR #33656: (*cachedout*) Fix indentation error in minion.py
- PR #33637: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- b7230bd Back-port #33613 to 2016.3 (#33638)
- PR #33606: (*danslimmon*) Fixed ini.options\_absent. Resolves #33590.
- PR #33604: (*kev009*) Fix #33578 disks grain
- 259529e Use correct state name in libvirt formula doc (#33631)
- PR #33603: (*sjorge*) allow esky packages to be build on base64 2015Q4
- PR #33576: (*tomlaredo*) Fix #33565 (typo causes invalid syntax)
- PR #33549: (*thatch45*) Fix for #33530
- PR #33538: (*anlutro*) Fix a KeyError if group is provided but not user in cmd states
- PR #33550: (*jacobhammons*) Fixes display of thorium docs
- PR #33509: (*twangboy*) Detect System Architecture for Mac Build
- PR #33522: (*jfindlay*) rework modules.mac\_brew.latest\_version to work around brew version inconsistency
- PR #33519: (*jacobhammons*) New doc site layout, 2016.3.0 release note known issue additions
- PR #33508: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #33505: (*twangboy*) Fix build script where pip didn't work
- PR #33076: (*cachedout*) Avoid second grains load on windows multiprocessing

## 20.2.18 Salt 2016.3.2 Release Notes

Version 2016.3.2 is a bugfix release for *2016.3.0*.

### Returner Changes

- Any returner which implements a `save_load` function is now required to accept a `minions` keyword argument. All returners which ship with Salt have been modified to do so.

## Changes for v2016.3.1..2016.3.2

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Generated at: 2016-07-27T15:47:45Z

Statistics:

- Total Merges: **198**

Changes:

- **PR #34946:** (*anlutro*) Fix virtualenv behavior when requirements files are in subdirectories
- **PR #34957:** (*sjmh*) Don't fall through to checking auth entries
- **PR #34971:** (*cachedout*) Increase timeout for grains test
- **PR #34951:** (*vutny*) Fix #34873
- **PR #34935:** (*rallytime*) Avoid UnboundLocalError in beacons module
- **PR #34956:** (*cachedout*) Increase all run\_script timeouts to 30s
- **PR #34933:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34916:** (*cachedout*) Master performance improvement
- **PR #34911:** (*cachedout*) Backport #34906
- **PR #34906:** (*cachedout*) Set timeout for run\_salt in test suite
- **PR #34898:** (*hrumph*) Stop multiple refreshes during call to pkg.list\_upgrades
- **PR #34915:** (*abednarik*) Update service\_rh provider to exclude XenServer >= 7.
- **PR #34926:** (*rallytime*) Lint #34923
- **PR #34923:** (*eliasp*) Handle exception when no Slack API key was provided
- **PR #34910:** (*cachedout*) Fix grains error on proxy minions
- **PR #34864:** (*jmacfar*) Check for version in list of installed versions
- **PR #34902:** (*rallytime*) Back-port #34878 to 2016.3
- **PR #34878:** (*abednarik*) Add VirtuozzoLinux is yumpkg enable list.
- **PR #34901:** (*rallytime*) Add VirtuozzoLinux to the list of enabled distros for rpm.py
- **PR #34900:** (*rallytime*) Add VirtuozzoLinux to enabled platforms list in rh\_service.py
- **PR #34887:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34869:** (*terminalmage*) Fail git.latest states with uncommitted changes when force\_reset=False
- **PR #34862:** (*thatch45*) Fix salt-ssh cacheing issue
- **PR #34859:** (*cachedout*) Fix wheel test
- **PR #34632:** (*eliasp*) Try to create the log directory when not present yet
- **PR #34854:** (*rallytime*) Remove string\_types import from state compiler
- **PR #34865:** (*thatch45*) This needs discussion, since this breaks SUSE
- **PR #34858:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34847:** (*cachedout*) Add an option to skip the verification of client\_acl users
- **PR #34833:** (*rallytime*) Back-port #28521 to 2015.8

- PR #34828: (*thatch45*) Fix #34648
- PR #34827: (*thatch45*) fix beacon list to include all beacons being processed
- PR #34823: (*rallytime*) Back-port #25276 to 2015.8
- PR #34822: (*thatch45*) Fix salt-ssh state.high and state.low
- PR #28521: (*gongled*) SPM: packaging doesn't work in Python 2.6. Fixed.
- PR #25276: (*jacobhammons*) copy spm.1 man page during setup
- PR #34852: (*rallytime*) Skip GCE unit tests - causes test suite to hang
- PR #34844: (*vutny*) Fix getting total available memory without *psutil* installed
- PR #34837: (*thatch45*) Fix #34345
- PR #34838: (*thatch45*) Check if a valid value is passed to `unlyif/unless`
- PR #34840: (*thatch45*) update the state wrapper to include `show_low_sls`
- PR #34842: (*sjorge*) 2016.3 zpool cleanup and fixes
- PR #34770: (*aphor*) zpool state module needs support for disk vdev #34762
- PR #34825: (*thatch45*) keep this beacon from stack tracing at the loader
- PR #34824: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #34818: (*jtand*) Skip mysql state test if `mysqladmin` is not available
- PR #34803: (*junovitch*) salt/state.py: set `'chunk[order] = 0' with 'order: first'; fixes '#24744'`
- PR #34642: (*jtand*) Check that `mysqladmin` exists before running mysql integration tests
- PR #34670: (*isbm*) Add `'osmajorrelease'` grain (2016.3)
- PR #34683: (*cachedout*) Fix publisher leak
- PR #34791: (*sjorge*) salt.state.zpool tweaks
- PR #34784: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #34773: (*randomed*) Bugfix: Startup states on minions are not being written to mysql returner
- PR #34754: (*cachedout*) Disable test
- PR #34751: (*cachedout*) Remove unneeded config test
- PR #34741: (*rallytime*) Back-port #34726 to 2015.8
- PR #34726: (*martinhoefling*) Always loop over updated keys in non recursive update
- PR #34606: (*isbm*) Bugfix: Exit on configuration read (backport)
- PR #34756: (*jacobhammons*) Rebuild man pages
- PR #34746: (*rallytime*) Update azure lib dep to match the one in `cloud.clouds.msazure`
- PR #34744: (*jtand*) Test valid docs fix
- PR #34740: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #34721: (*rallytime*) Add `output_file` option to master config docs
- PR #34607: (*isbm*) Bugfix: Exit on configuration read (backport)
- PR #34739: (*cachedout*) Remove unneeded config test
- PR #34607: (*isbm*) Bugfix: Exit on configuration read (backport)

- **PR #34722:** (*rallytime*) Various spelling fixes
- **PR #34714:** (*sjmh*) Fix ldap auth for function matches
- **PR #34720:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34695:** (*isbm*) Bugfix: Zypper *pkg.list\_products* returns False on some empty values (2015.8)
- **PR #34689:** (*Azidburn*) fix second run problems with pkg.installed using sources
- **PR #34682:** (*jfindlay*) update 2015.8.11 release notes
- **PR #34707:** (*rallytime*) Add versionadded to ``special" option in cron.present state
- **PR #34696:** (*isbm*) Bugfix: Zypper *pkg.list\_products* returns False on some empty values (2016.3)
- **PR #34702:** (*farcaller*) Fixed dockerng.list\_tags
- **PR #34681:** (*rallytime*) Back-port #34549 to 2016.3
- **PR #34549:** (*Inveracity*) fixes multiple values in mof configuration
- **PR #34679:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34676:** (*cachedout*) Revert ``Modify lodaer global test to use populated dunder"
- **PR #34651:** (*rallytime*) Lint 34644
- **PR #34647:** (*cachedout*) Adjust the mine test a little bit to give it a better chance of success
- **PR #34644:** (*cachedout*) Cleanup loader errors
- **PR #34642:** (*jtand*) Check that mysqladmin exists before running mysql integration tests
- **PR #34618:** (*jtand*) Network state integration test test=True
- **PR #34601:** (*loregordon*) Clarifies the proper way to reference states
- **PR #34605:** (*gtmanfred*) catch error if no dns domains exist
- **PR #34557:** (*jacobweinstock*) handle jboss cli expression type in the parsing of output
- **PR #34652:** (*rallytime*) Spelling fixes found in sqlite3 pillar docs
- **PR #34565:** (*Ch3LL*) add num\_cpus grain to freebsd
- **PR #34621:** (*jtand*) Suse Leap doesn't have `man'
- **PR #34619:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34617:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #34593:** (*rallytime*) Back-port #33851 to 2015.8
- **PR #34592:** (*jtand*) Update github IP for ssh state integration tests
- **PR #34591:** (*jtand*) Gate docker unit test to check for docker
- **PR #34590:** (*oeuftete*) [2015.8] dockerng: When sorting list actual\_data, make it a list
- **PR #34584:** (*rallytime*) [2015.5] Avoid circular imports when calling salt.utils functions
- **PR #34560:** (*terminalmage*) Add a bunch of documentation on getting files from other environments
- **PR #34545:** (*terminalmage*) Handle cases where Docker Remote API returns an empty ExecutionDriver
- **PR #34531:** (*terminalmage*) Support ignore\_epoch argument in version comparisons
- **PR #33851:** (*ticosax*) [dockerng] Add support for edge case when *Cmd* and *Entrypoint* can't be blanked
- **PR #34585:** (*rallytime*) [2016.3] Avoid salt.utils circular imports when using ``from"

- **PR #34616:** (*jacobhammons*) Adds a mock required for the network settings beacon
- **PR #34553:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34546:** (*rallytime*) Rename unit.states.boto\_secgroup to unit.states.boto\_secgroup\_test
- **PR #34537:** (*rallytime*) Rename tests.unit.simple to tests.unit.simple\_test
- **PR #34527:** (*rallytime*) [2015.8] Update bootstrap script to latest stable
- **PR #34521:** (*cachedout*) Prevent many errors in the test suite in loader tests
- **PR #34518:** (*terminalmage*) Fix pkg.latest integration test for non-LTS ubuntu
- **PR #34507:** (*AAbouZaid*) Fix wrong order of retention\_policy\_exists.
- **PR #34569:** (*eliasp*) Minor doc fixes for PostgreSQL states
- **PR #34524:** (*terminalmage*) yumpkg: Avoid spurious logging in pkg.upgrade
- **PR #34490:** (*cachedout*) Fix master crash on ctrl-c for long-running job
- **PR #34520:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34513:** (*cachedout*) Lower the log level for modules which cannot be loaded to trace
- **PR #34505:** (*terminalmage*) Improve top file merging documentation
- **PR #34503:** (*rallytime*) Rename some unit test files by adding \_test
- **PR #34498:** (*rallytime*) Use -O in the wget example in the bootstrap tutorial for the develop branch
- **PR #34492:** (*zer0def*) Gracefully handle non-XML output in GlusterFS execution module.
- **PR #34489:** (*jtand*) Use skipTest for network state integration test
- **PR #34488:** (*rallytime*) Update dnsmasq.get\_config docs to use correct config\_file param.
- **PR #34499:** (*gtmanfred*) remove unnecessary block parsing ip addrs for nova
- **PR #34468:** (*twangboy*) Use Python 2.7.12 for Windows Build
- **PR #34493:** (*twangboy*) Use Python 2.7.12 for Mac Build
- **PR #34486:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34467:** (*rallytime*) Back-port #34457 to 2015.8
- **PR #34462:** (*terminalmage*) Use --always when available to git describe
- **PR #34457:** (*ryan-lane*) Only access key metadata if we found key metadata
- **PR #34455:** (*cro*) Forgot reference to inotify
- **PR #34432:** (*twangboy*) Fix file.append
- **PR #34429:** (*terminalmage*) Skip version checking for targeted packages in pkg.latest state
- **PR #34459:** (*terminalmage*) Ignore retcode when formatting highstate output
- **PR #34463:** (*terminalmage*) states/git: pass required cwd parameter to git.describe.
- **PR #34466:** (*rallytime*) Back-port #34436 to 2016.3
- **PR #34436:** (*artxki*) Fix #34395 Nonfunctional default\_password in states.postgres\_user.present
- **PR #34453:** (*jtand*) Arch linux does not have osrelease or osmajorrelease grains
- **PR #34456:** (*thatch45*) Be more careful when making the SMinion
- **PR #34452:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3

- PR #34451: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #34435: (*cachedout*) Backport change to integraiton test suite
- PR #34426: (*cro*) Document that inotify is Linux only
- PR #34401: (*terminalmage*) Use rpmdev-vercmp as a fallback for version comparison on RHEL5
- PR #34366: (*steverweber*) Update service.py
- PR #34427: (*twangboy*) Automated signing fixes for Ubuntu 16.04, 14.04, 12.04 (for dmurphy)
- PR #34400: (*cachedout*) Fix uninitialized value
- PR #34404: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #34392: (*cro*) Clarify that salt-cloud doesn't get installed by bootstrap
- PR #34377: (*terminalmage*) Optimize pkg integration tests and add a couple new tests
- PR #34373: (*jtand*) Network state integration test
- PR #34292: (*twangboy*) Fix runas function for System Account
- PR #34388: (*rallytime*) Back-port #34378 to 2016.3
- PR #34378: (*adelcast*) network\_settings.py: fix documentation
- PR #34352: (*cro*) Esxi dvs
- PR #34386: (*rallytime*) Beacon network docs
- PR #34376: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #34368: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #34344: (*rallytime*) Back-port #34324 to 2015.8
- PR #34342: (*rallytime*) Back-port #34316 to 2015.8
- PR #34324: (*cachedout*) Test custom grains matcher
- PR #34316: (*edgan*) Making salt-ssh pass proper return codes for jinja rendering errors
- PR #34252: (*gtmanfred*) return list of nodes for lxc driver when called directly
- PR #34365: (*sjorge*) fixes computenode\_\* grains on SmartOS compute nodes
- PR #34353: (*cro*) Remove proxy check and additional GetConnection--this makes the proxy...
- PR #34348: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #34339: (*terminalmage*) Revert py3modernize lint changes
- PR #34335: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #34325: (*terminalmage*) Remove unnecessarily-disabled sanity check
- PR #34323: (*jacobhammons*) Doc clarifications to file modules, addition of new *profile* log lev...
- PR #34319: (*rallytime*) Back-port #34244 to 2015.8
- PR #34313: (*rallytime*) [2015.5] Update to latest bootstrap script v2016.06.27
- PR #34312: (*rallytime*) [2015.8] Update to latest bootstrap script v2016.06.27
- PR #34307: (*rallytime*) Fix test example in integration testing docs
- PR #34306: (*ghedo*) Fix iptables.flush state: Do not force `filter' table when flushing
- PR #34244: (*the-glu*) Typo in dockerio doc

- PR #34343: (*rallytime*) Back-port #34256 to 2016.3
- PR #34256: (*tmehlinger*) detect running from master in State.event method
- PR #34338: (*themalkolm*) Add listen/listen\_in support to stateconf.py
- PR #34283: (*sjorge*) 2016.3 mount vfstab support
- PR #34322: (*Ch3LL*) add osmajorrelease grain for raspbian
- PR #34337: (*clinta*) Change merge-if-exists logic to properly report changes
- PR #34300: (*vutny*) Make apache.configfile state handle the Options list correctly
- PR #34333: (*rallytime*) Back-port #33734 to 2016.3
- PR #34304: (*rallytime*) Back-port #33734 to 2016.3
- PR #33734: (*glomium*) modules/rabbitmq.py version checking had a logical error
- PR #34330: (*clinta*) fix #34329
- PR #34318: (*rallytime*) Back-port #32182 to 2016.3
- PR #32182: (*dongweiming*) Fix psutil.cpu\_times unpack error
- PR #34311: (*rallytime*) [2016.3] Update to latest bootstrap script v2016.06.27
- PR #34284: (*rallytime*) Don't require `domain` to be present before checking fqdn\_ip\* grains
- PR #34296: (*sjorge*) 2016.3 status module now works on Solaris like platforms
- PR #34281: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #34274: (*clinta*) Don't escape source before calling managed
- PR #34258: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #34257: (*rallytime*) Use `config\_dir` setting instead of CONFIG\_DIR in gpg renderer
- PR #34233: (*thegoodduke*) ipset: fix the comment containing blank
- PR #34232: (*thegoodduke*) ipset: fix comment containing blank
- PR #34225: (*richardscollin*) Fix win\_system.set\_system\_date\_time
- PR #34271: (*opdude*) Fixed symlinks on windows where the slashes don't match
- PR #34254: (*sjorge*) Fix for #14915
- PR #34259: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #34136: (*meaksh*) Fixed behavior for SUSE OS grains in 2015.8
- PR #34134: (*meaksh*) Fixed behavior for SUSE OS grains in 2016.3
- PR #34093: (*terminalmage*) Catch CommandExecutionError in pkg states
- PR #33903: (*meaksh*) Fetching grains['os'] from /etc/os-release on SUSE systems if it is possible
- PR #34134: (*meaksh*) Fixed behavior for SUSE OS grains in 2016.3
- PR #33903: (*meaksh*) Fetching grains['os'] from /etc/os-release on SUSE systems if it is possible
- PR #34159: (*christoe*) Fixes to the win\_task module
- PR #34223: (*peterdemin*) Fixed typo in filtering LDAP's potential\_ous
- PR #34239: (*vutny*) file.find module: fix handling of broken symlinks
- PR #34229: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3

- **PR #34218:** (*terminalmage*) Fix a pair of gitfs bugs
- **PR #34208:** (*lomeroy*) fix regression from #33681 which causes pulling a list of s3 objects ...
- **PR #34206:** (*terminalmage*) Change target for dockerng assuming default status to Nitrogen release
- **PR #34188:** (*terminalmage*) Clarify pkg.list\_repo\_pkgs docstring for held packages
- **PR #34182:** (*rallytime*) Handle child PIDs differently depending on the availability of psutils
- **PR #33942:** (*cachedout*) ZD 762
- **PR #33681:** (*rallytime*) Back-port #33599 to 2015.8
- **PR #33599:** (*lomeroy*) Fix s3 large file download
- **PR #34214:** (*rallytime*) Update saltutil.wheel docs to specify remote vs local minion behavior
- **PR #34209:** (*lomeroy*) fix regression in s3.query from #33682
- **PR #33682:** (*lomeroy*) backport #33599 to 2016.3
- **PR #33599:** (*lomeroy*) Fix s3 large file download
- **PR #34222:** (*cachedout*) Lint 34200
- **PR #34200:** (*secumod*) Fix parted module set CLI example
- **PR #34197:** (*eliasp*) Make `module.ssh.recv_known_host()` more resilient against hosts not returning a key
- **PR #34201:** (*DarkKnightCZ*) Suffix temp file with `.sr1` and add mandatory argument when executing PowerShell script
- **PR #34198:** (*DarkKnightCZ*) Don't use binary mode for `cmdmod.exec_code`
- **PR #34198:** (*DarkKnightCZ*) Don't use binary mode for `cmdmod.exec_code`
- **PR #34172:** (*dmurphy18*) Support for building with local packages on Debian and Ubuntu
- **PR #34194:** (*vutny*) Correct the docstrings formatting in pkgbuild modules and state
- **PR #34056:** (*vutny*) Make rpmbuild module work on non-RPM based GNU/Linux systems
- **PR #34186:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34184:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #34179:** (*terminalmage*) Raise the correct exception when gitfs lockfile is empty
- **PR #34178:** (*terminalmage*) Remove unnecessary comment
- **PR #34176:** (*rallytime*) Back-port #34103 to 2015.8
- **PR #34175:** (*rallytime*) Back-port #34128 to 2015.8
- **PR #34174:** (*rallytime*) Back-port #34066 to 2015.8
- **PR #34165:** (*mcalmer*) fix salt --summary to count not responding minions correctly
- **PR #34141:** (*jtand*) Fixed boto\_vpc\_test failure
- **PR #34128:** (*bebehei*) doc: add missing dot
- **PR #34103:** (*morganwillcock*) Fix diskusage beacon
- **PR #34077:** (*rallytime*) Add some grains targeting tests
- **PR #34066:** (*complexsplit*) Typo fix
- **PR #33474:** (*cachedout*) Fix diskusage beacon

- **PR #34173:** (*rallytime*) Update docs to match log\_level default
- **PR #34095:** (*rallytime*) Back-port #32396 to 2016.3
- **PR #32396:** (*eradman*) Unbreak cron.file
- **PR #34108:** (*l2ol33rt*) Make dockerng.absent state honor test=true
- **PR #34133:** (*rallytime*) Back-port #34057 to 2016.3
- **PR #34057:** (*ajacoutot*) \_active\_mounts\_openbsd: unbreak output for special filesystems
- **PR #34156:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34142:** (*isbm*) Move log message from INFO to DEBUG.
- **PR #34100:** (*terminalmage*) Update documentation on ``refresh" behavior in pkg states
- **PR #34072:** (*jfindlay*) modules.pkg int tests: skip refresh\_db upon error
- **PR #34110:** (*garthgreenaway*) Fixes to git module & state module related to identity file
- **PR #34138:** (*rallytime*) Update package dep note to systemd-python for RHEL7 install
- **PR #34166:** (*vutny*) Fix YAML indentation in Apache state docstrings
- **PR #34098:** (*terminalmage*) Restore old refresh logic
- **PR #34087:** (*bbinet*) Encourage to report issues to upstream PillarStack project
- **PR #34075:** (*jfindlay*) modules.inspectlib.kiwiproc: import gate lxml
- **PR #34056:** (*vutny*) Make rpmbuild module work on non-RPM based GNU/Linux systems
- **PR #34073:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34069:** (*rallytime*) Add a test to check for disconnected minion messaging
- **PR #34051:** (*tegbert*) Fixed a bug in the consul.py module that was preventing services
- **PR #34048:** (*terminalmage*) RFC: proposed fix for multiple fileserver updates in masterless runs
- **PR #34045:** (*jacobhammons*) Updated latest release version
- **PR #34030:** (*vutny*) More YAML indentation fixes in state module examples
- **PR #34020:** (*twangboy*) Always make changes to minion config if set (2015.8)
- **PR #34018:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #34011:** (*rallytime*) Back-port #33948 and #34009 to 2015.8
- **PR #34009:** (*rallytime*) Back-port #33948 to 2016.3 + add log message
- **PR #34005:** (*rallytime*) Lint fix for #34000
- **PR #34003:** (*vutny*) states.file: fix indentation in YAML examples
- **PR #34002:** (*lorenegordon*) Remove loader test for pam module
- **PR #34000:** (*cachedout*) Fix incorrectly written test
- **PR #33990:** (*jacobhammons*) Adds links to several current Salt-related projects
- **PR #33985:** (*rallytime*) Write some more simple batch command tests
- **PR #33984:** (*jfindlay*) Add docs and tests to disk state
- **PR #33983:** (*twangboy*) Clarify the *account\_exists* parameter
- **PR #33953:** (*whiteinge*) Add loader.utils() example to calling minion\_mods

- PR #33951: (*jfindlay*) modules.gem int tests: more fixes
- PR #33948: (*cachedout*) Save an entire minion cache traversal on each master pub
- PR #33904: (*rallytime*) Back-port #33806 to 2015.5
- PR #33880: (*terminalmage*) pkg.uptodate: Pass kwargs to pkg.list\_upgrades
- PR #33806: (*cachedout*) Work around upstream cherrypy bug
- PR #33684: (*jfindlay*) add acl unit tests
- PR #34010: (*terminalmage*) Do not cache remote files if they are already cached
- PR #34009: (*rallytime*) Back-port #33948 to 2016.3 + add log message
- PR #33948: (*cachedout*) Save an entire minion cache traversal on each master pub
- PR #33941: (*cachedout*) Don't call os.getppid() on Windows
- PR #34067: (*jacobhammons*) Fixes doc refresh bug on chrome mobile.
- PR #34050: (*rallytime*) Back-port #34026 to 2016.3
- PR #34026: (*bensherman*) removed method that doesn't exist
- PR #33987: (*isbm*) inspectlib cleanup
- PR #34042: (*sjorge*) fix #34038
- PR #34025: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #34044: (*jacobhammons*) Updated latest release to 2016.3.1
- PR #34014: (*jnhmcknight*) fix launch config creation params
- PR #34021: (*twangboy*) Always make changes to minion config if set (2016.3)
- PR #34031: (*eliasp*) states.postgres\_privileges expects a real list, not a comma-separated string
- PR #33995: (*jacobhammons*) Understanding Jinja topic, Jinja doc issues.
- PR #33900: (*amendlik*) Document sudo policy for gitfs post-recieve hook
- PR #33980: (*twangboy*) Use full path to python.exe
- PR #33993: (*s0undt3ch*) Call sys.exit() instead of exit()
- PR #33976: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #33962: (*jacobhammons*) Adds a ``Generated on <timestamp>'' line to the html footer
- PR #33952: (*rallytime*) Add base argument to salt-ssh grains wrapper for filter\_by func
- PR #33946: (*rallytime*) Back-port #33698 to 2015.8
- PR #33942: (*cachedout*) ZD 762
- PR #33698: (*opdude*) Vsphere fixes
- PR #33912: (*abalashov*) utils/schedule.py:handle\_func() - Fix for accessing returner configur...
- PR #33945: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #33936: (*rallytime*) Add connecting\_settings to boto\_elb state attributes list
- PR #33917: (*techhat*) Wait for up to a minute for sync\_after\_install
- PR #33888: (*jfindlay*) random.org checks
- PR #33877: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8

- **PR #33833:** (*terminalmage*) Support syncing pillar modules to masterless minions
- **PR #33829:** (*terminalmage*) Update versionchanged directive
- **PR #33814:** (*terminalmage*) Support extraction of XZ archives in archive.extracted state
- **PR #33778:** (*sodium-chloride*) Fix minor docstring issues
- **PR #33765:** (*cachedout*) Correct issue with ping on rotate with minion cache
- **PR #33726:** (*jtand*) glance.warn\_until shouldn't be checked for a doc string
- **PR #33611:** (*rolffokkens*) 2015.5
- **PR #33960:** (*mecarus*) Fix mongo get\_load to return full mongo record instead of non-existent 'load' key
- **PR #33961:** (*jacobhammons*) 2016.3.0 known issues update
- **PR #33908:** (*ticosax*) [boto\_lambda] handle omitted Permissions parameter
- **PR #33896:** (*DmitryKuzmenko*) Don't deep copy context dict values.
- **PR #33905:** (*rallytime*) Back-port #33847 to 2016.3
- **PR #33910:** (*cachedout*) Ensure tht pillar have freshest grains
- **PR #33870:** (*rallytime*) Add note about Xenial packages to 2016.3.0 release notes
- **PR #33847:** (*whiteinge*) Add docs for arg/kwarg eauth matching
- **PR #33076:** (*cachedout*) Avoid second grains load on windows multiprocessing
- **PR #29153:** (*DmitryKuzmenko*) ACL limit args

### 20.2.19 Salt 2016.3.3 Release Notes

Version 2016.3.3 is a bugfix release for *2016.3.0*.

#### Known Issues

[issue 36055](#): Salt Cloud events (`salt/cloud`) are not generated on the master event bus when provisioning cloud systems.

[Bootstrap Issue #973](#): `python-futures` is not installed when installing from a git tag on RedHat-based distributions. `python-futures` is needed when running Salt with the TCP transport. This is fixed on the `develop` branch of the [salt-bootstrap repo](#) and the fix will be included in the upcoming release of `salt-bootstrap`, but is a bug in the bootstrap release that ships with this version of Salt. Please see the [salt-bootstrap repo](#) for more information on how to update your bootstrap version.

#### Changes for v2016.3.2..2016.3.3

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Generated at: 2016-08-19T16:17:34Z

Total Merges: 134

Changes:

- **PR #35580:** (*twangboy*) Fix mac\_service attempts to parse non-plist files
- **PR #35586:** (*hu-dabao*) Fix 35420, add run\_on\_start in build\_schedule\_item

- **PR #35583:** (*terminalmage*) Fix localemod tests
- **PR #35579:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35577:** (*terminalmage*) Unit file changes for 2015.8.12, 2016.3.3
- **PR #35571:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35566:** (*rallytime*) Back-port #35545 to 2015.8
- **PR #35546:** (*whiteinge*) Salt api eauth fail gracefully
- **PR #35545:** (*hu-dabao*) fix-35384, fix cmd.run unless
- **PR #35540:** (*rallytime*) Whitespace fix for 2015.8
- **PR #35525:** (*UtahDave*) add missing glob import
- **PR #35510:** (*terminalmage*) Better systemd integration
- **PR #35492:** (*terminalmage*) Clarify config.get docstring
- **PR #35483:** (*gtmanfred*) use `__utils__` in salt.cloud
- **PR #35573:** (*rallytime*) Back-port #33337 to 2016.3
- **PR #33337:** (*mzupan*) adding the () to make changes work
- **PR #35572:** (*terminalmage*) Fix poor formatting in pkg state docs
- **PR #35545:** (*hu-dabao*) fix-35384, fix cmd.run unless
- **PR #35489:** (*rallytime*) Back-port #35463 to 2016.3
- **PR #35463:** (*skizunov*) Make `auth_timeout` user configurable again
- **PR #35538:** (*thatch45*) Treat python XML as an optdep
- **PR #35526:** (*thatch45*) Always deploy the thin to /var/tmp
- **PR #35522:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35513:** (*cachedout*) Might be a good idea to be able to download the software we make
- **PR #35512:** (*cachedout*) Fixup 35419
- **PR #35508:** (*terminalmage*) Add Carbon to versionadded for git.diff
- **PR #35497:** (*deepakhj*) Fixes spacing in requirements files
- **PR #35302:** (*Ch3LL*) Add job cache test
- **PR #35516:** (*rallytime*) Back-port #34441 to 2016.3
- **PR #34441:** (*markuskramerlgitt*) Copy and delete silently, do not list each file
- **PR #35517:** (*rallytime*) Back-port #34502 to 2016.3
- **PR #34502:** (*markuskramerlgitt*) Windows installer build scripts will exit on error
- **PR #35429:** (*tankywoo*) Fix iptables target options with no arguments
- **PR #35495:** (*rallytime*) Use correct deprecated notation instead of a warning for `apache_module.enable` state function.
- **PR #35498:** (*rallytime*) Add supported templates list to all template doc references in file state
- **PR #35406:** (*rallytime*) Provide links to the renderers in the template docs
- **PR #35360:** (*rallytime*) Add all template registry templates to file.managed docs

- **PR #35487:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35486:** (*rallytime*) Update bootstrap script to latest stable (2016.08.16)
- **PR #35476:** (*cachedout*) Fixup SSH bug where sudo without sudo user would break
- **PR #35471:** (*terminalmage*) win\_pkg: Fix traceback when package is not installed
- **PR #35460:** (*rallytime*) [2015.8] Update bootstrap script to latest stable (2016.08.15)
- **PR #35459:** (*thatch45*) Ensure that output for salt-ssh gets back
- **PR #35453:** (*theothergraham*) fixes #34279 - disk cache ttl expiry
- **PR #35451:** (*isbm*) Bugfix: zypper mod repo unchanged
- **PR #35448:** (*isbm*) Add ignore\_repo\_failure option to suppress zypper's exit code 106 on ...
- **PR #35413:** (*cachedout*) Resolve path issues with cp.push
- **PR #35446:** (*cachedout*) Make salt-client aware of edge-case where saltutil might be broken
- **PR #35449:** (*dkruger*) aptpkg will specify --install-recommends if enabled by the SLS
- **PR #35467:** (*rallytime*) Back-port #33518 to 2016.3
- **PR #35235:** (*rallytime*) Back-port #33518 to 2016.3
- **PR #33518:** (*tonybaloney*) Fix libcloud bug #33367
- **PR #35461:** (*rallytime*) [2016.3] Update bootstrap script to latest stable (2016.08.15)
- **PR #35456:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35442:** (*cachedout*) Fix cp.push\_dir pushing empty dirs
- **PR #35436:** (*cachedout*) Minor doc fixup
- **PR #35132:** (*sjorge*) fixes , causing lots of mayham (onchange) with 2016.3.2 for me
- **PR #35447:** (*ticosax*) [dockerng] RepoTags can be also be None with docker 1.12
- **PR #35308:** (*farcaller*) Actually fixed dockerng.list\_tags
- **PR #34702:** (*farcaller*) Fixed dockerng.list\_tags
- **PR #35427:** (*cachedout*) Correct errant call to argspec from master. Fix ext\_job\_cache.
- **PR #35428:** (*cachedout*) Resolve stacktrace logged by highstate outputter if sls cannot be found
- **PR #35412:** (*s0undt3ch*) Only allow one sync read to happen at a time.
- **PR #35406:** (*rallytime*) Provide links to the renderers in the template docs
- **PR #35360:** (*rallytime*) Add all template registry templates to file.managed docs
- **PR #35393:** (*deniszh*) No need to run ddns update every time
- **PR #35407:** (*hu-dabao*) [Fix-35094] None will not be added to grains which generate [none]
- **PR #35411:** (*eliasp*) modules.event.send(): Prevent backtrace for masterless Minions
- **PR #35395:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35394:** (*rallytime*) Back-port #34573 to 2015.8
- **PR #35359:** (*terminalmage*) Clean up open filehandles
- **PR #35357:** (*twangboy*) Fix file.recurse with clean: True on Windows (2015.8)
- **PR #35339:** (*isbm*) Bugfix: Prevent continuous restart, if a dependency wasn't installed

- [PR #34573](#): (*cedwards*) Update freebsd.rst
- [PR #35373](#): (*cachedout*) Raise SaltRenderError on bad requisite
- [PR #35352](#): (*twangboy*) Fix file.recurse with clean: True on Windows (2016.3)
- [PR #35356](#): (*jfindlay*) document log levels and warn on all logging below info
- [PR #35358](#): (*twangboy*) Update libsodium deps
- [PR #35360](#): (*rallytime*) Add all template registry templates to file.managed docs
- [PR #35362](#): (*rallytime*) Correct deprecation version tags
- [PR #35361](#): (*rallytime*) Blockdev deprecations
- [PR #25267](#): (*jfindlay*) Disk module improvements
- [PR #24893](#): (*The-Loeki*) Contribution: Disk module improvements
- [PR #35347](#): (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- [PR #35325](#): (*kev009*) Fix freebsd netstat route on fbsd 10+
- [PR #35323](#): (*thatch45*) Fix issue with bad error check in salt-vt
- [PR #35309](#): (*terminalmage*) file.recurse: Do not convert octal mode string to int
- [PR #35301](#): (*bobrik*) Pass port to ssh.check\_known\_host, closes [#35264](#)
- [PR #35334](#): (*cachedout*) Restore random\_master functionality
- [PR #35331](#): (*hu-dabao*) fix 35165, salt-run jobs.exit\_success jid is broken
- [PR #35318](#): (*rallytime*) Remove legacy compat docs in mysql pillar since the code was removed already
- [PR #30913](#): (*jtand*) Deprecated code removed.
- [PR #35329](#): (*hu-dabao*) sys.doc will skip all not connected minions
- [PR #35306](#): (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- [PR #35290](#): (*terminalmage*) Resolve a couple bugs in orchestration output
- [PR #35229](#): (*lubyu*) Ignore import error for pwd module in mac\_shadow
- [PR #35227](#): (*isbm*) Isbm osfinger ubuntu fix
- [PR #35286](#): (*hu-dabao*) fix 34425, a bug that sys.doc cannot output format
- [PR #35275](#): (*rallytime*) Back-port [#35213](#) to 2016.3
- [PR #35213](#): (*gtmanfred*) add identity v3 support to openstack driver
- [PR #35278](#): (*dmurphy18*) Increase timeout for signing to 10 seconds when signing rpm packages
- [PR #35276](#): (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- [PR #35271](#): (*bobrik*) Default state\_output\_profile to True everywhere, closes [#35166](#)
- [PR #35249](#): (*terminalmage*) Fix regression in git.latest
- [PR #35245](#): (*rallytime*) Back-port [#35039](#) to 2015.8
- [PR #35241](#): (*terminalmage*) Ensure max recursion in gitfs results in no blob object being returned.
- [PR #35240](#): (*derekmaciel*) Backport [#35225](#) to 2015.8
- [PR #35236](#): (*rallytime*) Back-port [#35119](#) to 2015.8
- [PR #35233](#): (*terminalmage*) Do not attempt to get fqdn\_ip{4,6} grains when ipv{4,6} grains are empty

- **PR #35225:** (*derekmaciel*) Add missing documentation for pkg.installed
- **PR #35211:** (*cachedout*) Alternative sudo users for salt-ssh
- **PR #35202:** (*multani*) doc: fix broken links in the test documentation page
- **PR #35119:** (*derekmaciel*) Assume two EVRs are equal if E and V are equal but one R is missing.
- **PR #35039:** (*whiteinge*) Add saltenv support to module.run
- **PR #35274:** (*rallytime*) Lint fixes for 2016.3 branch
- **PR #35232:** (*theredcat*) fix rabbitmq version detection using a package-agnostic version
- **PR #35269:** (*meaksh*) Checksum validation for zypper pkg.download in 2016.3 and develop
- **PR #35197:** (*vutny*) Make *pkgbuild.repo* state recognize *createrepo* command return code
- **PR #35178:** (*cro*) Add append\_minionid\_config\_dirs option
- **PR #35259:** (*cachedout*) Fixup 35253
- **PR #35253:** (*abednarik*) Fix disk.wipe missing option.
- **PR #35253:** (*abednarik*) Fix disk.wipe missing option.
- **PR #35206:** (*hu-dabao*) Make the log level back to warning for unclassified exc
- **PR #35196:** (*isbm*) Deprecate status.uptime one version later
- **PR #35207:** (*eliasp*) Handle exceptions in *\_get\_virtual()* and in *\_get\_virtual()* consumers
- **PR #35232:** (*theredcat*) fix rabbitmq version detection using a package-agnostic version
- **PR #35244:** (*rallytime*) Back-port #31677 to 2016.3
- **PR #31677:** (*miihael*) Return correct value for services that must be enabled in Systemd
- **PR #35182:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35174:** (*rallytime*) Back-port #35146 to 2015.8
- **PR #35173:** (*rallytime*) Back-port #35135 to 2015.8
- **PR #35146:** (*cachedout*) Don't discard running beacons config when listing beacons
- **PR #35145:** (*jacobhammons*) doc version update to 2015.8.11, updates to release notes
- **PR #35135:** (*rallytime*) Add missing CLI Examples to aws\_sqs module funcs
- **PR #34827:** (*thatch45*) fix beacon list to include all beacons being processed
- **PR #35150:** (*rallytime*) Start release notes for 2016.3.3
- **PR #35157:** (*hu-dabao*) master returned from func should be a string as designed so far
- **PR #35147:** (*jacobhammons*) doc version updated to 2016.3.2
- **PR #35136:** (*s0undt3ch*) Don't restart processes if the manager is not set to restart them
- **PR #35133:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35114:** (*terminalmage*) Add clarification docs on a common git\_pillar misconfiguration
- **PR #35043:** (*rallytime*) Start release notes file for 2015.8.12
- **PR #34768:** (*hrumph*) Fixes #34767
- **PR #35120:** (*kstreee*) The ``_handle_event_socket_recv'` function in Salt Api is missing first data of stream.
- **PR #35131:** (*rallytime*) Back-port #35011 to 2016.3

- [PR #35011](#): (*nishigori*) Fix docstring for code-block of `rst`
- [PR #35110](#): (*hu-dabao*) Do not return job status back to master for `master_alive` and `master_failback` schedules
- [PR #35104](#): (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- [PR #35066](#): (*jfindlay*) `returners.postgres_local_cache`: do not log in `__virtual__`
- [PR #35050](#): (*terminalmage*) [orchestration] Properly handle runner/wheel funcs which accept a ``saltdev'` argument
- [PR #35026](#): (*cachedout*) Expressly deny a minion if a key cannot be found
- [PR #35024](#): (*bobrik*) Cache `systemd` unit update check per unit, closes [#34927](#)
- [PR #35105](#): (*rallytime*) Update 2016.3.0 release notes with `repo.saltstack.com` Xenial pkg availability
- [PR #33870](#): (*rallytime*) Add note about Xenial packages to 2016.3.0 release notes
- [PR #35059](#): (*vutny*) Add `fun_args` field to events generated by execution of Master modules
- [PR #34955](#): (*lubyu*) force `dism` to always output english text
- [PR #35078](#): (*jacobweinstock*) added missing non-keyword argument `skip_verify` to `__get_artifact` func...
- [PR #35008](#): (*hu-dabao*) Fix multimaster failover on more than two masters and failback behaviour
- [PR #35055](#): (*galet*) [#33536](#) `pkgrepo.managed` does not disable a yum repo with ```disabled: True''`
- [PR #35039](#): (*whiteinge*) Add `saltenv` support to `module.run`
- [PR #35046](#): (*eliasp*) Prevent backtrace in `salt.states.network`
- [PR #35054](#): (*lubyu*) Only fail user lookup if the user parameter is required
- [PR #35029](#): (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- [PR #35000](#): (*rallytime*) Back-port [#33875](#) and [#34999](#) to 2015.8
- [PR #34994](#): (*rallytime*) Back-port [#34835](#) to 2015.8
- [PR #34835](#): (*thatch45*) Make the mine and publish combine minion and master opts in `salt-ssh`
- [PR #33875](#): (*jmesquita*) Fix naive fileserver map diff algorithm
- [PR #35021](#): (*terminalmage*) Don't add ``!'` to `strerror` when passed string ends in `?` or `!`
- [PR #34983](#): (*eliasp*) `modules.slack.post_message`: Allow sending messages to direct-message ...
- [PR #34996](#): (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- [PR #34991](#): (*cachedout*) SSH timeout
- [PR #34976](#): (*cachedout*) Refine errors in client
- [PR #34831](#): (*thatch45*) If the thin does not match, then redeploy, don't error
- [PR #34987](#): (*eliasp*) `salt.states.slack`: check correct result attribute
- [PR #34835](#): (*thatch45*) Make the mine and publish combine minion and master opts in `salt-ssh`
- [PR #34988](#): (*rallytime*) Update release notes with new changes
- [PR #34946](#): (*anlutro*) Fix `virtualenv` behavior when requirements files are in subdirectories
- [PR #34957](#): (*sjmh*) Don't fall through to checking auth entries
- [PR #34971](#): (*cachedout*) Increase timeout for grains test
- [PR #34951](#): (*vutny*) Fix [#34873](#)

- **PR #34935:** (*rallytime*) Avoid UnboundLocalError in beacons module
- **PR #34894:** (*rallytime*) [develop] Merge forward from 2016.3 to develop
- **PR #34956:** (*cachedout*) Increase all run\_script timeouts to 30s
- **PR #34933:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34916:** (*cachedout*) Master performance improvement
- **PR #34911:** (*cachedout*) Backport #34906
- **PR #34906:** (*cachedout*) Set timeout for run\_salt in test suite
- **PR #34898:** (*hrumph*) Stop multiple refreshes during call to pkg.list\_upgrades
- **PR #34606:** (*isbm*) Bugfix: Exit on configuration read (backport)
- **PR #34915:** (*abednarik*) Update service\_rh provider to exclude XenServer >= 7.
- **PR #34926:** (*rallytime*) Lint #34923
- **PR #34923:** (*eliasp*) Handle exception when no Slack API key was provided
- **PR #34910:** (*cachedout*) Fix grains error on proxy minions
- **PR #34864:** (*jmacfar*) Check for version in list of installed versions
- **PR #34902:** (*rallytime*) Back-port #34878 to 2016.3
- **PR #34878:** (*abednarik*) Add VirtuozzoLinux is yumpkg enable list.
- **PR #34901:** (*rallytime*) Add VirtuozzoLinux to the list of enabled distros for rpm.py
- **PR #34900:** (*rallytime*) Add VirtuozzoLinux to enabled platforms list in rh\_service.py
- **PR #34887:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34869:** (*terminalmage*) Fail git.latest states with uncommitted changes when force\_reset=False
- **PR #34862:** (*thatch45*) Fix salt-ssh cacheing issue
- **PR #34859:** (*cachedout*) Fix wheel test
- **PR #34632:** (*eliasp*) Try to create the log directory when not present yet
- **PR #34854:** (*rallytime*) Remove string\_types import from state compiler
- **PR #34865:** (*thatch45*) This needs discussion, since this breaks SUSE
- **PR #34858:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #34847:** (*cachedout*) Add an option to skip the verification of client\_acl users
- **PR #34833:** (*rallytime*) Back-port #28521 to 2015.8
- **PR #34828:** (*thatch45*) Fix #34648
- **PR #34827:** (*thatch45*) fix beacon list to include all beacons being processed
- **PR #34823:** (*rallytime*) Back-port #25276 to 2015.8
- **PR #34822:** (*thatch45*) Fix salt-ssh state.high and state.low
- **PR #28521:** (*gongled*) SPM: packaging doesn't work in Python 2.6. Fixed.
- **PR #25276:** (*jacobhammons*) copy spm.1 man page during setup
- **PR #34852:** (*rallytime*) Skip GCE unit tests - causes test suite to hang

## 20.2.20 Salt 2016.3.4 Release Notes

Version 2016.3.4 is a bugfix release for [2016.3.0](#).

### Known Issues

The Salt Minion does not clean up files in `/tmp` when rendering templates. This potentially results in either running out of disk space or running out of inodes. Please see [Issue #37541](#) for more information. This bug was fixed with [Pull Request #37540](#), which will be available in the 2016.3.5 release of Salt.

The release of the `bootstrap-salt.sh` script that is included with 2016.3.4 release has a bug in it that fails to install salt correctly for git installs using tags in the 2015.5 branch. This bug has not been fixed in the `salt-bootstrap` repository yet, but the [previous bootstrap release \(v2016.08.16\)](#) does not contain this bug.

### Changes

- The `disk.wipe` execution module function has been modified so that it correctly wipes a disk.
- Add ability to clone from a snapshot to the VMWare salt-cloud driver.
- Add ability to specify disk backing mode in the VMWare salt cloud profile.

### Changes for v2016.3.3..v2016.3.4

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Generated at: 2016-10-27T16:10:53Z

Total Merges: 274

Changes:

- **PR #37282:** (*thatch45*) add cpub to raet event for compat
- **PR #37278:** (*jfindlay*) update 2016.3.4 release notes
- **PR #37252:** (*vutny*) Set logging level to `info` for message about init system detection
- 47290d8 Update man pages for the 2016.3 branch (#37259)
- **PR #37257:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #37254:** (*DmitryKuzmenko*) Bugs/37191 minion hangs
- **PR #37218:** (*darkalia*) Issue #37187 Do not parse first `/proc/1/cmdline` binary if it's not `*b...`
- **PR #37239:** (*Ch3LL*) Fix cloud tests timeout
- **PR #37244:** (*rallytime*) Update bootstrap release to 2016.10.25
- **PR #37245:** (*rallytime*) Back-port #36334 to 2016.3
- **PR #37233:** (*rallytime*) Back-port #37154 to 2016.3
- **PR #37232:** (*rallytime*) Back-port #37153 to 2016.3
- **PR #37228:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #37213:** (*cachedout*) More salttesting fixes
- **PR #37207:** (*cachedout*) Correct documentation for `mine_functions`
- **PR #37208:** (*cachedout*) Give multimion a process manager and its own destroy method

- **PR #37206:** (*cachedout*) Address transport test hang
- **PR #37179:** (*isbm*) Fix Salt-API ssh crash (2016.3)
- **PR #37183:** (*gtmanfred*) load tags should reference the actual load tags
- **PR #37188:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- d7e28d2 Pylint fix for 2016.3 (#37186)
- **PR #37175:** (*cachedout*) Fix test hang
- **PR #37144:** (*DmitryKuzmenko*) Bugs/36866 salt minion communication broken 2016.3
- **PR #37158:** (*jfindlay*) add mock for *status.uptime* unit test
- **PR #37161:** (*rallytime*) Back-port #37098 to 2016.3
- **PR #37159:** (*rallytime*) Back-port #37107 to 2016.3
- **PR #37163:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 2bc5ded Allow the minion test daemons a couple of tries to connect to the master (#37150)
- ec7ad9e Add note about salt-bootstrap known issue for 2016.3.4 (#37152)
- **PR #37135:** (*AaronM-Cloudtek*) Fix example signing policy in salt.states.x509 docs
- **PR #37140:** (*vutny*) pkgbuild.repo: fix GPG signing with *use\_passphrase=False*
- **PR #37071:** (*vutny*) pkgbuild.repo: add *timeout* parameter for waiting passphrase prompt
- **PR #37115:** (*DmitryKuzmenko*) Backport/36720 fix race condition
- **PR #37119:** (*jfindlay*) log.setup: only assign user if defined
- f22c686 fix digital ocean image name in profile (#37126)
- 4263849 add 2016.3.4 release notes (#37125)
- **PR #37120:** (*rallytime*) Back-port #36246 to 2016.3
- **PR #37103:** (*cachedout*) Remove unnecessary sleep from unit.utils.process\_test.TestProcessMana...
- **PR #36823:** (*terminalmage*) Update debian systemd unit files to use default KillMode, Type=notify
- **PR #37030:** (*isbm*) Fix status.uptime for Solaris 9, 10 and 11.
- **PR #37101:** (*rallytime*) [2016.3] Merge forward from 2016.3 to carbon
- **PR #36958:** (*twangboy*) Fix bug where cmd.powershell fails to return
- **PR #37086:** (*cachedout*) Make salt-call a first-class citizen for multi-master
- **PR #36898:** (*clinta*) X509 fixes
- **PR #37025:** (*cro*) Make salt.utils.minion.\_check\_cmdline work on OSes without /proc.
- **PR #37050:** (*twangboy*) Fix service state for Windows (DO NOT MERGE FORWARD)
- **PR #37076:** (*jfindlay*) Document proxy settings
- **PR #37081:** (*terminalmage*) Fix archive.extracted remote source\_hash verification
- **PR #37064:** (*cachedout*) Unify job check in scheduler
- **PR #37072:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #37049:** (*terminalmage*) Further clarification on new grains docs from #37028
- **PR #37057:** (*rallytime*) [2016.3] Update salt.utils.cloud references to `__utils__` for cache funcs

- **PR #36977:** (*twangboy*) Remove whitespace from string commands
- **PR #37048:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #37028:** (*damon-atkins*) Update topics/grains doco, about considerations before adding a Grain
- **PR #37012:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 519e1dc opkg: Support ignore\_epoch argument in version comparisons (#37007)
- **PR #36808:** (*gtmanfred*) allow for closing stuff in beacons
- a02868b Make helper funcs private (#36993)
- **PR #36986:** (*jfindlay*) modules.archive.unzip: zipfile is stdlib
- **PR #36981:** (*rallytime*) Skip pkg.upgrades test on distros other than Suse in 2016.3
- **PR #36755:** (*terminalmage*) systemd.py: check retcode for service availability in systemd >= 231
- **PR #36750:** (*terminalmage*) Add the CLI client and pub\_data as class attributes
- **PR #36241:** (*hrumph*) Fixes #36240
- **PR #36950:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #36948:** (*rallytime*) Back-port #36943 to 2016.3
- **PR #36946:** (*rallytime*) Back-port #36892 to 2016.3
- **PR #36945:** (*rallytime*) Back-port #35199 to 2016.3
- 7565ed6 Fix versionadded (#36949)
- 4d8fb03 return opennebula errors to user (#36930)
- **PR #36929:** (*rallytime*) [yumpkg] Skip test\_pkg\_upgrade\_has\_pending\_upgrades if there are no upgrades
- 288f437 [2016.3] Remove "Targeting with Executions" section from docs (#36926)
- **PR #36915:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 0ebf7a4 modules: debian\_ip: override params early to fix diff (#36820)
- a23ce84 states.schedule: splay is not ordereddict (#36894)
- **PR #36885:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 1c0ba80 salt-ssh: Try "command -v" before falling back to "which" (#36889)
- 85eea4d fileclient: Change queryarg comparison from None to simple boolean check (#36830)
- **PR #36853:** (*rallytime*) Back-port #33939 to 2016.3
- **PR #36852:** (*rallytime*) Back-port #36743 to 2016.3
- **PR #36844:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #36835:** (*jfindlay*) unify and expand beacon documentation
- **PR #36789:** (*maximeguillet*) Fix behavior of psql -c option with postgresql 9.6
- **PR #36797:** (*cachedout*) Error on reaction with missing SLS file
- **PR #36803:** (*gtmanfred*) do not load libvirt pillar if certtool is unavailable
- **PR #36815:** (*BenoitKnecht*) Fix glance.image\_present state
- **PR #36754:** (*terminalmage*) Base rpmdev-vercmp comparison result on retcode
- **PR #36785:** (*cachedout*) Fixup merge forward #36728

- PR #36768: (*gtmanfred*) add `__utils__` to vultr cloud provider
- PR #36764: (*cachedout*) Another bit of detection for failed pip tests
- PR #36747: (*jfindlay*) modules.archive integration tests: check for gzip, rar
- PR #36744: (*cachedout*) Fix issue where test suite could hang on shutdown
- PR #36696: (*cro*) pass `__proxy__` in `state.sls_id`
- PR #36716: (*vutny*) salt.modules.ini\_manage: fix creating options in empty file
- PR #36724: (*rallytime*) Back-port #36628 to 2016.3
- PR #36725: (*rallytime*) Back-port #36643 to 2016.3
- PR #36726: (*rallytime*) Back-port #36722 to 2016.3
- 48d2b01 fix python26 archive zip module (#36719)
- PR #36699: (*cachedout*) Fix error in test
- PR #36670: (*jackywu*) fix bug for including loopback addr
- PR #36694: (*loregordon*) Exposes `ignore_if_missing` to `file.replace` state module
- PR #36686: (*jfindlay*) log levels doc: try long form table
- PR #36690: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #36680: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #36659: (*terminalmage*) Support dynamic env in new-style `git_pillar`
- PR #36538: (*clinta*) daemon-reload on call to `service.available`
- PR #36616: (*cro*) Zypper fix test
- PR #36621: (*terminalmage*) Fix shadowed builtins
- PR #36636: (*rallytime*) Back-port #36618 to 2016.3
- PR #36648: (*jfindlay*) Integration tests for archive execution module
- PR #36650: (*rallytime*) Revert ``Pr 36386``
- PR #36646: (*rallytime*) Provide an error message when invalid transport is set
- PR #36635: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #36620: (*rallytime*) Don't allow mercurial states to return True with errors
- PR #36622: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #36520: (*twangboy*) Fix `cmd.script` runas for Windows
- PR #36564: (*DmitryKuzmenko*) Improve and fix `_check_cache_minions`
- PR #36606: (*danlsgiga*) Add support for ACL Tokens in `consul_pillar` with the option `consul.token`
- PR #36613: (*slinn0*) Remove `file.check_managed_changes` when not needed (backport of PR #36589 to 2016.3)
- PR #36609: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #36595: (*cachedout*) Remove tests which no longer apply
- PR #36594: (*cachedout*) Update bootstrap docs to recent versions of Ubuntu
- PR #36585: (*twangboy*) Add `pyOpenSSL` to req file for Windows
- f205d5f Fix `salt.utils.rm_rf` to delete files too (#36572)

- **PR #36495:** (*cro*) Fix pkg.upgrade for zypper
- **PR #36539:** (*jfindlay*) Prefer archive.cmd\_unzip
- **PR #36546:** (*rallytime*) Mercurial Module: Pass the identity\_path portion as own arg
- **PR #36555:** (*DmitryKuzmenko*) Bugs/35480 master shutdown
- **PR #36542:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 5548ed7 Back-port #36435 to 2016.3 (#36532)
- fe377b3 Be explicit about the salt.utils.templates import (#36535)
- fcc50c9 Wrap the entire GrainsAppendTestCase class with destructiveTest (#36537)
- **PR #36529:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #36483:** (*dmurphy18*) Isolate sun IPv6 fix to Sun OS only
- **PR #36280:** (*alertedsnake*) Feature/2016.3 better postgresql grants
- **PR #36508:** (*twangboy*) Fix chocolatey
- **PR #36519:** (*terminalmage*) Rewrite minionfs walkthrough
- **PR #36505:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #36496:** (*cachedout*) Add repr to namespacedict
- **PR #36474:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #36478:** (*rallytime*) Add the ``bash" option to the ``code-block"directive.
- **PR #36484:** (*terminalmage*) Fix for temp files being left over by salt-cloud execution
- **PR #36486:** (*terminalmage*) Improve the rebase docs in contributing guidelines
- **PR #36455:** (*twangboy*) Update docs for Windows
- **PR #36459:** (*cachedout*) Pr 36426
- **PR #36442:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #36310:** (*thatch45*) Fix bug where the client will destroy the loop
- **PR #36394:** (*oba11*) fix account\_id in boto\_iam and get\_region in boto\_sns
- **PR #36424:** (*jfindlay*) skip some mac\_timezone tests
- **PR #36428:** (*terminalmage*) A couple fixes for Antergos Linux
- **PR #36425:** (*whiteinge*) Check for dictionary explicitly since we're accessing it as one
- **PR #36199:** (*thatch45*) skip all failhards if test=True
- **PR #36418:** (*rallytime*) Back-port #36246 to 2016.3
- **PR #36419:** (*rallytime*) Back-port #36329 to 2016.3
- **PR #36420:** (*rallytime*) Back-port #36365 to 2016.3
- **PR #36413:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #36305:** (*gtmanfred*) cache query args with url as well
- **PR #36389:** (*cachedout*) Pr 36386
- 5737b1c Update versionadded and release notes (#36352)
- **PR #36369:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3

- fbbe9ec Quote postgres privilege target names (#36249)
- 9451141 set \_\_virtualname\_\_ to `service` (#36330)
- fee3be4 Use infoblox\_\* values if present in arguments (#36339)
- 19eb848 remove help message from glance module (#36345)
- a4bbd5e Add resize2fs unit test from blockdev\_test to disk\_test (#36346)
- PR #36350: (*terminalmage*) Add note about yumpkg.check\_db removal in Boron
- PR #36344: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 3a37fe5 merge error overwrites correct ssh\_host with stale data in ip\_address (#36312)
- PR #36299: (*rallytime*) Gate the pkg.group\_installed state test: not all pkg modules have group\_install
- b3aac0e Back-port #36273 to 2016.3 (#36295)
- 7296179 Back-port #36124 to 2016.3 (#36296)
- PR #36297: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 7684ebd Filter out pub kwargs from cloud runner (#36178)
- PR #36238: (*pass-by-value*) Add ability to clone from a snapshot to salt-cloud vmware driver
- a0bbb0f Integration tests fixes for 2016.3 (#36263)
- PR #36264: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #35688: (*cachedout*) Splat serializer default configs into the serializer kwargs
- PR #36025: (*mirceaulinic*) Potential fix for #36021
- 449c298 Fix timezones states on OS X (#36183)
- PR #36235: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #36137: (*cachedout*) Allow highstate outputter to show all results
- 1b12940 Docs clarification for module sync and state.apply (#36217)
- PR #36184: (*DmitryKuzmenko*) Disable signal handling while handling signal
- PR #36203: (*xiaoanyunfei*) fix owner of MultiprocessingLoggingQueue
- b586ed7 if the backend stack traces when it should return an empty string (#36193)
- PR #36188: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- PR #35907: (*rallytime*) Catch CommandExecutionError when the group in group\_installed doesn't exist
- PR #36068: (*rallytime*) Remove grains type deprecation warning from 2016.3
- PR #36152: (*cachedout*) Remove unnecessary unpack
- PR #36158: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 3445a33 Remove unclosed backticks in walkthrough doc (#36170)
- PR #36161: (*jacobhammons*) Adds #36055 to release notes
- PR #36139: (*meaksh*) Fixing unit tests for 2016.3
- PR #36143: (*multani*) doc: fix doc formatting for salt.states.mount
- PR #36070: (*rallytime*) Use \_\_utils\_\_ instead of salt.utils.cloud in opennebula driver
- PR #36089: (*terminalmage*) Support running git states / remote exec funcs as a different user in Windows

- **PR #35923:** (*kstreee*) Fixes a bug that Ctrl-c not working on Salt CLI.
- **PR #36078:** (*thatch45*) Failhard test=True fix
- **PR #34529:** (*Ch3LL*) Add skip\_verify for archive.extracted
- **PR #36073:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- a86e36c Add docs for new kwargs added to the wheel key module (#36040)
- 2934fc1 Doc cherry-py deemphasize urlencoded (#36047)
- **PR #36039:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 1d90c42 Back-port #35824 to 2016.3 (#36038)
- 65b6734 catch unicode encoding errors in json outputter (#36033)
- 822481e modules.service: Do not default to OpenRC on Gentoo, also allow systemd (#36010)
- b68d293 fix redis\_return's clean\_old\_jobs. (#36014)
- 95591c2 Add documentation about salt\_interface to EC2 docs (#36015)
- **PR #36019:** (*meaksh*) Back-port #36000 to 2016.3
- b9fc51a Fix error when profiling is turned on and minions don't return (#36028)
- 20a361d Add include\_\* kwargs to the \*\_dict key functions (#36030)
- **PR #36024:** (*DmitryKuzmenko*) Don't subscribe to events if not sure it would read them.
- **PR #36023:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #36004:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35952:** (*twangboy*) Load UserProfile when using RunAs (2016.3)
- **PR #35959:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35955:** (*jacobhammons*) Version docs to 2016.3.3
- 9910b9c Fix incremental doc builds - OS X, postgres returner, tcp transport doc updates (#35865)
- 24f9d33 Speed up FreeBSD pkg install process for pkg.latest since pkg command by default tries to update repository DB on each search: (#35904)
- b87e4f1 Salt Cloud: add *centos* default user for official CentOS AMIs (#35931)
- 580e0d4 Mention that docker image names must be given with repository (#35926)
- **PR #35868:** (*rallytime*) Add more helpful return messages for drac runner
- **PR #35903:** (*rallytime*) [2016.3] Merge forward from 2015.8 into 2016.3
- **PR #35855:** (*vutny*) [REGRESSION] salt-cloud: fix path to Salt Master socket dir
- **PR #35881:** (*whiteinge*) Add fail-safe in case Salt gives us data we can't serialize
- 9679266 Add engines to list of extension module options in master config docs (#35864)
- 40bc7d Fix IAM roles statement to be boto version specific in sqs\_events (#35861)
- ee45a88 Fix doc formatting for sqs\_events engine example config (#35860)
- **PR #35859:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35849:** (*theredcat*) Fix potential infinite loop with no error when using recursive makedirs
- **PR #35682:** (*vutny*) [BACKPORT] Fix empty *fun\_agrs* field in Reactor generated events

- **PR #35792:** (*DmitryKuzmenko*) Reconnect syndic to event bus if master disappeared.
- **PR #35817:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- b89f455 fix 34241, webutil.useradd\_all is deprecated (#35788)
- 2be5daf Bump the deprecation warning in pkgrepo state to Nitrogen (#35810)
- 083d836 Fix misuse of HTTP credentials in modjk execution module (#35796)
- 0247867 Adds mock for tornado.locks (#35807)
- e4dfc21 Trivial documentation spelling fix (#35800)
- **PR #35763:** (*isbm*) Sphinx crash: documentation config fix
- cd90052 Documentation spelling fixes (#35773)
- **PR #35767:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35753:** (*rallytime*) Fixup the unit.client\_test.LocalClientTestCase.test\_cmd\_subset from #35720
- dab8428 Add versionadded for enabled function in apache\_module state (#35732)
- **PR #35737:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35729:** (*cachedout*) Remove docs mocks for msgpack and psutils
- **PR #35628:** (*jf*) Fix user.present state reporting for groups when remove\_groups=false
- **PR #35696:** (*xiaoanyunfei*) fix maximum recursion depth bug
- **PR #35720:** (*hu-dabao*) fix 20575, make subset really return random subset
- **PR #35700:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR #35634:** (*hu-dabao*) fix 34922, StopIteration should not throw exception out
- **PR #35679:** (*twangboy*) Revert to vcredist 12 (2013)
- **PR #35662:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 64974c8 Backport #35627 to 2016.3 (#35661)
- **PR #35615:** (*hu-dabao*) fix 35591, verify the acl file exist before proceed
- **PR #35485:** (*cro*) Cassandra returner bugfixes and documentation.
- **PR #35520:** (*morganwillcock*) Check for all success return codes in win\_dism state
- **PR #35616:** (*xbglowx*) Remove duplicate auth\_tries in minion docs
- **PR #35552:** (*DmitryKuzmenko*) Syndic fix: don't strip `retcode' and `success' from events.
- **PR #35559:** (*Jlin317*) Fix highstate outputter when it's given multiple results
- **PR #35605:** (*rallytime*) Back-port #32739 to 2016.3
- **PR #35606:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3

### 20.2.21 Salt 2016.3.5 Release Notes

Version 2016.3.5 is a bugfix release for *2016.3.0*.

## Security Fixes

CVE-2017-5192: local\_batch client external authentication not respected

The `LocalClient.cmd_batch()` method client does not accept `external_auth` credentials and so access to it from salt-api has been removed for now. This vulnerability allows code execution for already-authenticated users and is only in effect when running salt-api as the root user.

CVE-2017-5200: Salt-api allows arbitrary command execution on a salt-master via Salt's ssh\_client

Users of Salt-API and salt-ssh could execute a command on the salt master via a hole when both systems were enabled.

We recommend everyone on the 2016.3 branch upgrade to a patched release as soon as possible.

## Improved Checksum Handling in `file.managed`, `archive.extracted` States

When the `source_hash` argument for these states refers to a file containing checksums, Salt now looks for checksums matching the name of the source URI, as well as the file being managed. Prior releases only looked for checksums matching the filename being managed. Additionally, a new argument (`source_hash_name`) has been added, which allows the user to disambiguate ambiguous matches when more than one matching checksum is found in the `source_hash` file.

A more detailed explanation of this functionality can be found in the *file.managed* documentation, in the section for the new `source_hash_name` argument.

## Changes for v2016.3.4..v2016.3.5

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Changes:

- **PR #38812:** (*rallytime*) Update pyobjects test to be a list @ 2017-01-18T21:06:01Z
  - d14f0c6 Merge pull request #38812 from rallytime/pyobjects-test
  - f3e84c1 Update pyobjects test to be a list
- **PR #38813:** (*gtmanfred*) catch SIGPIPE in vmware connection @ 2017-01-18T21:05:42Z
  - **ISSUE #36598:** (*ikkaro*) CloudClient vmware driver reusing SI bug | refs: #38813
  - 50f03f8 Merge pull request #38813 from gtmanfred/2016.3
  - ce3472c catch SIGPIPE in vmware connection
- **PR #38809:** (*twangboy*) Fix get\_hostname to handle longer computer names @ 2017-01-18T19:32:00Z
  - 23b8b47 Merge pull request #38809 from twangboy/fix\_hostname\_2016.3
  - d57a51f Fix tests for get\_hostname
  - 7ca3fd7 Fix get\_hostname to handle longer computer names

- **PR #38808:** (*vutny*) Fix #38388 @ 2017-01-18T18:19:36Z
  - **ISSUE #38388:** (*johje349*) No INFO logs in minion log file | refs: #38808
  - 1033bbd Merge pull request #38808 from vutny/fix-38388
  - 9bd203f Fix #38388
- **PR #38668:** (*terminalmage*) Fix proposal for #38604 @ 2017-01-18T17:53:09Z
  - **ISSUE #10:** (*thatch45*) list jobs option
  - f3ae3cd Merge pull request #38668 from terminalmage/issue38604
  - 0ea97cd Merge pull request #10 from cachedout/pr-38668
    - \* db81afc Munge retcode into return data for batching
  - a642a99 Return the ret data from batch execution instead of raw data
- **PR #38789:** (*rallytime*) Update some saltenv refs to environment in salt.modules.state docs @ 2017-01-18T15:39:22Z
  - **ISSUE #38622:** (*mikejford*) Incorrect saltenv argument documentation in salt.modules.state | refs: #38789
  - c6a19a9 Merge pull request #38789 from rallytime/fix-38622
  - af41fe0 Update some saltenv refs to environment in salt.modules.state docs
- **PR #38790:** (*cachedout*) Fix typo in pyobjects test @ 2017-01-18T15:38:57Z
  - e0bf700 Merge pull request #38790 from cachedout/fix\_pyobjects\_test\_typo
  - a66afb5 Fix typo in pyobjects test
- **PR #38792:** (*rallytime*) Update pillar tutorial lanuage regarding pillar\_opts settings @ 2017-01-18T15:38:19Z
  - **ISSUE #38629:** (*Arabus*) Conflicting documentation about default value of pillar\_opts | refs: #38792
  - 6e9785e Merge pull request #38792 from rallytime/fix-38629
  - 1e125e2 Update pillar tutorial lanuage regarding pillar\_opts settings
- **PR #38796:** (*cachedout*) Revert ``Fixed prepending of root\_dir override to the other paths" @ 2017-01-17T23:18:18Z
  - **PR #38707:** (*alexbleotu*) Fixed prepending of root\_dir override to the other paths | refs: #38796
  - 3417adc Merge pull request #38796 from saltstack/revert-38707-root\_dir\_fix-gh
  - cb080f3 Revert ``Fixed prepending of root\_dir override to the other paths"
- **PR #38585:** (*rallytime*) Follow up to PR #38527 @ 2017-01-17T18:40:01Z
  - **ISSUE #38524:** (*rbjorklin*) salt-api seems to ignore rest\_timeout since 2016.11.0 | refs: #38585 #38527
  - **ISSUE #38479:** (*tyeapple*) api\_logfile setting takes no effect | refs: #38585
  - **PR #38570:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 | refs: #38585
  - **PR #38560:** (*Ch3LL*) fix api logfile | refs: #38585
  - **PR #38527:** (*rbjorklin*) salt-api no longer forces the default timeout | refs: #38585 #38585 #38585
  - bab3479 Merge pull request #38585 from rallytime/follow-up-38527
  - 0558720 Pylint fix: add line at end of file
  - fa01367 Keep a copy of the DEFAULT\_API\_OPTS and restore them after the test run

- 2ad0763 Test clean up
- fd2ee7d Add some simple unit tests for salt.config.api\_config function
- 3d2f6fc Make sure the pidfile and log\_file values are overridden by api opts
- 1f6b540 Make sure the pidfile and log\_file values are overridden by api opts
- 04d307f salt-api no longer forces the default timeout
- **PR #38707:** (*alexbleotu*) Fixed prepending of root\_dir override to the other paths | refs: #38796 @ 2017-01-17T15:40:13Z
  - 0fb6bb7 Merge pull request #38707 from alexbleotu/root\_dir\_fix-gh
  - 0bac8c8 Fixed prepending of root\_dir override to the other paths
- **PR #38774:** (*vutny*) DOCS: add C++ compiler installation on RHEL required for bundled 0mq @ 2017-01-17T15:21:00Z
  - 96c9dc1 Merge pull request #38774 from vutny/dev-test-docs
  - 4620dc4 DOCS: add C++ compiler installation on RHEL required for bundled 0mq
- **PR #38749:** (*vutny*) pkg build modules throw better exception message if keyid wasn't found @ 2017-01-17T02:13:08Z
  - aedfbb7 Merge pull request #38749 from vutny/pkg-build-better-exception-msg
  - 53f2be5 pkg build modules throw better exception message if keyid wasn't found
- **PR #38743:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ 2017-01-17T01:46:01Z
  - **ISSUE #20:** (*thatch45*) Sort sys.doc output
  - **ISSUE #19:** (*thatch45*) Sending a faulty command kills all the minions!
  - **PR #38731:** (*rallytime*) Various follow up fixes
  - **PR #38602:** (*terminalmage*) Fix failing unit.states.boto\_vpc\_test.BotoVpcRouteTableTestCase.test\_present\_with\_routes
  - 8466b34 Merge pull request #38743 from rallytime/merge-2016.3
  - d24776f Merge branch `2015.8' into `2016.3'
  - 6869621 Merge pull request #38731 from rallytime/merge-2015.8
    - \* 9eb191b Pylint fix
    - \* b910499 Various follow up fixes
    - \* e8309a6 Add release notes for 2015.8.13
    - \* f881f36 Merge pull request #20 from rallytime/2015.8.12\_follow\_up-batch-tests
      - 3428232 Clean up tests and docs for batch execution
    - \* c80b20b Merge pull request #19 from whiteinge/batchclient
      - 3d8f3d1 Remove batch execution from NetapiClient and Saltnado
    - \* 97b0f64 Lintfix
    - \* d151666 Add explanation comment
    - \* 62f2c87 Add docstring
    - \* 9b0a786 Explain what it is about and how to configure that
    - \* 5ea3579 Pick up a specified roster file from the configured locations

- \* 3a8614c Disable custom rosters in API
- \* c0e5a11 Add roster disable flag
- e9c59e9 Merge pull request #38602 from terminalmage/fix-boto-test
  - \* 3424a10 Fix failing unit.states.boto\_vpc\_test.BotoVpcRouteTableTestCase.test\_present\_with\_routes
- **PR #38723:** (*rallytime*) Remove ``event\_publisher\_pub\_hwm`` and ``salt\_event\_pub\_hwm`` from config/\_\_init\_\_.py @ 2017-01-15T18:36:14Z
  - **ISSUE #38674:** (*jackywu*) There is no code to use parameter `event\_publisher\_pub\_hwm` in saltstack-2016.3 | refs: #38723
  - **PR #29294:** (*skizunov*) ZeroMQ no longer required when transport is TCP | refs: #38723 #38723
  - a642cde Merge pull request #38723 from rallytime/fix-38674
  - 706c885 Remove ``event\_publisher\_pub\_hwm`` and ``salt\_event\_pub\_hwm`` from config/\_\_init\_\_.py
- **PR #38669:** (*rallytime*) Update bootstrap script version to latest release @ 2017-01-15T18:03:27Z
  - fc545af Merge pull request #38669 from rallytime/update-bootstrap-script
  - 78ba76e Update bootstrap script version to latest release
- **PR #38693:** (*twangboy*) Update jinja2 to 2.9.4 @ 2017-01-15T14:40:46Z
  - 50d417f Merge pull request #38693 from twangboy/update\_jinja
  - e0c7e55 Update jinja2 to 2.9.4
- **PR #38739:** (*vutny*) DOCS: correct examples of running test suite @ 2017-01-15T14:35:47Z
  - f4233bb Merge pull request #38739 from vutny/fix-runtests-doc
  - b872bb6 DOCS: correct examples of running test suite
- 51d4707 DOCS: add links to File State Backups page where necessary (#38735)
  - **PR #38735:** (*vutny*) DOCS: add links to File State Backups page where necessary
- 6d3717b Proofread jinja\_to\_execution\_module tutorial (#38720)
  - **PR #38720:** (*dereckson*) Proofread jinja\_to\_execution\_module tutorial
- **PR #38647:** (*gtmanfred*) Allow novaclient to use keystoneauth1 sessions for authentication @ 2017-01-10T17:48:26Z
  - **ISSUE #36548:** (*abonillasuse*) openstack auth with nova driver | refs: #38647
  - 7b850d4 Merge pull request #38647 from gtmanfred/nova
  - 5be9b60 add documentation about using keystoneauth for v3
  - 7b657ca add the ability to use keystone v2 and v3
  - 5646ae1 add ability to use keystoneauth to authenticate in nova driver
- **PR #38650:** (*rallytime*) Remove the installation instructions for out-of-date community ppa @ 2017-01-10T17:47:45Z
  - **ISSUE #38648:** (*ericuldall*) No release file error from PPA on Ubuntu | refs: #38650
  - **ISSUE #38572:** (*COLABORATI*) ppa:saltstack/salt failure | refs: #38650
  - **ISSUE #34504:** (*AvinashDeluxeVR*) Installation documentation for Ubuntu server and Windows minion leads the user to use different salt versions. | refs: #38650
  - 383768d Merge pull request #38650 from rallytime/remove-ubuntu-ppa-docs

- 30429b2 Remove the installation instructions for out-of-date community ppa
- **PR #38657:** (*DmitryKuzmenko*) Publish the `data` field content for Syndic events @ 2017-01-10T16:59:33Z
  - **ISSUE #38087:** (*UtahDave*) The `data` field in the return from a minion below a syndic is wrapped in an extra `data` field. | refs: #38657
  - 7d9f56e Merge pull request #38657 from DSRCorporation/bugs/38087\_syndic\_event\_format\_fix
  - 594c33f Publish the `data` field content for Syndic events
- **PR #38649:** (*Ch3LL*) fix unit.modules.file\_test @ 2017-01-10T16:44:45Z
  - 8398751 Merge pull request #38649 from Ch3LL/test\_apply\_template
  - 47f8b68 fix unit.modules.file\_test
- **PR #38626:** (*cachedout*) Revert ``Fix/workaround for issue #37355" @ 2017-01-06T21:28:09Z
  - **ISSUE #37355:** (*Firewire2002*) salt-ssh - ImportError: No module named backports.ssl\_match\_hostname | refs: #37358
  - **ISSUE #34600:** (*davidpsv17*) Error trying a salt-ssh test.ping | refs: #37358
  - **ISSUE #27355:** (*jerob*) salt ssh error with debian 7 on target | refs: #37358
  - **PR #37358:** (*Firewire2002*) Fix/workaround for issue #37355 | refs: #38626
  - 74ddc71 Merge pull request #38626 from saltstack/revert-37358-2016.3.3\_issue37355
  - e912ac9 Revert ``Fix/workaround for issue #37355``
- **PR #37358:** (*Firewire2002*) Fix/workaround for issue #37355 | refs: #38626 @ 2017-01-06T18:58:47Z
  - **ISSUE #37355:** (*Firewire2002*) salt-ssh - ImportError: No module named backports.ssl\_match\_hostname | refs: #37358
  - **ISSUE #34600:** (*davidpsv17*) Error trying a salt-ssh test.ping | refs: #37358
  - **ISSUE #27355:** (*jerob*) salt ssh error with debian 7 on target | refs: #37358
  - 5e58b32 Merge pull request #37358 from Firewire2002/2016.3.3\_issue37355
  - 910da18 fixed typo
  - 4fbc5dd fixed wrong renamed variable and spaces
  - 92366e6 issue #37355
  - 7dc87ab issue #37355
  - 2878180 issue #37355
- **PR #35390:** (*alexandr-orlov*) Returns back missed proper grains dictionary for file module @ 2017-01-06T18:02:13Z
  - 6c2fe61 Merge pull request #35390 from alexandr-orlov/2016.3
  - cd5ae17 fxd missed proper grains dictionary
- **PR #38618:** (*rallytime*) Back-port #38579 to 2016.3 @ 2017-01-06T17:37:56Z
  - **ISSUE #38558:** (*multani*) pillar.get("...", default=var, merge=true) updates default value | refs: #38579 #38579
  - **PR #38579:** (*zwo-bot*) Fix #38558 - pillar.get with default= ...,merge=true influence subsequent calls of pillar.get | refs: #38618
  - 2579cfa Merge pull request #38618 from rallytime/bp-38579

- 2052ece Add copy import
- 2c8845a add test for pillar.get() + default value
- c2f98d2 ticket 38558: add unit test, deepcopy() only if necessary
- 30ae0a1 added deepcopy of default if merge=True
- **PR #38601:** (*terminalmage*) pillar.get: Raise exception when merge=True and default is not a dict @ 2017-01-05T23:15:51Z
  - da676ce Merge pull request #38601 from terminalmage/pillar-get
  - 8613d72 pillar.get: Raise exception when merge=True and default is not a dict
- **PR #38600:** (*terminalmage*) Avoid errors when sudo\_user is set (2016.3 branch) @ 2017-01-05T20:57:09Z
  - **PR #38598:** (*terminalmage*) Avoid errors when sudo\_user is set | refs: #38600
  - 224fc77 Merge pull request #38600 from terminalmage/issue38459-2016.3
  - 8a45b13 Avoid errors when sudo\_user is set
- **PR #38589:** (*tobithiel*) State Gem: fix incorrect warning about missing rvm/rbenv @ 2017-01-05T20:12:15Z
  - a376970 Merge pull request #38589 from tobithiel/fix\_rvm\_rbenv\_warning
  - 9ec470b State Gem: fix incorrect warning about missing rvm/rbenv
- **PR #38567:** (*pass-by-value*) Create queue if one doesn't exist @ 2017-01-05T18:46:11Z
  - 02e6a78 Merge pull request #38567 from pass-by-value/pgjsonb\_queue\_changes\_2016.3
  - 67879eb Create queue if one doesn't exist
- **PR #38587:** (*rallytime*) Change daemontools \_\_virtualname\_\_ from service to daemontools @ 2017-01-05T18:06:01Z
  - **ISSUE #37498:** (*githubcdr*) service.restart salt-minion fails on Ubuntu 14.04.5 LTS | refs: #37748 #38587
  - 0889cbd Merge pull request #38587 from rallytime/fix-37498
  - 2a58809 Change daemontools \_\_virtualname\_\_ from service to daemontools
- **PR #38562:** (*rallytime*) Update arch installation docs with correct package name @ 2017-01-04T20:04:28Z
  - 7b74436 Merge pull request #38562 from rallytime/arch-install-docs
  - 8b1897a Update arch installation docs with correct package name
- **PR #38560:** (*Ch3LL*) fix api logfile | refs: #38585 @ 2017-01-04T19:03:17Z
  - 0186070 Merge pull request #38560 from Ch3LL/fix\_api\_log
  - 1b45e96 fix api logfile
- **PR #38531:** (*rallytime*) Back-port #33601 to 2016.3 @ 2017-01-04T16:56:53Z
  - **PR #33601:** (*mchugh19*) Fix slack engine to run on python2.6 | refs: #38531
  - 0056620 Merge pull request #38531 from rallytime/bp-33601
  - c36cb39 remove the unnecessary double trigger
  - 3841449 fix spacing lint error
  - 8c1defc Remove unnecessary type from alias commands. Deduplicate alias handling to autodetect function selection. Add error reporting to slack connectivity problems. Cleanup slack's unicode conversion
  - c2f23bc Fix slack engine to run on python2.6

- **PR #38541:** (*techhat*) Strip user:pass from cached URLs @ 2017-01-04T15:39:57Z
  - **ISSUE #38187:** (*curiositycasualty*) username/password saved as cleartext when using URIs with user:pass@ format | refs: #38541
  - 50242c7 Merge pull request #38541 from techhat/issue38187
  - eae3a43 Strip user:pass from cached URLs
- **PR #38554:** (*multani*) Fix YAML deserialization of unicode @ 2017-01-04T15:31:16Z
  - **ISSUE #30454:** (*favoretti*) Using yaml serializer inside jinja template results in unicode being prepended by `!!python/unicode` | refs: #38554 #38554 #30481
  - **PR #30481:** (*basepi*) Add yaml\_safe jinja filter | refs: #38554
  - 325dc56 Merge pull request #38554 from multani/fix/30454
  - 2e7f743 yaml: support unicode serialization/deserialization
  - df76113 jinja: test the `yaml` filter with ordered dicts
  - f7712d4 Revert `Add yaml\_safe filter`
- 4ddbc2e add note about pyVmomi locale workaround (#38536)
  - **PR #38536:** (*UtahDave*) add note about pyVmomi locale workaround
- 1c951d1 fix gce image bug (#38542)
  - **ISSUE #38353:** (*Ch3LL*) salt-cloud gce specifying | refs: #38542 #38542
  - **PR #38542:** (*Ch3LL*) fix gce image bug
- **PR #38487:** (*gtmanfred*) Fix crontab issues with spaces @ 2017-01-01T20:33:29Z
  - **ISSUE #38449:** (*swalladge*) Parsing issues in *list\_tab* (salt/modules/cron.py) | refs: #38487
  - ec60f9c Merge pull request #38487 from gtmanfred/2016.3
  - 048b9f6 add test
  - c480c11 allow spaces in cron env
  - c529ec8 allow crons to have multiple spaces
- **PR #38491:** (*gtmanfred*) Use UTC for timing in case timezone changes @ 2017-01-01T20:30:57Z
  - **ISSUE #37684:** (*thusoy*) State execution duration is timezone-dependent | refs: #38491
  - c5ba11b Merge pull request #38491 from gtmanfred/timing
  - 79368c7 Use UTC for timing in case timezone changes
- **PR #38503:** (*jinnm*) Hash type fallback for file management @ 2017-01-01T17:36:51Z
  - **ISSUE #38472:** (*jinnm*) file.managed Unable to manage file: `hash\_type` (2016.3.4) | refs: #38503
  - 86f0aa0 Merge pull request #38503 from jinnm/issue\_38472\_jinnm
  - 0cd9df2 Hash type fallback for file management
- **PR #38457:** (*bshelton229*) Stops git.latest checking for local changes in a bare repo @ 2016-12-30T14:28:47Z
  - ed2ba4b Merge pull request #38457 from bshelton229/git-latest-head-bug
  - 558e7a7 Stops git.latest checking for local changes in a bare repo
- **PR #38385:** (*dragon788*) Use unambiguous long names with double dashes @ 2016-12-29T17:10:48Z
  - 36e21b2 Merge pull request #38385 from dragon788/2016.3-double-dash

- 86c4b56 Newline for lint compat
- 9d9b686 Address review comments, consistency of quotes
- df9bd5e Use unambiguous long names with double dashes
- **PR #38474:** (*cachedout*) Allow an existing ioloop to be passed to salt-key @ 2016-12-29T16:28:51Z
  - **ISSUE #38209:** (*limited*) Accepting a minion causes tornado to exit | refs: #38474
  - 59f2560 Merge pull request #38474 from cachedout/key\_loop
  - de50453 Allow an existing ioloop to be passed to salt-key
- **PR #38467:** (*gtmanfred*) file.line fail with mode=delete @ 2016-12-28T20:00:33Z
  - **ISSUE #38438:** (*jf*) file.line with mode=delete breaks on empty file | refs: #38467
  - 3d0c752 Merge pull request #38467 from gtmanfred/2016.3
  - 7b7c6b3 file.line fail with mode=delete
- **PR #38434:** (*slinn0*) Make sysctl.persist fail when failing to set a value into the running kernel @ 2016-12-27T15:37:53Z
  - 940025d Merge pull request #38434 from slinn0/issue\_38433\_fixes
  - 22af87a Fixes for <https://github.com/saltstack/salt/issues/38433>
- e5eb512 Update deprecation notices to the correct version (#38421)
  - **PR #38421:** (*rallytime*) Update deprecation notices to the correct version
  - **PR #38420:** (*rallytime*) Removed various deprecation notices from salt/modules/\* files | refs: #38421
- 9ce5331 file.managed: Fix failure when filename contains unicode chars (#38415)
  - **ISSUE #38282:** (*sash-kan*) file.managed fails when file (which contains utf-characters in the name) exists | refs: #38415
  - **PR #38415:** (*terminalmage*) file.managed: Fix failure when filename contains unicode chars
- **PR #38419:** (*Ch3LL*) fix scsci docs example @ 2016-12-22T18:57:51Z
  - 2cdb59d Merge pull request #38419 from Ch3LL/fix\_doc\_scsci
  - 234043b fix scsci docs example
- 2725352 Improve pillar documentation (#38407)
  - **PR #38407:** (*terminalmage*) Improve pillar documentation
- **PR #38398:** (*terminalmage*) Fix call to file.get\_managed in cron.file state @ 2016-12-22T16:46:14Z
  - **ISSUE #38372:** (*fanirama*) Issue with cron.file. Source: salt://path/to/crontab\_file not found | refs: #38398
  - 423b1fd Merge pull request #38398 from terminalmage/issue38372
  - c80dbaa Fix call to file.get\_managed in cron.file state
- 5a33d1e Fix http.query when result has no text (#38382)
  - **PR #38382:** (*heewa*) Fix http.query when result has no text
- **PR #38390:** (*meaksh*) Add ``try-restart`` to fix autorestarting on SUSE systems @ 2016-12-21T16:06:24Z
  - b74b5c7 Merge pull request #38390 from meaksh/2016.3-fix-try-restart-for-autorestarting-on-SUSE-systems

- de6ec05 add try-restart to fix autorestarting on SUSE systems
- **PR #38221:** (*UtahDave*) Fix default returner @ 2016-12-20T20:34:36Z
  - 2c3a397 Merge pull request #38221 from UtahDave/fix\_default\_returner
  - 3856407 remove a blank line to satisfy linter
  - 9c248aa validate return opt, remove default.
  - 8bb37f9 specify allowed types and default for ``returner``
  - 11863a4 add examples of default minion returners
  - e7c6012 add support for default returners using *return*
- **PR #38288:** (*terminalmage*) archive.extracted: don't try to cache local sources (2016.3 branch) @ 2016-12-18T13:07:11Z
  - 09d9cff Merge pull request #38288 from terminalmage/archive-extracted-local-source-2016.3
  - 845e3d0 Update tests to reflect change in cache behavior
  - 5a08d7c archive.extracted: don't try to cache local sources (2016.3 branch)
- **PR #38312:** (*cro*) Backport feature allowing proxy config to live in pillar OR /etc/salt/proxy @ 2016-12-18T12:39:01Z
  - bf37667 Merge pull request #38312 from cro/proxy\_config\_in\_cfg
  - 2006c40 Typo
  - 689d95b Backport feature allowing proxy config to live in pillar OR /etc/salt/proxy.
- **PR #38320:** (*rallytime*) Cleanup doc internal markup references @ 2016-12-18T12:31:28Z
  - **ISSUE #12788:** (*whiteinge*) Comb through docs to replace :doc: roles with :ref: | refs: #38320
  - c83db5a Merge pull request #38320 from rallytime/cleanup-doc-refs
  - 62978cb Don't check the doc/conf.py file for doc markup refs
  - 770e732 Add a unit test to search for new doc markup refs
  - 5c42a36 Remove ":doc:" references from all doc/topics/installation/\* files
  - 23bce1c Remove ":doc:" references from all doc/topics/releases/\* files
  - 4aafa41 Remove ":doc:" references from a bunch of doc/\* files
  - 02bfe79 Remove more ":doc:" references from doc/\* files
  - 6e32267 Remove ":doc:" references in salt/\* files
- 6367ca7 Add nick to args for create\_multi (#38281)
  - **PR #38281:** (*mikejford*) Add nick to args for create\_multi
- **PR #38313:** (*dragon788*) 2016.3 chocolatey fix @ 2016-12-16T17:20:39Z
  - **ISSUE #38290:** (*dragon788*) Need to use machine automation friendly output | refs: #38313
  - 235682b Merge pull request #38313 from dragon788/2016.3-chocolatey-fix
  - 1f5fc17 Use machine readable output for list
  - cdbd2fb Added limit-output to eliminate false packages
- **PR #38279:** (*rallytime*) Add docs for syndic\_wait setting @ 2016-12-15T18:30:31Z

- **ISSUE #38174:** (*NickDubelman*) [syndic] Why can't a syndic node signal when all of it's minions have returned? | refs: #38279
- **ISSUE #32400:** (*rallytime*) Document Default Config Values | refs: #38279
- 9e78ddc Merge pull request #38279 from rallytime/fix-38174
- 4a62d01 Add docs for syndic\_wait setting
- **PR #38248:** (*meaksh*) Successfully exit of salt-api child processes when SIGTERM is received @ 2016-12-15T09:16:27Z
  - fc9e1df Merge pull request #38248 from meaksh/salt-api-successfully-close-child-processes
  - ee6eae9 Successfully exit of salt-api child processes when SIGTERM.
- **PR #38254:** (*terminalmage*) Also check if pillarenv is in opts @ 2016-12-15T09:10:24Z
  - 3c718ed Merge pull request #38254 from terminalmage/check-pillarenv
  - fa9ad31 Also check if pillarenv is in opts
- 6b9060c [2016.3] Bump latest release version to 2016.11.1 (#38256)
  - **PR #38256:** (*rallytime*) [2016.3] Bump latest release version to 2016.11.1
- **PR #38198:** (*vutny*) Add missing requirements for running unit tests: libcloud and boto3 @ 2016-12-13T14:12:20Z
  - 004e46a Merge pull request #38198 from vutny/unit-tests-require-libcloud-boto3
  - a6098ba Remove note about SaltTesting installation, now it is in the requirements
  - 004bff1 Add missing requirements for running unit tests: libcloud and boto3
- **PR #38213:** (*rallytime*) Skip test\_cert\_info tls unit test on pyOpenSSL upstream errors @ 2016-12-13T12:05:01Z
  - 9d497bc Merge pull request #38213 from rallytime/skip-tls-test
  - bdb807f Skip test\_cert\_info tls unit test on pyOpenSSL upstream errors
- **PR #38224:** (*whiteinge*) Allow CORS OPTIONS requests to be unauthenticated @ 2016-12-13T12:02:30Z
  - 203109d Merge pull request #38224 from whiteinge/cors-options-unauthed
  - de4d322 Allow CORS OPTIONS requests to be unauthenticated
- **PR #38223:** (*whiteinge*) Add root\_dir to salt-api file paths @ 2016-12-13T07:44:19Z
  - **PR #37272:** (*vutny*) Get default logging level and log file from default opts dict | refs: #38223
  - 721a5fe Merge pull request #38223 from whiteinge/salt-api-root\_dirs
  - bfbf390 Add root\_dir to salt-api file paths
- **PR #38191:** (*terminalmage*) Clarify the fact that git\_pillar.update does not fast-forward @ 2016-12-12T09:45:48Z
  - **ISSUE #38162:** (*747project*) git\_pillar does not detect changes to remote repository when told to update | refs: #38191
  - 70f7d22 Merge pull request #38191 from terminalmage/issue38162
  - 1ae543a Clarify the fact that git\_pillar.update does not fast-forward
- **PR #38194:** (*vutny*) Document the requirements for running ZeroMQ-based integration tests @ 2016-12-12T09:42:11Z
  - 28171cb Merge pull request #38194 from vutny/integration-test-requirements-doc

- e9f419f Document the requirements for running ZeroMQ-based integration tests
- **PR #38185:** (*rallytime*) Back-port #38181 to 2016.3 @ 2016-12-09T22:27:44Z
  - **PR #38181:** (*rallytime*) Reset socket default timeout to None (fixes daemons\_tests failures) | refs: #38185
  - a4ef037 Merge pull request #38185 from rallytime/bp-38181
  - 609f814 Reset socket default timeout to None (fixes daemons\_tests failures)
- **PR #38163:** (*Ch3LL*) enabled ec2 cloud tests @ 2016-12-09T18:01:57Z
  - 65b2ad7 Merge pull request #38163 from Ch3LL/enabled\_ec2\_cloud
  - be74c45 enabled ec2 cloud tests
- **PR #38177:** (*vutny*) Correct `cp.get_file_str` docstring and add integration tests @ 2016-12-09T16:55:35Z
  - b63f74e Merge pull request #38177 from vutny/fix-cp-get-file-str
  - a449980 Correct `cp.get_file_str` docstring and add integration tests
- **PR #38153:** (*vutny*) Master config includes may contain errors and be safely skipped @ 2016-12-08T17:43:34Z
  - 7596313 Merge pull request #38153 from vutny/master-includes-error-tolerance
  - cd0154e Master config includes may contain errors and be safely skipped
- 86091db Skip daemon unit tests when running on Python 2.6 (#38134)
  - **PR #38134:** (*rallytime*) Skip daemon unit tests when running on Python 2.6
- **PR #38102:** (*rallytime*) Add False + msg tuple return if requests is missing for zenoss module @ 2016-12-07T13:24:37Z
  - **ISSUE #38091:** (*tjyang*) [WARNING ] salt.loaded.int.module.zenoss.\_\_virtual\_\_() is wrongly returning None. | refs: #38102
  - d3d98fd4 Merge pull request #38102 from rallytime/fix-38091
  - 4f79d5a Add False + msg tuple return if requests is missing for zenoss module
- **PR #38104:** (*rallytime*) Back-port #36794 to 2016.3 @ 2016-12-07T13:23:48Z
  - **ISSUE #36707:** (*do3meli*) slow FreeBSD sysctl module with test=true | refs: #36794
  - **PR #36794:** (*do3meli*) FreeBSD sysctl module now handels config\_file parameter in show method | refs: #38104
  - 8c8cbc2 Merge pull request #38104 from rallytime/bp-36794
  - c906c8a Pylint fixes
  - da3ebf8 FreeBSD sysctl module now handels config\_file parameter in show method
- **PR #38083:** (*twangboy*) Only delete .sls files from winrepo-ng [DO NOT MERGE FORWARD] @ 2016-12-06T14:13:35Z
  - **ISSUE #35342:** (*morganwillcock*) win\_pkg: refresh\_db doesn't remove cached items which have been renamed or removed | refs: #38083
  - fbc8776 Merge pull request #38083 from twangboy/fix\_refresh\_db
  - 978af6d Remove only .sls files from the cached winrepo-ng
- **PR #38059:** (*rallytime*) Call `exec_test` for the Syndic daemon in tests.unit.daemons\_test.py @ 2016-12-04T04:18:41Z
  - **PR #38057:** (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 | refs: #38059

- **PR #38034:** (*cachedout*) Modify daemons test to use multiprocessing | refs: #38059
- 9dcfdee Merge pull request #38059 from rallytime/daemons-test-fix
- eb372b2 Add missing ``not" statement: The last syndic test should assertFalse()
- 4e10f8e Call exec\_test for the Syndic daemon in tests.unit.daemons\_test.py
- **PR #38039:** (*rallytime*) Check to see if a line is already commented before moving on @ 2016-12-02T20:08:35Z
  - **ISSUE #37939:** (*Talkless*) file.comment always report changes in test=True mode | refs: #38039
  - 9cd42b9 Merge pull request #38039 from rallytime/fix-37939
  - 1da7aac Update unit tests to account for additional file.search call
  - 8a685b1 Check to see if a line is already commented before moving on
  - f2c0455 Write an integration test demonstrating the issue
- **PR #38045:** (*terminalmage*) yumpkg.py: don't include non-upgrade versions found by ``yum list available" @ 2016-12-02T20:07:38Z
  - **ISSUE #38037:** (*dmurphy18*) pkg.latest and yumpkg.latest\_version return incorrect package versions 2016.3 and 2016.11 | refs: #38045
  - a34a763 Merge pull request #38045 from terminalmage/issue38037
  - 6528950 Simplify logic for matching desired pkg arch with actual pkg arch
  - 3babbcd yumpkg.py: don't include non-upgrade versions found by ``yum list available"
- 6724fe4 Modify daemons test to use multiprocessing (#38034)
  - **PR #38034:** (*cachedout*) Modify daemons test to use multiprocessing | refs: #38059
- **PR #37995:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ 2016-11-30T20:12:55Z
  - **PR #37978:** (*terminalmage*) Add clarifying language to ext\_pillar\_first docs
  - 6942d5d Merge pull request #37995 from rallytime/merge-2016.3
  - b44e179 Merge branch `2015.8' into `2016.3'
    - \* 7a7e367 Merge pull request #37978 from terminalmage/ext\_pillar\_first-docs
      - 61ed9a8 Add clarifying language to ext\_pillar\_first docs
- cd66c17 fix broken yaml code block (#38002)
  - **PR #38002:** (*laleocen*) fix broken yaml code block
- **PR #37912:** (*attiasr*) fix encoding problem aws responses @ 2016-11-30T18:10:30Z
  - **ISSUE #35088:** (*Modulus*) salt/cloud/ec2.py encoding problems. | refs: #37912
  - 3dd45fb Merge pull request #37912 from attiasr/fix\_aws\_response\_encoding
  - ba4ec4e use Requests result encoding to encode the text
  - abe4eb3 fix encoding problem aws responses
- **PR #37950:** (*vutny*) Set default Salt Master address for a Syndic (like for a Minion) @ 2016-11-30T18:09:04Z
  - 69a74a4 Merge pull request #37950 from vutny/fix-starting-up-syndic
  - 7d9bc9a syndic\_master: correct default value, documentation and example config
  - 92a7c7e Set default Salt Master address for a Syndic (like for a Minion)
- 7f269bc Add clarification on expr\_form usage and future deprecation (#37964)

- **PR #37964:** (*terminalmage*) Add clarification on `expr_form` usage and future deprecation
- 1001987 Catch possible exception from `lsb_release` (#37962)
  - **ISSUE #37867:** (*tobiasBora*) Bug into `lsb_release` that crash salt | refs: #37962
  - **PR #37962:** (*cachedout*) Catch possible exception from `lsb_release`
- 330021c Handle empty tokens safely (#37961)
  - **ISSUE #37945:** (*gstachowiak*) Missing exception handling in `salt.master.Maintenance`. Process never completes. | refs: #37961
  - **PR #37961:** (*cachedout*) Handle empty tokens safely
- **PR #37272:** (*vutny*) Get default logging level and log file from default opts dict | refs: #38223 @ 2016-11-28T23:04:20Z
  - ea46639 Merge pull request #37272 from vutny/fix-getting-default-logging-opts
  - e5ce523 Fix description in the Salt Syndic usage info
  - 518a3dd Add unit tests for Salt parsers processing logging options
  - 83d6a44 Add `ssh_log_file` option to master config and documentation
  - c8a0915 Fix configuration example and documentation for `syndic_log_file` option
  - e64dd3e Correct default attributes for various parser classes
  - 82a2e21 Fix default usage string for Salt command line programs
  - 45dfffa2 Fix readding and updating logfile and pidfile config options for Salt API
  - f47253c Fix reading and applying Salt Cloud default configuration
  - fad5bec Work with a copy of default opts dictionaries
  - b7c2481 Fix `log_level_logfile` config value type
  - 1bd76a1 Fix setting temporary log level if CLI option omitted
  - 121848c Fix obtaining `log_granular_levels` config setting
  - 44cf07f Make CLI options take precedence for setting up `logfile_logger`
  - 61afaf1 Fix setting option attributes when processing `log_level` and `log_file`
  - 3c60e23 Fix processing of `log_level_logfile` config setting
  - 55a0af5 Use attribute functions for getting/setting options and config values
  - c25f2d0 Fix getting Salt API default logfile option
  - f242237 Remove processing of unused and undocumented `cli_*_log_*` config options
  - 2065e83 Get default logging level and file from default opts dict
- **PR #37925:** (*kontrolld*) Fix missing ipv6 options centos network @ 2016-11-28T22:38:43Z
  - f2f957d Merge pull request #37925 from kontrolld/add-ipv6-centos-network
  - ac2b477 Adding IPv6 functionality for CentOS `/etc/sysconfig/network`
- **PR #37899:** (*DmitryKuzmenko*) Clear functions context in schedule tasks for ZeroMQ. @ 2016-11-28T22:23:45Z
  - **ISSUE #37059:** (*basepi*) Beacon fileserver operations cause scheduled jobs with fileserver operations to hang | refs: #37899
  - c07ad11 Merge pull request #37899 from DSRCorporation/bugs/37059\_schedule\_task\_hang

- 9497748 Clear functions context in schedule tasks for ZeroMQ
- **PR #37928:** (*techhat*) Don't modify self.opts directly @ 2016-11-28T21:07:40Z
  - **ISSUE #37737:** (*b-harper*) python client api CloudClient multiple calls needed | refs: #37928
  - a55519d Merge pull request #37928 from techhat/issue37737
  - a09a60e Don't modify self.opts directly
- **PR #37929:** (*gtmanfred*) add list\_nodes\_min to nova driver @ 2016-11-28T21:05:40Z
  - 9d17f1c Merge pull request #37929 from gtmanfred/2016.3
  - c7d2c73 add list\_nodes\_min to nova driver
- **PR #37926:** (*kontrollld*) Fixes no IPv6 functionality in /etc/sysconfig/network @ 2016-11-28T20:40:00Z
  - 3bb743b Merge pull request #37926 from kontrollld/fix-ipv6-centos-network
  - 3ed42e5 updated
  - 3b3bc4f Fixes no IPv6 functionality in /etc/sysconfig/network
- **PR #37921:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ 2016-11-28T19:54:40Z
  - **PR #37918:** (*rallytime*) [2015.8] Update version numbers in doc config for 2016.11.0 release
  - **PR #37914:** (*terminalmage*) Update earlier release channels' docs with Carbon release notes
  - 271170a Merge pull request #37921 from rallytime/merge-2016.3
  - 523a67c Merge branch `2015.8' into `2016.3'
    - \* 4cdc6cf Update earlier release channels' docs with Carbon release notes (#37914)
    - \* d31491a [2015.8] Update version numbers in doc config for 2016.11.0 release (#37918)
- **PR #37924:** (*cachedout*) Update test for new gem ver @ 2016-11-28T18:17:53Z
  - 6cd6429 Merge pull request #37924 from cachedout/fix\_gem\_states
  - 894cca3 Update test for new gem ver
- **PR #37916:** (*rallytime*) [2016.3] Update version numbers in doc config for 2016.11.0 release @ 2016-11-28T17:09:08Z
  - c35ba1f Merge pull request #37916 from rallytime/doc-update-2016.3
  - bd40592 [2016.3] Update version numbers in doc config for 2016.11.0 release
- **PR #37785:** (*AaronM-Cloudtek*) respect trailing dot in ddns name parameter @ 2016-11-28T14:02:10Z
  - **ISSUE #37287:** (*AaronM-Cloudtek*) salt.states.ddns.present: `NS' record type always returns as changed | refs: #37785
  - e13a248 Merge pull request #37785 from Cloudtek/ddns-respect-trailing-dot
  - 262e3b3 respect trailing dot in ddns name parameter
- **PR #37895:** (*fj40crawler*) Change return value for salt/states/augeas.py to be True instead of N... @ 2016-11-28T13:49:27Z
  - **ISSUE #37870:** (*fj40crawler*) salt.states.augeas.change returns None when test=True | refs: #37895
  - c03b389 Merge pull request #37895 from fj40crawler/fix-augeas-return-for-test
  - ddc238d Fixed augeas\_test.py to match True v.s. None for test\_change\_in\_test\_mode
  - ef75c45 Merge branch `2016.3' of github.com:saltstack/salt into fix-augeas-return-for-test

- b0fe0cd Change return value for salt/states/augeas.py to be True instead of None for cases where salt is run with test=True. Fixes #37870
- **PR #37907:** (*Talkless*) Fix server trust in test run of svn.latest @ 2016-11-28T13:47:39Z
  - fdbc31e Merge pull request #37907 from Talkless/patch-2
  - 072a319 Fix server trust in test run of svn.latest
- **PR #37896:** (*toanju*) rh networking: add missing values @ 2016-11-27T10:30:35Z
  - f39fdf4 Merge pull request #37896 from toanju/2016.3
  - c953041 rh networking: add missing values
- **PR #37886:** (*bdrung*) Fix various spelling mistakes @ 2016-11-25T02:59:36Z
  - ea935c5 Merge pull request #37886 from bdrung/fix-typos
  - 9a51ba5 Fix various spelling mistakes
- **PR #37736:** (*dhaines*) handle semodule version >=2.4 (#37732) and fix typo @ 2016-11-24T01:44:20Z
  - **ISSUE #37732:** (*dhaines*) list\_semod() (from modules/selinux.py) incompatible with policycoreutils-2.5 (RHEL 7.3) | refs: #37736
  - 371b0a8 Merge pull request #37736 from dhaines/issue-37732
  - 7ef590a Update selinux.py
  - 516a67e fix indexing error
  - 4e49c1e fix typo
  - b16f2d8 handle semodule version >=2.4 (#37732) and fix typo
- **PR #37797:** (*clan*) check count of columns after split @ 2016-11-24T01:28:59Z
  - 87aeb66 Merge pull request #37797 from clan/extfs
  - acf0f96 check count of columns after split
- **PR #37762:** (*twangboy*) Add pre\_versions to chocolatey.installed @ 2016-11-24T01:27:29Z
  - f7c7109 Merge pull request #37762 from twangboy/fix\_chocolatey\_state
  - 9696b6d Use keyword args instead of relying on ordering
  - 398eaa0 Add pre\_versions to the available arguments
- **PR #37866:** (*meaksh*) Backport #37149 #36938 and #36784 to 2016.3 @ 2016-11-23T21:54:17Z
  - **PR #37857:** (*meaksh*) Backport #37149 and #36938 to 2015.8 | refs: #37866
  - **PR #37856:** (*meaksh*) Backport #36784 to 2015.8 | refs: #37866
  - **PR #37149:** (*dincamihai*) Fix pkg.latest\_version when latest already installed | refs: #37866 #37857
  - **PR #36938:** (*wanparo*) acl.delfacl: fix position of -X option to setfacl | refs: #37866 #37857
  - **PR #36784:** (*moio*) OS grains for SLES Expanded Support | refs: #37866 #37856
  - 56baa92 Merge pull request #37866 from meaksh/2016.3-bp-37149-36938-36784
  - 9d8d578 Fix pkg.latest\_version when latest already installed
  - ffca0d4 - acl.delfacl: fix position of -X option to setfacl
  - 3dfed6b Adjust linux\_acl unit test argument ordering
  - f185ecd core.py: quote style fixed

- 8404d13 Setting up OS grains for SLES Expanded Support (SUSE's Red Hat compatible platform)
- **PR #37863:** (*rallytime*) Back-port #36893 to 2016.3 @ 2016-11-23T17:09:09Z
  - **ISSUE #32829:** (*tyhunt99*) Dockerng appears to not be using docker registries pillar data | refs: #36893 #36893
  - **PR #36893:** (*tyhunt99*) add option to force a reauth for a docker registry | refs: #37863
  - d0cc7f0 Merge pull request #37863 from rallytime/bp-36893
  - 4c70534 Add versionadded to reauth option in dockerng module
  - 5ca2c38 added documentation for the new reuth option in docker registry configuration
  - 5b0c11a add option to force a reauth for a docker registry
- b17a118 add multiline encryption documentation to nacl (#37847)
  - **PR #37847:** (*laleocen*) add multiline encryption documentation to nacl
- aa37487 add missing chloginclass (#37827)
  - **ISSUE #37787:** (*elyulka*) user.present state fails to change loginclass on FreeBSD | refs: #37827
  - **PR #37827:** (*silenius*) add missing chloginclass
- 0e74bad Update branch refs to more relevant branch (#37826)
  - **PR #37826:** (*rallytime*) Update branch refs to more relevant branch
  - **PR #37822:** (*laleocen*) add documentation for multiline encryption using nacl | refs: #37826
- 6a9b49c Add ``names" option to file state docs: point users to highstate doc examples (#37823)
  - **ISSUE #19269:** (*markuskramerlgitt*) Undocumented feature *names: of file.directory* | refs: #37823
  - **PR #37823:** (*rallytime*) Add ``names" option to file state docs: point users to highstate doc examples
- aaf587d Clarify keystone.user\_present password state docs with default behavior (#37821)
  - **ISSUE #15697:** (*arthurlogilab*) keystone.user\_present should not re-set the password when user exists | refs: #37821
  - **PR #37821:** (*rallytime*) Clarify keystone.user\_present password state docs with default behavior
- c300863 Add some dependency documentation to libvirt docs (#37820)
  - **ISSUE #5999:** (*pille*) libvirt.keys does not work | refs: #37820
  - **PR #37820:** (*rallytime*) Add some dependency documentation to libvirt docs
- **PR #37772:** (*bdrung*) Support initializing OpenSSL 1.1 @ 2016-11-21T20:28:51Z
  - 485270f Merge pull request #37772 from bdrung/openssl1.1
  - 819c965 Support initializing OpenSSL 1.1
- 4910912 Update orchestrate runner file.copy doc example (#37817)
  - **ISSUE #37383:** (*edwardsdanielj*) Orchestration arguments (kwargs) not being interpreted / How I learned to stop worrying about documentation and love experimenting | refs: #37817
  - **PR #37817:** (*rallytime*) Update orchestrate runner file.copy doc example
- **PR #37816:** (*rallytime*) Back-port #32157 to 2016.3 @ 2016-11-21T20:22:27Z
  - **ISSUE #37653:** (*gravyboat*) Salt.cron docs don't wrap @hourly and @daily correctly in quotes for the examples | refs: #37816

- **ISSUE #31953:** (*sjorge*) Documentation for salt.states.cron is incorrect | refs: #32157
- **PR #32157:** (*cachedout*) Add quotes to cron doc | refs: #37816
- c5d3d8b Merge pull request #37816 from rallytime/bp-32157
- d9c2971 Add quotes to cron doc
- **PR #37812:** (*rallytime*) Back-port #37790 to 2016.3 @ 2016-11-21T18:46:40Z
  - **PR #37790:** (*sofixa*) Update cloud/proxmox.rst with more options and LXC | refs: #37812
  - 97e6b6a Merge pull request #37812 from rallytime/bp-37790
  - ca3b6e7 Update proxmox.rst with more options and LXC
- **PR #37811:** (*rallytime*) Back-port #37789 to 2016.3 @ 2016-11-21T18:46:21Z
  - **ISSUE #37751:** (*freach*) Documentation salt.states.dockerng.running: ``privileged" property undocumented | refs: #37789
  - **PR #37789:** (*fedusia*) issue: 37751 | refs: #37811
  - 27703c5 Merge pull request #37811 from rallytime/bp-37789
  - ba3fef4 fix comment
  - a021f76 issue: 37751 Add documentation for option privileged
- **PR #37810:** (*rallytime*) Back-port #37775 to 2016.3 @ 2016-11-21T18:45:53Z
  - **PR #37775:** (*calve*) Document *python* argument in *salt.states.virtualenv\_mod* | refs: #37810
  - adac9d7 Merge pull request #37810 from rallytime/bp-37775
  - 2bed914 Document *python* argument in *salt.states.virtualenv\_mod*
- 7de7844 Add nodegroup check to ckminions (#37763)
  - **ISSUE #37742:** (*blaketmiller*) Cannot match on nodegroup when checking minions | refs: #37763
  - **PR #37763:** (*cachedout*) Add nodegroup check to ckminions
- d674369 Fix ip/port issue with salt-call (#37766)
  - **ISSUE #37725:** (*secumod*) salt-call incorrectly parses master hostname:port from minion config | refs: #37766
  - **PR #37766:** (*cachedout*) Fix ip/port issue with salt-call
- c62ff6b Add thorium path to syspaths (#37767)
  - **ISSUE #33709:** (*msummers42*) Any/All Salt-SSH invocations in 2016.3.0 Fails with AttributeError: `module' object has no attribute `BASE\_THORIUM\_ROOTS\_DIR' | refs: #37767
  - **PR #37767:** (*cachedout*) Add thorium path to syspaths
- **PR #37760:** (*hu-dabao*) Fix couchbase returner and add couple of more features @ 2016-11-18T00:28:23Z
  - bff949f Merge pull request #37760 from hu-dabao/fix\_cb\_returner
  - de372f2 1. returner no need to check whether the jid exists for external job cache setup 2. add full\_ret to return doc so that the document will be informative 3. make ttl as a config attribute because salt-minion does not have keep\_jobs attribute 4. add password into config attribute 5. update the documents accordingly
- **PR #37738:** (*terminalmage*) Allow pillar.get to retrieve fresh pillar data when saltenv passed @ 2016-11-17T23:13:04Z

- **ISSUE #36629:** (*yhekma*) The pillar run module does not honor saltenv | refs: #37738
- 1f976ac Merge pull request #37738 from terminalmage/issue36629
- da46678 Allow pillar.get to retrieve fresh pillar data when saltenv passed
- 7aee7fc Switch default filter tag for ONE resources from user only to all resources (#37745)
  - **PR #37745:** (*cro*) Switch default filter tag for ONE resources from user only to all resources
- 6ba8d4e check for SERVICE\_DIR in \_\_virtual\_\_ in salt.modules.daemontools (#37748)
  - **ISSUE #37498:** (*githubcdr*) service.restart salt-minion fails on Ubuntu 14.04.5 LTS | refs: #37748 #38587
  - **PR #37748:** (*silenius*) check for SERVICE\_DIR in \_\_virtual\_\_ in salt.modules.daemontools
- **PR #37735:** (*Ch3LL*) change size and image of joyent profile @ 2016-11-16T21:07:52Z
  - **ISSUE #37734:** (*Ch3LL*) Joyent Cloud Size Issue | refs: #37735
  - fa78831 Merge pull request #37735 from Ch3LL/fix\_joyent\_profile
  - 9ef41dc change size and image of joyent profile
- **PR #37731:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ 2016-11-16T17:13:02Z
  - **PR #37718:** (*terminalmage*) Fix incorrectly-formatted RST
  - 98e25c6 Merge pull request #37731 from rallytime/merge-2016.3
  - ec13897 Merge branch `2015.8' into `2016.3'
    - \* f417dbb Merge pull request #37718 from terminalmage/docs
      - 23b8b2a Fix incorrectly-formatted RST
- 3be9ab4 Warn on AES test for systems with > 1 core (#37724)
  - **PR #37724:** (*cachedout*) Warn on AES test for systems with > 1 core
- **PR #37721:** (*terminalmage*) Fix for pillar setting `environment' key in \_\_gen\_opts() @ 2016-11-16T16:04:53Z
  - 35655d5 Merge pull request #37721 from terminalmage/zd909
  - acdd551 Update git\_pillar docs to reflect info from bugfix
  - 433737d Fix for pillar setting `environment' key in \_\_gen\_opts()
- **PR #37719:** (*terminalmage*) Fix incorrectly-formatted RST (2016.3 branch) @ 2016-11-16T08:20:53Z
  - 99cda7c Merge pull request #37719 from terminalmage/docs-2016.3
  - f163b4c Fix incorrectly-formatted RST
- **PR #37694:** (*cachedout*) Catch differences in git URLs in npm state @ 2016-11-16T01:56:18Z
  - 8dea695 Merge pull request #37694 from cachedout/npm\_git
  - 0e3bc23 Catch differences in git URLs in npm state
- **PR #37705:** (*rallytime*) Don't overwrite the ``key" variable passed in to \_listeners\_present func @ 2016-11-15T21:26:37Z
  - **ISSUE #37665:** (*kluoto*) boto\_elb state fails as key is overwritten by the code | refs: #37705
  - 329448c Merge pull request #37705 from rallytime/fix-37665
  - 3b7e9c5 Don't overwrite the ``key" variable passed in to \_listeners\_present func
- **PR #37707:** (*Ch3LL*) add timeout increase on azure tests @ 2016-11-15T21:24:25Z

- **PR #37239:** (*Ch3LL*) Fix cloud tests timeout | refs: #37707
- ac9a316 Merge pull request #37707 from Ch3LL/fix\_timeout\_azure
- 363122c add timeout increase on azure tests
- **PR #37704:** (*twangboy*) Fix test disabled 2016.3 [DO NOT MERGE FORWARD] @ 2016-11-15T16:48:52Z
  - 1ece265 Merge pull request #37704 from twangboy/fix\_test\_disabled\_2016.3
  - a0429cf Use nfsd instead of apsd for test\_disabled
- **PR #37690:** (*twangboy*) Update pyzmq to 15.3.0 for 2016.3 [DO NOT MERGE FORWARD] @ 2016-11-15T03:10:36Z
  - 44f05ac Merge pull request #37690 from twangboy/update\_pyzmq\_2016.3
  - cf55342 Update pyzmq to version 15.3.0
- **PR #37680:** (*rallytime*) Back-port #32965 to 2016.3 @ 2016-11-15T02:56:46Z
  - **PR #32965:** (*kevinquinnyo*) Fix 'present' option when used without 'key\_type' | refs: #37680
  - a743d8b Merge pull request #37680 from rallytime/bp-32965
  - 1865b13 Fix 'present' option when used without 'key\_type'
- **PR #37681:** (*rallytime*) Back-port #35965 to 2016.3 @ 2016-11-14T21:19:22Z
  - **ISSUE #35964:** (*edgan*) salt-ssh doesn't set the return code to non-zero on highstate rendering error | refs: #35965
  - **PR #35965:** (*edgan*) Set the return code to 1 on salt-ssh highstate errors | refs: #37681
  - 1c2d6ff Merge pull request #37681 from rallytime/bp-35965
  - 700f3fa Set the return code to 1 on salt-ssh highstate errors
- **PR #37668:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ 2016-11-14T15:43:25Z
  - **PR #37641:** (*cro*) Add docs for rotate\_aes\_key
  - 1b456b5 Merge pull request #37668 from rallytime/merge-2016.3
  - ef684c6 Merge branch '2015.8' into '2016.3'
  - a01b665 Add docs for rotate\_aes\_key (#37641)
- **PR #37625:** (*cachedout*) Return with proper retcodes in batch mode @ 2016-11-12T20:29:09Z
  - **ISSUE #37492:** (*JensRantil*) Failing `salt -b 1 minion state.highstate` has wrong exit code | refs: #37625
  - 305e51d Merge pull request #37625 from cachedout/issue\_37492
  - b603152 Return with proper retcodes in batch mode
- **PR #37639:** (*rallytime*) Back-port #37607 to 2016.3 @ 2016-11-11T20:29:20Z
  - **ISSUE #34547:** (*sebw*) salt-cloud deployment fails when `deploy: True` | refs: #37607
  - **PR #37607:** (*techhat*) Try the connection again, in case it's been reset | refs: #37639
  - **PR #35673:** (*cro*) Proxies don't handle reusing the SmartConnect instances very well. D... | refs: #37607
  - **PR #34059:** (*alexbleotu*) Vmware common gh | refs: #37607
  - 7510cd4 Merge pull request #37639 from rallytime/bp-37607
  - 9914c93 Pylint: Remove kwargs that are not in the 2016.3 branch
  - d941e93 Disable pylint warning

- 940ee49 Lint fix
- 69893f0 Try the connection again, in case it's been reset
- **PR #37638:** (*rallytime*) Back-port #37349 to 2016.3 @ 2016-11-11T20:29:01Z
  - **ISSUE #37118:** (*gtmanfred*) group in file.find module unable to be a list | refs: #37349 #37349
  - **PR #37349:** (*haeac*) Pull request for Bug #37118 | refs: #37638
  - 24ca960 Merge pull request #37638 from rallytime/bp-37349
  - ba2105b Fix for Bug #37118, the wrong parameter was being used to convert the group name to group id.
- **PR #37644:** (*Ch3LL*) digital ocean list\_keypairs: increase limit for ssh keys parsed @ 2016-11-11T20:28:46Z
  - **ISSUE #37643:** (*Ch3LL*) digital ocean list\_keypairs limits to 20 keys | refs: #37644
  - e1e8b81 Merge pull request #37644 from Ch3LL/fix\_37643
  - c02961a list\_keypairs: increase limit for ssh keys parsed
- **PR #37640:** (*rallytime*) Add known issue #37541 to 2016.3.4 release notes @ 2016-11-11T20:28:12Z
  - **ISSUE #37541:** (*yhekma*) salt-minion does not clean up temp files for templates | refs: #37540 #37640
  - a97c2ad Merge pull request #37640 from rallytime/update-release-notes
  - 6d6de12 Grammatical fix
  - 24d7f20 Add known issue #37541 to 2016.3.4 release notes
- **PR #37642:** (*cro*) Forward-port change from 2015.8 adding release note for rotate\_aes\_key @ 2016-11-11T20:27:07Z
  - fab3eaa Merge pull request #37642 from cro/rotate\_aes\_doc
  - 1ca5b95 Forward-port change from 2015.8 adding release note for rotate\_aes\_key
- **PR #37629:** (*TronPaul*) fix \_\_opts\_\_ and provider being None in salt.utils.aws:get\_location @ 2016-11-11T09:49:47Z
  - **ISSUE #37628:** (*TronPaul*) [git 2016.3] Refreshing of an s3 file server results in an exception | refs: #37629
  - 4c07b35 Merge pull request #37629 from TronPaul/fix-s3fs-opts
  - a452cde fix \_\_opts\_\_ and provider being None issue
- **PR #37481:** (*thatch45*) Raet internal client reference fix @ 2016-11-11T04:39:41Z
  - 200d9fc Merge pull request #37481 from thatch45/raet\_client
  - 50d9111 Attempted fix, needs user verification
- **PR #37611:** (*jeanpralo*) Fix cmd batch raw @ 2016-11-11T02:53:58Z
  - b14faf1 Merge pull request #37611 from jeanpralo/fix-cmd-batch-raw
  - 4f16840 add integration test for salt.client.LocalClient.cmd\_batch
  - ead47e4 update ret dict to avoid hanging
  - 0a2f153 fix dict key for raw support to avoid exception
- **PR #37614:** (*gtmanfred*) remove redundant code @ 2016-11-11T02:49:13Z
  - 35c8333 Merge pull request #37614 from gtmanfred/2016.3
  - 71c2df8 remove redundant code

- **PR #37627:** (*cachedout*) Exempt pip.iteritems from test\_valid\_docs test @ 2016-11-11T02:48:37Z
  - 4fab707 Merge pull request #37627 from cachedout/pr-36706
  - 94df2f8 Exempt pip.iteritems from test\_valid\_docs test
- **PR #36706:** (*siccrusher*) Add basic sanity checks for env\_vars in pip.install function @ 2016-11-11T02:47:16Z
  - **ISSUE #36644:** (*b1naryth1ef*) env\_vars not properly validated/casted to strings w/ virtualenv.manage/pip.install | refs: #36706
  - ee74f31 Merge pull request #36706 from siccrusher/fix\_env\_var\_validation
  - fb27f8b Revert change
  - 79f3e83 Use fully-qualified path for six
  - 0ca1222 Update pip.py
  - b15de37 \* Ensure src is python3 compatible
  - 0976a2d \* Before passing on the env\_vars dictionary ensure all values are strings. Fixes #36644
- **PR #37626:** (*cachedout*) Exit with proper retcode on hard client failures @ 2016-11-11T02:38:47Z
  - **ISSUE #37491:** (*JensRantil*) ``Failed to authenticate! ...'' error should exit non-zero | refs: #37626
  - 902a975 Merge pull request #37626 from cachedout/issue\_37491
  - bab9a72 Exit with proper retcode on hard client failures
- **PR #37617:** (*terminalmage*) Clarify docs for git\_pillar dynamic env feature @ 2016-11-11T01:52:52Z
  - 845f835 Merge pull request #37617 from terminalmage/git\_pillar-docs
  - 8cdf5db Clarify docs for git\_pillar dynamic env feature
- **PR #36627:** (*sjmh*) Skip rest of loop on failed func match @ 2016-11-10T23:47:12Z
  - 3079d78 Merge pull request #36627 from sjmh/fix/auth\_skip\_nomatch
  - b3baaf3 Skip rest of loop on failed func match
- **PR #37600:** (*mcalmer*) change TIMEZONE on SUSE systems (bsc`#1008933`\_) @ 2016-11-10T21:54:04Z
  - **ISSUE #1008933:** (\*\*)
  - a71e7c7 Merge pull request #37600 from mcalmer/fix-timezone-on-SUSE
  - 3530b54 change TIMEZONE on SUSE systems (bsc`#1008933`\_)
- **PR #37602:** (*DmitryKuzmenko*) Handle master restart in appropriate places using *salt.event* listener. @ 2016-11-10T21:53:20Z
  - **ISSUE #37238:** (*cmclaughlin*) Restarting master causes minion to hang | refs: #37438 #37602
  - **ISSUE #37018:** (*tsaridas*) get events from python | refs: #37438 #37602
  - **PR #37438:** (*DmitryKuzmenko*) Fix for #37238 salt hang on master restart | refs: #37602
  - 39b7587 Merge pull request #37602 from DSRCorporation/bugs/37238\_salt\_hang\_on\_master\_restart
  - d3d987b Handle master restart in appropriate places using *salt.event* listener.
- **PR #37608:** (*gtmanfred*) allow multiline returns from docker for mac @ 2016-11-10T21:48:59Z
  - 019e1a7 Merge pull request #37608 from gtmanfred/2016.3
  - 74aee1e allow multiline returns from docker for mac
- 71032f8 Documentation improvements and corrections (#37604)

- **ISSUE #37592:** (*craigafinch*) State git.latest does not work with SSH | refs: #37604
- **ISSUE #37551:** (*viict*) git.latest ``Not a valid commit name" | refs: #37571 #37604
- **PR #37604:** (*terminalmage*) Documentation improvements and corrections
- a7e09f9 Use existing VM's VDD size if not specified in the cloud profile (#37579)
  - **PR #37579:** (*pass-by-value*) Use existing VM's VDD size if not specified in the cloud profile
- **PR #37540:** (*yhekma*) Added prefix to tempfile for template @ 2016-11-10T00:37:18Z
  - **ISSUE #37541:** (*yhekma*) salt-minion does not clean up temp files for templates | refs: #37540 #37640
  - fdd13b4 Merge pull request #37540 from yhekma/2016.3
  - 93a59f8 Added prefix to tempfile for template
- 5e80acc Update for m2crypto changes removing lhash (#37578)
  - **ISSUE #37084:** (*AaronM-Cloudtek*) x509.certificate\_managed does not work with m2crypto >=0.25 | refs: #37578
  - **PR #37578:** (*clinta*) Update for m2crypto changes removing lhash
- 928462d fix example of function argument limiting (#37584)
  - **PR #37584:** (*clinta*) Fix eauth example for limiting args
- 2810b85 Add a test to ensure we don't check for fast-forward before fetching (#37571)
  - **ISSUE #37551:** (*viict*) git.latest ``Not a valid commit name" | refs: #37571 #37604
  - **PR #37571:** (*terminalmage*) Add a test to ensure we don't check for fast-forward before fetching
- **PR #37553:** (*rallytime*) Back-port #37521 to 2016.3 @ 2016-11-08T23:11:07Z
  - **ISSUE #33645:** (*ketzacoatl*) saltutil.sync\_all does not sync custom pillar modules to masterless minions | refs: #33833
  - **ISSUE #25297:** (*Akilesh1597*) perform `refresh\_pillar` as a part of `sync\_all` | refs: #37521 #25361
  - **PR #37521:** (*genuss*) refresh\_pillar() should be called always with refresh=True during saltutil.sync\_all | refs: #37553
  - **PR #33833:** (*terminalmage*) Support syncing pillar modules to masterless minions | refs: #37521
  - **PR #25361:** (*tedski*) perform *refresh\_pillar* as part of *sync\_all* when *refresh=True* | refs: #37521
  - b01c247 Merge pull request #37553 from rallytime/bp-37521
  - 30f92b0 refresh\_pillar() should be called always
- **PR #37565:** (*rallytime*) Back-port #37549 to 2016.3 @ 2016-11-08T23:10:25Z
  - **PR #37549:** (*Mrten*) sqlite is not found in 2015.8 | refs: #37565
  - 694df30 Merge pull request #37565 from rallytime/bp-37549
  - c92a90b Update sqlite3.py
  - fb76557 sqlite is not found in 2015.8
- 2fc0b22 Fix regression in service.dead state (#37562)
  - **ISSUE #37511:** (*jdelic*) service.dead now only operates if the service file exists | refs: #37562
  - **PR #37562:** (*terminalmage*) Fix regression in service.dead state
- ac754db Skip config type checking for sdb values (#37560)

- **ISSUE #37554:** (*sjmh*) salt-api doesn't dynamically re-read nodegroups configuration | refs: #37560
  - **PR #37560:** (*whiteinge*) Skip config type checking for sdb values
- 453319b Don't pass the vpc id to boto.vpc.create\_internet\_gateway func (#37556)
  - **PR #37556:** (*rallytime*) Don't pass the vpc id to boto.vpc.create\_internet\_gateway func
- 89b9417 Documentation rendering fixes (#37543)
  - **PR #37543:** (*multani*) Documentation rendering fixes
- **PR #37457:** (*rallytime*) Fixup file.line docs to be more clear and consistent @ 2016-11-08T00:29:20Z
  - **ISSUE #31081:** (*JensRantil*) salt.modules.file.line documentation unclarities | refs: #37457
  - 96b8b9a Merge pull request #37457 from rallytime/fix-31081
  - 25821bb Clarify which modes use ``before``, ``after``, and ``indent`` options
  - 8b2d2b9 Clarify file.line state docs as well
  - b261589 Move note about using mode=insert with location options to mode section
  - db0b0ce Fixup file.line docs to be more clear and consistent
- **PR #37526:** (*twangboy*) Remove loop from dsc.apply\_config @ 2016-11-08T00:23:11Z
  - **ISSUE #35799:** (*davegiles*) dsc.apply\_config hangs (no error) on empty directory on target | refs: #37526
  - 7de790f Merge pull request #37526 from twangboy/fix\_35799
  - fc42609 Remove unnecessary format
  - c934a2b Remove the loop from apply\_config
- **PR #37534:** (*rallytime*) Back-port fix needed from #37515 @ 2016-11-08T00:14:46Z
  - **PR #37515:** (*rallytime*) [carbon] Merge forward from 2016.3 to carbon | refs: #37534 #37534
  - 94811df Merge pull request #37534 from rallytime/bp-merge-foward-fix
  - d1b2af1 Add missing source\_hash\_name args to a couple funcs
- **PR #37533:** (*whiteinge*) Return a 504 response instead of 500 for Salt timeouts @ 2016-11-08T00:14:15Z
  - 17adbb0 Merge pull request #37533 from whiteinge/salt-api-504-timeouts
  - 63226ae Return a 504 response instead of 500 for Salt timeouts
- **PR #37529:** (*lorenegordon*) Backport: PR 36736 to 2016.3 @ 2016-11-08T00:04:10Z
  - **ISSUE #36679:** (*lorenegordon*) Command `Import-Module ServerManager` failed with return code: 1 | refs: #36736
  - **PR #36736:** (*m03*) Fix issue 36679 win\_servermanager error | refs: #37529
  - a9f03ee Merge pull request #37529 from lorenegordon/bp-36736
  - 21c2664 Fix issue 36679 win\_servermanager failure
- **PR #37519:** (*rallytime*) Update returner \_\_virtual\_\_() return messages for loader @ 2016-11-07T23:06:23Z
  - **ISSUE #37444:** (*Tanoti*) Returning False from \_\_virtual\_\_ in a returner does not return expected error | refs: #37502 #37519
  - **PR #37502:** (*cachedout*) Log proper message on returners that cannot be loaded | refs: #37519
  - 19475aa Merge pull request #37519 from rallytime/returner-load-errors
  - fb261a3 Update returner \_\_virtual\_\_() return messages for loader

- **PR #37527:** (*rallytime*) Add `syndic_id=None` kwarg to `save_minions` funcs in returners @ 2016-11-07T23:04:03Z
  - **ISSUE #35016:** (*pingangit*) `TypeError: save_minions() got an unexpected keyword argument 'syndic_id'` | refs: #37527
  - *fefdfab* Merge pull request #37527 from rallytime/fix-35016
  - *2944b24* Add `syndic_id=None` kwarg to `save_minions` funcs in returners
- *b77b6ba* fix Lithium to 2015.5.0 (#37530)
  - **PR #37530:** (*gtmanfred*) fix Lithium to 2015.5.0
- **PR #37514:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ 2016-11-07T16:51:06Z
  - **PR #37482:** (*rallytime*) [2015.8] Doc version updated to 2016.3.4
  - *7431648* Merge pull request #37514 from rallytime/merge-2016.3
  - *41166ae* Merge branch '2015.8' into '2016.3'
  - *c505a05* [2015.8] Doc version updated to 2016.3.4 (#37482)
- **PR #37503:** (*cachedout*) Catch loader error on returners without `save_load` @ 2016-11-07T09:33:57Z
  - **ISSUE #36713:** (*Tanoti*) `ExtraData: unpack(b) received extra data after upgrading to 2016.3.3` | refs: #37503
  - *2d924d0* Merge pull request #37503 from cachedout/issue\_36713
  - *5f7f971* Catch loader error on returners without `save_load`
- **PR #37499:** (*cachedout*) Clarify docs on salt-key events @ 2016-11-07T09:33:20Z
  - **ISSUE #37448:** (*alisson276*) In 'salt/key' events there are acts that never happen | refs: #37499
  - *d95bf59* Merge pull request #37499 from cachedout/key\_docs\_clarify
  - *2758e74* Clarify docs on salt-key events
- **PR #37500:** (*cachedout*) Remove unused flag @ 2016-11-07T09:33:04Z
  - *1dd1408* Merge pull request #37500 from cachedout/remove\_include\_errors
  - *6c705b1* Remove unused flag
- **PR #37502:** (*cachedout*) Log proper message on returners that cannot be loaded | refs: #37519 @ 2016-11-07T09:32:45Z
  - **ISSUE #37444:** (*Tanoti*) Returning `False` from `__virtual__` in a returner does not return expected error | refs: #37502 #37519
  - *4b6f1ab* Merge pull request #37502 from cachedout/issue\_37444
  - *4c5ab05* Remove debugging
  - *17d01e4* Log proper message on returners that cannot be loaded
- **PR #37494:** (*sjorge*) Forgot to update `os_family` map in #37472 @ 2016-11-06T22:18:54Z
  - **ISSUE #37389:** (*d101nelson*) Some core grains are inaccurate or incomplete for Solaris | refs: #37472
  - **PR #37472:** (*sjorge*) 2016.3 solaris grains improvements | refs: #37494 #37494
  - *2422daf* Merge pull request #37494 from sjorge/2016.3-osfam\_map
  - *96ba545* Forgot to update `os_family` map in #37472
- **PR #37496:** (*mcalmer*) fix status handling in sysv init scripts @ 2016-11-06T22:18:00Z

- 41bd8e3 Merge pull request #37496 from mcalmer/fix-status-handling-in-sysv-init-scripts
- 1fb2c4d fix status handling in sysv init scripts
- **PR #37497:** (*terminalmage*) Update 2016.3.5 release notes with source\_hash\_name explanation @ 2016-11-06T22:17:40Z
  - e741a77 Merge pull request #37497 from terminalmage/release\_notes
  - c08038d Update 2016.3.5 release notes with source\_hash\_name explanation
- **PR #37486:** (*twangboy*) Add requirement for PowerShell 3 on Windows @ 2016-11-06T06:01:07Z
  - f4426c2 Merge pull request #37486 from twangboy/fix\_win\_docs
  - 9e0631a Add docs denoting the requirement for at least PowerShell 3
- **PR #37493:** (*cachedout*) Add sdb support to minion and master configs @ 2016-11-06T06:00:18Z
  - a1f355a Merge pull request #37493 from cachedout/minion\_master\_sdb
  - 9761a46 Add sdb support to minion and master configs
- **PR #37452:** (*rallytime*) file.line with mode=replace on an empty file should return False, not stacktrace @ 2016-11-06T01:55:11Z
  - **ISSUE #31135:** (*jeffreycat*) file.line mode=replace breaks on empty file. | refs: #37452
  - be93710 Merge pull request #37452 from rallytime/fix-31135
  - c792f76 Bump log level from debug to warning on empty file
  - 5f181cf file.line with mode=replace on an empty file should return False
  - 94a00c6 Write a unit test demonstrating stack trace in #31135
- **PR #37469:** (*terminalmage*) Rewrite file.extract\_hash to improve its matching ability @ 2016-11-06T01:50:01Z
  - **ISSUE #37001:** (*phil123456*) URGENT : archive.extracted does not work anymore | refs: #37081
  - **ISSUE #29010:** (*The-Loeki*) file.managed download failing checksum testing for Ubuntu initscripts/source\_hash | refs: #37469
  - **PR #37081:** (*terminalmage*) Fix archive.extracted remote source\_hash verification | refs: #37469 #37469
  - 129b038 Merge pull request #37469 from terminalmage/issue29010
  - a3f38e5 Update file.extract\_hash unit tests
  - b26b528 Add the source\_hash\_name param to file.managed states
  - 52fe72d Rewrite file.extract\_hash
- **PR #37472:** (*sjorge*) 2016.3 solaris grains improvements | refs: #37494 #37494 @ 2016-11-06T01:46:10Z
  - **ISSUE #37389:** (*d101nelson*) Some core grains are inaccurate or incomplete for Solaris | refs: #37472
  - 9426b9d Merge pull request #37472 from sjorge/2016.3-solaris-grains
  - 2958f5c detect and properly handle OmniOS
  - 37c3a7f handle Oracle Solaris better
  - 69706d3 parse minorrelease if it has a / in it
  - d1cf4a0 improve regex for parsing /etc/release using files from Solaris 8 SPARC and Solaris 10
  - 88eddef some more cleanup for smartos
  - d3ff39f improve smartos os version grains

- **PR #37478:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ 2016-11-04T20:30:08Z
  - **ISSUE #37388:** (*tyhunt99*) [2016.3.4] Refreshing of an s3 file server results in an exception. | refs: #37428
  - **ISSUE #37286:** (*terminalmage*) GitFS: mountpoints with trailing slashes cause all file paths in that repo to fail to be matched | refs: #37408
  - **ISSUE #36849:** (*skulikov*) file.managed and archive.extracted don't properly work for tgz remote files | refs: #37418
  - **PR #37441:** (*rallytime*) Back-port #37428 to 2015.8
  - **PR #37428:** (*cachedout*) Fix incorrect reference of `__utils__` in `salt.utils` | refs: #37441
  - **PR #37418:** (*terminalmage*) Do not use compression in tornado httpclient requests
  - **PR #37408:** (*terminalmage*) Strip slashes from gitfs mountpoints
  - 4ba63ab Merge pull request #37478 from rallytime/merge-2016.3
  - 3483a44 Merge branch `2015.8' into `2016.3'
    - \* 35888c2 Merge pull request #37408 from terminalmage/issue37286
      - 4e4a057 Strip slashes from gitfs mountpoints
    - \* b6c57c6 Merge pull request #37418 from terminalmage/issue36849
      - 740bc54 Do not use compression in tornado httpclient requests
    - \* 7fba8aa Merge pull request #37441 from rallytime/bp-37428
      - 6fe3ef4 Fix incorrect reference of `__utils__` in `salt.utils`
- 8aa101a Get release notes started for 2016.3.5 (#37485)
  - **PR #37485:** (*rallytime*) Get release notes started for 2016.3.5
- dfd9495 [2016.3] Doc version updated to 2016.3.4 (#37483)
  - **PR #37483:** (*rallytime*) [2016.3] Doc version updated to 2016.3.4
- **PR #37121:** (*nevins-b*) allow the file.recurse state to support saltenv @ 2016-11-04T05:59:28Z
  - **ISSUE #37123:** (*nevins-b*) file.recurse state doesn't support pulling from other environments | refs: #37121
  - 580eca7 Merge pull request #37121 from nevins-b/2016.3
  - 99d2c36 making messaging in tests match new return
  - bc4b0e7 adding test for saltenv in file.recurse source url
  - 3315b67 fixing saltenv if not set in url
  - a9683cb allow the file.recurse state to support saltenv (`salt://example/dir?saltenv=dev`)
- **PR #37426:** (*jfindlay*) Wait for macOS to change system settings @ 2016-11-04T04:35:52Z
  - **PR #37351:** (*jfindlay*) modules.mac\_power: give macOS time to change setting | refs: #37426
  - 766b143 Merge pull request #37426 from jfindlay/mac\_sleep
  - 43a8e19 modules.mac\_power: wait for system to make change
  - feabca6 modules.mac\_system: wait for system to make change
  - 0213eb9 utils.mac\_utils: add confirm\_updated
- **PR #37438:** (*DmitryKuzmenko*) Fix for #37238 salt hang on master restart | refs: #37602 @ 2016-11-04T04:10:51Z

- **ISSUE #37238:** (*cmclaughlin*) Restarting master causes minion to hang | refs: #37438 #37602
- **ISSUE #37018:** (*tsaridas*) get events from python | refs: #37438 #37602
- 9eab5c8 Merge pull request #37438 from DSRCorporation/bugs/37238\_salt\_hang\_on\_master\_restart
- f253d3c Auto reconnect *salt* to master if the connection was lost.
- **PR #37440:** (*rallytime*) Back-port #31207 to 2016.3 @ 2016-11-04T04:09:33Z
  - **PR #31207:** (*thusoy*) Remove error logging of missing boto libraries | refs: #37440
  - 9aa7073 Merge pull request #37440 from rallytime/bp-31207
  - c71ae61 Remove error logging of missing boto libraries
- **PR #37442:** (*twangboy*) Create paths.d directory @ 2016-11-04T04:07:19Z
  - edbfadc Merge pull request #37442 from twangboy/fix\_osx\_postinstall
  - 8091a30 Create paths.d directory
- **PR #37445:** (*twangboy*) Check for Server os before checking [DO NOT MERGE FORWARD] @ 2016-11-04T04:04:49Z
  - afb1b3c Merge pull request #37445 from twangboy/fix\_import\_error\_2016.3
  - c0d5ebd Check for Server os before checking
- **PR #37446:** (*twangboy*) Detect VC++ for Python on Win32 @ 2016-11-04T04:04:02Z
  - 7a9f95a Merge pull request #37446 from twangboy/fix\_build\_32
  - 2de69f4 Detect VC for Python correctly on 32bit Windows
- **PR #37447:** (*rallytime*) Cast ip\_protocol rule as a str() in boto\_secgroup.present @ 2016-11-04T04:03:45Z
  - **ISSUE #36961:** (*nullify005*) boto\_secgroup assumes a string when checking ip\_protocol validity when not tcp|udp|all|-1 | refs: #37447
  - 651e0f7 Merge pull request #37447 from rallytime/fix-36961
  - 6b930ac Cast ip\_protocol rule as a str() in boto\_secgroup.present
- **PR #37455:** (*techhat*) Make api opts respect correct root\_dir @ 2016-11-04T03:25:40Z
  - **ISSUE #36446:** (*whiteinge*) Custom salt-api config problem | refs: #37455
  - **PR #36386:** (*xiaoanyunfei*) fix salt-api's default opts were covered by salt-master #35734 | refs: #37455
  - a51d944 Merge pull request #37455 from techhat/issue36446
  - 7eff90d Make api opts respect correct root\_dir
- **PR #37459:** (*twangboy*) Fix error message when ConvertTo-Json not supported [DO NOT MERGE FORWARD] @ 2016-11-04T03:22:31Z
  - 3591bf0 Merge pull request #37459 from twangboy/fix\_dsc\_json\_msg\_2016.3
  - 949b709 Use cmd.run\_all instead of cmd.shell
- **PR #37430:** (*meaksh*) Including resolution parameters in the Zypper debug-solver call during a dry-run dist-upgrade (2016.3) @ 2016-11-03T14:35:46Z
  - **ISSUE #2016:** (*seanchannel*) status.custom failing on any arguments
  - **PR #37353:** (*meaksh*) Including resolution parameters in the Zypper debug-solver call during a dry-run dist-upgrade | refs: #37430
  - 80a99c4 Merge pull request #37430 from meaksh/zypper-dist-upgrade-debug-solver-fix-2016.3

- ffc596f Including resolver params for Zypper debug-solver
- 67cc7a7 Fix incorrect reference of `__utils__` in `salt.utils` (#37428)
  - **ISSUE** #37388: (*tyhunt99*) [2016.3.4] Refreshing of an s3 file server results in an exception. | refs: #37428
  - **PR** #37428: (*cachedout*) Fix incorrect reference of `__utils__` in `salt.utils` | refs: #37441
- **PR** #37419: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ 2016-11-02T21:40:04Z
  - **ISSUE** #33187: (*usbportnoy*) Deploy to jboss TypeError at boss7.py:469 | refs: #33190
  - **PR** #37392: (*rallytime*) Back-port #33190 to 2015.8
  - **PR** #33190: (*usbportnoy*) Fixes Type error in jboss state module when concatenating comments | refs: #37392
  - 7864f9b Merge pull request #37419 from rallytime/merge-2016.3
  - bce47c9 Merge branch `2015.8' into `2016.3'
    - \* 7b1d3b5 Merge pull request #37392 from rallytime/bp-33190
    - \* 4063bae catch None cases for comments in jboss7 state module
- d749567 Fix regression in output for Ctrl-c'ed CLI jobs (#37416)
  - **PR** #37416: (*terminalmage*) Fix regression in output for Ctrl-c'ed CLI jobs
- e9b4620 Add unit tests for cloning from snapshot (#37414)
  - **PR** #37414: (*pass-by-value*) Add unit tests for cloning from snapshot
  - **PR** #37350: (*pass-by-value*) Add handling for full and linked clone | refs: #37414
- **PR** #37404: (*cachedout*) Revert ``Bootstrap delay option for salt-cloud" @ 2016-11-02T09:48:53Z
  - **PR** #37401: (*cachedout*) Bootstrap delay option for salt-cloud | refs: #37404
  - ecd794a Merge pull request #37404 from saltstack/revert-37401-bootstrap\_delay
  - e864de8 Revert ``Bootstrap delay option for salt-cloud"
- **PR** #37401: (*cachedout*) Bootstrap delay option for salt-cloud | refs: #37404 @ 2016-11-02T09:02:13Z
  - 2eb44fb Merge pull request #37401 from cachedout/bootstrap\_delay
  - 6e42b0e Bootstrap delay option for salt-cloud
- **PR** #37350: (*pass-by-value*) Add handling for full and linked clone | refs: #37414 @ 2016-11-02T08:02:29Z
  - 9446e48 Merge pull request #37350 from pass-by-value/full\_and\_linked\_clone\_v1
  - d8b1c9c Add handling for full and linked clone and commit disk mode additions
- **PR** #37386: (*rallytime*) Fix `win_useradd.chgroups` return when `cmd.run_all` `retcode != 0` @ 2016-11-02T06:34:12Z
  - **ISSUE** #34841: (*Ch3LL*) Wrong return when using `user.chgroups` on windows | refs: #37386
  - c7f4d7f Merge pull request #37386 from rallytime/fix-34841
  - c70492a Fix `win_useradd.chgroups` return when `cmd.run_all` `retcode != 0`
- **PR** #37390: (*rallytime*) Don't insert `__pub*` keys into `dnsmasq` config file with `set_config` function @ 2016-11-02T06:31:53Z
  - **ISSUE** #34263: (*vernondcole*) Use of `dnsmasq.set_config` injects unintentional text into the configuration file. | refs: #37390

- 34b6c64 Merge pull request #37390 from rallytime/fix-34263
- e082ff5 Fix failing test now that we're raising a CommandExecutionError
- c6a3476 Filter out the \_\_pub keys passed via **\*\***kwargs for dnsmasq.set\_config
- fd380c7 Add test case to reproduce dnsmasq.set\_config failure in #34263
- **PR #37391:** (*rallytime*) Back-port #35287 to 2016.3 @ 2016-11-02T06:18:26Z
  - **ISSUE #35163:** (*SolarisYan*) salt file.mkdir | refs: #35287 #35189
  - **PR #35287:** (*dere*) 2016.3 | refs: #37391
  - **PR #35189:** (*dere*) return value for file.mkdir instead of None | refs: #35287
  - 798b2ac Merge pull request #37391 from rallytime/bp-35287
  - 0e1ebea Simplify return value to ``True".
  - 13022c5 return value for mkdir instead of None
- **PR #37279:** (*gtmanfred*) initialize super class of NamespacedDictWrapper @ 2016-11-01T15:12:49Z
  - **ISSUE #37264:** (*junster1*) Parsing \_\_grains\_\_ with json.dumps in a module is returning an empty dict in 2016.3.3 | refs: #37279
  - 1a4833b Merge pull request #37279 from gtmanfred/2016.3
  - 597f346 initialize super class of NamespacedDictWrapper
- **PR #37351:** (*jfindlay*) modules.mac\_power: give macOS time to change setting | refs: #37426 @ 2016-10-31T19:15:40Z
  - 3511759 Merge pull request #37351 from jfindlay/mac\_set
  - 0c58056 modules.mac\_power: give macOS time to change setting
- **PR #37340:** (*cachedout*) SIGILL -> SIGKILL in process test @ 2016-10-31T08:50:10Z
  - 25c987e Merge pull request #37340 from cachedout/ill\_kill\_3
  - a6b7417 SIGILL -> SIGKILL in process test
- **PR #37306:** (*DmitryKuzmenko*) Don't use os.wait() on subprocesses managed by *multiprocessing*. @ 2016-10-31T06:55:30Z
  - **ISSUE #35480:** (*jelenak*) 200 processes of salt-master (2016.3.2) | refs: #37306
  - 7f16548 Merge pull request #37306 from DSRCorporation/bugs/35480\_master\_shutdown\_no\_process\_error
  - b6937eb Don't use os.wait() on subprocesses managed by *multiprocessing*.
- **PR #37314:** (*rallytime*) Document the existence of placementgroup option in ec2 driver @ 2016-10-31T06:42:33Z
  - **ISSUE #34998:** (*exowaucka*) placementgroup parameter for salt-cloud is undocumented | refs: #37314
  - bf8ba97 Merge pull request #37314 from rallytime/fix-34998
  - 39459ed Document the existence of placementgroup option in ec2 driver
- **PR #37219:** (*alex-zel*) Fix freeipa ldap groups @ 2016-10-28T04:33:37Z
  - **ISSUE #36148:** (*alex-zel*) Eauth error with openLDAP groups | refs: #37219
  - e0baf4b Merge pull request #37219 from alex-zel/fix-freeipa-ldap-groups
  - b5b2e7e Remove trailing whitespaces
  - 32f906b Add support for FreeIPA

## 20.2.22 Salt 2016.3.6 Release Notes

Version 2016.3.6 is a bugfix release for [2016.3.0](#).

### Changes for v2016.3.5..v2016.3.6

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Statistics:

- Total Merges: **118**
- Total Issue references: **53**
- Total PR references: **168**

Changes:

- **PR #39855:** (*Foxlik*) Use regular expression instead of split when replacing authorized\_keys @ 2017-03-22T18:28:32Z
  - **ISSUE #39854:** (*Foxlik*) quoted space in authorized\_keys confuses ssh.py | refs: #39855
  - c59ae9a Merge pull request #39855 from Foxlik/use\_regex\_to\_compare\_authorized\_keys
  - d46845a Add newline at end of file
  - d4a3c8a Use regular expression instead of split when replacing authorized\_keys
- **PR #40221:** (*rallytime*) Back-port #39179 to 2016.3 @ 2017-03-22T17:40:34Z
  - **PR #39179:** (*mcalmer*) fix error parsing | refs: #40221
  - fd10430 Merge pull request #40221 from rallytime/bp-39179
  - 07dc2de fix error parsing
- **PR #40206:** (*cro*) Leave sign\_pub\_messages off by default. @ 2017-03-22T16:43:03Z
  - **ISSUE #40203:** (*frogunder*) 2016.3.6. Minion don't connect to older master. | refs: #40206
  - a27a2cc Merge pull request #40206 from cro/sign\_pub\_take2
  - 01048de leave sign\_pub\_messages off on minion by default.
  - a82b005 Leave sign\_pub\_messages off by default.
- **PR #40193:** (*rallytime*) Back-port #40117 to 2016.3 @ 2017-03-22T16:42:21Z
  - **PR #40117:** (*narendraingale2*) Fix force remove | refs: #40193
  - d1abb4c Merge pull request #40193 from rallytime/bp-40117
  - cf18579 More optimization.
  - 5a08266 Removed debug statemnt
  - f557f7c Added fix for issue 39393
  - bb62278 Reverting changes.
  - a9107cd Added if condition for broken link.
- **PR #40196:** (*twangboy*) Update dependencies for PyOpenSSL @ 2017-03-22T16:40:46Z
  - 0f1ff4d Merge pull request #40196 from twangboy/win\_fix\_deps

- 6761527 Update dependencies for PyOpenSSL
- **PR #40184:** (*terminalmage*) Link to minion start reactor example from FAQ @ 2017-03-21T17:33:09Z
  - b050151 Merge pull request #40184 from terminalmage/link-reactor-example
  - a42be82 Link to minion start reactor example from FAQ.
- **PR #40182:** (*terminalmage*) Add support for ``stopped" state to dockerng's mod\_watch @ 2017-03-21T15:40:29Z
  - d4e6c58 Merge pull request #40182 from terminalmage/dockerng-mod\_watch-stopped
  - 4629a26 Add support for ``stopped" state to dockerng's mod\_watch
- **PR #40171:** (*Ch3LL*) additional PRs/issues for 2016.3.6 release notes @ 2017-03-20T22:14:17Z
  - a0b4082 Merge pull request #40171 from Ch3LL/2016.3.6\_release
  - 9c6d8d8 additional PRs/issues for 2016.3.6 release notes
- **PR #40120:** (*sergeizv*) gce: Exclude GCENodeDriver objects from \_expand\_node result @ 2017-03-20T21:44:42Z
  - 33ba782 Merge pull request #40120 from sergeizv/gce-expand-node-fix
  - 9d0f7e7 gce: Exclude GCENodeDriver objects from \_expand\_node result
- **PR #40122:** (*meaksh*) Adding ``pkg.install downloadonly=True" support to yum/dnf execution module @ 2017-03-20T21:44:15Z
  - 4884397 Merge pull request #40122 from meaksh/2016.3-yum-downloadonly-support
  - 067f3f7 Adding downloadonly support to yum/dnf module
- **PR #40159:** (*cro*) Turn on sign\_pub\_messages by default. @ 2017-03-20T21:00:49Z
  - 60e1d4e Merge pull request #40159 from cro/sign\_pub
  - e663b76 Fix small syntax error
  - 0a0f46f Turn on sign\_pub\_messages by default. Make sure messages with no `sig' are dropped with error when sign\_pub\_messages is True.
- **PR #40123:** (*twangboy*) Adds support for inet\_pton in Windows to network util @ 2017-03-20T16:25:47Z
  - 28e4fc1 Merge pull request #40123 from twangboy/win\_fix\_network
  - 06dfd55 Adds support for inet\_pton in Windows to network util
- **PR #40141:** (*bobrik*) Use the first address if cannot connect to any @ 2017-03-20T15:06:57Z
  - **ISSUE #39995:** (*frogunder*) Head of Develop - Multimaster error | refs: #40141
  - **ISSUE #39118:** (*bobrik*) Minion ipv6 option is not documented | refs: #39289
  - **PR #39289:** (*bobrik*) Autodetect IPv6 connectivity from minion to master | refs: #39766 #40141
  - 35ddb79 Merge pull request #40141 from bobrik/fallback-resolve
  - af1545d Use the first address if cannot connect to any
- **PR #40059:** (*terminalmage*) Fix traceback when virtualenv.managed is invoked with nonexistent user @ 2017-03-16T20:46:43Z
  - 116201f Merge pull request #40059 from terminalmage/fix-virtualenv-traceback
  - e3cfd29 Fix traceback when virtualenv.managed is invoked with nonexistent user
- **PR #40090:** (*rallytime*) Back-port #40056 to 2016.3 @ 2017-03-16T19:42:58Z

- [PR #40056](#): (*thatch45*) update mention bot blacklist | refs: [#40090](#)
- [a01b52b](#) Merge pull request [#40090](#) from rallytime/bp-40056
- [ae012db](#) update mention bot blacklist
- [PR #40057](#): (*cachedout*) More mentionbot blacklists @ 2017-03-16T18:10:11Z
  - [d1570bb](#) Merge pull request [#40057](#) from cachedout/ollie\_blacklist
  - [0ac2e83](#) Merge branch `2016.3' into ollie\_blacklist
- [PR #40070](#): (*Ch3LL*) update 2016.3.6 release notes with additional PR's @ 2017-03-16T15:43:22Z
  - [d36bdb1](#) Merge pull request [#40070](#) from Ch3LL/2016.3.6\_release
  - [a1f8b49](#) update 2016.3.6 release notes with additional PR's
- [PR #40018](#): (*meaksh*) Allow overriding `timeout' and `gather\_job\_timeout' to `manage.up' runner call @ 2017-03-15T19:43:01Z
  - [8dcffc7](#) Merge pull request [#40018](#) from meaksh/2016.3-handling-timeouts-for-manage.up-runner
  - [9f5c3b7](#) Allow setting custom timeouts for `manage.up' and `manage.status'
  - [2102d9c](#) Allow setting `timeout' and `gather\_job\_timeout' via kwargs
- [PR #40038](#): (*velom*) correctly parse ``pkg\_name===version" from pip freeze @ 2017-03-15T19:30:03Z
  - [22fc529](#) Merge pull request [#40038](#) from velom/fix-pip-freeze-parsing
  - [3fae91d](#) correctly parse ``pkg\_name===version" from pip freeze
- [PR #40053](#): (*gtmanfred*) Update rh\_ip.py @ 2017-03-15T18:57:32Z
  - [ISSUE #40036](#): (*oogali*) UnboundLocalError: local variable `ifcfg' referenced before assignment | refs: [#40053](#)
  - [3584f93](#) Merge pull request [#40053](#) from saltstack/rh\_ip\_patch
  - [219947a](#) Update rh\_ip.py
- [PR #40041](#): (*terminalmage*) Fix transposed lines in salt.utils.process @ 2017-03-15T17:58:24Z
  - [ISSUE #40011](#): (*tsaridas*) salt-minion does not shutdown properly 2016.11.3 rh6 | refs: [#40041](#)
  - [837432d](#) Merge pull request [#40041](#) from terminalmage/issue40011
  - [5b5d1b3](#) Fix transposed lines in salt.utils.process
- [PR #40021](#): (*Ch3LL*) 2016.3.6 release notes with change log @ 2017-03-14T21:06:18Z
  - [ee7f3b1](#) Merge pull request [#40021](#) from Ch3LL/2016.3.6\_release
  - [f3e7e4f](#) Add 2016.3.6 Release Notes
- [PR #40016](#): (*terminalmage*) Attempt to fix failing grains tests in 2016.3 @ 2017-03-14T18:34:32Z
  - [26895b7](#) Merge pull request [#40016](#) from terminalmage/fix-grains-test
  - [0ec81a4](#) Fixup a syntax error
  - [5d84b40](#) Attempt to fix failing grains tests in 2016.3
- [PR #39980](#): (*vutny*) [2016.3] Allow using *bg* kwarg for *cmd.run* state function @ 2017-03-14T17:16:14Z
  - [0c61d06](#) Merge pull request [#39980](#) from vutny/cmd-run-state-bg
  - [a81dc9d](#) [2016.3] Allow using *bg* kwarg for *cmd.run* state function
- [PR #39994](#): (*rallytime*) Add a versionadded tag for dockerng ulimits addition @ 2017-03-13T20:58:02Z

- **ISSUE #39942:** (*Foxlik*) Web Documentation not in sync with release 2016.11.3 | refs: #39994
- b042484 Merge pull request #39994 from rallytime/ulimits-dockerng-version
- 37bd800 Add a versionadded tag for dockerng ulimits addition
- **PR #39988:** (*terminalmage*) Add comment explaining change from #39973 @ 2017-03-13T18:37:29Z
  - **PR #39973:** (*terminalmage*) Don't use docker.Client instance from context if missing attributes
  - e125c94 Merge pull request #39988 from terminalmage/dockerng-timeout
  - bd2519e Add comment explaining change from #39973
- **PR #39973:** (*terminalmage*) Don't use docker.Client instance from context if missing attributes @ 2017-03-11T14:57:50Z
  - cd0336e Merge pull request #39973 from terminalmage/dockerng-timeout
  - 869416e Don't use docker.Client instance from context if missing attributes
- **PR #39962:** (*cachedout*) Disable mention bot delay on 2016.3 @ 2017-03-10T20:24:08Z
  - 282c607 Merge pull request #39962 from cachedout/disable\_mentionbot\_delay\_3
  - 7a638f2 Disable mention bot delay on 2016.3
    - \* 5592c68 More mentionbot blacklists
- **PR #39937:** (*cachedout*) Fix --non-gpg-checks in zypper module @ 2017-03-10T18:02:51Z
  - 1e0c88a Merge pull request #39937 from cachedout/gpg\_zypper
  - 13ed0d1 Fix --non-gpg-checks in zypper module
- **PR #39929:** (*terminalmage*) Scrap event-based approach for refreshing grains (2016.3 branch) @ 2017-03-09T22:03:16Z
  - 4526fc6 Merge pull request #39929 from terminalmage/pr-39770-2016.3
  - cf0100d Scrap event-based approach for refreshing grains
- **PR #39919:** (*The-Loeki*) CIDR matching supports IPv6, update docs @ 2017-03-09T16:03:00Z
  - **ISSUE #22080:** (*The-Loeki*) CIDR matching for IPv6 / improve IPv6 support in utils.network | refs: #39919
  - 111110c Merge pull request #39919 from The-Loeki/patch-1
  - 170cbad CIDR matching supports IPv6, update docs
- **PR #39899:** (*techhat*) Update cleanup function for azure @ 2017-03-08T23:28:33Z
  - caf10e9 Merge pull request #39899 from techhat/cleanupdisks
  - baf4579 Update cleanup function for azure
- **PR #39871:** (*terminalmage*) Squelch warning for pygit2 import @ 2017-03-07T20:40:18Z
  - fcf95f3 Merge pull request #39871 from terminalmage/squelch-import-warning
  - 2b2ec69 Squelch warning for pygit2 import
- **PR #39794:** (*cachedout*) Clean up errors which might be thrown when the monitor socket shuts down @ 2017-03-04T16:12:37Z
  - f223fa8 Merge pull request #39794 from cachedout/clean\_monitor\_socket\_shutdown
  - 2e683e7 Clean up errors which might be thrown when the monitor socket shuts down
- **PR #39819:** (*terminalmage*) Improve the Top File matching docs @ 2017-03-04T16:06:40Z

- 4002dc1 Merge pull request #39819 from terminalmage/top-file-matching-docs
- 7178e77 Improve the Top File matching docs
- **PR #39820:** (*ni3mm4nd*) Add missing apostrophe in Beacons topic documentation @ 2017-03-04T16:05:29Z
  - c08aaeb Merge pull request #39820 from ni3mm4nd/beacons\_topic\_doc\_typo
  - 804b120 Add missing apostrophe
- **PR #39826:** (*cachedout*) Add group func to yubikey auth @ 2017-03-04T16:02:14Z
  - cbd2a4e Merge pull request #39826 from cachedout/yubikey\_fix
  - 6125eff Add group func to yubikey auth
- **PR #39624:** (*drawsmcgraw*) Address issue 39622 @ 2017-03-03T15:59:04Z
  - **ISSUE #39622:** (*drawsmcgraw*) boto\_vpc.create\_subnet does not properly assign tags | refs: #39624
  - f575ef4 Merge pull request #39624 from drawsmcgraw/39622
  - 13da50b Fix indention lint errors
  - 5450263 Address issue 39622
- **PR #39796:** (*cachedout*) Stop the process manager when it no longer has processes to manage @ 2017-03-02T23:03:13Z
  - **ISSUE #39119:** (*frogunder*) Head of 2016.3 - Salt-Master uses 90 seconds to restart | refs: #39796
  - 1f3619c Merge pull request #39796 from cachedout/master\_shutdown
  - e31d46c Stop the process manager when it no longer has processes to manage
- **PR #39791:** (*gtmanfred*) load runners if role is master @ 2017-03-02T19:43:41Z
  - **ISSUE #39333:** (*jagguli*) Not Available error - Scheduling custom runner functions | refs: #39791
  - **ISSUE #38514:** (*githubcdr*) Unable to schedule runners | refs: #39791
  - 53341cf Merge pull request #39791 from gtmanfred/2016.3
  - 3ab4f84 load runners if role is master
- **PR #39784:** (*sergeizv*) Fix 39782 @ 2017-03-02T16:08:51Z
  - **ISSUE #39782:** (*sergeizv*) salt-cloud show\_instance action fails on EC2 instances | refs: #39784
  - **ISSUE #33162:** (*jfindlay*) Key error with salt.utils.cloud.cache\_node and EC2 | refs: #33164 #39784
  - **PR #33164:** (*jfindlay*) cloud.clouds.ec2: cache each named node | refs: #39784 #39784
  - c234c25 Merge pull request #39784 from sergeizv/fix-39782
  - b71c3fe Revert ``cloud.clouds.ec2: cache each named node (#33164)''
- **PR #39766:** (*rallytime*) Restore ipv6 connectivity and ``master: <ip>:<port>" support @ 2017-03-02T02:55:55Z
  - **ISSUE #39336:** (*GevatterGaul*) salt-minion fails with IPv6 | refs: #39766
  - **ISSUE #39118:** (*bobrik*) Minion ipv6 option is not documented | refs: #39289
  - **PR #39289:** (*bobrik*) Autodetect IPv6 connectivity from minion to master | refs: #39766 #40141
  - **PR #25021:** (*GideonRed*) Introduce ip:port minion config | refs: #39766
  - 4ee59be Merge pull request #39766 from rallytime/fix-ipv6-connection
  - 65b2396 Restore ipv6 connectivity and ``master: <ip>:<port>" support

- **PR #39761:** (*cachedout*) Properly display error in jboss7 state @ 2017-03-01T18:43:23Z
  - **ISSUE #33187:** (*usbportnoy*) Deploy to jboss TypeError at boss7.py:469 | refs: #39170 #39761
  - a24da31 Merge pull request #39761 from cachedout/issue\_33187
  - c2df29e Properly display error in jboss7 state
- **PR #39728:** (*rallytime*) [2016.3] Bump latest release version to 2016.11.3 @ 2017-02-28T18:07:44Z
  - 0888bc3 Merge pull request #39728 from rallytime/update-release-ver-2016.3
  - c9bc8af [2016.3] Bump latest release version to 2016.11.3
- **PR #39619:** (*terminalmage*) Add a function to simply refresh the grains @ 2017-02-28T00:20:27Z
  - b52dbee Merge pull request #39619 from terminalmage/zd1207
  - c7dfb49 Fix mocking for grains refresh
  - 7e0ced3 Properly hand proxy minions
  - 692c456 Add a function to simply refresh the grains
- **PR #39487:** (*bobrik*) Document default permission modes for file module @ 2017-02-24T23:49:00Z
  - **ISSUE #39482:** (*bobrik*) file.managed and file mode don't mention default mode | refs: #39487
  - 3f8b5e6 Merge pull request #39487 from bobrik/mode-docs
  - 41ef69b Document default permission modes for file module
- **PR #39641:** (*smarsching*) Return runner return code in a way compatible with check\_state\_result @ 2017-02-24T23:07:11Z
  - **ISSUE #39169:** (*blueyed*) Using batch-mode with *salt.state* in orchestration runner considers all minions to have failed | refs: #39641 #39641
  - f7389bf Merge pull request #39641 from smarsching/issue-39169-2016.3
  - 88c2d9a Fix return data structure for runner (issue #39169).
- **PR #39633:** (*terminalmage*) Fix misspelled argument in salt.modules.systemd.disable() @ 2017-02-24T18:21:36Z
  - fc970b6 Merge pull request #39633 from terminalmage/fix-systemd-typo
  - ca54541 Add missing unit test for disable func
  - 17109e1 Fix misspelled argument in salt.modules.systemd.disable()
- **PR #39613:** (*terminalmage*) Fix inaccurate documentation @ 2017-02-24T06:07:35Z
  - 53e78d6 Merge pull request #39613 from terminalmage/fix-docs
  - 9342eda Fix inaccurate documentation
- **PR #39600:** (*vutny*) state.file: drop non-relevant examples for *source\_hash* parameter @ 2017-02-23T16:55:27Z
  - 4e2b852 Merge pull request #39600 from vutny/state-file-docs
  - 9b0427c state.file: drop non-relevant examples for *source\_hash* parameter
- **PR #39584:** (*cachedout*) A note in the docs about mentionbot @ 2017-02-23T15:12:13Z
  - ed83420 Merge pull request #39584 from cachedout/mentionbot\_docs
  - 652044b A note in the docs about mentionbot
- **PR #39583:** (*cachedout*) Add empty blacklist to mention bot @ 2017-02-23T02:22:57Z
  - d3e50b4 Merge pull request #39583 from cachedout/mentionbot\_blacklist

- 62491c9 Add empty blacklist to mention bot
- **PR #39579:** (*rallytime*) [2016.3] Pylint: Remove unused import @ 2017-02-22T23:46:33Z
  - 8352e6b Merge pull request #39579 from rallytime/fix-lint
  - 65889e1 [2016.3] Pylint: Remove unused import
- **PR #39578:** (*cachedout*) Add mention-bot configuration @ 2017-02-22T23:39:24Z
  - 43dba32 Merge pull request #39578 from cachedout/2016.3
  - 344499e Add mention-bot configuration
- **PR #39542:** (*twangboy*) Gate ssh\_known\_hosts state against Windows @ 2017-02-22T20:16:41Z
  - 8f7a0f9 Merge pull request #39542 from twangboy/gate\_ssh\_known\_hosts
  - c90a52e Remove expensive check
  - 6d645ca Add \_\_virtual\_\_ function
- **PR #39289:** (*bobrik*) Autodetect IPv6 connectivity from minion to master | refs: #39766 #40141 @ 2017-02-22T19:05:32Z
  - **ISSUE #39118:** (*bobrik*) Minion ipv6 option is not documented | refs: #39289
  - c109658 Merge pull request #39289 from bobrik/autodetect-ipv6
  - 2761a1b Move new kwargs to the end of argument list
  - 0df6b92 Narrow down connection exception to socket.error
  - e8a2cc0 Do not try to connect to salt master in syndic config test
  - af95786 Properly log address that failed to resolve or pass connection check
  - 9a34fbe Actually connect to master instead of checking route availability
  - c494839 Avoid bare exceptions in dns\_check
  - 29f3766 Rewrite dns\_check to try to connect to address
  - 55965ce Autodetect IPv6 connectivity from minion to master
- **PR #39569:** (*s0undt3ch*) Don't use our own six dictionary fixes in this branch @ 2017-02-22T18:59:49Z
  - 3fb928b Merge pull request #39569 from s0undt3ch/2016.3
  - 49da135 Don't use our own six dictionary fixes in this branch
- **PR #39508:** (*dincamihai*) Openscap @ 2017-02-22T18:36:36Z
  - 91e3319 Merge pull request #39508 from dincamihai/openscap
  - 9fedb84 Always return oscap's stderr
  - 0ecde2c Include oscap returncode in response
- **PR #39562:** (*terminalmage*) Add ulimits to dockerng state/exec module @ 2017-02-22T16:31:49Z
  - **ISSUE #30802:** (*kjelle*) Missing ulimits on docker.running / dockerng.running | refs: #39562
  - fbe2194 Merge pull request #39562 from terminalmage/issue30802
  - c503740 Add ulimits to dockerng state/exec module
  - da42040 Try the docker-py 2.0 client name first
- 01d4a84 dockerng.get\_client\_args: Fix path for endpoint config for some versions of docker-py (#39544)

- **PR #39544:** (*terminalmage*) dockerng.get\_client\_args: Fix path for endpoint config for some versions of docker-py
- **PR #39498:** (*terminalmage*) Resubmit PR #39483 against 2016.3 branch @ 2017-02-20T19:35:33Z
  - dff35b5 Merge pull request #39498 from terminalmage/pr-39483
  - 20b097a dockerng: compare sets instead of lists of security\_opt
- **PR #39497:** (*terminalmage*) Two dockerng compatibility fixes @ 2017-02-19T17:43:36Z
  - 6418e72 Merge pull request #39497 from terminalmage/docker-compat-fixes
  - cbd0270 docker: make docker-exec the default execution driver
  - a6a17d5 Handle docker-py 2.0's new host\_config path
- **PR #39423:** (*dincamihai*) Openscap module @ 2017-02-17T18:31:04Z
  - 9c4292f Merge pull request #39423 from dincamihai/openscap
  - 9d13422 OpenSCAP module
- **PR #39464:** (*gtmanfred*) skip false values from preferred\_ip @ 2017-02-16T22:48:32Z
  - **ISSUE #39444:** (*clem-compiletio*) salt-cloud - IPv6 and IPv4 private\_ips - preferred\_ip sends False to is\_public\_ip | refs: #39464
  - 7dd2502 Merge pull request #39464 from gtmanfred/2016.3
  - f829d6f skip false values from preferred\_ip
- **PR #39460:** (*cachedout*) Fix mocks in win\_disim tests @ 2017-02-16T19:27:48Z
  - db359ff Merge pull request #39460 from cachedout/win\_dism\_test\_fix
  - e652a45 Fix mocks in win\_disim tests
- **PR #39426:** (*morganwillcock*) win\_dism: Return failure when package path does not exist @ 2017-02-16T00:09:22Z
  - 9dbfba9 Merge pull request #39426 from morganwillcock/dism
  - a7d5118 Return failure when package path does not exist
- **PR #39431:** (*UtahDave*) Fix grains.setval performance @ 2017-02-15T23:56:30Z
  - 5616270 Merge pull request #39431 from UtahDave/fix\_grains.setval\_performance
  - 391bbec add docs
  - 709c197 allow sync\_grains to be disabled on grains.setval
- **PR #39405:** (*rallytime*) Update :depends: docs for boto states and modules @ 2017-02-15T17:32:08Z
  - **ISSUE #39304:** (*Auha*) boto\_s3\_bucket documentation dependency clarification | refs: #39405
  - 239e16e Merge pull request #39405 from rallytime/fix-39304
  - bd1fe03 Update :depends: docs for boto states and modules
- **PR #39411:** (*rallytime*) Update external\_cache docs with other configuration options @ 2017-02-15T17:30:40Z
  - **ISSUE #38762:** (*oz123*) Configuration information for custom returners | refs: #39411
  - 415102f Merge pull request #39411 from rallytime/fix-38762
  - e13febe Update external\_cache docs with other configuration options
- 7e1803b Update docs on upstream EPEL7 pygit2/libgit2 issues (#39421)

- PR #39421: (*terminalmage*) Update docs on upstream EPEL7 pygit2/libgit2 issues
- 4ff13ac salt.fileserver.roots: Fix regression in symlink\_list (#39409)
  - PR #39409: (*terminalmage*) salt.fileserver.roots: Fix regression in symlink\_list
  - PR #39337: (*terminalmage*) Don't re-walk the roots fileserver in symlink\_list() | refs: #39409
- PR #39362: (*dincamihai*) Add cp.push test @ 2017-02-14T18:42:11Z
  - 8b8ab8e Merge pull request #39362 from dincamihai/cp-push-test-2016.3
  - 91383c5 Add cp.push test
- PR #39380: (*joe-niland*) Quote numeric user names so pwd.getpwnam handles them properly @ 2017-02-14T18:33:33Z
  - 4b726f9 Merge pull request #39380 from joe-niland/quote-numeric-username
  - c2edfdd Quote numeric user names so pwd.getpwnam handles them properly
- PR #39400: (*meaksh*) Prevents `OSError` exception in case certain job cache path doesn't exist @ 2017-02-14T18:27:04Z
  - 1116d32 Merge pull request #39400 from meaksh/2016.3-fix-local-cache-issue
  - e7e559e Prevents `OSError` exception in case path doesn't exist
- PR #39300: (*terminalmage*) Replace more usage of str.format in the loader @ 2017-02-13T19:01:19Z
  - PR #39227: (*terminalmage*) Loader optimization | refs: #39300
  - 6c854da Merge pull request #39300 from terminalmage/loader-optimization
  - d3e5d15 Replace more usage of str.format in the loader
- PR #39337: (*terminalmage*) Don't re-walk the roots fileserver in symlink\_list() | refs: #39409 @ 2017-02-13T18:41:17Z
  - 5286b5f Merge pull request #39337 from terminalmage/issue34428
  - a7d2135 Don't re-walk the roots fileserver in symlink\_list()
- PR #39339: (*cro*) Add link to external pillar documentation for clarification. @ 2017-02-13T18:40:13Z
  - ce781de Merge pull request #39339 from cro/pillar\_filetree\_doc
  - 410810c Clarification on external pillar usage.
- fa30143 Document the upstream RedHat bug with their pygit2 package (#39316)
  - PR #39316: (*terminalmage*) Document the upstream RedHat bug with their pygit2 package
- PR #39313: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ 2017-02-10T16:23:23Z
  - PR #39296: (*sergeizv*) Whitespace fix in docs Makefile
  - PR #39295: (*sergeizv*) Fix typo
  - PR #39294: (*sergeizv*) Fix link in proxyminion guide
  - PR #39293: (*sergeizv*) Grammar fix
  - 9de559f Merge pull request #39313 from rallytime/merge-2016.3
  - 0b8dddf Merge branch `2015.8' into `2016.3'
  - fc551bc Merge pull request #39293 from sergeizv/grammar-fix
    - \* 70f2b58 Rewrap paragraph

- \* e6ab517 Grammar fix
  - 8a1b456 Merge pull request #39295 from sergeizv/typo-fix
  - \* 5d9f36d Fix typo
  - cfaafec Merge pull request #39296 from sergeizv/whitespace-fix
  - \* 1d4c1dc Whitespace fix in docs Makefile
  - 0b4dcf4 Merge pull request #39294 from sergeizv/fix-link
  - \* 04bde6e Fix link in proxyminion guide
- dd3ca0e Fix #38595 - Unexpected error log from redis retuner in master's log (#39299)
  - **ISSUE** #38595: (*yue9944882*) Redis ext job cache occurred error | refs: #38610 #38610
  - **PR** #39299: (*rallytime*) Back-port #38610 to 2016.3
  - **PR** #38610: (*yue9944882*) Fix #38595 - Unexpected error log from redis retuner in master's log | refs: #39299
- **PR** #39297: (*cro*) Add doc to recommend pgjsonb for master job caches @ 2017-02-09T22:49:59Z
  - f16027d Merge pull request #39297 from cro/pg\_returner\_docs
  - 28bac64 Typo
  - 19fedcd Add doc to recommend pgjsonb for master job caches
- **PR** #39286: (*terminalmage*) Allow minion/CLI saltenv/pillarenv to override master when compiling pillar @ 2017-02-09T21:22:46Z
  - 77e50ed Merge pull request #39286 from terminalmage/fix-pillarenv-precedence
  - 3cb9833 Allow minion/CLI saltenv/pillarenv to override master when compiling pillar
- **PR** #39221: (*lvg01*) Fix bug 39220 @ 2017-02-09T18:12:29Z
  - **ISSUE** #39220: (*lvg01*) state file.line skips leading spaces in content with mode:ensure and indent:False | refs: #39221 #39221 #39221 #39221
  - 5244041 Merge pull request #39221 from lvg01/fix-bug-39220
  - e8a41d6 Removes to early content stripping (stripping is already done when needed with ident:true), fixes #39220
  - a4b169e Fixed wrong logic, fixes #39220
- 5a27207 Add warning for Dulwich removal (#39280)
  - **ISSUE** #36913: (*terminalmage*) Support custom refsspecs in GitFS | refs: #39210
  - **PR** #39280: (*terminalmage*) Add warning for Dulwich removal
  - **PR** #39210: (*terminalmage*) salt.utils.gitfs: remove dulwich support, make refsspecs configurable | refs: #39280
- 1b9217d Update jsonschema tests to reflect change in jsonschema 2.6.0 (#39260)
  - **PR** #39260: (*terminalmage*) Update jsonschema tests to reflect change in jsonschema 2.6.0
- c1d16cc Better handling of enabled/disabled arguments in pkgrepo.managed (#39251)
  - **ISSUE** #33536: (*murzick*) pkgrepo.managed does not disable a yum repo with ``disabled: True" | refs: #35055
  - **PR** #39251: (*terminalmage*) Better handling of enabled/disabled arguments in pkgrepo.managed

- **PR #35055:** (*galet*) #33536 pkgrepo.managed does not disable a yum repo with ``disabled: True" | refs: #39251
- **PR #39227:** (*terminalmage*) Loader optimization | refs: #39300 @ 2017-02-08T19:38:21Z
  - 8e88f71 Merge pull request #39227 from terminalmage/loader-optimization
  - c750662 Loader optimization
- **PR #39228:** (*gtmanfred*) default to utf8 encoding if not specified @ 2017-02-08T19:36:57Z
  - **ISSUE #38856:** (*fhaynes*) salt-cloud throws an exception when ec2 does not return encoding | refs: #39228
  - bc89b29 Merge pull request #39228 from gtmanfred/2016.3
  - afee047 default to utf8 encoding if not specified
- **PR #39231:** (*terminalmage*) Add clarification for jenkins execution module @ 2017-02-08T19:34:45Z
  - d9b0671 Merge pull request #39231 from terminalmage/clarify-jenkins-depends
  - ad1b125 Add clarification for jenkins execution module
- **PR #39232:** (*terminalmage*) Avoid recursion in s3/svn ext\_pillars @ 2017-02-08T19:33:28Z
  - ddcff89 Merge pull request #39232 from terminalmage/issue21342
  - c88896c Avoid recursion in s3/svn ext\_pillars
- ef4e437 Fix the win\_ip\_test failures (#39230)
  - **ISSUE #38697:** (*fboismenu*) On Windows, ip.get\_all\_interfaces returns at most 2 DNS/WINS Servers | refs: #38793
  - **PR #39230:** (*rallytime*) Fix the win\_ip\_test failures
  - **PR #38793:** (*fboismenu*) Fix for #38697 | refs: #39197 #39230
- **PR #39199:** (*rallytime*) Back-port #39170 to 2016.3 @ 2017-02-07T16:19:32Z
  - **ISSUE #33187:** (*usbportnoy*) Deploy to jboss TypeError at boss7.py:469 | refs: #39170 #39761
  - **PR #39170:** (*grep4linux*) Added missing source\_hash\_name argument in get\_managed function | refs: #39199
  - df5f934 Merge pull request #39199 from rallytime/bp-39170
  - c129905 Added missing source\_hash\_name argument in get\_managed function Additional fix to #33187 Customer was still seeing errors, this should now work. Tested with 2015.8.13 and 2016.11.2
- **PR #39206:** (*cachedout*) Ignore empty dicts in highstate outputter @ 2017-02-07T16:11:36Z
  - **ISSUE #37174:** (*mikeadamz*) The State execution failed to record the order in which all states were executed spam while running pkg.upgrade from orchestration runner | refs: #39206
  - 2621c11 Merge pull request #39206 from cachedout/issue\_issue\_37174
  - be31e05 Ignore empty dicts in highstate outputter
- **PR #39209:** (*terminalmage*) Sort the return list from the fileserver.envs runner @ 2017-02-07T16:07:08Z
  - dd44045 Merge pull request #39209 from terminalmage/sorted-envs
  - e6dda4a Sort the return list from the fileserver.envs runner
- 7bed687 [2016.3] Pylint fix (#39202)
  - **PR #39202:** (*rallytime*) [2016.3] Pylint fix

- **PR #39197:** (*cachedout*) Pr 38793 @ 2017-02-06T19:23:12Z
  - **ISSUE #38697:** (*fboismenu*) On Windows, ip.get\_all\_interfaces returns at most 2 DNS/WINS Servers | refs: #38793
  - **PR #38793:** (*fboismenu*) Fix for #38697 | refs: #39197 #39230
  - ab76054 Merge pull request #39197 from cachedout/pr-38793
  - f3d35fb Lint fixes
  - 624f25b Fix for #38697
- **PR #39166:** (*Ch3LL*) fix boto ec2 module create\_image doc @ 2017-02-06T18:27:17Z
  - fa45cbc Merge pull request #39166 from Ch3LL/fix\_boto\_ec2\_docs
  - 90af696 fix boto ec2 module create\_image doc
- **PR #39173:** (*rallytime*) Restore ``Salt Community'' doc section @ 2017-02-06T18:19:11Z
  - **PR #30770:** (*jacobhammons*) Doc restructuring, organization, and cleanup | refs: #39173
  - **PR #10792:** (*cachedout*) Documentation overhaul | refs: #39173
  - a40cb46 Merge pull request #39173 from rallytime/restore-community-docs
  - 5aedd4 Restore ``Salt Community'' doc section
- 9de08af Apply fix from #38705 to 2016.3 branch (#39077)
  - **ISSUE #38704:** (*nasenbaer13*) Archive extracted fails when another state run is queued | refs: #38705
  - **PR #39077:** (*terminalmage*) Apply fix from #38705 to 2016.3 branch
  - **PR #38705:** (*nasenbaer13*) Fix for #38704 archive extracted and dockerio states
- da3053e update vmware getting started doc (#39146)
  - **PR #39146:** (*gtmanfred*) update vmware getting started doc
- e78ca0f Fixing a weird edge case when using salt syndics and targeting via pillar. Without this fix the master of masters ends up in an infinite loop since the data returned from the minions is differently structured than if a sync was not in use. (#39145)
  - **PR #39145:** (*garethgreenaway*) [2016.3] Fix when targeting via pillar with Salt syndic
- **PR #38804:** (*alexbleotu*) Second attempt to fix prepending of root\_dir to paths @ 2017-02-02T16:10:37Z
  - **ISSUE #2016:** (*seanchannel*) status.custom failing on any arguments
  - **ISSUE #3:** (*thatch45*) libvirt module
  - **ISSUE #1:** (*thatch45*) Enable regex on the salt cli
  - cd8077a Merge pull request #38804 from alexbleotu/root\_dir\_`fix-2016`\_3-gh
  - b3bdd3b Add missing whitelist
  - c7715ac Merge pull request #3 from cro/ab\_rootdirfix
    - \* e8cbafa When running testsuite, salt.syspaths.ROOT\_DIR is often empty.
  - b12dd44 Merge pull request #1 from cro/ab\_rootdirfix
    - \* bffc537 Remove extra if statements (rstrip will check for the presence anyway).
  - 97521b3 Second attempt to fix prepending of root\_dir to paths
- 6ffeda3 Clarify ipv6 option for minion and interface for master, closes #39118 (#39131)

- **ISSUE #39118:** (*bobrik*) Minion ipv6 option is not documented | refs: #39289
- **PR #39131:** (*bobrik*) Clarify ipv6 option for minion and interface for master, closes #39118
- 646b9ea Don't abort pillar.get with merge=True if default is None (#39116)
  - **PR #39116:** (*terminalmage*) Don't abort pillar.get with merge=True if default is None
- **PR #39091:** (*terminalmage*) Run test\_valid\_docs in batches @ 2017-02-01T19:09:05Z
  - cc9b69b Merge pull request #39091 from terminalmage/update-test-valid-docs
  - d76f038 add debug logging for batch vars
  - b4afea2 Don't fail test if data is empty
  - b3a5d54 Account for trimmed value in `salt -d` output
  - 909916c Run test\_valid\_docs in batches
- bcee3d1 Move fileclient tests to tests/integration/fileserver/fileclient\_test.py (#39081)
  - **PR #39081:** (*terminalmage*) Move fileclient tests to tests/integration/fileserver/fileclient\_test.py
- 122422b Bump openstack deprecation notice to Oxygen (#39067)
  - **PR #39067:** (*rallytime*) Bump openstack deprecation notice to Oxygen
- **PR #39047:** (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ 2017-01-30T23:48:14Z
  - **PR #39046:** (*rallytime*) Add 2015.8.14 release notes file
  - **PR #39037:** (*rallytime*) Update 2015.8.13 release notes
  - a24af5a Merge pull request #39047 from rallytime/merge-2016.3
  - b732a1f Merge branch `2015.8' into `2016.3'
  - 56ccae6 Add 2015.8.14 release notes file (#39046)
  - 5943fe6 Update 2015.8.13 release notes (#39037)
- fef1b11 Add 2016.3.6 release notes file (#39045)
  - **PR #39045:** (*rallytime*) Add 2016.3.6 release notes file
- 7c43f4a [2016.3] Update release numbers for doc build (#39042)
  - **PR #39042:** (*rallytime*) [2016.3] Update release numbers for doc build
- ff32459 Update 2016.3.5 release notes (#39038)
  - **PR #39038:** (*rallytime*) Update 2016.3.5 release notes
- **PR #39028:** (*terminalmage*) Clarify delimiter argument @ 2017-01-30T18:20:26Z
  - 5b09dc4 Merge pull request #39028 from terminalmage/clarify-delimiter-argument
  - f29ef07 Clarify delimiter argument
- 1ff359f Add CLI Example for rest\_sample\_utils.get\_test\_string function (#39030)
  - **PR #39030:** (*rallytime*) Back-port #38972 to 2016.3
  - **PR #38972:** (*rallytime*) Add CLI Example for rest\_sample\_utils.get\_test\_string function | refs: #39030
- f13fb9e Enable \_\_proxy\_\_ availability in states, highstate, and utils. Enable \_\_utils\_\_ availability in proxies. (#38899)
  - **ISSUE #38753:** (*alexbleotu*) \_\_proxy\_\_ dunder is not injected when invoking the *salt* variable in sls files | refs: #38899 #38829

- **ISSUE #38557:** (*alexbleotu*) Proxy not working on develop | refs: #38829
- **ISSUE #38265:** (*mirceaulinic*) `__utils__` object not available in proxy module | refs: #38899 #38829 #38829
- **ISSUE #32918:** (*mirceaulinic*) Proxy minions reconnection | refs: #38829
- **PR #38899:** (*cro*) Enable `__proxy__` availability in states, highstate, and utils. Enable `__utils__` for proxies.
- **PR #38829:** (*cro*) MANY dunder variable fixes for proxies + proxy keepalive from @mirceaulinic | refs: #38899
- **PR #37864:** (*mirceaulinic*) Proxy keepalive feature | refs: #38829
- **PR #38951:** (*DmitryKuzmenko*) Keep the only one record per module-function in depends decorator. @ 2017-01-27T17:05:42Z
  - **ISSUE #37938:** (*johje349*) Memory leak in Reactor | refs: #38951
  - **ISSUE #33890:** (*hvnswearing*) salt memleak when running state.sls | refs: #38951
  - da96221 Merge pull request #38951 from DSRCorporation/bugs/37938\_fix\_depends\_decorator\_memleak
  - 0b18f34 Keep the only one record per module-function in depends decorator.
- **PR #38982:** (*rallytime*) Set response when using ```GET``` method in s3 utils @ 2017-01-27T17:04:48Z
  - **ISSUE #34780:** (*joehoyale*) S3fs broken in 2016.3.1 | refs: #38982
  - 85165ed Merge pull request #38982 from rallytime/fix-34780
  - 1583c55 Set response when using ```GET``` method in s3 utils
- **PR #38989:** (*anlutro*) Documentation: fix SLS in environment variable examples @ 2017-01-27T17:00:08Z
  - cfd9c99 Merge pull request #38989 from alprs/docfix-state\_pt3\_envirion
  - 52a9ad1 fix SLS in environment variable examples
- **PR #39000:** (*rallytime*) Skip the test\_badload test until Jenkins move is complete @ 2017-01-27T16:58:21Z
  - 55e4d25 Merge pull request #39000 from rallytime/skip-badload-test
  - 4b3ff0f Skip the test\_badload test until Jenkins move is complete
- **PR #38995:** (*terminalmage*) Fix pillar.item docstring @ 2017-01-27T16:58:00Z
  - fe054eb Merge pull request #38995 from terminalmage/fix-pillar.item-docstring
  - 06d094d Fix pillar.item docstring
- **PR #38950:** (*mbom2004*) Fixed Logstash Engine in file logstash.py @ 2017-01-26T19:10:07Z
  - **ISSUE #34551:** (*mbom2004*) salt.engines.logstash not loading | refs: #38950
  - b66b6f6 Merge pull request #38950 from mbom2004/2016.3
  - c09f39d Remove unused json import
  - 249efa3 Fixed Logstash Engine in file logstash.py
- a6c6e47 Handle changing ```is_default``` value in moto package for boto test mock (#38973)
  - **PR #38973:** (*rallytime*) Handle changing ```is_default``` value in moto package for boto test mock
- **PR #38952:** (*terminalmage*) Make the ext\_pillars available to pillar.ext tunable @ 2017-01-26T19:01:56Z
  - b965b5d Merge pull request #38952 from terminalmage/zd1168
  - 6b014e5 Rename on\_demand\_pillar to on\_demand\_ext\_pillar

- d216f90 Document new on\_demand\_pillar option and add to config template
- 426b20f Add documentation for on-demand pillar to pillar.ext docstring
- 7b10274 Make on-demand ext\_pillars tunable
- d54723c Add on\_demand\_pillar config option
- **PR #38948:** (*rallytime*) Bump the template context deprecation version to Oxygen @ 2017-01-25T19:45:59Z
  - **ISSUE #35777:** (*rallytime*) Properly deprecate template context data in Oxygen | refs: #38948
  - 2c4ad85 Merge pull request #38948 from rallytime/bump-template-context-deprecation
  - 749e003 Bump the template context deprecation version to Oxygen
- **PR #38946:** (*rallytime*) Back-port #37632 to 2016.3 @ 2017-01-25T19:40:40Z
  - **PR #37632:** (*twangboy*) Fix versions report for Windows Server platforms | refs: #38946
  - e4514ca Merge pull request #38946 from rallytime/bp-37632
  - ee37cda Fix some lint
  - c08071e Fix versions report for server OSs
- **PR #38913:** (*Adaephon-GH*) Ignore plist files without Label key @ 2017-01-25T19:07:27Z
  - 953a203 Merge pull request #38913 from Adaephon-GH/patch-1
  - e2f4a16 Removing trailing whitespace
  - 616292c Ignore plist files without Label key
- **PR #38917:** (*twangboy*) Update Jinja2 to 2.9.4 @ 2017-01-25T19:05:38Z
  - 826dce1 Merge pull request #38917 from twangboy/update\_jinja\_mac
  - 62e608b Update Jinja2 to 2.9.4
- **PR #38925:** (*terminalmage*) Fix two wheel issues in netapi @ 2017-01-25T18:28:52Z
  - **ISSUE #38540:** (*amendlik*) API wheel client throws exception and success=true | refs: #38925
  - **ISSUE #38537:** (*amendlik*) API client wheel\_async always returns status 500 | refs: #38925
  - b27733c Merge pull request #38925 from terminalmage/issue38540
  - 76392fc Fix traceback when a netapi module uses wheel\_async
  - bd4474f Fix `success` value for wheel commands
- **PR #38926:** (*gtmanfred*) add note about pysss for pam eauth @ 2017-01-25T18:12:20Z
  - 618596f Merge pull request #38926 from gtmanfred/2016.3
  - 9cae953 add note about pysss for pam eauth
- **PR #38847:** (*terminalmage*) Catch MinionError in file.source\_list @ 2017-01-24T16:03:10Z
  - **ISSUE #38825:** (*IshMalik*) file.managed multiple sources for redundancy failure | refs: #38847
  - 405d86a Merge pull request #38847 from terminalmage/issue38825
  - 11a4780 Use log.exception() instead
  - e40fac5 Catch MinionError in file.source\_list
- **PR #38875:** (*terminalmage*) Reactor: fix traceback when salt:// path is nonexistent @ 2017-01-24T15:23:39Z
  - **ISSUE #36121:** (*Ashald*) TemplateNotFound/Unable to cache file | refs: #38875

- b5df104 Merge pull request #38875 from terminalmage/issue36121
- fbc4d2a reactor: ensure glob\_ref is a string
- 2e443d7 cp.cache\_file: add note re: return for nonexistent salt:// path
- **PR #38890:** (*cro*) Backport #38887 to 2016.3: Enable resetting a VM via salt-cloud & VMware driver @ 2017-01-24T15:15:35Z
  - **ISSUE #37413:** (*Snarfingcode666*) Salt-cloud vmware missing reboot command | refs: #38890
  - e9ebec4 Merge pull request #38890 from cro/vmware\_reset\_vm\_20163
  - 0146562 Call correct function for resetting a VM
- **PR #38883:** (*techhat*) Don't require text\_out path to exist @ 2017-01-23T18:20:42Z
  - **PR #38867:** (*mchugh19*) Touch deploy.sh before use | refs: #38883
  - **PR #32026:** (*techhat*) Don't require the decode\_out file to already exist | refs: #38883
  - c3fbfcd Merge pull request #38883 from techhat/dontrequire
  - 67bc4d6 Don't require text\_out path to exist
- **PR #38851:** (*terminalmage*) Support docker-py 2.0 in dockerng @ 2017-01-23T16:48:12Z
  - 6430a45 Merge pull request #38851 from terminalmage/docker-py-2.0
  - 3c061b2 Support docker-py 2.0 in dockerng
- **PR #38844:** (*cachedout*) Fix memory leak in HTTP client @ 2017-01-20T20:59:14Z
  - ac8008d Merge pull request #38844 from cachedout/http\_memory\_leak
  - c46bf85 Fix memory leak in HTTP client
- **PR #38823:** (*gtmanfred*) pass pillar to compound matcher in match module @ 2017-01-20T19:19:09Z
  - **ISSUE #38798:** (*riptta*) match.compound fails to match when pillar data is used | refs: #38823
  - dfe6dfe Merge pull request #38823 from gtmanfred/2016.3
  - f0a71e8 pass pillar to compound matcher in match module

### 20.2.23 Salt 2016.3.7 Release Notes

Version 2016.3.7 is a bugfix release for *2016.3.0*.

#### Changes for v2016.3.6..v2016.3.7

##### Security Fix

CVE-2017-12791 Maliciously crafted minion IDs can cause unwanted directory traversals on the Salt-master

Correct a flaw in minion id validation which could allow certain minions to authenticate to a master despite not having the correct credentials. To exploit the vulnerability, an attacker must create a salt-minion with an ID containing characters that will cause a directory traversal. Credit for discovering the security flaw goes to: [Vernhk@qq.com](mailto:Vernhk@qq.com)

### 20.2.24 Salt 2016.3.8 Release Notes

Version 2016.3.8 is a bugfix release for *2016.3.0*.

## Changes for v2016.3.7..v2016.3.8

New master configuration option `allow_minion_key_revoke`, defaults to True. This option controls whether a minion can request that the master revoke its key. When True, a minion can request a key revocation and the master will comply. If it is False, the key will not be revoked by the msater.

New master configuration option `require_minion_sign_messages` This requires that minions cryptographically sign the messages they publish to the master. If minions are not signing, then log this information at loglevel `INFO` and drop the message without acting on it.

New master configuration option `drop_messages_signature_fail` Drop messages from minions when their signatures do not validate. Note that when this option is False but `require_minion_sign_messages` is True minions MUST sign their messages but the validity of their signatures is ignored.

New minion configuration option `minion_sign_messages` Causes the minion to cryptographically sign the payload of messages it places on the event bus for the master. The payloads are signed with the minion's private key so the master can verify the signature with its public key.

## 20.2.25 Salt 2015.8.0 Release Notes - Codename Beryllium

### 2015.8.0 Detailed Change List

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>)

*Generated at: 2015-09-09T18:15:43Z*

This list includes all pull requests merged into the 2015.8 branch between the forking of the branch from develop and the release of 2015.8.0.

Statistics:

- Total Merges: **682**
- Total Issue references: **342**
- Total PR references: **866**

Pull Requests:

- #26993: (*whiteinge*) Backport #26975
- #26970: (*cachedout*) Revert ``better path query parsing in fileserver"
- #26980: (*terminalmage*) Use human-readable cachedirs for gitfs-backed winrepo
- #26969: (*TheBigBear*) URL of salt windows downloads has changed
- #26968: (*TheBigBear*) URL of salt windows downloads has changed
- #26958: (*s0undt3ch*) Bradthurber bootstrap command line help doc update
- #26949: (*rallytime*) Back-port #25148 to 2015.8
- #26914: (*cro*) Add salt-proxy script and manpage to setup.py so they will get installed.
- #26909: (*terminalmage*) Don't try to git clone from /tmp on Windows
- #26910: (*s0undt3ch*) Sometimes the event system is just too fast
- #26905: (*s0undt3ch*) Exit the loop if run\_once is true
- #26897: (*msted*) spm file hash part deux
- #26900: (*s0undt3ch*) If no tag is passed, don't actually subscribe to anything.

- #26880: (*s0undt3ch*) Restore backwards compatibility to *salt.utils.event*
- #26896: (*msteed*) spm remove: use pkgfiles to calculate file hashes
- #26891: (*jtand*) Fixed an unboundlocalerror
- #26892: (*cachedout*) Make the testing ioloop the current one
- #26886: (*jtand*) Gets the azure version correctly on python-azure 1.0.0
- #26870: (*rallytime*) Back-port #26834 to 2015.8
- #26865: (*dmurphy18*) Fix apt preferences for apts, repos for pbuilder building for Debian
- #26873: (*terminalmage*) Properly handle getting local config values in older git versions
- #26869: (*rallytime*) Fix provider --> driver change for salt-cloud lxc
- #26858: (*terminalmage*) Fix a couple version checks for git state and execution module
- #26853: (*UtahDave*) Fix salt-cloud on windows
- #26852: (*basepi*) [2015.8] Only reference msgpack if it imported successfully
- #26835: (*terminalmage*) Backport #26572 to 2015.8
- #26836: (*jacobhammons*) Added rst source for salt-proxy man page, added build and copy lines ...
- #26818: (*terminalmage*) Support empty repositories in git.latest
- #26819: (*rallytime*) Make sure we're calling `_validate_name` in the correct place in 2015.8 Linode driver
- #26841: (*l2ol33rt*) Fix reference before assignment in sqs engine
- #26822: (*terminalmage*) Add some missing imports for masterless winrepo
- #26831: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26826: (*techhat*) Pass a package name to `unregister_file()`
- #26757: (*cachedout*) Fix various filehandle leaks
- #26816: (*gtmanfred*) rev defaults to HEAD
- #26801: (*jacobhammons*) Added doc for dockerng minion configuration options
- #26808: (*anlutro*) Fix git init argument formatting
- #26807: (*terminalmage*) Move `salt.utils.itersplit()` to `salt.utils.itertools.split()`
- #26796: (*jacobhammons*) Add doc for `__states__`
- #26764: (*sjorge*) `salt.utils.is_proxy()` is no longer always true on SunOS/Illumos/SmartOS
- #26772: (*sjorge*) pull in smartos `virt` module from develop
- #26726: (*terminalmage*) Redact HTTPS Basic Auth in states/funcs which deal with git remotes
- #26769: (*terminalmage*) Use `--track` to set tracking branch on older git versions
- #26765: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26761: (*sjorge*) fix SPM paths on smartos/illumos esky
- #26751: (*terminalmage*) Fixes for masterless winrepo
- #26745: (*rallytime*) Make sure pyrax configs are in place before checking for deps
- #26746: (*rallytime*) Make sure nova configs are set before checking for dependencies
- #26750: (*basepi*) [2015.8] Add `__utils__` to state modules

- #26752: (*cro*) Fix typo in some diagram labels
- #26747: (*basepi*) [2015.8] Add `__states__` to state modules, for cross-calling states
- #26744: (*basepi*) [2015.8] Fix issue from #26717
- #26737: (*dmurphy18*) Fix to allow for package naming other than just salt
- #26742: (*rallytime*) Only warn about vsphere deprecation if vsphere is configured
- #26733: (*sjorge*) Refactor of `smartos_vmadm` module
- #26735: (*s0undt3ch*) Add `.hg` and `.cvs` to `spm_build_exclude`
- #26720: (*UtahDave*) Updates for winrepo in 2015.8 to support jinja, while maintaining backwards compat
- #26719: (*jodv*) Backport 26532 to 2015.8
- #26721: (*rallytime*) Linode Driver Cleanup
- #26707: (*techhat*) Add `top_level_dir` to FORMULAs
- #26723: (*s0undt3ch*) Handle SPM paths in the setup script
- #26717: (*basepi*) [2015.8] Revert loader changes from #26645
- #26712: (*techhat*) Move SPM paths around
- #26680: (*TheBigBear*) add more python libs info in `'--versions-report'`
- #26716: (*terminalmage*) Allow git identity to be a list
- #26691: (*garethgreenaway*) Fixes to ipset module for 2015.8
- #26701: (*kev009*) Ignore the first element of `kern.disks` split, which is the `sysctl` name (new disks grain)
- #26678: (*terminalmage*) Restructure `git.latest` rewrite to work better when following HEAD
- #26679: (*rallytime*) Back-port #26661 to 2015.8
- #26684: (*techhat*) Add reactor formulas to `spm`
- #26682: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26671: (*rallytime*) Warn users if cloud driver dependencies are missing.
- #26674: (*rallytime*) Back-port #26583 to 2015.8
- #26670: (*techhat*) Set up SPM to install `-conf` packages
- #26657: (*jfindlay*) top file compilation fixes
- #26659: (*TheBigBear*) minor doc edits - spelling
- #26654: (*jfindlay*) merge `'#26650'`
- #26567: (*jtand*) Added git version check to git module
- #26649: (*twangboy*) Fixed Lint for real in `win_repo.py`
- #26608: (*jacobhammons*) 2015.8.0 release notes and `doc/conf.py` updates
- #26646: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26645: (*rallytime*) Back-port #26390 to 2015.8
- #26642: (*twangboy*) Added function to render winrepo Jinja
- #26625: (*twangboy*) Correctly detect packages with no version, docs
- #26575: (*msteed*) Update `spm` for integration into raas

- #26635: (*cro*) Don't report windows as a proxy.
- #26622: (*rallytime*) [2015.8] Also add -Z to script args for cloud tests
- #26619: (*rallytime*) Apply cloud test fixes from 2015.5 to 2015.8
- #26603: (*terminalmage*) Fixes for git.latest, git module integration tests, etc.
- #26577: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26534: (*cachedout*) Bump required Tornado version to 4.2.1
- #26566: (*cachedout*) Don't stacktrace trying to publish without a master
- #26541: (*terminalmage*) Make winrepo execution module use the same code as the runner
- #26530: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26570: (*cachedout*) Fix haproxy docs to be valid
- #26562: (*cachedout*) Fix suprious error message with systemd-detect
- #26557: (*jfindlay*) add docs to #26550
- #26544: (*nmadhok*) Do not raise KeyError when calling avail\_images if VM/template is in disconnected state
- #26501: (*terminalmage*) Update git\_pillar docs, add git.list\_worktrees function
- #26521: (*terminalmage*) Work around upstream git bug when cloning repo as root
- #26518: (*krak3n*) Fix for [`#25492`\\_](#)
- #26514: (*evverx*) Unmask a runtime masked services too
- #26529: (*mnalt*) bugfix: fix service.enable for missing rc.conf
- #26516: (*techhat*) Move more path operations into SPM loader
- #26533: (*cachedout*) Fix too aggressive even init check
- #26522: (*cro*) Do not load package provider if its not a proxy
- #26531: (*cachedout*) Fix failing event tests and modify event init
- #26433: (*cro*) Add support for default proxy config options, change default location of proxy config and log to /etc/salt/proxy and /var/log/proxy
- #26504: (*nmadhok*) [Backport] Adding ability to specify the virtual hardware version when creating VM
- #26517: (*cachedout*) Better fix for opensuse tornado httpclient
- #26479: (*rallytime*) Don't allow VMs with duplicate names to be created in EC2/AWS
- #26488: (*cachedout*) Don't pass unsupported kwarg to tornado
- #26451: (*terminalmage*) Use `rpm -qa` instead of repoquery to list installed packages
- #26491: (*jacobhammons*) doc site css fix for tiny fonts that appeared in code or pre tags in ...
- #26442: (*rallytime*) Hide API Key from debug logs for Linode Driver
- #26441: (*rallytime*) Refactor a few linode functions to be useful with salt-cloud command
- #26485: (*s0undt3ch*) One more missed typo
- #26495: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26492: (*cachedout*) Fix schedule test error on py26
- #26489: (*cachedout*) Fixing more tarfile tests on py2.6

- #26475: (*cachedout*) Better object checking on asyncreq cleanup
- #26477: (*cachedout*) Fix integration.modules.git.GitModuleTest.test\_archive on py26
- #26469: (*jtand*) --annotate and --message aren't valid options in older versions of git.
- #26439: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26464: (*rallytime*) Back-port #26456 to 2015.8
- #26463: (*rallytime*) Back-port #26455 to 2015.8
- #26449: (*s0undt3ch*) The CLI options are not meant to include underscores.
- #26270: (*sjorge*) salt.modules.network now supports SmartOS and SunOS < Solaris 11
- #26436: (*TheBigBear*) minor edits
- #26410: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26427: (*anlutro*) git.latest with no rev: fix concatenation error (NoneType and str)
- #26307: (*cachedout*) Fix bug in top file ordering
- #26428: (*cro*) Update docs to reflect new pillar structure
- #26429: (*cachedout*) Add release note regarding tcp transport on freebsd
- #26418: (*driskell*) Fix forward-merged caching from 2015.5 into 2015.8 to be compatible with the new match\_func
- #26252: (*DmitryKuzmenko*) Issues/24048 http client 2015.8
- #26413: (*evverx*) Fix service.{start,restart,reload,force-reload} for masked services
- #26393: (*dmurphy18*) Added option parameters to make\_repo to allow for configuration settings
- #26422: (*TheBigBear*) no dots in SLS filename \_\_AND\_\_ any directories (incl git repos)
- #26323: (*0xf10e*) Fix Credentials used in *glance* Exec Module
- #26341: (*terminalmage*) Rewrite git state and execution modules
- #26419: (*terminalmage*) Only use pygit2.errors if it exists
- #26423: (*eliasp*) doc - Correct function name for peer configuration
- #26401: (*cachedout*) Adapt proxy minion to tornado (w/lint)
- #26400: (*rallytime*) Back-port #26318 to 2015.8
- #26397: (*s0undt3ch*) A single *isinstance()* check for all types is enough
- #26385: (*gtmanfred*) don't require volume endpoint in nova driver
- #26287: (*techhat*) Break out SPM components into loaders
- #26384: (*TheBigBear*) Fix shell quoting for cmd.run
- #26391: (*rallytime*) Back-port #26367 to 2015.8
- #26383: (*rallytime*) Allow the creation of a VM without a profile
- #26375: (*s0undt3ch*) [2015.8] Schema DictItem required attribute fixes
- #26363: (*garthgreenaway*) Fixes to mount state 2015.8
- #26347: (*0xf10e*) Load `pkgng` as `pkg` on FreeBSD 9 when *providers:pkg* == `pkgng`
- #26361: (*TronPaul*) sign security token

- #26346: (*TronPaul*) Fix s3 using IAM credentials
- #26331: (*mnalt*) fix bug in sysrc to allow for empty rc variables
- #26334: (*rallytime*) Call salt.utils.cloud.bootstrap in GCE Driver provisioning
- #26308: (*dmurphy18*) Support for environment overrides building packages
- #26279: (*TheScriptSage*) Merge changes for pull`#26083`\_ and pull`#25632`\_ into 2015.8
- #26224: (*cachedout*) Cleanup of a few cases to move to salt.utils.fopen
- #26260: (*nmadhok*) Correct spelling of integration in docs
- #26226: (*rallytime*) Fix [`#25463`\\_](#)
- #26248: (*nmadhok*) Initial commit of unit tests for vmware cloud driver
- #26228: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26244: (*nmadhok*) Backport additions to VMware cloud driver from develop to 2015.8 branch
- #26235: (*sjorge*) salt.utils.is\_smartos\_zone, inverse of is\_smartos\_globalzone
- #26221: (*sjorge*) SmartOS grain fixes
- #26218: (*terminalmage*) Add warning about file.recurse unicode errors with vim swap files.
- #26214: (*rallytime*) Back-port [#24878](#) to 2015.8
- #26211: (*techhat*) Move SPM to its own directory
- #26197: (*TronPaul*) Fix GitFS when whitelisting base
- #26200: (*anlutro*) Make it possible to run salt-cloud as current user
- #26201: (*kev009*) Avoid VBOX storage emulation bugs in FreeBSD disks grain
- #26188: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26194: (*basepi*) Allow virtual grains to be generated even if virt-what is not available
- #26176: (*rallytime*) Back-port [#26165](#) to 2015.8
- #26169: (*terminalmage*) Fix attribute error in gitfs' find\_file functions
- #26170: (*nmadhok*) [Backport] Make sure variable is a dictionary before popping something from it.
- #26143: (*nmadhok*) VMware cloud driver fixes [forward port from 2015.5 into 2015.8]
- #26173: (*jacobhammons*) Updates to cloud docs for the provider > driver change
- #26125: (*evverx*) Use timedatectl set-timezone to tzsetting if available
- #26145: (*sjorge*) smartos\_imgadm cleanup
- #26148: (*terminalmage*) Refactor winrepo support
- #26128: (*sjorge*) imgadm.avail should return multiple results
- #26109: (*jfindlay*) fix quote indent
- #26089: (*anlutro*) User state/module: fix coercing of None into string ``None" in GECOS
- #26081: (*cachedout*) Move invocation routine up
- #26086: (*rallytime*) Back-port [#26019](#) to 2015.8
- #26087: (*rallytime*) Back-port [#26059](#) to 2015.8
- #26052: (*jtand*) Rh\_ip fix

- #26078: (*cachedout*) Fix missing key in error return
- #26074: (*basepi*) [2015.8] Re-apply #25358 in 2015.8
- #26069: (*jfindlay*) fix win\_firewall.delete\_rule
- #26066: (*s0undt3ch*) [2015.8] Update to latest bootstrap stable release v2015.06.08
- #26049: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26026: (*anlutro*) Fix httpasswd result false positive in test mode
- #26037: (*rallytime*) Back-port #25489 to 2015.8
- #26004: (*techhat*) Allow updating a single SPM repo at a time
- #26012: (*cachedout*) Merge kwarg into opts for tcp client
- #26007: (*anlutro*) file.managed: wrap os.remove in if isfile, don't remove on success
- #26009: (*terminalmage*) Add winrepo and dockerng information to 2015.8.0 release notes
- #26006: (*basepi*) Revert #25727 in favor of #25645
- #26001: (*cachedout*) Fix failing tests
- #25978: (*anlutro*) Correct service state changes in test mode
- #25982: (*sjorge*) salt.modules.smartos\_\* limit to global zone only
- #25989: (*rallytime*) Back-port #25832 to 2015.8
- #25988: (*cachedout*) Move #25642 to 2015.8
- #25999: (*s0undt3ch*) Include subschema defaults
- #25997: (*s0undt3ch*) Allow getting a defaults dictionary from schema defaults
- #25979: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25902: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25956: (*anlutro*) Fix user argument to cron functions
- #25946: (*sjorge*) Fix for salt.utils.decorators under esky
- #25957: (*anlutro*) Remove temporary file after file.managed with checkcmd
- #25874: (*rallytime*) Back-port #25668 to 2015.8
- #25929: (*sjorge*) salt.module.pkgin's \_\_virtual\_\_() should not return None if pkg\_info is not present
- #25952: (*garethgreenaway*) Log when event.fire and event.fire\_master fail 2015.8
- #25944: (*sjorge*) Smartos libcrypto nonesky fix
- #25906: (*dmurphy18*) Cherry-pick of pkgbuild changes from develop branch
- #25925: (*sjorge*) Create default log location in smartos esky buildscript
- #25928: (*cachedout*) Fix stacktrace for non-existent states
- #25922: (*jacksonj*) Correct max\_wait -> max\_auth\_wait in MultiMinion
- #25907: (*rallytime*) Back-port #25892 to 2015.8
- #25910: (*terminalmage*) Pass osarch to check\_32()
- #25849: (*basepi*) Repr template error for GPG renderer (can't seek an OrderedDict)
- #25868: (*rallytime*) Back-port #25404 to 2015.8

- #25896: (*cachedout*) Lint
- #25876: (*jackson tj*) Fixes for 2015.8
- #25867: (*rallytime*) Back-port #25370 to 2015.8
- #25845: (*jacobhammons*) updated versionadded
- #25836: (*jackson tj*) Keep track of SyncWrapper's IOLoop usage
- #25859: (*0xf10e*) warn\_until(Carbon,...) instead of Boron
- #25505: (*0xf10e*) Glance state module for 2015.8 ``Beryllium''
- #25843: (*jtand*) Fixed a lint error in parsers.py
- #25835: (*techhat*) spm update\_repo doesn't always require arguments
- #25837: (*jacobhammons*) regenerated man pages
- #25830: (*sjorge*) Loading of libcrypto on smartos esky fixed
- #25808: (*jfindlay*) add highstate opts to config/\_\_init\_\_.py, update docs
- #25820: (*sjorge*) Prerequisite to fix the smartos libcrypto loading
- #25781: (*anlutro*) Fix iptables.build\_rule
- #25764: (*gtmanfred*) allow use of cloudnetworks in ssh\_interface
- #25736: (*jfindlay*) insert explicit formatter number
- #25742: (*rallytime*) Back-port #25731 to 2015.8
- #25741: (*rallytime*) Back-port #25727 to 2015.8
- #25712: (*cachedout*) Fix outputter for state.apply
- #25698: (*rallytime*) Back-port #25659 to 2015.8
- #25690: (*anlutro*) Fix highstate duration alignment (again)
- #25684: (*davidjb*) Fix doc around Include/Exclude for states
- #25549: (*techhat*) Switch Scaleway to salt.utils.cloud.bootstrap()
- #25667: (*jfindlay*) add 2015.8.0rc2 autogenerated changelog
- #25653: (*anlutro*) Properly align highstate duration sum
- #25663: (*rallytime*) Back-port #25638 to 2015.8
- #25639: (*terminalmage*) Don't do pre-flight check on git\_pillar if it is not configured
- #25587: (*cachedout*) Fix prereq in salt.state
- #25628: (*anlutro*) Highstate output: show duration in seconds instead of milliseconds when appropriate
- #25631: (*basepi*) Remove trailing whitespace
- #25627: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25626: (*basepi*) Fix the highstate outputter if `duration' is not present
- #25601: (*terminalmage*) Fix error message when local bin pkg path is not absolute
- #25595: (*terminalmage*) Bring git\_pillar up to feature parity with gitfs
- #25619: (*cachedout*) Lint stateconf changes
- #25578: (*davidjb*) Allow parent relative includes in state files

- #25610: (*s0undt3ch*) [2015.8] Update the bootstrap script to latest release v2015.07.22
- #25599: (*jfindlay*) fix transport settings in #25596
- #25596: (*jfindlay*) Tcp test
- #25591: (*garethgreenaway*) Return data for scheduled jobs in 2015.8 default to True.
- #25588: (*basepi*) Fix some of the retcode work from #23105
- #25583: (*jtand*) Fixed lint error where pprint wasn't imported.
- #25572: (*rallytime*) Back-port #25570 to 2015.8
- #25575: (*rallytime*) Make Sure Scaleway driver works with deprecation paths
- #25564: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25566: (*techhat*) Fix download process for SPM repo updates
- #25553: (*techhat*) Switch SoftLayer to salt.utils.cloud.bootstrap()
- #25552: (*techhat*) Update pricing for SoftlayerHW
- #25547: (*techhat*) Switch Parallels to salt.utils.cloud.bootstrap()
- #25548: (*techhat*) Switch Proxmox to salt.utils.cloud.bootstrap()
- #25543: (*techhat*) Switch GCE to salt.utils.cloud.bootstrap()
- #25546: (*techhat*) Switch CloudStack to salt.utils.cloud.bootstrap()
- #25558: (*cachedout*) Lint config\_test
- #25515: (*s0undt3ch*) salt.utils.schema fixes
- #25514: (*garethgreenaway*) fixes to schedule.add documentation in 2015.8
- #25508: (*s0undt3ch*) [2015.8] Update bootstrap script to latest stable release, v2015.07.17
- #25501: (*basepi*) Add optional job end time to the local\_cache returner
- #25491: (*s0undt3ch*) Let's call it for what it is!
- #25462: (*rallytime*) Wrap is\_profile\_configured calls in try/except block
- #25439: (*rallytime*) Reduce digital\_ocean API call frequency
- #25451: (*s0undt3ch*) Salt-SSH Scan roster bugfixes (And Py3 support)
- #25449: (*ruzarowski*) Exclude dotfiles and directories from minion key lists (Fixes ``#25448``)
- #25421: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25412: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25415: (*bechtoldt*) [docs] declare YAML as code block
- #25407: (*rallytime*) Back-port #23236 to 2015.8
- #25409: (*rallytime*) Back-port #24422 to 2015.8
- #25394: (*rallytime*) Back-port #25355 to 2015.8
- #25393: (*rallytime*) Back-port #25289 to 2015.8
- #25387: (*cachedout*) Lint #25319
- #25319: (*ruzarowski*) [cloud:EC2] Move SourceDest logic to \_update\_enis and add alias for delete\_interface\_on\_terminate

- #25310: (*anlutro*) Add an ``is list" test to the jinja environment
- #25264: (*ruzarowski*) Fix AttributeError in fileserver update\_opts
- #25372: (*rallytime*) Don't stacktrace when provisioning instances with softlayer\* drivers
- #25315: (*ruzarowski*) [cloud:EC2] Move handling of AssociatePublicIpAddress to associate\_eip/allocate\_new\_eip logic depending on value type
- #25312: (*ruzarowski*) [cloud:EC2] Introduce eni Name property to set name tag value after its creation
- #25311: (*ruzarowski*) [cloud:EC2] Add ability to attach an existing eni
- #25280: (*rallytime*) Remove deprecation warnings for Beryllium
- #25329: (*twangboy*) Fixed some documentation errors
- #25300: (*s0undt3ch*) Fix ordering issue & Added requirements support
- #25283: (*jfindlay*) ensure ret is always defined
- #25252: (*jfindlay*) make args optional with default values in win\_firewall.delete\_rule
- #25257: (*notpeter*) Document SourceDestCheck added in #25242.
- #25298: (*twangboy*) Continue if profile not found
- #25296: (*twangboy*) Fixed file.comment for windows
- #25254: (*rallytime*) Change versionadded/changed references from Beryllium to 2015.8.0
- #25285: (*thusoy*) Remove error logging of missing victorops keys
- #25266: (*ruzarowski*) cloud: EC2 eni property SourceDestCheck is a AttributeBooleanValue
- #25216: (*jfindlay*) replace shell code with native python code
- #25278: (*rallytime*) Don't require size for all cloud drivers when checking profile configs
- #25271: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25263: (*techhat*) Allow non-standard HTTP requests on tornado
- #25253: (*s0undt3ch*) Remove the deprecation warning. The driver has been renamed.
- #25248: (*techhat*) Do not resize while iterating
- #25244: (*rallytime*) Remove parted deprecations and fix failing tests
- #25242: (*ruzarowski*) Make SourceDestCheck flag available to network interface definition
- #25226: (*nmadhok*) Backporting fix for issue `#25223`\_ on 2015.8 branch
- #25234: (*krak3n*) Fix: Bug in boto\_asg state argument passing to boto\_asg module
- #25222: (*rallytime*) Back-port #25219 to 2015.8
- #25188: (*rallytime*) Use linode status descriptions instead of ints when logging status to CLI
- #25203: (*s0undt3ch*) Added DictConfig with tests & More tests
- #25189: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25184: (*rallytime*) Back-port #25126 to 2015.8
- #25172: (*s0undt3ch*) Comment out imports while the YAML and RST rendering is not in-place.
- #25158: (*s0undt3ch*) Comment out not implemented code
- #25145: (*s0undt3ch*) Implement *oneOf*, *anyOf*, *allOf* and *not* with unit tests

- #25140: (*s0undt3ch*) Make the detection code work under Python 3.4
- #25131: (*s0undt3ch*) Array support in salt.utils.config
- #25130: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8

The 2015.8.0 feature release of Salt contains several major new features. As usual the release notes are not exhaustive and primarily include the most notable additions and improvements. Hundreds of bugs have been fixed and many modules have been substantially updated and added.

### New SaltStack Installation Repositories

SaltStack now provides installation repositories for several platforms, with more to come. See the following links for instructions:

- [Red Hat / CentOS 5, 6, 7](#)
- [Debian 8](#)
- [Windows](#)
- [FreeBSD](#)

### Send Event on State Completion

A `fire_event` global state keyword argument was added that allows any state to send an event upon completion. Useful for custom progress bars and checking in on long state runs. See [fire\\_event](#).

### ZeroMQ socket monitoring

If `zmq_monitor` is enabled, log all ZMQ events for socket monitoring purposes. Verbose, but useful.

### SPM (Salt Package Manager)

Allows Salt formulas to be packaged for ease of deployment. See [spm](#).

---

**Note:** The `spm` executable was not included in the Debian or Ubuntu packages for the 2015.8.0 or the 2015.8.1 releases. This executable will be included in an upcoming release. As a workaround, copy the SPM script from the salt library installation into `/usr/local/bin` or your local equivalent.

---

### Specify a Single Environment for Top Files

A new `default_top` option was added to load the state top file from a single, specific environment, rather than merging top data across all environments. Additionally, new `top_file_merge_strategy` and `env_order` options were added for more control over top file merging. See [The Top File](#).

### Tornado TCP Transport

Implemented a pure-TCP transport, in addition to ZeroMQ and RAET. The new transport uses Tornado, which allows Salt to use a standardized set of libraries for asynchronous behavior, which should greatly improve reliability and performance.

**Note:** Tornado is considered experimental in this release. The following known issues were being investigated at the time of release:

- TCP tests show performance degradation over time ([issue 26051](#))
  - TCP transport stacktrace on windows minion: Future exception was never retrieved ([issue 25718](#))
  - [freebsd] TCP transport not working in 2015.8.0rc3 ([issue 26364](#))
- 

### Proxy Minion Enhancements

Proxy Minions have undergone a significant overhaul in 2015.8, see [Proxy Minion Enhancements](#).

### Engines

Salt engines are long-running, external processes that leverage Salt. See [Salt Engines](#).

### Core Changes

- Add system version info to `versions_report`, which appears in both `salt --versions-report` and `salt '*' test.versions_report`. Also added is an alias `test.versions` to `test.versions_report`. ([issue 21906](#))
- Add colored console logging support. This is activated by using `%(colorlevel)s, %(colorname)s, %(colorprocess)s, %(colormsg)s` in `log_fmt_console` in the config file for any of `salt-master`, `salt-minion`, and `salt-cloud`.

### Git Pillar

The git external pillar has been rewritten to bring it up to feature parity with *gitfs*. Support for `pygit2` has been added, bringing with it the ability to access authenticated repositories.

Using the new features will require updates to the git ext\_pillar configuration, further details can be found in the [pillar.git\\_pillar](#) docs.

### Salt Cloud Improvements

- Pricing data from several cloud providers (GCE, DigitalOcean, SoftLayer\_HW, EC2)
- All cloud providers now use standardized bootstrapping code.
- Modified the Linode Salt Cloud driver to use Linode's native API instead of depending on `apache-libcloud` or `linode-python`.

### Salt Cloud Changes

- Changed the default behavior of `rename_on_destroy` to be set to `True` in the EC2 and AWS drivers.
- Changed the default behavior of the EC2 and AWS drivers to always check for duplicate names of VMs before trying to create a new VM. Will now throw an error similarly to other salt-cloud drivers when trying to create a VM of the same name, even if the VM is in the `terminated` state.

- When querying for VMs in `digital_ocean.py`, the number of VMs to include in a page was changed from 20 (default) to 200 to reduce the number of API calls to Digital Ocean.Ocean.

### State and Execution Module Improvements

- New and improved Docker state and execution modules (`state` and `execution` module).

### Git State and Execution Modules Rewritten

The git state and execution modules have gone through an extensive overhaul.

#### Changes in the `git.latest` State

- The `branch` argument has been added, allowing for a custom branch name to be used in the local checkout maintained by the `git.latest` state. This can be helpful in avoiding ambiguous refs in the local checkout when a tag is used as the `rev` argument. If no branch is specified, then the state uses the value of `rev` as the branch name.
- The `always_fetch` argument no longer has any effect, and will be removed in a future release. The state now detects whether or not a fetch is needed based on comparisons made between the local and remote repositories.
- The `force_fetch` argument has been added to force a fetch if the fetch is not a fast-forward (for instance, if someone has done a reset and force-pushed to the remote repository).
- The `remote_name` argument has been deprecated and renamed to `remote`.
- The `force` argument has been deprecated and renamed to `force_clone` to reduce ambiguity with the other `force` arguments.
- Using SHA1 hashes (full or shortened) in the `rev` argument is now properly supported.
- Non-fast-forward merges are now detected before the repository is updated, and the state will not update the repository if the change is not a fast-forward. Non-fast-forward updates must be overridden with the `force_reset` argument. If `force_reset` is set to `True`, the state will only reset the repository if it cannot be fast-forwarded. This is in contrast to the earlier behavior, in which a hard-reset would be performed every time the state was run if `force_reset` was set to `True`.
- A `git pull` is no longer performed by this state, dropped in favor of a fetch-and-merge (or fetch-and-reset) workflow.

#### `git.config_unset` state added

This state allows for configuration values (or entire keys) to be unset. See [here](#) for more information and example SLS.

#### `git.config` State Renamed to `git.config_set`

To reduce confusion after the addition of `git.config_unset`, the `git.config` state has been renamed to `git.config_set`. The old `config.get` name will still work for a couple releases, allowing time for SLS files to be updated.

In addition, this state now supports managing multivar git configuration values. See [here](#) for more information and example SLS.

## Initial Support for Git Worktrees in Execution Module

Several functions have been added to the execution module to manage `worktrees` (a feature new to Git 2.5.0). State support does not exist yet, but will follow soon.

## New Functions in Git Execution Module

- `git.config_get_regexp`
- `git.config_unset`
- `git.is_worktree`
- `git.list_branches`
- `git.list_tags`
- `git.list_worktrees`
- `git.merge_base`
- `git.merge_tree`
- `git.rev_parse`
- `git.version`
- `git.worktree_rm`
- `git.worktree_add`
- `git.worktree_prune`

## Changes to Functions in Git Execution Module

### **git.add**

- `--verbose` is now implied when running the `git add` command, to provide a list of the files added in the return data.

### **git.archive**

- Now returns `True` when the `git archive` command was successful, and otherwise raises an error.
- The `overwrite` argument has been added to prevent an existing archive from being overwritten by this function.
- The `fmt` argument has been deprecated and renamed to `format`.
- Trailing slash no longer implied in `prefix` argument, must be included if this argument is passed.

### **git.checkout**

- The `rev` argument is now optional when using `-b` or `-B` in `opts`, allowing for a branch to be created (or reset) using `HEAD` as the starting point.

### **git.clone**

- The `name` argument has been added to specify the name of the directory in which to clone the repository. If this option is specified, then the clone will be made within the directory specified by the `cwd`, instead of at that location.
- The `repository` argument has been deprecated and renamed to `url`.

### **git.config\_get**

- The `setting_name` argument has been deprecated and renamed to `key`.
- The `global` argument has been added, to query the global git configuration
- The `all` argument has been added to return a list of all values for the specified key, allowing for all values in a multivar to be returned.
- The `cwd` argument is now optional if `global` is set to `True`

### **git.config\_set**

- The value(s) of the key being set are now returned
- The `setting_name` argument has been deprecated and renamed to `key`.
- The `setting_value` argument has been deprecated and renamed to `value`.
- The `is_global` argument has been deprecated and renamed to `global`.
- The `multivar` argument has been added to specify a list of values to set for the specified key. The `value` argument is not compatible with `multivar`.
- The `add` argument has been added to add a value to a key (this essentially just adds an `--add` to the `git config` command that is run to set the value).

### **git.fetch**

- The `force` argument has been added to force the fetch when it is not a fast-forward. This could have been achieved in previous Salt versions by including `--force` in the `opts` argument, this argument is just for convenience and to match the usage of other functions with `force` arguments.
- The `refspecs` argument has been added to allow for one or more refspecs to be provided which override the one(s) specified by the `remote.remote_name.fetch` git configuration option.

### **git.ls\_remote**

- The `repository` argument has been deprecated and renamed to `remote`.
- The `branch` argument has been deprecated and renamed to `ref`.
- The `opts` argument has been added to allow for additional CLI options to be passed to the `git ls-remote` command.

### **git.merge**

- The `branch` argument has been deprecated and renamed to `rev`.

### **git.status**

- Return data has been changed from a list of lists to a dictionary containing lists of files in the modified, added, deleted, and untracked states.

### **git.submodule**

- Added the `command` argument to allow for operations other than `update` to be run on submodules, and deprecated the `init` argument. To do a submodule update with `init=True` moving forward, use `command=update opts='--init'`.
- OpenStack Glance API V2 execution module
- Amazon VPC state module
- RallyDev execution module
- BambooHR execution module
- Stormpath execution, state modules
- Remove unused argument `timeout` in `jboss7.status`.
- Deprecate `enabled` argument in `pkgrepo.managed` in favor of `disabled`.
- Archive module changes: In the `archive.tar` and `archive.cmd_unzip` module functions, remove the arbitrary prefixing of the options string with `-`. An options string beginning with a `--long-option`, would have uncharacteristically needed its first `-` removed under the former scheme. Also, `tar` will parse its options differently if short options are used with or without a preceding `-`, so it is better to not confuse the user into thinking they're using the non-`-` format, when really they are using the with-`-` format.
- Added `__states__` to state modules, for cross-calling states. This enables using existing states when writing custom states. See [cross calling states](#).

## **Windows Improvements**

- Enhanced the windows minion silent installation with command line parameters to configure the salt master and minion name. See [Silent Installer Options](#).
- Improved user management with additional capabilities in the user module for Windows.
- Improved patch management with a new module for managing windows updates (`win_wua`).
- Turned on multi-processing by default for windows in minion configuration.

## **Windows Software Repo Changes**

A next-generation (ng) windows software repo is available for 2015.8.0 and later minions. When using this new repository, the repo cache is compiled on the Salt Minion, which enables pillar, grains and other things to be available during compilation time.

See the [Windows Software Repository](#) documentation for more information.

## Changes to legacy Windows repository

If you have pre 2015.8 Windows minions connecting to your 2015.8 Salt master, you can continue to use the legacy Windows repository for these Salt minions.

If you were previously using this repository and have customized settings, be aware that several config options have been renamed to make their naming more consistent.

See the *Windows Software Repository* documentation for more information.

## Win System Module

The unit of the `timeout` parameter in the `system.halt`, `system.poweroff`, `system.reboot`, and `system.shutdown` functions has been changed from seconds to minutes in order to be consistent with the `linux.timeout` setting. (issue 24411) Optionally, the unit can be reverted to seconds by specifying `in_seconds=True`.

## Other Improvements

- Sanitize sensitive fields in `http.query`
- Allow authorization to be read from Django and eauth
- Add templating to SMTP returner
- New REST module for SDB
- Added `rest_timeout` config option and `timeout` argument to jobs api call
- Provide config options for Raet lane and road buffer count. (Useful for BSD kernels)
- Implemented ZeroMQ socket monitor for master and minion
- Add end time to master job cache for jobs (optional, off by default)
- Tornado is now the default backend for `http.request`
- Support `pillarenv` selection as it's done for `saltenv`
- salt was updated to use `python-crypto` version 2.6.1, which removes the dependency on `python-m2crypto`.

## Deprecations

- The `digital_ocean.py` Salt Cloud driver was removed in favor of the `digital_ocean_v2.py` driver as DigitalOcean has removed support for APIv1. The `digital_ocean_v2.py` was renamed to `digital_ocean.py` and supports DigitalOcean's APIv2.
- The `vsphere.py` Salt Cloud driver has been deprecated in favor of the `vmware.py` driver.
- The `openstack.py` Salt Cloud driver has been deprecated in favor of the `nova.py` driver.
- The use of `provider` in Salt Cloud provider files to define cloud drivers has been deprecated in favor of using `driver`. Both terms will work until the 2017.7.0 release of Salt. Example provider file:

```
my-ec2-cloud-config:
  id: 'HJGRYCILJLKJYG'
  key: 'kdjgfsqm;woormgl/asorigjksjdhasdfgn'
  private_key: /etc/salt/my_test_key.pem
  keyname: my_test_key
```

```
securitygroup: default
driver: ec2
```

- The use of `lock` has been deprecated and from `salt.utils.fopen`. `salt.utils.flopen` should be used instead.
- The following args have been deprecated from the `rabbitmq_vhost.present` state: `user`, `owner`, `conf`, `write`, `read`, and `runas`.
- The use of `runas` has been deprecated from the `rabbitmq_vhost.absent` state.
- Support for output in `mine.get` was removed. `--out` should be used instead.
- The use of `delim` was removed from the following functions in the `match` execution module: `pillar_pcre`, `pillar`, `grain_pcre`,

### Security Fixes

CVE-2015-6918 - Git modules leaking HTTPS auth credentials to debug log

Updated the Git state and execution modules to no longer display HTTPS basic authentication credentials in loglevel debug output on the Salt master. These credentials are now replaced with REDACTED in the debug output. Thanks to Andreas Stieger <asteiger@suse.com> for bringing this to our attention.

### Major Bug Fixes

- Fixed minion failover to next master on DNS errors ([issue 21082](#))
- Fixed memory consumption in SaltEvents ([issue 25557](#))
- Don't lookup outside system path in `which()` util ([issue 24085](#))
- Fixed broken jobs rest api call ([issue 23408](#))
- Fixed stale grains data using in modules ([issue 24073](#))
- Added `ssh_identities_only` config flag for ssh-agent configured environments ([issue 24096](#))
- Fixed `object has no attribute` errors for Raet transport ([issue 21640](#))
- Flush event returners before master exit ([issue 22814](#))
- Fix `CommandExecutionError` in grains generation with `lspci` missing ([issue 23342](#))
- Fix salt-ssh against CentOS 7 when `python-zmq` not installed ([issue 23503](#))
- Fix salt-ssh issues related to out-of-date `six` module ([issue 20949](#))
- Fix salt-ssh thin generation after previous run was interrupted ([issue 24376](#))
- Use proper line endings on Windows with `file.managed` w/contents ([issue 25675](#))
- Fixed broken comment/uncomment functions in `file.py` ([issue 24620](#))
- Fixed problem with unicode when changing computer description ([issue 12255](#))
- Fixed problem with `chocolatey` module not loading ([issue 25717](#))
- Fixed problem adding users to groups with spaces in the name ([issue 25144](#))
- Fixed problem adding full name to user account ([issue 25206](#))
- Fixed `gem` module stack trace ([issue 21041](#))

- Fixed problem with file.managed when test=True ([issue 20441](#))
- Fixed problem with powershell hanging while waiting for user input ([issue 13943](#))
- Fixed problem where the salt-minion service would not consistently start ([issue 25272](#))
- Fixed problem where pkg.refresh\_db would return True even when winrepo.p was not found ([issue 18919](#))
- Could someone please provide end to end example for Proxy Minion with REST ([issue 25500](#))
- Proxy minions stopped working between 2014.7 and 2015.5 ([issue 25053](#))
- Proxy minion documentation includes outdated code sample ([issue 24018](#))
- Proxy Minion documentation missing grains example ([issue 18273](#))
- Improve process management in proxy minion ([issue 12024](#))
- Proxy minion never comes up with message `I am XXX and I am not supposed to start any proxies!` ([issue 25908](#))
- Fixed an issue that caused an exception when using Salt mine from pillar. ([issue 11509](#))

### 20.2.26 Salt 2015.8.1 Release Notes

Version 2015.8.1 is a bugfix release for [2015.8.0](#).

#### Security Fixes

CVE-2015-6941 - win\_useradd module and salt-cloud display passwords in debug log

Updated the win\_useradd module return data to no longer include the password of the newly created user. The password is now replaced with the string XXX-REDACTED-XXX. Updated the Salt Cloud debug output to no longer display win\_password and sudo\_password authentication credentials. Also updated the Linode driver to no longer display authentication credentials in debug logs. These credentials are now replaced with REDACTED in the debug output.

CVE-2015-6918 - Git modules leaking HTTPS auth credentials to debug log

Updated the Git state and execution modules to no longer display HTTPS basic authentication credentials in loglevel debug output on the Salt master. These credentials are now replaced with REDACTED in the debug output. Thanks to Andreas Stieger <[asteiger@suse.com](mailto:asteiger@suse.com)> for bringing this to our attention.

#### Major Bug Fixes

- Add support for spm.d/\* .conf configuration of SPM ([issue 27010](#))
- Fix proxy grains breakage for non-proxy minions ([issue 27039](#))
- Fix global key management for git state
- Fix passing http auth to util.http from state.file ([issue 21917](#))
- Fix multiprocessing: True in windows (on by default)
- Add pkg.info to pkg modules
- Fix name of serial grain (this was accidentally renamed in 2015.8.0)
- Merge config values from master.d/minion.d conf files (rather than flat update)
- Clean grains cache on grains sync ([issue 19853](#))

- Remove streamed response for fileclient to avoid HTTP redirection problems ([issue 27093](#))
- Fixed incorrect warning about `osrelease` grain ([issue 27065](#))
- Fix authentication via Salt-API with tokens ([issue 27270](#))
- Fix winrepo downloads from https locations ([issue 27081](#))
- Fix potential error with salt-call as non-root user ([issue 26889](#))
- Fix global minion provider overrides ([issue 27209](#))
- Fix backward compatibility issues for pecl modules
- Fix Windows uninstaller to only remove `./bin, salt*, nssm.exe, uninst.exe` ([issue 27383](#))
- Fix misc issues with mongo returner.
- Add sudo option to cloud config files ([issue 27398](#))
- Fix regression in RunnerClient argument handling ([issue 25107](#))
- Fix `dockerng.running` replacing creation hostconfig with runtime hostconfig ([issue 27265](#))
- Fix `dockerng.running` replacing creation hostconfig with runtime hostconfig ([issue 27265](#))
- Increased performance on boto asg/elb states due to `__states__` integration
- Windows minion no longer requires powershell to restart ([issue 26629](#))
- Fix x509 module to support recent versions of OpenSSL ([issue 27326](#))
- Some issues with proxy minions were corrected.

Known Issues:

- Proxy minions currently cannot execute a highstate because of the way the proxymodule is being loaded internally. This will be fixed in a future release.

### Changes for v2015.8.0..v2015.8.1

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Total Merges: **200**

Changes:

- **PR #27584:** (*jacobhammons*) added changes list to 2015.8.1 release notes
- **PR #27575:** (*rallytime*) Don't report existing instances as running only if they're actually terminated in EC2
- **PR #27573:** (*basepi*) [2015.8] Use the custom yaml serializer for minion\_opts for salt-ssh
- **PR #27514:** (*clinta*) Recent Versions of OpenSSL don't allow importing incomplete PEMs
- **PR #27564:** (*jacobhammons*) Man pages
- **PR #27522:** (*twangboy*) Removed dependency on powershell to restart salt-minion
- **PR #27550:** (*rallytime*) [2015.8] Clean up salt-cloud logging and make it more useful
- **PR #27517:** (*jacobhammons*) Updated install docs
- **PR #27526:** (*eliasp*) Add missing newlines before param listing to fix doc rendering
- **PR #27525:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8

- [PR #27513](#): (*terminalmage*) Fix integration tests for worktree addition in git >= 2.6
- [PR #27510](#): (*rallytime*) Merge [#27475](#) with test fixes
- [PR #27451](#): (*ticosax*) [dockerng] Enforce usage of host\_config and require docker-py>=1.4.0
- [PR #27461](#): (*cachedout*) Only clean context if it exists
- [PR #27473](#): (*terminalmage*) salt.utils.gitfs: Don't use close\_fds=True on Windows
- [PR #27496](#): (*blueyed*) Fix version reporting of gitpython
- [PR #27502](#): (*ticosax*) Add test to check we don't call inspect\_image on absent images.
- [PR #27497](#): (*blueyed*) dockerng: fix image\_present for forced, non-existent image
- [PR #27411](#): (*terminalmage*) Fix invocation of git.config\_get and git.config\_set
- [PR #27477](#): (*terminalmage*) Don't append role to hash\_cachedir
- [PR #27474](#): (*whiteinge*) Add fake pymongo version attribute for the docs
- [PR #27466](#): (*blueyed*) Fix version reporting of python-gnupg and mysql-python
- [PR #27465](#): (*ticosax*) Fix usage of dockerng ``cmd" was [#27459](#)
- [PR #27417](#): (*whiteinge*) Backport [#25243](#) into 2015.8
- [PR #27423](#): (*dmurphy18*) Changes to support configurable repository for Debian / Ubuntu
- [PR #27428](#): (*rallytime*) Back-port [#27398](#) to 2015.8
- [PR #27429](#): (*rallytime*) Back-port [#27344](#) to 2015.8
- [PR #27450](#): (*ticosax*) [dockerng] Fix typo in docstring
- [PR #27430](#): (*jacksontj*) Fix bug introduced in eee0291ff8b65ff1e22f4dc2447a74aa28a3ce7f
- [PR #27418](#): (*terminalmage*) Don't always remove dest path in salt.utils.files.rename()
- [PR #27383](#): (*twangboy*) Uninstaller only removes specific files and dirs
- [PR #27416](#): (*rallytime*) Back-port [#27399](#) to 2015.8
- [PR #27394](#): (*jacksontj*) Remove streamed response for fileclient to avoid HTTP redirection problems
- [PR #27415](#): (*ryan-lane*) Backwards compat fixes for pecl module
- [PR #27407](#): (*meggiebot*) Adding stretch label definition
- [PR #27388](#): (*basepi*) [2015.8] Fix global provider overrides
- [PR #27386](#): (*rallytime*) Document tty: True usage in salt-ssh roster file
- [PR #27380](#): (*jtand*) Skipping Async tests
- [PR #27382](#): (*terminalmage*) Revert ``fixes [#27217](#) clear\_old\_remotes clears wrong directory (gitfs)"
- [PR #27361](#): (*cro*) Correct some issues with proxy minions
- [PR #27364](#): (*ruzarowski*) SaltCloud[EC2] Fix missing credentials in modify\_eni\_properties api call
- [PR #27349](#): (*jfindlay*) add freebsd install docs to release notes
- [PR #27343](#): (*cachedout*) Close io loop before deleting attribute
- [PR #27337](#): (*rallytime*) [2015.8] Fixup salt-cloud logging
- [PR #27332](#): (*terminalmage*) Adjust dockerng/dockerio docstrings
- [PR #27353](#): (*cachedout*) Fix case where var not set in config

- **PR #27350:** (*rallytime*) Allow IP-forwarding in GCE driver
- **PR #27305:** (*cachedout*) Re-init logging system on Windows when using multiprocessing
- **PR #27331:** (*terminalmage*) dockerng: Allow both cmd and command to be used to specify command
- **PR #27327:** (*isbm*) Fix a typo in the RPM output
- **PR #27312:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #27303:** (*jacobhammons*) Updated module doc index using <https://github.com/saltstack/salt/pull...>
- **PR #27301:** (*twangboy*) Pass ca\_bundle for windows (fixes SSL Error)
- **PR #27300:** (*rallytime*) Back-port #27287 to 2015.8
- **PR #27288:** (*rallytime*) Filter on `name`, not `id`, when listing images
- **PR #27283:** (*jtand*) `__grains__['osrelease']` returns a string
- **PR #27276:** (*rallytime*) Back-port #27218 to 2015.8
- **PR #27275:** (*rallytime*) Back-port #27213 to 2015.8
- **PR #27274:** (*rallytime*) Back-port #27272 to 2015.8
- **PR #27271:** (*isbm*) Bugfix: crash on token authentication via API
- **PR #27251:** (*rallytime*) Add support for post\_uri in SoftLayer cloud drivers
- **PR #27260:** (*bechtoldt*) add missing module doc references
- **PR #27254:** (*jfindlay*) 2015.2,2015.8,Beryllium -> 2015.8.0
- **PR #27245:** (*rallytime*) If two ssh keynames are found in DigitalOcean, abort and warn the user.
- **PR #27241:** (*jfindlay*) osrelease is only an integer for fedora
- **PR #27234:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #27240:** (*isbm*) Backport of the fix of `pkg.info\*` for Beryllium
- **PR #27223:** (*pprkut*) Support firewalld per interface zone config on rh7 systems
- **PR #27238:** (*bechtoldt*) salt.modules.disk.percent() throws KeyError when partition doesn't exist
- **PR #27232:** (*basepi*) [2015.8] Add stub release notes for 2015.8.1
- **PR #27199:** (*rallytime*) Avoid RuntimeError (dictionary changed size during iteration) with keys()
- **PR #27206:** (*rallytime*) Don't repeat GCE setup instructions, and make the use of .json files clearer
- **PR #27210:** (*rallytime*) Refactor some digital ocean functions
- **PR #27197:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #27195:** (*jacobhammons*) Fixed sphinx / latex build warnings and errors
- **PR #27182:** (*bernieke*) fix restart\_on\_error
- **PR #27163:** (*terminalmage*) Workaround upstream tornado bug affecting redirects
- **PR #27177:** (*rallytime*) Remove note - incorrect info
- **PR #27173:** (*rallytime*) Add the ability to specify multiple disks on the SoftLayer driver
- **PR #27164:** (*rallytime*) Make sure changes from #26824 to digital\_ocean\_v2.py driver make it to digital\_ocean.py in 2015.8
- **PR #27143:** (*cachedout*) Clean grains cache on grains sync

- **PR #27150:** (*cachedout*) Merge config values from master.d/minion.d conf files
- **PR #27137:** (*jfindlay*) revert serial grain regression
- **PR #27144:** (*rallytime*) Don't stacktrace on softlayer\_hw.show\_all\_prices if a code isn't supplied
- **PR #27139:** (*jacobhammons*) Updated key instruction on rhel7
- **PR #27134:** (*isbm*) Backport to 2015.8: ``pkg.info"
- **PR #27119:** (*l2ol33rt*) Boto dynamodb module should be using layer 2 abstractions
- **PR #27092:** (*perfinion*) salt/master: chdir to root not homedir
- **PR #27131:** (*jacobhammons*) Install docs
- **PR #27124:** (*jfindlay*) Backport #27123
- **PR #27111:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #27122:** (*terminalmage*) Fix broken link to git-config(1) docs
- **PR #27115:** (*jacobhammons*) Release docs
- **PR #27110:** (*rallytime*) Make sure -Q output is consistent across salt-cloud drivers
- **PR #27050:** (*twangboy*) Turned multiprocessing on
- **PR #27086:** (*techhat*) Document development of SPM loader modules
- **PR #26941:** (*msteed*) Make elasticsearch work as master job cache
- **PR #27080:** (*bechtoldt*) [Proposal] Add Github SPM label for issues
- **PR #27064:** (*twangboy*) Fixed user docs
- **PR #27072:** (*rallytime*) Back-port #26840 to 2015.8
- **PR #27060:** (*cro*) Fix grains breakage when hosts are not Linux, Windows, or SunOS
- **PR #27051:** (*rallytime*) Back-port #26953 to 2015.8
- **PR #26864:** (*terminalmage*) Only do git\_pillar preflight checks on new-style git\_pillar configs
- **PR #26967:** (*TheBigBear*) new URL for windows salt downloads
- **PR #26921:** (*terminalmage*) Get rid of error in legacy git pillar when using branch mapping notation
- **PR #26923:** (*rallytime*) Code clean up of cloud drivers and files
- **PR #27010:** (*rallytime*) Back-port #26988 to 2015.8
- **PR #26985:** (*rallytime*) Fix versionadded tag

### 20.2.27 Salt 2015.8.10 Release Notes

Version 2015.8.10 is a bugfix release for *2015.8.0*.

#### Final Release of Debian 7 Packages

Regular security support for Debian 7 ended on April 25th 2016. As a result, 2016.3.1 and 2015.8.10 will be the last Salt releases for which Debian 7 packages are created.

---

#### Mint Linux: Important Post-Upgrade Instructions

As a result of some upstream changes, the OS grain on Mint Linux is now being detected as `LinuxMint` (issue 33295). Run the following command **after you upgrade to 2015.8.10** to reset the OS grain to `Mint` and the `os_family` grain to `Debian`:

```
salt -G 'os:LinuxMint' grains.setvals '{"os': 'Mint', 'os_family': 'Debian'}"
```

---

### Changes for v2015.8.9..v2015.8.10

Salt 2015.8.10 includes fixes for the following known issues in 2015.8.9:

- [issue 33376](#): pip state broken in 2015.8.9 with pip <6.0
- [PR 33386](#): Fix traceback in logging for config validation

Since 2015.8.10 includes only two fixes, the 2015.8.9 changes list is included below for convenience:

Total Merges: **145**

Changes:

- [PR #33293](#): (*twangboy*) Fix minion start retry on Windows (2015.8)
- [22c4331](#) linux\_acl: Allow ` ` as a separation character in ACL permissions. Fixes [#31270](#) ([#33172](#)) ([#33305](#))
- [7a181f2](#) Handle more ipv6 error as an exception [#33299](#) ([#33300](#))
- [eb47a15](#) Ignore retcode when checking service's status ([#33294](#))
- [PR #33274](#): (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- [4f3596a](#) Add comment for test=true w/o changes ret and add changes dict example ([#33254](#))
- [2a30c48](#) Update Git Policy docs to match Contribution guide ([#33252](#))
- [056c273](#) Fix [#33238](#) ([#33239](#))
- [1cd34ab](#) Properly report on invalid gitfs/git\_pillar/winrepo repos ([#33245](#))
- [PR #33253](#): (*rallytime*) Update the release process docs
- [8c2c5b1](#) update 2015.8.9 release notes ([#33251](#))
- [8ee8ee3](#) Handle ipv6 error as an exception ([#33246](#))
- [855bed3](#) Check rendered YAML for invalid keys ([#33213](#))
- [6fb25a8](#) Make note of files that begin with ` \_` in master.d or minion.d dirs ([#33224](#))
- [a6dc0d2](#) Gate jnpr imports in salt.proxy.junos.py ([#33150](#))
- [64a89c4](#) Add docs for the http state ([#33222](#))
- [0a32163](#) Don't stacktrace when using --out=highstate at CLI during staterun. ([#33215](#))
- [04d714d](#) propagate opts to salt.util.http call ([#33219](#))
- [c8236c0](#) update 2015.8.9 release notes ([#33237](#))
- [PR #33217](#): (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8

- 730bec1 [2015.8] Merge forward from 2015.5 to 2015.8 (#33207)
- 379b151 Add a fetch when compiling git\_pillar for masterless minions (#33204)
- b3805d8 cloud.clouds.ec2: cache each named node (#33164)
- 86db5df Properly handle failed git commands when redirect\_stderr=True (#33203)
- 8a0950d Don't force use of global ssh\_config when git identity file is specified (#33152)
- ce07133 update 2015.8.9 release notes (#33198)
- **PR #33188:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- e9108e0 add 2015.8.9 release notes (#33161)
- 2d9919e [2015.8] Update to latest bootstrap script v2016.05.10 (#33156)
- 033bef2 Hash fileclients by opts (#33142)
- f520fa3 Back-port #31769 to 2015.8 (#33139)
- **PR #33144:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #33140:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- ad607ef If cache\_jobs: True is set, populate the local job cache when running salt-call (#33100)
- 64689a6 Fix broken parsing of usermgmt.conf on OpenBSD (#33135)
- 06a382e Add a check that the cmdline of the found proc matches (#33129)
- 10018e9 salt.utils.gitfs: fix formatting for warning messages (#33064)
- d45b599 Fix 33058 (#33099)
- **PR #33106:** (*abednarik*) Moved \_finger\_fail method to parent class.
- 20c7e10 clarify docs that map is designed to be run once. is not stateful (#33102)
- 558561d cloud.query needs to define mapper.opts (#33098)
- **PR #33096:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 22a327b salt-cloud: fix ipv6-only virtual machines (#32865)
- e788f7e modules.npm: do not log npm --version at info level (#33084)
- **PR #33081:** (*jfindlay*) ssh docs: install py-2.6 for RHEL 5
- **PR #33088:** (*isbm*) Bugfix: Restore boolean values from the repo configuration
- 2c6326f fix tests for file.blockplace to remove newline (#33082)
- **PR #32892:** (*isbm*) Resolve Zypper locks on asynchronous calls
- 3e0bf23 Add fun\_args to scheduled return data (part of #24237) (#33039)
- 264c0d4 Don't append a newline when creating new content with blockreplace (#33049)
- 54b783a Pass all data to batch.run() call when using --failhard (#33048)
- 2dbfa55 Display command output when command fails with batch + failhard options (#33050)
- add9199 Allow security\_groups kwarg for boto\_elb.present to be string or list (#33053)
- 111701c [2015.8] Merge forward from 2015.5 to 2015.8 (#33054)
- 1066063 File and User test fixes for 2015.8 on Fedora23 (#33056)
- f97b5d5 Back-port #33030 to 2015.8 (#33040)

- e90a501 Update the docs for saltutil.find\_job to be more clear/accurate (#33017)
- d3d77ce Add saltenv to the cmd.script state function (#33031)
- 3434f44 Fix syndic regression (#33021)
- 4bb3ca5 Compare uid and gid instead of name and group (#32674)
- 9ca5b02 Allow batch mode to use verbose option, as well as show\_jid. (#32996)
- 81c0fa4 Fixed glusterfs.peered output (#32955)
- 8c70d7a Clarify some arg docs (#32994)
- 00fbeb Fix boto\_secgroup\_test (#32986)
- 3362367 fix user cron on solarish operating systems (#32970)
- 07e38bc salt.log.setup: process user args before format (#32796)
- b2d7c81 doc.ref.states.ordering: clarify requisite change (#32934)
- df41d5d mode should default to `text` (#32928)
- f581a82 Remove FileClient class references from docs - it doesn't exist. (#32925)
- 31b96de Update contents\_grains option with relevant docs (#32922)
- **PR #32926:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 1cd6a45 specify volume tags in profile configuration (#32908)
- 85ca86d Update docs to warn users that -1 isn't valid for iptables insert state (#32906)
- cb68706 Allow profile options to be specified in provider file when using maps (#32900)
- 1a55fcb Clarify service state opening docs - uses `service` virtualname (#32880)
- **PR #32884:** (*terminalmage*) Fix incorrect deprecation notice
- **PR #32878:** (*jacobhammons*) added note about updating the bootstrap script in salt-cloud using th...
- **PR #32869:** (*rallytime*) Use correct config setting in cloud syndic docs
- **PR #32844:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- eb8fb6b Back-port #31139 to 2015.8 (#32868)
- 4bb5545 backport PR #32732 for issue #23714 (#32847)
- 5ea003b Add pyvmomi version warning to Getting Started with VMware docs (#32845)
- 44f08d0 Pass None as memory limit. (#32841)
- feebe69 Back-port #32813 to 2015.8 (#32839)
- 3b81031 various improvements on cloud deploy script docs (#32659)
- bf85987 update bootstrap to 2016.04.18 release (#32668)
- 83dee63 Back-port #29322 to 2015.8 (#32785)
- **PR #32787:** (*rallytime*) Back-port #32722 to 2015.8
- **PR #32786:** (*rallytime*) Back-port #32703 to 2015.8
- a6a42740 Merge branch `pr-32775` into 2015.8
- cda00f4 Improve documentation on pygit2 versions (#32779)
- 1d6d234 Properly handle minion failback failure. (#32749)

- 3751a27 Document pillar cache options (#32643)
- 35c8af3 modules.win\_dacl: consistent case of dacl constants (#32720)
- 2cd0817 Update external auth documentation to list supported matcher. (#32733)
- bba089d Check dependencies type before applying str operations (#32693)
- 3aa0605 Handle when beacon not configured and we try to enable/disable them (#32692)
- **PR #32718:** (*garethgreenaway*) Fixes to schedule.list in 2015.8
- **PR #32684:** (*captaininspiration*) Fix routes for redhat < 6
- 7cdd512 Handle a couple of arguments better (Azure) (#32683)
- aaa03bc Fix for issue 32523 (#32672)
- 21081b1 Don't access deprecated Exception.message attribute. (#32556)
- 5d1e9a4 Lower log level for pillar cache (#32655)
- **PR #32588:** (*anlutro*) Fix salt-ssh module function call argument type juggling by JSON encoding them
- 5e7edfc yumpkg: Ignore epoch in version comparison for explicit versions without an epoch (#32563)
- fea6056 Fixing critical bug to remove only the specified Host instead of the entire Host cluster (#32640)
- 0477f66 align OS grains from older SLES with current one (#32649)
- 8d46244 Prevent crash if pygit2 package is requesting re-compilation of the eâ (#32652)
- **PR #32614:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #32616:** (*rallytime*) Back-port #32547 to 2015.8
- 3047471 Fix comments value in salt.states.pkgrepo example (#32604)
- ab9da90 Revert PR #32480 and apply #32314 with fixes / documentation (#32558)
- c84c921 Better log message on minion restart if master couldn't be reached. (#32576)
- 3c81798 Don't return None from eval\_master (#32555)
- **PR #32536:** (*rallytime*) Back-port #31898 to 2015.8

- [PR #32163](#): (*rallytime*) Update nacl.config docs to use key value instead of `None'
- [PR #32166](#): (*vutny*) *salt.states.file*: correct examples with multiline YAML string
- [PR #32168](#): (*rallytime*) Lint 2015.8
- [PR #32165](#): (*terminalmage*) Make \_\_virtual\_\_ for rservice.py more robust
- [PR #32160](#): (*cachedout*) Fix beacon tutorial docs
- [PR #32145](#): (*paclat*) fixes 29817
- [PR #32133](#): (*basepi*) Pass eauth user/groups through salt-api to destination functions
- [PR #32127](#): (*rallytime*) Add runners to \_\_salt\_\_ docs
- [PR #32143](#): (*DmitryKuzmenko*) Set auth retry count to 0 if multimaster mode is failover.
- [PR #32134](#): (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- [PR #32091](#): (*clarkperkins*) Fixed the regression in 410da78
- [PR #32135](#): (*rallytime*) [2015.8] Support multiple valid option types when performing type checks
- [PR #31760](#): (*sakateka*) SMinion need wait future from eval\_master
- [PR #32106](#): (*jfindlay*) update suse master service patch
- [PR #32130](#): (*jacobhammons*) Added known issues 32004 and 32044 to 2015.8.8 release notes

- **PR #32105:** (*clarkperkins*) Fixed invalid `deploy_scripts_search_path`
- **PR #32117:** (*tomlaredo*) Fixed validation type for `file_ignore_glob`
- **PR #32113:** (*sakateka*) Fix log message for AsyncAuth initialization
- **PR #32116:** (*ticosax*) Obtain default value of `memory_swap` from the container.
- **PR #32098:** (*rallytime*) Back-port #32083 to 2015.8
- **PR #32099:** (*jacobhammons*) 2015.8.8 release docs
- **PR #32088:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #32074:** (*Xiami2012*) Fix code for proto args in `modules.iptables`
- **PR #32053:** (*basepi*) [2015.8] Fix `rabbitmq_user.present` tag handling
- **PR #32023:** (*sbreidba*) Move constant declaration into member variable to avoid issues when m...
- **PR #32026:** (*techhat*) Don't require the `decode_out` file to already exist
- **PR #32019:** (*rallytime*) Back-port #32012 to 2015.8
- **PR #32015:** (*ticosax*) [dockerng] Fix ports exposition when protocol is passed.
- **PR #31999:** (*jacobhammons*) Fixes a doc build exception caused by missing mocks for `modules.win_dacl`
- **PR #31992:** (*notpeter*) salt-cloud: add D2 and G2 EC2 instance types
- **PR #31981:** (*lloydoliver*) include rotational disks in grains under linux
- **PR #31970:** (*twangboy*) Add `apply_template_on_contents` for windows
- **PR #31960:** (*aletourneau*) fixed `ec2_get_console_output`
- **PR #31958:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 3934c66 Merge branch '2015.5' into '2015.8'
- **PR #31935:** (*twangboy*) Back port nullsoft build script from 2015.8
- **PR #31912:** (*jfindlay*) `log.mixins`: remove extermoporaneous `.record`

## 20.2.28 Salt 2015.8.11 Release Notes

Version 2015.8.11 is a bugfix release for *2015.8.0*.

### Returner Changes

- Any returner which implements a `save_load` function is now required to accept a `minions` keyword argument. All returners which ship with Salt have been modified to do so.

### New Configuration Parameter: `rotate_aes_key`

- `Rotate_aes_key` causes Salt to generate a new AES key whenever a minion key is deleted. This eliminates the chance that a deleted minion could continue to eavesdrop on communications with the master if it continues to run after its key is deleted. See the entry in the documentation for *rotate\_aes\_key*.

### Ubuntu 16.04 Packages

SaltStack is now providing official Salt 2015.8 *packages* for Ubuntu 16.04.

**Changes for v2015.8.10..v2015.8.11**

Total Merges: **122**

Changes:

- **PR #34676:** (*cachedout*) Revert ``Modify lodaer global test to use populated dunder''
- **PR #34601:** (*lorenegordon*) Clarifies the proper way to reference states
- bc63f25 Lint 34644 (#34651)
- 5036026 Adjust the mine test a little bit to give it a better chance of success (#34647)
- **PR #34642:** (*jtand*) Check that mysqladmin exists before running mysql integration tests
- **PR #34618:** (*jtand*) Network state integration test test=True
- **PR #34617:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- b90ae40 Add support for edge case when Cmd and Entrypoint can't be blanked (#34593)
- 12b579c When sorting list actual\_data, make it a list (#34590)
- 7dd8035 Gate docker unit test to check for docker (#34591)
- ae38c87 Add a bunch of documentation on getting files from other environments (#34560)
- **PR #34531:** (*terminalmage*) Support ignore\_epoch argument in version comparisons
- **PR #34545:** (*terminalmage*) Handle cases where Docker Remote API returns an empty ExecutionDriver
- **PR #34546:** (*rallytime*) Rename unit.states.boto\_secgroup to unit.states.boto\_secgroup\_test
- **PR #34537:** (*rallytime*) Rename tests.unit.simple to tests.unit.simple\_test
- fbab2f8 [2015.8] Update bootstrap script to latest stable (#34527)
- 6b8c76a Prevent many errors in the test suite in loader tests (#34521)
- c2f296c Fix wrong order of retention\_policy\_exists (#34507)
- **PR #34518:** (*terminalmage*) Fix pkg.latest integration test for non-LTS ubuntu
- **PR #34513:** (*cachedout*) Lower the log level for modules which cannot be loaded to trace
- **PR #34498:** (*rallytime*) Use -O in the wget example in the bootstrap tutorial for the develop branch
- 3ebba02 Rename some unit test files by adding \_test (#34503)
- 8722257 Improve top file merging documentation (#34505)
- 6ce7cb9 Gracefully handle non-XML output in GlusterFS execution module. (#34492)
- 7529945 Use skipTest for network state integration test (#34489)
- 0f3f87f Update dnsmasq.get\_config docs to use correct config\_file param. (#34488)
- **PR #34462:** (*terminalmage*) Use --always when available to git describe
- **PR #34467:** (*rallytime*) Back-port #34457 to 2015.8
- **PR #34432:** (*twangboy*) Fix file.append
- **PR #34429:** (*terminalmage*) Skip version checking for targeted packages in pkg.latest state
- 0a26459 Forgot reference to inotify (#34455)

- **PR #34451:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #34401:** (*terminalmage*) Use rpmdev-vercmp as a fallback for version comparison on RHEL5
- **PR #34366:** (*steverweber*) Update service.py
- **PR #34426:** (*cro*) Document that inotify is Linux only
- **PR #34392:** (*cro*) Clarify that salt-cloud doesn't get installed by bootstrap
- **PR #34373:** (*jtand*) Network state integration test
- d6af1de Optimize pkg integration tests and add a couple new tests (#34377)
- **PR #34368:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 94e0946 Back-port #34324 to 2015.8 (#34344)
- 11dc020 Making salt-ssh pass proper return codes for jinja rendering errors (#34342)
- f6bd1ad Revert py3modernize lint changes (#34339)
- **PR #34306:** (*ghedo*) Fix iptables.flush state: Do not force `filter` table when flushing
- 0c60fea Doc clarifications to file modules, addition of new *profile* log level to docs, fixed example in dnsmasq (#34323)
- b793426 Remove unnecessarily-disabled sanity check (#34325)
- **PR #34335:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- a6d3cc6 Typo in dockerio doc (#34319)
- **PR #34312:** (*rallytime*) [2015.8] Update to latest bootstrap script v2016.06.27
- **PR #34307:** (*rallytime*) Fix test example in integration testing docs
- **PR #34233:** (*thegooodduke*) ipset: fix the comment containing blank
- **PR #34257:** (*rallytime*) Use `config\_dir` setting instead of CONFIG\_DIR in gpg renderer
- **PR #34274:** (*clinta*) Don't escape source before calling managed
- **PR #34258:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #34093:** (*terminalmage*) Catch CommandExecutionError in pkg states
- **PR #34136:** (*meaksh*) Fixed behavior for SUSE OS grains in 2015.8
- 56c7267 fix regression from #33681 which causes pulling a list of s3 objects via s3.query to fail (#34208)
- 02eb331 Fix a pair of gitfs bugs (#34218)
- **PR #34182:** (*rallytime*) Handle child PIDs differently depending on the availability of psutils
- 5d3ec31 Clarify pkg.list\_repo\_pkgs docstring for held packages (#34188)
- 5bca5c4 Change target for dockerng assuming default status to Nitrogen release (#34206)
- **PR #34184:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #34176:** (*rallytime*) Back-port #34103 to 2015.8
- **PR #34179:** (*terminalmage*) Raise the correct exception when gitfs lockfile is empty
- **PR #34178:** (*terminalmage*) Remove unnecessary comment
- 6387d16 fix salt --summary to count not responding minions correctly (#34165)
- e5949ea doc: add missing dot (#34175)

- 47595d6 Typo fix (#34174)
- PR #34077: (*rallytime*) Add some grains targeting tests
- PR #34142: (*isbm*) Move log message from INFO to DEBUG.
- 79a719b Update documentation on ``refresh" behavior in pkg states (#34100)
- 6d0d52f modules.pkg int tests: skip refresh\_db upon error (#34072)
- PR #34069: (*rallytime*) Add a test to check for disconnected minion messaging
- PR #34048: (*terminalmage*) RFC: proposed fix for multiple fileserver updates in masterless runs
- PR #34011: (*rallytime*) Back-port #33948 and #34009 to 2015.8
- bca4371 Fixed a bug in the consul.py module that was preventing services (#34051)
- PR #34045: (*jacobhammons*) Updated latest release version
- f9bfcde Always make changes to minion config if set (#34020)
- e25dba4 More YAML indentation fixes in state module examples (#34030)
- PR #34018: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 7d940ae states.file: fix indentation in YAML examples (#34003)
- 4c7fac0 Remove loader test for pam module (#34002)
- PR #33990: (*jacobhammons*) Adds links to several current Salt-related projects
- PR #33983: (*twangboy*) Clarify the *account\_exists* parameter
- PR #33951: (*jfindlay*) modules.gem int tests: more fixes
- PR #33984: (*jfindlay*) Add docs and tests to disk state
- PR #33985: (*rallytime*) Write some more simple batch command tests
- 6080846 acl.ClientACL: add unit tests (#33684)
- a74f1b8 ZD 762 (#33942)
- PR #33946: (*rallytime*) Back-port #33698 to 2015.8
- PR #33952: (*rallytime*) Add base argument to salt-ssh grains wrapper for filter\_by func
- 4a80649 Adds a ``Generated on <timestamp>" line to the footer of each doc html page in the doc (#33962)
- b3ec39d Correct issue with ping on rotate with minion cache (#33765)
- PR #33888: (*jfindlay*) random.org checks
- 2dc1914 Add connecting\_settings to boto\_elb state attributes list (#33936)
- 91a2184 Wait for up to a minute for sync\_after\_install (#33917)
- PR #33877: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #33827: (*cachedout*) Fix broken locate.locate function
- PR #33839: (*cachedout*) Fix another unit test stacktrace in pkg\_resource
- PR #33840: (*cachedout*) Remove matcher tests
- PR #33836: (*cachedout*) Fixing more stupid unit tests
- PR #33805: (*jfindlay*) states.pkg int tests: skip if pkg mgr unavailable
- PR #33808: (*jfindlay*) fix some problems with the gem module integration tests

- PR #33770: (*jfindlay*) service state integration tests
- PR #33691: (*jtand*) Gem integration test
- PR #33777: (*sodium-chloride*) Fix minor docstring issue of arg being missing
- PR #33759: (*cachedout*) Catch no minions exception in batch mode
- PR #33719: (*cachedout*) Catch oserror for race condition
- PR #33712: (*meaksh*) Fix for groupadd execution module failures in SLES11 systems
- PR #33718: (*rallytime*) Back-port #33700 to 2015.8
- PR #33727: (*terminalmage*) Fix git\_pillar edge case for remote repos without a master branch
- PR #33728: (*jfindlay*) Make `configurable_test_state` configurable in test mode
- PR #33729: (*twangboy*) Add exclude option to win\_servermanager
- PR #33743: (*vutny*) Debian installation docs: drop section about community-maintained repo
- 56c0a42 Create missing jid dir if it doesn't exist (#33653)
- PR #33654: (*twangboy*) Fix win servermanager
- PR #33679: (*terminalmage*) Only compile the template contents if they evaluate to True
- PR #33685: (*jfindlay*) modules.cp.get\_url: add test for `https://`
- PR #33581: (*dincamihai*) Call zypper refresh after adding/modifying a repository
- PR #33681: (*rallytime*) Back-port #33599 to 2015.8
- PR #33396: (*babilen*) Issue 33393
- PR #33652: (*terminalmage*) Lower the log level for failed auths
- PR #33615: (*danslimmon*) Fix crash on unconnectable MySQL server (resolves #33582)
- PR #33558: (*twangboy*) Fix win servermanager
- PR #33555: (*cachedout*) Fix crashing Maintenance process
- PR #33501: (*meaksh*) unit tests for rpm.checksum() and zypper.download()
- PR #33513: (*rallytime*) Add a section to the jinja docs about escaping jinja
- PR #33520: (*jacobhammons*) Updated version numbers in the docs for the 2016.3.0 release
- PR #33507: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #33503: (*rallytime*) Add docs about minion config file in standalone minion docs
- PR #33474: (*cachedout*) Fix diskusage beacon
- PR #33465: (*meaksh*) jobs.exit\_success allow one to check if a job has executed and exit successfully
- PR #33487: (*jtand*) Add docstring examples to glance.py and nova.py [2015.8]
- PR #33481: (*rallytime*) Fix docs about etcd config options and add pillar\_opts doc
- PR #33490: (*rallytime*) Document the postgres.psql\_query function
- PR #33480: (*jfindlay*) states.service: minor doc updates
- 4f96cc1 Return full pending computer name (#33483)
- a89be5e Use six.string\_types in jobs runner (#33499)
- PR #33491: (*BlaineAtAffirm*) fix jobs.list\_jobs failing with search\_target

- **PR #33478:** (*rallytime*) Back-port #32484 to 2015.8
- **PR #33457:** (*rallytime*) Make doc formatting consistent and use correct versionadded
- 1dfa956 Don't allow a ``repo" kwarg for pkgrepo.managed (#33477)
- b4071b0 Allow for config entry to be a list in a dict for beacons (#33476)
- **PR #33469:** (*meaksh*) check the RPM signature of zypper pkg.download packages and report errors
- 00f9090 Add docs about PyYAML's 1024 character limitations for simple keys (#33459)
- 3b12f39 Prevent several minion processes on the same machine (#33464)
- c8b4f33 Make --gpg-auto-import-keys a global param when calling zypper (#33432)
- 0c4e38c Fix the saltutil.wheel function and add integration tests (#33414)
- e4f00f9 Make sure the path we're removing is present first - avoid an OSError (#33440)
- 93fd00b Avoid a syntax error by using " instead of escaped ` (#33443)
- ec60b9c Fix virtual function (#33436)
- **PR #33438:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- c9d0de4 Documentation update in file.serialize. (#33421)
- f8a90eb Fix LVM parameter devices as a pure list. Comma separated lists are cã¸ (#33398)
- 3989e5b Spelling correction. (#33406)
- 9accb53 Update windows pkg.[install|remove] error logic (#33321)
- 04ac89d Add note about reload\_modules functionality for pkg.installed (#33374)
- 637c2af Add note to absolute\_imports practice about \_\_future\_\_ import (#33377)
- d35b81d Document how to set the alias file location for alias state (#33380)
- **PR #33403:** (*jacobhammons*) 2015.8.10 release notes
- **PR #33381:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 946d27e Fix traceback in logging for config validation (#33386)
- 38fbcf8 Add note about name parameter in git\_pillar docs (#33369)
- 4925199 Add win\_pkg to list of modules that support ``version" in pkg.installed (#33362)
- 7a400a9 Add note to docs about api settings for Hipchat API v2 (#33365)
- 37e1930 Add initscripts, SystemD service units and environment files for Debian (#32857)
- **PR #33370:** (*jacobhammons*) Update docs version to 2015.8.9
- **PR #33366:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- f248003 Remove mentions of windows not supporting pkgs param (#33361)
- 4fdb097 Update job\_cache and keep\_jobs docs to be more specific to their behavior (#33328)
- 2f06918 Properly detect newer Linux Mint distros (#33359)
- d85096c Fix UnboundLocalError in git.latest (#33340)
- e602446 Describes parameters in register\_instances function (#33339)
- 5c29c65 Fix some link errors in the test writing tutorial (#33347)
- e532e58 Fix network.managed for windows (#33312)

- 11a2525 Bp 28467 calm mine (#33327)
- b897f2c import ps from psutil\_compat in beacons (#33334)
- 089c1a2 remove redundant, incorrect sudo\_runas config documentation (#33318)
- 1f7fda2 Disambiguate non-exact matches when checking if sysv service is enabled (#33324)
- 8c1f19a Allow concurrency mode in state runs if using sudo (#33325)
- ed14ef2 Fix master hanging after a request from minion with removed key. (#33333)
- daafa27 Cleanup comments in smbios.get output (fixes #33266) (#33306)
- bfe12d9 Fix iptables --match-set (#23643) (#33314)
- **PR #33308:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8

### 20.2.29 Salt 2015.8.12 Release Notes

Version 2015.8.12 is a bugfix release for *2015.8.0*.

#### Changes for v2015.8.11..v2015.8.12

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

*Generated at: 2016-08-19T16:06:27Z*

Total Merges: 57

Changes:

- **PR #35611:** (*rallytime\**) Everything in the sample master config file should be commented out
- **PR #35569:** (*\*rallytime*) Write test for multiple unless commands where 1st cmd passes and 2nd fails
- **PR #35600:** (*\*rallytime*) Update release notes for 2015.8.12
- **PR #35599:** (*rallytime*) Update release notes for 2015.8.12
- **PR #35584:** (*terminalmage*) Update linux\_sysctl tests to reflect new context key
- **PR #35575:** (*terminalmage*) Add warning about AWS flagging of nmap usage
- **PR #35577:** (*terminalmage*) Unit file changes for 2015.8.12, 2016.3.3
- **PR #35566:** (*rallytime*) Back-port #35545 to 2015.8
- **PR #35545:** (*hu-dabao*) fix-35384, fix cmd.run unless
- **PR #35492:** (*terminalmage*) Clarify config.get docstring
- **PR #35483:** (*gtmanfred*) use `__utils__` in salt.cloud
- **PR #35546:** (*whiteinge*) Salt api eauth fail gracefully
- **PR #35525:** (*UtahDave*) add missing glob import
- **PR #35540:** (*rallytime*) Whitespace fix for 2015.8
- **PR #35510:** (*terminalmage*) Better systemd integration
- **PR #35513:** (*cachedout*) Might be a good idea to be able to download the software we make
- **PR #35302:** (*Ch3LL*) Add job cache test
- **PR #35512:** (*cachedout*) Fixup 35419

- [PR #35497](#): (*deepakhj*) Fixes spacing in requirements files
- [PR #35508](#): (*terminalmage*) Add Carbon to versionadded for git.diff
- [PR #35486](#): (*rallytime*) Update bootstrap script to latest stable (2016.08.16)
- [PR #35413](#): (*cachedout*) Resolve path issues with cp.push
- [PR #35476](#): (*cachedout*) Fixup SSH bug where sudo without sudo user would break
- [PR #35471](#): (*terminalmage*) win\_pkg: Fix traceback when package is not installed
- [PR #35448](#): (*isbm*) Add ignore\_repo\_failure option to suppress zypper's exit code 106 on ...
- [PR #35451](#): (*isbm*) Bugfix: zypper mod repo unchanged
- [PR #35453](#): (*theothergraham*) fixes [#34279](#) - disk cache ttl expiry
- [PR #35459](#): (*thatch45*) Ensure that output for salt-ssh gets back
- [PR #35460](#): (*rallytime*) [2015.8] Update bootstrap script to latest stable (2016.08.15)
- [PR #35442](#): (*cachedout*) Fix cp.push\_dir pushing empty dirs
- [PR #35436](#): (*cachedout*) Minor doc fixup
- [PR #35132](#): (*sjorge*) fixes , causing lots of mayham (onchange) with 2016.3.2 for me
- [PR #35394](#): (*rallytime*) Back-port [#34573](#) to 2015.8
- [PR #34573](#): (*cedwards*) Update freebsd.rst
- [PR #35359](#): (*terminalmage*) Clean up open filehandles
- [PR #35339](#): (*isbm*) Bugfix: Prevent continuous restart, if a dependency wasn't installed
- [PR #35357](#): (*twangboy*) Fix file.recurse with clean: True on Windows (2015.8)
- [PR #35323](#): (*thatch45*) Fix issue with bad error check in salt-vt
- [PR #35325](#): (*kev009*) Fix freebsd netstat route on fbsd 10+
- [PR #35301](#): (*bobrik*) Pass port to ssh.check\_known\_host, closes [#35264](#)
- [PR #35309](#): (*terminalmage*) file.recurse: Do not convert octal mode string to int
- [PR #35290](#): (*terminalmage*) Resolve a couple bugs in orchestration output
- [PR #35211](#): (*cachedout*) Alternative sudo users for salt-ssh
- [PR #35271](#): (*bobrik*) Default state\_output\_profile to True everywhere, closes [#35166](#)
- [PR #35233](#): (*terminalmage*) Do not attempt to get fqdn\_ip{4,6} grains when ipv{4,6} grains are empty
- [PR #35202](#): (*multani*) doc: fix broken links in the test documentation page
- [PR #35236](#): (*rallytime*) Back-port [#35119](#) to 2015.8
- [PR #35119](#): (*derekmaciel*) Assume two EVRs are equal if E and V are equal but one R is missing.
- [PR #35240](#): (*derekmaciel*) Backport [#35225](#) to 2015.8
- [PR #35225](#): (*derekmaciel*) Add missing documentation for pkg.installed
- [PR #35241](#): (*terminalmage*) Ensure max recursion in gitfs results in no blob object being returned.
- [PR #35245](#): (*rallytime*) Back-port [#35039](#) to 2015.8
- [PR #35039](#): (*whiteinge*) Add saltenv support to module.run
- [PR #35249](#): (*terminalmage*) Fix regression in git.latest

- [PR #35174](#): (*rallytime*) Back-port [#35146](#) to 2015.8
- [PR #35146](#): (*cachedout*) Don't discard running beacons config when listing beacons
- [PR #34827](#): (*thatch45*) fix beacon list to include all beacons being processed
- [PR #35173](#): (*rallytime*) Back-port [#35135](#) to 2015.8
- [PR #35135](#): (*rallytime*) Add missing CLI Examples to aws\_sqs module funcs
- [PR #35145](#): (*jacobhammons*) doc version update to 2015.8.11, updates to release notes
- [PR #35114](#): (*terminalmage*) Add clarification docs on a common git\_pillar misconfiguration
- [PR #34768](#): (*hrumph*) Fixes [#34767](#)
- [PR #35043](#): (*rallytime*) Start release notes file for 2015.8.12
- [PR #35050](#): (*terminalmage*) [orchestration] Properly handle runner/wheel funcs which accept a `saltdev` argument
- [PR #35066](#): (*jfindlay*) returners.postgres\_local\_cache: do not log in \_\_virtual\_\_
- [PR #35024](#): (*bobrik*) Cache systemd unit update check per unit, closes [#34927](#)
- [PR #35026](#): (*cachedout*) Expressly deny a minion if a key cannot be found
- [PR #35000](#): (*rallytime*) Back-port [#33875](#) and [#34999](#) to 2015.8
- [PR #33875](#): (*jmesquita*) Fix naive fileserv map diff algorithm
- [PR #34994](#): (*rallytime*) Back-port [#34835](#) to 2015.8
- [PR #34835](#): (*thatch45*) Make the mine and publish combine minion and master opts in salt-ssh
- [PR #34991](#): (*cachedout*) SSH timeout
- [PR #34976](#): (*cachedout*) Refine errors in client
- [PR #34831](#): (*thatch45*) If the thin does not match, then redeploy, don't error
- [PR #34916](#): (*cachedout*) Master performance improvement
- [PR #34911](#): (*cachedout*) Backport [#34906](#)
- [PR #34906](#): (*cachedout*) Set timeout for run\_salt in test suite
- [PR #34898](#): (*hrumph*) Stop multiple refreshes during call to pkg.list\_upgrades
- [PR #34606](#): (*isbm*) Bugfix: Exit on configuration read (backport)
- [PR #34862](#): (*thatch45*) Fix salt-ssh cacheing issue
- [PR #34869](#): (*terminalmage*) Fail git.latest states with uncommitted changes when force\_reset=False
- [PR #34859](#): (*cachedout*) Fix wheel test
- [PR #34822](#): (*thatch45*) Fix salt-ssh state.high and state.low
- [PR #34847](#): (*cachedout*) Add an option to skip the verification of client\_acl users
- [PR #34827](#): (*thatch45*) fix beacon list to include all beacons being processed
- [PR #34833](#): (*rallytime*) Back-port [#28521](#) to 2015.8
- [PR #28521](#): (*gongled*) SPM: packaging doesn't work in Python 2.6. Fixed.
- [PR #34823](#): (*rallytime*) Back-port [#25276](#) to 2015.8
- [PR #25276](#): (*jacobhammons*) copy spm.1 man page during setup

- **PR #34828:** (*thatch45*) Fix #34648
- **PR #34818:** (*jtand*) Skip mysql state test if mysqladmin is not available
- **PR #34642:** (*jtand*) Check that mysqladmin exists before running mysql integration tests
- **PR #34803:** (*junovitch*) salt/state.py: set ``chunk[order] = 0` with order: first`; fixes `#24744``
- **PR #34773:** (*randomed*) Bugfix: Startup states on minions are not being written to mysql returner
- **PR #34751:** (*cachedout*) Remove unneeded config test
- **PR #34606:** (*isbm*) Bugfix: Exit on configuration read (backport)
- **PR #34754:** (*cachedout*) Disable test
- **PR #34741:** (*rallytime*) Back-port #34726 to 2015.8
- **PR #34726:** (*martinhoefling*) Always loop over updated keys in non recursive update
- **PR #34721:** (*rallytime*) Add output\_file option to master config docs
- **PR #34689:** (*Azidburn*) fix second run problems with pkg.installed using sources
- **PR #34695:** (*isbm*) Bugfix: Zypper `pkg.list_products` returns False on some empty values (2015.8)

### 20.2.30 Salt 2015.8.13 Release Notes

Version 2015.8.13 is a bugfix release for *2015.8.0*.

#### Security Fixes

CVE-2017-5192: local\_batch client external authentication not respected

The `LocalClient.cmd_batch()` method client does not accept `external_auth` credentials and so access to it from salt-api has been removed for now. This vulnerability allows code execution for already-authenticated users and is only in effect when running salt-api as the root user.

CVE-2017-5200: Salt-api allows arbitrary command execution on a salt-master via Salt's `ssh_client`

Users of Salt-API and salt-ssh could execute a command on the salt master via a hole when both systems were enabled.

We recommend everyone on the 2015.8 branch upgrade to a patched release as soon as possible.

#### Changes for v2015.8.12..v2015.8.13

Statistics:

- Total Merges: 3
- Total Issue references: 3
- Total PR references: 5

Changes:

- 3428232 Clean up tests and docs for batch execution

- 3d8f3d1 Remove batch execution from NetapiClient and Saltnado
- 97b0f64 Lintfix
- d151666 Add explanation comment
- 62f2c87 Add docstring
- 9b0a786 Explain what it is about and how to configure that
- 5ea3579 Pick up a specified roster file from the configured locations
- 3a8614c Disable custom rosters in API
- c0e5a11 Add roster disable flag

### 20.2.31 Salt 2015.8.14 Release Notes

Version 2015.8.14 is a bugfix release for *2015.8.0*.

### 20.2.32 Salt 2015.8.2 Release Notes

---

**Note:** A significant orchestrate issue #29110 was discovered during the release process of 2015.8.2, so it has not been officially released. Please use 2015.8.3 instead.

Generated at: 2015-11-13T17:24:04Z

Total Merges: 378

Changes:

- **PR #28730:** (*garethgreenaway*) Fixes to how return\_job is handled in the scheduler for the salt master.
- **PR #28848:** (*cro*) Lint
- **PR #28842:** (*cachedout*) Add transport setting to shell test
- **PR #28837:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #28827:** (*jacksonjt*) Cleanup virtual\_timer in loader
- **PR #28836:** (*cachedout*) Cast to dict to fix wheel tests in tcp
- **PR #28834:** (*cachedout*) Fix breakage in tcp server
- **PR #28804:** (*cachedout*) TCP test fixes
- **PR #28826:** (*basepi*) [2015.8] Add new tornado deps to salt-ssh thin
- **PR #28759:** (*jfindlay*) simplify stdin use of stdin in at.present state
- **PR #28824:** (*rallytime*) Back-port #28778 and #28820 to 2015.8
- **PR #28803:** (*jfindlay*) decode strings to utf-8
- **PR #28782:** (*rallytime*) Fixes to rabbitmq user state
- **PR #28789:** (*nmadhok*) Provide ability to enable/disable customization for newly create VMs using VMware salt-cloud driver
- **PR #28768:** (*mrosedale*) 2015.8

- **PR #28772:** (*rallytime*) rabbitmq.list\_user\_permissions returns a dict, not a list. Don't expect a list.
- **PR #28774:** (*rallytime*) Back-port #28725 to 2015.8
- **PR #28775:** (*rallytime*) Back-port #28740 to 2015.8
- **PR #28755:** (*rallytime*) Move most vmware driver list\_\* functions to use salt.utils.vmware functions
- **PR #28744:** (*jfindlay*) import gate elementtree
- **PR #28758:** (*jfindlay*) remove redundant logic in useradd execution module
- **PR #28757:** (*mbarrien*) Bug fix: pip command to not quote spaces in cmd line args
- **PR #28764:** (*multani*) Various documentation fixes
- **PR #28752:** (*aboe76*) Update openSUSE grain for tumbleweed
- **PR #28713:** (*hexedpackets*) Rename consul.list to consul.list\_keys.
- **PR #28719:** (*jacobhammons*) removed dependencies info from docs
- **PR #28709:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #28710:** (*rallytime*) Pass kwargs correctly to \_get\_group from get\_group\_id
- **PR #28698:** (*rallytime*) Back-port #28530 to 2015.8
- **PR #28700:** (*rallytime*) Back-port #28679 to 2015.8
- **PR #28695:** (*s0undt3ch*) [2015.8] Update to latest bootstrap script v2015.11.09
- **PR #28656:** (*clarkperkins*) #28526 fixed yumpkg module issue with pkg.installed
- **PR #28672:** (*jfindlay*) add OS grain support for SuSE Leap
- **PR #28673:** (*jfindlay*) add hidden\_opts to mount.mounted
- **PR #28667:** (*cro*) saltutil.sync\_all should sync proxymodules as well as the rest.
- **PR #28665:** (*jfindlay*) fixes to windows execution and state modules
- **PR #28660:** (*techhat*) Don't sign empty regions
- **PR #28632:** (*terminalmage*) Fixes/improvements to pkgbuild state/modules
- **PR #28658:** (*techhat*) Remove \_pkgdb\_fun() references
- **PR #28653:** (*rallytime*) Provide possible parameters for boto\_rds.present engine values
- **PR #28649:** (*bdrung*) Fix OS related grains on Debian
- **PR #28646:** (*rallytime*) Back-port #28614 to 2015.8
- **PR #28647:** (*rallytime*) Back-port #28624 to 2015.8
- **PR #28648:** (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR #28638:** (*anlutro*) Salt-SSH: Return more concise error when SSH command fails
- **PR #28644:** (*pass-by-value*) Make sure versionchanged is correct
- **PR #28615:** (*The-Loeki*) Fixes to FreeBSD pkg
- **PR #28613:** (*cachedout*) Add facility to deepcopy bound methods in Py2.6 and apply to grains
- **PR #28612:** (*rallytime*) Remove unsupported storage\_type argument for parity with boto\_rds module
- **PR #28611:** (*rallytime*) [2015.8] Be explicit about salt.utils.vmware function calls
- **PR #28610:** (*pass-by-value*) Lxc config additions

- **PR #28602:** (*nasenbaer13*) Allow setting of custom dimensions in asg alarm specification
- **PR #28596:** (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR #28593:** (*blueyed*) doc: fix typo with salt.states.file: s/preseve/preserve/
- **PR #28578:** (*twangboy*) Fixed the script... something got broke...
- **PR #28579:** (*jfindlay*) fix `__virtual__` returns: tls,uptime mods
- **PR #28584:** (*rallytime*) If AssociatePublicIpAddress is set to True, don't auto-assign eip.
- **PR #28576:** (*jacksonjtj*) Only encode the zmq message once
- **PR #28587:** (*cachedout*) Reset yaml rendering hooks to avoid leaks
- **PR #28581:** (*basepi*) Revert b4875e585a165482c4c1ddc8987d76b0a71ef1b0
- **PR #28573:** (*jacksonjtj*) Add *body* to salt.utils.http.query returns
- **PR #28564:** (*s0undt3ch*) [2015.8] Update to latest bootstrap script v2015.11.04
- **PR #28561:** (*Oro*) Issue #28527 boto\_rds.create does not work
- **PR #28560:** (*bdrung*) Fix various typos
- **PR #28550:** (*jfindlay*) check timedatectl errno and return stdout on failure
- **PR #28545:** (*jfindlay*) pass on concurrent create of jid\_dir in local\_cache
- **PR #28544:** (*rallytime*) Start moving some vmware.py cloud funcs to utils/vmware.py
- **PR #28543:** (*gtmanfred*) clean up changes for pkg.uptodate and supervisorord.dead
- **PR #28538:** (*jfindlay*) decode path and url to utf-8 in url.create
- **PR #28533:** (*jfindlay*) decode highstate error messages to utf-8
- **PR #28547:** (*nmadhok*) [Backport] [2015.8] Tasks can be in queued state instead of running
- **PR #28535:** (*techhat*) Fail gracefully if 169.254\* isn't available
- **PR #28536:** (*cro*) Default configuration file for proxy minions.
- **PR #28534:** (*rallytime*) Add versionadded directive for vpc\_name arg in boto\_secgroup.present
- **PR #28516:** (*rallytime*) Back-port #28489 to 2015.8
- **PR #28506:** (*basepi*) [2015.8] Log minion list for all rosters, at debug level
- **PR #28514:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #28502:** (*cachedout*) Lint #28427
- **PR #28464:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #28486:** (*rallytime*) Back-port #26945 to 2015.8
- **PR #28472:** (*gtmanfred*) overwrite more than one value with names
- **PR #28493:** (*rallytime*) Back-port #28492 to 2015.8
- **PR #28494:** (*whiteinge*) Fix filter\_by passing incorrect parameters to match functions
- **PR #28491:** (*rallytime*) Back-port #28388 to 2015.8
- **PR #28465:** (*twangboy*) Fix #12363: Password Expiration in Windows
- **PR #28485:** (*nasenbaer13*) Fix invalid usage of `_get_conn` causing #28484
- **PR #28454:** (*sdm24*) Fixed nodegroup doc formatting to correctly link to pillar\_opts in the master config

- [PR #28487](#): (*cachedout*) Lint 28456
- [PR #28457](#): (*sdm24*) Clarified comments for grains/core.py for ip\_interfaces, ip4\_interfac...
- [PR #28473](#): (*anlutro*) Show check\_cmd output on failure
- [PR #28460](#): (*jtand*) Skipped wipefs test if wipefs does not exist on OS
- [PR #28426](#): (*terminalmage*) pkgbuild.built: make template engine optional
- [PR #28422](#): (*cachedout*) Handle windows logging on thread\_multi [WIP]
- [PR #28425](#): (*twangboy*) Fix [#13513](#) - Reflection
- [PR #28417](#): (*rallytime*) Add note about azure sdk version to getting started docs
- [PR #28410](#): (*jacksontj*) Add retries to the zeromq.AsyncReqMessageClient
- [PR #28404](#): (*rallytime*) Back-port [#28395](#) to 2015.8
- [PR #28405](#): (*opdude*) Detect legacy versions of chocolatey correctly
- [PR #28187](#): (*sjansen*) fix at.present
- [PR #28375](#): (*merll*) Merge pillar includes correctly
- [PR #28376](#): (*ryan-lane*) Support update of route53 records with multiple values
- [PR #28377](#): (*terminalmage*) Deprecate `always' in favor of `force' in pkgbuild.built
- [PR #28380](#): (*cro*) Add missing call for service provider
- [PR #28348](#): (*jfindlay*) salt.utils.alias informs user they are using a renamed function
- [PR #28364](#): (*jtand*) In CentOS 5 the .split() causes a stacktrace.
- [PR #28361](#): (*rallytime*) Back-port [#28087](#) to 2015.8
- [PR #28360](#): (*multani*) Various documentation fixes
- [PR #28370](#): (*rallytime*) Back-port [#28276](#) to 2015.8
- [PR #28353](#): (*merll*) Consider each pillar match only once.
- [PR #28334](#): (*anlutro*) iptables needs -m comment for --comment to work
- [PR #28340](#): (*jfindlay*) sdecode file and dir lists in fileclient
- [PR #28344](#): (*ryan-lane*) Fix iptables state for non-filter tables
- [PR #28343](#): (*rallytime*) Back-port [#28342](#) to 2015.8
- [PR #28330](#): (*rallytime*) Back-port [#28305](#) to 2015.8
- [PR #28270](#): (*rallytime*) Refactor RabbitMQ Plugin State to correctly use test=true and format errors
- [PR #28269](#): (*rallytime*) Refactor rabbitmq\_user state to use test=True correctly
- [PR #28299](#): (*rallytime*) Add test for availability\_zone check to boto\_vpc\_tests
- [PR #28306](#): (*sdm24*) Updated the Nodegroup docs to include how to target nodegroups in SLS Jinja
- [PR #28308](#): (*rallytime*) Firewalld state services should use --add-service, not --new-service
- [PR #28302](#): (*DmitryKuzmenko*) Always close socket even if there is no stream.
- [PR #28282](#): (*keesbos*) Fix for \_\_env\_\_ in legacy git\_pillar
- [PR #28258](#): (*pass-by-value*) Add service module for ssh proxy example
- [PR #28294](#): (*bechtoldt*) correct a bad default value in http utility

- **PR #28185:** (*jtand*) Added single package return for `latest_version`, fixed other bug.
- **PR #28297:** (*cachedout*) Lint fix proxy junos
- **PR #28210:** (*terminalmage*) Fix for `ext_pillar` being compiled twice in legacy `git_pillar` code
- **PR #28265:** (*jfindlay*) fix blockdev execution and state modules
- **PR #28266:** (*rallytime*) Back-port #28260 to 2015.8
- **PR #28253:** (*rallytime*) Back-port #28063 to 2015.8
- **PR #28231:** (*rallytime*) Make sure we're comparing strings when getting images in the DO driver
- **PR #28224:** (*techhat*) Optimize `create_repo` for large packages
- **PR #28214:** (*rallytime*) Don't stacktrace if invalid credentials are passed to `boto_route53` state
- **PR #28228:** (*rallytime*) Back-port #27562 to 2015.8
- **PR #28232:** (*rallytime*) Add documentation to supply the `ssh_username`: `freebsd` config to DO docs
- **PR #28198:** (*jacobhammons*) Added note regarding missing `spm` exe on Debian/Ubuntu
- **PR #28182:** (*erchn*) Some fixes for nova driver for Rackspace
- **PR #28181:** (*rallytime*) Revamp `firewalld` state to be more stateful.
- **PR #28176:** (*cro*) Add ping function
- **PR #28167:** (*The-Loeki*) `file.serialize` needs to add a final newline to serialized files
- **PR #28168:** (*rallytime*) Make sure availability zone gets passed in `boto_vpc` module when creating subnet
- **PR #28148:** (*basepi*) [2015.8] Only expand nodegroups to lists if there is a nested nodegroup
- **PR #28155:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #28149:** (*pass-by-value*) Add clarification to cloud profile doc about host
- **PR #28146:** (*cachedout*) Lint `dracr.py`
- **PR #28141:** (*rallytime*) Don't use RAM for root disk size in `linode.py`
- **PR #28143:** (*jtand*) Removed blank line at end of `chassis.py`
- **PR #28021:** (*blueyed*) Handle includes in `include_config` recursively
- **PR #28095:** (*rallytime*) Back-port #28001 to 2015.8
- **PR #28096:** (*rallytime*) Back-port #28061 to 2015.8
- **PR #28139:** (*rallytime*) Back-port #28103 to 2015.8
- **PR #28098:** (*jackson tj*) For all multi-part messages, check the headers. If the header is not ...
- **PR #28134:** (*bernieke*) fix unicode pillar values #3436
- **PR #28076:** (*redmcg*) Replace option ``i'` with an explicit `queryformat`
- **PR #28119:** (*jackson tj*) Check if the remote exists before casting to a string.
- **PR #28105:** (*jfindlay*) add reason for not loading `localemod`
- **PR #28108:** (*cachedout*) Set logfile permissions correctly
- **PR #27922:** (*cro*) WIP States/Modules for managing Dell FX2 chassis via salt-proxy
- **PR #28104:** (*pass-by-value*) Add documentation for proxy minion `ssh`
- **PR #28020:** (*DmitryKuzmenko*) LazyLoader `deepcopy` fix.

- **PR #27933:** (*eliasp*) Provide all git pillar dirs in `opts[pillar_roots]`
- **PR #28013:** (*rallytime*) Back-port #27891 to 2015.8
- **PR #28018:** (*rallytime*) Add example to Writing Grains of how grains can be loaded twice
- **PR #28084:** (*cachedout*) #28069 with lint
- **PR #28079:** (*The-Loeki*) Fix for trace dump on failing imports for win32com & pythoncom 4 win\_task
- **PR #28081:** (*The-Loeki*) fix for glance state trace error on import failure
- **PR #28066:** (*jacksontj*) Use the generic `text` attribute, not `.body` of the handler
- **PR #28019:** (*rallytime*) Clean up version added and deprecated msgs to be accurate
- **PR #28058:** (*rallytime*) Back-port #28041 to 2015.8
- **PR #28055:** (*rallytime*) Back-port #28043 to 2015.8
- **PR #28046:** (*pass-by-value*) Add pkg install and remove functions
- **PR #28050:** (*ryan-lane*) Use a better method for checking dynamodb table existence
- **PR #28042:** (*jfindlay*) fix repo path in ubuntu installation documentation
- **PR #28033:** (*twangboy*) Fixed win\_useradd.py
- **PR #28027:** (*cro*) Make ssh conn persistent.
- **PR #28029:** (*jacobhammons*) Updated release notes with additional CVE information
- **PR #28022:** (*jacobhammons*) Updated Debian and Ubuntu repo paths with new structure for 2015.8.1
- **PR #27983:** (*rallytime*) Pip state run result should be False, not None, if installation error occurs.
- **PR #27991:** (*twangboy*) Fix for #20678
- **PR #27997:** (*rallytime*) Remove note about pip bug with pip v1 vs pip v2 return codes
- **PR #27994:** (*jtand*) Fix schedule\_test failure
- **PR #27992:** (*cachedout*) Make load beacon config into list
- **PR #28003:** (*twangboy*) Fix #26336
- **PR #27984:** (*rallytime*) Versionadded for clean\_file option for pkgrepo
- **PR #27989:** (*ryan-lane*) Do not try to remove the main route table association
- **PR #27982:** (*pass-by-value*) Add example for salt-proxy over SSH
- **PR #27985:** (*jacobhammons*) Changed current release to 8.1 and added CVEs to release notes
- **PR #27979:** (*cachedout*) Fix regression with key whitespace
- **PR #27977:** (*cachedout*) Decode unicode names in fileclient/server
- **PR #27981:** (*jtand*) Fixed trailing whitespace lint
- **PR #27969:** (*jeffreyctang*) fix parse of { on next line
- **PR #27978:** (*terminalmage*) Add note about dockerng.inspect\_image usage
- **PR #27955:** (*pass-by-value*) Bp 27868
- **PR #27953:** (*The-Loeki*) Fix CloudStack cloud for new `driver` syntax
- **PR #27965:** (*ryan-lane*) Fail in boto\_asg.present if alarms fail
- **PR #27958:** (*twangboy*) Added new functionality to win\_task.py

- PR #27959: (*techhat*) Change `__opts__` to `self.opts`
- PR #27943: (*rallytime*) Back-port #27910 to 2015.8
- PR #27944: (*rallytime*) Back-port #27909 to 2015.8
- PR #27946: (*jtand*) Changed grain to look at `osmajorrelease` instead of `osrelease`
- PR #27914: (*rallytime*) Use `eipalloc` instead of `eni` in EC2 interface properties example
- PR #27926: (*rallytime*) Back-port #27905 to 2015.8
- PR #27927: (*ryan-lane*) Do not manage ingress or egress rules if set to None
- PR #27928: (*rallytime*) Back-port #27908 to 2015.8
- PR #27676: (*ticosax*) [dockerng] WIP No more runtime args passed to `docker.start()`
- PR #27885: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #27882: (*twangboy*) Created `win_task.py` module
- PR #27802: (*terminalmage*) Correct warning logging when update lock is present for `git_pillar/winrepo`, add runner function for clearing `git_pillar/winrepo` locks
- PR #27886: (*rallytime*) Handle group lists as well as comma-separated group strings.
- PR #27746: (*anlutro*) timezone module: handle `timedatectl` errors
- PR #27816: (*anlutro*) Make `system.reboot` use `shutdown -r` when available
- PR #27874: (*rallytime*) Add mention of Periodic Table naming scheme to deprecation docs
- PR #27883: (*terminalmage*) Work around `--is-ancestor` not being present in `git-merge-base` before git 1.8.0
- PR #27877: (*rallytime*) Back-port #27774 to 2015.8
- PR #27878: (*rallytime*) Use `apache2ctl` binary on SUSE in `apache` module
- PR #27879: (*cro*) Add docs for 2015.8.2+ changes to proxies
- PR #27731: (*cro*) Add `__proxy__` to replace `opts['proxymodule']`
- PR #27745: (*anlutro*) Add `pip_upgrade` arg to `virtualenv.managed` state
- PR #27809: (*ticosax*) [dockerng] Remove `dockerng.ps` caching
- PR #27859: (*ticosax*) [dockerng] Clarify doc port bindings
- PR #27748: (*multani*) Fix #8646
- PR #27850: (*rallytime*) Back-port #27722 to 2015.8
- PR #27851: (*rallytime*) Back-port #27771 to 2015.8
- PR #27833: (*jfindlay*) decode path before string ops in `fileclient`
- PR #27837: (*jfindlay*) reverse truth in `python_shell` documentation
- PR #27860: (*flavio*) Fix OS related grains on openSUSE and SUSE Linux Enterprise
- PR #27768: (*rallytime*) Clean up bootstrap function to be slightly cleaner
- PR #27797: (*isbm*) Zypper module clusterfix
- PR #27849: (*rallytime*) Don't require a size parameter for proxmox profiles
- PR #27827: (*techhat*) Add additional error checking to SPM
- PR #27826: (*martinhoefling*) Fixes #27825

- **PR #27585:** (*ryan-lane*) Fix undefined variable in `cron state` module

## 20.2.33 Salt 2015.8.3 Release Notes

### Security Fix

CVE-2015-8034: Saving `state.sls` cache data to disk with insecure permissions

This affects users of the `state.sls` function. The state run cache on the minion was being created with incorrect permissions. This file could potentially contain sensitive data that was inserted via `jinja` into the state SLS files. The permissions for this file are now being set correctly. Thanks to `@zmalone` for bringing this issue to our attention.

### Changes

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Changes:

- **PR #29172:** (*basepi*) [2015.8] Backport new `philips_hue` proxy features from `develop`
- **PR #29167:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #29141:** (*optix2000*) Add test case for `require: sls` with only `import` statements
- **PR #29072:** (*terminalmage*) Several `gitfs/git_pillar` fixes
- **PR #29118:** (*ticosax*) [`dockerng`] Add networking capabilities
- **PR #29145:** (*anlutro*) Remove duplicate `import` of `salt.utils.s3`
- **PR #29148:** (*lomeroy*) correcting parameter calls to `boto get_zone/create_zone` functions in ...
- **PR #29108:** (*lorenogordon*) Enforce `length` as an `int`, fixes `#29107`
- **PR #29125:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #29126:** (*fcrozat*) Fix deployment when `umask` is non-standard
- **PR #29124:** (*rallytime*) Back-port `#28130` to 2015.8
- **PR #29076:** (*RealKelsar*) We can't query installed use flags for a non installed `pkg`
- **PR #29097:** (*rallytime*) Back-port `#29070` to 2015.8
- **PR #29090:** (*gtmanfred*) clean up `novaclient` module
- **PR #29095:** (*terminalmage*) Add warning about `pygit2` API instability

- [PR #28919](#): (*cro*) Update Philips Hue proxy minion to support `__proxy__` instead of `proxymodule` stored in `__opts__`
- [PR #29065](#): (*cachedout*) Handle failures inside python's inspect if a module is reloaded
- [PR #29057](#): (*paulnivin*) Add local file support for `file.managed` source list
- [PR #29017](#): (*jfindlay*) pagerduty runner: add missing `salt.utils` import
- [PR #29039](#): (*anlutro*) Allow passing list of pip packages to `virtualenv.managed`
- [PR #29047](#): (*schwing*) Fix `salt.modules.gpg.import_key` exception: ``GPG_1_3_1` referenced before assignment'
- [PR #29050](#): (*terminalmage*) Make `git_pillar` global config option docs more prominent
- [PR #29048](#): (*nmadhok*) Fix incorrect debug log statement
- [PR #29024](#): (*jfindlay*) cache runner test: add new unit tests
- [PR #28967](#): (*cro*) Fix some issues with password changes
- [PR #29020](#): (*basepi*) [2015.8] Add special list-only nodegroup support to `salt-ssh`
- [PR #28970](#): (*terminalmage*) Properly handle non-string `saltenvs`
- [PR #28959](#): (*rallytime*) Add blade password example and make note of timeout
- [PR #29000](#): (*kiorky*) [Mergeable] Fix up LXC
- [PR #29014](#): (*jfindlay*) `systemd` module: remove unneeded `col` command
- [PR #28983](#): (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- [PR #28969](#): (*rallytime*) Back-port [#28825](#) to 2015.8
- [PR #28787](#): (*chrigl*) closes [#28784](#)
- [PR #28944](#): (*rallytime*) The `ret` result must contain ``name'`, not ``chassis_name'` for the state compiler.
- [PR #28957](#): (*terminalmage*) Fix version number for new state option
- [PR #28950](#): (*DmitryKuzmenko*) [PR 28812](#) which test fix
- [PR #28812](#): (*isbm*) Enhance ``which'` decorator reliability
- [PR #28934](#): (*terminalmage*) `git.latest`: Add `update_head` option to prevent local HEAD from being updated
- [PR #28937](#): (*rallytime*) Update `dellchassis` state example to use correct jinja syntax
- [PR #28889](#): (*jfindlay*) state compiler: relax aggregate conditional check
- [PR #28921](#): (*rallytime*) Back-port [#25470](#) to 2015.8
- [PR #28922](#): (*rallytime*) Change 2015.8.2 release note title to reflect proper version
- [PR #28891](#): (*jfindlay*) `rh_service` module: fix logic in `_chkconfig_is_enabled`
- [PR #28892](#): (*jfindlay*) `grains.core`: correctly identify SLES 11 `distrib_id`
- [PR #28910](#): (*lorenegordon*) Fix `winrepo` command in windows pkg mgmt doc
- [PR #28896](#): (*rallytime*) Back-port [#28855](#) to 2015.8
- [PR #28895](#): (*rallytime*) Back-port [#28823](#) to 2015.8
- [PR #28885](#): (*kt97679*) fix for: `service.enabled` fails on xen server [#28754](#)
- [PR #28880](#): (*terminalmage*) Add ``profile'` loglevel
- [PR #28882](#): (*basepi*) [2015.8] `salt-ssh`: Check return type to make sure it's an error

- **PR #28867:** (*rallytime*) [fx2 grains] Grains functions should return dictionaries
- **PR #28863:** (*mhoogendoorn*) Fix ebuild.install causing extra refresh\_db calls.
- **PR #28865:** (*jfindlay*) add 2015.8.2 release notes
- **PR #28730:** (*garethgreenaway*) Fixes to how return\_job is handled in the scheduler for the salt master.
- **PR #28848:** (*cro*) Lint
- **PR #28842:** (*cachedout*) Add transport setting to shell test
- **PR #28837:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #28827:** (*jacksonjtj*) Cleanup virtual\_timer in loader
- **PR #28836:** (*cachedout*) Cast to dict to fix wheel tests in tcp
- **PR #28834:** (*cachedout*) Fix breakage in tcp server
- **PR #28804:** (*cachedout*) TCP test fixes
- **PR #28826:** (*basepi*) [2015.8] Add new tornado deps to salt-ssh thin
- **PR #28759:** (*jfindlay*) simplify stdin use of stdin in at.present state
- **PR #28824:** (*rallytime*) Back-port #28778 and #28820 to 2015.8
- **PR #28803:** (*jfindlay*) decode strings to utf-8
- **PR #28782:** (*rallytime*) Fixes to rabbitmq user state
- **PR #28789:** (*nmadhok*) Provide ability to enable/disable customization for newly create VMs using VMware salt-cloud driver
- **PR #28768:** (*mrosedale*) 2015.8
- **PR #28772:** (*rallytime*) rabbitmq.list\_user\_permissions returns a dict, not a list. Don't expect a list.
- **PR #28774:** (*rallytime*) Back-port #28725 to 2015.8
- **PR #28775:** (*rallytime*) Back-port #28740 to 2015.8
- **PR #28755:** (*rallytime*) Move most vmware driver list\_\* functions to use salt.utils.vmware functions
- **PR #28744:** (*jfindlay*) import gate elementtree
- **PR #28758:** (*jfindlay*) remove redundant logic in useradd execution module
- **PR #28757:** (*mbarrien*) Bug fix: pip command to not quote spaces in cmd line args
- **PR #28764:** (*multani*) Various documentation fixes
- **PR #28752:** (*aboe76*) Update openSUSE grain for tumbleweed
- **PR #28713:** (*hexedpackets*) Rename consul.list to consul.list\_keys.
- **PR #28719:** (*jacobhammons*) removed dependencies info from docs
- **PR #28709:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #28710:** (*rallytime*) Pass kwargs correctly to \_get\_group from get\_group\_id
- **PR #28698:** (*rallytime*) Back-port #28530 to 2015.8
- **PR #28700:** (*rallytime*) Back-port #28679 to 2015.8
- **PR #28695:** (*s0undt3ch*) [2015.8] Update to latest bootstrap script v2015.11.09
- **PR #28656:** (*clarkperkins*) #28526 fixed yumpkg module issue with pkg.installed

- **PR #28672:** (*jfindlay*) add OS grain support for SuSE Leap
- **PR #28673:** (*jfindlay*) add hidden\_opts to mount.mounted
- **PR #28667:** (*cro*) saltutil.sync\_all should sync proxymodules as well as the rest.
- **PR #28665:** (*jfindlay*) fixes to windows execution and state modules
- **PR #28660:** (*techhat*) Don't sign empty regions
- **PR #28632:** (*terminalmage*) Fixes/improvements to pkgbuild state/modules
- **PR #28658:** (*techhat*) Remove \_pkgdb\_fun() references
- **PR #28653:** (*rallytime*) Provide possible parameters for boto\_rds.present engine values
- **PR #28649:** (*bdrung*) Fix OS related grains on Debian
- **PR #28646:** (*rallytime*) Back-port #28614 to 2015.8
- **PR #28647:** (*rallytime*) Back-port #28624 to 2015.8
- **PR #28648:** (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR #28638:** (*anlutro*) Salt-SSH: Return more concise error when SSH command fails
- **PR #28644:** (*pass-by-value*) Make sure versionchanged is correct
- **PR #28615:** (*The-Loeki*) Fixes to FreeBSD pkg
- **PR #28613:** (*cachedout*) Add facility to deepcopy bound methods in Py2.6 and apply to grains
- **PR #28612:** (*rallytime*) Remove unsupported storage\_type argument for parity with boto\_rds module
- **PR #28611:** (*rallytime*) [2015.8] Be explicit about salt.utils.vmware function calls
- **PR #28610:** (*pass-by-value*) Lxc config additions
- **PR #28602:** (*nasenbaer13*) Allow setting of custom dimensions in asg alarm specification
- **PR #28596:** (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR #28593:** (*blueyed*) doc: fix typo with salt.states.file: s/preseve/preserve/
- **PR #28578:** (*twangboy*) Fixed the script... something got broke...
- **PR #28579:** (*jfindlay*) fix \_\_virtual\_\_ returns: tls,uptime mods
- **PR #28584:** (*rallytime*) If AssociatePublicIpAddress is set to True, don't auto-assign eip.
- **PR #28576:** (*jackson tj*) Only encode the zmq message once
- **PR #28587:** (*cachedout*) Reset yaml rendering hooks to avoid leaks
- **PR #28581:** (*basepi*) Revert b4875e585a165482c4c1ddc8987d76b0a71ef1b0
- **PR #28573:** (*jackson tj*) Add body to salt.utils.http.query returns
- **PR #28564:** (*s0undt3ch*) [2015.8] Update to latest bootstrap script v2015.11.04
- **PR #28561:** (*Oro*) Issue #28527 boto\_rds.create does not work
- **PR #28560:** (*bdrung*) Fix various typos
- **PR #28550:** (*jfindlay*) check timedatectl errno and return stdout on failure
- **PR #28545:** (*jfindlay*) pass on concurrent create of jid\_dir in local\_cache
- **PR #28544:** (*rallytime*) Start moving some vmware.py cloud funcs to utils/vmware.py
- **PR #28543:** (*gtmanfred*) clean up changes for pkg.uptodate and supervisorord.dead

- **PR #28538:** (*jfindlay*) decode path and url to utf-8 in url.create
- **PR #28533:** (*jfindlay*) decode highstate error messages to utf-8
- **PR #28547:** (*nmadhok*) [Backport] [2015.8] Tasks can be in queued state instead of running
- **PR #28535:** (*techhat*) Fail gracefully if 169.254\* isn't available
- **PR #28536:** (*cro*) Default configuration file for proxy minions.
- **PR #28534:** (*rallytime*) Add versionadded directive for vpc\_name arg in boto\_secgroup.present
- **PR #28516:** (*rallytime*) Back-port #28489 to 2015.8
- **PR #28506:** (*basepi*) [2015.8] Log minion list for all rosters, at debug level
- **PR #28514:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #28502:** (*cachedout*) Lint #28427
- **PR #28464:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #28486:** (*rallytime*) Back-port #26945 to 2015.8
- **PR #28472:** (*gtmanfred*) overwrite more than one value with names
- **PR #28493:** (*rallytime*) Back-port #28492 to 2015.8
- **PR #28494:** (*whiteinge*) Fix filter\_by passing incorrect parameters to match functions
- **PR #28491:** (*rallytime*) Back-port #28388 to 2015.8
- **PR #28465:** (*twangboy*) Fix #12363: Password Expiration in Windows
- **PR #28485:** (*nasenbaer13*) Fix invalid usage of \_get\_conn causing #28484
- **PR #28454:** (*sdm24*) Fixed nodegroup doc formatting to correctly link to pillar\_opts in the master config
- **PR #28487:** (*cachedout*) Lint 28456
- **PR #28457:** (*sdm24*) Clarified comments for grains/core.py for ip\_interfaces, ip4\_interfac...
- **PR #28473:** (*anlutro*) Show check\_cmd output on failure
- **PR #28460:** (*jtand*) Skipped wipefs test if wipefs does not exist on OS
- **PR #28426:** (*terminalmage*) pkgbuild.built: make template engine optional
- **PR #28422:** (*cachedout*) Handle windows logging on thread\_multi [WIP]
- **PR #28425:** (*twangboy*) Fix #13513 - Reflection
- **PR #28417:** (*rallytime*) Add note about azure sdk version to getting started docs
- **PR #28410:** (*jackson tj*) Add retries to the zeromq.AsyncReqMessageClient
- **PR #28404:** (*rallytime*) Back-port #28395 to 2015.8
- **PR #28405:** (*opdude*) Detect legacy versions of chocolatey correctly
- **PR #28187:** (*sjansen*) fix at.present
- **PR #28375:** (*merll*) Merge pillar includes correctly
- **PR #28376:** (*ryan-lane*) Support update of route53 records with multiple values
- **PR #28377:** (*terminalmage*) Deprecate `always` in favor of `force` in pkgbuild.built
- **PR #28380:** (*cro*) Add missing call for service provider
- **PR #28348:** (*jfindlay*) salt.utils.alias informs user they are using a renamed function

- **PR #28364:** (*jtand*) In CentOS 5 the `.split()` causes a stacktrace.
- **PR #28361:** (*rallytime*) Back-port #28087 to 2015.8
- **PR #28360:** (*multani*) Various documentation fixes
- **PR #28370:** (*rallytime*) Back-port #28276 to 2015.8
- **PR #28353:** (*merll*) Consider each pillar match only once.
- **PR #28334:** (*anlutro*) iptables needs `-m` comment for `--comment` to work
- **PR #28340:** (*jfindlay*) `sdecode` file and dir lists in `fileclient`
- **PR #28344:** (*ryan-lane*) Fix iptables state for non-filter tables
- **PR #28343:** (*rallytime*) Back-port #28342 to 2015.8
- **PR #28330:** (*rallytime*) Back-port #28305 to 2015.8
- **PR #28270:** (*rallytime*) Refactor RabbitMQ Plugin State to correctly use `test=true` and format errors
- **PR #28269:** (*rallytime*) Refactor `rabbitmq_user` state to use `test=True` correctly
- **PR #28299:** (*rallytime*) Add test for `availability_zone` check to `boto_vpc_tests`
- **PR #28306:** (*sdm24*) Updated the Nodegroup docs to include how to target nodegroups in SLS Jinja
- **PR #28308:** (*rallytime*) `firewalld` state services should use `--add-service`, not `--new-service`
- **PR #28302:** (*DmitryKuzmenko*) Always close socket even if there is no stream.
- **PR #28282:** (*keesbos*) Fix for `__env__` in legacy `git_pillar`
- **PR #28258:** (*pass-by-value*) Add service module for ssh proxy example
- **PR #28294:** (*bechtoldt*) correct a bad default value in `http` utility
- **PR #28185:** (*jtand*) Added single package return for `latest_version`, fixed other bug.
- **PR #28297:** (*cachedout*) Lint fix proxy `junos`
- **PR #28210:** (*terminalmage*) Fix for `ext_pillar` being compiled twice in legacy `git_pillar` code
- **PR #28265:** (*jfindlay*) fix `blockdev` execution and state modules
- **PR #28266:** (*rallytime*) Back-port #28260 to 2015.8
- **PR #28253:** (*rallytime*) Back-port #28063 to 2015.8
- **PR #28231:** (*rallytime*) Make sure we're comparing strings when getting images in the DO driver
- **PR #28224:** (*techhat*) Optimize `create_repo` for large packages
- **PR #28214:** (*rallytime*) Don't stacktrace if invalid credentials are passed to `boto_route53` state
- **PR #28228:** (*rallytime*) Back-port #27562 to 2015.8
- **PR #28232:** (*rallytime*) Add documentation to supply the `ssh_username: freebsd` config to DO docs
- **PR #28198:** (*jacobhammons*) Added note regarding missing `spm` exe on Debian/Ubuntu
- **PR #28182:** (*erchn*) Some fixes for nova driver for Rackspace
- **PR #28181:** (*rallytime*) Revamp `firewalld` state to be more stateful.
- **PR #28176:** (*cro*) Add ping function
- **PR #28167:** (*The-Loeki*) `file.serialize` needs to add a final newline to serialized files
- **PR #28168:** (*rallytime*) Make sure availability zone gets passed in `boto_vpc` module when creating subnet

- **PR #28148:** (*basepi*) [2015.8] Only expand nodegroups to lists if there is a nested nodegroup
- **PR #28155:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #28149:** (*pass-by-value*) Add clarification to cloud profile doc about host
- **PR #28146:** (*cachedout*) Lint dracr.py
- **PR #28141:** (*rallytime*) Don't use RAM for root disk size in linode.py
- **PR #28143:** (*jtand*) Removed blank line at end of chassis.py
- **PR #28021:** (*blueyed*) Handle includes in *include\_config* recursively
- **PR #28095:** (*rallytime*) Back-port #28001 to 2015.8
- **PR #28096:** (*rallytime*) Back-port #28061 to 2015.8
- **PR #28139:** (*rallytime*) Back-port #28103 to 2015.8
- **PR #28098:** (*jacksontj*) For all multi-part messages, check the headers. If the header is not ...
- **PR #28134:** (*bernieke*) fix unicode pillar values #3436
- **PR #28076:** (*redmcg*) Replace option `i' with an explicit queryformat
- **PR #28119:** (*jacksontj*) Check if the remote exists before casting to a string.
- **PR #28105:** (*jfindlay*) add reason for not loading localemod
- **PR #28108:** (*cachedout*) Set logfile permissions correctly
- **PR #27922:** (*cro*) WIP States/Modules for managing Dell FX2 chassis via salt-proxy
- **PR #28104:** (*pass-by-value*) Add documentation for proxy minion ssh
- **PR #28020:** (*DmitryKuzmenko*) LazyLoader deepcopy fix.
- **PR #27933:** (*eliasp*) Provide all git pillar dirs in *opts[pillar\_roots]*
- **PR #28013:** (*rallytime*) Back-port #27891 to 2015.8
- **PR #28018:** (*rallytime*) Add example to Writing Grains of how grains can be loaded twice
- **PR #28084:** (*cachedout*) #28069 with lint
- **PR #28079:** (*The-Loeki*) Fix for trace dump on failing imports for win32com & pythoncom 4 win\_task
- **PR #28081:** (*The-Loeki*) fix for glance state trace error on import failure
- **PR #28066:** (*jacksontj*) Use the generic *text* attribute, not *.body* of the handler
- **PR #28019:** (*rallytime*) Clean up version added and deprecated msgs to be accurate
- **PR #28058:** (*rallytime*) Back-port #28041 to 2015.8
- **PR #28055:** (*rallytime*) Back-port #28043 to 2015.8
- **PR #28046:** (*pass-by-value*) Add pkg install and remove functions
- **PR #28050:** (*ryan-lane*) Use a better method for checking dynamodb table existence
- **PR #28042:** (*jfindlay*) fix repo path in ubuntu installation documentation
- **PR #28033:** (*twangboy*) Fixed win\_useradd.py
- **PR #28027:** (*cro*) Make ssh conn persistent.
- **PR #28029:** (*jacobhammons*) Updated release notes with additional CVE information
- **PR #28022:** (*jacobhammons*) Updated Debian and Ubuntu repo paths with new structure for 2015.8.1

- **PR #27983:** (*rallytime*) Pip state run result should be False, not None, if installation error occurs.
- **PR #27991:** (*twangboy*) Fix for #20678
- **PR #27997:** (*rallytime*) Remove note about pip bug with pip v1 vs pip v2 return codes
- **PR #27994:** (*jtand*) Fix schedule\_test failure
- **PR #27992:** (*cachedout*) Make load beacon config into list
- **PR #28003:** (*twangboy*) Fix #26336
- **PR #27984:** (*rallytime*) Versionadded for clean\_file option for pkgrepo
- **PR #27989:** (*ryan-lane*) Do not try to remove the main route table association
- **PR #27982:** (*pass-by-value*) Add example for salt-proxy over SSH
- **PR #27985:** (*jacobhammons*) Changed current release to 8.1 and added CVEs to release notes
- **PR #27979:** (*cachedout*) Fix regression with key whitespace
- **PR #27977:** (*cachedout*) Decode unicode names in fileclient/server
- **PR #27981:** (*jtand*) Fixed trailing whitespace lint
- **PR #27969:** (*jeffreycatang*) fix parse of { on next line
- **PR #27978:** (*terminalmage*) Add note about dockerng.inspect\_image usage
- **PR #27955:** (*pass-by-value*) Bp 27868
- **PR #27953:** (*The-Loeki*) Fix CloudStack cloud for new `driver' syntax
- **PR #27965:** (*ryan-lane*) Fail in boto\_asg.present if alarms fail
- **PR #27958:** (*twangboy*) Added new functionality to win\_task.py
- **PR #27959:** (*techhat*) Change \_\_opts\_\_ to self.opts
- **PR #27943:** (*rallytime*) Back-port #27910 to 2015.8
- **PR #27944:** (*rallytime*) Back-port #27909 to 2015.8
- **PR #27946:** (*jtand*) Changed grain to look at osmajorrelease instead of osrelease
- **PR #27914:** (*rallytime*) Use eipalloc instead of eni in EC2 interface properties example
- **PR #27926:** (*rallytime*) Back-port #27905 to 2015.8
- **PR #27927:** (*ryan-lane*) Do not manage ingress or egress rules if set to None
- **PR #27928:** (*rallytime*) Back-port #27908 to 2015.8
- **PR #27676:** (*ticosax*) [dockerng] WIP No more runtime args passed to docker.start()
- **PR #27885:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #27882:** (*twangboy*) Created win\_task.py module
- **PR #27802:** (*terminalmage*) Correct warning logging when update lock is present for git\_pillar/winrepo, add runner function for clearing git\_pillar/winrepo locks
- **PR #27886:** (*rallytime*) Handle group lists as well as comma-separated group strings.
- **PR #27746:** (*anlutro*) timezone module: handle timedatectl errors
- **PR #27816:** (*anlutro*) Make system.reboot use *shutdown -r* when available
- **PR #27874:** (*rallytime*) Add mention of Periodic Table naming scheme to deprecation docs

- **PR #27883:** (*terminalmage*) Work around --is-ancestor not being present in git-merge-base before git 1.8.0
- **PR #27877:** (*rallytime*) Back-port #27774 to 2015.8
- **PR #27878:** (*rallytime*) Use apache2ctl binary on SUSE in apache module
- **PR #27879:** (*cro*) Add docs for 2015.8.2+ changes to proxies
- **PR #27731:** (*cro*) Add \_\_proxy\_\_ to replace opts['proxymodule']
- **PR #27745:** (*anlutro*) Add pip\_upgrade arg to virtualenv.managed state
- **PR #27809:** (*ticosax*) [dockerng] Remove dockerng.ps caching
- **PR #27859:** (*ticosax*) [dockerng] Clarify doc port bindings
- **PR #27748:** (*multani*) Fix #8646
- **PR #27850:** (*rallytime*) Back-port #27722 to 2015.8
- **PR #27851:** (*rallytime*) Back-port #27771 to 2015.8
- **PR #27833:** (*jfindlay*) decode path before string ops in fileclient
- **PR #27837:** (*jfindlay*) reverse truth in python\_shell documentation
- **PR #27860:** (*flavio*) Fix OS related grains on openSUSE and SUSE Linux Enterprise
- **PR #27768:** (*rallytime*) Clean up bootstrap function to be slightly cleaner
- **PR #27797:** (*isbm*) Zypper module clusterfix
- **PR #27849:** (*rallytime*) Don't require a size parameter for proxmox profiles
- **PR #27827:** (*techhat*) Add additional error checking to SPM
- **PR #27826:** (*martinhoefling*) Fixes #27825
- **PR #27824:** (*techhat*) Update Azure errors
- **PR #27795:** (*eguyen*) better change reporting for postgres\_user groups
- **PR #27799:** (*terminalmage*) Fix usage of identity file in git.latest
- **PR #27717:** (*pass-by-value*) Proxy beacon example
- **PR #27793:** (*anlutro*) update code that changes log level of salt-ssh shim command
- **PR #27761:** (*terminalmage*) Merge git pillar data instead of using dict.update()
- **PR #27741:** (*ticosax*) [dockerng] pass filters argument to dockerng.ps
- **PR #27760:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #27757:** (*jfindlay*) fix virtual fcn return doc indentation
- **PR #27754:** (*rallytime*) Change test.nop version directive to 2015.8.1
- **PR #27734:** (*jacobhammons*) Updated saltstack2 theme to add SaltConf16 banner
- **PR #27727:** (*rallytime*) Merge #27719 w/pylint fix
- **PR #27724:** (*jfindlay*) update \_\_virtual\_\_ return documentation
- **PR #27725:** (*basepi*) Fix global injection for state cross calls
- **PR #27628:** (*ticosax*) [dockerng] Add support of labels parameter for dockerng
- **PR #27704:** (*jacobhammons*) Update compound matcher docs to clarify the usage of alternate delimi...
- **PR #27705:** (*rallytime*) Merge #27602 with final pylint fix

- **PR #27691:** (*notpeter*) Faster timeout (3s vs 2min) for instance metadata lookups. #13850.
- **PR #27696:** (*blueyed*) loader.proxy: call `_modules_dirs` only once
- **PR #27630:** (*ticosax*) Expose `container_id` in `mine.get_docker`
- **PR #27600:** (*blueyed*) dockerng: use `docker.version=auto` by default
- **PR #27689:** (*rallytime*) Merge #27448 with test fixes
- **PR #27693:** (*jacobhammons*) initial engines topic, updates to windows repo docs
- **PR #27601:** (*blueyed*) dockerng: handle `None` in `container.Names`
- **PR #27596:** (*blueyed*) gitfs: fix `UnboundLocalError` for ``msg'`
- **PR #27651:** (*eliasp*) Check for existence of ``subnetId'` key in `subnet dict`
- **PR #27639:** (*rallytime*) Docement version added for new artifactory options
- **PR #27677:** (*rallytime*) Back-port #27675 to 2015.8
- **PR #27637:** (*rallytime*) Back-port #27604 to 2015.8
- **PR #27657:** (*garethgreenaway*) Fix to `pkg state` module
- **PR #27632:** (*rallytime*) Back-port #27539 to 2015.8
- **PR #27633:** (*rallytime*) Back-port #27559 to 2015.8
- **PR #27579:** (*rallytime*) Change `boto_route53` region default to ``universal'` to avoid problems with `boto` library
- **PR #27581:** (*tkwilliams*) Add support for ``vpc_name'` tag in `boto_secgroup` module and state
- **PR #27624:** (*nasenbaer13*) Wait for `sync` is not passed to `boto_route53` state
- **PR #27614:** (*blueyed*) doc: minor fixes to doc and comments
- **PR #27627:** (*eyj*) Fix crash in `boto_asg.get_instances` if the requested attribute is `None`
- **PR #27616:** (*jacobhammons*) Updated windows software repository docs
- **PR #27569:** (*lomeroe*) `boto_vpc.get_subnet_association` now returns a dict w/key of `vpc_id`, a...
- **PR #27567:** (*whiteinge*) Use `getattr` to fetch `psutil.version_info`
- **PR #27583:** (*tkwilliams*) Fixup `zypper` module
- **PR #27597:** (*blueyed*) gitfs: remove unused variable ```bad_per_remote_conf''`
- **PR #27585:** (*ryan-lane*) Fix undefined variable in `cron` state module

## 20.2.34 Salt 2015.8.4 Release Notes

### Known Issues

`in_requisites` (issue 30820)

This issue affects all users targeting an explicit `-name: <name>` with a `_in` requisite (such as `watch_in` or `require_in`). If you are not using explicit `-name: <name>` arguments, are targeting with the state ID instead of the name, or are not using `_in` requisites, then you should be safe to upgrade to 2015.8.4.

This issue is resolved in the [2015.8.5](#) release.

## Security Fix

CVE-2016-1866: Improper handling of clear messages on the minion, which could result in executing commands not sent by the master.

This issue affects only the 2015.8.x releases of Salt. In order for an attacker to use this attack vector, they would have to execute a successful attack on an existing TCP connection between minion and master on the pub port. It does not allow an external attacker to obtain the shared secret or decrypt any encrypted traffic between minion and master. Thank you to Sebastian Kraemer <kraemer@suse.com> for bringing this issue to our attention.

We recommend everyone upgrade to 2015.8.4 as soon as possible.

## Core Changes

- **PR #28994:** *timcharper* Salt S3 module has learned how to assume IAM roles
- Added option `mock=True` for `state.sls` and `state.highstate`. This allows the salt state compiler to process sls data in a state run without actually calling the state functions, thus providing feedback on the validity of the arguments used for the functions beyond the preprocessing validation provided by `state.show_sls` ([issue 30118](#) and [issue 30189](#)).

```
salt '*' state.sls core,edit.vim mock=True
salt '*' state.highstate mock=True
salt '*' state.apply edit.vim mock=True
```

## Changes for v2015.8.3..v2015.8.4

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Total Merges: **320**

Changes:

- **PR #30613:** (*basepi*) Fix minion/syndic clearfuncs
- **PR #30609:** (*seanjnkns*) Fix documentation for `pillar_merge_lists` which default is False, not ...
- **PR #30584:** (*julianbrost*) `file.line state`: add missing colon in docstring
- **PR #30589:** (*terminalmage*) Merge 2015.5 into 2015.8
- **PR #30599:** (*multani*) Documentation formatting fixes
- **PR #30554:** (*rallytime*) Make the salt-cloud actions output more verbose and helpful
- **PR #30549:** (*techhat*) Salt Virt cleanup
- **PR #30553:** (*techhat*) AWS: Support 17-character IDs
- **PR #30532:** (*whiteinge*) Add execution module for working in sls files
- **PR #30529:** (*terminalmage*) Merge 2015.5 into 2015.8
- **PR #30526:** (*twangboy*) Added `FlushKey` to make sure it's changes are saved to disk
- **PR #30521:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #30485:** (*jtand*) Updated `pip_state` to work with pip 8.0 on 2015.8
- **PR #30494:** (*isbm*) Zyper: `info_installed` — ``errors'` flag change to type ``boolean'`

- PR #30506: (*jacksontj*) Properly remove newlines after reading the file
- PR #30508: (*rallytime*) Fix Linode driver cloning functionality
- PR #30522: (*terminalmage*) Update git.list\_worktree tests to reflect new return data
- PR #30483: (*borgstrom*) Pyobjects recursive import support (for 2015.8)
- PR #30491: (*jacksontj*) Add multi-IP support to network state
- PR #30496: (*anlutro*) Fix KeyError when adding ignored pillars
- PR #30359: (*kingsquirrel152*) Removes suspected copy/paste error for zmq\_filtering functionality
- PR #30448: (*cournape*) Fix osx scripts location
- PR #30457: (*rallytime*) Remove fsutils references from modules list
- PR #30453: (*rallytime*) Make sure private AND public IPs are listed for Linode driver
- PR #30458: (*rallytime*) Back-port #30062 to 2015.8
- PR #30468: (*timcharper*) make note of s3 role assumption in upcoming changelog
- PR #30470: (*whiteinge*) Add example of the match\_dict format to accept\_dict wheel function
- PR #30450: (*gtmanfred*) fix extension loading in novaclient
- PR #30212: (*abednarik*) Fix incorrect file permissions in file.line
- PR #29947: (*jfindlay*) fileclient: decode file list from master
- PR #30363: (*terminalmage*) Use native ``list" subcommand to list git worktrees
- PR #30445: (*jtand*) Boto uses False for is\_default instead of None
- PR #30406: (*frioux*) Add an example of how to use file.managed/check\_cmd
- PR #30424: (*isbm*) Check if byte strings are properly encoded in UTF-8
- PR #30405: (*jtand*) Updated glusterfs.py for python2.6 compatibility.
- PR #30396: (*pass-by-value*) Remove hardcoded val
- PR #30391: (*jtand*) Added else statements
- PR #30375: (*rallytime*) Wrap formatted log statements with six.u() in cloud/\_\_init\_\_.py
- PR #30384: (*isbm*) Bugfix: info\_available does not work correctly on SLE 11 series
- PR #30376: (*pritambaral*) Fix FLO\_DIR path in 2015.8
- PR #30389: (*jtand*) Older versions of ipset don't support comments
- PR #30373: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #30372: (*jacobhammons*) Updated man pages for 2015.8.4, updated copyright to 2016
- PR #30370: (*rallytime*) Remove incomplete function
- PR #30366: (*rallytime*) Back-port #28702 to 2015.8
- PR #30361: (*cro*) Flip the sense of the test for proxymodule imports, add more fns for esxi proxy
- PR #30267: (*isbm*) Fix RPM issues with the date/time and add package attributes filtering
- PR #30360: (*jfindlay*) file.remove, file.absent: mention recursive dir removal
- PR #30221: (*mbarrien*) No rolcatupdate for user\_exist in Postgres>=9.5 #26845
- PR #30358: (*terminalmage*) Add libgit2 version to versions-report

- PR #30346: (*pass-by-value*) Prevent orphaned volumes
- PR #30349: (*rallytime*) Back-port #30347 to 2015.8
- PR #30354: (*anlutro*) Make sure all ignore\_missing SLSes are caught
- PR #30356: (*nmadhok*) Adding code author
- PR #30340: (*jtand*) Updated seed\_test.py for changes made to seed module
- PR #30339: (*jfindlay*) Backport #26511
- PR #30343: (*rallytime*) Fix 2015.8 from incomplete back-port
- PR #30342: (*eliasp*) Correct whitespace placement in error message
- PR #30308: (*rallytime*) Back-port #30257 to 2015.8
- PR #30187: (*rallytime*) Back-port #27606 to 2015.8
- PR #30223: (*serge-p*) adding support for DragonFly BSD
- PR #30238: (*rallytime*) Reinit crypto before calling RSA.generate when generating keys.
- PR #30246: (*dmacvicar*) Add missing return data to scheduled jobs (#24237)
- PR #30292: (*thegoodduke*) ipset: fix test=true & add comment for every entry
- PR #30275: (*abednarik*) Add permanent argument in firewall.d.
- PR #30328: (*cachedout*) Fix file test
- PR #30310: (*pass-by-value*) Empty bucket fix
- PR #30211: (*techhat*) Execute choot on the correct path
- PR #30309: (*rallytime*) Back-port #30304 to 2015.8
- PR #30278: (*nmadhok*) If datacenter is specified in the config, then look for managed objects under it
- PR #30305: (*jacobhammons*) Changed examples to use the ``example.com" domain instead of ``mycompan...
- PR #30249: (*mpreziuso*) Fixes performance and timeout issues on win\_pkg.install
- PR #30217: (*pass-by-value*) Make sure cloud actions can be called via salt run
- PR #30268: (*terminalmage*) Optimize file\_tree ext\_pillar and update file.managed to allow for binary contents
- PR #30245: (*rallytime*) Boto secgroup/iam\_role: Add note stating us-east-1 is default region
- PR #30299: (*rallytime*) ESXi Proxy minions states are located at salt.states.esxi, not vsphere.
- PR #30202: (*opdude*) Fixed the periodic call to beacons
- PR #30303: (*jacobhammons*) Changed notes to indicate that functions are matched using regular ex...
- PR #30284: (*terminalmage*) salt.utils.gitfs: Fix Dulwich env detection and submodule handling
- PR #30280: (*jfindlay*) add state mocking to release notes
- PR #30273: (*rallytime*) Back-port #30121 to 2015.8
- PR #30301: (*cachedout*) Accept whatever comes into hightstate mock for state tests
- PR #30282: (*cachedout*) Fix file.append logic
- PR #30289: (*cro*) Fix problems with targeting proxies by grains
- PR #30293: (*cro*) Ensure we don't log stuff we shouldn't
- PR #30279: (*cachedout*) Allow modules to be packed into boto utils

- **PR #30186:** (*rallytime*) Update CLI Examples in boto\_ec2 module to reflect correct arg/kwarg positioning
- **PR #30156:** (*abednarik*) Add option in file.append to ignore\_whitespace.
- **PR #30189:** (*rallytime*) Back-port #30185 to 2015.8
- **PR #30215:** (*jacobhammons*) Assorted doc bug fixes
- **PR #30206:** (*cachedout*) Revert ``Fix incorrect file permissions in file.line''
- **PR #30190:** (*jacobhammons*) Updated doc site banners
- **PR #30180:** (*jfindlay*) modules.x509.\_dec2hex: add fmt index for 2.6 compat
- **PR #30179:** (*terminalmage*) Backport #26962 to 2015.8 branch
- **PR #29693:** (*abednarik*) Handle missing source file in ssh\_auth.
- **PR #30155:** (*rallytime*) Update boto\_secgroup and boto\_iam\_role docs to only use region OR profile
- **PR #30158:** (*rallytime*) Move \_option(value) calls to \_\_salt\_\_[config.option] in boto utils
- **PR #30160:** (*dmurphy18*) Fix parsing disk usage for line with no number and AIX values in Kilos
- **PR #30162:** (*rallytime*) Update list\_present and append grains state function docs to be more clear.
- **PR #30163:** (*rallytime*) Add warning about using ``=' in file.line function
- **PR #30164:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #30168:** (*abednarik*) Fix incorrect file permissions in file.line
- **PR #30154:** (*Oro*) Fix file serialize on windows
- **PR #30144:** (*rallytime*) Added generic ESXCLI command ability to ESXi Proxy Minion
- **PR #30142:** (*terminalmage*) Fix dockerng.push, and allow for multiple images
- **PR #30075:** (*joejulian*) Convert glusterfs module to use xml
- **PR #30129:** (*optix2000*) Clean up \_uptodate() in git state
- **PR #30139:** (*rallytime*) Back-port #29589 to 2015.8
- **PR #30124:** (*abednarik*) Update regex to detect ip alias in OpenBSD.
- **PR #30133:** (*stanislavb*) Fix typo in gpgkey URL
- **PR #30126:** (*stanislavb*) Log S3 API error message
- **PR #30128:** (*oeuftete*) Log retryable transport errors as warnings
- **PR #30096:** (*cachedout*) Add rm\_special to crontab module
- **PR #30106:** (*techhat*) Ensure last dir
- **PR #30101:** (*gtmanfred*) fix bug where nova driver exits with no adminPass
- **PR #30090:** (*techhat*) Add argument to isdir()
- **PR #30094:** (*rallytime*) Fix doc formatting for cloud.create example in module.py state
- **PR #30095:** (*rallytime*) Add the list\_nodes\_select function to linode driver
- **PR #30082:** (*abednarik*) Fixed saltversioninfo grain return
- **PR #30084:** (*rallytime*) Back-port #29987 to 2015.8
- **PR #30071:** (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR #30067:** (*ryan-lane*) Pass in kwargs to boto\_secgroup.convert\_to\_group\_ids explicitly

- **PR #30069:** (*techhat*) Ensure that `pki_dir` exists
- **PR #30064:** (*rallytime*) Add Syndic documentation to miscellaneous Salt Cloud config options
- **PR #30049:** (*rallytime*) Add some more unit tests for the `vsphere` execution module
- **PR #30060:** (*rallytime*) Back-port #27104 to 2015.8
- **PR #30048:** (*jacobhammons*) Remove internal APIs from `rest_cherry.py` docs.
- **PR #30043:** (*rallytime*) Be explicit about importing from `salt.utils.jinja` to avoid circular imports
- **PR #30038:** (*rallytime*) Back-port #30017 to 2015.8
- **PR #30036:** (*rallytime*) Back-port #29995 to 2015.8
- **PR #30035:** (*rallytime*) Back-port #29895 to 2015.8
- **PR #30034:** (*rallytime*) Back-port #29893 to 2015.8
- **PR #30033:** (*rallytime*) Back-port #29876 to 2015.8
- **PR #30029:** (*terminalmage*) `git.latest`: Fix handling of nonexistent branches
- **PR #30016:** (*anlutro*) Properly normalize locales in `locale.gen_locale`
- **PR #30015:** (*anlutro*) `locale` module: don't escape the slash in `\n`
- **PR #30022:** (*gqgunhed*) Two minor typos fixed
- **PR #30026:** (*anlutro*) `states.at`: fix wrong variable being used
- **PR #29966:** (*multani*) Fix `bigip` state/module documentation + `serializers` documentation
- **PR #29904:** (*twangboy*) Improvements to `osx` packaging scripts
- **PR #29950:** (*multani*) `boto_iam`: fix deletion of IAM users when using `delete_keys=true`
- **PR #29937:** (*multani*) Fix `states.boto_iam` group users
- **PR #29934:** (*multani*) Fix `state.boto_iam` virtual name
- **PR #29943:** (*cachedout*) Check args correctly in `boto_rds`
- **PR #29924:** (*gqgunhed*) fixed: uptime now working on non-US Windows
- **PR #29883:** (*serge-p*) fix for `nfs` mounts in `_active_mounts_openbsd()`
- **PR #29894:** (*techhat*) Support Saltfile in SPM
- **PR #29856:** (*rallytime*) Added some initial unit tests for the `salt.modules.vsphere.py` file
- **PR #29855:** (*rallytime*) Back-port #29740 to 2015.8
- **PR #29890:** (*multani*) Various documentation fixes
- **PR #29850:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #29811:** (*anlutro*) `influxdb`: add retention policy module functions
- **PR #29814:** (*basepi*) [2015.8][Windows] Fix multi-master on windows
- **PR #29819:** (*rallytime*) Add `esxi` module and state to docs build
- **PR #29832:** (*jleimbach*) Fixed typo in order to use the `keyboard` module for RHEL without `systemd`
- **PR #29803:** (*rallytime*) Add `vSphere` module to doc ref module tree
- **PR #29767:** (*abednarik*) Hosts file update in `mod_hostname`.
- **PR #29772:** (*terminalmage*) `pygit2`: skip submodules when traversing tree

- [PR #29765](#): (*gtmanfred*) allow nova driver to be boot from volume
- [PR #29773](#): (*l2ol33rt*) Append missing wget in debian installation guide
- [PR #29800](#): (*rallytime*) Back-port [#29769](#) to 2015.8
- [PR #29775](#): (*paulnivin*) Change listen requisite resolution from name to ID declaration
- [PR #29754](#): (*rallytime*) Back-port [#29719](#) to 2015.8
- [PR #29713](#): (*The-Loeki*) Pillar-based cloud providers still forcing use of deprecated `'provider'`
- [PR #29729](#): (*rallytime*) Further clarifications on `'unless'` and `'onlyif'` requisites.
- [PR #29737](#): (*akissa*) fix pillar sqlite3 documentation examples
- [PR #29743](#): (*akissa*) fix pillar sqlite not honouring config options
- [PR #29723](#): (*rallytime*) Clarify `db_user` and `db_password` kwargs for `postgres_user.present` state function
- [PR #29722](#): (*rallytime*) Link `'stateful'` kwargs to definition of what `'stateful'` means for `cmd` state.
- [PR #29724](#): (*rallytime*) Add examples of using multiple matching levels to Pillar docs
- [PR #29726](#): (*cachedout*) Disable some boto tests per resolution of moto issue
- [PR #29708](#): (*lagesag*) Fix `test=True` for `file.directory` with `recurse ignore_files/ignore_dirs`.
- [PR #29642](#): (*cachedout*) Correctly restart daemonized minions on failure
- [PR #29599](#): (*cachedout*) Clean up minion shutdown
- [PR #29675](#): (*clinta*) allow returning all refs
- [PR #29683](#): (*rallytime*) Catch more specific error to pass the error message through elegantly.
- [PR #29687](#): (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- [PR #29681](#): (*clinta*) fix bare/mirror in `git.latest`
- [PR #29644](#): (*rallytime*) Fixed a couple more ESXi proxy minion bugs
- [PR #29645](#): (*rallytime*) Back-port [#29558](#) to 2015.8
- [PR #29632](#): (*jfindlay*) reduce severity of `tls` module `__virtual__` logging
- [PR #29606](#): (*abednarik*) Fixed duplicate `mtu` entry in RedHat 7 network configuration.
- [PR #29613](#): (*rallytime*) Various ESXi Proxy Minion Bug Fixes
- [PR #29628](#): (*DmitryKuzmenko*) Don't create `io_loop` before fork
- [PR #29609](#): (*basepi*) [2015.8][salt-ssh] Add ability to set `salt-ssh` command `umask` in roster
- [PR #29603](#): (*basepi*) Fix orchestration failure-checking
- [PR #29597](#): (*terminalmage*) `dockerng`: Prevent exception when API response contains empty dictionary
- [PR #29596](#): (*rallytime*) Back-port [#29587](#) to 2015.8
- [PR #29588](#): (*rallytime*) Added ESXi Proxy Minion Tutorial
- [PR #29572](#): (*gtmanfred*) [nova] use old `discover_extensions` if available
- [PR #29545](#): (*terminalmage*) `git.latest`: `init` submodules if not yet initialized
- [PR #29548](#): (*rallytime*) Back-port [#29449](#) to 2015.8
- [PR #29547](#): (*rallytime*) Refactored ESXCLI-based functions to accept a list of `esxi_hosts`
- [PR #29563](#): (*anlutro*) Fix a call to deprecated method in `python-influxdb`

- **PR #29565:** (*bdrung*) Fix typos and missing release note
- **PR #29540:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #29499:** (*rallytime*) Initial commit of ESXi Proxy Minion
- **PR #29526:** (*jfindlay*) 2015.8.2 notes: add note about not being released
- **PR #29531:** (*jfindlay*) grains.core: handle undefined variable
- **PR #29538:** (*basepi*) [2015.8] [salt-ssh] Remove umask around actual execution for salt-ssh
- **PR #29505:** (*rallytime*) Update boto\_rds state docs to include funky yaml syntax for ``tags" option.
- **PR #29513:** (*bdrung*) Drop obsolete syslog.target from systemd services
- **PR #29500:** (*rallytime*) Back-port #29467 to 2015.8
- **PR #29463:** (*abednarik*) Add **\*\*kwargs** to debconf.set.
- **PR #29399:** (*jfindlay*) modules.status: add human\_readable option to uptime
- **PR #29433:** (*cro*) Files for building .pkg files for MacOS X
- **PR #29455:** (*jfindlay*) modules.nova.\_\_init\_\_: do not return None
- **PR #29454:** (*jfindlay*) rh\_service module \_\_virtual\_\_ return error messages
- **PR #29476:** (*tbaker57*) Doc fix - route\_table\_present needs subnet\_names (not subnets) as a key
- **PR #29487:** (*rallytime*) Back-port #29450 to 2015.8
- **PR #29441:** (*rallytime*) Make sure docs line up with blade\_idrac function specs
- **PR #29440:** (*rallytime*) Back-port #28925 to 2015.8
- **PR #29435:** (*galet*) Grains return wrong OS version and other OS related values for Oracle Linux
- **PR #29430:** (*rall0r*) Fix host.present state limitation
- **PR #29417:** (*jacobhammons*) Repo install updates
- **PR #29402:** (*techhat*) Add rate limiting to linode
- **PR #29400:** (*twangboy*) Fix #19332
- **PR #29398:** (*cachedout*) Lint 29288
- **PR #29331:** (*DmitryKuzmenko*) Bugfix - #29116 raet dns error
- **PR #29390:** (*jacobhammons*) updated version numbers in documentation
- **PR #29381:** (*nmadhok*) No need to deepcopy since six.iterkeys() creates a copy
- **PR #29349:** (*cro*) Fix mis-setting chassis names
- **PR #29334:** (*rallytime*) Back-port #29237 to 2015.8
- **PR #29300:** (*ticosax*) [dockerng] Add support for volume management in dockerng
- **PR #29218:** (*clan*) check service enable state in test mode
- **PR #29315:** (*jfindlay*) dev tutorial doc: fix markup errors
- **PR #29317:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #29240:** (*clan*) handle acl\_type [[d]efault:][user|group|mask|other]
- **PR #29305:** (*lorenegordon*) Add `file' as a source\_hash proto
- **PR #29272:** (*jfindlay*) win\_status module: handle 12 hour time in uptime

- **PR #29289:** (*terminalmage*) file.managed: Allow local file sources to use source\_hash
- **PR #29264:** (*anlutro*) Prevent ssh\_auth.absent from running when test=True
- **PR #29277:** (*terminalmage*) Update git\_pillar runner to support new git\_ext\_pillar config schema
- **PR #29283:** (*cachedout*) Single-quotes and use format
- **PR #29139:** (*thomaso-mirodin*) [salt-ssh] Add a range roster and range targeting options for the flat roster
- **PR #29282:** (*cachedout*) dev docs: add development tutorial
- **PR #28994:** (*timcharper*) add support to s3 for aws role assumption
- **PR #29278:** (*techhat*) Add verify\_log to SPM
- **PR #29067:** (*jacksontj*) Fix infinite recursion in state compiler for prereq of SLSs
- **PR #29207:** (*jfindlay*) do not shadow ret function argument
- **PR #29215:** (*rallytime*) Back-port #29192 to 2015.8
- **PR #29217:** (*clan*) show duration only if state\_output\_profile is False
- **PR #29221:** (*ticosax*) [dokcerng] Docu network mode
- **PR #29269:** (*jfindlay*) win\_status module: fix function names in docs
- **PR #29213:** (*rallytime*) Move \_wait\_for\_task func from vmware cloud to vmware utils
- **PR #29271:** (*techhat*) Pass full path for digest (SPM)
- **PR #29244:** (*isbm*) List products consistently across all SLES systems
- **PR #29255:** (*garethgreenaway*) fixes to consul module
- **PR #29208:** (*whyte wolf*) Glance more profile errors
- **PR #29200:** (*jfindlay*) mount state: unmount by device is optional
- **PR #29205:** (*trevor-h*) Fixes #29187 - using winrm on EC2
- **PR #29170:** (*cachedout*) Migrate pydsl tests to integration test suite
- **PR #29198:** (*jfindlay*) rh\_ip module: only set the mtu once
- **PR #29135:** (*jfindlay*) ssh\_known\_hosts.present state: catch not found exc
- **PR #29196:** (*s0undt3ch*) We need novaclient imported to compare versions
- **PR #29059:** (*terminalmage*) Work around upstream pygit2 bug
- **PR #29112:** (*eliasp*) Prevent backtrace (KeyError) in *ssh\_known\_hosts.present* state
- **PR #29178:** (*whyte wolf*) Profile not being passed to keystone.endpoint\_get in \_auth. so if a p...

### 20.2.35 Salt 2015.8.5 Release Notes

---

#### About this Release

Salt 2015.8.5 is identical to the 2015.8.4 release with the addition of a fix for [issue 30820](#), fixed by **PR #30833**. For convenience, the content from the 2015.8.4 release notes is included below.

---

### Known Issue in boto\_\* execution modules

This release contains an issue that causes the boto\_\* execution modules to display a `__salt__ not defined` error ([issue 30300](#)). This issue will be fixed in an upcoming release, but can be manually resolved by completing the following:

1. Download the boto\_\* execution modules that you would like to update from the 2015.8 branch of Salt. A complete list of affected modules with the specific changes is available in [PR #30867](#).

A simple way to get the updated modules is to [download](#) a zip file of the 2015.8 branch from GitHub. The updated modules are in the `salt\modules` directory.

2. Copy the boto\_\* modules to the `\srv\salt\_modules` directory on your Salt master.
3. Run the following command to sync these modules to all Salt minions:

```
salt '*' saltutil.sync_modules
```

---

### 2015.8.4 Release Notes

#### Security Fix

CVE-2016-1866: Improper handling of clear messages on the minion, which could result in executing commands not sent by the master.

This issue affects only the 2015.8.x releases of Salt. In order for an attacker to use this attack vector, they would have to execute a successful attack on an existing TCP connection between minion and master on the pub port. It does not allow an external attacker to obtain the shared secret or decrypt any encrypted traffic between minion and master. Thank you to Sebastian Kraemer <[kraemer@suse.com](mailto:kraemer@suse.com)> for bringing this issue to our attention.

We recommend everyone upgrade to 2015.8.4 as soon as possible.

#### Core Changes

- [PR #28994](#): *timcharper* Salt S3 module has learned how to assume IAM roles
- Added option `mock=True` for `state.sls` and `state.highstate`. This allows the salt state compiler to process sls data in a state run without actually calling the state functions, thus providing feedback on the validity of the arguments used for the functions beyond the preprocessing validation provided by `state.show_sls` ([issue 30118](#) and [issue 30189](#)).

```
salt '*' state.sls core,edit.vim mock=True
salt '*' state.highstate mock=True
salt '*' state.apply edit.vim mock=True
```

#### Changes for v2015.8.3..v2015.8.4

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Generated at: 2016-01-25T17:48:35Z

Total Merges: 320

Changes:

- [PR #30613](#): (*basepi*) Fix minion/syndic clearfuncs

- **PR #30609:** (*seanjnkns*) Fix documentation for `pillar_merge_lists` which default is `False`, not ...
- **PR #30584:** (*julianbrost*) `file.line` state: add missing colon in docstring
- **PR #30589:** (*terminalmage*) Merge 2015.5 into 2015.8
- **PR #30599:** (*multani*) Documentation formatting fixes
- **PR #30554:** (*rallytime*) Make the salt-cloud actions output more verbose and helpful
- **PR #30549:** (*techhat*) Salt Virt cleanup
- **PR #30553:** (*techhat*) AWS: Support 17-character IDs
- **PR #30532:** (*whiteinge*) Add execution module for working in sls files
- **PR #30529:** (*terminalmage*) Merge 2015.5 into 2015.8
- **PR #30526:** (*twangboy*) Added `FlushKey` to make sure it's changes are saved to disk
- **PR #30521:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #30485:** (*jtand*) Updated `pip_state` to work with pip 8.0 on 2015.8
- **PR #30494:** (*isbm*) Zyper: `info_installed` — `'errors'` flag change to type `'boolean'`
- **PR #30506:** (*jackson tj*) Properly remove newlines after reading the file
- **PR #30508:** (*rallytime*) Fix Linode driver cloning functionality
- **PR #30522:** (*terminalmage*) Update `git.list_worktree` tests to reflect new return data
- **PR #30483:** (*borgstrom*) Pyobjects recursive import support (for 2015.8)
- **PR #30491:** (*jackson tj*) Add multi-IP support to network state
- **PR #30496:** (*anlutro*) Fix `KeyError` when adding ignored pillars
- **PR #30359:** (*kingsquirrel152*) Removes suspected copy/paste error for `zmq_filtering` functionality
- **PR #30448:** (*cournape*) Fix `osx` scripts location
- **PR #30457:** (*rallytime*) Remove `fsutils` references from modules list
- **PR #30453:** (*rallytime*) Make sure private AND public IPs are listed for Linode driver
- **PR #30458:** (*rallytime*) Back-port #30062 to 2015.8
- **PR #30468:** (*timcharper*) make note of `s3` role assumption in upcoming changelog
- **PR #30470:** (*whiteinge*) Add example of the `match_dict` format to `accept_dict` wheel function
- **PR #30450:** (*gtmanfred*) fix extension loading in novaclient
- **PR #30212:** (*abednarik*) Fix incorrect file permissions in `file.line`
- **PR #29947:** (*jfindlay*) `fileclient`: decode file list from master
- **PR #30363:** (*terminalmage*) Use native `'list'` subcommand to list git worktrees
- **PR #30445:** (*jtand*) Boto uses `False` for `is_default` instead of `None`
- **PR #30406:** (*frioux*) Add an example of how to use `file.managed/check_cmd`
- **PR #30424:** (*isbm*) Check if byte strings are properly encoded in UTF-8
- **PR #30405:** (*jtand*) Updated `glusterfs.py` for python2.6 compatibility.
- **PR #30396:** (*pass-by-value*) Remove hardcoded `val`
- **PR #30391:** (*jtand*) Added `else` statements

- **PR #30375:** (*rallytime*) Wrap formatted log statements with `six.u()` in `cloud/__init__.py`
- **PR #30384:** (*isbm*) Bugfix: `info_available` does not work correctly on SLE 11 series
- **PR #30376:** (*pritambaral*) Fix `FLO_DIR` path in 2015.8
- **PR #30389:** (*jtand*) Older versions of `ipset` don't support comments
- **PR #30373:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #30372:** (*jacobhammons*) Updated man pages for 2015.8.4, updated copyright to 2016
- **PR #30370:** (*rallytime*) Remove incomplete function
- **PR #30366:** (*rallytime*) Back-port #28702 to 2015.8
- **PR #30361:** (*cro*) Flip the sense of the test for `proxymodule` imports, add more fns for `esxi proxy`
- **PR #30267:** (*isbm*) Fix RPM issues with the date/time and add package attributes filtering
- **PR #30360:** (*jfindlay*) `file.remove`, `file.absent`: mention recursive dir removal
- **PR #30221:** (*mbarrien*) No `rolcatupdate` for `user_exist` in `Postgres>=9.5` #26845
- **PR #30358:** (*terminalmage*) Add `libgit2` version to `versions-report`
- **PR #30346:** (*pass-by-value*) Prevent orphaned volumes
- **PR #30349:** (*rallytime*) Back-port #30347 to 2015.8
- **PR #30354:** (*anlutro*) Make sure all `ignore_missing` SLSes are caught
- **PR #30356:** (*nmadhok*) Adding code author
- **PR #30340:** (*jtand*) Updated `seed_test.py` for changes made to `seed` module
- **PR #30339:** (*jfindlay*) Backport #26511
- **PR #30343:** (*rallytime*) Fix 2015.8 from incomplete back-port
- **PR #30342:** (*eliasp*) Correct whitespace placement in error message
- **PR #30308:** (*rallytime*) Back-port #30257 to 2015.8
- **PR #30187:** (*rallytime*) Back-port #27606 to 2015.8
- **PR #30223:** (*serge-p*) adding support for DragonFly BSD
- **PR #30238:** (*rallytime*) Reinit `crypto` before calling `RSA.generate` when generating keys.
- **PR #30246:** (*dmacvicar*) Add missing return data to scheduled jobs (#24237)
- **PR #30292:** (*thegooodduke*) `ipset`: fix `test=true` & add comment for every entry
- **PR #30275:** (*abednarik*) Add permanent argument in `firewalld`.
- **PR #30328:** (*cachedout*) Fix file test
- **PR #30310:** (*pass-by-value*) Empty bucket fix
- **PR #30211:** (*techhat*) Execute `choot` on the correct path
- **PR #30309:** (*rallytime*) Back-port #30304 to 2015.8
- **PR #30278:** (*nmadhok*) If `datacenter` is specified in the config, then look for managed objects under it
- **PR #30305:** (*jacobhammons*) Changed examples to use the ```example.com``` domain instead of ```mycompan...```
- **PR #30249:** (*mpreziuso*) Fixes performance and timeout issues on `win_pkg.install`
- **PR #30217:** (*pass-by-value*) Make sure cloud actions can be called via salt run

- **PR #30268:** (*terminalmage*) Optimize file\_tree ext\_pillar and update file.managed to allow for binary contents
- **PR #30245:** (*rallytime*) Boto secgroup/iam\_role: Add note stating us-east-1 is default region
- **PR #30299:** (*rallytime*) ESXi Proxy minions states are located at salt.states.esxi, not vsphere.
- **PR #30202:** (*opdude*) Fixed the periodic call to beacons
- **PR #30303:** (*jacobhammons*) Changed notes to indicate that functions are matched using regular ex...
- **PR #30284:** (*terminalmage*) salt.utils.gitfs: Fix Dulwich env detection and submodule handling
- **PR #30280:** (*jfindlay*) add state mocking to release notes
- **PR #30273:** (*rallytime*) Back-port #30121 to 2015.8
- **PR #30301:** (*cachedout*) Accept whatever comes into hightstate mock for state tests
- **PR #30282:** (*cachedout*) Fix file.append logic
- **PR #30289:** (*cro*) Fix problems with targeting proxies by grains
- **PR #30293:** (*cro*) Ensure we don't log stuff we shouldn't
- **PR #30279:** (*cachedout*) Allow modules to be packed into boto utils
- **PR #30186:** (*rallytime*) Update CLI Examples in boto\_ec2 module to reflect correct arg/kwarg positioning
- **PR #30156:** (*abednarik*) Add option in file.append to ignore\_whitespace.
- **PR #30189:** (*rallytime*) Back-port #30185 to 2015.8
- **PR #30215:** (*jacobhammons*) Assorted doc bug fixes
- **PR #30206:** (*cachedout*) Revert ``Fix incorrect file permissions in file.line``
- **PR #30190:** (*jacobhammons*) Updated doc site banners
- **PR #30180:** (*jfindlay*) modules.x509.\_dec2hex: add fmt index for 2.6 compat
- **PR #30179:** (*terminalmage*) Backport #26962 to 2015.8 branch
- **PR #29693:** (*abednarik*) Handle missing source file in ssh\_auth.
- **PR #30155:** (*rallytime*) Update boto\_secgroup and boto\_iam\_role docs to only use region OR profile
- **PR #30158:** (*rallytime*) Move \_option(value) calls to \_\_salt\_\_[ 'config.option' ] in boto utils
- **PR #30160:** (*dmurphy18*) Fix parsing disk usage for line with no number and AIX values in Kilos
- **PR #30162:** (*rallytime*) Update list\_present and append grains state function docs to be more clear.
- **PR #30163:** (*rallytime*) Add warning about using ``=`` in file.line function
- **PR #30164:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #30168:** (*abednarik*) Fix incorrect file permissions in file.line
- **PR #30154:** (*Oro*) Fix file.serialize on windows
- **PR #30144:** (*rallytime*) Added generic ESXCLI command ability to ESXi Proxy Minion
- **PR #30142:** (*terminalmage*) Fix dockerng.push, and allow for multiple images
- **PR #30075:** (*joejulian*) Convert glusterfs module to use xml
- **PR #30129:** (*optix2000*) Clean up \_uptodate() in git state
- **PR #30139:** (*rallytime*) Back-port #29589 to 2015.8
- **PR #30124:** (*abednarik*) Update regex to detect ip alias in OpenBSD.

- **PR #30133:** (*stanislavb*) Fix typo in gpgkey URL
- **PR #30126:** (*stanislavb*) Log S3 API error message
- **PR #30128:** (*oeuftete*) Log retryable transport errors as warnings
- **PR #30096:** (*cachedout*) Add `rm_special` to `crontab` module
- **PR #30106:** (*techhat*) Ensure last dir
- **PR #30101:** (*gtmanfred*) fix bug where nova driver exits with no `adminPass`
- **PR #30090:** (*techhat*) Add argument to `isdir()`
- **PR #30094:** (*rallytime*) Fix doc formatting for `cloud.create` example in `module.py` state
- **PR #30095:** (*rallytime*) Add the `list_nodes_select` function to `linode` driver
- **PR #30082:** (*abednarik*) Fixed `saltversioninfo` grain return
- **PR #30084:** (*rallytime*) Back-port #29987 to 2015.8
- **PR #30071:** (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR #30067:** (*ryan-lane*) Pass in `kwargs` to `boto_secgroup.convert_to_group_ids` explicitly
- **PR #30069:** (*techhat*) Ensure that `pki_dir` exists
- **PR #30064:** (*rallytime*) Add `Syndic` documentation to miscellaneous Salt Cloud config options
- **PR #30049:** (*rallytime*) Add some more unit tests for the `vsphere` execution module
- **PR #30060:** (*rallytime*) Back-port #27104 to 2015.8
- **PR #30048:** (*jacobhammons*) Remove internal APIs from `rest_cherrypy` docs.
- **PR #30043:** (*rallytime*) Be explicit about importing from `salt.utils.jinja` to avoid circular imports
- **PR #30038:** (*rallytime*) Back-port #30017 to 2015.8
- **PR #30036:** (*rallytime*) Back-port #29995 to 2015.8
- **PR #30035:** (*rallytime*) Back-port #29895 to 2015.8
- **PR #30034:** (*rallytime*) Back-port #29893 to 2015.8
- **PR #30033:** (*rallytime*) Back-port #29876 to 2015.8
- **PR #30029:** (*terminalmage*) `git.latest`: Fix handling of nonexistent branches
- **PR #30016:** (*anlutro*) Properly normalize locales in `locale.gen_locale`
- **PR #30015:** (*anlutro*) `locale` module: don't escape the slash in `\n`
- **PR #30022:** (*gqgunhed*) Two minor typos fixed
- **PR #30026:** (*anlutro*) `states.at`: fix wrong variable being used
- **PR #29966:** (*multani*) Fix `bigip` state/module documentation + `serializers` documentation
- **PR #29904:** (*twangboy*) Improvements to `osx` packaging scripts
- **PR #29950:** (*multani*) `boto_iam`: fix deletion of IAM users when using `delete_keys=true`
- **PR #29937:** (*multani*) Fix `states.boto_iam` group users
- **PR #29934:** (*multani*) Fix `state.boto_iam` virtual name
- **PR #29943:** (*cachedout*) Check args correctly in `boto_rds`
- **PR #29924:** (*gqgunhed*) fixed: uptime now working on non-US Windows

- **PR #29883:** (*serge-p*) fix for nfs mounts in `_active_mounts_openbsd()`
- **PR #29894:** (*techhat*) Support Saltfile in SPM
- **PR #29856:** (*rallytime*) Added some initial unit tests for the `salt.modules.vsphere.py` file
- **PR #29855:** (*rallytime*) Back-port #29740 to 2015.8
- **PR #29890:** (*multani*) Various documentation fixes
- **PR #29850:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #29811:** (*anlutro*) influxdb: add retention policy module functions
- **PR #29814:** (*basepi*) [2015.8][Windows] Fix multi-master on windows
- **PR #29819:** (*rallytime*) Add esxi module and state to docs build
- **PR #29832:** (*jleimbach*) Fixed typo in order to use the keyboard module for RHEL without systemd
- **PR #29803:** (*rallytime*) Add vSphere module to doc ref module tree
- **PR #29767:** (*abednarik*) Hosts file update in `mod_hostname`.
- **PR #29772:** (*terminalmage*) pygit2: skip submodules when traversing tree
- **PR #29765:** (*gtmanfred*) allow nova driver to be boot from volume
- **PR #29773:** (*l2ol33rt*) Append missing `wget` in debian installation guide
- **PR #29800:** (*rallytime*) Back-port #29769 to 2015.8
- **PR #29775:** (*paulnivin*) Change listen requisite resolution from name to ID declaration
- **PR #29754:** (*rallytime*) Back-port #29719 to 2015.8
- **PR #29713:** (*The-Loeki*) Pillar-based cloud providers still forcing use of deprecated `'provider'`
- **PR #29729:** (*rallytime*) Further clarifications on `'unless'` and `'onlyif'` requisites.
- **PR #29737:** (*akissa*) fix pillar sqlite3 documentation examples
- **PR #29743:** (*akissa*) fix pillar sqlite not honouring config options
- **PR #29723:** (*rallytime*) Clarify `db_user` and `db_password` kwargs for `postgres_user.present` state function
- **PR #29722:** (*rallytime*) Link `'stateful'` kwargs to definition of what `'stateful'` means for `cmd` state.
- **PR #29724:** (*rallytime*) Add examples of using multiple matching levels to Pillar docs
- **PR #29726:** (*cachedout*) Disable some boto tests per resolution of moto issue
- **PR #29708:** (*lagesag*) Fix `test=True` for `file.directory` with `recurse ignore_files/ignore_dirs`.
- **PR #29642:** (*cachedout*) Correctly restart daemonized minions on failure
- **PR #29599:** (*cachedout*) Clean up minion shutdown
- **PR #29675:** (*clinta*) allow returning all refs
- **PR #29683:** (*rallytime*) Catch more specific error to pass the error message through elegantly.
- **PR #29687:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #29681:** (*clinta*) fix bare/mirror in `git.latest`
- **PR #29644:** (*rallytime*) Fixed a couple more ESXi proxy minion bugs
- **PR #29645:** (*rallytime*) Back-port #29558 to 2015.8
- **PR #29632:** (*jfindlay*) reduce severity of `tls` module `__virtual__` logging

- **PR #29606:** (*abednarik*) Fixed duplicate mtu entry in RedHat 7 network configuration.
- **PR #29613:** (*rallytime*) Various ESXi Proxy Minion Bug Fixes
- **PR #29628:** (*DmitryKuzmenko*) Don't create io\_loop before fork
- **PR #29609:** (*basepi*) [2015.8][salt-ssh] Add ability to set salt-ssh command umask in roster
- **PR #29603:** (*basepi*) Fix orchestration failure-checking
- **PR #29597:** (*terminalmage*) dockerng: Prevent exception when API response contains empty dictionary
- **PR #29596:** (*rallytime*) Back-port #29587 to 2015.8
- **PR #29588:** (*rallytime*) Added ESXi Proxy Minion Tutorial
- **PR #29572:** (*gtmanfred*) [nova] use old discover\_extensions if available
- **PR #29545:** (*terminalmage*) git.latest: init submodules if not yet initialized
- **PR #29548:** (*rallytime*) Back-port #29449 to 2015.8
- **PR #29547:** (*rallytime*) Refactored ESXCLI-based functions to accept a list of esxi\_hosts
- **PR #29563:** (*anlutro*) Fix a call to deprecated method in python-influxdb
- **PR #29565:** (*bdrung*) Fix typos and missing release note
- **PR #29540:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #29499:** (*rallytime*) Initial commit of ESXi Proxy Minion
- **PR #29526:** (*jfindlay*) 2015.8.2 notes: add note about not being released
- **PR #29531:** (*jfindlay*) grains.core: handle undefined variable
- **PR #29538:** (*basepi*) [2015.8] [salt-ssh] Remove umask around actual execution for salt-ssh
- **PR #29505:** (*rallytime*) Update boto\_rds state docs to include funky yaml syntax for ``tags" option.
- **PR #29513:** (*bdrung*) Drop obsolete syslog.target from systemd services
- **PR #29500:** (*rallytime*) Back-port #29467 to 2015.8
- **PR #29463:** (*abednarik*) Add **\*\*kwargs** to debconf.set.
- **PR #29399:** (*jfindlay*) modules.status: add human\_readable option to uptime
- **PR #29433:** (*cro*) Files for building .pkg files for MacOS X
- **PR #29455:** (*jfindlay*) modules.nova.\_\_init\_\_: do not return None
- **PR #29454:** (*jfindlay*) rh\_service module \_\_virtual\_\_ return error messages
- **PR #29476:** (*tbaker57*) Doc fix - route\_table\_present needs subnet\_names (not subnets) as a key
- **PR #29487:** (*rallytime*) Back-port #29450 to 2015.8
- **PR #29441:** (*rallytime*) Make sure docs line up with blade\_idrac function specs
- **PR #29440:** (*rallytime*) Back-port #28925 to 2015.8
- **PR #29435:** (*galet*) Grains return wrong OS version and other OS related values for Oracle Linux
- **PR #29430:** (*rall0r*) Fix host.present state limitation
- **PR #29417:** (*jacobhammons*) Repo install updates
- **PR #29402:** (*techhat*) Add rate limiting to linode
- **PR #29400:** (*twangboy*) Fix #19332

- PR #29398: (*cachedout*) Lint 29288
- PR #29331: (*DmitryKuzmenko*) Bugfix - #29116 raet dns error
- PR #29390: (*jacobhammons*) updated version numbers in documentation
- PR #29381: (*nmadhok*) No need to deepcopy since six.iterkeys() creates a copy
- PR #29349: (*cro*) Fix mis-setting chassis names
- PR #29334: (*rallytime*) Back-port #29237 to 2015.8
- PR #29300: (*ticosax*) [dockerng] Add support for volume management in dockerng
- PR #29218: (*clan*) check service enable state in test mode
- PR #29315: (*jfindlay*) dev tutorial doc: fix markup errors
- PR #29317: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #29240: (*clan*) handle acl\_type [[d]efault:] [user|group|mask|other]
- PR #29305: (*loregordon*) Add `file` as a source\_hash proto
- PR #29272: (*jfindlay*) win\_status module: handle 12 hour time in uptime
- PR #29289: (*terminalmage*) file.managed: Allow local file sources to use source\_hash
- PR #29264: (*anlutro*) Prevent ssh\_auth.absent from running when test=True
- PR #29277: (*terminalmage*) Update git\_pillar runner to support new git ext\_pillar config schema
- PR #29283: (*cachedout*) Single-quotes and use format
- PR #29139: (*thomaso-mirodin*) [salt-ssh] Add a range roster and range targeting options for the flat roster
- PR #29282: (*cachedout*) dev docs: add development tutorial
- PR #28994: (*timcharper*) add support to s3 for aws role assumption
- PR #29278: (*techhat*) Add verify\_log to SPM
- PR #29067: (*jackson tj*) Fix infinite recursion in state compiler for prereq of SLSs
- PR #29207: (*jfindlay*) do not shadow ret function argument
- PR #29215: (*rallytime*) Back-port #29192 to 2015.8
- PR #29217: (*clan*) show duration only if state\_output\_profile is False
- PR #29221: (*ticosax*) [dockerng] Docu network mode
- PR #29269: (*jfindlay*) win\_status module: fix function names in docs
- PR #29213: (*rallytime*) Move \_wait\_for\_task func from vmware cloud to vmware utils
- PR #29271: (*techhat*) Pass full path for digest (SPM)
- PR #29244: (*isbm*) List products consistently across all SLES systems
- PR #29255: (*garethgreenaway*) fixes to consul module
- PR #29208: (*whyte wolf*) Glance more profile errors
- PR #29200: (*jfindlay*) mount state: unmount by device is optional
- PR #29205: (*trevor-h*) Fixes #29187 - using winrm on EC2
- PR #29170: (*cachedout*) Migrate pydsl tests to integration test suite
- PR #29198: (*jfindlay*) rh\_ip module: only set the mtu once

- **PR #29135:** (*jfindlay*) `ssh_known_hosts.present` state: catch not found exc
- **PR #29196:** (*s0undt3ch*) We need `novaclient` imported to compare versions
- **PR #29059:** (*terminalmage*) Work around upstream `pygit2` bug
- **PR #29112:** (*eliasp*) Prevent backtrace (`KeyError`) in `ssh_known_hosts.present` state
- **PR #29178:** (*whytewolf*) Profile not being passed to `keystone.endpoint_get` in `_auth`. so if a p...

### 20.2.36 Salt 2015.8.7 Release Notes

---

**Note:** Salt 2015.8.4, 2015.8.5, and 2015.8.7 were all released within a short period due to regressions found soon after the releases of 2015.8.4 and 2015.8.5. These release notes contain all of the changes since 2015.8.3 to make it easier to see everything that has changed recently.

---

#### Changes for v2015.8.4..v2015.8.7

For `pkg.installed` states, on Linux distributions which use `yum/dnf`, packages which have a non-zero epoch in the version number now require this epoch to be included when specifying an exact version for a package. For example:

```
vim-enhanced:
  pkg.installed:
    - version: 2:7.4.160-1.el7
```

The `pkg.latest_version` and `pkg.list_repo_pkgs` functions can be used to get the correct version string to use, as they will now contain the epoch when it is non-zero.

Changes:

- **PR #31111:** (*jtand*) Fixes failing `npm` test on `arch`. @ 2016-02-10T21:51:47Z
  - 8d84c63 Merge pull request #31111 from jtand/8\_4\_npm\_fix
  - b0a48e5 Fixes failing `npm` test on `arch`.
  - 733c6ab Some 3rd-party modules (e.g. `gnupg`) define custom log levels that emit at `INFO` level and above. This patch sets the color data lookups to default to `TextFormat('reset')` rather than producing a stack trace every time a log message is generated from an affected module.
  - 3f71fd0 Revert #30217
    - \* **PR #30217:** (*pass-by-value*) Make sure `cloud` actions can be called via `salt run`
- **PR #31092:** (*terminalmage*) Apply PR #31031 to 2015.8.4.`follow_up` @ 2016-02-10T20:54:37Z

- 5a6a93e Merge pull request #31092 from terminalmage/issue31014-2015.8.4.follow\_up \* 2767a4e Don't handle epoch specially for dnf
    - \* e5dfcc0 More efficient way to add the epoch before version number
    - \* ed74627 include possible epoch in version for rpm
  - 6c6b66a Comment multiprocessing line in minion config
  - 1f7dfef Set multiprocessing to true in config.py
  - 433c645 Fix remove placeholder files
  - 7103756 Remove placeholder files
  - 20b381f Set overwrite to off
  - ca50f56 Fix boto\_secgroup
  - fd571d2 Fix boto test failures
  - cfb6588 Fix regression when contents\_pillar/contents\_grains is a list.
  - 881d866 utils.aws: use time lib to conver to epoch seconds
  - 3141292 The call to cp.get\_url needs the saltenv, if you're using environments other than base, it will fail.
  - a869401 Fix regression in git\_pillar when multiple remotes are configured
  - 2243f25 Properly set the default value for pillar\_merge\_lists
  - c7472ff Lint
  - d868711 Fix failing boto\_vpc module unit tests
  - ed09516 Fix failing state module tests
  - fd0e940 Pylint fix
  - bc780a7 Don't use pack=pack. Just pass in pack=\_\_salt\_\_ always.
  - 1ae022d Pass in `pack` variable to utils.boto.assign\_funcs function from ALL boto modules.
  - 1efaff1 Remove bad symlinks in osx pkg dirs
  - c7db435 Fix regression in scanning for state with `name` param
- 

## Security Fix

CVE-2016-1866: Improper handling of clear messages on the minion, which could result in executing commands not sent by the master.

This issue affects only the 2015.8.x releases of Salt. In order for an attacker to use this attack vector, they would have to execute a successful attack on an existing TCP connection between minion and master on the pub port. It does not allow an external attacker to obtain the shared secret or decrypt any encrypted traffic between minion and master. Thank you to Sebastian Kraemer <kraemer@suse.com> for bringing this issue to our attention.

We recommend everyone upgrade to 2015.8.4 as soon as possible.

### Core Changes

- **PR #28994:** *timcharper* Salt S3 module has learned how to assume IAM roles
- Added option `mock=True` for `state.sls` and `state.highstate`. This allows the salt state compiler to process sls data in a state run without actually calling the state functions, thus providing feedback on the validity of the arguments used for the functions beyond the preprocessing validation provided by `state.show_sls` ([issue 30118](#) and [issue 30189](#)).

```
salt '*' state.sls core,edit.vim mock=True
salt '*' state.highstate mock=True
salt '*' state.apply edit.vim mock=True
```

### Changes for v2015.8.3..v2015.8.4

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Generated at: 2016-01-25T17:48:35Z

Total Merges: **320**

Changes:

- **PR #30613:** (*basepi*) Fix minion/syndic clearfuncs
- **PR #30609:** (*seanjknks*) Fix documentation for `pillar_merge_lists` which default is False, not ...
- **PR #30584:** (*julianbrost*) `file.line` state: add missing colon in docstring
- **PR #30589:** (*terminalmage*) Merge 2015.5 into 2015.8
- **PR #30599:** (*multani*) Documentation formatting fixes
- **PR #30554:** (*rallytime*) Make the salt-cloud actions output more verbose and helpful
- **PR #30549:** (*techhat*) Salt Virt cleanup
- **PR #30553:** (*techhat*) AWS: Support 17-character IDs
- **PR #30532:** (*whiteinge*) Add execution module for working in sls files
- **PR #30529:** (*terminalmage*) Merge 2015.5 into 2015.8
- **PR #30526:** (*twangboy*) Added `FlushKey` to make sure it's changes are saved to disk
- **PR #30521:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #30485:** (*jtand*) Updated `pip_state` to work with pip 8.0 on 2015.8
- **PR #30494:** (*isbm*) Zypper: `info_installed` — ``errors'` flag change to type ``boolean'`
- **PR #30506:** (*jackson tj*) Properly remove newlines after reading the file
- **PR #30508:** (*rallytime*) Fix Linode driver cloning functionality
- **PR #30522:** (*terminalmage*) Update `git.list_worktree` tests to reflect new return data
- **PR #30483:** (*borgstrom*) Pyobjects recursive import support (for 2015.8)
- **PR #30491:** (*jackson tj*) Add multi-IP support to network state
- **PR #30496:** (*anlutro*) Fix `KeyError` when adding ignored pillars
- **PR #30359:** (*kingsquirrel152*) Removes suspected copy/paste error for `zmq_filtering` functionality
- **PR #30448:** (*cournape*) Fix `osx` scripts location

- **PR #30457:** (*rallytime*) Remove fsutils references from modules list
- **PR #30453:** (*rallytime*) Make sure private AND public IPs are listed for Linode driver
- **PR #30458:** (*rallytime*) Back-port #30062 to 2015.8
- **PR #30468:** (*timcharper*) make note of s3 role assumption in upcoming changelog
- **PR #30470:** (*whiteinge*) Add example of the match\_dict format to accept\_dict wheel function
- **PR #30450:** (*gtmanfred*) fix extension loading in novaclient
- **PR #30212:** (*abednarik*) Fix incorrect file permissions in file.line
- **PR #29947:** (*jfindlay*) fileclient: decode file list from master
- **PR #30363:** (*terminalmage*) Use native ``list" subcommand to list git worktrees
- **PR #30445:** (*jtand*) Boto uses False for is\_default instead of None
- **PR #30406:** (*frioux*) Add an example of how to use file.managed/check\_cmd
- **PR #30424:** (*isbm*) Check if byte strings are properly encoded in UTF-8
- **PR #30405:** (*jtand*) Updated glusterfs.py for python2.6 compatibility.
- **PR #30396:** (*pass-by-value*) Remove hardcoded val
- **PR #30391:** (*jtand*) Added else statements
- **PR #30375:** (*rallytime*) Wrap formatted log statements with six.u() in cloud/\_\_init\_\_.py
- **PR #30384:** (*isbm*) Bugfix: info\_available does not work correctly on SLE 11 series
- **PR #30376:** (*pritambaral*) Fix FLO\_DIR path in 2015.8
- **PR #30389:** (*jtand*) Older versions of ipset don't support comments
- **PR #30373:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #30372:** (*jacobhammons*) Updated man pages for 2015.8.4, updated copyright to 2016
- **PR #30370:** (*rallytime*) Remove incomplete function
- **PR #30366:** (*rallytime*) Back-port #28702 to 2015.8
- **PR #30361:** (*cro*) Flip the sense of the test for proxymodule imports, add more fns for esxi proxy
- **PR #30267:** (*isbm*) Fix RPM issues with the date/time and add package attributes filtering
- **PR #30360:** (*jfindlay*) file.remove, file.absent: mention recursive dir removal
- **PR #30221:** (*mbarrien*) No rolcatupdate for user\_exist in Postgres>=9.5 #26845
- **PR #30358:** (*terminalmage*) Add libgit2 version to versions-report
- **PR #30346:** (*pass-by-value*) Prevent orphaned volumes
- **PR #30349:** (*rallytime*) Back-port #30347 to 2015.8
- **PR #30354:** (*anlutro*) Make sure all ignore\_missing SLSes are caught
- **PR #30356:** (*nmadhok*) Adding code author
- **PR #30340:** (*jtand*) Updated seed\_test.py for changes made to seed module
- **PR #30339:** (*jfindlay*) Backport #26511
- **PR #30343:** (*rallytime*) Fix 2015.8 from incomplete back-port
- **PR #30342:** (*eliasp*) Correct whitespace placement in error message

- PR #30308: (*rallytime*) Back-port #30257 to 2015.8
- PR #30187: (*rallytime*) Back-port #27606 to 2015.8
- PR #30223: (*serge-p*) adding support for DragonFly BSD
- PR #30238: (*rallytime*) Reinit crypto before calling RSA.generate when generating keys.
- PR #30246: (*dmacvicar*) Add missing return data to scheduled jobs (#24237)
- PR #30292: (*thegoodduke*) ipset: fix test=true & add comment for every entry
- PR #30275: (*abednarik*) Add permanent argument in firewall.d.
- PR #30328: (*cachedout*) Fix file test
- PR #30310: (*pass-by-value*) Empty bucket fix
- PR #30211: (*techhat*) Execute choot on the correct path
- PR #30309: (*rallytime*) Back-port #30304 to 2015.8
- PR #30278: (*nmadhok*) If datacenter is specified in the config, then look for managed objects under it
- PR #30305: (*jacobhammons*) Changed examples to use the ``example.com" domain instead of ``mycompan...
- PR #30249: (*mpreziuso*) Fixes performance and timeout issues on win\_pkg.install
- PR #30217: (*pass-by-value*) Make sure cloud actions can be called via salt run
- PR #30268: (*terminalmage*) Optimize file\_tree ext\_pillar and update file.managed to allow for binary contents
- PR #30245: (*rallytime*) Boto secgroup/iam\_role: Add note stating us-east-1 is default region
- PR #30299: (*rallytime*) ESXi Proxy minions states are located at salt.states.esxi, not vsphere.
- PR #30202: (*opdude*) Fixed the periodic call to beacons
- PR #30303: (*jacobhammons*) Changed notes to indicate that functions are matched using regular ex...
- PR #30284: (*terminalmage*) salt.utils.gitfs: Fix Dulwich env detection and submodule handling
- PR #30280: (*jfindlay*) add state mocking to release notes
- PR #30273: (*rallytime*) Back-port #30121 to 2015.8
- PR #30301: (*cachedout*) Accept whatever comes into hightstate mock for state tests
- PR #30282: (*cachedout*) Fix file.append logic
- PR #30289: (*cro*) Fix problems with targeting proxies by grains
- PR #30293: (*cro*) Ensure we don't log stuff we shouldn't
- PR #30279: (*cachedout*) Allow modules to be packed into boto utils
- PR #30186: (*rallytime*) Update CLI Examples in boto\_ec2 module to reflect correct arg/kwarg positioning
- PR #30156: (*abednarik*) Add option in file.append to ignore\_whitespace.
- PR #30189: (*rallytime*) Back-port #30185 to 2015.8
- PR #30215: (*jacobhammons*) Assorted doc bug fixes
- PR #30206: (*cachedout*) Revert ``Fix incorrect file permissions in file.line"
- PR #30190: (*jacobhammons*) Updated doc site banners
- PR #30180: (*jfindlay*) modules.x509.\_dec2hex: add fmt index for 2.6 compat
- PR #30179: (*terminalmage*) Backport #26962 to 2015.8 branch

- **PR #29693:** (*abednarik*) Handle missing source file in `ssh_auth`.
- **PR #30155:** (*rallytime*) Update `boto_secgroup` and `boto_iam_role` docs to only use region OR profile
- **PR #30158:** (*rallytime*) Move `_option(value)` calls to `__salt__['config.option']` in boto utils
- **PR #30160:** (*dmurphy18*) Fix parsing disk usage for line with no number and AIX values in Kilos
- **PR #30162:** (*rallytime*) Update `list_present` and `append grains state` function docs to be more clear.
- **PR #30163:** (*rallytime*) Add warning about using `` `="` in `file.line` function
- **PR #30164:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #30168:** (*abednarik*) Fix incorrect file permissions in `file.line`
- **PR #30154:** (*Oro*) Fix file serialize on windows
- **PR #30144:** (*rallytime*) Added generic ESXCLI command ability to ESXi Proxy Minion
- **PR #30142:** (*terminalmage*) Fix `dockerng.push`, and allow for multiple images
- **PR #30075:** (*joejulian*) Convert `glusterfs` module to use xml
- **PR #30129:** (*optix2000*) Clean up `_uptodate()` in git state
- **PR #30139:** (*rallytime*) Back-port #29589 to 2015.8
- **PR #30124:** (*abednarik*) Update regex to detect ip alias in OpenBSD.
- **PR #30133:** (*stanislavb*) Fix typo in `gpgkey` URL
- **PR #30126:** (*stanislavb*) Log S3 API error message
- **PR #30128:** (*oeuftete*) Log retryable transport errors as warnings
- **PR #30096:** (*cachedout*) Add `rm_special` to `crontab` module
- **PR #30106:** (*techhat*) Ensure last dir
- **PR #30101:** (*gtmanfred*) fix bug where nova driver exits with no `adminPass`
- **PR #30090:** (*techhat*) Add argument to `isdir()`
- **PR #30094:** (*rallytime*) Fix doc formatting for `cloud.create` example in `module.py` state
- **PR #30095:** (*rallytime*) Add the `list_nodes_select` function to `linode` driver
- **PR #30082:** (*abednarik*) Fixed `saltversioninfo` grain return
- **PR #30084:** (*rallytime*) Back-port #29987 to 2015.8
- **PR #30071:** (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR #30067:** (*ryan-lane*) Pass in `kwargs` to `boto_secgroup.convert_to_group_ids` explicitly
- **PR #30069:** (*techhat*) Ensure that `pki_dir` exists
- **PR #30064:** (*rallytime*) Add Syndic documentation to miscellaneous Salt Cloud config options
- **PR #30049:** (*rallytime*) Add some more unit tests for the `vsphere` execution module
- **PR #30060:** (*rallytime*) Back-port #27104 to 2015.8
- **PR #30048:** (*jacobhammons*) Remove internal APIs from `rest_cherrypy` docs.
- **PR #30043:** (*rallytime*) Be explicit about importing from `salt.utils.jinja` to avoid circular imports
- **PR #30038:** (*rallytime*) Back-port #30017 to 2015.8
- **PR #30036:** (*rallytime*) Back-port #29995 to 2015.8

- PR #30035: (*rallytime*) Back-port #29895 to 2015.8
- PR #30034: (*rallytime*) Back-port #29893 to 2015.8
- PR #30033: (*rallytime*) Back-port #29876 to 2015.8
- PR #30029: (*terminalmage*) git.latest: Fix handling of nonexistent branches
- PR #30016: (*anlutro*) Properly normalize locales in locale.gen\_locale
- PR #30015: (*anlutro*) locale module: don't escape the slash in \n
- PR #30022: (*gqgunhed*) Two minor typos fixed
- PR #30026: (*anlutro*) states.at: fix wrong variable being used
- PR #29966: (*multani*) Fix bigip state/module documentation + serializers documentation
- PR #29904: (*twangboy*) Improvements to osx packaging scripts
- PR #29950: (*multani*) boto\_iam: fix deletion of IAM users when using delete\_keys=true
- PR #29937: (*multani*) Fix states.boto\_iam group users
- PR #29934: (*multani*) Fix state.boto\_iam virtual name
- PR #29943: (*cachedout*) Check args correctly in boto\_rds
- PR #29924: (*gqgunhed*) fixed: uptime now working on non-US Windows
- PR #29883: (*serge-p*) fix for nfs mounts in \_active\_mounts\_opensbd()
- PR #29894: (*techhat*) Support Saltfile in SPM
- PR #29856: (*rallytime*) Added some initial unit tests for the salt.modules.vsphere.py file
- PR #29855: (*rallytime*) Back-port #29740 to 2015.8
- PR #29890: (*multani*) Various documentation fixes
- PR #29850: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #29811: (*anlutro*) influxdb: add retention policy module functions
- PR #29814: (*basepi*) [2015.8][Windows] Fix multi-master on windows
- PR #29819: (*rallytime*) Add esxi module and state to docs build
- PR #29832: (*jleimbach*) Fixed typo in order to use the keyboard module for RHEL without systemd
- PR #29803: (*rallytime*) Add vSphere module to doc ref module tree
- PR #29767: (*abednarik*) Hosts file update in mod\_hostname.
- PR #29772: (*terminalmage*) pygit2: skip submodules when traversing tree
- PR #29765: (*gtmanfred*) allow nova driver to be boot from volume
- PR #29773: (*l2ol33rt*) Append missing wget in debian installation guide
- PR #29800: (*rallytime*) Back-port #29769 to 2015.8
- PR #29775: (*paulnivin*) Change listen requisite resolution from name to ID declaration
- PR #29754: (*rallytime*) Back-port #29719 to 2015.8
- PR #29713: (*The-Loeki*) Pillar-based cloud providers still forcing use of deprecated `provider`
- PR #29729: (*rallytime*) Further clarifications on ``unless" and ``onlyif" requisites.
- PR #29737: (*akissa*) fix pillar sqlite3 documentation examples

- **PR #29743:** (*akissa*) fix pillar sqlite not honouring config options
- **PR #29723:** (*rallytime*) Clarify db\_user and db\_password kwargs for postgres\_user.present state function
- **PR #29722:** (*rallytime*) Link ``stateful" kwargs to definition of what ``stateful" means for cmd state.
- **PR #29724:** (*rallytime*) Add examples of using multiple matching levels to Pillar docs
- **PR #29726:** (*cachedout*) Disable some boto tests per resolution of moto issue
- **PR #29708:** (*lagesag*) Fix test=True for file.directory with recurse ignore\_files/ignore\_dirs.
- **PR #29642:** (*cachedout*) Correctly restart daemonized minions on failure
- **PR #29599:** (*cachedout*) Clean up minion shutdown
- **PR #29675:** (*clinta*) allow returning all refs
- **PR #29683:** (*rallytime*) Catch more specific error to pass the error message through elegantly.
- **PR #29687:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #29681:** (*clinta*) fix bare/mirror in git.latest
- **PR #29644:** (*rallytime*) Fixed a couple more ESXi proxy minion bugs
- **PR #29645:** (*rallytime*) Back-port #29558 to 2015.8
- **PR #29632:** (*jfindlay*) reduce severity of tls module \_\_virtual\_\_ logging
- **PR #29606:** (*abednarik*) Fixed duplicate mtu entry in RedHat 7 network configuration.
- **PR #29613:** (*rallytime*) Various ESXi Proxy Minion Bug Fixes
- **PR #29628:** (*DmitryKuzmenko*) Don't create io\_loop before fork
- **PR #29609:** (*basepi*) [2015.8][salt-ssh] Add ability to set salt-ssh command umask in roster
- **PR #29603:** (*basepi*) Fix orchestration failure-checking
- **PR #29597:** (*terminalmage*) dockerng: Prevent exception when API response contains empty dictionary
- **PR #29596:** (*rallytime*) Back-port #29587 to 2015.8
- **PR #29588:** (*rallytime*) Added ESXi Proxy Minion Tutorial
- **PR #29572:** (*gtmanfred*) [nova] use old discover\_extensions if available
- **PR #29545:** (*terminalmage*) git.latest: init submodules if not yet initialized
- **PR #29548:** (*rallytime*) Back-port #29449 to 2015.8
- **PR #29547:** (*rallytime*) Refactored ESXCLI-based functions to accept a list of esxi\_hosts
- **PR #29563:** (*anlutro*) Fix a call to deprecated method in python-influxdb
- **PR #29565:** (*bdrung*) Fix typos and missing release note
- **PR #29540:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #29499:** (*rallytime*) Initial commit of ESXi Proxy Minion
- **PR #29526:** (*jfindlay*) 2015.8.2 notes: add note about not being released
- **PR #29531:** (*jfindlay*) grains.core: handle undefined variable
- **PR #29538:** (*basepi*) [2015.8] [salt-ssh] Remove umask around actual execution for salt-ssh
- **PR #29505:** (*rallytime*) Update boto\_rds state docs to include funky yaml syntax for ``tags" option.
- **PR #29513:** (*bdrung*) Drop obsolete syslog.target from systemd services

- [PR #29500](#): (*rallytime*) Back-port [#29467](#) to 2015.8
- [PR #29463](#): (*abednarik*) Add `**kwargs` to `debconf.set`.
- [PR #29399](#): (*jfindlay*) `modules.status`: add `human_readable` option to `uptime`
- [PR #29433](#): (*cro*) Files for building `.pkg` files for MacOS X
- [PR #29455](#): (*jfindlay*) `modules.nova.__init__`: do not return `None`
- [PR #29454](#): (*jfindlay*) `rh_service` module `__virtual__` return error messages
- [PR #29476](#): (*tbaker57*) Doc fix - `route_table_present` needs `subnet_names` (not `subnets`) as a key
- [PR #29487](#): (*rallytime*) Back-port [#29450](#) to 2015.8
- [PR #29441](#): (*rallytime*) Make sure docs line up with `blade_idrac` function specs
- [PR #29440](#): (*rallytime*) Back-port [#28925](#) to 2015.8
- [PR #29435](#): (*galet*) Grains return wrong OS version and other OS related values for Oracle Linux
- [PR #29430](#): (*rall0r*) Fix `host.present` state limitation
- [PR #29417](#): (*jacobhammons*) Repo install updates
- [PR #29402](#): (*techhat*) Add rate limiting to `linode`
- [PR #29400](#): (*twangboy*) Fix [#19332](#)
- [PR #29398](#): (*cachedout*) Lint 29288
- [PR #29331](#): (*DmitryKuzmenko*) Bugfix - [#29116](#) raet dns error
- [PR #29390](#): (*jacobhammons*) updated version numbers in documentation
- [PR #29381](#): (*nmadhok*) No need to `deepcopy` since `six.iterkeys()` creates a copy
- [PR #29349](#): (*cro*) Fix mis-setting chassis names
- [PR #29334](#): (*rallytime*) Back-port [#29237](#) to 2015.8
- [PR #29300](#): (*ticosax*) [`dockerng`] Add support for volume management in `dockerng`
- [PR #29218](#): (*clan*) check service enable state in test mode
- [PR #29315](#): (*jfindlay*) dev tutorial doc: fix markup errors
- [PR #29317](#): (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- [PR #29240](#): (*clan*) handle `acl_type` [`[d]efault:`] [`user|group|mask|other`]
- [PR #29305](#): (*loregordon*) Add ``file'` as a `source_hash` proto
- [PR #29272](#): (*jfindlay*) `win_status` module: handle 12 hour time in `uptime`
- [PR #29289](#): (*terminalmage*) `file.managed`: Allow local file sources to use `source_hash`
- [PR #29264](#): (*anlutro*) Prevent `ssh_auth.absent` from running when `test=True`
- [PR #29277](#): (*terminalmage*) Update `git_pillar` runner to support new `git_ext_pillar` config schema
- [PR #29283](#): (*cachedout*) Single-quotes and use `format`
- [PR #29139](#): (*thomaso-mirodin*) [`salt-ssh`] Add a range roster and range targeting options for the flat roster
- [PR #29282](#): (*cachedout*) dev docs: add development tutorial
- [PR #28994](#): (*timcharper*) add support to `s3` for aws role assumption
- [PR #29278](#): (*techhat*) Add `verify_log` to SPM

- **PR #29067:** (*jacksonj*) Fix infinite recursion in state compiler for prereq of SLSs
- **PR #29207:** (*jfindlay*) do not shadow ret function argument
- **PR #29215:** (*rallytime*) Back-port #29192 to 2015.8
- **PR #29217:** (*clan*) show duration only if state\_output\_profile is False
- **PR #29221:** (*ticosax*) [dokcerng] Docu network mode
- **PR #29269:** (*jfindlay*) win\_status module: fix function names in docs
- **PR #29213:** (*rallytime*) Move \_wait\_for\_task func from vmware cloud to vmware utils
- **PR #29271:** (*techhat*) Pass full path for digest (SPM)
- **PR #29244:** (*isbm*) List products consistently across all SLES systems
- **PR #29255:** (*garethgreenaway*) fixes to consul module
- **PR #29208:** (*whyte wolf*) Glance more profile errors
- **PR #29200:** (*jfindlay*) mount state: unmount by device is optional
- **PR #29205:** (*trevor-h*) Fixes #29187 - using winrm on EC2
- **PR #29170:** (*cachedout*) Migrate pydsl tests to integration test suite
- **PR #29198:** (*jfindlay*) rh\_ip module: only set the mtu once
- **PR #29135:** (*jfindlay*) ssh\_known\_hosts.present state: catch not found exc
- **PR #29196:** (*s0undt3ch*) We need novaclient imported to compare versions
- **PR #29059:** (*terminalmage*) Work around upstream pygit2 bug
- **PR #29112:** (*eliasp*) Prevent backtrace (KeyError) in *ssh\_known\_hosts.present* state
- **PR #29178:** (*whyte wolf*) Profile not being passed to keystone.endpoint\_get in \_auth. so if a p...

### 20.2.37 Salt 2015.8.8 Release Notes

---

**Important:** 2015.8.8.2 was released shortly after 2015.8.8 to fix several known issues. If you installed 2015.8.8 before 03/30/2016, you likely have installed 2015.8.8 and can optionally upgrade (find out which version you have installed using `salt --version`. The latest version is 2015.8.8.2).

---

#### Salt 2015.8.8.2

Salt 2015.8.8.2 includes fixes for the following known issues in 2015.8.8:

- [issue 32044](#): Key master with value [...] has an invalid type of list Error
- [issue 32004](#): Failed to import module win\_dacl Error
- [issue 32114](#): Wrong validation type for file\_ignore\_glob key
- [issue 31969](#): Fix file.managed for windows

---

**Important:** [issue 32183](#) prevents Salt Cloud from installing the Salt minion on new systems. To workaroud this issue, call `salt-cloud -u` to update the bootstrap script to the latest version.

---

## Salt 2015.8.8

### Security Fix

CVE-2016-3176: Insecure configuration of PAM external authentication service

This issue affects all Salt versions prior to 2015.8.8/2015.5.10 when PAM *external authentication* is enabled. This issue involves passing an alternative PAM authentication service with a command that is sent to *LocalClient*, enabling the attacker to bypass the configured authentication service. Thank you to Dylan Frese <dmfrese@gmail.com> for bringing this issue to our attention.

This update defines the PAM eAuth service that users authenticate against in the Salt Master configuration.

### Read Before Upgrading Debian 7 (Wheezy) from 2015.8.7 to 2015.8.8

Before you upgrade from 2015.8.7 on Debian 7, you must run the following commands to remove previous packages:

```
sudo apt-get remove python-pycrypto
sudo apt-get remove python-apache-libcloud
```

Note that `python-pycrypto` will likely remove `python-apache-libcloud`, so the second command might not be necessary. These have been replaced by `python-crypto` and `python-libcloud` with `~bpo70+1` moniker.

### Read Before Upgrading Debian 8 (Jessie) from Salt Versions Earlier than 2015.8.4

Salt `systemd` service files are missing the following statement in these versions:

```
[Service]
KillMode=process
```

This statement must be added to successfully upgrade on these earlier versions of Salt.

### Changes for v2015.8.7..v2015.8.8

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

*Generated at: 2016-03-17T21:03:44Z*

Total Merges: **312**

Changes:

- **PR #31947:** (*cro*) Move proxymodule assignment earlier in proxy minion init
- **PR #31948:** (*rallytime*) Revert ``not not" deletion and add comment as to why that is there
- **PR #31952:** (*rallytime*) Fix lint for 2015.8 branch
- **PR #31933:** (*rallytime*) Fix linking syntax in testing docs
- **PR #31930:** (*cro*) Backport changes from 2016.3
- **PR #31924:** (*jfindlay*) update 2015.8.8 release notes
- **PR #31922:** (*cachedout*) For 2015.8 head
- **PR #31904:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8

- **PR #31906:** (*sbreidba*) Win\_dacl module: fix FULLCONTROL / FILE\_ALL\_ACCESS definition
- **PR #31745:** (*isbm*) Fix the always-false behavior on checking state
- **PR #31911:** (*rallytime*) Merge #31903 with pylint fix
- **PR #31883:** (*paiou*) Fix scaleway cloud provider and manage x86 servers
- **PR #31903:** (*terminalmage*) Use remote\_ref instead of local\_ref to see if checkout is necessary
- **PR #31845:** (*sakateka*) Now a check\_file\_meta deletes temporary files when test=True
- **PR #31901:** (*rallytime*) Back-port #31846 to 2015.8
- **PR #31905:** (*terminalmage*) Update versionadded directive
- **PR #31902:** (*rallytime*) Update versionadded tag for new funcs
- **PR #31888:** (*terminalmage*) Fix salt.utils.decorators.Depends
- **PR #31857:** (*sjorge*) gen\_password and del\_password missing from solaris\_shadow
- **PR #31879:** (*cro*) Clarify some comments
- **PR #31815:** (*dr4Ke*) Fix template on contents 2015.8
- **PR #31818:** (*anlutro*) Prevent event logs from writing huge amounts of data
- **PR #31836:** (*terminalmage*) Fix git\_pillar race condition
- **PR #31824:** (*rallytime*) Back-port #31819 to 2015.8
- **PR #31856:** (*szeestraten*) Adds missing docs for Virtual Network and Subnet options in salt-cloud Azure cloud profile
- **PR #31839:** (*jfindlay*) add 2015.8.8 release notes
- **PR #31828:** (*gtmanfred*) Remove ability of authenticating user to specify pam service
- **PR #31787:** (*anlutro*) Fix user\_create and db\_create for new versions of influxdb
- **PR #31800:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #31797:** (*Ch3LL*) Change pkg name to less for suse pkg.info\_installed test
- **PR #31793:** (*xopher-mc*) fixing init system detection on sles 11, refs #31617
- **PR #31786:** (*isbm*) Bugfix: zypper doesn't detect base product on SLE11 series
- **PR #31780:** (*gtmanfred*) use already created vsphere connection
- **PR #31779:** (*sbreidba*) win\_dacl state & module: return comment field as strings, not lists.
- **PR #31723:** (*sjorge*) file\_ignore\_regex is a list, not bool
- **PR #31747:** (*techhat*) Use get\_local\_client with MASTER opts, not MINION
- **PR #31688:** (*whiteinge*) Various SMTP returner fixes
- **PR #31752:** (*rallytime*) Back-port #31686 to 2015.8
- **PR #31733:** (*jacobhammons*) docs to clarify cloud configuration
- **PR #31775:** (*techhat*) Show correct provider/driver name
- **PR #31754:** (*techhat*) Check all providers, not just the current one
- **PR #31735:** (*rallytime*) Add reboot, start, and stop actions to digital ocean driver
- **PR #31770:** (*anlutro*) Fix influxdb user functionality for version 0.9+

- **PR #31743:** (*Talkless*) Fix parentheses mismatch in documentation
- **PR #31162:** (*isbm*) Remove MD5 digest from everywhere and default to SHA256
- **PR #31670:** (*terminalmage*) Write lists of minions targeted by syndic masters to job cache
- **PR #31711:** (*ticosax*) [dockerng] Port and Volume comparison should consider Dockerfile
- **PR #31719:** (*techhat*) Don't worry about KeyErrors if the node is already removed
- **PR #31713:** (*ticosax*) [dockerng] Fix dockerng.network\_present when container is given by name
- **PR #31705:** (*peripatetic-sojourner*) Foreman pillar
- **PR #31702:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #31700:** (*s0undt3ch*) It's a function!
- **PR #31679:** (*cro*) Fix bad link to the sample REST endpoint in salt-contrib.
- **PR #31668:** (*rallytime*) Some more testing documentation improvements
- **PR #31653:** (*DmitryKuzmenko*) Don't attempt to verify token if it wasn't sent to master.
- **PR #31629:** (*darix*) Fix services on sles
- **PR #31641:** (*rallytime*) Improve Salt Testing tutorial to be a more comprehensive intro
- **PR #31651:** (*dr4Ke*) test case: test\_list\_present\_nested\_already
- **PR #31643:** (*opdude*) Make sure we are really updating the mercurial repository
- **PR #31598:** (*terminalmage*) Remove limitations on validation types for eauth targets
- **PR #31627:** (*jakehilton*) Handling error from using gevent 1.1.
- **PR #31630:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #31594:** (*rallytime*) Back-port #31589 to 2015.8
- **PR #31604:** (*joejulian*) Workaround for non-xml output from gluster cli when not tty
- **PR #31583:** (*vutny*) Remove trailing white spaces
- **PR #31592:** (*rallytime*) Back-port #31546 to 2015.8
- **PR #31593:** (*rallytime*) Back-port #31570 to 2015.8
- **PR #31567:** (*cachedout*) Restore FIPS compliance when using master\_finger
- **PR #31568:** (*twangboy*) Grant permissions using SID instead of name
- **PR #31561:** (*jtand*) Skipped test
- **PR #31550:** (*rallytime*) Correct versionadded tag for win\_service.config
- **PR #31549:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #31544:** (*DmitryKuzmenko*) Protect getattr from recursion
- **PR #31525:** (*DmitryKuzmenko*) Issues/30643 merge forward fixes
- **PR #31536:** (*virtualguy*) Remove debian repo from raspbian installation
- **PR #31528:** (*vutny*) Correct Salt Cloud documentation about updating Salt Bootstrap script
- **PR #31539:** (*DmitryKuzmenko*) Added temporary workaround for CentOS 7 os-release id bug.
- **PR #31508:** (*mcalmer*) Zyper correct exit code checking
- **PR #31510:** (*vutny*) Add installation guide for Raspbian (Debian on Raspberry Pi)

- **PR #31498:** (*Ch3LL*) rename methods in pkg states test
- **PR #31471:** (*cachedout*) Correct issue where duplicate items in grains list during state run will result in duplicate grains
- **PR #31455:** (*ticosax*) [dockerng] Disable notset check
- **PR #31488:** (*isbm*) Unit Test for Zypper's ``remove" and ``purge"
- **PR #31485:** (*jacobhammons*) Fixed transport description in minion / master config
- **PR #31411:** (*jtand*) Added some beacons execution module integration tests
- **PR #31475:** (*jacobhammons*) Assorted doc issues
- **PR #31477:** (*vutny*) Correct installation documentation for Ubuntu
- **PR #31479:** (*isbm*) Zypper unit tests & fixes
- **PR #31445:** (*rallytime*) Only use LONGSIZE in rpm.info if available. Otherwise, use SIZE.
- **PR #31464:** (*Ch3LL*) integartion test: ensure decorator only runs on one method and not class
- **PR #31458:** (*vutny*) Correct installation documentation for Debian
- **PR #31457:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #31439:** (*rallytime*) Fix lowpkg.info function for Ubuntu 12 - make sure we have a pkg name
- **PR #31456:** (*RabidCicada*) Clarified the form of requisite targets/requisite-references
- **PR #31453:** (*DmitryKuzmenko*) Backport cp\_geturl fix for large files into 2015.8
- **PR #31444:** (*jacobhammons*) Documentation updates - ddns state, file.line state/exe function, installation dependencies
- **PR #31341:** (*twangboy*) Clarification on Windows Package Manager docs
- **PR #31380:** (*kiorky*) Bring up ext\_pillar rendering errors as well
- **PR #31418:** (*terminalmage*) Fix core grains when Debian OS detected as `Debian GNU/Linux'
- **PR #31429:** (*mcalmer*) fix argument handling for pkg.download
- **PR #31432:** (*ticosax*) [dockerng] Hotfix docker 1.10.2
- **PR #31420:** (*twangboy*) Handle Unversioned Packages
- **PR #31417:** (*jacobhammons*) ddns state docs updated with notes regarding the name, zone, and keyfile.
- **PR #31391:** (*redmcg*) Added sanity check: is `pillar' in self.opts
- **PR #31376:** (*cro*) Some distros don't have a /lib/systemd
- **PR #31352:** (*ticosax*) [dockerng] Pull missing images when calling dockerng.running
- **PR #31378:** (*mcalmer*) Zypper refresh handling
- **PR #31373:** (*terminalmage*) Use --set-upstream instead of --track to set upstream on older git
- **PR #31390:** (*abednarik*) Fix Logrotate module.
- **PR #31354:** (*ticosax*) [dockerng] Don't require auth for all registries
- **PR #31368:** (*whiteinge*) Update list of netapi clients for autotclass
- **PR #31367:** (*techhat*) Add docs on how to actually use SDB
- **PR #31357:** (*ticosax*) [dockerng] Support docker inconsistencies
- **PR #31353:** (*ticosax*) [dockerng] Fix when ports are integers

- **PR #31346:** (*ticosax*) Backport #31130 to 2015.8
- **PR #31332:** (*terminalmage*) Clarify documentation for gitfs/hgfs/svnfs mountpoint and root options
- **PR #31305:** (*mcalmer*) call zypper with option --non-interactive everywhere
- **PR #31337:** (*jacobhammons*) Release notes and versioning for 2015.8.7
- **PR #31326:** (*ticosax*) [dockerng ] Detect settings removal
- **PR #31292:** (*twangboy*) Fix dunder virtual to check for Remote Administration Tools
- **PR #31287:** (*joejulian*) Rework tests and fix reverse peering with gluster 3.7
- **PR #31196:** (*sakateka*) Here are a few fixes utils.network
- **PR #31299:** (*rallytime*) Allow state-output and state-verbose default settings to be set from CLI
- **PR #31317:** (*terminalmage*) Fix versionadded directive
- **PR #31301:** (*terminalmage*) Corrected fix for #30999
- **PR #31302:** (*terminalmage*) Audit CLI opts used in git states
- **PR #31312:** (*terminalmage*) Merge 2015.5 into 2015.8
- **PR #31225:** (*pprince*) Fix in file\_tree pillar (Fixes #31223.)
- **PR #31233:** (*mcalmer*) implement version\_cmp for zypper
- **PR #31273:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #31253:** (*gtmanfred*) allow for nova servers to be built with premade volumes
- **PR #31271:** (*rallytime*) Back-port #30689 to 2015.8
- **PR #31255:** (*jacobhammons*) Fixes #30461
- **PR #31189:** (*dmacvicar*) Fix crash with scheduler and runners (#31106)
- **PR #31201:** (*The-Loeki*) Utilize prepared grains var in master-side ipcidr matching
- **PR #31239:** (*terminalmage*) Improve logging when master cannot decode a payload
- **PR #31190:** (*twangboy*) Clear minion cache before caching from master
- **PR #31226:** (*pprince*) Minor docs fix: file\_tree pillar (Fixes #31124)
- **PR #31234:** (*mcalmer*) improve doc for list\_pkgs
- **PR #31237:** (*mcalmer*) add handling for OEM products
- **PR #31182:** (*rallytime*) Back-port #31172 to 2015.8
- **PR #31191:** (*rallytime*) Make sure doc example matches kwarg
- **PR #31171:** (*Ch3LL*) added logic to check for installed package
- **PR #31177:** (*Ch3LL*) add integration test for issue #30934
- **PR #31181:** (*cachedout*) Lint 2015.8 branch
- **PR #31169:** (*rallytime*) Back-port #29718 to 2015.8
- **PR #31170:** (*rallytime*) Back-port #31157 to 2015.8
- **PR #31147:** (*cro*) Documentation clarifications.
- **PR #31153:** (*edencrane*) Fixed invalid host causing 'reference to variable before assignment'
- **PR #31152:** (*garethgreenaway*) fixes to beacon module, state module and friends

- **PR #31149:** (*jfindlay*) add 2015.8.7 release notes
- **PR #31134:** (*isbm*) Fix types in the output data and return just a list of products
- **PR #31120:** (*gtmanfred*) Clean up some bugs in the nova driver
- **PR #31132:** (*rallytime*) Make sure required profile configurations passed in a map file work
- **PR #31131:** (*Ch3LL*) integration test for issue #31014
- **PR #31133:** (*cachedout*) Fixup 31121
- **PR #31125:** (*isbm*) Force-kill websocket's child processes faster than default two minutes.
- **PR #31119:** (*sakateka*) fixes for ipv6-only multi-master failover
- **PR #31107:** (*techhat*) Don't try to add a non-existent IP address
- **PR #31108:** (*jtand*) Changed npm integration test to install request.
- **PR #31105:** (*cachedout*) Lint 30975
- **PR #31100:** (*jfindlay*) states.x509: docs: peer.sls -> peer.conf
- **PR #31103:** (*twangboy*) Point to reg.delete\_key\_recursive
- **PR #31093:** (*techhat*) Ensure double directories don't get created
- **PR #31095:** (*jfindlay*) modules.file, states.file: explain symbolic links
- **PR #31061:** (*rallytime*) Revert #30217 - was causing salt-cloud -a breakage
- **PR #31090:** (*rallytime*) Back-port #30542 to 2015.8
- **PR #31085:** (*jacksonj*) Correctly remove path we added after loader is completed
- **PR #31037:** (*vutny*) Update RHEL installation guide to reflect latest repo changes
- **PR #31050:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #31053:** (*cachedout*) Fix boto test failures
- **PR #31029:** (*twangboy*) Windows defaults to multiprocessing true
- **PR #30998:** (*dmacvicar*) add\_key/reject\_key: do not crash w/Permission denied: '/var/cache/salt/master/.dfn' (#27796)
- **PR #31049:** (*twangboy*) Fix versionadded in win\_service.config
- **PR #30987:** (*youngnick*) Changed glusterfs.peer() module so state can handle localhost peering attempts.
- **PR #31042:** (*moltob*) Allow using Windows path in archive.extracted name attribute
- **PR #31012:** (*terminalmage*) Fix gitfs/git\_pillar/winrepo provider to allow lowercase values
- **PR #31024:** (*jfindlay*) modules.aptpkg.upgrade: clarify dist-upgrade usage
- **PR #31028:** (*twangboy*) Fix config overwrite by windows installer
- **PR #31031:** (*terminalmage*) More complete fix for #31014
- **PR #31026:** (*terminalmage*) Fix regression when contents\_pillar/contents\_grains is a list.
- **PR #30978:** (*garethgreenaway*) fixes to state.py in 2015.8
- **PR #30893:** (*bdrung*) Make build reproducible
- **PR #30945:** (*cachedout*) Note that pillar cli args are sent via pub
- **PR #31002:** (*rmtmckenzie*) Fix lxc cloud provided minion reporting present

- PR #31007: (*jtand*) Fixed rabbitmq\_vhost test failure.
- PR #31004: (*rallytime*) Remove overstate docs and a few references.
- PR #30965: (*anlutro*) Fix rabbitmq\_vhost.present result when test=True
- PR #30955: (*Ch3LL*) docs: add clarification when source is not defined
- PR #30941: (*rallytime*) Back-port #30879 to 2015.8
- PR #30940: (*twangboy*) Fix Build Process for OSX
- PR #30944: (*jacobhammons*) 2015.8.5 release notes linking and clean up
- PR #30905: (*joejulian*) Add realpath to lvm.pvdisplay and use it in vg\_present
- PR #30924: (*youngnick*) Fix small bug with starting volumes after creation.
- PR #30910: (*cro*) fix iDRAC state
- PR #30919: (*garthgreenaway*) Fixes to ssh\_auth state module
- PR #30920: (*jacobhammons*) Versioned to 2015.8.5, added known issue #30300 to release notes
- PR #30894: (*terminalmage*) git module/state: Handle identity files more gracefully
- PR #30750: (*jfindlay*) extract whole war version
- PR #30884: (*rallytime*) Move checks for private\_key file existence and permissions to create function
- PR #30888: (*ticosax*) Backport #30797 to 2015.8
- PR #30895: (*bdrung*) Fix various typos
- PR #30889: (*anlutro*) Make msgpack an optional dependency in salt.utils.cache
- PR #30896: (*vutny*) Update nodegroups parameter examples in master config example and docs
- PR #30898: (*abednarik*) Fix pkg install with version.
- PR #30867: (*rallytime*) Pass in `pack` variable to utils.boto.assign\_funcs function from ALL boto modules
- PR #30849: (*jfindlay*) utils.aws: use time lib to conver to epoch seconds
- PR #30874: (*terminalmage*) Fix regression in git\_pillar when multiple remotes are configured
- PR #30850: (*jfindlay*) modules.dpkg.\_get\_pkg\_info: allow for ubuntu 12.04
- PR #30852: (*replicant0wnz*) Added more descriptive error message
- PR #30847: (*terminalmage*) Backport #30844 to 2015.8 branch
- PR #30860: (*vutny*) Correct installation documentation for RHEL-based distributions
- PR #30841: (*jacobhammons*) Release notes for 2015.8.5
- PR #30835: (*terminalmage*) Integration test for #30820
- PR #30837: (*jacobhammons*) Added known issue #30820 to release notes
- PR #30832: (*rallytime*) Add grains modules to salt modindex
- PR #30822: (*rallytime*) Make sure setting list\_user\_permissions to [' ', `', `'] doesn't stacktrace
- PR #30833: (*terminalmage*) Fix regression in scanning for state with `name` param
- PR #30823: (*yannis666*) Fix for mine to merge configuration on update.
- PR #30827: (*jacobhammons*) Version to 2015.8.4, added CVE 2016-1866 to release notes
- PR #30813: (*anlutro*) Properly set the default value for pillar\_merge\_lists

- **PR #30826:** (*cachedout*) Fix 30682
- **PR #30818:** (*rallytime*) Back-port #30790 to 2015.8
- **PR #30815:** (*vutny*) Pick right user argument for updating reactor function's low data
- **PR #30747:** (*jfindlay*) modules.lxc.running\_systemd: use *command -v* not *which*
- **PR #30800:** (*twangboy*) Ability to handle special case installations
- **PR #30794:** (*rallytime*) A spelling fix and some spacing fixes for the boto\_ec2 module docs
- **PR #30756:** (*basepi*) [2015.8] Fix two error conditions in the highstate outputter
- **PR #30788:** (*rallytime*) Fix incorrect doc example for dellchassis blade\_idrac state
- **PR #30791:** (*Ch3LL*) do not shadow ret function argument for salt.function
- **PR #30726:** (*sjmh*) Fix improper use of yield in generator
- **PR #30752:** (*terminalmage*) Backport systemd and yum/dnf optimizations from develop into 2015.8
- **PR #30759:** (*thusoy*) Allow managing empty files
- **PR #30758:** (*thusoy*) Support mounting labelled volumes with multiple drives
- **PR #30686:** (*cachedout*) Master-side pillar caching
- **PR #30675:** (*jfindlay*) handle non-ascii minion IDs
- **PR #30691:** (*rallytime*) Make sure we use the ``instance" kwarg in cloud.action.
- **PR #30713:** (*rallytime*) Fix-up autodoc proxy modules for consistency
- **PR #30741:** (*jfindlay*) states.locale.\_\_virtual\_\_: return exec mod load err
- **PR #30751:** (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #30720:** (*clinta*) x509.pem\_managed does not return changes dict
- **PR #30687:** (*clarkperkins*) Setting `del\_root\_vol\_on\_destroy' changes the root volume type to `standard'
- **PR #30673:** (*terminalmage*) Properly derive the git\_pillar cachedir from the id instead of the URL
- **PR #30666:** (*cachedout*) Fix grains cache
- **PR #30623:** (*twangboy*) Added service.config function
- **PR #30678:** (*rallytime*) Back-port #30668 to 2015.8
- **PR #30677:** (*clarkperkins*) Fix EC2 volume creation logic
- **PR #30680:** (*cro*) Merge forward from 2015.5, primarily for #30671
- **PR #30663:** (*isbm*) Zypper: latest version bugfix and epoch support feature
- **PR #30652:** (*mew1033*) Fix sh beacon
- **PR #30657:** (*jfindlay*) [2015.8] Backport #30378 and #29650
- **PR #30656:** (*rallytime*) [2015.8] Merge 2015.5 into 2015.8
- **PR #30644:** (*tbaker57*) Another go at fixing 30573
- **PR #30611:** (*isbm*) Bugfix: Zypper *pkg.latest* crash fix
- **PR #30631:** (*rallytime*) Refactor rabbitmq\_cluster states to use test=true functionality correctly
- **PR #30628:** (*rallytime*) Refactor rabbitmq\_policy states to use test=true functionality correctly
- **PR #30624:** (*cro*) Remove bad symlinks from osx pkg dir

- **PR #30622:** (*rallytime*) Add glance state to list of state modules
- **PR #30618:** (*rallytime*) Back-port #30591 to 2015.8
- **PR #30625:** (*jfindlay*) doc.topics.eauth: clarify client\_acl vs eauth

## 20.2.38 Salt 2015.8.9 Release Notes

Version 2015.8.9 is a bugfix release for *2015.8.0*.

---

### Mint Linux: Important Post-Upgrade Instructions

As a result of some upstream changes, the OS grain on Mint Linux is now being detected as LinuxMint (issue 33295). Run the following command **after you upgrade to 2015.8.9** to reset the OS grain to Mint and the os\_family grain to Debian:

```
salt -G 'os:LinuxMint' grains.setvals '{"os': 'Mint', 'os_family': 'Debian'}"
```

---

### Changes for v2015.8.8..v2015.8.9

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Generated at: 2016-05-17T17:09:39Z

Total Merges: **145**

Changes:

- **PR #33293:** (*twangboy*) Fix minion start retry on Windows (2015.8)
- 22c4331 linux\_acl: Allow ` ` as a separation character in ACL permissions. Fixes #31270 (#33172) (#33305)
- 7a181f2 Handle more ipv6 error as an exception #33299 (#33300)
- eb47a15 Ignore retcode when checking service's status (#33294)
- **PR #33274:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 4f3596a Add comment for test=true w/o changes ret and add changes dict example (#33254)
- 2a30c48 Update Git Policy docs to match Contribution guide (#33252)
- 056c273 Fix #33238 (#33239)
- 1cd34ab Properly report on invalid gitfs/git\_pillar/winrepo repos (#33245)
- **PR #33253:** (*rallytime*) Update the release process docs
- 8c2c5b1 update 2015.8.9 release notes (#33251)
- 8ee8ee3 Handle ipv6 error as an exception (#33246)
- 855bed3 Check rendered YAML for invalid keys (#33213)
- 6fb25a8 Make note of files that begin with ` ` in master.d or minion.d dirs (#33224)
- a6dc0d2 Gate jnpr imports in salt.proxy.junos.py (#33150)
- 64a89c4 Add docs for the http state (#33222)
- 0a32163 Don't stacktrace when using --out=highstate at CLI during staterun. (#33215)
- 04d714d propagate opts to salt.util.http call (#33219)

- c8236c0 update 2015.8.9 release notes (#33237)
- **PR #33217:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 730bec1 [2015.8] Merge forward from 2015.5 to 2015.8 (#33207)
- 379b151 Add a fetch when compiling git\_pillar for masterless minions (#33204)
- b3805d8 cloud.clouds.ec2: cache each named node (#33164)
- 86db5df Properly handle failed git commands when redirect\_stderr=True (#33203)
- 8a0950d Don't force use of global ssh\_config when git identity file is specified (#33152)
- ce07133 update 2015.8.9 release notes (#33198)
- **PR #33188:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- e9108e0 add 2015.8.9 release notes (#33161)
- 2d9919e [2015.8] Update to latest bootstrap script v2016.05.10 (#33156)
- 033bef2 Hash fileclients by opts (#33142)
- f520fa3 Back-port #31769 to 2015.8 (#33139)
- **PR #33144:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #33140:** (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- ad607ef If cache\_jobs: True is set, populate the local job cache when running salt-call (#33100)
- 64689a6 Fix broken parsing of usermgmt.conf on OpenBSD (#33135)

### 20.2.39 Salt 2015.5.0 Release Notes - Codename Lithium

The 2015.5.0 feature release of Salt is focused on hardening Salt and mostly on improving existing systems. A few major additions are present, primarily the new Beacon system. Most enhancements have been focused around improving existing features and interfaces.

As usual the release notes are not exhaustive and primarily include the most notable additions and improvements. Hundreds of bugs have been fixed and many modules have been substantially updated and added.

**Warning:** In order to fix potential shell injection vulnerabilities in salt modules, a change has been made to the various `cmd` module functions. These functions now default to `python_shell=False`, which means that the commands will not be sent to an actual shell.

The largest side effect of this change is that ``shellisms'', such as pipes, will not work by default. The modules shipped with salt have been audited to fix any issues that might have arisen from this change. Additionally, the

`cmd` state module has been unaffected, and use of `cmd.run` in jinja is also unaffected. `cmd.run` calls on the CLI will also allow shellisms.

However, custom execution modules which use shellisms in `cmd` calls will break, unless you pass `python_shell=True` to these calls.

As a temporary workaround, you can set `cmd_safe: False` in your minion and master configs. This will revert the default, but is also less secure, as it will allow shell injection vulnerabilities to be written in custom code. We recommend you only set this setting for as long as it takes to resolve these issues in your custom code, then remove the override.

---

**Note:** Starting in this version of salt, `pillar_opts` defaults to `False` instead of `True`. This means that master opts will not be present in minion pillar, and as a result, `config.get` calls will not include master opts.

We recommend pillar is used for configuration options which need to make it to the minion.

---

## Beacons

The beacon system allows the minion to hook into system processes and continually translate external events into the salt event bus. The primary example of this is the *inotify* beacon. This beacon uses `inotify` to watch configured files or directories on the minion for changes, creation, deletion etc.

This allows for the changes to be sent up to the master where the reactor can respond to changes.

## Sudo Minion Settings

It is now possible to run the minion as a non-root user and for the minion to execute commands via `sudo`. Simply add `sudo_user: root` to the minion config, run the minion as a non-root user and grant that user `sudo` rights to execute `salt-call`.

## Lazy Loader

The Lazy Loader is a significant overhaul of Salt's module loader system. The Lazy Loader will lazily load modules on access instead of all on start. In addition to a major performance improvement, this "sandboxes" modules so a bad/broken import of a single module will only affect jobs that require accessing the broken module. (:issue: 20274)

## Enhanced Active Directory Support

The `eauth` system for LDAP has been extended to support Microsoft Active Directory out of the box. This includes Active Directory and LDAP group support for `eauth`.

## Salt LXC Enhancements

The LXC systems have been overhauled to be more consistent and to fix many bugs.

This overhaul makes using LXC with Salt much easier and substantially improves the underlying capabilities of Salt's LXC integration.

## Salt SSH

- Additional configuration options and command line flags have been added to configure the scan roster on the fly
- Added support for `state.single` in `salt-ssh`
- Added support for `publish.publish`, `publish.full_data`, and `publish.runner` in `salt-ssh`
- Added support for `mine.get` in `salt-ssh`

## New Windows Installer

The new Windows installer changes how Salt is installed on Windows. The old installer used `bbfreeze` to create an isolated python environment to execute in. This made adding modules and python libraries difficult. The new installer sets up a more flexible python environment making it easy to manage the python install and add python modules.

Instead of frozen packages, a full python implementation resides in the `bin` directory (`C:\salt\bin`). By executing `pip` or `easy_install` from within the `Scripts` directory (`C:\salt\bin\Scripts`) you can install any additional python modules you may need for your custom environment.

The `.exe`'s that once resided at the root of the `salt` directory (`C:\salt`) have been replaced by `.bat` files and should function the same way as the `.exe`'s in previous versions.

The new Windows Installer will not replace the minion config file and key if they already exist on the target system. Only the `salt` program files will be replaced. `C:\salt\conf` and `C:\salt\var` will remain unchanged.

## Removed Requests Dependency

The hard dependency on the `requests` library has been removed. `Requests` is still required by a number of cloud modules but is no longer required for normal Salt operations.

This removal fixes issues that were introduced with `requests` and `salt-ssh`, as well as issues users experienced from the many different packaging methods used by `requests` package maintainers.

## Python 3 Updates

While Salt does not YET run on Python 3 it has been updated to INSTALL on Python 3, taking us one step closer. What remains is getting the test suite to the point where it can run on Python 3 so that we can verify compatibility.

## RAET Additions

The RAET support continues to improve. RAET now supports multi-master and many bugs and performance issues have been fixed. RAET is much closer to being a first class citizen.

## Modified File Detection

A number of functions have been added to the RPM-based package managers to detect and diff files that are modified from the original package installs. This can be found in the new `pkg.modified` functions.

## Reactor Update

Fix an infinite recursion problem for runner/wheel reactor jobs by passing a ``user" (Reactor) to all jobs that the reactor starts. The reactor skips all events created by that username -- thereby only reacting to events not caused by itself. Because of this, runner and wheel executions from the runner will have user ``Reactor" in the job cache.

## Misc Fixes/Additions

- SDB driver for etcd. (:issue: 22043)
- Add `only_upgrade` argument to `apt-based pkg.install` to only install a package version if the package is already installed. (Great for security updates!)
- Joyent now requires a `keyname` to be specified in the provider configuration. This change was necessitated upstream by the 7.0+ API.
- Add `args` argument to `cmd.script_retcode` to match `cmd.script` in the `cmd` module. (:issue: 21122)
- Fixed bug where TCP keepalive was not being sent on the defined interval on the return port (4506) from minion to master. (:issue: 21465)
- `LocalClient` may now optionally raise `SaltClientError` exceptions. If using this class directly, checking for and handling this exception is recommended. (:issue: 21501)
- The `SAuth` object is now a singleton, meaning authentication state is global (per master) on each minion. This reduces sign-ins of minions from 3->1 per startup.
- Nested outputter has been optimized, it is now much faster.
- Extensive fileserver backend updates.

## Deprecations

- Removed `parameter` keyword argument from `eselect.exec_action` execution module.
- Removed `runas` parameter from the following `pip`` execution module functions: `install`, `uninstall`, `freeze`, `list_`, `list_upgrades`, `upgrade_available`, `upgrade`. Please migrate to `user`.
- Removed `runas` parameter from the following `pip` state module functions: `installed`, `removed`, `update`. Please migrate to `user`.
- Removed `quiet` option from all functions in `cmdmod` execution module. Please use `output_loglevel=quiet` instead.
- Removed `parameter` argument from `eselect.set_state`. Please migrate to `module_parameter` or `action_parameter`.
- The `salt_events` table schema has changed to include an additional field called `master_id` to distinguish between events flowing into a database from multiple masters. If `event_return` is enabled in the master config, the database schema must first be updated to add the `master_id` field. This alteration can be accomplished as follows:

```
ALTER TABLE salt_events ADD master_id VARCHAR(255) NOT NULL;
```

## Known Issues

- In multi-master mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting ``auth_timeout`` and ``auth_tries`` down to shorter periods.

## 20.2.40 Salt 2015.5.1 Release Notes

release 2015-05-20

Version 2015.5.1 is a bugfix release for *2015.5.0*.

Changes:

- `salt.runners.cloud.action()` has changed the *fun* keyword argument to *func*. Please update any calls to this function in the cloud runner.

Extended Changelog Courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

- **PR #23965:** (*hvnsweeting*) handle all exceptions gitpython can raise
- 9566e7d Merge pull request #23986 from basepi/merge-forward-2015.5
- 0b78156 Merge remote-tracking branch `upstream/2014.7` into merge-forward-2015.5
- 314e4db Merge pull request #23965 from hvnsweeting/20147-fix-gitfs-gitpython-exception
- 2576301 handle all exception gitpython can raise

**PR #23985: (*UtahDave*) Add 2014.7.5-2 and 2015.5.0-2 Windows installer download links @ 2015-05-20T18:32:44Z**

- 9d1130e Merge pull request #23985 from UtahDave/2015.5local
- 10338d0 Add links to Windows 2015.5.0-2 install downloads
- b84f975 updated Windows 2014.7.5-2 installer download link

**PR #23983: (*rallytime*) Versionadded tags for https\_user and https\_pass args new in 2015.5.0 @ 2015-05-20T18:05:27Z**

- ca7729d Merge pull request #23983 from rallytime/versionadded\_git\_options
- 14eae22 Versionadded tags for https\_user and https\_pass args new in 2015.5.0

**PR #23970: (*jayeshka*) adding system unit test case @ 2015-05-20T17:12:57Z**

- b06df57 Merge pull request #23970 from jayeshka/system-unit-test

- 89eb008 adding system unit test case

**PR #23967: (jayeshka) adding states/memcached unit test case @ 2015-05-20T17:12:26Z**

- 38d5f75 Merge pull request #23967 from jayeshka/memcached-states-unit-test
- 8ef9240 adding states/memcached unit test case

**PR #23966: (jayeshka) adding states/modjk unit test case @ 2015-05-20T17:11:48Z**

- 868e807 Merge pull request #23966 from jayeshka/modjk-states-unit-test
- 422a964 adding states/modjk unit test case

**PR #23942: (jacobhammons) Updates to sphinx saltstack2 doc theme @ 2015-05-20T15:43:54Z**

- 6316490 Merge pull request #23942 from jacobhammons/2015.5
- 31023c8 Updates to sphinx saltstack2 doc theme

**PR #23874: (joejulian) Validate keyword arguments to be valid @ 2015-05-20T04:53:40Z**

- **ISSUE #23872: (joejulian) create\_ca\_signed\_cert can error if dereferenced dict is used for args | refs: #23874**
- 587957b Merge pull request #23874 from joejulian/2015.5\_tls\_validate\_kwargs
- 30102ac Fix py3 and ordering inconsistency problems.
- 493f7ad Validate keyword arguments to be valid

**PR #23960: (rallytime) Backport #22114 to 2015.5 @ 2015-05-20T04:37:09Z**

- **PR #22114: (dmyerscough) Fixing KeyError when there are no additional pages | refs: #23960**
- 00c5c22 Merge pull request #23960 from rallytime/bp-22114
- f3e1d63 Catch KeyError
- 306b1ea Fixing KeyError
- 6b2cda2 Fix PEP8 complaint
- 239e50f Fixing KeyError when there are no additional pages

**PR #23961: (rallytime) Backport #23944 to 2015.5 @ 2015-05-20T04:35:41Z**

- **PR #23944: (ryan-lane) Add missing loginclass argument to \_changes call | refs: #23961**
- 4648b46 Merge pull request #23961 from rallytime/bp-23944
- 970d19a Add missing loginclass argument to \_changes call

**PR #23948: (jfindlay) augeas.change state now returns changes as a dict @ 2015-05-20T04:00:10Z**

- 0cb5cd3 Merge pull request #23948 from jfindlay/augeas\_changes
- f09b80a augeas.change state now returns changes as a dict

**PR #23957: (rallytime) Backport #23951 to 2015.5 @ 2015-05-20T03:04:24Z**

- **PR #23951: (ryan-lane) Do not check perms in file.copy if preserve | refs: #23957**
- 2d185f7 Merge pull request #23957 from rallytime/bp-23951
- 996b431 Update file.py
- 85d461f Do not check perms in file.copy if preserve

- **PR #23956: (rallytime) Backport #23906 to 2015.5 @ 2015-05-20T03:04:14Z**

- **ISSUE #23839:** (*gladiatr72*) wonky loader syndrome | refs: #23906
- **ISSUE #23373:** (*tnypex*) reactor/orchestrate race condition on salt['pillar.get'] | refs: #23906
- **PR #23906:** (*gladiatr72*) Added exception handler to trap the RuntimeError raised when | refs: #23956
- ebff1ff Merge pull request #23956 from rallytime/bp-23906
- 9d87fd3 add proper marker for format argument
- 197688e Added exception handler to trap the RuntimeError raised when Depends.enforce\_dependency() class method fires unsuccessfully. There appears to be no synchronization within the Depends decorator class wrt the class global dependency\_dict which results in incomplete population of any loader instantiation occurring at the time of one of these exceptions.
- **PR #23955:** (*rallytime*) Backport #19305 to 2015.5 @ 2015-05-20T03:03:55Z
  - **ISSUE #19852:** (*TaiSHiNet*) DigitalOcean APIv2 can't delete machines when there is only 1 page | refs: #23955
  - **ISSUE #19304:** (*TaiSHiNet*) DigitalOcean API v2 cannot delete VMs on 2nd page | refs: #19305
  - **PR #19305:** (*TaiSHiNet*) Fixes droplet listing past page 1 | refs: #23955
  - da3f919 Merge pull request #23955 from rallytime/bp-19305
  - bbf2429 Fixes droplet listing past page 1
- **PR #23940:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-19T22:37:58Z
  - **ISSUE #23820:** (*UtahDave*) 2014.7.5 schedule error | refs: #23881
  - **ISSUE #22131:** (*quixoten*) ``unexpected keyword argument `merge'' on 2014.7.2 (salt-ssh) | refs: #23887
  - **PR #23939:** (*basepi*) Add extended changelog to 2014.7.6 release notes
  - **PR #23887:** (*basepi*) [2014.7] Bring salt-ssh pillar.get in line with mainline pillar.get
  - **PR #23881:** (*garethgreenaway*) Fixes to schedule module in 2014.7
  - 02a78fc Merge pull request #23940 from basepi/merge-forward-2015.5
  - 36f0065 Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
    - \* 9133912 Merge pull request #23939 from basepi/v2014.7.6release
      - 32b65dc Add extended changelog to 2014.7.6 release notes
    - \* 0031ca2 Merge pull request #23881 from garethgreenaway/23820\_2014\_7\_schedule\_list\_issue
      - b207f2a Missing continue in the list function when deleting unused attributes.
    - \* 63bd21e Merge pull request #23887 from basepi/salt-ssh.pillar.get.22131
      - bc84502 Bring salt-ssh pillar.get in line with mainline pillar.get
- **PR #23932:** (*rallytime*) Backport #23908 to 2015.5 @ 2015-05-19T21:41:28Z
  - **PR #23908:** (*nleib*) fix connection function to mongo | refs: #23932
  - ee4c01b Merge pull request #23932 from rallytime/bp-23908
  - 5d520c9 fix connection function to mongo
- **PR #23931:** (*rallytime*) Backport #23880 to 2015.5 @ 2015-05-19T21:41:18Z
  - **PR #23880:** (*bastiaanb*) if setting client\_config\_dir to `~', expand path | refs: #23931
  - 70bd407 Merge pull request #23931 from rallytime/bp-23880

- 8ce59a2 if setting client\_config\_dir to `~`, expand path
- **PR #23898:** (*kiorky*) Lxc profiles | refs: #23897 @ 2015-05-19T21:08:28Z
  - **ISSUE #23847:** (*kiorky*) lxc: systemd containers cant be seeded | refs: #23806 #23898 #23897 #23808
  - **ISSUE #23833:** (*kiorky*) lxc.set\_dns fails intermittently | refs: #23898 #23807 #23897 #23808
  - **ISSUE #23772:** (*cheuschober*) lxc.init fails to bootstrap container | refs: #23806 #23898 #23807 #23897 #23808
  - **ISSUE #23658:** (*arthurlogilab*) [salt-cloud lxc] too verbose, shows host: True multiple times when starting | refs: #23898 #23897
  - **ISSUE #23657:** (*arthurlogilab*) [salt-cloud lxc] NameError: global name `\_\_salt\_\_` is not defined | refs: #23727 #23898 #23897
  - **PR #23897:** (*kiorky*) Lxc seed and prof ports | refs: #23898
  - **PR #23808:** (*kiorky*) Lxc seed and prof ports | refs: #23807 #23897
  - **PR #23807:** (*kiorky*) Lxc profiles | refs: #23898
  - **PR #23806:** (*kiorky*) Lxc seeding | refs: #23807
  - 5bdbf0a Merge pull request #23898 from makinacorp/lxc\_profiles
  - d9051a0 lxc: systemd support
  - e8d674f lxc: chroot fallback toggle
  - e2887a0 lxc: sync func name with develop
  - e96e345 lxc more fixes (lxc.set\_dns)
  - fdb6424 lxc: Fix salt config (no more a kwarg)
  - 63e63fa repair salt cloud lxc api on develop
  - 80eabe2 lxc salt cloud doc
  - 73f229d lxc: unificate saltconfig/master/master\_port
  - 0bc1f08 lxc: refactor a bit saltcloud/lxc interface
  - 7a80370 lxc: get networkprofile from saltcloud
  - 47acb2e lxc: default net profile has now correct options
  - 7eadf48 lxc: select the appropriate default bridge
- **PR #23922:** (*garthgreenaway*) Fixes to debian\_ip.py @ 2015-05-19T18:50:53Z
  - **ISSUE #23900:** (*hashi825*) salt ubuntu network building issue 2015.5.0 | refs: #23922
  - b818f72 Merge pull request #23922 from garthgreenaway/23900\_2015\_5\_bonding\_interface\_fixes
  - 0bba536 Fixing issue reported when using bonded interfaces on Ubuntu. Attributes should be bond-, but the code was attempting to split just on bond\_. Fix accounts for both, but the debian\_ip.py module will write out bond attributes with bond-
- **PR #23925:** (*jplic*) Fixed wrong path in LXC cloud documentation @ 2015-05-19T18:23:56Z
  - **PR #23924:** (*jplic*) Fixed wrong path in LXC cloud documentation | refs: #23925
  - b1c98a3 Merge pull request #23925 from jplic/fix/wrong\_lxc\_path
  - a4bcd75 Fixed wrong path in LXC cloud documentation
- **PR #23894:** (*whiteinge*) Add \_\_all\_\_ attribute to Mock class for docs @ 2015-05-19T17:17:35Z

- 7f6a716 Merge pull request #23894 from whiteinge/doc-mock\_\_all\_\_
- 6eeca46 Add \_\_all\_\_ attribute to Mock class for docs
- **PR #23884:** (*jfindlay*) Fix locale.set\_locale on debian @ 2015-05-19T15:51:22Z
  - **ISSUE #23767:** (*chrimi*) Salt system.locale fails on non existent default locale | refs: #23884
  - 8108a9b Merge pull request #23884 from jfindlay/fix\_locale
  - 91c2d51 use append\_if\_not\_found in locale.set\_locale
  - e632603 (re)generate /etc/default/locale
- **PR #23866:** (*jfindlay*) backport #23834, change portage.dep.strip\_empty to list comprehension @ 2015-05-19T15:50:43Z
  - **PR #23834:** (*Arabus*) Avoid deprecation warning from portage.dep.strip\_empty() | refs: #23866
  - 6bae12f Merge pull request #23866 from jfindlay/flag\_strip
  - aa032cc replace portage.dep.strip\_empty() with list comprehension
  - 7576872 Proper replacement for portage.dep.strip\_empty() with list comprehension, pep8fix
  - 2851a5c Switch portage.dep.strip\_empty(...) to filter(None,...) to avoid deprecation warning and do essentially the same
- **PR #23917:** (*corywright*) Split debian bonding options on dash instead of underscore @ 2015-05-19T15:44:35Z
  - **ISSUE #23904:** (*mbrgm*) Network config bonding section cannot be parsed when attribute names use dashes | refs: #23917
  - a67a008 Merge pull request #23917 from corywright/issue23904
  - c06f8cf Split debian bonding options on dash instead of underscore
- **PR #23909:** (*jayeshka*) `str` object has no attribute `capitalized` @ 2015-05-19T15:41:53Z
  - e8fcd09 Merge pull request #23909 from jayeshka/file-exe-module
  - e422d9d `str` object has no attribute `capitalized`
- **PR #23903:** (*garethgreenaway*) Adding docs for missing schedule state module parameters. @ 2015-05-19T06:29:34Z
  - c73bf38 Merge pull request #23903 from garethgreenaway/missing\_docs\_schedule\_state
  - acd8ab9 Adding docs for missing schedule state module parameters.
- f7eb70c changed previous release to 2014.7.6
- 608059f Merge branch `2015.5` of <https://github.com/jacobhammons/salt> into 2015.5
  - a56697b Merge branch `2015.5` of <https://github.com/saltstack/salt> into 2015.5
  - 1c2af5c Merge branch `2015.5` of <https://github.com/saltstack/salt> into 2015.5
  - ef58128 Merge branch `2015.5` of <https://github.com/saltstack/salt> into 2015.5
  - 8664e8b Merge branch `2015.5` of <https://github.com/saltstack/salt> into 2015.5-2
  - 46eb265 saltstack2 sphinx theme updates
  - e7442d3 Merge branch `2015.5` of <https://github.com/saltstack/salt> into 2015.5
  - ee3c1bd missed one
  - 3872921 More updates to sphinx2 theme

- fcd4865 Merge branch `2015.5' of <https://github.com/saltstack/salt> into 2015.5
- 8c32152 removed TOC numbering, additional tweaks to layout.html
- 73dfaef Merge branch `2015.5' of <https://github.com/saltstack/salt> into 2015.5
- 16d8a75 saltstack2 sphinx theme and build settings
- **PR #23806:** (*kiorky*) Lxc seeding | refs: #23807 @ 2015-05-18T23:18:33Z
  - **ISSUE #23847:** (*kiorky*) lxc: systemd containers cant be seeded | refs: #23806 #23898 #23897 #23808
  - **ISSUE #23772:** (*cheuschober*) lxc.init fails to bootstrap container | refs: #23806 #23898 #23807 #23897 #23808
  - ff3cc7d Merge pull request #23806 from makinacorp/lxc\_seeding
  - 61b7aad runners/lxc: optim
- **PR #23892:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-18T23:07:57Z
  - **PR #23891:** (*basepi*) Update the release notes index page
  - **PR #23888:** (*basepi*) Update the 2014.7.6 release notes with CVE details
  - **PR #23871:** (*rallytime*) Backport #23848 to 2014.7
  - **PR #23848:** (*dumol*) Updated installation docs for SLES 12. | refs: #23871
  - 5f1a93d Merge pull request #23892 from basepi/merge-forward-2015.5
  - c2eed77 Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - 17c5810 Merge pull request #23891 from basepi/releasenotes
    - \* dec153b Update the release notes index page
  - a93e58f Merge pull request #23888 from basepi/v2014.7.6release
    - \* 49921b6 Update the 2014.7.6 release notes with CVE details
  - 5073028 Merge pull request #23871 from rallytime/bp-23848
    - \* 379c09c Updated for SLES 12.
- **PR #23875:** (*rallytime*) Backport #23838 to 2015.5 @ 2015-05-18T22:28:55Z
  - **PR #23838:** (*gtmanfred*) add refresh\_beacons and sync\_beacons | refs: #23875
  - 66d1335 Merge pull request #23875 from rallytime/bp-23838
  - 3174227 Add versionadded directives to new beacon saltutil functions
  - 4a94b2c add refresh\_beacons and sync\_beacons
- **PR #23876:** (*rallytime*) Switch digital ocean tests to v2 driver @ 2015-05-18T22:17:13Z
  - d294cf2 Merge pull request #23876 from rallytime/switch\_digital\_ocean\_tests\_v2
  - dce9b54 Remove extra line
  - 4acf58e Switch digital ocean tests to v2 driver
- **PR #23882:** (*garethgreenaway*) Fixes to scheduler in 2015.5 @ 2015-05-18T22:09:24Z
  - **ISSUE #23792:** (*neogenix*) Salt Scheduler Incorrect Response (True, should be False) | refs: #23882
  - b97a48c Merge pull request #23882 from garethgreenaway/23792\_2015\_5\_wrong\_return\_code
  - 37dbde6 Job already exists in schedule, should return False.

- **PR #23868:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-18T18:35:54Z
  - **ISSUE #20198:** (*jcftang*) virt.get\_graphics, virt.get\_nics are broken, in turn breaking other things | refs: #23809
  - **PR #23823:** (*gtmanfred*) add link local for ipv6
  - **PR #23810:** (*rallytime*) Backport #23757 to 2014.7
  - **PR #23809:** (*rallytime*) Fix virtualport section of virt.get\_nics loop
  - **PR #23802:** (*gtmanfred*) if it is ipv6 ip\_to\_int will fail
  - **PR #23757:** (*clan*) use abspath, do not eliminating symlinks | refs: #23810
  - **PR #23573:** (*techhat*) Scan all available networks for public and private IPs | refs: #23802
  - **PR #21487:** (*rallytime*) Backport #21469 to 2014.7 | refs: #23809
  - **PR #21469:** (*vdesjardins*) fixes #20198: virt.get\_graphics and virt.get\_nics calls in module virt | refs: #21487
  - 61c922e Merge pull request #23868 from basepi/merge-forward-2015.5
  - c9ed233 Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - aee00c8 Merge pull request #23810 from rallytime/bp-23757
    - \* fb32c32 use abspath, do not eliminating symlinks
  - 6b3352b Merge pull request #23809 from rallytime/virt\_get\_nics\_fix
    - \* 0616fb7 Fix virtualport section of virt.get\_nics loop
  - 188f03f Merge pull request #23823 from gtmanfred/2014.7
    - \* 5ef006d add link local for ipv6
  - f3ca682 Merge pull request #23802 from gtmanfred/2014.7
    - \* 2da98b5 if it is ipv6 ip\_to\_int will fail
- **PR #23863:** (*rahulhan*) Adding states/timezone.py unit test @ 2015-05-18T17:02:19Z
  - 433f873 Merge pull request #23863 from rahulhan/states\_timezone\_unit\_test
  - 72fcabc Adding states/timezone.py unit test
- **PR #23862:** (*rahulhan*) Adding states/tomcat.py unit tests @ 2015-05-18T17:02:10Z
  - 37b3ee5 Merge pull request #23862 from rahulhan/states\_tomcat\_unit\_test
  - 65d7752 Adding states/tomcat.py unit tests
- **PR #23860:** (*rahulhan*) Adding states/test.py unit tests @ 2015-05-18T17:01:49Z
  - dde7207 Merge pull request #23860 from rahulhan/states\_test\_unit\_test
  - 1f4cf86 Adding states/test.py unit tests
- **PR #23859:** (*rahulhan*) Adding states/sysrc.py unit tests @ 2015-05-18T17:01:46Z
  - 3c9b813 Merge pull request #23859 from rahulhan/states\_sysrc\_unit\_test
  - 6a903b0 Adding states/sysrc.py unit tests
- **PR #23812:** (*rallytime*) Backport #23790 to 2015.5 @ 2015-05-18T15:30:34Z
  - **PR #23790:** (*aboe76*) updated suse spec file to version 2015.5.0 | refs: #23812
  - 4cf30a7 Merge pull request #23812 from rallytime/bp-23790

- 3f65631 updated suse spec file to version 2015.5.0
- **PR #23811:** (*rallytime*) Backport #23786 to 2015.5 @ 2015-05-18T15:30:27Z
  - **PR #23786:** (*kaithar*) Log the error generated that causes returns.mysql.returner to except. | refs: #23811
  - c6f939a Merge pull request #23811 from rallytime/bp-23786
  - 346f30b Log the error generated that causes returns.mysql.returner to except.
- **PR #23850:** (*jayeshka*) adding sysbench unit test case @ 2015-05-18T15:28:04Z
  - ce60582 Merge pull request #23850 from jayeshka/sysbench-unit-test
  - 280abde adding sysbench unit test case
- **PR #23843:** (*The-Loeki*) Fix erroneous virtual:physical core grain detection @ 2015-05-18T15:24:22Z
  - 060902f Merge pull request #23843 from The-Loeki/patch-1
  - 9e2cf60 Fix erroneous virtual:physical core grain detection
- **PR #23816:** (*Snergster*) Doc for #23685 Added prereq, caution, and additional mask information @ 2015-05-18T15:18:03Z
  - **ISSUE #23815:** (*Snergster*) [beacons] inotify errors on subdir creation | refs: #23816
  - 3257a9b Merge pull request #23816 from Snergster/23685-doc-fix
  - 0fca49d Added prereq, caution, and additional mask information
- **PR #23832:** (*ahus1*) make saltify provider use standard bootstrap procedure @ 2015-05-18T02:18:29Z
  - **PR #23829:** (*ahus1*) make saltify provider use standard bootstrap procedure | refs: #23832
  - 3df3b85 Merge pull request #23832 from ahus1/ahus1\_saltify\_bootstrap\_2015.5
  - f5b1734 fixing problem in unit test
  - cba47f6 make saltify to use standard bootstrap procedure, therefore providing all options like master\_sign\_pub\_file
- **PR #23791:** (*optix2000*) Psutil compat @ 2015-05-16T04:05:54Z
  - 8ec4fb2 Merge pull request #23791 from optix2000/psutil\_compat
  - 5470cf5 Fix pylint errors and sloppy inline comments
  - 64634b6 Update psutil.pid\_list to use psutil.pids
  - 5dd6d69 Fix imports that aren't in \_\_all\_\_
  - 8a1da33 Fix test cases by mocking psutil\_compat
  - 558798d Fix net\_io\_counters deprecation issue
  - 8140f92 Override unnecessary pylint errors
  - 7d02ad4 Fix some of the mock names for the new API
  - 9b3023e Fix overloaded getters/setters. Fix line lengths
  - 180eb87 Fix whitespace
  - f8edf72 Use new psutil API in ps module
  - e48982f Fix version checking in psutil\_compat
  - 93ee411 Create compatibility psutil. psutil 3.0 drops 1.0 API, but we still support old psutil versions.

- **PR #23782:** (*terminalmage*) Replace ``command -v" with ``which" and get rid of spurious log messages @ 2015-05-16T04:03:10Z
  - 405517b Merge pull request #23782 from terminalmage/issue23772
  - 0f6f239 More ignore\_retcode to suppress spurious log msgs
  - b4c48e6 Ignore return code in lxc.attachable
  - 08658c0 Replace ``command -v" with ``which"
- **PR #23783:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-15T21:38:51Z
  - **ISSUE #22959:** (*highlyunavailable*) Windows Salt hangs if file.directory is trying to write to a drive that doesn't exist
  - **ISSUE #22332:** (*rallytime*) [salt-ssh] Add a check for host in /etc/salt/roster | refs: #23748
  - **ISSUE #16424:** (*stanvit*) salt-run cloud.create fails with saltify
  - **PR #23748:** (*basepi*) [2014.7] Log salt-ssh roster render errors more assertively and verbosely
  - **PR #23731:** (*twangboy*) Fixes #22959: Trying to add a directory to an unmapped drive in windows
  - **PR #23730:** (*rallytime*) Backport #23729 to 2014.7
  - **PR #23729:** (*rallytime*) Partially merge #23437 (grains fix) | refs: #23730
  - **PR #23688:** (*twangboy*) Added inet\_pton to utils/validate/net.py for ip.set\_static\_ip in windows
  - **PR #23488:** (*cellscape*) LXC cloud fixes
  - **PR #23437:** (*cedwards*) Grains item patch | refs: #23729
  - cb2eb40 Merge pull request #23783 from basepi/merge-forward-2015.5
  - 9df51ca \_\_opts\_\_.get
  - 51d23ed Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
    - \* d9af0c3 Merge pull request #23488 from cellscape/lxc-cloud-fixes
      - 64250a6 Remove profile from opts after creating LXC container
      - c4047d2 Set destroy=True in opts when destroying cloud instance
      - 9e1311a Store instance names in opts when performing cloud action
      - 934bc57 Correctly pass custom env to lxc-attach
      - 7fb85f7 Preserve test=True option in cloud states
      - 9771b5a Fix detection of absent LXC container in cloud state
      - fb24f0c Report failure when failed to create/clone LXC container
      - 2d9aa2b Avoid shadowing variables in lxc module
      - 792e102 Allow overriding profile options in lxc.cloud\_init\_interface
      - 42bd64b Return changes on successful lxc.create from salt-cloud
      - 4409eab Return correct result when creating cloud LXC container
      - 377015c Issue #16424: List all providers when creating salt-cloud instance without profile
    - \* 808bbe1 Merge pull request #23748 from basepi/salt-ssh.roster.host.check
      - bc53e04 Log entire exception for render errors in roster
      - 753de6a Log render errors in roster to error level

- e01a7a9 Always let the real YAML error through
- \* 72cf360 Merge pull request #23731 from twangboy/fix\_22959
  - 88e5495 Fixes #22959: Trying to add a directory to an unmapped drive in windows
- \* 2610195 Merge pull request #23730 from rallytime/bp-23729
  - 1877cae adding support for nested grains to grains.item
- \* 3e9df88 Merge pull request #23688 from twangboy/fix\_23415
  - 6a91169 Fixed unused-import pylint error
  - 5e25b3f fixed pylint errors
  - 1a96766 Added inet\_pton to utils/validate/net.py for ip.set\_static\_ip in windows
- **PR #23781:** (*jfindlay*) fix unit test mock errors on arch @ 2015-05-15T19:40:07Z
  - 982f873 Merge pull request #23781 from jfindlay/fix\_locale\_tests
  - 14c711e fix unit test mock errors on arch
- **PR #23740:** (*jfindlay*) Binary write @ 2015-05-15T18:10:44Z
  - **ISSUE #23566:** (*rks2286*) Salt-cp corrupting the file after transfer to minion | refs: #23740
  - 916b1c4 Merge pull request #23740 from jfindlay/binary\_write
  - 626930a update incorrect comment wording
  - a978f5c always use binary file write mode on windows
- **PR #23736:** (*jfindlay*) always load pip execution module @ 2015-05-15T18:10:16Z
  - **ISSUE #23682:** (*chrish42*) Pip module requires system pip, even when not used (with env\_bin) | refs: #23736
  - 348645e Merge pull request #23736 from jfindlay/fix\_pip
  - b8867a8 update pip tests
  - 040bbc4 only check pip version in one place
  - 6c453a5 check for executable status of bin\_env
  - 3337257 always load the pip module as pip could be anywhere
- **PR #23770:** (*cellscape*) Fix cloud LXC container destruction @ 2015-05-15T17:38:59Z
  - 10cedfb Merge pull request #23770 from cellscape/fix-cloud-lxc-destruction
  - 4f6021c Fix cloud LXC container destruction
- **PR #23759:** (*lisa2lisa*) fixed the problem for not beable to revoke ., for more detail https... @ 2015-05-15T17:38:38Z
  - ddea822 Merge pull request #23759 from lisa2lisa/iss23664
  - a29f161 fixed the problem for not beable to revoke ., for more detail <https://github.com/saltstack/salt/issues/23201>, fixed mysql cannot create user with pure digit password, for more info <https://github.com/saltstack/salt/issues/23664>
- **PR #23769:** (*cellscape*) Fix file\_roots CA lookup in salt.utils.http.get\_ca\_bundle @ 2015-05-15T16:21:49Z
  - 10615ff Merge pull request #23769 from cellscape/utils-http-ca-file-roots
  - 8e90f32 Fix file\_roots CA lookup in salt.utils.http.get\_ca\_bundle

- **PR #23765:** (*jayeshka*) adding states/makeconf unit test case @ 2015-05-15T14:29:43Z
  - fd8a1b7 Merge pull request #23765 from jayeshka/makeconf\_states-unit-test
  - 26e31af adding states/makeconf unit test case
- **PR #23760:** (*ticosax*) [doc] document refresh argument @ 2015-05-15T14:23:47Z
  - ee13b08 Merge pull request #23760 from ticosax/2015.5
  - e3ca859 document refresh argument
- **PR #23766:** (*jayeshka*) adding svn unit test case @ 2015-05-15T14:23:18Z
  - a017f72 Merge pull request #23766 from jayeshka/svn-unit-test
  - 19939cf adding svn unit test case
- **PR #23751:** (*rallytime*) Backport #23737 to 2015.5 @ 2015-05-15T03:58:37Z
  - **ISSUE #23734:** (*bradthurber*) 2015.5.0 modules/archive.py ZipFile instance has no attribute `\_\_exit\_\_` - only python 2.6? | refs: #23737
  - **PR #23737:** (*bradthurber*) fix for 2015.5.0 modules/archive.py ZipFile instance has no attribute... | refs: #23751
  - 0ed9d45 Merge pull request #23751 from rallytime/bp-23737
  - 8d1eb32 fix for 2015.5.0 modules/archive.py ZipFile instance has no attribute `\_\_exit\_\_` - only python 2.6? #23734
- **PR #23710:** (*kiorky*) Get more useful output from stateful commands @ 2015-05-14T21:58:10Z
  - **ISSUE #23709:** (*kiorky*) cmdmod: enhancement is really needed for stateful commands | refs: #23710
  - d73984e Merge pull request #23710 from makinacorus/i23709
  - c706909 Get more useful output from stateful commands
- **PR #23724:** (*rallytime*) Backport #23609 to 2015.5 @ 2015-05-14T19:34:22Z
  - **PR #23609:** (*kaidokert*) file\_map: chown created directories if not root #23608 | refs: #23724
  - cdf421b Merge pull request #23724 from rallytime/bp-23609
  - fe3a762 file\_map: chmod created directories if not root
- **PR #23723:** (*rallytime*) Backport #23568 to 2015.5 @ 2015-05-14T19:34:11Z
  - **PR #23568:** (*techhat*) Allow Salt Cloud to use either SCP or SFTP, as configured | refs: #23723
  - 94f9099 Merge pull request #23723 from rallytime/bp-23568
  - bbec34a Allow Salt Cloud to use either SCP or SFTP, as configured
- **PR #23725:** (*rallytime*) Backport #23691 to 2015.5 @ 2015-05-14T19:32:30Z
  - **PR #23691:** (*dennisjac*) add initial configuration documentation for varstack pillar | refs: #23725
  - 137e5ee Merge pull request #23725 from rallytime/bp-23691
  - 28a846e add initial configuration documentation for varstack pillar
- **PR #23722:** (*rallytime*) Backport #23472 to 2015.5 @ 2015-05-14T19:31:52Z
  - **PR #23472:** (*techhat*) Allow neutron network list to be used as pillar data | refs: #23722
  - 0c00995 Merge pull request #23722 from rallytime/bp-23472
  - c3d0f39 Change versionadded tag for backport

- 023e88f Allow neutron network list to be used as pillar data
- **PR #23727:** (*jfindlay*) fix npm execution module stacktrace @ 2015-05-14T18:14:12Z
  - **ISSUE #23657:** (*arthurlogilab*) [salt-cloud lxc] NameError: global name `\_\_salt\_\_` is not defined | refs: #23727 #23898 #23897
  - cbf4ca8 Merge pull request #23727 from jfindlay/npm\_salt
  - 05392f2 fix npm execution module stacktrace
- **PR #23718:** (*rahulhan*) Adding states/user.py unit tests @ 2015-05-14T17:15:38Z
  - ef536d5 Merge pull request #23718 from rahulhan/states\_user\_unit\_tests
  - aad27db Adding states/user.py unit tests
- **PR #23720:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-14T17:13:02Z
  - **ISSUE #23604:** (*Azidburn*) service.dead on systemd Minion create an Error Message | refs: #23607
  - **ISSUE #23548:** (*kkaig*) grains.list\_present produces incorrect (?) output | refs: #23674
  - **ISSUE #23403:** (*iamfil*) salt.runners.cloud.action fun parameter is replaced | refs: #23680
  - **PR #23680:** (*cachedout*) Rename kwarg in cloud runner
  - **PR #23674:** (*cachedout*) Handle lists correctly in grains.list\_present
  - **PR #23672:** (*twangboy*) Fix user present
  - **PR #23670:** (*rallytime*) Backport #23607 to 2014.7
  - **PR #23607:** (*Azidburn*) Fix for #23604. No error reporting. Exitcode !=0 are ok | refs: #23670
  - a529d74 Merge pull request #23720 from basepi/merge-forward-2015.5
  - 06a3ebd Merge remote-tracking branch `upstream/2014.7` into merge-forward-2015.5
  - 1b86460 Merge pull request #23680 from cachedout/issue\_23403
    - \* d5986c2 Rename kwarg in cloud runner
  - cd64af0 Merge pull request #23674 from cachedout/issue\_23548
    - \* da8a2f5 Handle lists correctly in grains.list\_present
  - d322a19 Merge pull request #23672 from twangboy/fix\_user\_present
    - \* 731e7af Merge branch `2014.7` of <https://github.com/saltstack/salt> into fix\_user\_present
    - \* d6f70a4 Fixed user.present to create password in windows
  - 43f7025 Merge pull request #23670 from rallytime/bp-23607
    - \* ed30dc4 Fix for #23604. No error reporting. Exitcode !=0 are ok
- **PR #23704:** (*jayeshka*) adding states/lvs\_server unit test case @ 2015-05-14T14:22:10Z
  - 13facbf Merge pull request #23704 from jayeshka/lvs\_server\_states-unit-test
  - da323da adding states/lvs\_server unit test case
- **PR #23703:** (*jayeshka*) adding states/lvs\_service unit test case @ 2015-05-14T14:21:23Z
  - f95ca31 Merge pull request #23703 from jayeshka/lvs\_service\_states-unit-test
  - 66717c8 adding states/lvs\_service unit test case
- **PR #23702:** (*jayeshka*) Remove superfluous return statement. @ 2015-05-14T14:20:42Z

- 07e987e Merge pull request #23702 from jayeshka/fix\_lvs\_service
- ecff218 fix lvs\_service
- **PR #23686:** (*jfindlay*) remove superfluous return statement @ 2015-05-14T14:20:18Z
  - 39973d4 Merge pull request #23686 from jfindlay/fix\_lvs\_server
  - 5aaeb73 remove superfluous return statement
- **PR #23690:** (*rallytime*) Backport #23424 to 2015.5 @ 2015-05-13T23:04:36Z
  - **PR #23424:** (*jtand*) Added python\_shell=True for refresh\_db in pacman.py | refs: #23690
  - be7c7ef Merge pull request #23690 from rallytime/bp-23424
  - 94574b7 Added python\_shell=True for refresh\_db in pacman.py
- **PR #23681:** (*cachedout*) Start on 2015.5.1 release notes @ 2015-05-13T19:44:22Z
  - 1a0db43 Merge pull request #23681 from cachedout/2015\_5\_1\_release\_notes
  - bdbbfa6 Start on 2015.5.1 release notes
- **PR #23679:** (*jfindlay*) Merge #23616 @ 2015-05-13T19:03:53Z
  - **PR #23616:** (*Snergster*) virtual returning none warning fixed in dev but missed in 2015.5 | refs: #23679
  - b54075a Merge pull request #23679 from jfindlay/merge\_23616
  - 6e15e19 appease pylint's blank line strictures
  - 8750680 virtual returning none warning fixed in dev but missed in 2015.5
- **PR #23675:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-13T18:35:54Z
  - **ISSUE #23611:** (*hubez*) master\_type set to 'failover' but 'master' is not of type list but of type <type 'str'> | refs: #23637
  - **ISSUE #23479:** (*danielmorlock*) Typo in pkg.removed for Gentoo? | refs: #23558
  - **ISSUE #23452:** (*michaelforge*) minion crashed with empty grain | refs: #23639
  - **ISSUE #23411:** (*dr4Ke*) grains.append should work at any level of a grain | refs: #23440
  - **ISSUE #23355:** (*dr4Ke*) salt-ssh: 'sources: salt:/' files from 'pkg' state are not included in salt\_state.tgz | refs: #23530
  - **ISSUE #23110:** (*martinhoefling*) Copying files from gitfs in file.recurse state fails
  - **ISSUE #23004:** (*b18*) 2014.7.5 - Windows - pkg.list\_pkgs - ``nxlog" never shows up in output. | refs: #23433
  - **ISSUE #22908:** (*karanjad*) Add failhard option to salt orchestration | refs: #23389
  - **ISSUE #22141:** (*Deshke*) grains.get\_or\_set\_hash render error if hash begins with ``%" | refs: #23640
  - **PR #23661:** (*rallytime*) Merge #23640 with whitespace fix
  - **PR #23640:** (*cachedout*) Add warning to get\_or\_set\_hash about reserved chars | refs: #23661
  - **PR #23639:** (*cachedout*) Handle exceptions raised by \_\_virtual\_\_
  - **PR #23637:** (*cachedout*) Convert str master to list
  - **PR #23606:** (*twangboy*) Fixed checkbox for starting service and actually starting it
  - **PR #23595:** (*rallytime*) Backport #23549 to 2014.7
  - **PR #23594:** (*rallytime*) Backport #23496 to 2014.7

- PR #23593: (*rallytime*) Backport #23442 to 2014.7
- PR #23592: (*rallytime*) Backport #23389 to 2014.7
- PR #23573: (*techhat*) Scan all available networks for public and private IPs | refs: #23802
- PR #23558: (*jfindlay*) reorder emerge command line
- PR #23554: (*jleroy*) Debian: Hostname always updated
- PR #23551: (*dr4Ke*) grains.append unit tests, related to #23474
- PR #23549: (*vr-jack*) Update \_\_init\_\_.py | refs: #23595
- PR #23537: (*t0rrant*) Update changelog
- PR #23530: (*dr4Ke*) salt-ssh state: fix including all salt:// references
- PR #23496: (*martinhoefling*) Fix for issue #23110 | refs: #23594
- PR #23474: (*dr4Ke*) Fix grains.append in nested dictionary grains #23411
- PR #23442: (*clan*) add directory itself to keep list | refs: #23593
- PR #23440: (*dr4Ke*) fix grains.append in nested dictionary grains #23411 | refs: #23474
- PR #23433: (*twangboy*) Obtain all software from the registry
- PR #23389: (*cachedout*) Correct fail\_hard typo | refs: #23592
- e480f13 Merge pull request #23675 from basepi/merge-forward-2015.5

    - 45404fb reorder emerge command line
  - \* a664a3c Merge pull request #23530 from dr4Ke/fix\_salt-ssh\_to\_include\_pkg\_sources
    - 5df6a80 fix pylint warning
    - d0549e5 salt-ssh state: fix including all salt:// references
  - \* 55c3869 Merge pull request #23433 from twangboy/list\_pkgs\_fix
    - 8ab5b1b Fix pylint error
    - 2d11d65 Obtain all software from the registry
  - \* 755bed0 Merge pull request #23554 from jleroy/debian-hostname-fix
    - 5ff749e Debian: Hostname always updated
  - \* 6ec87ce Merge pull request #23551 from dr4Ke/grains.append\_unit\_tests
    - ebf9df fix pylint errors
    - c495404 unit tests for grains.append module function
    - 0c9a323 use MagicMock
    - c838a22 unit tests for grains.append module function
  - \* e96c5c5 Merge pull request #23474 from dr4Ke/fix\_grains.append\_nested
    - a01a5bb grains.get, parameter delimiter, versionadded: 2014.7.6
    - b39f504 remove debugging output
    - b6e15e2 fix grains.append in nested dictionary grains #23411
  - \* ab7e1ae Merge pull request #23537 from t0rrant/patch-1
    - 8e03cc9 Update changelog
- **PR #23669:** (*rallytime*) Backport #23586 to 2015.5 @ 2015-05-13T18:27:11Z
  - **PR #23586:** (*Lothiraldan*) Fix salt.state.file.\_unify\_sources\_and\_hashes when sources is used without sources\_hashes | refs: #23669
  - 0dad6be Merge pull request #23669 from rallytime/bp-23586
  - ef4c6ad Remove another unused import
  - 73cfda7 Remove unused import
  - 52b68d6 Use the zip\_longest from six module for python 3 compatibility

- 18d5ff9 Fix salt.state.file.\_unify\_sources\_and\_hashes when sources is used without sources\_hashes
- **PR #23662:** (*rallytime*) Merge #23642 with pylint fix @ 2015-05-13T15:46:51Z
  - **PR #23642:** (*cachedout*) Let saltmod handle lower-level exceptions gracefully | refs: #23662
  - fabef75 Merge pull request #23662 from rallytime/merge-23642
  - aa7bbd8 Remove unused import
  - 9e66d4c Let saltmod handle lower-level exceptions gracefully
- **PR #23622:** (*jfindlay*) merge #23508 @ 2015-05-13T15:36:49Z
  - **PR #23508:** (*cro*) Port mysql returner to postgres using jsonb datatype | refs: #23622
  - 072b927 Merge pull request #23622 from jfindlay/pgjsonb
  - 454322c appease pylint's proscription on blank line excess
  - 57c6171 Get time with timezone correct also in job return.
  - e109d0f Get time with timezone correct.
  - 21e06b9 Fix SQL, remove unneeded imports.
  - 653f360 Stop making changes in 2 places.
  - d6daaa0 Typo.
  - 7d748bf SSL is handled differently by Pg, so don't set it here.
  - cc7c377 Fill alter\_time field in salt\_events with current time with timezone.
  - 43defe9 Port mysql module to Postgres using jsonb datatypes
- **PR #23651:** (*jayeshka*) adding solr unit test case @ 2015-05-13T15:26:15Z
  - c1bdd4d Merge pull request #23651 from jayeshka/solr-unit-test
  - 6e05148 adding solr unit test case
- **PR #23649:** (*jayeshka*) adding states/libvirt unit test case @ 2015-05-13T15:24:48Z
  - ee43411 Merge pull request #23649 from jayeshka/libvirt\_states-unit-test
  - 0fb923a adding states/libvirt unit test case
- **PR #23648:** (*jayeshka*) adding states/linux\_acl unit test case @ 2015-05-13T15:24:11Z
  - c7fc466 Merge pull request #23648 from jayeshka/linux\_acl\_states-unit-test
  - 3f0ab29 removed error.
  - 11081c1 adding states/linux\_acl unit test case
- **PR #23650:** (*jayeshka*) adding states/kmod unit test case @ 2015-05-13T15:09:18Z
  - 4cba7ba Merge pull request #23650 from jayeshka/kmod\_states-unit-test
  - 1987015 adding states/kmod unit test case
- **PR #23633:** (*jayeshka*) made changes to test\_interfaces function. @ 2015-05-13T06:51:07Z
  - bc8faf1 Merge pull request #23633 from jayeshka/win\_network-2015.5-unit-test
  - 0936e1d made changes to test\_interfaces function.
- **PR #23619:** (*jfindlay*) fix kmod.present processing of module loading @ 2015-05-13T01:16:56Z
  - 7df3579 Merge pull request #23619 from jfindlay/fix\_kmod\_state

- 73facbf fix kmod.present processing of module loading
- **PR #23598:** (*rahulhan*) Adding states/win\_dns\_client.py unit tests @ 2015-05-12T21:47:36Z
  - d4f3095 Merge pull request #23598 from rahulhan/states\_win\_dns\_client\_unit\_test
  - d08d885 Adding states/win\_dns\_client.py unit tests
- **PR #23597:** (*rahulhan*) Adding states/vbox\_guest.py unit tests @ 2015-05-12T21:46:30Z
  - 811c6a1 Merge pull request #23597 from rahulhan/states\_vbox\_guest\_unit\_test
  - 6a2909e Removed errors
  - 4cde78a Adding states/vbox\_guest.py unit tests
- **PR #23615:** (*rallytime*) Backport #23577 to 2015.5 @ 2015-05-12T21:19:11Z
  - **PR #23577:** (*msciciel*) Fix find and remove functions to pass database param | refs: #23615
  - 029ff11 Merge pull request #23615 from rallytime/bp-23577
  - 6f74477 Fix find and remove functions to pass database param
- **PR #23603:** (*rahulhan*) Adding states/winrepo.py unit tests @ 2015-05-12T18:40:12Z
  - b858953 Merge pull request #23603 from rahulhan/states\_winrepo\_unit\_test
  - a66e7e7 Adding states/winrepo.py unit tests
- **PR #23602:** (*rahulhan*) Adding states/win\_path.py unit tests @ 2015-05-12T18:39:37Z
  - 3cbbd6d Merge pull request #23602 from rahulhan/states\_win\_path\_unit\_test
  - 122c29f Adding states/win\_path.py unit tests
- **PR #23600:** (*rahulhan*) Adding states/win\_network.py unit tests @ 2015-05-12T18:39:01Z
  - 3c904e8 Merge pull request #23600 from rahulhan/states\_win\_network\_unit\_test
  - b418404 removed lint error
  - 1be8023 Adding states/win\_network.py unit tests
- **PR #23599:** (*rahulhan*) Adding win\_firewall.py unit tests @ 2015-05-12T18:37:49Z
  - 10243a7 Merge pull request #23599 from rahulhan/states\_win\_firewall\_unit\_test
  - 6cda890 Adding win\_firewall.py unit tests
- **PR #23601:** (*basepi*) Add versionadded for jboss module/state @ 2015-05-12T17:22:59Z
  - e73071d Merge pull request #23601 from basepi/jboss.version.added
  - 0174c8f Add versionadded for jboss module/state
- **PR #23469:** (*s0undt3ch*) Call the windows specific function not the general one @ 2015-05-12T16:47:22Z
  - 9beb7bc Merge pull request #23469 from s0undt3ch/hotfix/call-the-win-func
  - 83e88a3 Call the windows specific function not the general one
- **PR #23583:** (*jayeshka*) adding states/ipset unit test case @ 2015-05-12T16:31:55Z
  - d2f0975 Merge pull request #23583 from jayeshka/ipset\_states-unit-test
  - 4330cf4 adding states/ipset unit test case
- **PR #23582:** (*jayeshka*) adding states/keyboard unit test case @ 2015-05-12T16:31:17Z
  - 82a47e8 Merge pull request #23582 from jayeshka/keyboard\_states-unit-test

- fa94d7a adding states/keyboard unit test case
- **PR #23581:** (*jayeshka*) adding states/layman unit test case @ 2015-05-12T16:30:36Z
  - 77e5b28 Merge pull request #23581 from jayeshka/layman\_states-unit-test
  - 297b055 adding states/layman unit test case
- **PR #23580:** (*jayeshka*) adding smf unit test case @ 2015-05-12T16:29:58Z
  - cbe3282 Merge pull request #23580 from jayeshka/smf-unit-test
  - 4f97191 adding smf unit test case
- **PR #23572:** (*The-Loeki*) Fix regression of #21355 introduced by #21603 @ 2015-05-12T16:28:05Z
  - **ISSUE #21603:** (*ipmb*) ssh\_auth.present fails on key without comment | refs: #23572 #23572
  - **PR #21355:** (*The-Loeki*) Fix for comments containing whitespaces
  - 16a3338 Merge pull request #23572 from The-Loeki/ssh\_auth\_fix
  - d8248dd Fix regression of #21355 introduced by #21603
- **PR #23565:** (*garethgreenaway*) fix to aptpkg module @ 2015-05-12T16:25:46Z
  - **ISSUE #23490:** (*lichtamberg*) salt.modules.aptpkg.upgrade should have default ``dist\_upgrade=False" | refs: #23565
  - f843f89 Merge pull request #23565 from garethgreenaway/2015\_2\_aptpkg\_upgrade\_default\_to\_upgrade
  - 97ae514 aptpkg.upgrade should default to upgrade instead of dist\_upgrade.
- **PR #23550:** (*jfindlay*) additional mock for rh\_ip\_test test\_build\_bond @ 2015-05-12T15:17:16Z
  - **ISSUE #23473:** (*terminalmage*) unit.modules.rh\_ip\_test.RhipTestCase.test\_build\_bond is not properly mocked | refs: #23550
  - c1157cd Merge pull request #23550 from jfindlay/fix\_rh\_ip\_test
  - e9b94d3 additional mock for rh\_ip\_test test\_build\_bond
- **PR #23552:** (*garethgreenaway*) Fix for an issue caused by a previous pull request @ 2015-05-11T21:54:59Z
  - b593328 Merge pull request #23552 from garethgreenaway/2015\_5\_returner\_fix\_broken\_previous\_pr
  - 7d70e2b Passed argumentes in the call \_fetch\_profile\_opts to were in the wrong order
- **PR #23547:** (*slinu3d*) Added AWS v4 signature support for 2015.5 @ 2015-05-11T21:52:24Z
  - d0f9682 Merge pull request #23547 from slinu3d/2015.5
  - f3bfbdb Fixed urlparse and urlencode calls
  - 802dbdb Added AWS v4 signature support for 2015.5
- **PR #23544:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-11T18:02:06Z
  - **ISSUE #23159:** (*aneeshusa*) Unused validator
  - **ISSUE #20518:** (*ekle*) module s3.get does not support eu-central-1 | refs: #23467
  - **ISSUE #563:** (*chutz*) pidfile support for minion and master daemons | refs: #23460 #23461
  - **PR #23538:** (*cro*) Update date in LICENSE file
  - **PR #23505:** (*aneeshusa*) Remove unused ssh config validator. Fixes #23159.
  - **PR #23467:** (*slinu3d*) Added AWS v4 signature support
  - **PR #23460:** (*s0undt3ch*) [2014.7] Update to latest stable bootstrap script v2015.05.07

- **PR #23444:** (*techhat*) Add create\_attach\_volume to nova driver
- **PR #23439:** (*techhat*) Add wait\_for\_passwd\_maxtries variable
- 06c6a1f Merge pull request #23544 from basepi/merge-forward-2015.5
- f8a36bc Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - \* b79fed3 Merge pull request #23538 from cro/licupdate
    - 345efe2 Update date in LICENSE file
  - \* a123a36 Merge pull request #23505 from aneeshusa/remove-unused-ssh-config-validator
    - 90af167 Remove unused ssh config validator. Fixes #23159.
  - \* ca2c21a Merge pull request #23467 from slinu3d/2014.7
    - 0b4081d Fixed pylint error at line 363
    - 5be5eb5 Fixed pylink errors
    - e64f374 Fixed lint errors
    - b9d1ac4 Added AWS v4 signature support
  - \* e6f9eec Merge pull request #23444 from techhat/novacreateattach
    - ebdb7ea Add create\_attach\_volume to nova driver
  - \* e331463 Merge pull request #23460 from s0undt3ch/hotfix/bootstrap-script-2014.7
    - edcd0c4 Update to latest stable bootstrap script v2015.05.07
  - \* 7a8ce1a Merge pull request #23439 from techhat/maxtries
    - 0ad3ff2 Add wait\_for\_passwd\_maxtries variable
- **PR #23470:** (*twangboy*) Fixed service.restart for salt-minion @ 2015-05-11T17:54:47Z
  - **ISSUE #23426:** (*twangboy*) Can't restart salt-minion on 64 bit windows (2015.5.0) | refs: #23470
  - aa5b896 Merge pull request #23470 from twangboy/fix\_svc\_restart
  - b3f284c Fixed tests
  - ad44d79 Fixed service.restart for salt-minion
- **PR #23539:** (*rahulhan*) Adding states/virtualenv\_mod.py unit tests @ 2015-05-11T17:02:31Z
  - 67988b2 Merge pull request #23539 from rahulhan/states\_virtualenv\_mod\_unit\_test
  - 750bb07 Adding states/virtualenv\_mod.py unit tests
- 6f0cf2e Merge remote-tracking branch `upstream/2015.2' into 2015.5
  - **ISSUE #23244:** (*freimer*) Caller not available in reactors | refs: #23245
  - **PR #23509:** (*keesbos*) Catch the unset (empty/None) environment case
  - **PR #23423:** (*cachedout*) Remove jid\_event from state.orch
  - **PR #23245:** (*freimer*) Add Caller functionality to reactors.
  - c966196 Merge pull request #23423 from cachedout/remove\_jid\_event\_from\_orch
    - \* f81aab7 Remove jid\_event from state.orch
  - 2bb09b7 Merge pull request #23509 from keesbos/Catch\_empty\_environment
    - \* 6dedeac Catch the unset (empty/None) environment case

- 6d42f30 Merge pull request #23245 from freimer/issue\_23244
  - \* 24cf6eb Add Caller functionality to reactors.
- **PR #23513:** (*gladiatr72*) short-circuit auto-failure of iptables.delete state @ 2015-05-11T15:18:33Z
  - c3f03d8 Merge pull request #23513 from gladiatr72/RFC\_stop\_iptables.check\_from\_short-circuiting\_position-only\_delete\_rule
  - c71714c short-circuit auto-failure of iptables.delete state if position argument is set without the other accoutrements that check\_rule requires.
- **PR #23534:** (*jayeshka*) adding states/ini\_manage unit test case @ 2015-05-11T14:32:06Z
  - 4e77f6f Merge pull request #23534 from jayeshka/ini\_manage\_states-unit-test
  - 831223c adding states/ini\_manage unit test case
- **PR #23533:** (*jayeshka*) adding states/hipchat unit test case @ 2015-05-11T14:30:22Z
  - 11ba9ed Merge pull request #23533 from jayeshka/hipchat-states-unit-test
  - 41d14b3 adding states/hipchat unit test case
- **PR #23532:** (*jayeshka*) adding states/ipmi unit test case @ 2015-05-11T14:28:15Z
  - e542113 Merge pull request #23532 from jayeshka/ipmi-states-unit-test
  - fc3e64a adding states/ipmi unit test case
- **PR #23531:** (*jayeshka*) adding service unit test case @ 2015-05-11T14:27:12Z
  - 9ba85fd Merge pull request #23531 from jayeshka/service-unit-test
  - 3ad5314 adding service unit test case
- **PR #23517:** (*garethgreenaway*) fix to returners @ 2015-05-11T14:20:51Z
  - **ISSUE #23512:** (*Code-Vortex*) hipchat\_returner / slack\_returner not work correctly | refs: #23517
  - 32838cd Merge pull request #23517 from garethgreenaway/23512\_2015\_5\_returners\_with\_profiles
  - 81e31e2 fix for returners that utilize profile attributes. code in the if else statement was backwards. #23512
- **PR #23502:** (*rahulhan*) Adding states/win\_servermanager.py unit tests @ 2015-05-08T19:47:18Z
  - 6be7d8d Merge pull request #23502 from rahulhan/states\_win\_servermanager\_unit\_test
  - 2490074 Adding states/win\_servermanager.py unit tests
- **PR #23495:** (*jayeshka*) adding seed unit test case @ 2015-05-08T17:30:38Z
  - 6048578 Merge pull request #23495 from jayeshka/seed-unit-test
  - 3f134bc adding seed unit test case
- **PR #23494:** (*jayeshka*) adding sensors unit test case @ 2015-05-08T17:30:18Z
  - 70bc3c1 Merge pull request #23494 from jayeshka/sensors-unit-test
  - 1fb48a3 adding sensors unit test case
- **PR #23493:** (*jayeshka*) adding states/incron unit test case @ 2015-05-08T17:29:59Z
  - b981b20 Merge pull request #23493 from jayeshka/incron-states-unit-test
  - cc7bc17 adding states/incron unit test case
- **PR #23492:** (*jayeshka*) adding states/influxdb\_database unit test case @ 2015-05-08T17:29:51Z

- 4019c49 Merge pull request #23492 from jayeshka/influxdb\_database-states-unit-test
- e1fcac8 adding states/influxdb\_database unit test case
- **PR #23491:** (*jayeshka*) adding states/influxdb\_user unit test case @ 2015-05-08T16:24:07Z
  - d317a77 Merge pull request #23491 from jayeshka/influxdb\_user-states-unit-test
  - 9d4043f adding states/influxdb\_user unit test case
- **PR #23477:** (*galet*) LDAP auth: Escape filter value for group membership search @ 2015-05-07T22:04:48Z
  - e0b2a73 Merge pull request #23477 from galet/ldap-filter-escaping
  - 33038b9 LDAP auth: Escape filter value for group membership search
- **PR #23476:** (*cachedout*) Lint becaon @ 2015-05-07T19:55:36Z
  - **PR #23431:** (*UtahDave*) Beacon fixes | refs: #23476
  - e1719fe Merge pull request #23476 from cachedout/lint\_23431
  - 8d1ff20 Lint becaon
- **PR #23431:** (*UtahDave*) Beacon fixes | refs: #23476 @ 2015-05-07T19:53:47Z
  - 1e299ed Merge pull request #23431 from UtahDave/beacon\_fixes
  - 152f223 remove unused import
  - 81198f9 fix interval logic and example
  - 5504778 update to proper examples
  - 6890439 fix list for mask
  - ee7b579 remove custom interval code.
- **PR #23468:** (*rahulhan*) Adding states/win\_system.py unit tests @ 2015-05-07T19:20:50Z
  - ea55c44 Merge pull request #23468 from rahulhan/states\_win\_system\_unit\_test
  - 33f8c12 Adding states/win\_system.py unit tests
- **PR #23466:** (*UtahDave*) minor spelling fix @ 2015-05-07T19:19:06Z
  - e6e1114 Merge pull request #23466 from UtahDave/2015.5local
  - b2c399a minor spelling fix
- **PR #23461:** (*s0undt3ch*) [2015.5] Update to latest stable bootstrap script v2015.05.07 @ 2015-05-07T19:16:18Z
  - **ISSUE #563:** (*chutz*) pidfile support for minion and master daemons | refs: #23460 #23461
  - 4eeb1e6 Merge pull request #23461 from s0undt3ch/hotfix/bootstrap-script
  - 638c63d Update to latest stable bootstrap script v2015.05.07
- **PR #23450:** (*jayeshka*) adding scsi unit test case @ 2015-05-07T19:00:28Z
  - 8651278 Merge pull request #23450 from jayeshka/scsi-unit-test
  - e7269ff adding scsi unit test case
- **PR #23449:** (*jayeshka*) adding s3 unit test case @ 2015-05-07T18:59:45Z
  - 8b374ae Merge pull request #23449 from jayeshka/s3-unit-test
  - 85786bf adding s3 unit test case
- **PR #23448:** (*jayeshka*) adding states/keystone unit test case @ 2015-05-07T18:58:59Z

- 49b431c Merge pull request #23448 from jayeshka/keystone-states-unit-test
- a3050eb adding states/keystone unit test case
- PR #23447: (*jayeshka*) adding states/grafana unit test case @ 2015-05-07T18:58:20Z
  - 23d7e7e Merge pull request #23447 from jayeshka/grafana-states-unit-test
  - 7e90a4a adding states/grafana unit test case
- PR #23438: (*techhat*) Gate requests import @ 2015-05-07T07:22:58Z
  - 1fd0bc2 Merge pull request #23438 from techhat/gaterequests
  - d5b15fc Gate requests import
- PR #23429: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-07T05:35:13Z
  - ISSUE #17245: (*tomashavlas*) localemod does not generate locale for Arch | refs: #23307 #23397
  - PR #23425: (*basepi*) [2014.7] Fix typo in FunctionWrapper
  - PR #23422: (*cro*) \$HOME should not be used, some shells don't set it.
  - PR #23414: (*jfindlay*) 2015.2 -> 2015.5
  - PR #23409: (*terminalmage*) Update Lithium docstrings in 2014.7 branch | refs: #23410
  - PR #23404: (*hvnsweeting*) saltapi cherrypy: initialize var when POST body is empty
  - PR #23397: (*jfindlay*) add more flexible whitespace to locale\_gen search
  - PR #23385: (*rallytime*) Backport #23346 to 2014.7
  - PR #23346: (*ericfode*) Allow file\_map in salt-cloud to handle folders. | refs: #23385
  - 3c4f734 Merge pull request #23429 from basepi/merge-forward-2015.5
  - 7729834 Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - 644eb75 Merge pull request #23422 from cro/gce\_sh\_home
    - \* 4ef9e6b Don't use \$HOME to find user's directory, some shells don't set it
  - ef17ab4 Merge pull request #23425 from basepi/functionwrapper\_typo
    - \* c390737 Fix typo in FunctionWrapper
  - 1b13ec0 Merge pull request #23385 from rallytime/bp-23346
    - \* 9efc13c more linting fixes
    - \* cf131c9 cleaned up some pylint errors
    - \* f981699 added logic to sftp\_file and file\_map to allow folder uploads using file\_map
  - f8c7a62 Merge pull request #23414 from jfindlay/update\_branch
    - \* 8074d16 2015.2 -> 2015.5
  - 54b3bd4 Merge pull request #23404 from hvnsweeting/cherrypy-post-emptybody-fix
    - \* f85f8f9 initialize var when POST body is empty
  - 160f703 Merge pull request #23409 from terminalmage/update-lithium-docstrings-2014.7
    - \* bc97d01 Fix sphinx typo
    - \* 20006b0 Update Lithium docstrings in 2014.7 branch
  - aa5fb0a Merge pull request #23397 from jfindlay/fix\_locale\_gen

- \* 0941fef add more flexible whitespace to locale\_gen search
- PR #23396: (*basepi*) [2015.2] Merge forward from 2014.7 to 2015.2 @ 2015-05-06T21:42:35Z
  - ISSUE #23294: (*variia*) file.replace fails to append if repl string partially available | refs: #23350
  - ISSUE #23026: (*adelcast*) Incorrect salt-syndic logfile and pidfile locations | refs: #23341

  - a4dd836 adding rsync unit test case
- **PR #23406:** (*jayeshka*) adding states/lxc unit test case @ 2015-05-06T15:51:50Z
  - 58ec2a2 Merge pull request #23406 from jayeshka/lxc-states-unit-test
  - 32a0d03 adding states/lxc unit test case
- **PR #23395:** (*basepi*) [2015.2] Add note to 2015.2.0 release notes about master opts in pillar @ 2015-05-05T22:15:20Z
  - 8837d00 Merge pull request #23395 from basepi/2015.2.0masteropts
  - b261c95 Add note to 2015.2.0 release notes about master opts in pillar
- **PR #23393:** (*basepi*) [2015.2] Add warning about python\_shell changes to 2015.2.0 release notes @ 2015-05-05T22:12:46Z
  - f79aed5 Merge pull request #23393 from basepi/2015.2.0python\_shell
  - b2f033f Add CLI note
  - 48e7b3e Add warning about python\_shell changes to 2015.2.0 release notes
- **PR #23380:** (*gladiatr72*) Fix for double output with static salt cli/v2015.2 @ 2015-05-05T21:44:28Z
  - a977776 Merge pull request #23380 from gladiatr72/fix\_for\_double\_output\_with\_static\_\_salt\_CLI/v2015.2
  - c47fdd7 Actually removed the `static` bits from below the else: fold this time.
  - 4ee3679 Fix for incorrect output with salt CLI --static option
- **PR #23379:** (*rahulhan*) Adding states/rabbitmq\_cluster.py @ 2015-05-05T21:44:06Z
  - 5c9543c Merge pull request #23379 from rahulhan/states\_rabbitmq\_cluster\_test
  - 04c22d1 Adding states/rabbitmq\_cluster.py
- **PR #23377:** (*rahulhan*) Adding states/xmpp.py unit tests @ 2015-05-05T21:43:35Z
  - 430f080 Merge pull request #23377 from rahulhan/states\_xmpp\_test
  - 32923b5 Adding states/xmpp.py unit tests
- **PR #23335:** (*steverweber*) 2015.2: include doc in master config for module\_dirs @ 2015-05-05T21:28:58Z
  - 8c057e6 Merge pull request #23335 from steverweber/2015.2
  - 5e3bae9 help installing python pysphere lib
  - 97513b0 include module\_dirs
  - 36b1c87 include module\_dirs

- **PR #23362:** (*jayeshka*) adding states/zk\_concurrency unit test case @ 2015-05-05T15:50:06Z
  - 1648253 Merge pull request #23362 from jayeshka/zk\_concurrency-states-unit-test
  - f60dda4 adding states/zk\_concurrency unit test case
- **PR #23363:** (*jayeshka*) adding riak unit test case @ 2015-05-05T14:23:05Z
  - 1cdaeed Merge pull request #23363 from jayeshka/riak-unit-test
  - f9da6db adding riak unit test case

## 20.2.41 Salt 2015.5.10 Release Notes

### Security Fix

CVE-2016-3176: Insecure configuration of PAM external authentication service

This issue affects all Salt versions prior to 2015.8.8/2015.5.10 when PAM *external authentication* is enabled. This issue involves passing an alternative PAM authentication service with a command that is sent to *LocalClient*, enabling the attacker to bypass the configured authentication service. Thank you to Dylan Frese <dmfrese@gmail.com> for bringing this issue to our attention.

This update defines the PAM eAuth service that users authenticate against in the Salt Master configuration.

(No additional fixes are contained in this release).

### Read Before Upgrading Debian 8 (Jessie) from Salt Versions Earlier than 2015.5.9

Salt systemd service files are missing the following statement in these versions:

```
[Service]
KillMode=process
```

This statement must be added to successfully upgrade on these earlier versions of Salt.

## 20.2.42 Salt 2015.5.11 Release Notes

Version 2015.5.11 is a bugfix release for 2015.5.0.

### Changes for v2015.5.10..v2015.5.11

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Generated at: 2016-05-20T21:02:38Z

Total Merges: **101**

Changes:

- dc8ce2d Fix traceback in logging for config validation (#33386) (#33405)
- **PR #33383:** (*thatch45*) maintain the fallback because I am totally sick of this crap
- 755acfb Improve doc clarity for disable\_modules documentation (#33379)
- 2b5ad12 Better YAML syntax error handling (#33375)
- **PR #33372:** (*jacobhammons*) revved 2015.8 branch to .9 in version selector

- 55be0ab Expanded documentation for boto\_elb state and module (#33341)
- 9b42a05 Added some more docs for master and minion config settings (#33292)
- 8acee5e Fix iptables --match-set (#23643) (#33301)
- 757ef20 fix ``loose" typo (#33290)
- b7d98da Add auth\_tries config option to minion.rst docs (#33287)
- 061851b Document minion\_id\_caching config value (#33282)
- 8fa72f6 Clarify file.replace MULTILINE flag interaction with regex anchors (#33137)
- 4b1f460 update 2015.5.11 release notes (#33236)
- **PR #33211:** (*cachedout*) Don't try to kill a parent proc if we can't
- f868329 Resolve issue with pkg module on Mint Linux (#33205)
- a09e1b6 Add pip installed and removed test (#33178)
- 96e3586 update 2015.5.11 release notes (#33197)
- 09b072a Fix file.managed for Windows (#33181)
- 30868ab [2015.5] Update to latest bootstrap script v2016.05.11 (#33185)
- 264ad34 Pip fix (#33180)
- 43288b2 add 2015.5.11 release notes (#33160)
- e0da8fd [2015.5] Update to latest bootstrap script v2016.05.10 (#33155)
- **PR #33141:** (*jtand*) Skipping salt-call --local test
- 878d34a Doc mock decorators (#33132)
- 30edeadd Lower display of msgpack failure msg to debug (#33078)
- d4928c5 Use saltstack repo in buildpackage.py on CentOS 5 (#33080)
- 61d126c add test for installing package while using salt-call --local (#33025)
- 6d3e4e8 File and User test fixes for 2015.5 on Fedora23 (#33055)
- d48b2b8 test pillar.items output (#33060)
- 398793b Fix minor document error of test.assertion (#33067)
- f875763 Saltfile with pillar tests (#33045)
- 1d78924 Backport #33021 manually to 2015.5 (#33044)
- f00b5f9 Add run\_on\_start docs to schedule.rst (#32958)
- edce22a backport PR #32732 to 2015.5 fixes #23714 (#32848)
- 9b5c14c *salt-cloud -u* downloads stable version from bootstrap.saltstack.com by default (#32837)
- 9725804 update bootstrap to 2016.04.18 release (#32667)
- **PR #32776:** (*rallytime*) [2015.5] Merge forward from 2014.7 to 2015.5
- 67d0c81 Support remote sources in a source list (#32691)
- **PR #32686:** (*cachedout*) Fix stacktrace in batch with dup minion ids
- 3ec9502 Update ``Low Hanging Fruit" to ``Help Wanted" (#32675)
- 77bea56 Additional documentation on calling exec modules from templates (#32657)

- c910b8d Fixing critical bug to remove only the specified Host instead of the entire Host cluster (#32639)
- 4568565 Add \_syspaths.py to .gitignore (#32638)
- PR #32561: (*gtmanfred*) redact passwords and hashes from user.present updates
- PR #32538: (*rallytime*) Back-port #32528 to 2015.5
- 29333e5 Add documentation for some master/minion configs (#32454)
- PR #32458: (*terminalmage*) Improve and clarify docs on provider overrides.
- 0809126 Merge #32293 with test fixes (#32418)
- bbd8260 Ignore Raspbian in service.py \_\_virtual\_\_ (#32421)
- 690addf FreeBSD supports packages in format java/openjdk7 so the prior commit broke that functionality. Check `freebsd/pkg#1409` for more info.
- PR #32399: (*amontalban*) Backport to fix #28262 for 2015.5 as requested in PR #32376
- PR #32374: (*cachedout*) Update proxmox documentation
- PR #32339: (*Ch3LL*) remove reference to master\_alive\_check in 2015.5
- PR #32284: (*rallytime*) Audit config.py default types and values
- PR #32302: (*terminalmage*) Properly support packages with blank ``Release" param in pkg.latest\_version
- PR #32162: (*terminalmage*) Properly handle yum/zypper repositories in pkgrepo.managed
- PR #32223: (*twangboy*) Create minion.d directory on install for Windows
- PR #32218: (*cachedout*) Only display error when tty is True in salt-ssh
- PR #32196: (*jtand*) Fixed pylint error in app\_pam\_test.py
- PR #32154: (*Ch3LL*) Add integration tests for salt-api using pam eauth
- PR #32170: (*gtmanfred*) add name for lxc for use with cloud cache
- PR #32164: (*terminalmage*) Make \_\_virtual\_\_ for rservice.py more robust (2015.5 branch)
- PR #32141: (*paclat*) fixes 32108
- PR #32129: (*terminalmage*) Support multiple valid option types when performing type checks
- PR #32056: (*bstevenson*) Fix list absent
- PR #32096: (*rallytime*) Back-port #32065 to 2015.5
- PR #32104: (*jacobhammons*) One additional known issue for 2015.5.10 release notes
- PR #32100: (*jacobhammons*) 2015.5.10 release docs
- PR #32038: (*terminalmage*) Improve state module docs, replace references to state.highstate/state.sls with state.apply
- PR #32051: (*terminalmage*) Fix outputter for state.apply
- PR #32002: (*abednarik*) Added Manajro Linux to virtual.
- PR #31957: (*rallytime*) [2015.5] Merge forward from 2014.7 to 2015.5
- PR #31972: (*terminalmage*) Make lack of python-ldap module more explicit when LDAP eauth is enabled
- PR #31935: (*twangboy*) Back port nullsoft build script from 2015.8
- PR #31912: (*jfindlay*) log.mixins: remove extermoporaneous .record
- PR #31825: (*jtand*) Updated .testing.pylintrc to match newer versions of pylint

- **PR #31900:** (*rallytime*) Add ``python module" clarification to ps \_\_virtual\_\_ warning.
- **PR #31878:** (*rallytime*) Make sure \_\_virtual\_\_ error message is helpful when psutil is missing
- **PR #31852:** (*rallytime*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR #31827:** (*gtmanfred*) Remove ability of authenticating user to specify pam service
- **PR #31810:** (*whiteinge*) Fix outdated Jinja `env' variable reference
- **PR #31744:** (*brejoc*) Fix for AttributeError with libcloud <0.15
- **PR #31740:** (*terminalmage*) Assume pillar\_opts is False when not specified in masterless mode
- **PR #31750:** (*rallytime*) Back-port #26170 to 2015.5
- **PR #31689:** (*rallytime*) Back-port #29467 to 2015.5
- **PR #31687:** (*cachedout*) Removed useless GPG tests
- **PR #31660:** (*terminalmage*) Remove epoch from version string if present when installing with yum
- **PR #31683:** (*rallytime*) Back-port #31578 to 2015.5
- **PR #31682:** (*cachedout*) Add definition of job cache to glossary
- **PR #31658:** (*rallytime*) Add mentioned of Salt's Coding Style docs to the Contributing docs
- **PR #31655:** (*rallytime*) Make note of pylint dependencies in docs
- **PR #31440:** (*cachedout*) Set correct type for master\_tops config value
- **PR #31622:** (*jfindlay*) doc/topics/tutorials/http: update query decoding docs
- **PR #31558:** (*cachedout*) Don't stacktrace if ssh binary is not installed with salt-ssh
- **PR #31521:** (*terminalmage*) salt-ssh: Fix race condition when caching files to build the thin tarball
- **PR #31497:** (*rallytime*) Remove duplicate ``timeout" definition in Roster docs
- **PR #31472:** (*rallytime*) Update contributing docs
- **PR #31461:** (*DmitryKuzmenko*) Set auth retry count to 0 if multimaster mode is failover.
- **PR #31442:** (*sastorsl*) Add os.path.exists(src) to file.py, def copy
- **PR #31441:** (*cachedout*) Include localhost minions in presence detection for runner
- **PR #31416:** (*carlwgeorge*) selinux module documentation fix
- **PR #31336:** (*terminalmage*) Improve config validation logging
- **PR #31374:** (*sjorge*) fix for #31369
- **PR #31339:** (*jacobhammons*) changed latest release to 2015.8.7
- **PR #31288:** (*notpeter*) Improve salt.states.ssh\_known\_hosts documentation.
- **PR #31183:** (*heyfife*) Fixed named external\_ip reservation/re-use code in gce driver.
- **PR #31032:** (*terminalmage*) (2015.5 branch) yumpkg: ensure that dnf-plugins-core >= 0.1.15 is installed
- **PR #31264:** (*sjorge*) fix if\_missing gets appended to dirs list, take III
- **PR #31110:** (*cachedout*) Fixup 30730
- **PR #30974:** (*rallytime*) Back-port #30949 to 2015.5
- **PR #30942:** (*rallytime*) Back-port #30897 to 2015.5
- **PR #30922:** (*jacobhammons*) Rev latest version to 2015.8.5

- **PR #30865:** (*abednarik*) Better boto elb error message.
- **PR #30831:** (*jacobhammons*) Updated readme
- **PR #30829:** (*jacobhammons*) Updated latest version to 2015.8.4
- **PR #30784:** (*rallytime*) Back-port #24952 to 2015.5
- **PR #30764:** (*terminalmage*) Work around yum versionlock's inability to remove holds by package name alone
- **PR #30760:** (*toanju*) Changed output format of arp\_ip\_target from list to comma delimited...
- **PR #30757:** (*yannis666*) Fix to mine update to merge configuration
- **PR #30749:** (*abednarik*) Fix Network hostname Module in Debian systems.
- **PR #30699:** (*abednarik*) Add Retry to save\_load.
- **PR #30659:** (*sjmh*) Fix lsscsi issues for certain platforms
- **PR #30671:** (*techhat*) Add file locking to cloud index
- **PR #30586:** (*abednarik*) Fix comment\_line permissions.
- **PR #30582:** (*terminalmage*) yumpkg.check\_db: run separate repoquery commands when multiple names passed
- **PR #30548:** (*jacobhammons*) Added placeholder release notes for 2015.5.10
- **PR #30530:** (*terminalmage*) 2015.5 tweaks from #30529
- **PR #30484:** (*terminalmage*) Backport DNF support to 2015.5 branch
- **PR #30512:** (*jfindlay*) disable pkgrepo test for ubuntu 15.10+
- **PR #30478:** (*jtand*) Updated pip\_state to work with pip 8.0
- **PR #30482:** (*borgstrom*) Pyobjects recursive import support (for 2015.5)
- **PR #30459:** (*jfindlay*) modules.pkg: disable repo int test for ubuntu 15.10
- **PR #30443:** (*jtand*) Boto uses False for is\_default instead of None
- **PR #30420:** (*attiasr*) Backport #26853
- **PR #30364:** (*rallytime*) Add TLS version imports and add linode driver documentation notices
- **PR #30184:** (*rallytime*) Back-port #30166 to 2015.5
- **PR #30291:** (*thegooodduke*) ipset: fix test=true & add comment for every entry

### 20.2.43 Salt 2015.5.2 Release Notes

release 2015-06-10

Version 2015.5.2 is a bugfix release for *2015.5.0*.

Extended Changelog Courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

**PR #24346:** (*rallytime*) Backport #24271 to 2015.5 @ 2015-06-03T18:44:31Z

**PR #24271:** (*randybias*) Fixed the setup instructions

refs: #24346

- 76927c9 Merge pull request #24346 from rallytime/bp-24271
- 04067b6 Fixed the setup instructions

PR #24345: (*rallytime*) Backport #24013 to 2015.5 @ 2015-06-03T18:39:41Z

ISSUE #24012: (*jbq*) Enabling a service does not create the appropriate rc.d symlinks on Ubuntu

refs: #24013

PR #24013: (*jbq*) Fix enabling a service on Ubuntu #24012

refs: #24345

- 4afa03d Merge pull request #24345 from rallytime/bp-24013
- 16e0732 Fix enabling a service on Ubuntu #24012

PR #24365: (*jacobhammons*) Fixes for PDF build errors @ 2015-06-03T17:50:02Z

- c3392c2 Merge pull request #24365 from jacobhammons/DocFixes
- 0fc1902 Fixes for PDF build errors

PR #24313: (*nicholascapo*) Fix #22991 Correctly set result when test=True @ 2015-06-03T14:49:18Z

ISSUE #22991: (*nicholascapo*) npm.installed ignores test=True \* ae681a4 Merge pull request #24313 from nicholascapo/fix-22991-npm.installed-test-true \* ac9644c Fix #22991 npm.installed correctly set result on test=True

PR #24312: (*nicholascapo*) Fix #18966: file.serialize supports test=True @ 2015-06-03T14:49:06Z

ISSUE #18966: (*bechtoldt*) file.serialize ignores test=True \* d57a9a2 Merge pull request #24312 from nicholascapo/fix-18966-file.serialize-test-true \* e7328e7 Fix #18966 file.serialize correctly set result on test=True

PR #24302: (*jfindlay*) fix pkg hold/unhold integration test @ 2015-06-03T03:27:43Z

- 6b694e3 Merge pull request #24302 from jfindlay/pkg\_tests
- c2db0b1 fix pkg hold/unhold integration test

PR #24349: (*rallytime*) Remove references to mount\_points in ec2 docs @ 2015-06-03T01:54:09Z

ISSUE #14021: (*mathrawka*) EC2 doc mentions mount\_point, but unable to use properly

refs: #24349

- aca8447 Merge pull request #24349 from rallytime/fix-14021
- a235b11 Remove references to mount\_points in ec2 docs

PR #24328: (*dr4Ke*) Fix state grains silently fails 2015.5 @ 2015-06-02T15:18:46Z

ISSUE #24319: (*dr4Ke*) grains state shouldn't fail silently \* 88a997e Merge pull request #24328 from dr4Ke/fix\_state\_grains\_silently\_fails\_2015.5 \* 8a63d1e fix state grains silently fails #24319

- ca1af20 grains state: add some tests

PR #24310: (*techhat*) Add warning about destroying maps @ 2015-06-02T03:01:28Z

ISSUE #24036: (*arthurlogilab*) [salt-cloud] Protect against passing command line arguments as names for the --destroy command

refs: #24310

ISSUE #9772: (*s0undt3ch*) Delete VM's in a map does not delete them all

refs: #24310

- 7dcd9bb Merge pull request #24310 from techhat/mapwarning
- ca535a6 Add warning about destroying maps

PR #24281: (*steverweber*) Ipmi docfix @ 2015-06-01T17:45:36Z

- 02bfb25 Merge pull request #24281 from steverweber/ipmi\_docfix
- dd36f2c yaml formatting
- f6deef3 include api\_kg kwarg in ipmi state
- a7d4e97 doc cleanup
- 0ded2fd save more cleanup to doc
- 08872f2 fix name api\_key to api\_kg
- 165a387 doc fix add api\_kg kwargs
- 1ec7888 cleanup docs

**PR #24287: (jfindlay) fix pkg test on ubuntu 12.04 for realz @ 2015-06-01T14:16:37Z**

- 73cd2cb Merge pull request #24287 from jfindlay/pkg\_test
- 98944d8 fix pkg test on ubuntu 12.04 for realz

**PR #24279: (rallytime) Backport #24263 to 2015.5 @ 2015-06-01T04:29:34Z**

**PR #24263: (cdarwin) Correct usage of import\_yaml in formula documentation**

refs: #24279

- 02017a0 Merge pull request #24279 from rallytime/bp-24263
- beff7c7 Correct usage of import\_yaml in formula documentation

**PR #24277: (rallytime) Put a space between after\_jump commands @ 2015-06-01T04:28:26Z**

**ISSUE #24226: (c4urself) iptables state needs to keep ordering of flags**

refs: #24277

- 2ba696d Merge pull request #24277 from rallytime/fix\_iptables\_jump
- e2d1606 Move after\_jump split out of loop
- d14f130 Remove extra loop
- 42ed532 Put a space between after\_jump commands

**PR #24262: (basepi) More dictupdate after #24142 @ 2015-05-31T04:09:37Z**

**PR #24142: (basepi) Optimize dictupdate.update and add #24097 functionality**

refs: #24262

**PR #24097: (kiorky) Optimize dictupdate**

refs: #24142 #24142

- 113eba3 Merge pull request #24262 from basepi/dictupdatefix
- 0c4832c Raise a typeerror if non-dict types
- be21aaa Pylint
- bb8a6c6 More optimization
- c933249 py3 compat
- ff6b2a7 Further optimize dictupdate.update()
- c73f5ba Remove unused valtype

**PR #24269: (kiorky) zfs: Fix spurious retcode hijacking in virtual @ 2015-05-30T17:47:49Z**

- 785d5a1 Merge pull request #24269 from makinacorpuz/zfs
- 0bf23ce zfs: Fix spurious retcode hijacking in virtual

PR #24257: (*jfindlay*) fix pkg mod integration test on ubuntu 12.04 @ 2015-05-29T23:09:00Z

- 3d885c0 Merge pull request #24257 from jfindlay/pkg\_tests
- 9508924 fix pkg mod integration test on ubuntu 12.04

PR #24260: (*basepi*) Fix some typos from #24080 @ 2015-05-29T22:54:58Z

ISSUE #23657: (*arthurlogilab*) [salt-cloud lxc] NameError: global name `__salt__` is not defined

**PR #24247: (rallytime) Backport #24220 to 2015.5 @ 2015-05-29T21:40:01Z**

**ISSUE #24210: (damonnk) salt-cloud vsphere.py should allow key\_filename param**

refs: #24220

**PR #24220: (djcrabhat) adding key\_filename param to vsphere provider**

refs: #24247

- da14f3b Merge pull request #24247 from rallytime/bp-24220
- 0b1041d adding key\_filename param to vsphere provider

**PR #24254: (rallytime) Add deprecation warning to Digital Ocean v1 Driver @ 2015-05-29T21:39:25Z**

**PR #22731: (dmyerscough) Decommission DigitalOcean APIv1 and have users use the new DigitalOcean APIv2**

refs: #24254

- 21d6126 Merge pull request #24254 from rallytime/add\_deprecation\_warning\_digitalocean
- cafe37b Add note to docs about deprecation
- ea0f1e0 Add deprecation warning to digital ocean driver to move to digital\_ocean\_v2

**PR #24252: (aboe76) Updated suse spec to 2015.5.1 @ 2015-05-29T21:38:45Z**

- dac055d Merge pull request #24252 from aboe76/opensuse\_package
- 0ad617d Updated suse spec to 2015.5.1

**PR #24251: (garthgreenaway) Returners broken in 2015.5 @ 2015-05-29T21:37:52Z**

- 49e7fe8 Merge pull request #24251 from garthgreenaway/2015\_5\_returner\_brokenness
- 5df6b52 The code calling cfg as a function vs treating it as a dictionary and using get is currently backwards causing returners to fail when used from the CLI and in scheduled jobs.

**PR #24255: (rallytime) Clarify digital ocean documentation and mention v1 driver deprecation @ 2015-05-29T21:37:07Z**

**ISSUE #21498: (rallytime) Clarify Digital Ocean Documentation**

refs: #24255

- bfb9461 Merge pull request #24255 from rallytime/clarify\_digital\_ocean\_driver\_docs
- 8d51f75 Clarify digital ocean documentation and mention v1 driver deprecation

PR #24232: (*rallytime*) Backport #23308 to 2015.5 @ 2015-05-29T21:36:46Z

PR #23308: (*thusoy*) Don't merge: Add missing jump arguments to iptables module

refs: #24232

- 41f5756 Merge pull request #24232 from rallytime/bp-23308
- 2733f66 Import string
- 9097cca Add missing jump arguments to iptables module

PR #24245: (*Sacro*) Unset PYTHONHOME when starting the service @ 2015-05-29T20:00:31Z

- a95982c Merge pull request #24245 from Sacro/patch-2
- 6632d06 Unset PYTHONHOME when starting the service

PR #24121: (*hvnsweeting*) deprecate setting user permission in rabbitmq\_vhost.present @ 2015-05-29T15:55:40Z

- 1504c76 Merge pull request #24121 from hvnsweeting/rabbitmq-host-deprecate-set-permission
- 2223158 deprecate setting user permission in rabbitmq\_host.present

PR #24179: (*merll*) Changing user and group only possible for existing ids. @ 2015-05-29T15:52:43Z

PR #24169: (*merll*) Changing user and group only possible for existing ids.

refs: #24179

- ba02f65 Merge pull request #24179 from Precis/fix-file-uid-gid-2015.0
- ee4c9d5 Use ids if user or group is not present.

PR #24229: (*msteed*) Fix auth failure on syndic with external\_auth @ 2015-05-29T15:04:06Z

ISSUE #24147: (*paclat*) Syndication issues when using authentication on master of masters.

refs: #24229

- 9bfb066 Merge pull request #24229 from msteed/issue-24147
- 482d1cf Fix auth failure on syndic with external\_auth

PR #24234: (*jayeshka*) adding states/quota unit test case. @ 2015-05-29T14:14:27Z

- 19fa43c Merge pull request #24234 from jayeshka/quota-states-unit-test
- c233565 adding states/quota unit test case.

PR #24217: (*jfindlay*) disable intermittently failing tests @ 2015-05-29T03:08:39Z

ISSUE #40: (*thatch45*) Clean up timeouts

refs: #22857

- a68d515 ShouldFix \_- troubles in debian\_ip

PR #24214: (*basepi*) 2015.5.1release @ 2015-05-28T16:23:57Z

- 071751d Merge pull request #24214 from basepi/2015.5.1release
- e5ba31b 2015.5.1 release date
- 768494c Update latest release in docs

PR #24202: (*rallytime*) Backport #24186 to 2015.5 @ 2015-05-28T05:16:48Z

PR #24186: (*thcipriani*) Update salt vagrant provisioner info

refs: #24202

- c2f1fdb Merge pull request #24202 from rallytime/bp-24186
- db793dd Update salt vagrant provisioner info

PR #24192: (*rallytime*) Backport #20474 to 2015.5 @ 2015-05-28T05:16:18Z

PR #20474: (*djcrabhat*) add sudo, sudo\_password params to vsphere deploy to allow for non-root deploys

refs: #24192

- 8a085a2 Merge pull request #24192 from rallytime/bp-20474
- fd3c783 add sudo, sudo\_password params to deploy to allow for non-root deploys

PR #24184: (*rallytime*) Backport #24129 to 2015.5 @ 2015-05-28T05:15:08Z

PR #24129: (*pengyao*) Wheel client doc

refs: #24184

- 7cc535b Merge pull request #24184 from rallytime/bp-24129
- 722a662 fixed a typo
- 565eb46 Add cmd doc for WheelClient

PR #24183: (*rallytime*) Backport #19320 to 2015.5 @ 2015-05-28T05:14:36Z

**PR #19320: (clan) add `state\_output\_profile` option for profile output**

refs: #24183

- eb0af70 Merge pull request #24183 from rallytime/bp-19320
- 55db1bf sate\_output\_profile default to True
- 9919227 fix type: statei -> state
- 0549ca6 add `state\_output\_profile` option for profile output

**PR #24201: (whiteinge) Add list of client libraries for the rest\_cherry module to the top-level documentation @ 2015-05-28T02:12:09Z**

- 1b5bf23 Merge pull request #24201 from whiteinge/rest\_cherry-client-libs
- 5f71802 Add list of client libraries for the rest\_cherry module
- 28fc77f Fix rest\_cherry config example indentation

**PR #24195: (rallytime) Merge #24185 with a couple of fixes @ 2015-05-27T22:18:37Z****PR #24185: (jacobhammons) Fixes for doc build errors**

refs: #24195

- 3307ec2 Merge pull request #24195 from rallytime/merge-24185
- d8daa9d Merge #24185 with a couple of fixes
- 634d56b Fixed pylon error
- 0689815 Fixes for doc build errors

**PR #24166: (jayeshka) adding states/pkgng unit test case. @ 2015-05-27T20:27:49Z**

- 7e400bc Merge pull request #24166 from jayeshka/pkgng-states-unit-test
- 2234bb0 adding states/pkgng unit test case.

**PR #24189: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-27T20:26:31Z**

**PR #24178: (rallytime) Backport #24118 to 2014.7, too. PR #24159: (rallytime) Fill out modules/keystone.py CLI Examples PR #24158: (rallytime) Fix test\_valid\_docs test for tls module PR #24118: (trevor-h) removed deprecated pymongo usage**

refs: #24139 #24178

- 9fcd79 Merge pull request #24189 from basepi/merge-forward-2015.5
- 8839e9c Merge remote-tracking branch `upstream/2014.7` into merge-forward-2015.5
- 9d7331c Merge pull request #24178 from rallytime/bp-24118
  - e2217a0 removed deprecated pymongo usage as no longer functional with pymongo > 3.x
- 4e8c503 Merge pull request #24159 from rallytime/keystone\_doc\_examples
  - dadac8d Fill out modules/keystone.py CLI Examples
- fc10ee8 Merge pull request #24158 from rallytime/fix\_doc\_error
  - 49a517e Fix test\_valid\_docs test for tls module

**PR #24181: (jtand) Fixed error where file was evaluated as a symlink in test\_absent @ 2015-05-27T18:26:28Z**

- 2303dec Merge pull request #24181 from jtand/file\_test
- 5f0e601 Fixed error where file was evaluated as a symlink in test\_absent

**PR #24180:** (*terminalmage*) Skip libvirt tests if not running as root @ 2015-05-27T18:18:47Z

- a162768 Merge pull request #24180 from terminalmage/fix-libvirt-test
- 72e7416 Skip libvirt tests if not running as root

**PR #24165:** (*jayeshka*) adding states/portage\_config unit test case. @ 2015-05-27T17:15:08Z

- 1fbc5b2 Merge pull request #24165 from jayeshka/portage\_config-states-unit-test
- 8cf1505 adding states/portage\_config unit test case.

**PR #24164:** (*jayeshka*) adding states/pecl unit test case. @ 2015-05-27T17:14:26Z

- 4747856 Merge pull request #24164 from jayeshka/pecl-states-unit-test
- 563a5b3 adding states/pecl unit test case.

**PR #24160:** (*The-Loeki*) small enhancement to data module; pop() @ 2015-05-27T17:03:10Z

- cdaaa19 Merge pull request #24160 from The-Loeki/patch-1
- 2175ff3 doc & merge fix
- eba382c small enhancement to data module; pop()

**PR #24153:** (*techhat*) Batch mode sometimes improperly builds lists of minions to process @ 2015-05-27T16:21:53Z

- 4a8dbc7 Merge pull request #24153 from techhat/batchlist
- 467ba64 Make sure that minion IDs are strings

**PR #24167:** (*jayeshka*) adding states/pagerduty unit test case. @ 2015-05-27T16:14:01Z

- ed8ccf5 Merge pull request #24167 from jayeshka/pagerduty-states-unit-test
- 1af8c83 adding states/pagerduty unit test case.

**PR #24156:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-27T15:05:01Z

**ISSUE #23464:** (*tibold*) cmd\_iter\_no\_block() blocks

refs: #24093

**PR #24125:** (*hvnsweeting*) Fix rabbitmq test mode **PR #24093:** (*msteed*) Make LocalClient.cmd\_iter\_no\_block() not block **PR #24008:** (*davidjb*) Correct reST formatting for states.cmd documentation **PR #23933:** (*jacobhammons*) sphinx saltstack2 doc theme \* b9507d1 Merge pull request #24156 from basepi/merge-forward-2015.5 \* e52b5ab Remove stray >>>>>

- 1aa0420 Merge pull request #23933 from jacobhammons/2014.7
- a3613e6 removed numbering from doc TOC
- 78b737c removed 2015.\* release from release notes, updated index page to remove PDF/epub links
- e867f7d Changed build settings to use saltstack2 theme and update release versions.
- 81ed9c9 sphinx saltstack2 doc theme

**PR #24145: (*jfindlay*) attempt to decode win update package @ 2015-05-26T23:20:20Z**

**ISSUE #24102: (*bormotov*) win\_update encondig problems**

refs: #24145

- 05745fa Merge pull request #24145 from jfindlay/win\_update\_encoding
- cc5e17e attempt to decode win update package

**PR #24123: (*kiorky*) fix service enable/disable change @ 2015-05-26T21:24:19Z**

**ISSUE #24122: (*kiorky*) service.dead is no more stateful: services does not handle correctly enable/disable change state**

refs: #24123

- 7024789 Merge pull request #24123 from makinacorpuss
- 2e2e1d2 fix service enable/disable change

**PR #24146: (*rallytime*) Fixes the boto\_vpc\_test failure on CentOS 5 tests @ 2015-05-26T20:15:19Z**

- 51c3cec Merge pull request #24146 from rallytime/fix\_centos\_boto\_failure
- ac0f97d Fixes the boto\_vpc\_test failure on CentOS 5 tests

**PR #24144: (*twangboy*) Compare Keys ignores all newlines and carriage returns @ 2015-05-26T19:25:48Z**

**ISSUE #24052: (*twangboy*) v2015.5.1 Changes the way it interprets the minion\_master.pub file**

refs: #24089 #24144

**ISSUE #23566: (*rks2286*) Salt-cp corrupting the file after transfer to minion**

refs: #24144 #23740

**PR #23740: (*jfindlay*) Binary write**

refs: #24144

- 1c91a21 Merge pull request #24144 from twangboy/fix\_24052
- c197b41 Compare Keys removing all newlines and carriage returns

**PR #24139: (*rallytime*) Backport #24118 to 2015.5 @ 2015-05-26T18:24:27Z**

**PR #24118: (*trevor-h*) removed deprecated pymongo usage**

refs: #24139 #24178

- 0841667 Merge pull request #24139 from rallytime/bp-24118
- 4bb519b removed deprecated pymongo usage as no longer functional with pymongo > 3.x

**PR #24138: (*rallytime*) Backport #24116 to 2015.5 @ 2015-05-26T18:23:51Z**

**PR #24116: (*awdrius*) Fixed typo in chown username (ending dot) that fails the command.**

refs: #24138

- 742eca2 Merge pull request #24138 from rallytime/bp-24116
- 7f08641 Fixed typo in chown username (ending dot) that fails the command.

**PR #24137: (rallytime) Backport #24105 to 2015.5 @ 2015-05-26T18:23:40Z**

**PR #24105: (cedwards) Updated some beacon-specific documentation formatting**

refs: #24137

- e01536d Merge pull request #24137 from rallytime/bp-24105
- f0778a0 Updated some beacon-specific documentation formatting

**PR #24136: (rallytime) Backport #24104 to 2015.5 @ 2015-05-26T15:58:47Z**

**ISSUE #23364: (pruiz) Unable to destroy host using proxmox cloud: There was an error destroying machines: 501 Server Error: Method `DELETE /nodes/pmx1/openvz/openvz/100` not implemented** **PR #24104: (pruiz) Only try to stop a VM if it's not already stopped. (fixes #23364)**

refs: #24136

- 89cdf97 Merge pull request #24136 from rallytime/bp-24104
- c538884 Only try to stop a VM if it's not already stopped. (fixes #23364)

**PR #24135: (rallytime) Backport #24083 to 2015.5 @ 2015-05-26T15:58:27Z**

**PR #24083: (swdream) fix code block syntax**

refs: #24135

- 67c4373 Merge pull request #24135 from rallytime/bp-24083
- e1d06f9 fix code block syntax

**PR #24131: (jayeshka) adding states/mysql\_user unit test case @ 2015-05-26T15:58:10Z**

- a83371e Merge pull request #24131 from jayeshka/mysql\_user-states-unit-test
- ed1ef69 adding states/mysql\_user unit test case

**PR #24130: (jayeshka) adding states/ntp unit test case @ 2015-05-26T15:57:29Z**

- 1dc1d2a Merge pull request #24130 from jayeshka/ntp-states-unit-test
- ede4a9f adding states/ntp unit test case

**PR #24128: (jayeshka) adding states/openstack\_config unit test case @ 2015-05-26T15:56:08Z**

- 3943417 Merge pull request #24128 from jayeshka/openstack\_config-states-unit-test
- ca09e0f adding states/openstack\_config unit test case

**PR #24127: (jayeshka) adding states/npm unit test case @ 2015-05-26T15:55:18Z**

- 23f25c4 Merge pull request #24127 from jayeshka/npm-states-unit-test
- c3ecabb adding states/npm unit test case

**PR #24077: (anlutro) Change how state\_verbose output is filtered @ 2015-05-26T15:41:11Z**

**ISSUE #24009: (hvnsweeting) state\_verbose False summary is wrong**

refs: #24077

- 07488a4 Merge pull request #24077 from alprs/fix-outputter\_highstate\_nonverbose\_count
- 7790408 Change how state\_verbose output is filtered

**PR #24119: (jfindlay) Update contrib docs @ 2015-05-26T15:37:01Z**

- 224820f Merge pull request #24119 from jfindlay/update\_contrib\_docs
- fa2d411 update example release branch in contrib docs
- a0b76b5 clarify git rebase instructions
- 3517e00 fix contribution docs link typos
- 651629c backport dev contrib doc updates to 2015.5

**PR #23928: (joejulian) Add the ability to replace existing certificates @ 2015-05-25T19:47:26Z**

- 5488c4a Merge pull request #23928 from joejulian/2015.5\_tls\_module\_replace\_existing
- 4a4cbdd Add the ability to replace existing certificates

**PR #24078: (jfindlay) if a charmap is not supplied, set it to the codeset @ 2015-05-25T19:39:19Z**

**ISSUE #23221: (Reiner030) Debian Jessie: locale.present not working again**

refs: #24078

- dd90ef0 Merge pull request #24078 from jfindlay/locale\_charmap
- 5eb97f0 if a charmap is not supplied, set it to the codeset

**PR #24088: (jfindlay) pkg module integration tests @ 2015-05-25T19:39:02Z**

- 9cec5d3 Merge pull request #24088 from jfindlay/pkg\_tests
- f1bd5ec adding pkg module integration tests
- 739b2ef rework yumpkg refresh\_db so args are not mandatory

**PR #24089: (jfindlay) allow override of binary file mode on windows @ 2015-05-25T19:38:44Z**

**ISSUE #24052: (twangboy) v2015.5.1 Changes the way it interprets the minion\_master.pub file**

refs: #24089 #24144

- 517552c Merge pull request #24089 from jfindlay/binary\_write
- b2259a6 allow override of binary file mode on windows

**PR #24092: (jfindlay) collect scattered contents edits, ensure it's a str @ 2015-05-25T19:38:10Z**

**ISSUE #23973: (mschiff) state file.managed: setting contents\_pillar to a pillar which is a list throws exception instead giving**

refs: #24092

- 121ab9f Merge pull request #24092 from jfindlay/file\_state
- cfa0f13 collect scattered contents edits, ensure it's a str

**PR #24112: (The-Loeki) thin\_gen breaks when thinver doesn't exist @ 2015-05-25T19:37:47Z**

- 84e65de Merge pull request #24112 from The-Loeki/patch-1
- 34646ea thin\_gen breaks when thinver doesn't exist

**PR #24108: (jayeshka) adding states/mysql\_query unit test case @ 2015-05-25T12:30:48Z**

- ec509ed Merge pull request #24108 from jayeshka/mysql\_query-states-unit-test
- ec50450 adding states/mysql\_query unit test case

**PR #24110: (jayeshka) adding varnish unit test case @ 2015-05-25T12:30:21Z**

- f2e5d6c Merge pull request #24110 from jayeshka/varnish-unit-test

- e119889 adding varnish unit test case

**PR #24109:** (*jayeshka*) adding states/mysql\_grants unit test case @ 2015-05-25T12:29:53Z

- 4fca2b4 Merge pull request #24109 from jayeshka/mysql\_grants-states-unit-test
- 11a93cb adding states/mysql\_grants unit test case

**PR #24028:** (*nleib*) send a disable message to disable puppet @ 2015-05-25T04:02:11Z

- 6b43c9a Merge pull request #24028 from nleib/2015.5
- 15f24b4 update format of string in disabled msg
- 7690e5b remove trailing whitespaces
- 56a9720 Update puppet.py
- 9686391 Update puppet.py
- 33f3d68 send a disable message to disable puppet

**PR #24100:** (*jfindlay*) adding states/file unit test case @ 2015-05-24T05:17:54Z

**PR #23963:** (*jayeshka*) adding states/file unit test case

refs: #24100

- 52c9aca Merge pull request #24100 from jfindlay/merge\_23963
- 7d59deb adding states/file unit test case

**PR #24098:** (*galet*) Systemd not recognized properly on Oracle Linux 7 @ 2015-05-24T04:07:31Z

**ISSUE #21446:** (*dpheasant*) check for systemd on Oracle Linux

refs: #24098

- 0eb9f15 Merge pull request #24098 from galet/2015.5
- 4d6ab21 Systemd not recognized properly on Oracle Linux 7

**PR #24090:** (*jfindlay*) adding states/mount unit test case @ 2015-05-22T23:02:57Z

**PR #24062:** (*jayeshka*) adding states/mount unit test case

refs: #24090

- 8e04db7 Merge pull request #24090 from jfindlay/merge\_24062
- a81a922 adding states/mount unit test case

**PR #24086:** (*rallytime*) Backport #22806 to 2015.5 @ 2015-05-22T21:18:20Z

**ISSUE #22574:** (*unicolet*) error when which is not available

refs: #22806

**PR #22806:** (*jfindlay*) use cmd.run\_all instead of cmd.run\_stdout

refs: #24086

- c0079f5 Merge pull request #24086 from rallytime/bp-22806
- f728f55 use cmd.run\_all instead of cmd.run\_stdout

**PR #24024:** (*jayeshka*) adding states/mongodb\_user unit test case @ 2015-05-22T20:53:19Z

- 09de253 Merge pull request #24024 from jayeshka/mongodb\_user-states-unit-test
- f31dc92 resolved errors

- d038b1f adding states/mongodb\_user unit test case

**PR #24065: (kiorky) continue to fix #23883**

refs: #24080 #24066

@ 2015-05-22T18:59:21Z

**ISSUE #23883: (kaithar) max\_event\_size seems broken \* bfd812c Merge pull request #24065 from makinacorus/real23883 \* 028282e continue to fix #23883**

**PR #24029: (kiorky) Fix providers handling @ 2015-05-22T16:56:06Z**

**ISSUE #24017: (arthurlogilab) [salt-cloud openstack] TypeError: unhashable type: 'dict' on map creation**

refs: #24029

- 429adfe Merge pull request #24029 from makinacorus/fixproviders
- 412b39b Fix providers handling

**PR #23936: (jfindlay) remove unreachable returns in file state @ 2015-05-22T16:26:49Z**

- a42cccc Merge pull request #23936 from jfindlay/file\_state
- ac29c0c also validate file.recurse source parameter
- 57f7388 remove unreachable returns in file state

**PR #24063: (jayeshka) removed tuple index error @ 2015-05-22T14:58:20Z**

- 8b69b41 Merge pull request #24063 from jayeshka/mount-states-module
- b9745d5 removed tuple index error

**PR #24057: (rallytime) Backport #22572 to 2015.5 @ 2015-05-22T05:36:25Z**

**PR #22572: (The-Loeki) Small docfix for GitPillar**

refs: #24057

- 02ac4aa Merge pull request #24057 from rallytime/bp-22572
- 49aad84 Small docfix for GitPillar

**PR #24040: (rallytime) Backport #24027 to 2015.5 @ 2015-05-21T23:43:54Z**

**ISSUE #23088: (wfhg) Segfault when adding a Zypper repo on SLES 11.3**

refs: #24027

**PR #24027: (wfhg) Add baseurl to salt.modules.zypper.mod\_repo**

refs: #24040

- 82de059 Merge pull request #24040 from rallytime/bp-24027
- 37d25d8 Added baseurl as alias for url and mirrorlist in salt.modules.zypper.mod\_repo.

**PR #24039: (rallytime) Backport #24015 to 2015.5 @ 2015-05-21T23:43:25Z**

**PR #24015: (YanChii) minor improvement of solarisips docs & fix typos**

refs: #24039

- d909781 Merge pull request #24039 from rallytime/bp-24015
- 6bfaa94 minor improvement of solarisips docs & fix typos

**PR #24038: (rallytime) Backport #19599 to 2015.5 @ 2015-05-21T23:43:10Z**

**ISSUE #19598:** (*fayatted*) ssh\_auth.present test=true incorrectly reports changes will be made

refs: #19599

**PR #19599:** (*fayatted*) Fix ssh\_auth test mode, compare lines not just key

refs: #24038

- 4a0f254 Merge pull request #24038 from rallytime/bp-19599
- ea00d3e Fix ssh\_auth test mode, compare lines not just key

**PR #24046:** (*rallytime*) Remove key management test from digital ocean cloud tests @ 2015-05-21T22:32:04Z

- 42b87f1 Merge pull request #24046 from rallytime/remove\_key\_test
- 1d031ca Remove key management test from digital ocean cloud tests

**PR #24044:** (*cro*) Remove spurious log message, fix typo in doc @ 2015-05-21T22:31:49Z

- eff54b1 Merge pull request #24044 from cro/pgjsonb
- de06633 Remove spurious log message, fix typo in doc

**PR #24001:** (*msteed*) issue #23883 @ 2015-05-21T20:32:30Z

**ISSUE #23883:** (*kaithar*) max\_event\_size seems broken \* ac32000 Merge pull request #24001 from msteed/issue-23883 \* bea97a8 issue #23883

**PR #23995:** (*kiorky*) Lxc path pre @ 2015-05-21T17:26:03Z

- f7fae26 Merge pull request #23995 from makinacorp/lxc\_path\_pre
- 319282a lint
- 1dc67e5 lxc: versionadded
- fca7cb lxc: states improvements
- 644bd72 lxc: more consistence for profiles
- 139372c lxc: remove merge cruft
- 725b046 lxc: Repair merge

**PR #24032:** (*kartiksubbarao*) Update augeas\_cfg.py @ 2015-05-21T17:03:42Z

**ISSUE #16383:** (*interjection*) salt.states.augeas.change example from docs fails with exception

refs: #24032

- 26d6851 Merge pull request #24032 from kartiksubbarao/augeas\_insert\_16383
- 3686dcd Update augeas\_cfg.py

**PR #24025:** (*jayeshka*) adding timezone unit test case @ 2015-05-21T16:50:53Z

- 55c9245 Merge pull request #24025 from jayeshka/timezone-unit-test
- 1ec33e2 removed assertion error
- 16ecb28 adding timezone unit test case

**PR #24023:** (*jayeshka*) adding states/mongodb\_database unit test case @ 2015-05-21T16:49:17Z

- e243617 Merge pull request #24023 from jayeshka/mongodb\_database-states-unit-test
- 5a9ac7e adding states/mongodb\_database unit test case

**PR #24022:** (*jayeshka*) adding states/modjk\_worker unit test case @ 2015-05-21T16:48:29Z

- b377bd9 Merge pull request #24022 from jayeshka/modjk\_worker-states-unit-test
- 05c0a98 adding states/modjk\_worker unit test case

**PR #24005: (mstead) issue #23776 @ 2015-05-21T01:55:34Z**

**ISSUE #23776: (enblde) Presence change events constantly reporting all minions as new in 2015.5 \* 701c51b**  
Merge pull request #24005 from mstead/issue-23776 \* 62e67d8 issue #23776

**PR #23996: (neogenix) iptables state generates a 0 position which is invalid in iptables cli #23950 @ 2015-05-20T22:44:27Z**

**ISSUE #23950: (neogenix) iptables state generates a 0 position which is invalid in iptables cli**

refs: #23996

- 17b7c0b Merge pull request #23996 from neogenix/2015.5-23950
- ad417a5 fix for #23950

**PR #23994: (rallytime) Skip the gpodder pkgrepo test for Ubuntu 15 - they don't have vivid ppa up yet @ 2015-05-20T21:18:21Z**

- 4cb8773 Merge pull request #23994 from rallytime/skip\_test\_ubuntu\_15
- 9e0ec07 Skip the gpodder pkgrepo test - they don't have vivid ppa up yet

## 20.2.44 Salt 2015.5.3 Release Notes

Extended Changelog Courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Statistics:

- Total Merges: **177**
- Total Issue references: **81**
- Total PR references: **231**

Changes:

- **PR #25096: (jfindlay) Postgres group test @ 2015-07-01T18:48:26Z**
  - **PR #24330: (jayeshka) adding states/postgres\_group unit test case. | refs: #25096**
  - 21709aa Merge pull request #25096 from jfindlay/postgres\_group\_test
  - 3c379dc decllobber postgres state unit test mocking
  - a162ffa adding states/postgres\_group unit test case.
- **PR #25085: (jfindlay) accept all sources in the file state @ 2015-07-01T18:23:45Z**
  - **ISSUE #25041: (wt) REGRESSION: pillar.get of integer fails to render in sls | refs: #25085**
  - 0a84640 Merge pull request #25085 from jfindlay/fix\_file
  - 937a252 remove unnecessary file state tests
  - 6f238e9 integration test file.managed sources
  - a5978d3 iterate an iterable source othwerise list+str it
- **PR #25095: (jfindlay) Win groupadd unit tests @ 2015-07-01T18:18:53Z**
  - **PR #24207: (jayeshka) adding win\_groupadd unit test case. | refs: #25095**

- a983942 Merge pull request #25095 from jfindlay/win\_groupadd\_test
- 564dff8 depend on win libs rather than mocking them
- 9b9aeb8 resolved all errors.
- aaf8935 adding win\_groupadd unit test case.
- **PR #25089:** (*jfindlay*) fix minion sudo @ 2015-07-01T15:53:16Z
  - **ISSUE #21520:** (*jfindlay*) sudo.salt\_call is broken | refs: #25089
  - **PR #20226:** (*thatch45*) Allow sudo priv escalation | refs: #25089
  - 7c8d2a8 Merge pull request #25089 from jfindlay/fix\_sudo
  - d8f91d4 add some apprehension to the sudo exec module
  - a9269c0 adding sudo exec module docs
  - e4a40b7 comment whitespace in minion config
  - 44cb167 adding sudo\_user minion config docs
  - d461060 adding sudo\_user minion config to default
- **PR #25099:** (*driskell*) Fix broken batch results @ 2015-07-01T15:51:29Z
  - **ISSUE #24875:** (*ahammond*) ValueError: list.remove(x): x not in list in File ``/usr/lib/python2.6/site-packages/salt/cli/batch.py``, line 179, in run active.remove(minion) | refs: #25099
  - 4d6078e Merge pull request #25099 from driskell/patch-1
  - 59b23e5 Fix broken batch results
- **PR #25083:** (*steverweber*) ipmi: get\_sensor\_data would always fail @ 2015-06-30T20:57:21Z
  - 4635079 Merge pull request #25083 from steverweber/fix\_ipmi\_stat
  - 836f48c include \_ in IpmiCommand
  - 817e434 get\_sensor\_data would always fail
- **PR #25067:** (*The-Loeki*) Fix for maxdepth=0 in find @ 2015-06-30T20:54:06Z
  - 15f2a40 Merge pull request #25067 from The-Loeki/patch-1
  - 61edad3 Fix for maxdepth=0 in find
- **PR #25078:** (*terminalmage*) Use smaller number for upper limit of mac\_user's \_first\_avail\_uid helper function @ 2015-06-30T20:53:24Z
  - 58d933c Merge pull request #25078 from terminalmage/fix-mac-uid
  - df2ab7e Use smaller number for upper limit of mac\_user's \_first\_avail\_uid helper function
- **PR #25045:** (*garethgreenaway*) Fixes to debian\_ip.py in 2015.5 @ 2015-06-30T17:36:43Z
  - **ISSUE #24521:** (*multani*) State network.managed fails on Debian (Jessie) | refs: #25045
  - ebd6cdc Merge pull request #25045 from garethgreenaway/24521\_debian\_networking
  - 6f2a6c9 having proto default to static since it's needed to build the template.
- **PR #25065:** (*loregordon*) Add download links for 2015.5.1-3 and 2015.5.2 Windows installers @ 2015-06-30T15:29:31Z
  - **ISSUE #25057:** (*TheBigBear*) why is there still no newer salt-minion for windows than ver. 2015.5.0-2? no 2015.5.1 or 2015.5.2?

- ae31b27 Merge pull request #25065 from lorengordon/update-windows-installer-links
- 40a0c13 Add download links for 2015.5.1-3 and 2015.5.2, Fixes #25057
- **PR #25052:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-30T01:05:00Z
  - **ISSUE #15209:** (*hubez*) file.manage: source\_hash not working with s3:// (2014.7.0rc1) | refs: #25011
  - **PR #25011:** (*notpeter*) Add s3 to protocols for remote source\_hash (2014.7 backport)
  - ddaeb0f Merge pull request #25052 from basepi/merge-forward-2015.5
  - 2c5e664 Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - a7154e7 Merge pull request #25011 from notpeter/s3\_2014.7\_backport
    - \* 8b8af64 Add s3 to protocols for remote source\_hash
- **PR #25038:** (*jfindlay*) versionadded @ 2015-06-29T19:49:27Z
  - **PR #24747:** (*msciciel*) add get\_route function to network module | refs: #25038
  - c7003d4 Merge pull request #25038 from jfindlay/versionadded
  - d6dc6f9 versionadded
- **PR #24747:** (*msciciel*) add get\_route function to network module | refs: #25038 @ 2015-06-29T16:51:43Z
  - 28c87ca Merge pull request #24747 from msciciel/2015.5
  - 79b4ec2 network module lint fix
  - 0b6ef78 network module: fix for ipv6
  - f3d184c add get\_route function to network module
- **PR #24975:** (*ryan-lane*) Fix update of undefined env var in npm module @ 2015-06-29T16:45:05Z
  - 46a9677 Merge pull request #24975 from lyft/npm-module-fix
  - 6fde581 Try byte literals rather than unicode strings in the env
  - c8514de Fix update of undefined env var in npm module
- **PR #24986:** (*heewa*) Don't modify empty change @ 2015-06-29T16:44:17Z
  - 9cf8550 Merge pull request #24986 from heewa/fix-pkg-hold-when-errored
  - d47a448 Don't modify empty change
- **PR #24999:** (*rallytime*) Provide a less confusing error when cloud provider is misconfigured @ 2015-06-29T16:43:31Z
  - **ISSUE #24969:** (*bradthurber*) salt-cloud 2015.5.0: missing azure dependency results in misleading error | refs: #24999
  - ece897d Merge pull request #24999 from rallytime/cloud\_error\_help
  - 1e81a88 Clean up
  - be19a67 Provide a less confusing error when cloud provider is misconfigured
- **PR #24987:** (*heewa*) Don't try to cache a template when it's not a file @ 2015-06-29T14:02:59Z
  - 4af15cf Merge pull request #24987 from heewa/fix-trying-to-cache-no-file
  - 9ae0c78 Don't try to cache a template when it's not a file
- **PR #25022:** (*jfindlay*) revise label and milestone documentation @ 2015-06-29T13:51:24Z
  - 8eeaddb Merge pull request #25022 from jfindlay/label\_docs

- 8575192 revise label and milestone documentation
- **PR #25029:** (*jayeshka*) adding redismod unit test case. @ 2015-06-29T13:50:33Z
  - 89c2e01 Merge pull request #25029 from jayeshka/redismod-unit-test
  - e3045be adding redismod unit test case.
- **PR #24995:** (*rallytime*) Fix deprecated pymongo usage causing errors in latest pymongo @ 2015-06-27T22:28:56Z
  - **PR #24175:** (*trevor-h*) fix deprecated pymongo usage causing errors in latest pymongo | refs: #24995
  - 6425252 Merge pull request #24995 from rallytime/tops\_mongo
  - a3c1063 fix deprecated pymongo usage causing errors in latest pymongo
- **PR #24994:** (*garethgreenaway*) Another Fix to gpg.py in 2015.5 @ 2015-06-27T22:28:15Z
  - **ISSUE #24862:** (*dkatsanikakis*) gpg.import\_key returns error after successfully completed | refs: #24966 #24994
  - e9aaa11 Merge pull request #24994 from garethgreenaway/2015\_5\_24862\_gpg\_import\_key
  - d2f0d8f variable was referenced before assignment. Just removing the variable and checking the return from distutils.version.LooseVersion directly.
- **PR #24988:** (*jayeshka*) adding states/supervisord unit test case. @ 2015-06-27T22:24:42Z
  - ebd666e Merge pull request #24988 from jayeshka/supervisord-states-unit-test
  - bb0a6d5 adding states/supervisord unit test case.
- **PR #25007:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-26T21:28:57Z
  - **ISSUE #24915:** (*jtand*) Salt-cloud not working in 2014.7.6 | refs: #24944
  - **PR #24944:** (*techhat*) Double-check main\_cloud\_config
  - **PR #24936:** (*jtand*) Fixed ps module to not use depreciated psutil commands
  - 0487c3c Merge pull request #25007 from basepi/merge-forward-2015.5
  - 4980fd5 Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - a11e4c6 Merge pull request #24944 from techhat/issue24915
    - \* 59c3081 Double-check main\_cloud\_config
  - d26a544 Merge pull request #24936 from jtand/psutil
    - \* bdb7a19 Fixed ps module to not use depreciated psutil commands
- **PR #25003:** (*jacobhammons*) Updated man pages @ 2015-06-26T19:13:41Z
  - 91a60e1 Merge pull request #25003 from jacobhammons/man-pages
  - cf97a4a Updated man pages
- **PR #25002:** (*jacobhammons*) sphinx html theme updates @ 2015-06-26T18:39:14Z
  - a60a2c4 Merge pull request #25002 from jacobhammons/doc-announcements
  - f88f344 sphinx html theme updates
- **PR #24977:** (*rallytime*) Only warn about digital ocean deprecation if digital ocean is configured @ 2015-06-25T23:54:46Z
  - a791b23 Merge pull request #24977 from rallytime/do\_move\_warning

- 6b54422 Only warn about digital ocean deprecation if digital ocean is configured
- **PR #24966:** (*garethgreenaway*) Fixes to `gpg.py` in 2015.5 @ 2015-06-25T19:58:49Z
  - **ISSUE #24862:** (*dkatsanikakis*) `gpg.import_key` returns error after successfully completed | refs: #24966 #24994
  - a71c1b7 Merge pull request #24966 from garethgreenaway/2015\_5\_24862\_gpg\_import\_key
  - 55eb73b fixing unit tests.
  - 80c24be Fixing an issue with the `import_key` method. Different results depending on which `gnupg` python module is installed.
- **PR #24965:** (*jacksonjtj*) Fix memory leak in `saltnado` @ 2015-06-25T18:48:03Z
  - **ISSUE #24846:** (*mavenAtHouzz*) Memory leak issue in `rest_tornado` `EventListener` | refs: #24965
  - 8622184 Merge pull request #24965 from jacksonjtj/2015.5
  - 48b5e16 pylint
  - 87adca4 Fix memory leak in `saltnado`
- **PR #24948:** (*jfindlay*) fix some malformed doc links and anchors @ 2015-06-25T15:51:38Z
  - 773c4cf Merge pull request #24948 from jfindlay/doc\_links
  - 152a9b2 fix some malformed doc links and anchors
- **PR #24886:** (*anlutro*) Be more careful about stripping away `root_dir` from directory options @ 2015-06-25T15:50:11Z
  - **ISSUE #24885:** (*anlutro*) Master config - Directories starting with a dot have the dot stripped when `root_dir` is `.` | refs: #24886
  - 4ebc01e Merge pull request #24886 from alprs/fix-root\_dir\_bug
  - 52ccafd `os.sep` is the correct directory separator constant
  - 0ecbf26 Be more careful about stripping away `root_dir` from directory options
- **PR #24930:** (*jacksonjtj*) Don't refetch file templates 100% of the time-- Performance optimization for templated files @ 2015-06-24T21:22:47Z
  - f52f7e1 Merge pull request #24930 from jacksonjtj/2015.5
  - 5fb7534 Only parse the source if we have one
  - c03a6fa Add support for sources of managed files to be local
  - 4cf78a0 pylint
  - d70914e Don't refetch the template 100% of the time-- Performance optimization for templated files
- **PR #24935:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-24T18:17:54Z
  - **PR #24918:** (*BretFisher*) SmartOS SMF minion startup fix
  - **PR #473:** (*whiteinge*) Added a couple functions to work with the minion file cache | refs: #24918
  - 925a4d9 Merge pull request #24935 from basepi/merge-forward-2015.5
  - 8d8bf34 Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - eeb05a1 Merge pull request #24918 from BretFisher/minion-start-smartos-smf-fix
    - \* d7bfb0c Smartos smf minion fix
- **PR #24873:** (*jfindlay*) convert `osrelease` grain to str before str op @ 2015-06-24T16:43:08Z

- **ISSUE #24826:** (*rakai93*) `rh_service.py: `int` object has no attribute `startswith`` | refs: #24873
- 4e8ed0d Merge pull request #24873 from jfindlay/rh\_service
- febe6ef convert osrelease grain to str before str op
- **PR #24923:** (*jayeshka*) adding states/status unit test case. @ 2015-06-24T15:50:07Z
  - 90819f9 Merge pull request #24923 from jayeshka/status-states-unit-test
  - baec650 adding states/status unit test case.
- **PR #24902:** (*cro*) Fix minion failover, document same @ 2015-06-24T15:20:43Z
  - 2dd24ec Merge pull request #24902 from cro/fixfo2
  - 90c73ff References to documentation.
  - f0c9204 Add references to failover parameters in conf
  - 9da96a8 Docs
  - e2314f0 Move comment.
  - b9a756f Fix master failover and add documentation for same. Factor in syndics. Syndics will not failover (yet).
- **PR #24926:** (*rallytime*) Back-port #22263 to 2015.5 @ 2015-06-24T15:09:40Z
  - **PR #22263:** (*cachedout*) Prevent a load from being written if one already exists | refs: #24926
  - 087ee09 Merge pull request #24926 from rallytime/bp-22263
  - 8c92d9c Prevent a load from being written if one already exists
- **PR #24900:** (*rallytime*) Back-port #24848 to 2015.5 @ 2015-06-24T15:09:18Z
  - **PR #24848:** (*nmadhok*) Correcting bash code blocks | refs: #24900
  - b34a74f Merge pull request #24900 from rallytime/bp-24848
  - d2b5456 Correcting bash code blocks
- **PR #24899:** (*rallytime*) Back-port #24847 to 2015.5 @ 2015-06-24T15:09:01Z
  - **PR #24847:** (*borutmtrak*) unset size parameter for `lxc.create` when `backing=zfs` | refs: #24899
  - a546e8e Merge pull request #24899 from rallytime/bp-24847
  - 1e4ec7a unset size parameter for `lxc.create` when `backing=zfs`
- **PR #24898:** (*rallytime*) Back-port #24845 to 2015.5 @ 2015-06-24T15:06:09Z
  - **PR #24845:** (*porterjamesj*) fix bug in `docker.loaded` | refs: #24898
  - d4dd8d2 Merge pull request #24898 from rallytime/bp-24845
  - 071049a fix bug in `docker.loaded`
- **PR #24897:** (*rallytime*) Back-port #24839 to 2015.5 @ 2015-06-24T15:05:35Z
  - **ISSUE #24799:** (*infestdead*) Forced remount because options changed when no options changed (`glusterfs`)
  - **PR #24839:** (*infestdead*) fix for issue #24799 | refs: #24897
  - 6930855 Merge pull request #24897 from rallytime/bp-24839
  - f3b20d5 fix for issue #24799
- **PR #24891:** (*jayeshka*) adding states/ssh\_known\_hosts unit test case. @ 2015-06-23T16:46:58Z

- 1650233 Merge pull request #24891 from jayeshka/ssh\_known\_hosts-states-unit-test
- ef1347f adding states/ssh\_known\_hosts unit test case.
- **PR #24874:** (*dkiser*) Fix for salt-cloud when ssh key used to auth and using sudo. @ 2015-06-22T23:46:08Z
  - **ISSUE #24870:** (*dkiser*) salt-cloud fails on sudo password prompt when using ssh key to auth | refs: #24874
  - c32aae9 Merge pull request #24874 from dkiser/salt-cloud-24870
  - 6c31143 Fix key error for the PR to fix #24870.
  - bdcf7d8 Fix pylint for #24874.
  - 8f66d19 Fix for salt-cloud when ssh key used to auth and using sudo.
- **PR #24880:** (*dkiser*) Fix to allow password for salt-cloud to be set outside of a vm specif... @ 2015-06-22T23:44:59Z
  - **ISSUE #24871:** (*dkiser*) salt-cloud fails to honor 'password' in cloud options before raising an exception | refs: #24880
  - ddaa21c Merge pull request #24880 from dkiser/salt-cloud-24871
  - 4f6c035 Fix to allow password for salt-cloud to be set outside of a vm specific context.
- **PR #24852:** (*pruiz*) Fix issue 24851: regular expression so it now matches packages with `!` or `-'` at pkg name @ 2015-06-22T20:37:13Z
  - 3902b16 Merge pull request #24852 from pruiz/issue-24851
  - 73adb1d Fix regular expression so it now matches packages with `!` or `-'` at pkg name.
- **PR #24861:** (*jayeshka*) adding states/ssh\_auth unit test case. @ 2015-06-22T16:20:01Z
  - 6c5b788 Merge pull request #24861 from jayeshka/ssh\_auth-states-unit-test
  - e5d7b0d adding states/ssh\_auth unit test case.
- **PR #24824:** (*kev009*) Detect bhyve virtual type for FreeBSD guests @ 2015-06-22T15:24:35Z
  - **ISSUE #23478:** (*calvinhp*) grains.get virtual reports ``physical" on bhyve FreeBSD VM | refs: #24824
  - 9e3321c Merge pull request #24824 from kev009/grains-bhyve-bsd
  - a226209 Detect bhyve virtual type for freebsd guests
- **PR #24795:** (*anlutro*) Fix state.apply for salt-ssh @ 2015-06-22T15:23:57Z
  - **ISSUE #24746:** (*anlutro*) state.apply doesn't seem to work | refs: #24795
  - 7b07ef9 Merge pull request #24795 from alprs/fix-salt\_ssh\_state\_apply
  - 905840b Fix state.apply for salt-ssh
- **PR #24832:** (*jackson tj*) Don't incur a ``\_load\_all" of the lazy\_loader while looking for mod\_init. @ 2015-06-22T15:17:10Z
  - **PR #20540:** (*jackson tj*) Loader nomerge: Don't allow modules to ``merge" | refs: #24832
  - **PR #20481:** (*jackson tj*) Add submodule support to LazyLoader | refs: #20540
  - **PR #20473:** (*jackson tj*) Add ``disabled" support | refs: #20481
  - **PR #20274:** (*jackson tj*) Loader overhaul to LazyLoader | refs: #20473
  - **PR #12327:** (*jackson tj*) Add a LazyLoader class which will lazily load modules (with the given lo... | refs: #20274

- 31d4c13 Merge pull request #24832 from jacksontj/2015.5
- cfa7c0a pylint
- be18439 Don't incur a ``\_load\_all" of the lazy\_loader while looking for mod\_init.
- **PR #24834:** (*rallytime*) Back-port #24811 to 2015.5 @ 2015-06-19T18:43:49Z
  - **ISSUE #14666:** (*luciddr34m3r*) salt-cloud GoGrid exception when using map file | refs: #24811
  - **PR #24811:** (*rallytime*) Add notes to map and gogrid docs -- don't use -P with map files | refs: #24834
  - 2d8148f Merge pull request #24834 from rallytime/bp-24811
  - e2684ec Add notes to map and gogrid docs -- don't use -P with map files
- **PR #24790:** (*rallytime*) Back-port #24741 to 2015.5 @ 2015-06-19T17:25:58Z
  - **PR #24741:** (*CameronNemo*) Improve Upstart enable/disable handling | refs: #24790
  - d2edb63 Merge pull request #24790 from rallytime/bp-24741
  - a54245f Add missing import
  - 4ce6370 salt.modules.upstart: fix lint errors
  - aec53ec Improve Upstart enable/disable handling
- **PR #24789:** (*rallytime*) Back-port #24717 to 2015.5 @ 2015-06-19T17:17:00Z
  - **PR #24717:** (*gthb*) virtualenv.managed: document user and no\_chown | refs: #24789
  - 645e62a Merge pull request #24789 from rallytime/bp-24717
  - 95ac4eb virtualenv.managed: document user and no\_chown
- **PR #24823:** (*jayeshka*) adding states/splunk\_search unit test case. @ 2015-06-19T17:14:12Z
  - 0a6c70f Merge pull request #24823 from jayeshka/splunk\_search-states-unit-test
  - 98831a8 adding states/splunk\_search unit test case.
- **PR #24809:** (*jodv*) Correctly create single item list for failover master type with string value for master opt @ 2015-06-19T15:22:20Z
  - 4c5a708 Merge pull request #24809 from jodv/single\_item\_master\_list
  - 18ceebc single item list vs. list of characters
- **PR #24802:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-18T20:11:58Z
  - **ISSUE #24776:** (*nmadhok*) --static option in salt raises ValueError and has been broken for a very long time | refs: #24777
  - **ISSUE #21318:** (*thanatos*) get\_full\_returns raises KeyError | refs: #24769

  - **ISSUE #17041:** (*xenophonf*) Confusing Salt error messages due to limited/incomplete PowerShell command error handling | refs: #24690
  - **ISSUE #19:** (*thatch45*) Sending a faulty command kills all the minions!
  - **PR #24780:** (*nmadhok*) Backporting PR #24777 to 2014.7 branch
  - **PR #24779:** (*nmadhok*) Backporting Changes to 2014.7 branch | refs: #24777
  - **PR #24778:** (*nmadhok*) Backporting PR #24777 to 2015.2 branch | refs: #24777

- **PR #24777:** (*nmadhok*) Fixing issue where --static option fails with ValueError Fixes #24776 | refs: #24778 #24780
- **PR #24769:** (*msteed*) Fix stacktrace in get\_cli\_returns()
- **PR #24690:** (*twangboy*) Report powershell output instead of error
- ae05e70 Merge pull request #24802 from basepi/merge-forward-2015.5
- 5b7a65d Merge pull request #19 from twangboy/merge-forward-fixes
  - \* 98e7e90 Fixed test failures for Colton
- b949856 Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - \* 4281dff Merge pull request #24780 from nmadhok/backport-2014.7-24777
    - c53b0d9 Backporting PR #24777 to 2014.7 branch
  - \* f3c5cb2 Merge pull request #24769 from msteed/issue-21318
    - f40a9d5 Fix stacktrace in get\_cli\_returns()
  - \* 59db246 Merge pull request #24690 from twangboy/fix\_17041
    - 7a01538 Added additional reporting
    - d84ad5d Fixed capitalization... Failed and Already
    - e955245 Merge branch `2014.7' of <https://github.com/saltstack/salt> into fix\_17041
    - 144bff2 Report powershell output instead of error
- **PR #24798:** (*jtand*) Revert ``adding states/postgres\_database unit test case." @ 2015-06-18T17:56:17Z
  - **PR #24329:** (*jayeshka*) adding states/postgres\_database unit test case. | refs: #24798
  - daa76c3 Merge pull request #24798 from saltstack/revert-24329-postgres\_database-states-unit-test
  - 179ce03 Revert ``adding states/postgres\_database unit test case."
- **PR #24791:** (*rallytime*) Back-port #24749 to 2015.5 @ 2015-06-18T17:43:15Z
  - **PR #24749:** (*obestwalter*) add windows specific default for multiprocessing | refs: #24791
  - 7073a9f Merge pull request #24791 from rallytime/bp-24749
  - be43b2b add windows specific default for multiprocessing
- **PR #24792:** (*rallytime*) Back-port #24757 to 2015.5 @ 2015-06-18T15:58:35Z
  - **PR #24757:** (*cachedout*) Fix loader call in pyobjects | refs: #24792
  - **PR #24668:** (*grischa*) enable virtual package names in pyobjects renderer | refs: #24721 #24757
  - 1a158e8 Merge pull request #24792 from rallytime/bp-24757
  - 6c804f0 Fix loader call in pyobjects
- **PR #24768:** (*jfindlay*) fix yum versionlock on RHEL/CentOS 5, disable corresponding test @ 2015-06-18T15:13:12Z
  - 0f92982 Merge pull request #24768 from jfindlay/pkg\_mod
  - 7a26c2b disable pkg.hold test for RHEL/CentOS 5
  - 4cacd93 use correct yum versionlock pkg name on centos 5
- **PR #24778:** (*nmadhok*) Backporting PR #24777 to 2015.2 branch | refs: #24777 @ 2015-06-18T14:53:04Z

- **ISSUE #24776:** (*nmadhok*) --static option in salt raises ValueError and has been broken for a very long time | refs: #24777
- **PR #24779:** (*nmadhok*) Backporting Changes to 2014.7 branch | refs: #24777
- **PR #24777:** (*nmadhok*) Fixing issue where --static option fails with ValueError Fixes #24776 | refs: #24778 #24780
- 39f088a Merge pull request #24778 from nmadhok/backport-2015.2-24777
- ae3701f Backporting PR #24777 to 2015.2 branch
- **PR #24774:** (*zefrog*) Fix lxc lvname parameter command @ 2015-06-18T14:49:06Z
  - 2a4f65f Merge pull request #24774 from zefrog/fix-lxc-lvname-param
  - 21e0cd4 Fixed typo in lxc module: lvname parameter typo
  - 283d86e Fixed bug in lxc module: lvname using wrong parameter in cmd
- **PR #24782:** (*jayeshka*) adding states/slack unit test case. @ 2015-06-18T14:33:55Z
  - fd73390 Merge pull request #24782 from jayeshka/slack-states-unit-test
  - e2b6214 adding states/slack unit test case.
- **PR #24771:** (*jacksontj*) Always extend requisites, instead of replacing them @ 2015-06-18T14:29:09Z
  - **ISSUE #24770:** (*jacksontj*) Requisite and Requisite\_in don't play nice together | refs: #24771
  - c9c90af Merge pull request #24771 from jacksontj/2015.5
  - b1211c5 Re-enable tests for complex prereq and prereq\_in
  - 378f6bf Only merge when the merge is of requisites
- **PR #24766:** (*msteed*) Remove doc references to obsolete minion opt @ 2015-06-17T21:36:55Z
  - 5fe4de8 Merge pull request #24766 from msteed/undoc-dns\_check
  - f92a769 Remove doc references to obsolete minion opt
- **PR #24329:** (*jayeshka*) adding states/postgres\_database unit test case. | refs: #24798 @ 2015-06-17T19:11:02Z
  - a407ab7 Merge pull request #24329 from jayeshka/postgres\_database-states-unit-test
  - ee06f1a adding states/postgres\_database unit test case.
- **PR #24632:** (*jacobhammons*) Doc bug fixes @ 2015-06-17T18:40:02Z
  - **ISSUE #24560:** (*hydrosine*) Documentation missing on parameter | refs: #24632
  - **ISSUE #24547:** (*dragonpaw*) Artifactory docs say module is `jboss7`. | refs: #24632
  - **ISSUE #24375:** (*companykitchen-dev*) Custom grain won't sync under any circumstances | refs: #24632
  - **ISSUE #24275:** (*kartiksubbarao*) augeas issue with apache and recognizing changes that have been already made | refs: #24632
  - **ISSUE #24163:** (*tbaker57*) enable\_gpu\_grains default value confusion | refs: #24632
  - 3ff6eff Merge pull request #24632 from jacobhammons/bug-fixes
  - 7c52012 Fixed typos
  - c7cdd41 Doc bug fixes Refs #24547 Refs #24275 Refs #24375 Refs #24560 Refs #24163
- **PR #24607:** (*garethgreenaway*) fixes to minion.py @ 2015-06-17T18:16:42Z
  - **ISSUE #24198:** (*ahammond*) salt-call event.send doesn't send events from minion | refs: #24607

- 9995f64 Merge pull request #24607 from garethgreenaway/2015\_5\_sending\_events\_multi\_master
- 8abd3f0 A fix if you have multiple masters configured and try to fire events to the minion. Currently they fail silently. Might be the cause of #24198.
- **PR #24755:** (*rallytime*) Remove SALT\_CLOUD\_REQS from setup.py @ 2015-06-17T17:42:25Z
  - bf2dd94 Merge pull request #24755 from rallytime/fix\_setup\_15
  - 48769a5 Remove SALT\_CLOUD\_REQS from setup.py
- **PR #24740:** (*rallytime*) Backport #24720 to 2015.5 @ 2015-06-17T16:43:37Z
  - **PR #24720:** (*TheScriptSage*) Issue 24621 - AD/LDAP Group Auth Issue | refs: #24740
  - 3d53d79 Merge pull request #24740 from rallytime/bp-24720
  - a9bcd5 Updating master.py to properly check against groups when user is only authed against group. Tested against unit.auth\_test.
- **PR #24723:** (*rallytime*) Back-port #20124 to 2015.5 @ 2015-06-17T16:43:20Z
  - **PR #20124:** (*cgtx*) add init system to default grains | refs: #24723
  - ac2851b Merge pull request #24723 from rallytime/bp-20124
  - 4d0061b fix infinite loop introduced by #20124 when the init system is not in the supported\_inits list
  - 0c7fa0f Optimizations for #20124
  - f353454 add init system to default grains (resolve #20124)
- **PR #24754:** (*anlutro*) salt-cloud documentation - Add information about linode location @ 2015-06-17T16:04:48Z
  - 78cd09b Merge pull request #24754 from alprs/docs-add\_linode\_location\_option
  - d88e071 add information about linode location
- **PR #24748:** (*jayeshka*) adding states/serverdensity\_device unit test case. @ 2015-06-17T15:39:07Z
  - d5554f7 Merge pull request #24748 from jayeshka/serverdensity\_device-states-unit-test
  - 1a4c241 adding states/serverdensity\_device unit test case.
- **PR #24739:** (*rallytime*) Back-port #24735 to 2015.5 @ 2015-06-17T15:16:47Z
  - **PR #24735:** (*notpeter*) Add 2015.5 codename to version numbers docs | refs: #24739
  - 0b7e7ef Merge pull request #24739 from rallytime/bp-24735
  - 64c565d Add .0 to version number
  - 5ed801b Add codenames for 2015.5 and future versions. Trailing newline.
- **PR #24732:** (*msteed*) Fix stacktrace when --summary is used @ 2015-06-17T03:27:57Z
  - **ISSUE #24111:** (*yermulnik*) cli option '--summary' got broken after upgrade to 2015.5.1 | refs: #24732
  - c8713f2 Merge pull request #24732 from msteed/issue-24111
  - 54b33dd Fix stacktrace when --summary is used
- **PR #24721:** (*rallytime*) Back-port #24668 to 2015.5 @ 2015-06-17T03:23:47Z
  - **PR #24668:** (*grischa*) enable virtual package names in pyobjects renderer | refs: #24721 #24757
  - 70d3781 Merge pull request #24721 from rallytime/bp-24668
  - 68fb5af fixing other test

- ba4f262 fixing text for virtual support in pyobjects
- b349d91 enable virtual package names in pyobjects renderer
- **PR #24718:** (*rallytime*) Added some missing config documentation to the vsphere driver @ 2015-06-17T03:19:35Z
  - **ISSUE #21923:** (*Fluro*) Salt cloud not running provisioning script as root | refs: #24718
  - **ISSUE #17241:** (*hasues*) Salt-Cloud for vSphere needs additional documentation | refs: #24718
  - 1b9d689 Merge pull request #24718 from rallytime/update\_vsphere\_docs
  - bfdebb6 Added some missing config documentation to the vsphere driver
- **PR #24714:** (*rallytime*) Remove cloud-requirements.txt @ 2015-06-17T03:17:04Z
  - 64857c7 Merge pull request #24714 from rallytime/remove\_cloud\_reqs\_15
  - 67b796d Remove cloud-requirements.txt
- **PR #24733:** (*msteed*) Include Tornado in versions report @ 2015-06-17T03:13:53Z
  - **ISSUE #24439:** (*bechtoldt*) Add tornado version to versions report | refs: #24733
  - f96b1d6 Merge pull request #24733 from msteed/issue-24439
  - 76cfef0 Include Tornado in versions report
- **PR #24737:** (*jacksontj*) Move AES command logging to trace @ 2015-06-17T01:48:11Z
  - a861fe0 Merge pull request #24737 from jacksontj/2015.5
  - a4ed41a Move AES command logging to trace
- **PR #24724:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-16T22:46:27Z
  - **ISSUE #24196:** (*johnccfm*) Exception when using user.present with Windows | refs: #24646
  - **PR #24646:** (*twangboy*) Fixed user.present on existing user
  - 0d2dc46 Merge pull request #24724 from basepi/merge-forward-2015.5
  - 4641028 Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - a18dada Merge pull request #24646 from twangboy/fix\_24196
    - \* a208e1d Fixed user.present on existing user
- **PR #24701:** (*jayeshka*) adding states/selinux unit test case. @ 2015-06-16T15:27:29Z
  - 3d33fe7 Merge pull request #24701 from jayeshka/selinux-states-unit-test
  - 0c136fd adding states/selinux unit test case.
- **PR #24687:** (*cachedout*) Note about minimum worker\_threads @ 2015-06-15T20:46:23Z
  - 2e287a9 Merge pull request #24687 from cachedout/min\_worker\_threads
  - b7bb7ea Note about minimum worker\_threads
- **PR #24688:** (*cachedout*) Update AUTHORS @ 2015-06-15T20:46:03Z
  - 432478c Merge pull request #24688 from cachedout/update\_authors
  - 3f6880e Better email
  - 6c7b773 Update AUTHORS
- **PR #24649:** (*cachedout*) Improved error reporting for failed states @ 2015-06-15T16:04:20Z

- **ISSUE #22385:** (*cachedout*) States which require unavailable modules should display the reason | refs: #24649
- 9a2b50d Merge pull request #24649 from cachedout/issue\_22385
- b9fe792 States will now return the reason behind failure if a module could not be loaded
- **PR #24673:** (*jayeshka*) adding states/schedule unit test case. @ 2015-06-15T15:24:52Z
  - 66e9e16 Merge pull request #24673 from jayeshka/schedule-states-unit-test
  - 54aaaa5 adding states/schedule unit test case.
- **PR #24663:** (*kartiksubbarao*) Update augeas\_cfg.py @ 2015-06-15T15:18:48Z
  - **ISSUE #24661:** (*kartiksubbarao*) augeas.change doesn't support setting empty values | refs: #24663
  - 5eb19c4 Merge pull request #24663 from kartiksubbarao/patch-2
  - e18db50 Update augeas\_cfg.py
- **PR #24667:** (*dkiser*) fix for #24583 clouds/openstack.py keyring first time succeeds @ 2015-06-14T21:58:58Z
  - **ISSUE #24583:** (*dkiser*) salt-cloud keyring password referenced before assignment | refs: #24667
  - 4450432 Merge pull request #24667 from dkiser/fix-cloud-keyring
  - c92c05f fix for #24583 clouds/openstack.py keyring first time succeeds
- **PR #24659:** (*kartiksubbarao*) Update aliases.py @ 2015-06-13T17:31:42Z
  - **ISSUE #24537:** (*kartiksubbarao*) alias.present doesn't update alias values that are substrings of the existing value | refs: #24659
  - 4c64ee9 Merge pull request #24659 from kartiksubbarao/patch-1
  - d683474 Update aliases.py
- **PR #24644:** (*cro*) Merge forward 2014.7->2015.5 @ 2015-06-12T21:31:41Z
  - **PR #24643:** (*cro*) Add reference to salt-announce mailing list
  - **PR #24620:** (*twangboy*) Fixed comment and uncomment functions in file.py
  - 89eb616 Merge pull request #24644 from cro/2014.7-2015.5-20150612
  - 4136dc3 Merge forward from 2014.7 to 2015.5
  - b99484f Merge pull request #24643 from cro/saltannounce
    - \* ecb0623 Add salt-announce mailing list.
  - 635121e Merge pull request #24620 from twangboy/fix\_24215
    - \* d7a9999 Fixed comment and uncomment functions in file.py
- **PR #24642:** (*basepi*) Revert ``fix target rule, remove unneeded quotation mark" @ 2015-06-12T20:14:26Z
  - **PR #24595:** (*tankywoo*) fix target rule, remove unneeded quotation mark | refs: #24642
  - b896a0d Merge pull request #24642 from saltstack/revert-24595-fix-iptables-target
  - 5ff3224 Revert ``fix target rule, remove unneeded quotation mark"
- **PR #24628:** (*jayeshka*) adding states/reg unit test case. @ 2015-06-12T17:29:11Z
  - 01092c2 Merge pull request #24628 from jayeshka/reg\_states-unit-test
  - af1bd8f adding states/reg unit test case.
- **PR #24631:** (*rallytime*) Back-port #24591 to 2015.5 @ 2015-06-12T16:54:32Z

- **ISSUE #24494:** (*arnoutpierre*) Computed comments in jinja states | refs: #24591
- **ISSUE #24073:** (*primechuck*) State.highstate uses stale grain data. | refs: #24492
- **ISSUE #23359:** (*BalintSzigeti*) init.sls parsing issue | refs: #24591
- **ISSUE #21217:** (*Colstuwjx*) Maybe a bug for jinja render? | refs: #24591
- **PR #24591:** (*tbaker57*) Add some documentation surrounding Jinja vs yaml comments - | refs: #24631
- **PR #24492:** (*DmitryKuzmenko*) Don't remove grains from opts
- 5f491f9 Merge pull request #24631 from rallytime/bp-24591
- f13cd41 Add extra clarification why jinja comments are needed.
- 2374971 Fix typo
- 6a91747 Add some documentation surrounding Jinja comments - refs #24492, #21217, #23359
- **PR #24616:** (*garethgreenaway*) additional logging in state.py module @ 2015-06-12T16:25:39Z
  - f23f99e Merge pull request #24616 from garethgreenaway/2015\_5\_logging\_disabled\_states
  - 4dbf0ef Adding some logging statement to give feedback when states, including highstate, are disabled. Useful when running from scheduler.
- **PR #24595:** (*tankywoo*) fix target rule, remove unneeded quotation mark | refs: #24642 @ 2015-06-12T16:23:22Z
  - 6dccbb0 Merge pull request #24595 from tankywoo/fix-iptables-target
  - 10a5160 fix target rule, remove unneeded quotation mark
- **PR #24604:** (*jfindlay*) fix pkg module integration tests @ 2015-06-12T16:04:26Z
  - 8ac3d94 Merge pull request #24604 from jfindlay/pkg\_tests
  - d88fb22 fix pkg module integration tests on CentOS 5
  - fb91b40 fix pkg module integration tests on ubuntu 12
- **PR #24600:** (*basepi*) [2015.5] Remove \_\_kwarg\_\_ from salt-ssh keyword args @ 2015-06-12T04:21:29Z
  - 0ff545c Merge pull request #24600 from basepi/salt-ssh.orchestrate.20615
  - 9b55683 Remove \_\_kwarg\_\_ from salt-ssh keyword args
- **PR #24608:** (*basepi*) [2015.5] Normalize salt-ssh flat roster minion IDs to strings @ 2015-06-11T21:35:07Z
  - **ISSUE #22843:** (*Xiol*) salt-ssh roster doesn't support integers as host keys | refs: #24608
  - 832916f Merge pull request #24608 from basepi/salt-ssh.flat.roster.integers.22843
  - 381820f Normalize salt-ssh flat roster minion IDs to strings
- **PR #24605:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-11T19:15:21Z
  - **PR #24589:** (*BretFisher*) Fixed Mine example for jinja code block
  - 4eb5bb2 Merge pull request #24605 from basepi/merge-forward-2015.5
  - f96c502 Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - d83928a Merge pull request #24589 from BretFisher/patch-1
    - \* 65a1133 Fixed Mine example for jinja code block
- **PR #24598:** (*jacobhammons*) 2015.5.2 release changes @ 2015-06-11T17:24:11Z
  - **ISSUE #24457:** (*ryan-lane*) When selecting the version of docs on the docs site, it brings you to the homepage | refs: #24598

- **ISSUE #24250:** (*jfindlay*) have version links on docs page link to that version of the current page | refs: #24598
- e0bb177 Merge pull request #24598 from jacobhammons/doc-fixes
- f3f34dd 2015.5.2 release changes Refs #24250 Refs #24457
- **PR #24588:** (*basepi*) Fixes for saltmod.function for salt-ssh @ 2015-06-11T16:15:21Z
  - **ISSUE #20615:** (*aurynn*) 2014.7.1: salt/states/saltmod using incorrect return dict for orchestrate | refs: #24588
  - 26930b4 Merge pull request #24588 from basepi/salt-ssh.orchestrate.20615
  - 826936c Move documentation into docstring instead of comments
  - de052e7 Assign `return` to `ret` if necessary in saltmod.function
  - 34ff989 Convert keyword args to key=value strings in salt-ssh
- **PR #24593:** (*jayeshka*) adding states/redismod unit test case. @ 2015-06-11T15:55:27Z
  - 5a21ad1 Merge pull request #24593 from jayeshka/redismod\_states-unit-test
  - 3b95744 adding states/redismod unit test case.
- **PR #24581:** (*rallytime*) Disabled some flaky tests until we can figure out how to make them more reliable @ 2015-06-11T15:51:41Z
  - **ISSUE #40:** (*thatch45*) Clean up timeouts | refs: #22857
  - **PR #24217:** (*jfindlay*) disable intermittently failing tests | refs: #24581
  - **PR #23623:** (*jfindlay*) Fix /jobs endpoint's return | refs: #24217
  - **PR #22857:** (*jacksontj*) Fix /jobs endpoint's return | refs: #23623
  - 8ffb86e Merge pull request #24581 from rallytime/disable\_some\_flaky\_tests
  - c82f135 Disabled some flaky tests until we can figure out how to make them more reliable
- **PR #24566:** (*jayeshka*) adding states/rdp unit test case. @ 2015-06-11T02:14:39Z
  - a570d7f Merge pull request #24566 from jayeshka/rdp\_states-unit-test
  - 273b994 adding states/rdp unit test case.
- **PR #24551:** (*joejulian*) 2015.5 don't pollute environment @ 2015-06-11T02:13:06Z
  - **ISSUE #24480:** (*kiorky*) [CRITICAL] [2015.5] tls breaks tzinfo | refs: #24551
  - 20ada1f Merge pull request #24551 from joejulian/2015.5\_dont\_pollute\_environment
  - cfc3b43 Don't pollute the TZ environment variable
  - cba8d3f pep8
  - 9cb7015 Mark keyword version adds
  - 76e2583 Merge tls changes from develop
- **PR #24574:** (*jacobhammons*) Refs #19901 @ 2015-06-10T20:09:23Z
  - **ISSUE #19901:** (*clinta*) State cache is not documented | refs: #24468
  - bb2fd6a Merge pull request #24574 from jacobhammons/19901
  - e2a2946 Refs #19901
- **PR #24577:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-10T19:46:22Z

- **ISSUE #24427:** (*fayatted*) 2015.5.1-3 Windows 64Bit Minion fails to start after install | refs: #24530
- **PR #24530:** (*twangboy*) Start Minion Service on Silent Install
- b03166c Merge pull request #24577 from basepi/merge-forward-2015.5
- e1d45cc Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
- d376390 Merge pull request #24530 from twangboy/fix\_24427
  - \* 673e1d8 Added missing panel.bmp for installer
  - \* cc50218 Start Minion Service on Silent Install
- **PR #24571:** (*jacobhammons*) Refs #24235 @ 2015-06-10T17:02:18Z
  - **ISSUE #24235:** (*tomasfejfar*) Difference between running from minion and from master | refs: #24468
  - 3ec457b Merge pull request #24571 from jacobhammons/24235
  - 8df5d53 Refs #24235
- **PR #24565:** (*pille*) fix backtrace, when listing plugins @ 2015-06-10T16:33:11Z
  - fe07eb5 Merge pull request #24565 from pille/munin-ignore-broken-symlinks
  - 8511a6c fix backtrace, when listing plugins
- **PR #24554:** (*ryan-lane*) Fix yes usage for pecl defaults @ 2015-06-09T23:59:49Z
  - 251c8f9 Merge pull request #24554 from lyft/pecl-module-fix
  - 56a9cfc Fix yes usage for pecl defaults
- **PR #24535:** (*rallytime*) Back-port #24518 to 2015.5 @ 2015-06-09T20:06:18Z
  - **PR #24518:** (*rallytime*) Merge #24448 with Pylint Fixes | refs: #24535
  - **PR #24448:** (*codertux*) Update modules path for operating systems using systemd | refs: #24518
  - dbd49b4 Merge pull request #24535 from rallytime/bp-24518
  - fc75197 Pylint fix
  - 3e08840 Update modules path for operating systems using systemd
- **PR #24538:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-09T17:27:20Z
  - **PR #24513:** (*jquast*) bugfix use of `iteritem' in 2014.7 branch
  - **PR #24511:** (*jquast*) bugfix: trailing "...done" in rabbitmq output | refs: #24513
  - 485ed3c Merge pull request #24538 from basepi/merge-forward-2015.5
  - 6a8039d Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - 6ebc476 Merge pull request #24513 from jquast/2014.7-bugfix-iteritem
    - \* 2be0180 bugfix use of `iteritem' in 2014.7 branch
- **PR #24495:** (*jayeshka*) adding states/rabbitmq\_vhost unit test case. @ 2015-06-09T15:33:23Z
  - 73e6388 Merge pull request #24495 from jayeshka/rabbitmq\_vhost\_states-unit-test
  - 31889e3 cosmetic change.
  - cf501cf resolved error.
  - 4bb6087 Merge branch `2015.5' of <https://github.com/saltstack/salt> into rabbitmq\_vhost\_states-unit-test

- 3ad7714 adding states/rabbitmq\_vhost unit test case.
- **PR #24445:** (*jayeshka*) adding states/pyrax\_queues unit test case. @ 2015-06-09T15:28:45Z
  - bf1abcc Merge pull request #24445 from jayeshka/pyrax\_queues\_states-unit-test
  - ea27cef adding states/pyrax\_queues unit test case.
- **PR #24490:** (*aneeshusa*) Fix pacman.list\_upgrades for new python\_shell default. @ 2015-06-09T15:13:16Z
  - 0247e8d Merge pull request #24490 from aneeshusa/fix-pacman-list-upgrades
  - 980e1cb Lint fix.
  - dca33f1 Fix pacman.list\_upgrades for new python\_shell default.
- **PR #24517:** (*steverweber*) small fixes to the ipmi docs @ 2015-06-09T15:10:14Z
  - 6268ddb Merge pull request #24517 from steverweber/ipmi\_doc
  - 6413712 lint
  - e78aea9 more small fixes to the ipmi docs
- **PR #24524:** (*jayeshka*) any() takes list oy tuple. @ 2015-06-09T13:49:42Z
  - 3728b3f Merge pull request #24524 from jayeshka/rabbitmq\_vhost\_states-module
  - 01c99ad any() takes list oy tuple.
- **PR #24482:** (*eliasp*) `docker.running` needs now the `image` param. @ 2015-06-09T04:43:04Z
  - dd23de8 Merge pull request #24482 from eliasp/2015.5-states.dockerio-docker.running-doc
  - 5de741d `docker.running` needs now the `image` param.
- **PR #24515:** (*basepi*) [2015.5] Add xml library to the salt-thin @ 2015-06-09T04:10:06Z
  - **ISSUE #23503:** (*jfindlay*) salt-ssh fails on CentOS 7 when python-zmq is not installed | refs: #24515
  - 2a727c3 Merge pull request #24515 from basepi/susexml23503
  - 078b33e Add xml library to the thin
- **PR #24497:** (*jayeshka*) adding states/rbenv unit test case. @ 2015-06-09T03:56:10Z
  - fce998a Merge pull request #24497 from jayeshka/rbenv\_states-unit-test
  - 79d343a adding states/rbenv unit test case.
- **PR #24496:** (*jayeshka*) adding states/rabbitmq\_user unit test case. @ 2015-06-09T03:55:23Z
  - 2bcb4b1 Merge pull request #24496 from jayeshka/rabbitmq\_user\_states-unit-test
  - 7d96f27 adding states/rabbitmq\_user unit test case.
- **PR #24481:** (*eliasp*) Fix typo (licnese → license). @ 2015-06-09T03:30:25Z
  - 02a597b Merge pull request #24481 from eliasp/2015.5-salt.states.powerpath-license\_typo
  - 1280054 Fix typo (licnese → license).
- **PR #24467:** (*thenewwazoo*) Fix dockerio bound volumes @ 2015-06-09T01:40:23Z
  - 5ad3db5 Merge pull request #24467 from thenewwazoo/fix-dockerio-bound-volumes
  - db4e3dc Let's raise an exception if create fails
  - d1d85dd Add logging
  - ddc63f0 Fix volume handling when creating containers

- **PR #24504:** (*rallytime*) Move vsphere deprecation to 2015.5 @ 2015-06-08T22:43:05Z
  - **PR #24487:** (*nmadhok*) Deprecating vsphere cloud driver in favor of vmware cloud driver | refs: #24504
  - d236fbd Merge pull request #24504 from rallytime/move\_vsphere\_deprecation\_2015.5
  - d876535 Add Getting Started with VSphere doc to 2015.5
  - b685ebc Add vSphere deprecation warnings to 2015.5
- **PR #24506:** (*rallytime*) Backport #24450 to 2015.5 @ 2015-06-08T22:42:14Z
  - **PR #24450:** (*ruzarowski*) Fix salt cli runs with batch-size set | refs: #24506
  - cb55460 Merge pull request #24506 from rallytime/bp-24450
  - 1c0fca2 Backport #24450 to 2015.5
- **PR #24498:** (*rallytime*) Added ``CLI Example" to make failing test happy on 2015.5 @ 2015-06-08T15:48:40Z
  - 3173fd1 Merge pull request #24498 from rallytime/fix\_doc\_failure\_fifteen
  - d992ef4 Added ``CLI Example" to make failing test happy on 2015.5
- **PR #24471:** (*anlutro*) Set up salt-ssh file logging @ 2015-06-08T15:26:49Z
  - 3639e41 Merge pull request #24471 from alprs/fix-salt\_ssh\_logging
  - 6a11ec8 set up salt-ssh file logging
- **PR #24469:** (*jfindlay*) correctly handle user environment info for npm @ 2015-06-08T15:26:02Z
  - **ISSUE #24231:** (*tarwich*) npm.bootstrap | refs: #24469
  - 551e70f Merge pull request #24469 from jfindlay/npm\_env
  - 8140c96 update npm's user info envs
  - cb572f8 add *env* parameter to npm.uninstall
- **PR #24468:** (*jacobhammons*) Bug fixes and build errors @ 2015-06-08T15:25:40Z
  - **ISSUE #24268:** (*tkent-xetus*) Ability to specify revision for win\_gitrepos undocumented | refs: #24468
  - **ISSUE #24235:** (*tomasfejfar*) Difference between running from minion and from master | refs: #24468
  - **ISSUE #24193:** (*abng88*) Update ext\_pillar docs to mention that this feature is supported masterless as well | refs: #24468
  - **ISSUE #24172:** (*zhujinhe*) Can lists be passed in the pillar on the command line on version 2015.5.0? | refs: #24468
  - **ISSUE #23211:** (*lloesche*) Document that salt://| escapes special characters in filenames | refs: #24468
  - **ISSUE #19901:** (*clinta*) State cache is not documented | refs: #24468
  - **ISSUE #19801:** (*ksalman*) How are grains static? | refs: #24468
  - 0d9e0c2 Merge pull request #24468 from jacobhammons/doc-fixes
  - 1035959 Appended .0 to version added
  - d45c4ed Bug fixes and build errors Refs #23211 Refs #24268 Refs #24235 Refs #24193 Refs #24172 Refs #19901 Refs #19801
- **PR #24465:** (*jfindlay*) catch exception from softwarerepositories @ 2015-06-08T15:25:19Z
  - **ISSUE #24318:** (*favadi*) uncaught exception for pkgrepo.absent for invalid PPA | refs: #24465
  - be6905a Merge pull request #24465 from jfindlay/unknown\_ppa

- 19c9128 catch exception from softwarerepositories
- **PR #24464:** (*jfindlay*) fix typo in modules/mount.py @ 2015-06-08T15:25:07Z
  - **ISSUE #24296:** (*objectx*) mount.mount calls file.mkdir with incorrect named argument | refs: #24464
  - 58d1ea8 Merge pull request #24464 from jfindlay/file\_mkdir
  - 6e8cd44 fix typo in modules/mount.py
- **PR #24461:** (*dkiser*) fix for #24434 @ 2015-06-08T15:24:53Z
  - **ISSUE #24434:** (*dkiser*) multimaster failover fails due to logic from issue #23611
  - 4f332a7 Merge pull request #24461 from dkiser/multimaster\_minion\_fix
  - 1944a74 fix for #24434
- **PR #24479:** (*ahus1*) change ``path" to ``name" for ``file" operations @ 2015-06-07T17:56:11Z
  - 8917416 Merge pull request #24479 from ahus1/patch-1
  - 7d6b60c change ``path" to ``name" for ``file" operations
- **PR #24475:** (*rallytime*) Back-port #24454 to 2015.5 @ 2015-06-07T01:29:32Z
  - **PR #24454:** (*rhertzog*) Strip extraneous newline character added in last environment variable | refs: #24475
  - 8618d5b Merge pull request #24475 from rallytime/bp-24454
  - a793c19 Avoid extraneous newline character added in last environment variable
- **PR #24474:** (*rallytime*) Back-port #24420 to 2015.5 @ 2015-06-07T01:29:11Z
  - **ISSUE #24407:** (*aboe76*) Please expand salt module random | refs: #24420
  - **PR #24420:** (*aboe76*) added random integer module to mod\_random.py | refs: #24474
  - 61658ff Merge pull request #24474 from rallytime/bp-24420
  - 4219b40 Fix lint error and update versionadded to 2015.5.3
  - 3613cc9 added random integer module to mod\_random.py
- **PR #24472:** (*variia*) ensure {} output is not treated as change in module.py state, fixes #... @ 2015-06-06T14:45:44Z
  - **ISSUE #24233:** (*variia*) yumpkg.group\_install keeps returning state change
  - 508d7dd Merge pull request #24472 from variia/Fix-yumpkg\_group\_install-return-change-#24233
  - 37e8827 ensure {} output is not treated as change in module.py state, fixes #24233
- **PR #24466:** (*basepi*) [2015.5] Fix for # in inner strings in yaml arguments @ 2015-06-06T14:35:56Z
  - **ISSUE #18045:** (*dstokes*) Pillar kwargs parse error with # | refs: #24466
  - **ISSUE #8585:** (*UtahDave*) `#` in single quoted option on cli not making it into the execution module | refs: #24466
  - 0292e67 Merge pull request #24466 from basepi/fixhashinargs18045
  - 2e0609f Fix for # in inner strings in yaml arguments
- **PR #24456:** (*rallytime*) Back-port #24441 to 2015.5 @ 2015-06-05T22:32:25Z
  - **PR #24441:** (*arthurlogilab*) [doc] Aligment fix on external\_auth documentation | refs: #24456
  - ced558a Merge pull request #24456 from rallytime/bp-24441

- 7002855 yaml indentations should be 2 spaces
- 21b51ab [doc] Aligment fix on external\_auth documentation
- **PR #24398:** (*kiorky*) VirtualName for states.apk | refs: #24399 @ 2015-06-05T17:40:04Z
  - **ISSUE #24397:** (*kiorky*) on debian: states.apk should use virtualname as it shadows system apt module | refs: #24398 #24398 #24399 #24399 #24400
  - **PR #24399:** (*kiorky*) Versionvirtual | refs: #24398
  - c0ff411 Merge pull request #24398 from makinacorpus/apk
  - 785d277 VirtualName for states.apk
- **PR #24447:** (*jayeshka*) adding states/rabbitmq\_policy unit test case. @ 2015-06-05T15:26:11Z
  - 3626340 Merge pull request #24447 from jayeshka/rabbitmq\_policy\_states-unit-test
  - 9b038ab adding states/rabbitmq\_policy unit test case.
- **PR #24446:** (*jayeshka*) adding states/rabbitmq\_plugin unit test case. @ 2015-06-05T15:25:33Z
  - 8445a3f Merge pull request #24446 from jayeshka/rabbitmq\_plugin\_states-unit-test
  - cb0c99a adding states/rabbitmq\_plugin unit test case.
- **PR #24426:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-05T03:59:11Z
  - **ISSUE #24276:** (*markuskramerlgitt*) Live salt-master Profiling with SIGUSR2 fails
  - **PR #24405:** (*jacksontj*) Fix for #24276
  - **PR #24395:** (*hvnsweeting*) handle exceptions when received data is not in good shape
  - **PR #24305:** (*twangboy*) Added documentation, fixed formatting
  - 9cc3808 Merge pull request #24426 from basepi/merge-forward-2015.5
  - eafa20c Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
    - \* 83f853b Merge pull request #24405 from jacksontj/2014.7
      - 2c7afae Fix for #24276
    - \* cef919c Merge pull request #24395 from hvnsweeting/handle-exception-get-file
      - bb798a0 handle exceptions when received data is not in good shape
    - \* efba1a9 Merge pull request #24305 from twangboy/win\_path\_docs
    - \* 36804253 Fixed pylint error caused by \P... added r
    - \* bc42a4b triple double quotes to triple single quotes
    - \* 77cd930 Added documentation, fixed formatting
- **PR #24429:** (*jacobhammons*) Salt cloud doc updates, build errors and bug fixes @ 2015-06-05T00:27:38Z
  - **ISSUE #24309:** (*steverweber*) missing docs | refs: #24429
  - 5d738b8 Merge pull request #24429 from jacobhammons/cloud-doc-updates
  - 1f7a13d Salt cloud doc updates, build errors and bug fixes Refs #24309
- **PR #24408:** (*rallytime*) Backport #24392 to 2015.5 @ 2015-06-04T20:22:09Z
  - **PR #24392:** (*quixoten*) Fix ``No such file or directory" in grains/core.py | refs: #24408
  - cdffc02 Merge pull request #24408 from rallytime/bp-24392

- ff7461b Use path found by salt.utils.which
- **PR #24380:** (*rallytime*) Backport #24357 to 2015.5 @ 2015-06-04T20:13:51Z
  - **PR #24357:** (*zhujinhe*) fix invoke issues of Jinja Macros example | refs: #24380
  - a6a1f87 Merge pull request #24380 from rallytime/bp-24357
  - f08c875 fix invoke issues of Jinja Macros example
- **PR #24388:** (*pengyao*) fixes #24358 @ 2015-06-04T20:07:40Z
  - **ISSUE #24358:** (*pengyao*) Netapi SSH client don't support ssh\_user and ssh\_passwd arguments | refs: #24388
  - 86ce9db Merge pull request #24388 from pengyao/sshclient-kwarg
  - 5c08ca4 fixes #24358
- **PR #24367:** (*terminalmage*) Improve error message when module does not exist @ 2015-06-04T20:07:12Z
  - **ISSUE #22958:** (*highlyunavailable*) Weird error when typoing a command | refs: #24367
  - 72d2eae Merge pull request #24367 from terminalmage/issue22958
  - d0d7a54 Improve error message when module does not exist
- **PR #24412:** (*jfindlay*) backport #23387 @ 2015-06-04T20:06:03Z
  - **ISSUE #23101:** (*gravyboat*) Create a docs page for labels | refs: #23387
  - **PR #23387:** (*rallytime*) Add some "What are all these labels for?" documentation | refs: #24412
  - a628778 Merge pull request #24412 from jfindlay/bp-23387
  - bf85772 Make sure the parameters are in the correct order
  - 9f53809 Add "Change" label parameters
  - b27a15e Remove "workaround" wording
  - 9fff35a Some small fixes
  - 54a7089 Link the new labels doc in contributing and hacking docs
  - 375695e Add pull request label definitions
  - de94563 Add Feature Request label definition
  - 684f291 Add issue definition and augment functional areas section
  - 2da13dd Start a "what are all of these labels for?" doc
- **PR #24336:** (*twangboy*) Added line to give more descriptive error @ 2015-06-04T19:56:00Z
  - **ISSUE #24154:** (*ssguard*) Exception when running cp.get\_url | refs: #24336
  - 485116c Merge pull request #24336 from twangboy/fix\_cp\_get\_url
  - 37b11f9 Added line to give more descriptive error
- **PR #24413:** (*techhat*) Add more namespaced functions to GoGrid driver @ 2015-06-04T19:51:22Z
  - b3d39cc Merge pull request #24413 from techhat/gogridnamespace
  - 1b397cb Adding blank line
  - da08cc9 Add more namespaced functions to GoGrid driver
- **PR #24399:** (*kiorky*) Versionvirtual | refs: #24398 @ 2015-06-04T18:02:22Z

- **ISSUE #24397:** (*kiorky*) on debian: states.apt should use virtualname as it shadows system apt module | refs: #24398 #24398 #24399 #24399 #24400
- **PR #24398:** (*kiorky*) VirtualName for states.apt | refs: #24399
- 27f109b Merge pull request #24399 from makinacorp/versiovirtual
- 235c78d Use apt\_pkg.version\_compare if available
- 1c0cd45 reindent block to isolate conflict on merge forward
- 699ecea use var to isolate conflict on merge forward
- **PR #24371:** (*joejulian*) 2015.5 tls module tests @ 2015-06-04T15:20:16Z
  - deaee68 Merge pull request #24371 from joejulian/2015.5\_tls\_module\_tests
  - 4c5dee1 Add @destructiveTest decorator to destructive tests
  - 274bbd4 Accept results from older pyOpenSSL
  - 161f913 All cert info should be in UTC always
  - 9affcca See the whole diff if dict compare fails
  - 94f6208 Ignore extensions for now. Resolve this as part of fixing issue 24338.
  - 84904d3 Mask lint warning for unused imported module
  - 5675b78 Do not test if PyOpenSSL is not installed
  - 563cc66 Add tls tests
- **PR #24403:** (*jayeshka*) adding states/process unit test case. @ 2015-06-04T15:19:01Z
  - 84686ee Merge pull request #24403 from jayeshka/process\_states-unit-test
  - fcb71fb adding states/process unit test case.
- **PR #24402:** (*jayeshka*) adding states/pyenv unit test case. @ 2015-06-04T15:18:11Z
  - 35de8d7 Merge pull request #24402 from jayeshka/pyenv\_states-unit-test
  - 5f263ab adding states/pyenc unit test case.
- **PR #24401:** (*jayeshka*) adding states/powerpath unit test case. @ 2015-06-04T15:17:46Z
  - 632f838 Merge pull request #24401 from jayeshka/powerpath-states-unit-test
  - 49ff927 adding states/powerpath unit test case.
- **PR #24400:** (*kiorky*) Aptversion @ 2015-06-04T15:17:19Z
  - **ISSUE #24397:** (*kiorky*) on debian: states.apt should use virtualname as it shadows system apt module | refs: #24398 #24398 #24399 #24399 #24400
  - 0a6e5e0 Merge pull request #24400 from makinacorp/aptversion
  - e15cb93 Use apt\_pkg.version\_compare if available
  - 953725a Fix too much quoting in apt.version\_cmp
- **PR #24385:** (*jeanpralo*) Fix salt.modules.dockerio.start method @ 2015-06-04T15:00:22Z
  - a904055 Merge pull request #24385 from jeanpralo/Fix-binds-dockerio.start
  - a0fed31 binds dict if not specified should remain to none otherwise docker-py will try to create a new host config and all volume and ports binds are lost. config should be done at the creation of the container not when we start it

- **PR #24381:** (*jtand*) Disabled flaky test to review later @ 2015-06-04T14:57:43Z
  - 9890bc4 Merge pull request #24381 from jtand/seed\_test
  - 7570ae9 Disabled flaky test to review later
- **PR #24382:** (*basepi*) [2015.5] Handle CommandExecutionError in grains commands, Fixes #23342 @ 2015-06-04T12:44:04Z
  - **ISSUE #23342:** (*philipd6*) salt-ssh 2015.2.0rc2 fails when target doesn't have lspci available | refs: #24382
  - b3fa8fe Merge pull request #24382 from basepi/grainscommandnotfound23342
  - 85b91d6 Handle CommandExecutionError in grains commands
- **PR #24379:** (*Starblade42*) Fixes an issue where Pagerduty states/modules couldn't find their profile in the Pillar @ 2015-06-04T12:41:13Z
  - 52587a4 Merge pull request #24379 from Starblade42/2015.5
  - b93dc5e Linting!
  - 2dd5904 Fixes an issue where Pagerduty states/modules couldn't find it's profile in the Pillar
- **PR #24366:** (*terminalmage*) Use yes '\$\n' instead of printf '\n' for pecl commands @ 2015-06-03T21:28:58Z
  - 3ca35d1 Merge pull request #24366 from terminalmage/pecl-yes
  - dcd9ad8 Use yes '\$\n' instead of printf '\n' for pecl commands
- **PR #24348:** (*kiorky*) Try to close input pipes before calling lxc-start @ 2015-06-03T19:38:07Z
  - **ISSUE #24284:** (*kiorky*) systemd lxc containers need use\_vt=True at lxc-start stage | refs: #24348
  - **PR #548:** (*Lanzaa*) Salt is now platform dependent. Use get\_python\_lib(1) | refs: #24348
  - 86a3b31 Merge pull request #24348 from makinacorpus/lxcpre
  - 0cb11a2 lxc: typo
  - d71efa6 Try to close input pipes before calling lxc-start

## 20.2.45 Salt 2015.5.4 Release Notes

Version 2015.5.4 is a bugfix release for *2015.5.0*.

Changes:

- The `cron.present` state now correctly defaults to state ID as identifier.
- When querying for VMs in `digital_ocean_v2.py`, the number of VMs to include in a page was changed from 20 (default) to 200 to reduce the number of API calls to Digital Ocean.
- The `vmware` Salt-Cloud driver was back-ported from the `develop` branch in order for installations of Salt that are older than 2015.8.0 to be able to use the `vmware` driver without stack-tracing on various deprecation paths that were implemented in the 2015.8.0 release.

### Changes for v2015.5.3..v2015.5.4

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

## Changes:

- **PR #26292:** (*jqkast*) Rabbitmq 3.2.4 on Ubuntu has "...done.", not "...done" @ 2015-08-13T19:53:29Z
- **PR #26296:** (*jqkast*) bugfix missing `'runas=None'` for rabbitmqctl cmds (backport to 2015.5) @ 2015-08-13T19:52:40Z
- **PR #26293:** (*jfindlay*) Fix #26268 @ 2015-08-13T19:48:06Z
  - **ISSUE #25618:** (*twangboy*) Fix reg.py to work with the registry properly | refs: #26268
  - **PR #26268:** (*twangboy*) Multiple improvements to reg executionmod and state mod | refs: #26293
- **PR #26290:** (*rallytime*) Only call convert\_to\_arn when action name is provided @ 2015-08-13T18:48:58Z
  - **ISSUE #25192:** (*deuscapturus*) 2015.5.2 boto\_cloudwatch\_alarm.present not working. | refs: #26290
- **PR #26288:** (*bbinet*) allow deleting grains which value is False @ 2015-08-13T18:24:36Z
- **PR #26263:** (*rallytime*) Don't make changes when test=True for openstack present/absent funcs @ 2015-08-13T16:30:31Z
  - **ISSUE #24882:** (*nmadhok*) salt.states.openstack\_config.present and salt.states.openstack\_config.absent make changes when test=True | refs: #26263
- **PR #26265:** (*rallytime*) Don't stacktrace on query return in ec2.create\_snapshot @ 2015-08-13T16:28:48Z
  - **ISSUE #24484:** (*codehotter*) clouds/ec2.py: create\_snapshot throws exception | refs: #26265
- **PR #26285:** (*stanislavb*) Remove explicit version from instance identity URL @ 2015-08-13T16:25:32Z
- **PR #26275:** (*cachedout*) Re-init modules on multi-master reconnect @ 2015-08-13T15:52:50Z
- **PR #26273:** (*garethgreenaway*) Fixes to schedule module in 2015.5 @ 2015-08-13T15:34:43Z
- **PR #26271:** (*rallytime*) Fix del\_root\_vol\_on\_destroy and del\_all\_vols\_on\_destroy functionality on ec2 @ 2015-08-12T23:22:47Z
  - **ISSUE #24483:** (*codehotter*) clouds/ec2.py: del\_root\_vol\_on\_destroy and del\_all\_vols\_on\_destroy not working | refs: #26271
- **PR #26219:** (*anlutro*) cron: make identifier default to state ID @ 2015-08-12T18:42:33Z
  - **ISSUE #25958:** (*anlutro*) Cron identifier does not default to state ID as documented | refs: #26219
- **PR #26257:** (*rallytime*) Back-port #26237 to 2015.5 @ 2015-08-12T18:40:35Z
  - **ISSUE #26207:** (*fullermd*) group members setting fails with obscure error message on FreeBSD | refs: #26237
  - **PR #26237:** (*silenius*) fix issue #26207 | refs: #26257
- **PR #26258:** (*nmadhok*) Fix permission on tests/runtests.py on 2015.5 branch @ 2015-08-12T18:40:04Z
- **PR #26261:** (*nmadhok*) Correct spelling of integration in docs @ 2015-08-12T18:14:48Z
  - **PR #2015:** (*thekuffs*) Esky / bbfreeze support
- **PR #26247:** (*nmadhok*) Initial commit of unit tests for vmware cloud driver @ 2015-08-12T16:58:24Z
- **PR #26246:** (*nmadhok*) Backport additions to VMware cloud driver from develop to 2015.5 branch @ 2015-08-12T15:11:26Z

- **PR #26239:** (*opdude*) Fixed documentation to match function name @ 2015-08-12T14:48:52Z
- **PR #26232:** (*garethgreenaway*) Fix to trust\_key in gpg module for 2015.5. @ 2015-08-12T04:48:27Z
- **PR #26084:** (*twangboy*) Added python\_shell=True, quoted user input @ 2015-08-10T21:29:35Z
  - **ISSUE #25802:** (*jefftucker*) Running module ``npm.list`` fails on Windows for masterless minion | refs: #26084
- **PR #26183:** (*cro*) Fix LDAP configuration issue. @ 2015-08-10T19:09:41Z
- **PR #26186:** (*jacobhammons*) regenerated man pages @ 2015-08-10T19:07:44Z
- **PR #26182:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-08-10T19:00:10Z
  - **ISSUE #25961:** (*getabc*) [2015.5.3-2] salt-winrepo.git/salt-minion.sls fails certificate ``\*.wengine.com`` or ``wengine.com`` | refs: #26047
  - **ISSUE #25751:** (*basepi*) Document *master\_finger* more prominently | refs: #26088
  - **PR #26116:** (*corux*) file.replace fails if repl string is an invalid regex and append/prepend is used
  - **PR #26088:** (*jacobhammons*) Master finger
  - **PR #26047:** (*jacobhammons*) Updated windows download links in the docs to <https://repo.saltstack.com>
- **PR #26000:** (*driskell*) Implement full event caching for subscribed tags @ 2015-08-10T18:57:17Z
  - **ISSUE #25998:** (*driskell*) Event subsystem discarding required events during --batch breaking it for slow running commands | refs: #26000
- **PR #26175:** (*rallytime*) Back-port #26153 to 2015.5 @ 2015-08-10T18:22:32Z
  - **PR #26153:** (*loa*) Fix dockerio state documentation typo | refs: #26175
- **PR #26177:** (*rallytime*) Back-port #26147 to 2015.5 @ 2015-08-10T18:22:01Z
  - **ISSUE #26024:** (*jpjic*) lxc\_conf\_unset in cloud.profile is ignored
  - **PR #26147:** (*martinhoefling*) Fixes #26024 | refs: #26177
- **PR #26179:** (*rallytime*) Back-port #25404 to 2015.5 @ 2015-08-10T18:21:50Z
  - **ISSUE #21082:** (*clinta*) master\_type failover does not failover on DNS errors | refs: #25404
  - **PR #25404:** (*DmitryKuzmenko*) Fixed minion failover to next master on DNS errors. | refs: #26179
- **PR #26180:** (*jfindlay*) fix processing of state.template @ 2015-08-10T18:21:38Z
  - **ISSUE #26112:** (*wt*) state.template fails with unclear error with template with only an include | refs: #26180
- **PR #26172:** (*nmadhok*) [Backport] Make sure variable is a dictionary before popping something from it. @ 2015-08-10T16:42:50Z
  - **ISSUE #26162:** (*nmadhok*) VMware cloud driver create function failing with traceback on latest develop | refs: #26163 #26172
  - **PR #26163:** (*nmadhok*) Make sure variable is a dictionary before popping something from it.
- **PR #26168:** (*cachedout*) Fix slack docs @ 2015-08-10T14:57:18Z
  - **ISSUE #26098:** (*rdinoff*) SALT.STATES.SLACK Doc update | refs: #26168
- **PR #26127:** (*garethgreenaway*) Fixes to salt.utils.http related to cp.get\_file\_str bug. @ 2015-08-10T14:38:25Z
  - **ISSUE #24106:** (*nvx*) fileclient.py#get\_url ignores HTTP Auth again (2015.5 regression) | refs: #26127
- **PR #26140:** (*nmadhok*) VMware cloud driver fixes @ 2015-08-10T13:15:58Z

- **ISSUE #26141:** (*nmadhok*) salt-cloud VMware driver fails with error in parsing configuration file | refs: #26140
- **ISSUE #25809:** (*o-sleep*) vmware cloud module error message | refs: #26140
- **ISSUE #25625:** (*steverweber*) cloud vmware driver does not provide mac\_address unless vmware tools is running | refs: #26137 #26140
- **PR #26137:** (*steverweber*) use device mac address if vmttools not active @ 2015-08-09T03:05:36Z
  - **ISSUE #25625:** (*steverweber*) cloud vmware driver does not provide mac\_address unless vmware tools is running | refs: #26137 #26140
- **PR #26119:** (*jodv*) Backport eauth bugfix to 2015.5 @ 2015-08-09T02:19:52Z
- **PR #26135:** (*cro*) Fix proxy minions in 2015.5 and significantly update documentation. @ 2015-08-09T02:19:21Z
- **PR #26132:** (*TheBigBear*) minor edit @ 2015-08-08T21:05:34Z
- **PR #26133:** (*amontalban*) Fixed #25915 in salt/modules/pkgng.py and salt/states/pkg.py @ 2015-08-08T21:05:05Z
  - **ISSUE #25915:** (*ari*) FreeBSD pkg install fails
- **PR #26111:** (*anlutro*) Better error messages when virtualenv creation fails @ 2015-08-07T21:42:09Z
- **PR #26110:** (*jfindlay*) check for sources before adding them to cmd str @ 2015-08-07T21:33:23Z
  - **ISSUE #26093:** (*freedba*) archive.tar bug | refs: #26110
- **PR #26106:** (*vr-jack*) Update \_\_init\_\_.py @ 2015-08-07T21:15:55Z
- **PR #26101:** (*rallytime*) Back-port #25984 to 2015.5 @ 2015-08-07T18:56:26Z
  - **ISSUE #25983:** (*jmdcal*) Trying to get md5 of local zip | refs: #25984
  - **PR #25984:** (*jmdcal*) Support local files without md5sum | refs: #26101
- **PR #26080:** (*techhat*) Fix string checking in s3fs @ 2015-08-06T23:36:09Z
- **PR #26079:** (*cachedout*) Update docs to remove state.over @ 2015-08-06T23:35:26Z
  - **ISSUE #26039:** (*basepi*) Update scheduler docs to use orchestrate instead of overstate | refs: #26079
- **PR #26058:** (*opdude*) Fix choco version on chocolatey versions below 0.9.9 @ 2015-08-06T18:50:10Z
- **PR #26068:** (*jfindlay*) fix autoruns.list looking in wrong directory @ 2015-08-06T18:49:48Z
- **PR #26065:** (*s0undt3ch*) [2015.5] Update to latest bootstrap stable release v2015.06.08 @ 2015-08-06T17:09:35Z
  - **ISSUE #634:** (*loupgaroublond*) /srv/salt/\_grains/ not documented | refs: #26065
  - **ISSUE #631:** (*fatbox*) Can't extend the same item multiple times | refs: #26065
  - **ISSUE #625:** (*whiteinge*) cmd.run state user flag is not working | refs: #25506 #632
  - **PR #640:** (*terminalmage*) fix syntax errors introduced in 0f776c13 | refs: #26065
  - **PR #638:** (*blast-hardcheese*) Tightened up configuration documentation | refs: #26065
  - **PR #633:** (*epoelke*) Bug fix to salt-key | refs: #26065
  - **PR #632:** (*whiteinge*) Change the cmd.run state to use the new runas arg | refs: #26065
- **PR #26061:** (*gmcwhistler*) Patch for issue #25994 @ 2015-08-06T17:07:34Z
  - **ISSUE #25994:** (*gmcwhistler*) module.ilo tempfile creation in \_\_execute\_cmd results in TypeError: cannot concatenate 'str' and 'int' objects
- **PR #26064:** (*s0undt3ch*) Don't stacktrace when trying to get the default locale. @ 2015-08-06T16:11:05Z

- ISSUE #26063: (*saltstack-bot*) not working with salt-cloud shows unknown locale error | refs: #26064
- PR #26048: (*jacobhammons*) Updated windows download links in the docs to <https://repo.saltstack.com> @ 2015-08-05T22:59:50Z
- PR #26044: (*rallytime*) Make sure the key we're comparing is also lowercase @ 2015-08-05T19:23:54Z
  - ISSUE #25616: (*rallytime*) [2015.5] Provisioning Linodes Stacktraces | refs: #26044
- PR #26042: (*jfindlay*) fix test mode logic in state docs @ 2015-08-05T19:23:07Z
- PR #26036: (*nicholascapo*) survey.hash: Remove manually printed text @ 2015-08-05T19:21:59Z
  - ISSUE #24460: (*nicholascapo*) Survey runner does not follow `--out` flag | refs: #26036
- PR #26030: (*opdude*) Fix a bug in choco version that returned odd data @ 2015-08-05T16:30:25Z
- PR #26032: (*jfindlay*) add test logic to state reult doc @ 2015-08-05T16:28:32Z
- PR #26031: (*alekti*) Revert ``Add file as supported protocol for file source\_hash. Fixes #23764" @ 2015-08-05T15:32:01Z
  - ISSUE #23764: (*es1o*) source\_hash from local file is not supported. | refs: #25750
- PR #26021: (*anlutro*) Documentation: Specify versionadded for git.present shared argument @ 2015-08-05T14:17:38Z
- PR #26020: (*alekti*) Correctly resolve conflict merging pull 25750 to 2015.5 @ 2015-08-05T14:16:58Z
  - ISSUE #23764: (*es1o*) source\_hash from local file is not supported. | refs: #25750
  - PR #25750: (*alekti*) Add file as supported protocol for file source\_hash. Fixes #25701. | refs: #26020
- PR #26016: (*basepi*) Revert ``Deep merge of pillar lists" @ 2015-08-05T04:59:52Z
  - ISSUE #22241: (*masterkorp*) Salt master not properly generating the map | refs: #25358
  - PR #25358: (*dkiser*) Deep merge of pillar lists | refs: #26016
- PR #25992: (*twangboy*) Refactor win\_system.py @ 2015-08-05T04:54:18Z
  - ISSUE #12255: (*eliasp*) `system.set\_computer\_desc' fails with non-ASCII chars | refs: #25992
  - ISSUE #3: (*thatch45*) libvirt module
- PR #26002: (*twangboy*) Fixed regex to account for comment character followed by whitespace @ 2015-08-04T22:28:11Z
  - ISSUE #25948: (*twangboy*) Fix uncomment function to handle spaces | refs: #26002
- PR #25970: (*jfindlay*) accept addition of layman overlay @ 2015-08-04T15:42:28Z
  - ISSUE #25949: (*godlike64*) layman.add does not work with unofficial overlays | refs: #25970
- PR #25971: (*basepi*) [2015.5] salt.modules.reg Add spaces for strings split across multiple lines @ 2015-08-04T15:39:48Z
- PR #25990: (*rallytime*) Back-port #25976 to 2015.5 @ 2015-08-04T14:36:53Z
  - PR #25976: (*fleaflutter*) Typo in help output | refs: #25990
- PR #25996: (*attiasr*) fix msiexec package remove @ 2015-08-04T14:36:31Z
- PR #25966: (*rallytime*) Back-port #25864 to 2015.5 @ 2015-08-03T18:48:26Z
  - ISSUE #25863: (*peterdemin*) pkg.installed fails on already installed package if it is in versionlock.list | refs: #25864
  - PR #25864: (*peterdemin*) #25863 state.pkg.installed fix | refs: #25966

- **PR #25967:** (*rallytime*) Back-port #25917 to 2015.5 @ 2015-08-03T18:48:02Z
  - **PR #25917:** (*jmdcal*) adding missing format string | refs: #25967
- **PR #25895:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-08-03T17:12:37Z
  - **ISSUE #23764:** (*es1o*) source\_hash from local file is not supported. | refs: #25750
  - **PR #25750:** (*alekti*) Add file as supported protocol for file source\_hash. Fixes #25701. | refs: #26020
  - **PR #25704:** (*cachedout*) Ensure prior alignment with master\_type in 2014.7
  - **PR #25657:** (*MrCitron*) Add the ability to specify a base pattern for carbon returner
  - **PR #25633:** (*AkhterAli*) Update loader.py
- **PR #25941:** (*jfindlay*) add timelib to dependency versions @ 2015-08-03T12:23:42Z
  - **ISSUE #25850:** (*ssguard*) Need to add packages to --versions-report | refs: #25941
- **PR #25951:** (*garethgreenaway*) Log when event.fire and event.fire\_master fail. @ 2015-08-03T00:19:45Z
- **PR #25942:** (*jfindlay*) typo in minion doc @ 2015-07-31T23:34:55Z
  - **ISSUE #25838:** (*grep4linux*) docs disable\_modules documentation typo | refs: #25942
- **PR #25938:** (*jacobhammons*) Doc on using syndic with multimaster @ 2015-07-31T23:05:05Z
  - **PR #14690:** (*jacksontj*) Multi syndic | refs: #25938
- **PR #25848:** (*twangboy*) Added allusers="1" when installing msi @ 2015-07-31T20:33:17Z
  - **ISSUE #25839:** (*twangboy*) ALLUSERS="1" should be a default when installing MSI's | refs: #25848
- **PR #25898:** (*jfindlay*) clarify and expand syndic docs @ 2015-07-31T20:01:23Z
- **PR #25927:** (*jacksontj*) Pass actual renderers to the Reactor's Compiler @ 2015-07-31T20:00:17Z
  - **ISSUE #25852:** (*UtahDave*) Salt loader is not loading Salt vars in reactor python renderer | refs: #25927
- **PR #25921:** (*cachedout*) Handle non-ascii in state log @ 2015-07-31T17:41:30Z
  - **ISSUE #25810:** (*nvx*) winpkg highstate fails when a new package name contains a unicide character | refs: #25921
- **PR #25919:** (*TheBigBear*) Minor update to msi un-installer info @ 2015-07-31T17:39:48Z
- **PR #25905:** (*rallytime*) Back-port #25982 to 2015.5 @ 2015-07-30T23:24:19Z
  - **PR #25892:** (*TheBigBear*) Update 7-zip msi un-installer instructions | refs: #25905
- **PR #25890:** (*rallytime*) Back-port #25698 to 2015.5 @ 2015-07-30T23:12:09Z
  - **ISSUE #25577:** (*yellow1912*) Wrong indentation in document | refs: #25696
  - **PR #25698:** (*rallytime*) Back-port #25659 to 2015.8 | refs: #25890
  - **PR #25696:** (*AkhterAli*) Update schedule.py
  - **PR #25659:** (*isbm*) Bugfix: crash at getting non-existing repo | refs: #25698
- **PR #25894:** (*jacobhammons*) Minor doc bug fixes @ 2015-07-30T23:02:34Z
  - **ISSUE #25650:** (*jacksontj*) state.running documentation is incorrect | refs: #25894
  - **ISSUE #24042:** (*whiteinge*) The state\_events setting is not documented | refs: #25894
  - **ISSUE #23788:** (*k5jj*) functions in drac.py module do not match documentation | refs: #25894
  - **ISSUE #21296:** (*Lothiraldan*) Possible minion enumeration using saltutil.find\_job and eauth | refs: #25894

- **PR #25877:** (*rallytime*) Protect against passing a map file in addition to VM names with `--destroy` @ 2015-07-30T21:55:45Z
  - **ISSUE #24036:** (*arthurlogilab*) [salt-cloud] Protect against passing command line arguments as names for the `--destroy` command in map files | refs: #25877
- **PR #25870:** (*rallytime*) Back-port #25824 to 2015.5 @ 2015-07-30T21:54:35Z
  - **PR #25824:** (*klyr*) Fix `get_managed()` in `file.py` module for local files | refs: #25870
- **PR #25885:** (*t0rrant*) Update Debian changelog @ 2015-07-30T20:05:59Z
- **PR #25875:** (*rallytime*) Back-port #25862 to 2015.5 @ 2015-07-30T17:34:02Z
  - **ISSUE #25478:** (*zyio*) salt-ssh - Unable to locate current thin version | refs: #25862
  - **ISSUE #25026:** (*sylvia-wang*) salt-ssh ``Failure deploying thin" when using salt module functions | refs: #25862
  - **PR #25862:** (*zyio*) Adding `SCP_NOT_FOUND` exit code | refs: #25875
- **PR #25873:** (*rallytime*) Back-port #25855 to 2015.5 @ 2015-07-30T17:33:55Z
  - **PR #25855:** (*puneetk*) Patch 3 | refs: #25873
- **PR #25871:** (*rallytime*) Back-port #25829 to 2015.5 @ 2015-07-30T17:33:43Z
  - **PR #25829:** (*peterdemin*) Fixed typo in `salt.states.saltmod.function` doc string | refs: #25871
- **PR #25869:** (*rallytime*) Back-port #25788 to 2015.5 @ 2015-07-30T17:33:33Z
  - **ISSUE #24002:** (*csakoda*) File lock contention on windows minions causing highstate crash | refs: #25788
  - **PR #25788:** (*opdude*) Catch a hard crash when running highstate on windows | refs: #25869
- **PR #25853:** (*davidjb*) Make `ssh-id-wrapper` accessible to non-root users @ 2015-07-30T16:49:47Z
  - **ISSUE #19532:** (*stolendog*) salt-ssh running git clone with not root user | refs: #25853
- **PR #25856:** (*jfindlay*) expand minion reauth scalability documentation @ 2015-07-30T15:33:17Z
  - **ISSUE #25447:** (*spoonman*) SaltMaster is crippled with Minion Re-Authentication | refs: #25856
- **PR #25840:** (*jfindlay*) add note to winrepo state docs about required grain @ 2015-07-30T14:38:27Z
  - **ISSUE #25801:** (*themalkolm*) Update docs that `salt.states.winrepo` requires `roles:salt-master` in grains. | refs: #25840
- **PR #25846:** (*jfindlay*) rework deprecation documentation for release names @ 2015-07-30T13:26:21Z
  - **ISSUE #25827:** (*0xf10e*) ``Deprecating Code" doesn't mention Usage of `warn_until()` w/ Release Names | refs: #25846
- **PR #25833:** (*jahamn*) Allows `cp.push` to recreate empty files @ 2015-07-29T16:14:48Z
  - **ISSUE #23288:** (*UtahDave*) `cp.push` fails to recreate empty files. | refs: #25833
- **PR #25831:** (*rallytime*) Add `salt://` to `key_url` options to docs for `pkgrepo.managed` @ 2015-07-29T15:38:43Z
  - **ISSUE #11474:** (*JensRantil*) `pkgrepo.managed` `key_url`: `salt://` always use `base` env | refs: #25831
- **PR #25807:** (*rallytime*) Provide helpful error when using actions with a mapfile @ 2015-07-29T15:30:15Z
  - **ISSUE #22699:** (*arthurlogilab*) salt-cloud fails on `KeyError` when given a nonexistent action | refs: #25807
- **PR #25818:** (*jfindlay*) fix `autoruns` list @ 2015-07-29T15:29:20Z
- **PR #25826:** (*anlutro*) Check that ```onchanges"` is a list @ 2015-07-29T15:00:28Z
- **PR #25798:** (*twangboy*) Fixed stacktrace on package name not found @ 2015-07-28T22:40:14Z

- ISSUE #25258: (*nickw8*) windows minion repo not updating | refs: #25798
- PR #25797: (*twangboy*) Changed repocache back to cached\_repo @ 2015-07-28T22:39:32Z
  - ISSUE #25437: (*lorengordon*) Stacktrace on Windows when running pkg.list\_pkgs | refs: #25598 #25763
  - PR #25763: (*twangboy*) Fix 25437 | refs: #25797
- PR #25793: (*rallytime*) Back-port #25730 to 2015.5 @ 2015-07-28T19:37:34Z
  - PR #25730: (*sjorge*) patchelf lives in pkgsrc | refs: #25793
- PR #25792: (*rallytime*) Back-port #25688 to 2015.5 @ 2015-07-28T19:37:17Z
  - PR #25688: (*bclermont*) Don't acquire lock if there is no formatter | refs: #25792
- PR #25796: (*cachedout*) Remove debug from docs @ 2015-07-28T17:35:59Z
- PR #25749: (*jahamn*) Allow zpool.create on character devices @ 2015-07-28T16:01:40Z
  - ISSUE #24920: (*voileux*) module.zpool.create on character device is not possible by salt | refs: #25749
- PR #25685: (*twangboy*) Fixed regex issues with comment and uncomment @ 2015-07-28T15:29:49Z
- PR #25763: (*twangboy*) Fix 25437 | refs: #25797 @ 2015-07-28T15:29:27Z
  - ISSUE #25437: (*lorengordon*) Stacktrace on Windows when running pkg.list\_pkgs | refs: #25598 #25763
- PR #25752: (*thatch45*) State top saltenv @ 2015-07-28T01:02:10Z
- PR #25755: (*twangboy*) Fixed problem with dunder functions not being passed @ 2015-07-27T19:31:22Z
  - ISSUE #25717: (*twangboy*) Problem with chocolatey module not loading | refs: #25755
- PR #25648: (*twangboy*) Clarified functionality of reg module, fixed state to work with new module @ 2015-07-27T19:30:33Z
  - ISSUE #25352: (*m03*) reg.absent reporting incorrect results | refs: #25648
  - ISSUE #1: (*thatch45*) Enable regex on the salt cli
- PR #25740: (*rallytime*) Back-port #25722 to 2015.5 @ 2015-07-27T16:08:40Z
  - ISSUE #25154: (*uvsmtid*) All data mixed on STDOUT together should generate valid JSON output | refs: #25722
  - ISSUE #25153: (*uvsmtid*) Multiple results should generate valid JSON output | refs: #25722
  - PR #25722: (*uvsmtid*) Minor docs changes to emphasize JSON output problems without --static option | refs: #25740
- PR #25739: (*rallytime*) Back-port #25709 to 2015.5 @ 2015-07-27T16:08:27Z
  - PR #25709: (*colekowalski*) add direct-io-mode to mount\_invisible\_options | refs: #25739
  - PR #25699: (*rallytime*) Back-port #25660 to 2015.5 | refs: #25709
  - PR #25660: (*colekowalski*) add glusterfs' direct-io-mode to mount\_invisible\_keys | refs: #25699 #25709
- PR #25738: (*rallytime*) Back-port #25671 to 2015.5 @ 2015-07-27T16:08:23Z
  - PR #25671: (*niq000*) added a parameter so verifying SSL is now optional instead of hard-coded | refs: #25738
- PR #25737: (*rallytime*) Back-port #25608 to 2015.5 @ 2015-07-27T16:08:18Z
  - ISSUE #25229: (*rall0r*) Module git.latest kills target directory when test=True | refs: #25608
  - PR #25608: (*rall0r*) Fix: prevent git.latest from removing target | refs: #25737

- **PR #25733:** (*davidjb*) Avoid IndexError when listing mounts if mount output ends in newline @ 2015-07-27T16:08:05Z
- **PR #25705:** (*blackduckx*) Support for setm augeas command. @ 2015-07-27T16:07:10Z
  - **ISSUE #22460:** (*onmeac*) Command setm is not supported (yet) | refs: #25705
- **PR #25703:** (*cachedout*) Return to *str* for master\_type for 2015.5 @ 2015-07-27T16:06:22Z
- **PR #25702:** (*twangboy*) Fixed win\_user module for groups with spaces in the name @ 2015-07-27T15:06:33Z
  - **ISSUE #25144:** (*johnccfm*) user.present on Windows fails to add user to groups if group name contains a space | refs: #25702
- **PR #25711:** (*twangboy*) Fixed problem with win\_servermanager.list\_installed @ 2015-07-27T15:05:48Z
  - **ISSUE #25351:** (*m03*) win\_servermanager.list\_installed failing with ``IndexError: list index out of range'' | refs: #25711
- **PR #25714:** (*cachedout*) Display warning when progressbar can't be loaded @ 2015-07-25T00:10:13Z
  - **ISSUE #25435:** (*yee379*) progressbar dependency missing | refs: #25714
- **PR #25699:** (*rallytime*) Back-port #25660 to 2015.5 | refs: #25709 @ 2015-07-24T22:11:40Z
  - **PR #25660:** (*colekowalski*) add glusterfs' direct-io-mode to mount\_invisible\_keys | refs: #25699 #25709
- **PR #25694:** (*s0undt3ch*) Salt-SSH fix for #25689 @ 2015-07-24T21:41:57Z
  - **ISSUE #25689:** (*anlutro*) Minion log in salt-ssh | refs: #25694
- **PR #25710:** (*jahamn*) Integration Testcase for Issue 25250 @ 2015-07-24T20:57:33Z
  - **ISSUE #25250:** (*wipfs*) `force' option in copy state deletes target file | refs: #25461 #25710
- **PR #25680:** (*basepi*) [2015.5] Move cmd.run jinja aliasing to a wrapper class to prevent side effects @ 2015-07-24T19:52:10Z
  - **PR #25049:** (*terminalmage*) Fix cmd.run when cross-called in a state/execution module | refs: #25680
- **PR #25682:** (*basepi*) [2015.5] Fix parsing args with just a hash (#) @ 2015-07-24T19:52:01Z
- **PR #25695:** (*stanislavb*) Configurable AWS region & region from IAM metadata @ 2015-07-24T19:36:40Z
- **PR #25645:** (*kev009*) Fix pkgng provider to work with a sources list and the underlying pkg... @ 2015-07-24T16:33:18Z
- **PR #25677:** (*aneeshusa*) Fix pacman.list\_upgrades when refresh=True. @ 2015-07-24T16:30:06Z
- **PR #25675:** (*UtahDave*) Use OS line endings with contents on file.managed @ 2015-07-24T16:29:50Z
  - **ISSUE #25674:** (*UtahDave*) file.managed with contents parameter uses wrong line endings on Windows | refs: #25675
- **PR #25676:** (*basepi*) Update release candidate docs to 2015.8.0rc2 @ 2015-07-23T20:29:37Z
- **PR #25666:** (*nmadhok*) Check if the properties exist before looping over them causing KeyError @ 2015-07-23T17:55:40Z
  - **ISSUE #25665:** (*nmadhok*) salt-cloud VMware driver fails with KeyErrors if there's any existing machine in the VMware infrastructure in (invalid state) | refs: #25666
- **PR #25656:** (*anlutro*) Fix locale detection in debian/gentoo @ 2015-07-23T16:46:40Z
- **PR #25661:** (*rallytime*) Back-port #25624 to 2015.5 @ 2015-07-23T16:26:48Z
  - **PR #25624:** (*bobrik*) Fix typo in get\_routes example for debian\_ip | refs: #25661
- **PR #25662:** (*rallytime*) Back-port #25638 to 2015.5 @ 2015-07-23T16:26:40Z

- ISSUE #15209: (*hubez*) file.manage: source\_hash not working with s3:// (2014.7.0rc1) | refs: #25638
- PR #25638: (*TronPaul*) fix bad merge in 99fc7ec | refs: #25662
- PR #25644: (*cachedout*) pillar doc fix @ 2015-07-22T22:57:23Z
  - ISSUE #25413: (*zizkebab*) pillar\_opts default behavior is not reflected in the docs | refs: #25644
- PR #25642: (*cachedout*) Warn on pillar schedule delete @ 2015-07-22T22:04:12Z
  - ISSUE #25540: (*dennisjac*) salt highstate schedule cannot be removed | refs: #25642
- PR #25598: (*twangboy*) Fixed problem trying to load file with name of boolean type @ 2015-07-22T17:07:49Z
  - ISSUE #25437: (*lorenegordon*) Stacktrace on Windows when running pkg.list\_pkgs | refs: #25598 #25763
  - 7b79e433 Merge pull request #25598 from twangboy/fix\_25437
- PR #25604: (*terminalmage*) Move patching of mock\_open to within test @ 2015-07-22T16:53:55Z
  - ISSUE #25323: (*terminalmage*) unit.modules.tls\_test fails with older mock | refs: #25604
- PR #25609: (*s0undt3ch*) [2015.5] Update the bootstrap script to latest release v2015.07.22 @ 2015-07-22T16:28:52Z
  - ISSUE #630: (*syphernl*) Allow for an include statement in config files | refs: #25609
  - PR #627: (*chjohnst*) add saltversion grain | refs: #25609
- PR #25603: (*terminalmage*) Add version\_cmp function to yumpkg.py @ 2015-07-22T15:42:29Z
  - ISSUE #21912: (*rvora*) pkg.latest not updating the package on CentOS though yum reports an update available | refs: #25603
- PR #25590: (*garethgreenaway*) 2015.5 scheduled jobs return data @ 2015-07-21T21:57:42Z
  - ISSUE #25560: (*dennisjac*) scheduled highstate runs don't return results to the job cache | refs: #25590
- PR #25584: (*rallytime*) Back-port #24054 and #25576 to 2015.5 @ 2015-07-21T21:16:38Z
  - PR #25576: (*pcn*) s3fs breaks when fetching files from s3 | refs: #25584
  - PR #24054: (*mgwilliams*) s3.head: return useful data | refs: #25584
- PR #25589: (*jahamn*) Fixes ssh\_known\_host not taking port into account @ 2015-07-21T21:15:06Z
  - ISSUE #23626: (*mirko*) salt state `ssh\_known\_hosts` doesn't take `port` into account | refs: #25589
- PR #25573: (*EvaSDK*) Do not execute bootstrap script twice @ 2015-07-21T18:20:04Z
  - PR #25465: (*EvaSDK*) 2015.5.3 LXC module fixes | refs: #25573
- PR #25580: (*attiasr*) use explicit utf-8 decoding (#25532) @ 2015-07-21T15:40:49Z
  - ISSUE #25532: (*attiasr*) salt/modules/win\_pkg.py list\_pkgs is broken (encoding issues) | refs: #25556 #25580
- PR #25568: (*twangboy*) Fixed win\_useradd module to add fullname @ 2015-07-21T14:30:25Z
  - ISSUE #25206: (*jfindlay*) fullname issues with user.add state on windows | refs: #25568
- PR #25561: (*twangboy*) Fixed the gem module to work on windows... without injection @ 2015-07-20T21:12:15Z
  - ISSUE #21041: (*deuscapturus*) state module gem.installed not working on Windows. | refs: #25430 #25561 #25428
  - PR #25428: (*twangboy*) Fixed the gem module to work on windows | refs: #25561
- PR #25521: (*cachedout*) Fix outputter for state.orch @ 2015-07-20T19:30:14Z

- **PR #25563:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-07-20T19:27:36Z
  - **PR #25416:** (*cachedout*) Fix broken keyword
- **PR #25559:** (*cachedout*) Lint win\_pkg @ 2015-07-20T17:46:29Z
- **PR #25556:** (*attiasr*) fix for #25532 @ 2015-07-20T17:45:11Z
  - **ISSUE #25532:** (*attiasr*) salt/modules/win\_pkg.py list\_pkgs is broken (encoding issues) | refs: #25556 #25580
- **PR #25554:** (*jfindlay*) verify\_ssl=True for s3 ext pillar @ 2015-07-20T17:43:38Z
  - **ISSUE #25538:** (*stanislavb*) S3 ext\_pillar configuration requires verify\_ssl | refs: #25554
- **PR #25551:** (*rallytime*) Backport #25530 to 2015.5 @ 2015-07-20T17:43:00Z
  - **PR #25530:** (*andre-luiz-dos-santos*) The variable name must be last | refs: #25551
- **PR #25533:** (*attiasr*) port 445 for windows bootstrapping @ 2015-07-20T15:13:06Z
- **PR #25525:** (*gtmanfred*) add make \_prepare an alias for postinitio @ 2015-07-20T15:12:38Z
  - **ISSUE #25432:** (*gtmanfred*) [2015.5.3][raet] raet error with SaltRaetRoadStackJoiner | refs: #25525
- **PR #25519:** (*rallytime*) Backport vmware driver to 2015.5 branch @ 2015-07-20T15:11:26Z
  - **ISSUE #25511:** (*rallytime*) Make provider --> driver change backward compatible | refs: #25519 #25519
  - **ISSUE #23574:** (*CedNantes*) Failed to Deploy Salt-Minion on a Win 2012 R2 using wmware Cloud Driver from Develop branch | refs: #25519
- **PR #25542:** (*Oro*) Fix hipchat.send\_message when using API v2 @ 2015-07-20T15:09:13Z
- **PR #25531:** (*rallytime*) Back-port #25529 to 2015.5 @ 2015-07-18T19:16:10Z
  - **PR #25529:** (*davidjb*) Fix minor typo in best practice example | refs: #25531
- **PR #25528:** (*davidjb*) Fix typo in extend declaration doco @ 2015-07-18T14:22:06Z
- **PR #25517:** (*rallytime*) Back-port #25486 to 2015.5 @ 2015-07-17T21:49:26Z
  - **ISSUE #25486:** (*whiteinge*) Highstate outputter not used for state.apply | refs: #25517
  - **PR #25485:** (*attiasr*) fix file downloads on windows
- **PR #25516:** (*rallytime*) Back-port #25483 to 2015.5 @ 2015-07-17T21:49:05Z
  - **ISSUE #25479:** (*alexandrsushko*) multiple mount.mounted of one device | refs: #25483
  - **PR #25483:** (*alexandrsushko*) Added `none` to the set of specialFSes | refs: #25516
- **PR #25513:** (*garethgreenaway*) fixes to schedule.add documentation in 2015.5 @ 2015-07-17T17:03:24Z
  - **ISSUE #25493:** (*blackduckx*) Issue with job\_args on schedule.add command | refs: #25513
- **PR #25465:** (*EvaSDK*) 2015.5.3 LXC module fixes | refs: #25573 @ 2015-07-17T15:57:54Z
- **PR #25506:** (*s0undt3ch*) [2015.5] Update bootstrap script to latest stable release, v2015.07.17 @ 2015-07-17T15:40:38Z
  - **ISSUE #25456:** (*julienlavergne*) [2015.8.0rc1] salt-bootstrap fails to install salt master | refs: #25506
  - **ISSUE #25270:** (*iggy*) [2015.8.0rc1] salt-bootstrap fails to properly install a minion | refs: #25506
  - **ISSUE #625:** (*whiteinge*) cmd.run state user flag is not working | refs: #25506 #632

  - **ISSUE #607:** (*thatch45*) next level -X support | refs: #25506

- **ISSUE #598:** (*syphernl*) Explanation on how to execute interactive installs | refs: #25506
- **ISSUE #455:** (*whiteinge*) Document common troubleshooting tips | refs: #25506
- **PR #624:** (*chjohnst*) Docs are not correct with network.ping as args are not supported | refs: #25506
- **PR #621:** (*akoumjian*) Adding ec2 cloud-init bootstrap docs | refs: #25506
- **PR #606:** (*terminalmage*) need empty line before code blocks. added ones that were missing. | refs: #25506
- **PR #602:** (*terminalmage*) State-related documentation changes | refs: #25506
- **PR #25498:** (*jfindlay*) only read /proc/1/cmdline if it exists @ 2015-07-17T15:35:33Z
  - **ISSUE #25454:** (*mschiff*) Regression: salt 2015.5 not working in secure chroot anymore. | refs: #25498
- **PR #25487:** (*rallytime*) Back-port #25464 to 2015.5 @ 2015-07-16T16:58:36Z
  - **PR #25464:** (*jqvast*) docfix: ``cache\_jobs: False" => grains\_cache: False" | refs: #25487
- **PR #25482:** (*oeuftete*) Fix docker.running detection of running container @ 2015-07-16T16:58:29Z
  - **PR #2015:** (*thekuffs*) Esky / bbfreeze support
- **PR #25468:** (*joejulian*) Add support for pyOpenSSL > 0.10 @ 2015-07-16T15:10:30Z
  - **ISSUE #25384:** (*rickh563*) pyopenssl 0.14 requirement in 2015.5.3 does not work in RHEL6 : ZD-364 | refs: #25468
- **PR #25467:** (*rallytime*) Add lxml dependency to opennebula docs @ 2015-07-16T15:09:57Z
- **PR #25461:** (*jahamn*) Update file, if force option and content not same @ 2015-07-15T20:15:07Z
  - **ISSUE #25250:** (*wipfs*) `force' option in copy state deletes target file | refs: #25461 #25710
  - **ISSUE #24647:** (*nmadhok*) salt.states.file.copy does not copy the file if it already exists with force=True | refs: #25461
- **PR #25438:** (*rallytime*) Reduce digital\_ocean\_v2 API call frequency @ 2015-07-15T19:40:18Z
  - **ISSUE #25431:** (*namcois*) Digital Ocean v2 reducing API calls by adding per\_page | refs: #25438
- **PR #25457:** (*jacksontj*) Saltnado @ 2015-07-15T17:50:12Z
  - **PR #25427:** (*tony-cocco*) Saltnado runner client results in blocking call despite being set-up as Runner.async | refs: #25457
- **PR #25459:** (*jahamn*) Fixed `defulats' typo in verify.py @ 2015-07-15T16:53:06Z
- **PR #25426:** (*jqvast*) bugfix: trailing "...done" in rabbitmq output (backport from `develop' to 2015.5) @ 2015-07-15T14:48:05Z
- **PR #25433:** (*jleroy*) Support for IPv6 addresses scopes in network.interfaces (ifconfig) @ 2015-07-15T14:44:09Z
  - **PR #25151:** (*jleroy*) Support for IPv6 addresses scopes in network.interfaces | refs: #25274 #25433
- **PR #25430:** (*twangboy*) Disabled rbenv execution module for Windows @ 2015-07-15T14:41:18Z
  - **ISSUE #21041:** (*deuscapturus*) state module gem.installed not working on Windows. | refs: #25430 #25561 #25428
- c4b1584 Additional test case for question raised in #1846
  - **ISSUE #1846:** (*seanchannel*) development dependencies
- **PR #25420:** (*techhat*) Move S3 to use AWS Signature Version 4 @ 2015-07-14T22:03:09Z
- **PR #25418:** (*twangboy*) Fixed problem with file.managed test=True @ 2015-07-14T21:26:59Z

- **ISSUE #20441:** (*deuscapturus*) State module file.managed returns an error on Windows and test=Test | refs: #25418
- **PR #25417:** (*ahus1*) extended documentation about dependencies for dig module @ 2015-07-14T20:49:51Z
- **PR #25411:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-07-14T17:55:26Z
  - **PR #25375:** (*cachedout*) Fix error in config.py for master\_type
  - **PR #25324:** (*jacobhammons*) Latest help theme updates
- **PR #25406:** (*anlutro*) Force arguments to aptpkg.version\_cmp into strings @ 2015-07-14T16:15:41Z
- **PR #25408:** (*rallytime*) Back-port #25399 to 2015.5 @ 2015-07-14T16:09:06Z
  - **PR #25399:** (*jarpy*) Demonstrate per-minion client\_acl. | refs: #25408
- **PR #25240:** (*tankywoo*) file make os.walk only be called one @ 2015-07-14T16:04:49Z
- **PR #25395:** (*rallytime*) Back-port #25389 to 2015.5 @ 2015-07-14T03:26:34Z
  - **PR #25389:** (*l2ol33rt*) Adding entropy note for gpg renderer | refs: #25395
- **PR #25392:** (*rallytime*) Back-port #25256 to 2015.5 @ 2015-07-14T03:25:13Z
  - **PR #25256:** (*yanatan16*) Don't assume source\_hash exists | refs: #25392
- **PR #25398:** (*twangboy*) Fix date @ 2015-07-14T03:21:17Z
- **PR #25397:** (*GideonRed*) Introduce standard error output when cli exits with non-zero status @ 2015-07-14T03:20:24Z
- **PR #25386:** (*cachedout*) Lint #25383 @ 2015-07-13T21:01:10Z
  - **ISSUE #24444:** (*michaelkrupp*) file.managed does not handle dead symlinks | refs: #25383
  - **PR #25383:** (*jahamn*) Fix manage\_file function in salt/modules/file.py to handle broken sym...
- **PR #25383:** (*jahamn*) Fix manage\_file function in salt/modules/file.py to handle broken sym... @ 2015-07-13T20:58:23Z
  - **ISSUE #24444:** (*michaelkrupp*) file.managed does not handle dead symlinks | refs: #25383
- **PR #25369:** (*anlutro*) Fix aptpkg.version\_cmp @ 2015-07-13T20:18:45Z
- **PR #25379:** (*jfindlay*) check for cwd before getting it @ 2015-07-13T19:50:27Z
  - **ISSUE #25337:** (*eliasp*) salt-call from non-existent cwd backtraces | refs: #25379
- **PR #25334:** (*jfindlay*) return all cmd info back to zypper fcn @ 2015-07-13T17:03:29Z
  - **ISSUE #25320:** (*podlucky-init*) zypper module list\_upgrades broken (2015.5.2) | refs: #25334
- **PR #25339:** (*jfindlay*) update orchestration docs @ 2015-07-13T16:04:26Z
- **PR #25358:** (*dkiser*) Deep merge of pillar lists | refs: #26016 @ 2015-07-13T15:51:01Z

  - **ISSUE** #25268: (*lichtamberg*) Salt not working anymore in 2015.8/develop: ValueError: `scope' is not in list | refs: #25274
  - **PR** #25151: (*jleroy*) Support for IPv6 addresses scopes in network.interfaces | refs: #25274 #25433
- **PR** #25272: (*twangboy*) Fixed problem with service not starting @ 2015-07-08T23:29:48Z
- **PR** #25225: (*nmadhok*) Backporting fix for issue #25223 on 2015.5 branch @ 2015-07-08T15:16:18Z
  - **ISSUE** #25223: (*nmadhok*) Runner occasionally fails with a RuntimeError when fired by a reactor | refs: #25225
- **PR** #25214: (*rallytime*) A couple of doc fixes for the http tutorial @ 2015-07-07T22:23:07Z

- **PR #25194:** (*rallytime*) Update moto version check in boto\_vpc\_test and update min version @ 2015-07-07T18:27:32Z
  - **ISSUE #24272:** (*rallytime*) Fix boto\_vpc\_test moto version check | refs: #25194
- **PR #25205:** (*basepi*) Update releasecandidate docs @ 2015-07-07T15:25:24Z
- **PR #25187:** (*UtahDave*) Doc fixes: Fix misspelling and remove extraneous double spaces @ 2015-07-07T01:07:04Z
- **PR #25182:** (*cachedout*) Try to re-pack long floats as strs @ 2015-07-07T01:06:43Z
- **PR #25185:** (*rallytime*) Back-port #25128 to 2015.5 @ 2015-07-07T00:58:00Z
  - **ISSUE #23822:** (*sidcarter*) Zip file extracted permissions are incorrect | refs: #25128
  - **PR #25128:** (*stanislavb*) Use cmd\_unzip to preserve permissions | refs: #25185
- **PR #25181:** (*rallytime*) Back-port #25102 to 2015.5 @ 2015-07-07T00:57:13Z
  - **PR #25102:** (*derBroBro*) Update win\_network.py | refs: #25181
- **PR #25179:** (*rallytime*) Back-port #25059 to 2015.5 @ 2015-07-07T00:56:44Z
  - **ISSUE #24301:** (*iggy*) influxdb\_user and influxdb\_database states need virtual functions | refs: #25059
  - **PR #25059:** (*babilen*) Add virtual functions to influxdb state modules | refs: #25179
- **PR #25196:** (*twangboy*) Fixed #18919 false-positive on pkg.refresh @ 2015-07-07T00:24:13Z
  - **ISSUE #18919:** (*giner*) Windows: pkg.refresh\_db returns false-positive success | refs: #25196
- **PR #25180:** (*rallytime*) Back-port #25088 to 2015.5 @ 2015-07-06T20:33:45Z
  - **PR #25088:** (*supertom*) Update | refs: #25180
- **PR #25191:** (*basepi*) Add extrndest back to fileclient.is\_cached in 2015.5 @ 2015-07-06T19:35:24Z
  - **PR #25117:** (*basepi*) Fix fileclient.is\_cached | refs: #25191
- **PR #25175:** (*rallytime*) Back-port #25020 to 2015.5 @ 2015-07-06T18:53:19Z
  - **ISSUE #25016:** (*martinhoefling*) salt-run doc.execution fails with AttributeError
  - **PR #25020:** (*martinhoefling*) Fix for issue #25016 | refs: #25175
- **PR #25173:** (*rallytime*) Partial back-port of #25019 @ 2015-07-06T18:52:59Z
  - **ISSUE #21879:** (*bechtoldt*) Reference pages in documentation are outdated again | refs: #25019
  - **ISSUE #19262:** (*bechtoldt*) salt.pillar.file\_tree doesn't appear in the documentation | refs: #25019
  - **PR #25019:** (*bechtoldt*) add missing module documentation to references | refs: #25173
  - **PR #24421:** (*bechtoldt*) add missing module documentation | refs: #25019
  - **PR #21880:** (*bechtoldt*) update references, fixes #21879 | refs: #25019
  - **PR #20039:** (*bechtoldt*) completing some doc references | refs: #25019
- **PR #25171:** (*rallytime*) Back-port #25001 to 2015.5 @ 2015-07-06T18:51:53Z
  - **PR #25001:** (*jasonkeene*) Add docs for key arg in ssh\_known\_hosts.present | refs: #25171
- **PR #25170:** (*rallytime*) Back-port #24982 to 2015.5 @ 2015-07-06T16:34:43Z
  - **PR #24982:** (*asynsrc*) ec2 network\_interfaces fix | refs: #25170
- **PR #25161:** (*aneeshusa*) Allow checking for non-normalized systemd units. @ 2015-07-06T15:15:31Z

- **PR #25151:** (*jleroy*) Support for IPv6 addresses scopes in network.interfaces | refs: #25274 #25433 @ 2015-07-06T14:43:03Z
- **PR #25166:** (*cachedout*) Lint #25149 @ 2015-07-06T14:40:29Z
  - **ISSUE #24979:** (*mavenAtHouzz*) [Discussion] Support for more than 1 netapi.rest\_tornado server process | refs: #25149
  - **PR #25149:** (*jacksonjtj*) Saltnado multiprocessing support | refs: #25166
- **PR #25149:** (*jacksonjtj*) Saltnado multiprocessing support | refs: #25166 @ 2015-07-06T14:38:43Z
  - **ISSUE #24979:** (*mavenAtHouzz*) [Discussion] Support for more than 1 netapi.rest\_tornado server process | refs: #25149
- **PR #25120:** (*d--j*) add missing continue for exception case @ 2015-07-02T19:38:45Z
- **PR #25117:** (*basepi*) Fix fileclient.is\_cached | refs: #25191 @ 2015-07-02T19:38:26Z
- **PR #25087:** (*0xf10e*) Fix execution module for glance - now based on 2015.5! @ 2015-07-02T19:36:27Z
- **PR #25129:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-07-02T17:37:40Z
  - **ISSUE #18447:** (*ryan-lane*) Can't install salt with raet using pip -e git
  - **PR #25093:** (*jaybocc2*) quick fix for issue #18447
  - **PR #25069:** (*puneetk*) Add a helper module function called list\_enabled
- **PR #25114:** (*jfindlay*) Revert ``Revert ``adding states/postgres\_database unit test case." @ 2015-07-02T01:01:29Z
  - **PR #24798:** (*jtand*) Revert ``adding states/postgres\_database unit test case." | refs: #25114
  - **PR #24329:** (*jayeshka*) adding states/postgres\_database unit test case. | refs: #24798
- **PR #24362:** (*jayeshka*) adding states/postgres\_user unit test case. @ 2015-07-01T21:45:31Z
- **PR #24361:** (*jayeshka*) adding states/postgres\_schema unit test case. @ 2015-07-01T21:44:56Z
- **PR #24331:** (*jayeshka*) adding states/postgres\_extension unit test case. @ 2015-07-01T21:43:58Z

## 20.2.46 Salt 2015.5.5 Release Notes

Version 2015.5.5 is a bugfix release for *2015.5.0*.

Changes:

- The `cron.present` state now correctly defaults to state ID as identifier.
- When querying for VMs in `digital_ocean_v2.py`, the number of VMs to include in a page was changed from 20 (default) to 200 to reduce the number of API calls to Digital Ocean.
- The `vmware` Salt-Cloud driver was back-ported from the `develop` branch in order for installations of Salt that are older than 2015.8.0 to be able to use the `vmware` driver without stack-tracing on various deprecation paths that were implemented in the 2015.8.0 release.

### Changes for v2015.5.3..v2015.5.5

## Changes:

- **PR #26292:** (*jqkast*) Rabbitmq 3.2.4 on Ubuntu has "...done.", not "...done" @ 2015-08-13T19:53:29Z
- **PR #26296:** (*jqkast*) bugfix missing `'runas=None'` for rabbitmqctl cmds (backport to 2015.5) @ 2015-08-13T19:52:40Z
- **PR #26293:** (*jfindlay*) Fix #26268 @ 2015-08-13T19:48:06Z
  - **ISSUE #25618:** (*twangboy*) Fix reg.py to work with the registry properly | refs: #26268
  - **PR #26268:** (*twangboy*) Multiple improvements to reg executionmod and state mod | refs: #26293
- **PR #26290:** (*rallytime*) Only call convert\_to\_arn when action name is provided @ 2015-08-13T18:48:58Z
  - **ISSUE #25192:** (*deuscapturus*) 2015.5.2 boto\_cloudwatch\_alarm.present not working. | refs: #26290
- **PR #26288:** (*bbinet*) allow deleting grains which value is False @ 2015-08-13T18:24:36Z
- **PR #26263:** (*rallytime*) Don't make changes when test=True for openstack present/absent funcs @ 2015-08-13T16:30:31Z
  - **ISSUE #24882:** (*nmadhok*) salt.states.openstack\_config.present and salt.states.openstack\_config.absent make changes when test=True | refs: #26263
- **PR #26265:** (*rallytime*) Don't stacktrace on query return in ec2.create\_snapshot @ 2015-08-13T16:28:48Z
  - **ISSUE #24484:** (*codehotter*) clouds/ec2.py: create\_snapshot throws exception | refs: #26265
- **PR #26285:** (*stanislavb*) Remove explicit version from instance identity URL @ 2015-08-13T16:25:32Z
- **PR #26275:** (*cachedout*) Re-init modules on multi-master reconnect @ 2015-08-13T15:52:50Z
- **PR #26273:** (*garethgreenaway*) Fixes to schedule module in 2015.5 @ 2015-08-13T15:34:43Z
- **PR #26271:** (*rallytime*) Fix del\_root\_vol\_on\_destroy and del\_all\_vols\_on\_destroy functionality on ec2 @ 2015-08-12T23:22:47Z
  - **ISSUE #24483:** (*codehotter*) clouds/ec2.py: del\_root\_vol\_on\_destroy and del\_all\_vols\_on\_destroy not working | refs: #26271
- **PR #26219:** (*anlutro*) cron: make identifier default to state ID @ 2015-08-12T18:42:33Z
  - **ISSUE #25958:** (*anlutro*) Cron identifier does not default to state ID as documented | refs: #26219
- **PR #26257:** (*rallytime*) Back-port #26237 to 2015.5 @ 2015-08-12T18:40:35Z
  - **ISSUE #26207:** (*fullermd*) group members setting fails with obscure error message on FreeBSD | refs: #26237
  - **PR #26237:** (*silenius*) fix issue #26207 | refs: #26257
- **PR #26258:** (*nmadhok*) Fix permission on tests/runtests.py on 2015.5 branch @ 2015-08-12T18:40:04Z
- **PR #26261:** (*nmadhok*) Correct spelling of integration in docs @ 2015-08-12T18:14:48Z
  - **PR #2015:** (*thekuffs*) Esky / bbfreeze support
- **PR #26247:** (*nmadhok*) Initial commit of unit tests for vmware cloud driver @ 2015-08-12T16:58:24Z
- **PR #26246:** (*nmadhok*) Backport additions to VMware cloud driver from develop to 2015.5 branch @ 2015-08-12T15:11:26Z

- **PR #26239:** (*opdude*) Fixed documentation to match function name @ 2015-08-12T14:48:52Z
- **PR #26232:** (*garethgreenaway*) Fix to trust\_key in gpg module for 2015.5. @ 2015-08-12T04:48:27Z
- **PR #26084:** (*twangboy*) Added python\_shell=True, quoted user input @ 2015-08-10T21:29:35Z
  - **ISSUE #25802:** (*jefftucker*) Running module ``npm.list`` fails on Windows for masterless minion | refs: #26084
- **PR #26183:** (*cro*) Fix LDAP configuration issue. @ 2015-08-10T19:09:41Z
- **PR #26186:** (*jacobhammons*) regenerated man pages @ 2015-08-10T19:07:44Z
- **PR #26182:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-08-10T19:00:10Z
  - **ISSUE #25961:** (*getabc*) [2015.5.3-2] salt-winrepo.git/salt-minion.sls fails certificate ``\*.wengine.com`` or ``wengine.com`` | refs: #26047
  - **ISSUE #25751:** (*basepi*) Document *master\_finger* more prominently | refs: #26088
  - **PR #26116:** (*corux*) file.replace fails if repl string is an invalid regex and append/prepend is used
  - **PR #26088:** (*jacobhammons*) Master finger
  - **PR #26047:** (*jacobhammons*) Updated windows download links in the docs to <https://repo.saltstack.com>
- **PR #26000:** (*driskell*) Implement full event caching for subscribed tags @ 2015-08-10T18:57:17Z
  - **ISSUE #25998:** (*driskell*) Event subsystem discarding required events during --batch breaking it for slow running commands | refs: #26000
- **PR #26175:** (*rallytime*) Back-port #26153 to 2015.5 @ 2015-08-10T18:22:32Z
  - **PR #26153:** (*loa*) Fix dockerio state documentation typo | refs: #26175
- **PR #26177:** (*rallytime*) Back-port #26147 to 2015.5 @ 2015-08-10T18:22:01Z
  - **ISSUE #26024:** (*jpjic*) lxc\_conf\_unset in cloud.profile is ignored
  - **PR #26147:** (*martinhoefling*) Fixes #26024 | refs: #26177
- **PR #26179:** (*rallytime*) Back-port #25404 to 2015.5 @ 2015-08-10T18:21:50Z
  - **ISSUE #21082:** (*clinta*) master\_type failover does not failover on DNS errors | refs: #25404
  - **PR #25404:** (*DmitryKuzmenko*) Fixed minion failover to next master on DNS errors. | refs: #26179
- **PR #26180:** (*jfindlay*) fix processing of state.template @ 2015-08-10T18:21:38Z
  - **ISSUE #26112:** (*wt*) state.template fails with unclear error with template with only an include | refs: #26180
- **PR #26172:** (*nmadhok*) [Backport] Make sure variable is a dictionary before popping something from it. @ 2015-08-10T16:42:50Z
  - **ISSUE #26162:** (*nmadhok*) VMware cloud driver create function failing with traceback on latest develop | refs: #26163 #26172
  - **PR #26163:** (*nmadhok*) Make sure variable is a dictionary before popping something from it.
- **PR #26168:** (*cachedout*) Fix slack docs @ 2015-08-10T14:57:18Z
  - **ISSUE #26098:** (*rdinoff*) SALT.STATES.SLACK Doc update | refs: #26168
- **PR #26127:** (*garethgreenaway*) Fixes to salt.utils.http related to cp.get\_file\_str bug. @ 2015-08-10T14:38:25Z
  - **ISSUE #24106:** (*nvx*) fileclient.py#get\_url ignores HTTP Auth again (2015.5 regression) | refs: #26127
- **PR #26140:** (*nmadhok*) VMware cloud driver fixes @ 2015-08-10T13:15:58Z

- **ISSUE #26141:** (*nmadhok*) salt-cloud VMware driver fails with error in parsing configuration file | refs: #26140
- **ISSUE #25809:** (*o-sleep*) vmware cloud module error message | refs: #26140
- **ISSUE #25625:** (*steverweber*) cloud vmware driver does not provide mac\_address unless vmware tools is running | refs: #26137 #26140
- **PR #26137:** (*steverweber*) use device mac address if vmttools not active @ 2015-08-09T03:05:36Z
  - **ISSUE #25625:** (*steverweber*) cloud vmware driver does not provide mac\_address unless vmware tools is running | refs: #26137 #26140
- **PR #26119:** (*jodv*) Backport eauth bugfix to 2015.5 @ 2015-08-09T02:19:52Z
- **PR #26135:** (*cro*) Fix proxy minions in 2015.5 and significantly update documentation. @ 2015-08-09T02:19:21Z
- **PR #26132:** (*TheBigBear*) minor edit @ 2015-08-08T21:05:34Z
- **PR #26133:** (*amontalban*) Fixed #25915 in salt/modules/pkgng.py and salt/states/pkg.py @ 2015-08-08T21:05:05Z
  - **ISSUE #25915:** (*ari*) FreeBSD pkg install fails
- **PR #26111:** (*anlutro*) Better error messages when virtualenv creation fails @ 2015-08-07T21:42:09Z
- **PR #26110:** (*jfindlay*) check for sources before adding them to cmd str @ 2015-08-07T21:33:23Z
  - **ISSUE #26093:** (*freedba*) archive.tar bug | refs: #26110
- **PR #26106:** (*vr-jack*) Update \_\_init\_\_.py @ 2015-08-07T21:15:55Z
- **PR #26101:** (*rallytime*) Back-port #25984 to 2015.5 @ 2015-08-07T18:56:26Z
  - **ISSUE #25983:** (*jmdcal*) Trying to get md5 of local zip | refs: #25984
  - **PR #25984:** (*jmdcal*) Support local files without md5sum | refs: #26101
- **PR #26080:** (*techhat*) Fix string checking in s3fs @ 2015-08-06T23:36:09Z
- **PR #26079:** (*cachedout*) Update docs to remove state.over @ 2015-08-06T23:35:26Z
  - **ISSUE #26039:** (*basepi*) Update scheduler docs to use orchestrate instead of overstate | refs: #26079
- **PR #26058:** (*opdude*) Fix choco version on chocolatey versions below 0.9.9 @ 2015-08-06T18:50:10Z
- **PR #26068:** (*jfindlay*) fix autoruns.list looking in wrong directory @ 2015-08-06T18:49:48Z
- **PR #26065:** (*s0undt3ch*) [2015.5] Update to latest bootstrap stable release v2015.06.08 @ 2015-08-06T17:09:35Z
  - **ISSUE #634:** (*loupgaroublond*) /srv/salt/\_grains/ not documented | refs: #26065
  - **ISSUE #631:** (*fatbox*) Can't extend the same item multiple times | refs: #26065
  - **ISSUE #625:** (*whiteinge*) cmd.run state user flag is not working | refs: #25506 #632
  - **PR #640:** (*terminalmage*) fix syntax errors introduced in 0f776c13 | refs: #26065

- PR #25609: (*s0undt3ch*) [2015.5] Update the bootstrap script to latest release v2015.07.22 @ 2015-07-22T16:28:52Z
  - ISSUE #630: (*syphernl*) Allow for an include statement in config files | refs: #25609
  - PR #627: (*chjohnst*) add saltversion grain | refs: #25609
- PR #25603: (*terminalmage*) Add version\_cmp function to yumpkg.py @ 2015-07-22T15:42:29Z
  - ISSUE #21912: (*rvora*) pkg.latest not updating the package on CentOS though yum reports an update available | refs: #25603
- PR #25590: (*garethgreenaway*) 2015.5 scheduled jobs return data @ 2015-07-21T21:57:42Z
  - ISSUE #25560: (*dennisjac*) scheduled highstate runs don't return results to the job cache | refs: #25590
- PR #25584: (*rallytime*) Back-port #24054 and #25576 to 2015.5 @ 2015-07-21T21:16:38Z
  - PR #25576: (*pcn*) s3fs breaks when fetching files from s3 | refs: #25584
  - PR #24054: (*mgwilliams*) s3.head: return useful data | refs: #25584
- PR #25589: (*jahamn*) Fixes ssh\_known\_host not taking port into account @ 2015-07-21T21:15:06Z
  - ISSUE #23626: (*mirko*) salt state `ssh\_known\_hosts` doesn't take `port` into account | refs: #25589
- PR #25573: (*EvaSDK*) Do not execute bootstrap script twice @ 2015-07-21T18:20:04Z
  - PR #25465: (*EvaSDK*) 2015.5.3 LXC module fixes | refs: #25573
- PR #25580: (*attiasr*) use explicit utf-8 decoding (#25532) @ 2015-07-21T15:40:49Z
  - ISSUE #25532: (*attiasr*) salt/modules/win\_pkg.py list\_pkgs is broken (encoding issues) | refs: #25556 #25580
- PR #25568: (*twangboy*) Fixed win\_useradd module to add fullname @ 2015-07-21T14:30:25Z
  - ISSUE #25206: (*jfindlay*) fullname issues with user.add state on windows | refs: #25568
- PR #25561: (*twangboy*) Fixed the gem module to work on windows... without injection @ 2015-07-20T21:12:15Z
  - ISSUE #21041: (*deuscapturus*) state module gem.installed not working on Windows. | refs: #25430 #25561 #25428
  - PR #25428: (*twangboy*) Fixed the gem module to work on windows | refs: #25561
- PR #25521: (*cachedout*) Fix outputter for state.orch @ 2015-07-20T19:30:14Z

- **PR #25563:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-07-20T19:27:36Z
  - **PR #25416:** (*cachedout*) Fix broken keyword
- **PR #25559:** (*cachedout*) Lint win\_pkg @ 2015-07-20T17:46:29Z
- **PR #25556:** (*attiasr*) fix for #25532 @ 2015-07-20T17:45:11Z
  - **ISSUE #25532:** (*attiasr*) salt/modules/win\_pkg.py list\_pkgs is broken (encoding issues) | refs: #25556 #25580
- **PR #25554:** (*jfindlay*) verify\_ssl=True for s3 ext pillar @ 2015-07-20T17:43:38Z
  - **ISSUE #25538:** (*stanislavb*) S3 ext\_pillar configuration requires verify\_ssl | refs: #25554
- **PR #25551:** (*rallytime*) Backport #25530 to 2015.5 @ 2015-07-20T17:43:00Z
  - **PR #25530:** (*andre-luiz-dos-santos*) The variable name must be last | refs: #25551
- **PR #25533:** (*attiasr*) port 445 for windows bootstrapping @ 2015-07-20T15:13:06Z
- **PR #25525:** (*gtmanfred*) add make \_prepare an alias for postinitio @ 2015-07-20T15:12:38Z
  - **ISSUE #25432:** (*gtmanfred*) [2015.5.3][raet] raet error with SaltRaetRoadStackJoiner | refs: #25525
- **PR #25519:** (*rallytime*) Backport vmware driver to 2015.5 branch @ 2015-07-20T15:11:26Z
  - **ISSUE #25511:** (*rallytime*) Make provider --> driver change backward compatible | refs: #25519 #25519
  - **ISSUE #23574:** (*CedNantes*) Failed to Deploy Salt-Minion on a Win 2012 R2 using wmware Cloud Driver from Develop branch | refs: #25519
- **PR #25542:** (*Oro*) Fix hipchat.send\_message when using API v2 @ 2015-07-20T15:09:13Z
- **PR #25531:** (*rallytime*) Back-port #25529 to 2015.5 @ 2015-07-18T19:16:10Z
  - **PR #25529:** (*davidjb*) Fix minor typo in best practice example | refs: #25531
- **PR #25528:** (*davidjb*) Fix typo in extend declaration doco @ 2015-07-18T14:22:06Z
- **PR #25517:** (*rallytime*) Back-port #25486 to 2015.5 @ 2015-07-17T21:49:26Z
  - **ISSUE #25486:** (*whiteinge*) Highstate outputter not used for state.apply | refs: #25517
  - **PR #25485:** (*attiasr*) fix file downloads on windows
- **PR #25516:** (*rallytime*) Back-port #25483 to 2015.5 @ 2015-07-17T21:49:05Z
  - **ISSUE #25479:** (*alexandrsushko*) multiple mount.mounted of one device | refs: #25483
  - **PR #25483:** (*alexandrsushko*) Added `none` to the set of specialFSes | refs: #25516
- **PR #25513:** (*garethgreenaway*) fixes to schedule.add documentation in 2015.5 @ 2015-07-17T17:03:24Z
  - **ISSUE #25493:** (*blackduckx*) Issue with job\_args on schedule.add command | refs: #25513
- **PR #25465:** (*EvaSDK*) 2015.5.3 LXC module fixes | refs: #25573 @ 2015-07-17T15:57:54Z
- **PR #25506:** (*s0undt3ch*) [2015.5] Update bootstrap script to latest stable release, v2015.07.17 @ 2015-07-17T15:40:38Z
  - **ISSUE #25456:** (*julienlavergne*) [2015.8.0rc1] salt-bootstrap fails to install salt master | refs: #25506
  - **ISSUE #25270:** (*iggy*) [2015.8.0rc1] salt-bootstrap fails to properly install a minion | refs: #25506
  - **ISSUE #625:** (*whiteinge*) cmd.run state user flag is not working | refs: #25506 #632
  - **ISSUE #611:** (*fatbox*) Peer interface fails to return data occasionally | refs: #25506
  - **ISSUE #607:** (*thatch45*) next level -X support | refs: #25506

- **ISSUE #598:** (*syphernl*) Explanation on how to execute interactive installs | refs: #25506
- **ISSUE #455:** (*whiteinge*) Document common troubleshooting tips | refs: #25506
- **PR #624:** (*chjohnst*) Docs are not correct with network.ping as args are not supported | refs: #25506
- **PR #621:** (*akoumjian*) Adding ec2 cloud-init bootstrap docs | refs: #25506
- **PR #606:** (*terminalmage*) need empty line before code blocks. added ones that were missing. | refs: #25506
- **PR #602:** (*terminalmage*) State-related documentation changes | refs: #25506
- **PR #25498:** (*jfindlay*) only read /proc/1/cmdline if it exists @ 2015-07-17T15:35:33Z
  - **ISSUE #25454:** (*mschiff*) Regression: salt 2015.5 not working in secure chroot anymore. | refs: #25498
- **PR #25487:** (*rallytime*) Back-port #25464 to 2015.5 @ 2015-07-16T16:58:36Z
  - **PR #25464:** (*jqvast*) docfix: ``cache\_jobs: False" => grains\_cache: False" | refs: #25487
- **PR #25482:** (*oeuftete*) Fix docker.running detection of running container @ 2015-07-16T16:58:29Z
  - **PR #2015:** (*thekuffs*) Esky / bbfreeze support
- **PR #25468:** (*joejulian*) Add support for pyOpenSSL > 0.10 @ 2015-07-16T15:10:30Z
  - **ISSUE #25384:** (*rickh563*) pyopenssl 0.14 requirement in 2015.5.3 does not work in RHEL6 : ZD-364 | refs: #25468
- **PR #25467:** (*rallytime*) Add lxml dependency to opennebula docs @ 2015-07-16T15:09:57Z
- **PR #25461:** (*jahamn*) Update file, if force option and content not same @ 2015-07-15T20:15:07Z
  - **ISSUE #25250:** (*wipfs*) `force' option in copy state deletes target file | refs: #25461 #25710
  - **ISSUE #24647:** (*nmadhok*) salt.states.file.copy does not copy the file if it already exists with force=True | refs: #25461
- **PR #25438:** (*rallytime*) Reduce digital\_ocean\_v2 API call frequency @ 2015-07-15T19:40:18Z
  - **ISSUE #25431:** (*namcois*) Digital Ocean v2 reducing API calls by adding per\_page | refs: #25438
- **PR #25457:** (*jacksontj*) Saltnado @ 2015-07-15T17:50:12Z
  - **PR #25427:** (*tony-cocco*) Saltnado runner client results in blocking call despite being set-up as Runner.async | refs: #25457
- **PR #25459:** (*jahamn*) Fixed `defulats' typo in verify.py @ 2015-07-15T16:53:06Z
- **PR #25426:** (*jqvast*) bugfix: trailing "...done" in rabbitmq output (backport from `develop' to 2015.5) @ 2015-07-15T14:48:05Z
- **PR #25433:** (*jleroy*) Support for IPv6 addresses scopes in network.interfaces (ifconfig) @ 2015-07-15T14:44:09Z
  - **PR #25151:** (*jleroy*) Support for IPv6 addresses scopes in network.interfaces | refs: #25274 #25433
- **PR #25430:** (*twangboy*) Disabled rbenv execution module for Windows @ 2015-07-15T14:41:18Z
  - **ISSUE #21041:** (*deuscapturus*) state module gem.installed not working on Windows. | refs: #25430 #25561 #25428
  - **ISSUE #1846:** (*seanchannel*) development dependencies
- **PR #25420:** (*techhat*) Move S3 to use AWS Signature Version 4 @ 2015-07-14T22:03:09Z
- **PR #25418:** (*twangboy*) Fixed problem with file.managed test=True @ 2015-07-14T21:26:59Z

- **ISSUE #20441:** (*deuscapturus*) State module file.managed returns an error on Windows and test=Test | refs: #25418
- **PR #25417:** (*ahus1*) extended documentation about dependencies for dig module @ 2015-07-14T20:49:51Z
- **PR #25411:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-07-14T17:55:26Z
  - **PR #25375:** (*cachedout*) Fix error in config.py for master\_type
  - **PR #25324:** (*jacobhammons*) Latest help theme updates
- **PR #25406:** (*anlutro*) Force arguments to aptpkg.version\_cmp into strings @ 2015-07-14T16:15:41Z
- **PR #25408:** (*rallytime*) Back-port #25399 to 2015.5 @ 2015-07-14T16:09:06Z
  - **PR #25399:** (*jarpy*) Demonstrate per-minion client\_acl. | refs: #25408
- **PR #25240:** (*tankywoo*) file make os.walk only be called one @ 2015-07-14T16:04:49Z
- **PR #25395:** (*rallytime*) Back-port #25389 to 2015.5 @ 2015-07-14T03:26:34Z
  - **PR #25389:** (*l2ol33rt*) Adding entropy note for gpg renderer | refs: #25395
- **PR #25392:** (*rallytime*) Back-port #25256 to 2015.5 @ 2015-07-14T03:25:13Z
  - **PR #25256:** (*yanatan16*) Don't assume source\_hash exists | refs: #25392
- **PR #25398:** (*twangboy*) Fix date @ 2015-07-14T03:21:17Z
- **PR #25397:** (*GideonRed*) Introduce standard error output when cli exits with non-zero status @ 2015-07-14T03:20:24Z
- **PR #25386:** (*cachedout*) Lint #25383 @ 2015-07-13T21:01:10Z
  - **ISSUE #24444:** (*michaelkrupp*) file.managed does not handle dead symlinks | refs: #25383
  - **PR #25383:** (*jahamn*) Fix manage\_file function in salt/modules/file.py to handle broken sym...
- **PR #25383:** (*jahamn*) Fix manage\_file function in salt/modules/file.py to handle broken sym... @ 2015-07-13T20:58:23Z
  - **ISSUE #24444:** (*michaelkrupp*) file.managed does not handle dead symlinks | refs: #25383
- **PR #25369:** (*anlutro*) Fix aptpkg.version\_cmp @ 2015-07-13T20:18:45Z
- **PR #25379:** (*jfindlay*) check for cwd before getting it @ 2015-07-13T19:50:27Z
  - **ISSUE #25337:** (*eliasp*) salt-call from non-existent cwd backtraces | refs: #25379
- **PR #25334:** (*jfindlay*) return all cmd info back to zypper fcn @ 2015-07-13T17:03:29Z
  - **ISSUE #25320:** (*podloucky-init*) zypper module list\_upgrades broken (2015.5.2) | refs: #25334
- **PR #25339:** (*jfindlay*) update orchestration docs @ 2015-07-13T16:04:26Z
- **PR #25358:** (*dkiser*) Deep merge of pillar lists | refs: #26016 @ 2015-07-13T15:51:01Z
  - **ISSUE #22241:** (*masterkorp*) Salt master not properly generating the map | refs: #25358
- **PR #25346:** (*bechtoldt*) set correct indention in states/requisites.rst (docs), fixes #25281 @ 2015-07-13T15:34:45Z
  - **ISSUE #25281:** (*shinshenjs*) Unless usage in Official Doc syntax error?
- **PR #25336:** (*terminalmage*) Don't try to read init binary if it wasn't found @ 2015-07-13T09:45:30Z
- **PR #25350:** (*davidjb*) Fix documentation for file.blockreplace @ 2015-07-13T03:41:20Z
- **PR #25326:** (*rallytime*) Back-port #20972 to 2015.5 @ 2015-07-10T18:49:44Z

- **ISSUE** #19288: (*oba11*) AssociatePublicIpAddress doesn't work with salt-cloud 2014.7.0 | refs: #20972 #25326
- **PR** #20972: (*JohannesEbke*) Fix interface cleanup when using AssociatePublicIpAddress in #19288 | refs: #25326
- **PR** #25327: (*rallytime*) Back-port #25290 to 2015.5 @ 2015-07-10T18:49:37Z
  - **ISSUE** #24433: (*chrimi*) Salt locale state fails, if locale has not been generated | refs: #25290
  - **PR** #25290: (*pcdummy*) Simple fix for locale.present on Ubuntu. | refs: #25327
- **PR** #25328: (*rallytime*) Back-port #25309 to 2015.5 @ 2015-07-10T17:22:59Z
  - **ISSUE** #24827: (*yermulnik*) locale.present doesn't generate locales | refs: #25309
  - **PR** #25309: (*davidjb*) Format /etc/locale.gen correctly in salt.modules.localemod.gen\_locale | refs: #25328
- **PR** #25322: (*jacobhammons*) version change to 2015.5.3 @ 2015-07-10T16:11:24Z
- **PR** #25308: (*jacksonjtj*) Make clear commands trace level logging @ 2015-07-10T14:20:06Z
  - **PR** #24737: (*jacksonjtj*) Move AES command logging to trace | refs: #25308
- **PR** #25269: (*jfindlay*) Extract tomcat war version @ 2015-07-10T01:28:21Z
  - **ISSUE** #24520: (*nvx*) Tomcat module fails to extract version number from snapshot builds (2015.5 regression) | refs: #24927
  - **PR** #24927: (*egarbi*) Tomcat module fails to extract version number from snapshot builds #2... | refs: #25269
- **PR** #25238: (*DmitryKuzmenko*) Pillarenv backport 2015.5 @ 2015-07-10T01:25:07Z
  - **ISSUE** #18808: (*amendlik*) Add command line argument to select pillar environment | refs: #25238
  - **PR** #23719: (*DmitryKuzmenko*) Support pillarenv cmdline in state.sls
- **PR** #25299: (*twangboy*) Added -NonInteractive so powershell doesn't hang waiting for input @ 2015-07-09T21:00:16Z
  - **ISSUE** #13943: (*Supermathie*) Powershell commands that expect input hang forever | refs: #25299
- **PR** #25301: (*jacobhammons*) bug fix for module function display in help @ 2015-07-09T20:46:34Z
- **PR** #25279: (*jacobhammons*) Additional docs on external and master job cache, assorted doc fixes @ 2015-07-09T16:46:26Z
  - **ISSUE** #25277: (*jacobhammons*) CherryPy recommended versions | refs: #25279
- **PR** #25274: (*jleroy*) Fix for issue #25268 @ 2015-07-09T13:36:26Z
  - **ISSUE** #25268: (*lichtamberg*) Salt not working anymore in 2015.8/develop: ValueError: `scope' is not in list | refs: #25274
  - **PR** #25151: (*jleroy*) Support for IPv6 addresses scopes in network.interfaces | refs: #25274 #25433
- **PR** #25272: (*twangboy*) Fixed problem with service not starting @ 2015-07-08T23:29:48Z
- **PR** #25225: (*nmadhok*) Backporting fix for issue #25223 on 2015.5 branch @ 2015-07-08T15:16:18Z
  - **ISSUE** #25223: (*nmadhok*) Runner occasionally fails with a RuntimeError when fired by a reactor | refs: #25225
- **PR** #25214: (*rallytime*) A couple of doc fixes for the http tutorial @ 2015-07-07T22:23:07Z

- **PR #25194:** (*rallytime*) Update moto version check in boto\_vpc\_test and update min version @ 2015-07-07T18:27:32Z
  - **ISSUE #24272:** (*rallytime*) Fix boto\_vpc\_test moto version check | refs: #25194
- **PR #25205:** (*basepi*) Update releasecandidate docs @ 2015-07-07T15:25:24Z
- **PR #25187:** (*UtahDave*) Doc fixes: Fix misspelling and remove extraneous double spaces @ 2015-07-07T01:07:04Z
- **PR #25182:** (*cachedout*) Try to re-pack long floats as strs @ 2015-07-07T01:06:43Z
- **PR #25185:** (*rallytime*) Back-port #25128 to 2015.5 @ 2015-07-07T00:58:00Z
  - **ISSUE #23822:** (*sidcarter*) Zip file extracted permissions are incorrect | refs: #25128
  - **PR #25128:** (*stanislavb*) Use cmd\_unzip to preserve permissions | refs: #25185
- **PR #25181:** (*rallytime*) Back-port #25102 to 2015.5 @ 2015-07-07T00:57:13Z
  - **PR #25102:** (*derBroBro*) Update win\_network.py | refs: #25181
- **PR #25179:** (*rallytime*) Back-port #25059 to 2015.5 @ 2015-07-07T00:56:44Z
  - **ISSUE #24301:** (*iggy*) influxdb\_user and influxdb\_database states need virtual functions | refs: #25059
  - **PR #25059:** (*babilen*) Add virtual functions to influxdb state modules | refs: #25179
- **PR #25196:** (*twangboy*) Fixed #18919 false-positive on pkg.refresh @ 2015-07-07T00:24:13Z
  - **ISSUE #18919:** (*giner*) Windows: pkg.refresh\_db returns false-positive success | refs: #25196
- **PR #25180:** (*rallytime*) Back-port #25088 to 2015.5 @ 2015-07-06T20:33:45Z
  - **PR #25088:** (*supertom*) Update | refs: #25180
- **PR #25191:** (*basepi*) Add extrndest back to fileclient.is\_cached in 2015.5 @ 2015-07-06T19:35:24Z
  - **PR #25117:** (*basepi*) Fix fileclient.is\_cached | refs: #25191
- **PR #25175:** (*rallytime*) Back-port #25020 to 2015.5 @ 2015-07-06T18:53:19Z
  - **ISSUE #25016:** (*martinhoefling*) salt-run doc.execution fails with AttributeError
  - **PR #25020:** (*martinhoefling*) Fix for issue #25016 | refs: #25175
- **PR #25173:** (*rallytime*) Partial back-port of #25019 @ 2015-07-06T18:52:59Z
  - **ISSUE #21879:** (*bechtoldt*) Reference pages in documentation are outdated again | refs: #25019
  - **ISSUE #19262:** (*bechtoldt*) salt.pillar.file\_tree doesn't appear in the documentation | refs: #25019
  - **PR #25019:** (*bechtoldt*) add missing module documentation to references | refs: #25173
  - **PR #24421:** (*bechtoldt*) add missing module documentation | refs: #25019
  - **PR #21880:** (*bechtoldt*) update references, fixes #21879 | refs: #25019
  - **PR #20039:** (*bechtoldt*) completing some doc references | refs: #25019
- **PR #25171:** (*rallytime*) Back-port #25001 to 2015.5 @ 2015-07-06T18:51:53Z
  - **PR #25001:** (*jasonkeene*) Add docs for key arg in ssh\_known\_hosts.present | refs: #25171
- **PR #25170:** (*rallytime*) Back-port #24982 to 2015.5 @ 2015-07-06T16:34:43Z
  - **PR #24982:** (*asynsrc*) ec2 network\_interfaces fix | refs: #25170
- **PR #25161:** (*aneeshusa*) Allow checking for non-normalized systemd units. @ 2015-07-06T15:15:31Z

- **PR #25151:** (*jleroy*) Support for IPv6 addresses scopes in network.interfaces | refs: #25274 #25433 @ 2015-07-06T14:43:03Z
- **PR #25166:** (*cachedout*) Lint #25149 @ 2015-07-06T14:40:29Z

  - ISSUE #26240: (*0xf10e*) keystone.user\_get raises exception when user is not found | refs: #26277
- PR #26326: (*rallytime*) Make ec2.create\_snapshot return less unweildly and more relevant @ 2015-08-14T19:40:47Z
  - ISSUE #24484: (*codehotter*) clouds/ec2.py: create\_snapshot throws exception | refs: #26326
- PR #26306: (*rallytime*) Move VM creation details dict to log.trace @ 2015-08-14T17:39:52Z
  - ISSUE #16179: (*UtahDave*) Salt Cloud -l debug includes the entire bootstrap script twice in its output | refs: #26306

## 20.2.47 Salt 2015.5.6 Release Notes

Version 2015.5.6 is a bugfix release for 2015.5.0.

### Security Fixes

CVE-2015-6941 - win\_useradd module and salt-cloud display passwords in debug log

Updated the `win_useradd` module return data to no longer include the password of the newly created user. The password is now replaced with the string `XXX-REDACTED-XXX`. Updated the Salt Cloud debug output to no longer display `win_password` and `sudo_password` authentication credentials.

CVE-2015-6918 - Git modules leaking HTTPS auth credentials to debug log

Updated the Git state and execution modules to no longer display HTTPS basic authentication credentials in loglevel debug output on the Salt master. These credentials are now replaced with `REDACTED` in the debug output. Thanks to Andreas Stieger <[asteiger@suse.com](mailto:asteiger@suse.com)> for bringing this to our attention.

### Changes for v2015.5.5..v2015.5.6

Changes:

- **PR #27557:** (*jfindlay*) add doc motivating mine vs grains
- **PR #27515:** (*jfindlay*) save iptables rules on SuSE
- **PR #27509:** (*jfindlay*) tell the user why the gluster module does not work
- **PR #27379:** (*jfindlay*) document and check dict type for pip env\_vars
- **PR #27516:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR #27472:** (*cachedout*) Change recommended schema for data field in mysql event table
- **PR #27468:** (*cachedout*) Fix 27351
- **PR #27479:** (*aboe76*) fix locale on opensuse and suse #27438
- **PR #27483:** (*rallytime*) Outputters should sync to output, not outputters, on the minion.
- **PR #27484:** (*rallytime*) Back-port #27434 and #27470 to 2015.5
- **PR #27469:** (*twangboy*) Added quotes to version numbers example
- **PR #27467:** (*cachedout*) file.managed: check contents\_{pillar|grain} result
- **PR #27419:** (*rallytime*) Amend error log to include multiple tips for troubleshooting.
- **PR #27426:** (*rallytime*) Don't stacktrace if there are conflicting id errors in highstate
- **PR #27408:** (*rallytime*) Fix avail\_locations function for the softlayer\_hw driver in 2015.5
- **PR #27410:** (*jacobhammons*) Fix css layout Refs #27389
- **PR #27336:** (*rallytime*) [2015.5] Fixup salt-cloud logging
- **PR #27358:** (*lorenogordon*) Escape search replacement text, fixes #27356
- **PR #27345:** (*rallytime*) Allow use of rst header links by separating options out from yaml example
- **PR #26903:** (*bersace*) Review defaults.get
- **PR #27317:** (*efficks*) State unzip should use unzip command instead of unzip\_cmd.
- **PR #27309:** (*rallytime*) Change a value list to a comma-separated string in boto\_route53.present
- **PR #27311:** (*jfindlay*) discuss replacement occurrences in file doc
- **PR #27310:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5

- **PR #27308:** (*terminalmage*) Fix refresh\_db regression in yumpkg.py
- **PR #27286:** (*terminalmage*) Add a configurable timer for minion return retries
- **PR #27278:** (*rallytime*) Back-port #27256 to 2015.5
- **PR #27277:** (*rallytime*) Back-port #27230 to 2015.5
- **PR #27253:** (*jfindlay*) 2015.5 -> 2015.5.0
- **PR #27244:** (*garethgreenaway*) Exception in cloud.ec2.create\_snapshot
- **PR #27231:** (*jfindlay*) only write cron file if it is changed
- **PR #27233:** (*basepi*) [2015.5] Add stub release notes for 2015.5.6
- **PR #27208:** (*basepi*) [2015.5] Add test.nop state
- **PR #27201:** (*jfindlay*) rename hash\_hostname to hash\_known\_hosts
- **PR #27214:** (*jacksonjtj*) Correctly support https, port 443 is not a requirement
- **PR #27172:** (*rallytime*) Back-port #27150 to 2015.5
- **PR #27194:** (*rallytime*) Back-port #27180 to 2015.5
- **PR #27176:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR #27170:** (*rallytime*) Update Getting Started with GCE docs to use cloud.profiles or cloud.profiles.d examples
- **PR #27167:** (*rallytime*) Back-port #27148 to 2015.5
- **PR #27168:** (*techhat*) Add further gating of impacket library
- **PR #27166:** (*rallytime*) Allow a full-query for EC2, even if there are no profiles defined
- **PR #27162:** (*rallytime*) Be explicit in using ``SoftLayer'' for service queries in SoftLayer drivers
- **PR #27149:** (*twangboy*) Fixed problem with add/remove path
- **PR #27147:** (*rallytime*) Enforce bounds in the GCE Regex
- **PR #27128:** (*eguwen*) don't show diff for test run if show\_diff=False
- **PR #27116:** (*jacobhammons*) Update latest to 2015.8, 2015.5 is now previous
- **PR #27033:** (*jfindlay*) Merge #27019
- **PR #26942:** (*Arabus*) Fix docker.run
- **PR #26977:** (*abh*) Add support for PEERNTIP network interface configuration
- **PR #27023:** (*jfindlay*) add test support for httpasswd state mod
- **PR #27074:** (*twangboy*) Replaced password with redacted when displayed
- **PR #27073:** (*rallytime*) Remove ``use develop branch'' warning from LXC tutorial
- **PR #27054:** (*rallytime*) Back-port #27029 to 2015.5
- **PR #27053:** (*rallytime*) Back-port #26992 to 2015.5
- **PR #27052:** (*rallytime*) Back-port #26930 to 2015.5
- **PR #27049:** (*johanek*) Run repoquery less
- **PR #27070:** (*stanislavb*) Deprecate salt.utils.iam in Carbon
- **PR #27030:** (*jfindlay*) Backport #26938
- **PR #27025:** (*cachedout*) Better try and error handling for prep\_jid

- [PR #27035](#): (*terminalmage*) useradd.py: Use contextmanager to prevent leaked filehandles
- [PR #27034](#): (*rallytime*) Update softlayer docs for where to find apikey
- [PR #27024](#): (*rallytime*) Back-port [#27004](#) to 2015.5
- [PR #27027](#): (*rallytime*) Back-port [#27013](#) to 2015.5
- [PR #27026](#): (*rallytime*) Back-port [#27011](#) to 2015.5
- [PR #26972](#): (*twangboy*) Catch the 404 error from fileclient
- [PR #26951](#): (*terminalmage*) Fix timezone module for CentOS
- [PR #26875](#): (*marccardinal*) LXC gateway provisioned only when IP is provided
- [PR #26997](#): (*twangboy*) Fixed symlinks for windows (don't use user root)
- [PR #27001](#): (*twangboy*) Added CLI Example for reg.delete\_key\_recursive
- [PR #26996](#): (*jacobhammons*) Beacon doc updates
- [PR #26868](#): (*joejulian*) Use the actual device name when checking vgdisplay
- [PR #26955](#): (*dsumsky*) S3 ext\_pillar module has broken caching mechanism (backport to 2015.5)
- [PR #26987](#): (*rallytime*) Back-port [#26966](#) to 2015.5
- [PR #26915](#): (*rallytime*) Update Joyent Cloud Tests
- [PR #26971](#): (*rallytime*) Fix a couple of typos in reactor docs
- [PR #26976](#): (*thatch45*) Revert ``file.symlink gets windows account instead of root''
- [PR #26975](#): (*whiteinge*) Remove mocks from rest\_cherry.py integration tests; fix groups check bug
- [PR #26899](#): (*twangboy*) file.symlink gets windows account instead of root
- [PR #26960](#): (*rallytime*) Fix bash code block formatting in CherryPy netapi docs
- [PR #26940](#): (*rallytime*) Fix minor doc typo in client api
- [PR #26871](#): (*rallytime*) Back-port [#26852](#) to 2015.5
- [PR #26851](#): (*jacobhammons*) states/pkgrepo examples, suse installation updates
- [PR #26817](#): (*jfindlay*) modify groupadd for rhel 5
- [PR #26824](#): (*pravka*) [salt-cloud] Fix creating droplet from snapshot in digital\_ocean provider
- [PR #26823](#): (*joejulian*) use dbus instead of localectl
- [PR #26820](#): (*jfindlay*) add default param in \_parse\_localectl in locale mod
- [PR #26821](#): (*twangboy*) Fixed user.rename function in windows
- [PR #26803](#): (*twangboy*) Added check for PyMySQL if MySQLdb import fails
- [PR #26815](#): (*jfindlay*) stringify linode id before performing str actions
- [PR #26800](#): (*jacobhammons*) Doc bug fixes
- [PR #26793](#): (*rallytime*) Don't stacktrace if ``name'' is specified as a minion id in a map file
- [PR #26790](#): (*rallytime*) Update Saltify docs to be more accurate and helpful
- [PR #26787](#): (*jfindlay*) merge [#26775](#)
- [PR #26759](#): (*terminalmage*) Backport [PR #26726](#) to 2015.5 branch
- [PR #26768](#): (*garethgreenaway*) Fixes to ipset in 2015.5 for [#26628](#)

- **PR #26753:** (*jfindlay*) import elementtree from `_compat` in `ilo exec mod`
- **PR #26736:** (*twangboy*) Changed import from `smbconnection` to `smb3`
- **PR #26714:** (*jfindlay*) add exception placeholder for older `msgpacks`
- **PR #26710:** (*rallytime*) Update GCE driver to return `True`, `False` or a new name in `__virtual__()`
- **PR #26709:** (*rallytime*) Ensure VM name is valid before trying to create Linode VM
- **PR #26617:** (*terminalmage*) Fix Windows failures in `pip` module due to raw string formatting
- **PR #26700:** (*kev009*) Ignore the first element of `kern.disks` split, which is the `sysctl` name
- **PR #26695:** (*terminalmage*) Better HTTPS basic auth redaction for 2015.5 branch
- **PR #26694:** (*terminalmage*) Backport [#26693](#) to 2015.5
- **PR #26681:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR #26676:** (*rallytime*) Back-port [#26648](#) to 2015.5
- **PR #26677:** (*rallytime*) Back-port [#26653](#) to 2015.5
- **PR #26675:** (*rallytime*) Back-port [#26631](#) to 2015.5
- **PR #26655:** (*cheng0919*) Update `win_dns_client.py`
- **PR #26662:** (*jacobhammons*) update version to 2015.5
- **PR #26651:** (*jfindlay*) add 2015.5.4 notes to 2015.5.5 notes
- **PR #26525:** (*jfindlay*) document `check_file_meta` args, remove unused arg
- **PR #26561:** (*stanislavb*) Leave `salt.utils.s3` location fallback to `salt.utils.aws`
- **PR #26573:** (*rallytime*) Don't stacktrace if using `private_ips` and `delete_sshkeys` together
- **PR #26563:** (*rallytime*) Fix error detection when `salt-cloud` config is missing a master's address
- **PR #26641:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR #26620:** (*rallytime*) Also add `-Z` to script args for cloud tests
- **PR #26618:** (*rallytime*) Add `script_args: '-P'` to Ubuntu 14 profiles for nightly cloud tests
- **PR #26612:** (*rallytime*) Use an available image to test against
- **PR #26576:** (*rallytime*) Ensure GCE and EC2 configuration checks are correct
- **PR #26580:** (*rallytime*) Avoid race condition when assigning floating IPs to new VMs
- **PR #26581:** (*terminalmage*) Skip tests that don't work with older mock
- **PR #26591:** (*rallytime*) Back-port [#26554](#) to 2015.5
- **PR #26565:** (*cachedout*) Fix many errors with `__virtual__` in tests
- **PR #26553:** (*rallytime*) Back-port [#26548](#) to 2015.5
- **PR #26552:** (*rallytime*) Back-port [#26542](#) to 2015.5
- **PR #26551:** (*rallytime*) Back-port [#26539](#) to 2015.5
- **PR #26549:** (*rallytime*) Back-port [#26524](#) to 2015.5
- **PR #26527:** (*jfindlay*) check exists and values in `boto_elb` listeners
- **PR #26446:** (*stanislavb*) Fetch AWS region from EC2 instance metadata

- **PR #26546:** (*nmadhok*) Do not raise `KeyError` when calling `avail_images` if VM/template is in disconnected state
- **PR #26537:** (*jfindlay*) Merge #26481
- **PR #26528:** (*zmalone*) Fixing encrypt to instructions in the 2015.5 branch

### 20.2.48 Salt 2015.5.7 Release Notes

---

**Note:** A significant orchestrate issue #29110 was discovered during the release process of 2015.5.7, so it has not been officially released. Please use 2015.5.8 instead.

Total Merges: **102**

Changes:

- **PR #28731:** (*garethgreenaway*) Fixes to salt scheduler in 2015.5, ensuring that `return_job` is only used on minion scheduler
- **PR #28857:** (*rallytime*) Back-port #28851 to 2015.5
- **PR #28856:** (*rallytime*) Back-port #28853 to 2015.5
- **PR #28832:** (*basepi*) [2015.5] Backport #28826
- **PR #28833:** (*basepi*) [2015.5] Increase the default `gather_job_timeout`
- **PR #28829:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR #28756:** (*MrCitron*) Fix #25775
- **PR #28786:** (*chrigl*) closes #28783
- **PR #28776:** (*rallytime*) Back-port #28740 to 2015.5
- **PR #28760:** (*dmyerscough*) Fixing CherryPy key bug
- **PR #28746:** (*rallytime*) Back-port #28718 to 2015.5
- **PR #28705:** (*cachedout*) Account for new headers class in tornado 4.3
- **PR #28699:** (*rallytime*) Back-port #28670 to 2015.5
- **PR #28703:** (*rallytime*) Back-port #28690 to 2015.5
- **PR #28694:** (*s0undt3ch*) [2015.5] Update to latest bootstrap script v2015.11.09
- **PR #28669:** (*rallytime*) Use the `-q` argument to strip extraneous messages from rabbitmq
- **PR #28645:** (*jackson tj*) Rework minion `return_retry_timer`
- **PR #28668:** (*twangboy*) Fixed `join_domain` and `unjoin_domain` for Windows
- **PR #28666:** (*jfindlay*) define `r_data` before using it in file module
- **PR #28662:** (*cachedout*) Add note about disabling `master_alive_interval`
- **PR #28627:** (*twangboy*) Backport `win_useradd`
- **PR #28617:** (*cachedout*) Set restrictive `umask` on module sync
- **PR #28622:** (*gravyboat*) Update puppet module wording

- **PR #28563:** (*s0undt3ch*) [2015.5] Update to latest bootstrap script v2015.11.04
- **PR #28541:** (*twangboy*) Fixed problem with `system.set_computer_name`
- **PR #28537:** (*jfindlay*) decode filename to utf-8 in `file.recurse` state
- **PR #28529:** (*rallytime*) Update contributing and documentation pages to recommend submitting against branches
- **PR #28548:** (*nmadhok*) [Backport] [2015.5] Tasks can be in queued state instead of running
- **PR #28531:** (*rallytime*) Add versionadded directives to `virtualenv_mod` state/module
- **PR #28508:** (*twangboy*) Fixed windows tests
- **PR #28525:** (*rallytime*) Fix spacing in doc examples for `boto_route53` state and module
- **PR #28517:** (*rallytime*) Add `state_auto_order` defaults to True note to ordering docs
- **PR #28512:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR #28448:** (*gwaters*) added a note to the tutorial for redhat derivatives
- **PR #28406:** (*rallytime*) Back-port #28381 to 2015.5
- **PR #28413:** (*rallytime*) Back-port #28400 to 2015.5
- **PR #28366:** (*erchn*) mark repo not enabled when `pkgrepo` state passes in `disable: True`
- **PR #28373:** (*beverlcl*) Fixing bug #28372 for `use_carrier` option on bonding network interfaces.
- **PR #28359:** (*rallytime*) Back-port #28358 to 2015.5
- **PR #28346:** (*twangboy*) Fix installer
- **PR #28315:** (*gwaters*) Adding a working example of setting pillar data on the cli
- **PR #28211:** (*terminalmage*) Fix for `ext_pillar` being compiled twice in legacy `git_pillar` code (2015.5 branch)
- **PR #28263:** (*cachedout*) New channel for `event.send`
- **PR #28293:** (*cachedout*) Minor grammar changes
- **PR #28271:** (*gwaters*) Update tutorial documentation
- **PR #28280:** (*0xf10e*) Correct Jinja function `load_*` to `import_*`
- **PR #28255:** (*cachedout*) Add `__cli` opt
- **PR #28213:** (*rallytime*) If record returned None, don't continue with the state. Something went wrong
- **PR #28238:** (*basepi*) [2015.5] Fix `schedule.present` always diffing
- **PR #28174:** (*lorenghordon*) Add support for multiline regex in `file.replace`
- **PR #28175:** (*twangboy*) Fixes #19673
- **PR #28140:** (*rallytime*) Add OpenBSD installation documentation to 2015.5 branch
- **PR #28138:** (*rallytime*) Back-port #28130 EC2 Sizes Only portion to 2015.5
- **PR #28097:** (*jacksonjtj*) For all multi-part messages, check the headers. If the header is not ...
- **PR #28117:** (*rallytime*) Clean up stacktrace when master can't be reached in `lxc` cloud driver
- **PR #28110:** (*terminalmage*) Add explanation of `file_client: local` setting masterless mode
- **PR #28109:** (*rallytime*) Add created reactor event to `lxc` cloud driver
- **PR #27996:** (*rallytime*) Don't fail if pip package is already present and pip1 is installed

- PR #28056: (*rallytime*) Back-port #28033 to 2015.5
- PR #28059: (*rallytime*) Back-port #28040 to 2015.5
- PR #28047: (*cachedout*) Restore FTP functionality to file client
- PR #28032: (*twangboy*) Fixed win\_path.py
- PR #28037: (*rallytime*) Back-port #28003 to 2015.5
- PR #28031: (*jacobhammons*) Updated release notes with additional CVE information
- PR #28008: (*jfindlay*) platform independent line endings in hosts mod
- PR #28012: (*rallytime*) Clean up stack trace when something goes wrong with minion output
- PR #27995: (*jacobhammons*) added link to grains security FAQ to targeting and pillar topics.
- PR #27986: (*jacobhammons*) Changed current release to 5.6 and added CVE to release notes
- PR #27913: (*pass-by-value*) Set default
- PR #27876: (*terminalmage*) 2015.5 branch: Fix traceback when 2015.8 git ext\_pillar config schema used
- PR #27726: (*jfindlay*) deprecate hash\_hostname in favor of hash\_known\_hosts
- PR #27776: (*jfindlay*) return message when local jobs\_cache not found
- PR #27766: (*jfindlay*) better check for debian userdel error
- PR #27758: (*iggy*) Remove redundant text from syslog returner
- PR #27841: (*terminalmage*) Detect Manjaro Linux as Arch derivative
- PR #27852: (*rallytime*) Back-port #27806 to 2015.5
- PR #27838: (*basepi*) [2015.5] Fix highstate outputter for jobs.lookup\_jid
- PR #27791: (*eguwen*) 2015.5 postgres\_user groups backport
- PR #27759: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- PR #27732: (*jacobhammons*) update docs for \_\_virtual\_\_ and \_\_virtualname\_\_
- PR #27747: (*Sacro*) Chocolatey doesn't have a help command.
- PR #27733: (*jacobhammons*) hardening topic - updates to docs.saltstack.com theme
- PR #27706: (*jacobhammons*) Assorted doc bugs
- PR #27695: (*rallytime*) Back-port #27671 to 2015.5
- PR #27524: (*jfindlay*) parse pkgng output in quiet mode for >= 1.6.1
- PR #27686: (*rallytime*) Back-port #27476 to 2015.5
- PR #27684: (*rallytime*) Back-port #27656 to 2015.5
- PR #27683: (*rallytime*) Back-port #27659 to 2015.5
- PR #27682: (*rallytime*) Back-port #27566 to 2015.5
- PR #27681: (*rallytime*) Back-port #25928 to 2015.5
- PR #27680: (*rallytime*) Back-port #27535 to 2015.5
- PR #27442: (*JaseFace*) Ensure we pass on the enable setting if present, or use the default of True if not in build\_schedule\_item()
- PR #27641: (*rallytime*) Gate the psutil import and add depends doc for diskusage beacon

- **PR #27644:** (*rallytime*) Back-port #27640 to 2015.5
- **PR #27612:** (*rallytime*) Fix GCE external\_ip stacktraces in 2015.5
- **PR #27568:** (*jacobhammons*) regenerated man pages

## 20.2.49 Salt 2015.5.8 Release Notes

### Security Fix

CVE-2015-8034: Saving `state.sls` cache data to disk with insecure permissions

This affects users of the `state.sls` function. The state run cache on the minion was being created with incorrect permissions. This file could potentially contain sensitive data that was inserted via jinja into the state SLS files. The permissions for this file are now being set correctly. Thanks to @zmalone for bringing this issue to our attention.

Total Merges: **118**

Changes:

- **PR #29128:** (*cachedout*) Set a safer default value for `ret` in saltmod
- **PR #29122:** (*cachedout*) Fix broken state orchestration
- **PR #29096:** (*rallytime*) Back-port #29093 to 2015.5
- **PR #29084:** (*rallytime*) Back-port #29055 to 2015.5
- **PR #29083:** (*rallytime*) Back-port #29053 to 2015.5
- **PR #28932:** (*twangboy*) Fixed `user.present` / `user.absent` in windows
- **PR #29011:** (*rallytime*) Back-port #28630 to 2015.5
- **PR #28982:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR #28949:** (*whiteinge*) Add `sync_sdb` execution function
- **PR #28930:** (*twangboy*) Added missing import `mmap` required by `file.py`
- **PR #28908:** (*rallytime*) A couple of spelling fixes for doc conventions page.
- **PR #28902:** (*whiteinge*) Fix missing JSON support for `/keys` endpoint
- **PR #28897:** (*rallytime*) Back-port #28873 to 2015.5
- **PR #28871:** (*basepi*) [2015.5] Fix command generation for `mdadm.assemble`
- **PR #28864:** (*jfindlay*) add 2015.5.7 release notes
- **PR #28731:** (*garethgreenaway*) Fixes to salt scheduler in 2015.5, ensuring that `return_job` is only used on minion scheduler
- **PR #28857:** (*rallytime*) Back-port #28851 to 2015.5
- **PR #28856:** (*rallytime*) Back-port #28853 to 2015.5
- **PR #28832:** (*basepi*) [2015.5] Backport #28826

- **PR #28833:** (*basepi*) [2015.5] Increase the default `gather_job_timeout`
- **PR #28829:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR #28756:** (*MrCitron*) Fix #25775
- **PR #28786:** (*chrigl*) closes #28783
- **PR #28776:** (*rallytime*) Back-port #28740 to 2015.5
- **PR #28760:** (*dmyerscough*) Fixing CherryPy key bug
- **PR #28746:** (*rallytime*) Back-port #28718 to 2015.5
- **PR #28705:** (*cachedout*) Account for new headers class in tornado 4.3
- **PR #28699:** (*rallytime*) Back-port #28670 to 2015.5
- **PR #28703:** (*rallytime*) Back-port #28690 to 2015.5
- **PR #28694:** (*s0undt3ch*) [2015.5] Update to latest bootstrap script v2015.11.09
- **PR #28669:** (*rallytime*) Use the `-q` argument to strip extraneous messages from rabbitmq
- **PR #28645:** (*jackson tj*) Rework minion `return_retry_timer`
- **PR #28668:** (*twangboy*) Fixed `join_domain` and `unjoin_domain` for Windows
- **PR #28666:** (*jfindlay*) define `r_data` before using it in file module
- **PR #28662:** (*cachedout*) Add note about disabling `master_alive_interval`
- **PR #28627:** (*twangboy*) Backport `win_useradd`
- **PR #28617:** (*cachedout*) Set restrictive `umask` on module `sync`
- **PR #28622:** (*gravyboat*) Update puppet module wording
- **PR #28563:** (*s0undt3ch*) [2015.5] Update to latest bootstrap script v2015.11.04
- **PR #28541:** (*twangboy*) Fixed problem with `system.set_computer_name`
- **PR #28537:** (*jfindlay*) decode filename to utf-8 in `file.recurse` state
- **PR #28529:** (*rallytime*) Update contributing and documentation pages to recommend submitting against branches
- **PR #28548:** (*nmadhok*) [Backport] [2015.5] Tasks can be in `queued` state instead of `running`
- **PR #28531:** (*rallytime*) Add `versionadded` directives to `virtualenv_mod` state/module
- **PR #28508:** (*twangboy*) Fixed windows tests
- **PR #28525:** (*rallytime*) Fix spacing in doc examples for `boto_route53` state and module

- **PR #27612:** (*rallytime*) Fix GCE external\_ip stacktraces in 2015.5
- **PR #27568:** (*jacobhammons*) regenerated man pages

### 20.2.50 Salt 2015.5.9 Release Notes

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Generated at: 2016-01-08T23:02:31Z

Total Merges: 44

Changes:

- **PR #30237:** (*jacobhammons*) Updated man pages and doc version for 2015.5.9
- **PR #30207:** (*rallytime*) Use correct spacing in rabbitmq state examples
- **PR #30191:** (*jacobhammons*) Updated doc site banners
- **PR #30125:** (*abednarik*) Update user home event when createhome is set to False
- **PR #30127:** (*jsutton*) Updating documentation and example minion config for `random_master/master_shuffle`.
- **PR #30110:** (*markckimball*) Fixed flag sent to `salt.utils.http` in order for `verify_ssl` to work correctly
- **PR #30093:** (*zmalone*) Noting that `file_roots` and `state tree` should both be avoided
- **PR #30097:** (*cachedout*) Note concern about cleartext password in docs for `shadow.gen_password`

- **PR #30089:** (*mpreziuso*) Fixes terminology and adds more accurate details about the algorithms
- **PR #30086:** (*cachedout*) Document that gitfs needs recent libs
- **PR #30070:** (*cachedout*) Add documentation on debugging salt-ssh
- **PR #30059:** (*mpreziuso*) Fixes wrong function scope
- **PR #30025:** (*jtand*) Skipping some Boto tests until resolved moto issue
- **PR #29949:** (*aletourneau*) Enhanced netScaler docstring
- **PR #29941:** (*cachedout*) Fix spelling error in boto\_vpc
- **PR #29908:** (*cachedout*) Allow kwargs to be passed to pacman provide for update func
- **PR #29909:** (*abednarik*) FreeBSD pkgng fix for non-interactive install.
- **PR #29730:** (*rallytime*) Update docker-py version requirement to 0.6.0 for dockerio.py files
- **PR #29715:** (*rallytime*) Install correct package version, if provided, for npm state.
- **PR #29721:** (*terminalmage*) Fix display of multiline strings when iterating over a list
- **PR #29646:** (*rallytime*) Don't stacktrace on kwargs.get if kwargs=None
- **PR #29673:** (*rallytime*) Default value should be False and not `False`
- **PR #29527:** (*jfindlay*) 2015.5.7 notes: add note about not being released
- **PR #29539:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR #29504:** (*rallytime*) Document userdata\_file option for EC2 driver
- **PR #29507:** (*rallytime*) Switch volumes and del\_\*\_on\_destroy example ordering
- **PR #29469:** (*abednarik*) Added Documentation note in salt cloud.
- **PR #29461:** (*dmyerscough*) Fix resource limits, systemd sets the default too small
- **PR #29439:** (*rallytime*) Back-port #28656 to 2015.5
- **PR #29418:** (*jacobhammons*) Added CVE 2015-8034 to 2015.5.8 release notes
- **PR #29389:** (*jacobhammons*) updated version numbers in documentation
- **PR #28501:** (*twangboy*) Requested fixes for 26898
- **PR #29348:** (*jtand*) Fixes an file.search on python2.6
- **PR #29336:** (*rallytime*) Back-port #29276 to 2015.5
- **PR #29333:** (*rallytime*) Back-port #29280 to 2015.5
- **PR #29316:** (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR #29216:** (*clan*) size is 0 doesn't mean no data, e.g, /proc/version
- **PR #29261:** (*attiasr*) fix incorrect reinstallation of windows pkg
- **PR #29214:** (*cro*) Doc for salt.utils.http should say verify\_ssl not ssl\_verify.
- **PR #29204:** (*lorenegordon*) Use os.path.join to return full path to ca bundle

## 20.2.51 Salt 2014.7.0 Release Notes - Codename Helium

This release is the largest Salt release ever, with more features and commits than any previous release of Salt. Everything from the new RAET transport to major updates in Salt Cloud and the merging of Salt API into the main project.

---

**Important:** The Fedora/RHEL/CentOS **salt-master** package has been modified for this release. The following components of Salt have been broken out and placed into their own packages:

- salt-syndic
- salt-cloud
- salt-ssh

When the **salt-master** package is upgraded, these components will be removed, and they will need to be manually installed.

---

**Important:** Compound/pillar matching have been temporarily disabled for the `mine` and `publish` modules for this release due to the possibility of inferring pillar data using pillar glob matching. A proper fix is now in the 2014.7 branch and scheduled for the 2014.7.1 release, and compound matching and non-globbering pillar matching will be re-enabled at that point.

Compound and pillar matching for normal salt commands are unaffected.

---

### New Transport!

#### RAET Transport Option

This has been a HUGE amount of work, but the beta release of Salt with RAET is ready to go. RAET is a reliable queuing transport system that has been developed in partnership with a number of large enterprises to give Salt an alternative to ZeroMQ and a way to get Salt to scale well beyond tens of thousands of servers. Unlike ZeroMQ, RAET is completely asynchronous in every aspect of its operation and has been developed using the flow programming paradigm. This allows for many new capabilities to be added to Salt in the upcoming releases.

Please keep in mind that this is a beta release of RAET and we hope for bugs to be worked out, performance to be better realized and more in the 2015.5.0 release.

Simply stated, users running Salt with RAET should expect some hiccups as we hammer out the update. This is a BETA release of Salt RAET.

For information about how to use Salt with RAET please see the [tutorial](#).

#### Salt SSH Enhancements

Salt SSH has just entered a new league, with substantial updates and improvements to make salt-ssh more reliable and easier than ever! From new features like the ansible roster and fileserver backends to the new pypi salt-ssh installer to lowered deps and a swath of bugfixes, salt-ssh is basically reborn!

#### Install salt-ssh Using pip

Salt-ssh is now pip-installable!

<https://pypi.python.org/pypi/salt-ssh/>

Pip will bring in all of the required deps, and while some deps are compiled, they all include pure python implementations, meaning that any compile errors which may be seen can be safely ignored.

```
pip install salt-ssh
```

### Fileserver Backends

Salt-ssh can now use the salt fileserver backend system. This allows for the gitfs, hgfs, s3, and many more ways to centrally store states to be easily used with salt-ssh. This also allows for a distributed team to easily use a centralized source.

### Saltfile Support

The new saltfile system makes it easy to have a user specific custom extended configuration.

### Ext Pillar

Salt-ssh can now use the external pillar system. Making it easier then ever to use salt-ssh with teams.

### No More sshpass

Thanks to the enhancements in the salt vt system, salt-ssh no longer requires sshpass to send passwords to ssh. This also makes the manipulation of ssh calls substantially more flexible, allowing for intercepting ssh calls in a much more fluid way.

### Pure Python Shim

The salt-ssh call originally used a shell script to discover what version of python to execute with and determine the state of the ssh code deployment. This shell script has been replaced with a pure python version making it easy to increase the capability of the code deployment without causing platform inconsistency issues with different shell interpreters.

### Custom Module Delivery

Custom modules are now seamlessly delivered. This makes the deployment of custom grains, states, execution modules and returners a seamless process.

### CP Module Support

Salt-ssh now makes simple file transfers easier then ever! The *cp* module allows for files to be conveniently sent from the salt fileserver system down to systems.

## More Thin Directory Options

Salt ssh functions by copying a subset of the salt code, or *salt thin* down to the target system. In the past this was always transferred to `/tmp/.salt` and cached there for subsequent commands.

Now, salt thin can be sent to a random directory and removed when the call is complete with the `-W` option. The new `-W` option still uses a static location but will clean up that location when finished.

The default *salt thin* location is now user defined, allowing multiple users to cleanly access the same systems.

## State System Enhancements

### New Imperative State Keyword ``Listen''

The new `listen` and `listen_in` keywords allow for completely imperative states by calling the `mod_watch()` routine after all states have run instead of re-ordering the states.

### Mod Aggregate Runtime Manipulator

The new `mod_aggregate` system allows for the state system to rewrite the state data during execution. This allows for state definitions to be aggregated dynamically at runtime.

The best example is found in the *pkg* state. If `mod_aggregate` is turned on, then when the first `pkg` state is reached, the state system will scan all of the other running states for `pkg` states and take all other packages set for `install` and `install` them all at once in the first `pkg` state.

These runtime modifications make it easy to run groups of states together. In future versions, we hope to fill out the `mod_aggregate` system to build in more and more optimizations.

For more documentation on `mod_aggregate`, see [the documentation](#).

### New Requisites: `onchanges` and `onfail`

The new `onchanges` and `onchanges_in` requisites make a state apply only if there are changes in the required state. This is useful to execute post hooks after changes occur on a system.

The other new requisites, `onfail`, and `onfail_in`, allow for a state to run in reaction to the failure of another state.

For more information about these new requisites, see the [requisites documentation](#).

### Global `onlyif` and `unless`

The `onlyif` and `unless` options can now be used for any state declaration.

### Use `names` to expand and override values

The *names declaration* in Salt's state system can now override or add values to the expanded data structure. For example:

```
my_users:
  user.present:
    - names:
      - larry
      - curly
      - moe:
        - shell: /bin/zsh
        - groups:
          - wheel
    - shell: /bin/bash
```

## Major Features

### Scheduler Additions

The Salt scheduler system has received MAJOR enhancements, allowing for cron-like scheduling and much more granular timing routines. See [here](#) for more info.

### Red Hat 7 Family Support

All the needed additions have been made to run Salt on RHEL 7 and derived OSes like CentOS and Scientific.

### Fileserver Backends in salt-call

Fileserver backends like gitfs can now be used without a salt master! Just add the fileserver backend configuration to the minion config and execute salt-call. This has been a much-requested feature and we are happy to finally bring it to our users.

### Amazon Execution Modules

An entire family of execution modules further enhancing Salt's Amazon Cloud support. They include the following:

- *Autoscale Groups* (includes *state support*) -- related: *Launch Control* states
- *Cloud Watch* (includes *state support*)
- *Elastic Cache* (includes *state support*)
- *Elastic Load Balancer* (includes *state support*)
- *IAM Identity and Access Management* (includes *state support*)
- *Route53 DNS* (includes *state support*)
- *Security Groups* (includes *state support*)
- *Simple Queue Service* (includes *state support*)

### LXC Runner Enhancements

BETA The Salt LXC management system has received a number of enhancements which make running an LXC cloud entirely from Salt an easy proposition.

### Next Gen Docker Management

The Docker support in Salt has been increased at least ten fold. The Docker API is now completely exposed and Salt ships with Docker data tracking systems which make automating Docker deployments very easy.

### Peer System Performance Improvements

The peer system communication routines have been refined to make the peer system substantially faster.

### SDB

Encryption at rest for configs

### GPG Renderer

Encrypted pillar at rest

### OpenStack Expansion

Lots of new OpenStack stuff

### Queues System

Ran change external queue systems into Salt events

### Multi Master Failover Additions

Connecting to multiple masters is more dynamic then ever

### Chef Execution Module

Managing Chef with Salt just got even easier!

### salt-api Project Merge

The `salt-api` project has been merged into Salt core and is now available as part of the regular `salt-master` package install. No API changes were made, the `salt-api` script and init scripts remain intact.

`salt-api` has always provided Yet Another Pluggable Interface to Salt (TM) in the form of `netapi` modules. These are modules that bind to a port and start a service. Like many of Salt's other module types, `netapi` modules often have library and configuration dependencies. See the documentation for each module for instructions.

#### See also:

*The full list of netapi modules.*

## Synchronous and Asynchronous Execution of Runner and Wheel Modules

`salt.runner.RunnerClient` and `salt.wheel.WheelClient` have both gained complimentary `cmd_sync` and `cmd_async` methods allowing for synchronous and asynchronous execution of any Runner or Wheel module function, all protected using Salt's *external authentication* system. `salt-api` benefits from this addition as well.

## rest\_cherryypy Additions

The `rest_cherryypy` netapi module provides the main REST API for Salt.

## Web Hooks

This release of course includes the Web Hook additions from the most recent `salt-api` release, which allows external services to signal actions within a Salt infrastructure. External services such as Amazon SNS, Travis-CI, or GitHub, as well as internal services that cannot or should not run a Salt minion daemon can be used as first-class components in Salt's rich orchestration capabilities.

The raw HTTP request body is now available in the event data. This is sometimes required information for checking an HMAC signature in order to verify a HTTP request. As an example, Amazon or GitHub requests are signed this way.

## Generating and Accepting Minion Keys

The `/key` convenience URL generates a public and private key for a minion, automatically pre-accepts the public key on the Salt Master, and returns both keys as a tarball for download.

This allows for easily bootstrapping the key on a new minion with a single HTTP call, such as with a Kickstart script, all using regular shell tools.

```
curl -sS http://salt-api.example.com:8000/keys \  
  -d mid=jerry \  
  -d username=kickstart \  
  -d password=kickstart \  
  -d eauth=pam \  
  -o jerry-salt-keys.tar
```

## Fileserver Backend Enhancements

All of the fileserver backends have been overhauled to be faster, lighter, and more reliable. The VCS backends (`gitfs`, `hgfs`, and `svnfs`) have also received a **lot** of new features.

Additionally, most config parameters for the VCS backends can now be configured on a per-remote basis, allowing for global config parameters to be overridden for a specific `gitfs`/`hgfs`/`svnfs` remote.

## New **gitfs** Features

### Pygit2 and Dulwich

In addition to supporting GitPython, support for `pygit2` (0.20.3 and newer) and `dulwich` have been added. Provided a compatible version of `pygit2` is installed, it will now be the default provider. The config parameter `gitfs_provider` has been added to allow one to choose a specific provider for gitfs.

### Mountpoints

Prior to this release, to serve a file from gitfs at a salt fileserver URL of `salt://foo/bar/baz.txt`, it was necessary to ensure that the parent directories existed in the repository. A new config parameter `gitfs_mountpoint` allows gitfs remotes to be exposed starting at a user-defined `salt://` URL.

### Environment Whitelisting/Blacklisting

By default, gitfs will expose all branches and tags as Salt fileserver environments. Two new config parameters, `gitfs_env_whitelist`, and `gitfs_env_blacklist`, allow more control over which branches and tags are exposed. More detailed information on how these two options work can be found in the *Gitfs Walkthrough*.

### Expanded Authentication Support

As of `pygit2` 0.20.3, both http(s) and SSH key authentication are supported, and Salt now also supports both authentication methods when using `pygit2`. Keep in mind that `pygit2` 0.20.3 is not yet available on many platforms, so those who had been using authenticated git repositories with a passphraseless key should stick to GitPython if a new enough `pygit2` is not yet available for the platform on which the master is running.

A full explanation of how to use authentication can be found in the *Gitfs Walkthrough*.

## New **hgfs** Features

### Mountpoints

This feature works exactly like its *gitfs counterpart*. The new config parameter is called `hgfs_mountpoint`.

### Environment Whitelisting/Blacklisting

This feature works exactly like its *gitfs counterpart*. The new config parameters are called `hgfs_env_whitelist` and `hgfs_env_blacklist`.

## New **svnfs** Features

### Mountpoints

This feature works exactly like its *gitfs counterpart*. The new config parameter is called `svnfs_mountpoint`.

## Environment Whitelisting/Blacklisting

This feature works exactly like its *gitfs counterpart*. The new config parameters are called *svnfs\_env\_whitelist* and *svnfs\_env\_blacklist*.

## Configurable Trunk/Branches/Tags Paths

Prior to this release, the paths where trunk, branches, and tags were located could only be in directories named ``trunk``, ``branches``, and ``tags`` directly under the root of the repository. Three new config parameters (*svnfs\_trunk*, *svnfs\_branches*, and *svnfs\_tags*) allow SVN repositories which are laid out differently to be used with svnfs.

## New minionfs Features

### Mountpoint

This feature works exactly like its *gitfs counterpart*. The new config parameter is called *minionfs\_mountpoint*. The one major difference is that, as minionfs doesn't use multiple remotes (it just serves up files pushed to the master using *cp.push*) there is no such thing as a per-remote configuration for *minionfs\_mountpoint*.

### Changing the Saltenv from Which Files are Served

A new config parameter (*minionfs\_env*) allows minionfs files to be served from a Salt fileserver environment other than base.

### Minion Whitelisting/Blacklisting

By default, minionfs will expose the pushed files from all minions. Two new config parameters, *minionfs\_whitelist*, and *minionfs\_blacklist*, allow minionfs to be restricted to serve files from only the desired minions.

### Pyobjects Renderer

Salt now ships with with the *Pyobjects Renderer* that allows for construction of States using pure Python with an idiomatic object interface.

### New Modules

In addition to the Amazon modules mentioned above, there are also several other new execution modules:

- *Oracle*
- *Random*
- *Redis*
- *Amazon Simple Queue Service*
- *Block Device Management*
- *CoreOS etcd*

- *Genesis*
- *InfluxDB*
- *Server Density*
- *Twilio Notifications*
- *Varnish*
- *ZNC IRC Bouncer*
- *SMTP*

### New Runners

- *Map/Reduce Style*
- *Queue*

### New External Pillars

- *CoreOS etcd*

### New Salt-Cloud Providers

- Aliyun ECS Cloud
- LXC Containers
- Proxmox (OpenVZ containers & KVM)

### Salt Call Change

When used with a returner, salt-call now contacts a master if `--local` is not specified.

### Deprecations

#### **salt.modules.virtualenv\_mod**

- Removed deprecated memoize function from salt/utils/\_\_init\_\_.py (deprecated)
- Removed deprecated no\_site\_packages argument from create function (deprecated)
- Removed deprecated check\_dns argument from minion\_config and apply\_minion\_config functions (deprecated)
- Removed deprecated OutputOptionsWithTextMixin class from salt/utils/parsers.py (deprecated)
- Removed the following deprecated functions from salt/modules/ps.py: - physical\_memory\_usage (deprecated) - virtual\_memory\_usage (deprecated) - cached\_physical\_memory (deprecated) - physical\_memory\_buffers (deprecated)
- Removed deprecated cloud arguments from cloud\_config function in salt/config.py: - vm\_config (deprecated) - vm\_config\_path (deprecated)

- Removed deprecated `libcloud_version` function from `salt/cloud/libcloudfuncs.py` (deprecated)
- Removed deprecated `CloudConfigMixin` class from `salt/utils/parsers.py` (deprecated)

### 20.2.52 Salt 2014.7.1 Release Notes

`release` 2015-01-12

Version 2014.7.1 is a bugfix release for [2014.7.0](#).

The changes include:

- Fixed gitfs serving symlinks in `file.recurse` states ([issue 17700](#))
- Fixed holding of multiple packages (YUM) when combined with version pinning ([issue 18468](#))
- Fixed use of Jinja templates in masterless mode with non-roots fileserver backend ([issue 17963](#))
- Re-enabled pillar and compound matching for mine and publish calls. Note that pillar globbing is still disabled for those modes, for security reasons. ([issue 17194](#))
- Fix for `tty: True` in salt-ssh ([issue 16847](#))
- Fix for supervisor states when supervisor not installed to system python ([issue 18044](#))
- Fix for logging when `log_level= 'quiet'` for `cmd.run` ([issue 19479](#))

### 20.2.53 Salt 2014.7.2 Release Notes

`release` 2015-02-09

Version 2014.7.2 is a bugfix release for [2014.7.0](#).

The changes include:

- Fix erroneous warnings for systemd service enabled check ([issue 19606](#))
- Fix FreeBSD kernel module loading, listing, and persistence `kmod` ([issue 197151](#), [issue 19682](#))
- Allow case-sensitive npm package names in the `npm state`. This may break behavior for people expecting the state to lowercase their npm package names for them. The `npm module` was never affected by mandatory lowercasing. ([issue 20329](#))
- Deprecate the `activate` parameter for `pip.install` for both the `module` and the `state`. If `bin_env` is given and points to a virtualenv, there is no need to activate that virtualenv in a shell for pip to install to the virtualenv.
- Fix a file-locking bug in gitfs ([issue 18839](#))
- Deprecate `archive_user` in favor of standardized `user` parameter in `state` and added `group` parameter.

### 20.2.54 Salt 2014.7.3 Release Notes

`release` TBA

Version 2014.7.3 is a bugfix release for [2014.7.0](#).

Changes:

- Multi-master minions mode no longer route fileclient operations asymmetrically. This fixes the source of many multi-master bugs where the minion would become unresponsive from one or more masters.
- Fix bug wherein network.iface could produce stack traces.
- net.arp will no longer be made available unless arp is installed on the system.
- Major performance improvements to Saltnado
- Allow KVM module to operate under KVM itself or VMware Fusion
- Various fixes to the Windows installation scripts
- Fix issue where the syndic would not correctly propagate loads to the master job cache.
- Improve error handling on invalid /etc/network/interfaces file in salt networking modules
- Fix bug where a response status was not checked for in fileclient.get\_url
- Enable eauth when running salt in batch mode
- Increase timeout in Boto Route53 module
- Fix bugs with Salt's 'tar' module option parsing
- Fix parsing of NTP servers on Windows
- Fix issue with blockdev tuning not reporting changes correctly
- Update to the latest Salt bootstrap script
- Update Linode salt-cloud driver to use either linode-python or apache-libcloud
- Fix for s3.query function to return correct headers
- Fix for s3.head returning None for files that exist
- Fix the disable function in win\_service module so that the service is disabled correctly
- Fix race condition between master and minion when making a directory when both daemons are on the same host
- Fix an issue where file.recurse would fail at the root of an svn repo when the repo has a mountpoint
- Fix an issue where file.recurse would fail at the root of an hgfs repo when the repo has a mountpoint
- Fix an issue where file.recurse would fail at the root of an gitfs repo when the repo has a mountpoint
- Add status.master capability for Windows.
- Various fixes to ssh\_known\_hosts
- Various fixes to states.network bonding for Debian
- The debian\_ip.get\_interfaces module no longer removes nameservers.
- Better integration between grains.virtual and systemd-detect-virt and virt-what
- Fix traceback in sysctl.present state output
- Fix for issue where mount.mounted would fail when superopts were not a part of mount.active (extended=True). Also mount.mounted various fixes for Solaris and FreeBSD.
- Fix error where datetimes were not correctly safeguarded before being passed into msgpack.
- Fix file.replace regressions. If the pattern is not found, and if dry run is False, and if *backup* is False, and if a pre-existing file exists with extension *.bak*, then that backup file will be overwritten. This backup behavior is a result of how *fileinput* works. Fixing it requires either passing through the file twice (the first time only to search for content and set a flag), or rewriting *file.replace* so it doesn't use *fileinput*

- VCS filreserver fixes/optimizations
- Catch fileserver configuration errors on master start
- Raise errors on invalid gitfs configurations
- set\_locale when locale file does not exist (Redhat family)
- Fix to correctly count active devices when created mdadm array with spares
- Fix to correctly target minions in batch mode
- Support ssh:// urls using the gitfs dulwich backend
- New fileserver runner
- Fix various bugs with argument parsing to the publish module.
- Fix disk.usage for Synology OS
- Fix issue with tags occurring twice with docker.pulled
- Fix incorrect key error in SMTP returner
- Fix condition which would remount loopback filesystems on every state run
- Remove requisites from listens after they are called in the state system
- Make system implementation of service.running aware of legacy service calls
- Fix issue where publish.publish would not handle duplicate responses gracefully.
- Accept Kali Linux for aptpkg salt execution module
- Fix bug where cmd.which could not handle a dirname as an argument
- Fix issue in ps.pgrep where exceptions were thrown on Windows.

#### Known issues:

- In multimaster mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting ``auth_timeout`` and ``auth_tries`` down to shorter periods.

## 20.2.55 Salt 2014.7.4 Release Notes

release 2015-03-30

Version 2014.7.4 is a bugfix release for [2014.7.0](#).

This is a security release. The security issues fixed have only been present since 2014.7.0, and only users of the two listed modules are vulnerable. The following CVEs have been resolved:

- CVE-2015-1838 SaltStack: insecure /tmp file handling in salt/modules/serverdensity\_device.py
- CVE-2015-1839 SaltStack: insecure /tmp file handling in salt/modules/chef.py

#### Changes:

- Multi-master minions mode no longer route fileclient operations asymmetrically. This fixes the source of many multi-master bugs where the minion would become unresponsive from one or more masters.
- Fix bug wherein network.iface could produce stack traces.
- net.arp will no longer be made available unless arp is installed on the system.
- Major performance improvements to Saltnado

- Allow KVM module to operate under KVM itself or VMware Fusion
- Various fixes to the Windows installation scripts
- Fix issue where the syndic would not correctly propagate loads to the master job cache.
- Improve error handling on invalid `/etc/network/interfaces` file in salt networking modules
- Fix bug where a response status was not checked for in `fileclient.get_url`
- Enable eauth when running salt in batch mode
- Increase timeout in Boto Route53 module
- Fix bugs with Salt's `'tar'` module option parsing
- Fix parsing of NTP servers on Windows
- Fix issue with blockdev tuning not reporting changes correctly
- Update to the latest Salt bootstrap script
- Update Linode salt-cloud driver to use either `linode-python` or `apache-libcloud`
- Fix for `s3.query` function to return correct headers
- Fix for `s3.head` returning `None` for files that exist
- Fix the `disable` function in `win_service` module so that the service is disabled correctly
- Fix race condition between master and minion when making a directory when both daemons are on the same host
- Fix an issue where `file.recurse` would fail at the root of an svn repo when the repo has a mountpoint
- Fix an issue where `file.recurse` would fail at the root of an hgfs repo when the repo has a mountpoint
- Fix an issue where `file.recurse` would fail at the root of an gitfs repo when the repo has a mountpoint
- Add `status.master` capability for Windows.
- Various fixes to `ssh_known_hosts`
- Various fixes to `states.network` bonding for Debian
- The `debian_ip.get_interfaces` module no longer removes nameservers.
- Better integration between `grains.virtual` and `systemd-detect-virt` and `virt-what`
- Fix traceback in `sysctl.present` state output
- Fix for issue where `mount.mounted` would fail when `superopts` were not a part of `mount.active` (`extended=True`). Also `mount.mounted` various fixes for Solaris and FreeBSD.
- Fix error where datetimes were not correctly safeguarded before being passed into `msgpack`.
- Fix `file.replace` regressions. If the pattern is not found, and if `dry run` is `False`, and if `backup` is `False`, and if a pre-existing file exists with extension `.bak`, then that backup file will be overwritten. This backup behavior is a result of how `fileinput` works. Fixing it requires either passing through the file twice (the first time only to search for content and set a flag), or rewriting `file.replace` so it doesn't use `fileinput`
- VCS filreserver fixes/optimizations
- Catch filserver configuration errors on master start
- Raise errors on invalid gitfs configurations
- `set_locale` when locale file does not exist (Redhat family)
- Fix to correctly count active devices when created `mdadm` array with spares

- Fix to correctly target minions in batch mode
- Support ssh:// urls using the gitfs dulwich backend
- New fileserver runner
- Fix various bugs with argument parsing to the publish module.
- Fix disk.usage for Synology OS
- Fix issue with tags occurring twice with docker.pulled
- Fix incorrect key error in SMTP returner
- Fix condition which would remount loopback filesystems on every state run
- Remove requisites from listens after they are called in the state system
- Make system implementation of service.running aware of legacy service calls
- Fix issue where publish.publish would not handle duplicate responses gracefully.
- Accept Kali Linux for aptpkg salt execution module
- Fix bug where cmd.which could not handle a dirname as an argument
- Fix issue in ps.pgrep where exceptions were thrown on Windows.

#### Known issues:

- In multimaster mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting ``auth_timeout'` and ``auth_tries'` down to shorter periods.
- There are known issues with batch mode operating on the incorrect number of minions. This bug can be patched with the change in [Pull Request #22464](#).
- The *fun*, *state*, and *unless* keywords are missing from the state internals, which can cause problems running some states. This bug can be patched with the change in [Pull Request #22365](#).

## 20.2.56 Salt 2014.7.5 Release Notes

release 2015-04-16

Version 2014.7.5 is a bugfix release for [2014.7.0](#).

#### Changes:

- Fixed a key error bug in salt-cloud
- Updated man pages to better match documentation
- Fixed bug concerning high CPU usage with salt-ssh
- Fixed bugs with remounting cvfs and fuse filesystems
- Fixed bug with allowing requisite tracking of entire sls files
- Fixed bug with aptpkg.mod\_repo returning OK even if apt-add-repository fails
- Increased frequency of ssh terminal output checking
- Fixed malformed locale string in localmod module
- Fixed checking of available version of package when accept\_keywords were changed
- Fixed bug to make git.latest work with empty repositories

- Added `**kwargs` to `service.mod_watch` which removes warnings about `enable` and `__reqs__` not being supported by the function
- Improved state comments to not grow so quickly on failed requisites
- Added `force` argument to `service` to trigger `force_reload`
- Fixed bug to andle `pkgrepo` `keyids` that have been converted to `int`
- Fixed `module.portage_config` bug with appending `accept_keywords`
- Fixed bug to correctly report disk usage on windows minion
- Added the ability to specify key prefix for S3 `ext_pillar`
- Fixed issues with batch mode operating on the incorrect number of minions
- Fixed a bug with the proxmox cloud provider stacktracing on disk definition
- Fixed a bug with the `changes` dictionary in the file state
- Fixed the TCP keep alive settings to work better with SREQ caching
- Fixed many bugs within the `iptables` state and module
- Fixed bug with states by adding `fun`, `state`, and `unless` to the state runtime internal keywords listing
- Added ability to eAuth against Active Directory
- Fixed some salt-ssh issues when running on Fedora 21
- Fixed `grains.get_or_set_hash` to work with multiple entries under same key
- Added better explanations and more examples of how the Reactor calls functions to docs
- Fixed bug to not pass `ex_config_drive` to `libcloud` unless it's explicitly enabled
- Fixed bug with `pip.install` on windows
- Fixed bug where `puppet.run` always returns a 0 retcode
- Fixed race condition bug with minion scheduling via pillar
- Made efficiency improvements and bug fixes to the windows installer
- Updated environment variables to fix bug with `pygit2` when running salt as non-root user
- Fixed `cas` behavior on data module -- `data.cas` was not saving changes
- Fixed GPG rendering error
- Fixed `strace` error in `virt.query`
- Fixed `stacktrace` when running `chef-solo` command
- Fixed possible bug wherein uncaught exceptions seem to make `zmq3` tip over when threading is involved
- Fixed argument passing to the reactor
- Fixed `glibc` caching to prevent bug where `salt-minion` `getaddrinfo` in `dns_check()` never got updated name-servers

Known issues:

- In multimaster mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting ``auth_timeout`` and ``auth_tries`` down to shorter periods.

## 20.2.57 Salt 2014.7.6 Release Notes

release 2015-05-18

Version 2014.7.6 is a bugfix release for [2014.7.0](#).

This release is a security release. A minor issue was found, as cited below:

- CVE-2015-4017 -- Certificates are not verified when connecting to server in the Aliyun and Proxmox modules

Only users of the Aliyun or Proxmox cloud modules are at risk. The vulnerability does not exist in the latest 2015.5.0 release of Salt.

Changes:

- salt.runners.cloud.action() has changed the *fun* keyword argument to *func*. Please update any calls to this function in the cloud runner.

Extended Changelog Courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

- **PR #23810:** (*rallytime*) Backport #23757 to 2014.7 @ 2015-05-18T15:30:21Z
  - **PR #23757:** (*clan*) use abspath, do not eliminating symlinks | refs: #23810
  - aee00c8 Merge pull request #23810 from rallytime/bp-23757
  - fb32c32 use abspath, do not eliminating symlinks
- **PR #23809:** (*rallytime*) Fix virtualport section of virt.get\_nics loop @ 2015-05-18T15:30:09Z
  - **ISSUE #20198:** (*jcftang*) virt.get\_graphics, virt.get\_nics are broken, in turn breaking other things | refs: #23809
  - **PR #21487:** (*rallytime*) Backport #21469 to 2014.7 | refs: #23809
  - **PR #21469:** (*vdesjardins*) fixes #20198: virt.get\_graphics and virt.get\_nics calls in module virt | refs: #21487
  - 6b3352b Merge pull request #23809 from rallytime/virt\_get\_nics\_fix
  - 0616fb7 Fix virtualport section of virt.get\_nics loop
- **PR #23823:** (*gtmanfred*) add link local for ipv6 @ 2015-05-17T12:48:25Z
  - 188f03f Merge pull request #23823 from gtmanfred/2014.7
  - 5ef006d add link local for ipv6
- **PR #23802:** (*gtmanfred*) if it is ipv6 ip\_to\_int will fail @ 2015-05-16T04:06:59Z
  - **PR #23573:** (*techhat*) Scan all available networks for public and private IPs | refs: #23802
  - f3ca682 Merge pull request #23802 from gtmanfred/2014.7
  - 2da98b5 if it is ipv6 ip\_to\_int will fail
- **PR #23488:** (*cellscape*) LXC cloud fixes @ 2015-05-15T18:09:35Z
  - **ISSUE #16424:** (*stanvit*) salt-run cloud.create fails with saltify
  - d9af0c3 Merge pull request #23488 from cellscape/lxc-cloud-fixes
  - 64250a6 Remove profile from opts after creating LXC container
  - c4047d2 Set destroy=True in opts when destroying cloud instance
  - 9e1311a Store instance names in opts when performing cloud action
  - 934bc57 Correctly pass custom env to lxc-attach

- 7fb85f7 Preserve test=True option in cloud states
- 9771b5a Fix detection of absent LXC container in cloud state
- fb24f0c Report failure when failed to create/clone LXC container
- 2d9aa2b Avoid shadowing variables in lxc module
- 792e102 Allow overriding profile options in lxc.cloud\_init\_interface
- 42bd64b Return changes on successful lxc.create from salt-cloud
- 4409eab Return correct result when creating cloud LXC container
- 377015c Issue #16424: List all providers when creating salt-cloud instance without profile
- **PR #23748:** (*basepi*) [2014.7] Log salt-ssh roster render errors more assertively and verbosely @ 2015-05-14T22:38:10Z
  - **ISSUE #22332:** (*rallytime*) [salt-ssh] Add a check for host in /etc/salt/roster | refs: #23748
  - 808bbe1 Merge pull request #23748 from basepi/salt-ssh.roster.host.check
  - bc53e04 Log entire exception for render errors in roster
  - 753de6a Log render errors in roster to error level
  - e01a7a9 Always let the real YAML error through
- **PR #23731:** (*twangboy*) Fixes #22959: Trying to add a directory to an unmapped drive in windows @ 2015-05-14T21:59:14Z
  - **ISSUE #22959:** (*highlyunavailable*) Windows Salt hangs if file.directory is trying to write to a drive that doesn't exist
  - 72cf360 Merge pull request #23731 from twangboy/fix\_22959
  - 88e5495 Fixes #22959: Trying to add a directory to an unmapped drive in windows
- **PR #23730:** (*rallytime*) Backport #23729 to 2014.7 @ 2015-05-14T21:58:34Z
  - **PR #23729:** (*rallytime*) Partially merge #23437 (grains fix) | refs: #23730
  - **PR #23437:** (*cedwards*) Grains item patch | refs: #23729
  - 2610195 Merge pull request #23730 from rallytime/bp-23729
  - 1877cae adding support for nested grains to grains.item
- **PR #23688:** (*twangboy*) Added inet\_pton to utils/validate/net.py for ip.set\_static\_ip in windows @ 2015-05-14T16:15:56Z
  - 3e9df88 Merge pull request #23688 from twangboy/fix\_23415
  - 6a91169 Fixed unused-import pylint error
  - 5e25b3f fixed pylint errors
  - 1a96766 Added inet\_pton to utils/validate/net.py for ip.set\_static\_ip in windows
- **PR #23680:** (*cachedout*) Rename kwarg in cloud runner @ 2015-05-13T19:44:02Z
  - **ISSUE #23403:** (*iamfil*) salt.runners.cloud.action fun parameter is replaced | refs: #23680
  - 1b86460 Merge pull request #23680 from cachedout/issue\_23403
  - d5986c2 Rename kwarg in cloud runner
- **PR #23674:** (*cachedout*) Handle lists correctly in grains.list\_prsents @ 2015-05-13T18:34:58Z

- **ISSUE #23548:** (*kkaig*) grains.list\_present produces incorrect (?) output | refs: #23674
- cd64af0 Merge pull request #23674 from cachedout/issue\_23548
- da8a2f5 Handle lists correctly in grains.list\_present
- **PR #23672:** (*twangboy*) Fix user present @ 2015-05-13T18:30:09Z
  - d322a19 Merge pull request #23672 from twangboy/fix\_user\_present
  - 731e7af Merge branch `2014.7' of <https://github.com/saltstack/salt> into fix\_user\_present
  - d6f70a4 Fixed user.present to create password in windows
- **PR #23670:** (*rallytime*) Backport #23607 to 2014.7 @ 2015-05-13T18:27:17Z
  - **ISSUE #23604:** (*Azidburn*) service.dead on systemd Minion create an Error Message | refs: #23607
  - **PR #23607:** (*Azidburn*) Fix for #23604. No error reporting. Exitcode !=0 are ok | refs: #23670
  - 43f7025 Merge pull request #23670 from rallytime/bp-23607
  - ed30dc4 Fix for #23604. No error reporting. Exitcode !=0 are ok
- **PR #23661:** (*rallytime*) Merge #23640 with whitespace fix @ 2015-05-13T15:47:30Z
  - **ISSUE #22141:** (*Deshke*) grains.get\_or\_set\_hash render error if hash begins with ``%" | refs: #23640
  - **PR #23640:** (*cachedout*) Add warning to get\_or\_set\_hash about reserved chars | refs: #23661
  - 0f006ac Merge pull request #23661 from rallytime/merge-23640
  - 4427f42 Whitespace fix
  - dd91154 Add warning to get\_or\_set\_hash about reserved chars
- **PR #23639:** (*cachedout*) Handle exceptions raised by \_\_virtual\_\_ @ 2015-05-13T15:11:12Z
  - **ISSUE #23452:** (*michaelforge*) minion crashed with empty grain | refs: #23639
  - 84e2ef8 Merge pull request #23639 from cachedout/issue\_23452
  - d418b49 Syntax error!
  - 45b4015 Handle exceptions raised by \_\_virtual\_\_
- **PR #23637:** (*cachedout*) Convert str master to list @ 2015-05-13T15:08:19Z
  - **ISSUE #23611:** (*hubez*) master\_type set to `failover' but `master' is not of type list but of type <type `str'> | refs: #23637
  - bd9b94b Merge pull request #23637 from cachedout/issue\_23611
  - 56cb1f5 Fix typo
  - f6fcf19 Convert str master to list
- **PR #23595:** (*rallytime*) Backport #23549 to 2014.7 @ 2015-05-12T21:19:40Z
  - **PR #23549:** (*vr-jack*) Update \_\_init\_\_.py | refs: #23595
  - f20c0e4 Merge pull request #23595 from rallytime/bp-23549
  - 6efcac0 Update \_\_init\_\_.py
- **PR #23594:** (*rallytime*) Backport #23496 to 2014.7 @ 2015-05-12T21:19:34Z
  - **ISSUE #23110:** (*martinhoefling*) Copying files from gitfs in file.recurse state fails
  - **PR #23496:** (*martinhoefling*) Fix for issue #23110 | refs: #23594

- 1acaf86 Merge pull request #23594 from rallytime/bp-23496
- d5ae1d2 Fix for issue #23110 This resolves issues when the freshly created directory is removed by fileserver.update.
- **PR #23593:** (*rallytime*) Backport #23442 to 2014.7 @ 2015-05-12T21:19:26Z
  - **PR #23442:** (*clan*) add directory itself to keep list | refs: #23593
  - 2c221c7 Merge pull request #23593 from rallytime/bp-23442
  - 39869a1 check w/ low['name'] only
  - 304cc49 another fix for file defined w/ id, but require name
  - 8814d41 add directory itself to keep list
- **PR #23606:** (*twangboy*) Fixed checkbox for starting service and actually starting it @ 2015-05-12T21:18:50Z
  - fadd1ef Merge pull request #23606 from twangboy/fix\_installer
  - 038331e Fixed checkbox for starting service and actually starting it
- **PR #23592:** (*rallytime*) Backport #23389 to 2014.7 @ 2015-05-12T16:44:42Z
  - **ISSUE #22908:** (*karanjad*) Add failhard option to salt orchestration | refs: #23389
  - **PR #23389:** (*cachedout*) Correct fail\_hard typo | refs: #23592
  - 10b3f0f Merge pull request #23592 from rallytime/bp-23389
  - 734cc43 Correct fail\_hard typo
- **PR #23573:** (*techhat*) Scan all available networks for public and private IPs | refs: #23802 @ 2015-05-12T15:22:22Z
  - cd34b9b Merge pull request #23573 from techhat/novaquery
  - f92db5e Linting
  - 26e00d3 Scan all available networks for public and private IPs
- **PR #23558:** (*jfindlay*) reorder emerge command line @ 2015-05-12T15:17:46Z
  - **ISSUE #23479:** (*danielmorlock*) Typo in pkg.removed for Gentoo? | refs: #23558
  - 2a72cd7 Merge pull request #23558 from jfindlay/fix\_ebuild
  - 45404fb reorder emerge command line
- **PR #23530:** (*dr4Ke*) salt-ssh state: fix including all salt:// references @ 2015-05-12T15:13:43Z
  - **ISSUE #23355:** (*dr4Ke*) salt-ssh: `sources: salt://` files from `pkg` state are not included in salt\_state.tgz | refs: #23530
  - a664a3c Merge pull request #23530 from dr4Ke/fix\_salt-ssh\_to\_include\_pkg\_sources
  - 5df6a80 fix pylint warning
  - d0549e5 salt-ssh state: fix including all salt:// references
- **PR #23433:** (*twangboy*) Obtain all software from the registry @ 2015-05-11T22:47:52Z
  - **ISSUE #23004:** (*b18*) 2014.7.5 - Windows - pkg.list\_pkgs - ``nxlog" never shows up in output. | refs: #23433
  - 55c3869 Merge pull request #23433 from twangboy/list\_pkgs\_fix
  - 8ab5b1b Fix pylint error

- 2d11d65 Obtain all software from the registry
- **PR #23554:** (*jleroy*) Debian: Hostname always updated @ 2015-05-11T21:57:00Z
  - 755bed0 Merge pull request #23554 from jleroy/debian-hostname-fix
  - 5ff749e Debian: Hostname always updated
- **PR #23551:** (*dr4Ke*) grains.append unit tests, related to #23474 @ 2015-05-11T21:54:25Z
  - 6ec87ce Merge pull request #23551 from dr4Ke/grains.append\_unit\_tests
  - ebf9df fix pylint errors
  - c495404 unit tests for grains.append module function
  - 0c9a323 use MagickMock
  - c838a22 unit tests for grains.append module function
- **PR #23474:** (*dr4Ke*) Fix grains.append in nested dictionary grains #23411 @ 2015-05-11T18:00:21Z
  - **ISSUE #23411:** (*dr4Ke*) grains.append should work at any level of a grain | refs: #23440
  - **PR #23440:** (*dr4Ke*) fix grains.append in nested dictionary grains #23411 | refs: #23474
  - e96c5c5 Merge pull request #23474 from dr4Ke/fix\_grains.append\_nested
  - a01a5bb grains.get, parameter delimititer, versionadded: 2014.7.6
  - b39f504 remove debugging output
  - b6e15e2 fix grains.append in nested dictionary grains #23411
- **PR #23537:** (*t0rrant*) Update changelog @ 2015-05-11T17:02:16Z
  - ab7e1ae Merge pull request #23537 from t0rrant/patch-1
  - 8e03cc9 Update changelog
- **PR #23538:** (*cro*) Update date in LICENSE file @ 2015-05-11T15:19:25Z
  - b79fed3 Merge pull request #23538 from cro/licupdate
  - 345efe2 Update date in LICENSE file
- **PR #23505:** (*aneeshusa*) Remove unused ssh config validator. Fixes #23159. @ 2015-05-09T13:24:15Z
  - **ISSUE #23159:** (*aneeshusa*) Unused validator
  - a123a36 Merge pull request #23505 from aneeshusa/remove-unused-ssh-config-validator
  - 90af167 Remove unused ssh config validator. Fixes #23159.
- **PR #23467:** (*slinu3d*) Added AWS v4 signature support @ 2015-05-08T14:36:19Z
  - **ISSUE #20518:** (*ekle*) module s3.get does not support eu-central-1 | refs: #23467
  - ca2c21a Merge pull request #23467 from slinu3d/2014.7
  - 0b4081d Fixed pylint error at line 363
  - 5be5eb5 Fixed pylint errors
  - e64f374 Fixed lint errors
  - b9d1ac4 Added AWS v4 signature support
- **PR #23444:** (*techhat*) Add create\_attach\_volume to nova driver @ 2015-05-07T19:51:32Z
  - e6f9eec Merge pull request #23444 from techhat/novacreateattach

- ebdb7ea Add create\_attach\_volume to nova driver
- **PR #23460:** (*s0undt3ch*) [2014.7] Update to latest stable bootstrap script v2015.05.07 @ 2015-05-07T19:10:54Z
  - **ISSUE #563:** (*chultz*) pidfile support for minion and master daemons | refs: #23460
  - e331463 Merge pull request #23460 from s0undt3ch/hotfix/bootstrap-script-2014.7
  - edcd0c4 Update to latest stable bootstrap script v2015.05.07
- **PR #23439:** (*techhat*) Add wait\_for\_passwd\_maxtries variable @ 2015-05-07T07:28:56Z
  - 7a8ce1a Merge pull request #23439 from techhat/maxtries
  - 0ad3ff2 Add wait\_for\_passwd\_maxtries variable
- **PR #23422:** (*cro*) \$HOME should not be used, some shells don't set it. @ 2015-05-06T21:02:36Z
  - 644eb75 Merge pull request #23422 from cro/gce\_sh\_home
  - 4ef9e6b Don't use \$HOME to find user's directory, some shells don't set it
- **PR #23425:** (*basepi*) [2014.7] Fix typo in FunctionWrapper @ 2015-05-06T20:38:03Z
  - ef17ab4 Merge pull request #23425 from basepi/functionwrapper\_typo
  - c390737 Fix typo in FunctionWrapper
- **PR #23385:** (*rallytime*) Backport #23346 to 2014.7 @ 2015-05-06T20:12:29Z
  - **PR #23346:** (*ericfode*) Allow file\_map in salt-cloud to handle folders. | refs: #23385
  - 1b13ec0 Merge pull request #23385 from rallytime/bp-23346
  - 9efc13c more linting fixes
  - cf131c9 cleaned up some pylint errors
  - f981699 added logic to sftp\_file and file\_map to allow folder uploads using file\_map
- **PR #23414:** (*jfindlay*) 2015.2 -> 2015.5 @ 2015-05-06T20:04:02Z
  - f8c7a62 Merge pull request #23414 from jfindlay/update\_branch
  - 8074d16 2015.2 -> 2015.5
- **PR #23404:** (*hvnsweeting*) saltapi cherry-py: initialize var when POST body is empty @ 2015-05-06T17:35:56Z
  - 54b3bd4 Merge pull request #23404 from hvnsweeting/cherry-py-post-emptybody-fix
  - f85f8f9 initialize var when POST body is empty
- **PR #23409:** (*terminalmage*) Update Lithium docstrings in 2014.7 branch @ 2015-05-06T16:20:46Z
  - 160f703 Merge pull request #23409 from terminalmage/update-lithium-docstrings-2014.7
  - bc97d01 Fix sphinx typo
  - 20006b0 Update Lithium docstrings in 2014.7 branch
- **PR #23397:** (*jfindlay*) add more flexible whitespace to locale\_gen search @ 2015-05-06T03:44:11Z
  - **ISSUE #17245:** (*tomashavlas*) localemod does not generate locale for Arch | refs: #23307 #23397
  - aa5fb0a Merge pull request #23397 from jfindlay/fix\_locale\_gen
  - 0941fef add more flexible whitespace to locale\_gen search
- **PR #23368:** (*kaithar*) Backport #23367 to 2014.7 @ 2015-05-05T21:42:26Z
  - **PR #23367:** (*kaithar*) Put the sed insert statement back in to the output. | refs: #23368

- **PR #18368:** (*basepi*) Merge forward from 2014.7 to develop | refs: #23367 #23368
- 0c76dd4 Merge pull request #23368 from kaithar/bp-23367
- 577f419 Pylint fix
- 8d9acd1 Put the sed insert statement back in to the output.
- **PR #23350:** (*loregordon*) Append/prepend: search for full line @ 2015-05-05T21:42:11Z
  - **ISSUE #23294:** (*variia*) file.replace fails to append if repl string partially available | refs: #23350
  - 3493cc1 Merge pull request #23350 from lorengordon/file.replace\_assume\_line
  - b60e224 Append/prepend: search for full line
- **PR #23341:** (*cachedout*) Fix syndic pid and logfile path @ 2015-05-05T21:29:10Z
  - **ISSUE #23026:** (*adelcast*) Incorrect salt-syndic logfile and pidfile locations | refs: #23341
  - 7be5c48 Merge pull request #23341 from cachedout/issue\_23026
  - e98e65e Fix tests
  - 6011b43 Fix syndic pid and logfile path
- **PR #23272:** (*basepi*) [2014.7] Allow salt-ssh minion config overrides via master config and roster | refs: #23347 @ \*\*
  - **ISSUE #19114:** (*pykler*) salt-ssh and gpg pillar renderer | refs: #23188 #23272 #23347
  - **PR #23188:** (*basepi*) [2014.7] Work around bug in salt-ssh in config.get for gpg renderer | refs: #23272
  - ea61abf Merge pull request #23272 from basepi/salt-ssh.minion.config.19114
  - c223309 Add versionadded
  - be7407f Lint
  - c2c3375 Missing comma
  - 8e3e8e0 Pass the minion\_opts through the FunctionWrapper
  - cb69cd0 Match the master config template in the master config reference
  - 87fc316 Add Salt-SSH section to master config template
  - 91dd9dc Add ssh\_minion\_opts to master config ref
  - c273ea1 Add minion config to salt-ssh doc
  - a0b6b76 Add minion\_opts to roster docs
  - 5212c35 Accept minion\_opts from the target information
  - e2099b6 Process ssh\_minion\_opts from master config
  - 3b64214 Revert ``Work around bug in salt-ssh in config.get for gpg renderer``
  - 494953a Remove the strip (embracing multi-line YAML dump)
  - fe87f0f Dump multi-line yaml into the SHIM
  - b751a72 Inject local minion config into shim if available
- **PR #23347:** (*basepi*) [2014.7] Salt-SSH Backport FunctionWrapper.\_\_contains\_\_ @ 2015-05-05T14:13:21Z
  - **ISSUE #19114:** (*pykler*) salt-ssh and gpg pillar renderer | refs: #23188 #23272 #23347
  - **PR #23272:** (*basepi*) [2014.7] Allow salt-ssh minion config overrides via master config and roster | refs: #23347

- **PR #23188:** (*basepi*) [2014.7] Work around bug in salt-ssh in config.get for gpg renderer | refs: #23272
- 4f760dd Merge pull request #23347 from basepi/salt-ssh.functionwrapper.contains.19114
- 30595e3 Backport FunctionWrapper.\_\_contains\_\_
- **PR #23344:** (*cachedout*) Explicitly set file\_client on master @ 2015-05-04T23:21:48Z
  - **ISSUE #22742:** (*hvnswearing*) salt-master says: ``This master address: `salt' was previously resolvable but now fails to resolve!'' | refs: #23344
  - 02658b1 Merge pull request #23344 from cachedout/issue\_22742
  - 5adc96c Explicitly set file\_client on master
- **PR #23318:** (*cellscape*) Honor seed argument in LXC container initializaton @ 2015-05-04T20:58:12Z
  - **PR #23311:** (*cellscape*) Fix new container initialization in LXC runner | refs: #23318
  - ba7605d Merge pull request #23318 from cellscape/honor-seed-argument
  - 228b1be Honor seed argument in LXC container initializaton
- **PR #23307:** (*jfindlay*) check for /etc/locale.gen @ 2015-05-04T20:56:32Z
  - **ISSUE #17245:** (*tomashavlas*) localemod does not generate locale for Arch | refs: #23307 #23397
  - 4ac4509 Merge pull request #23307 from jfindlay/fix\_locale\_gen
  - 101199a check for /etc/locale.gen
- **PR #23324:** (*s0undt3ch*) [2014.7] Update to the latest stable release of the bootstrap script v2015.05.04 @ 2015-05-04T16:28:30Z
  - **ISSUE #580:** (*thatch45*) recursive watch not being caught | refs: #23324
  - **ISSUE #552:** (*jhutchins*) Support require and watch under the same state dec | refs: #23324
  - **PR #589:** (*epoelke*) add --quiet and --outfile options to saltkey | refs: #23324
  - **PR #567:** (*bastichelaar*) Added upstart module | refs: #23324
  - **PR #560:** (*UtahDave*) The runas feature that was added in 93423aa2e5e4b7de6452090b0039560d2b13... | refs: #23324
  - **PR #504:** (*SEJeff*) File state goodies | refs: #23324
  - f790f42 Merge pull request #23324 from s0undt3ch/hotfix/bootstrap-script-2014.7
  - 6643e47 Update to the latest stable release of the bootstrap script v2015.05.04
- **PR #23329:** (*cro*) Require requests to verify cert when talking to aliyun and proxmox cloud providers @ 2015-05-04T16:18:17Z
  - 5487367 Merge pull request #23329 from cro/cloud\_verify\_cert
  - 860d4b7 Turn on ssl verify for requests.
- **PR #23311:** (*cellscape*) Fix new container initialization in LXC runner | refs: #23318 @ 2015-05-04T09:55:29Z
  - ea20176 Merge pull request #23311 from cellscape/fix-salt-cloud-lxc-init
  - 76fbb34 Fix new container initialization in LXC runner
- **PR #23298:** (*chris-prince*) Fixed issue #18880 in 2014.7 branch @ 2015-05-03T15:49:41Z
  - **ISSUE #18880:** (*johtso*) npm installed breaks when a module is missing
  - c399b8f Merge pull request #23298 from chris-prince/2014.7

- 0fa25db Fixed issue #18880 in 2014.7 branch
- **PR #23292:** (*rallytime*) Merge #23151 with pylint fixes @ 2015-05-02T03:54:12Z
  - **ISSUE #23148:** (*cr1st1p*) virt - error handling bogus if machine image location is wrong
  - **PR #23151:** (*cr1st1p*) Fixes #23148 | refs: #23292
  - 16ecefcd Merge pull request #23292 from rallytime/merge-23151
  - 8ff852a Merge #23151 with pylint fixes
  - 8ffa12e Fixes #23148
- **PR #23274:** (*basepi*) [2014.7] Reduce salt-ssh debug log verbosity @ 2015-05-01T20:19:23Z
  - ce24315 Merge pull request #23274 from basepi/salt-ssh.debug.verbosity
  - ecee6c6 Log stdout and stderr to trace
  - 08f54d7 Log stdout and stderr to trace as well
  - 9b9c30f Reduce salt-ssh debug log verbosity
- **PR #23261:** (*rallytime*) Fix tornado websocket event handler registration @ 2015-05-01T18:20:31Z
  - **ISSUE #22605:** (*mavenAtHouzz*) Tornado websockets event Handlers registration are incorrect | refs: #23261
  - 7b55e43 Merge pull request #23261 from rallytime/fix-22605
  - 4950fbf Fix tornado websocket event handler registration
- **PR #23258:** (*teizz*) TCP keepalives on the ret side, Revisited. @ 2015-05-01T16:13:49Z
  - 83ef7cb Merge pull request #23258 from teizz/i»¿ret\_keepalive\_2014\_7\_5
  - 0b9fb6f The fixes by i»¿cachedout which were backported into 2015\_2 were missing a single parameter thus not setting up the TCP keepalive for the ZeroMQ Channel by default.
- **PR #23241:** (*techhat*) Move iptables log options after the jump @ 2015-05-01T01:31:59Z
  - **ISSUE #23224:** (*twellspring*) iptables.append --log parameters must be after --jump LOG | refs: #23241
  - 8de3c83 Merge pull request #23241 from techhat/issue23224
  - 87f7948 Move iptables log options after the jump
- **PR #23228:** (*rallytime*) Backport #23171 to 2014.7 @ 2015-04-30T21:09:45Z
  - **PR #23171:** (*skizunov*) Bugfix: `clean\_proc\_dir` is broken | refs: #23228
  - f20210e Merge pull request #23228 from rallytime/bp-23171
  - e670e99 Bugfix: `clean\_proc\_dir` is broken
- **PR #23227:** (*rallytime*) Backport #22808 to 2014.7 @ 2015-04-30T21:09:14Z
  - **ISSUE #22703:** (*Xiol*) salt-ssh does not work with list matcher | refs: #22808
  - **PR #22808:** (*basepi*) [2015.2] Add list targeting to salt-ssh flat roster | refs: #23227
  - 721cc28 Merge pull request #23227 from rallytime/bp-22808
  - d208a00 Dict, not list
  - a3f529e It's already been converted to a list
  - dd57f2d Add list targeting to salt-ssh flat roster
- **PR #22823:** (*hvnsweeting*) 22822 file directory clean @ 2015-04-30T15:25:51Z

- 82c22af Merge pull request #22823 from hvnsweeting/22822-file-directory-clean
- c749c27 fix lint - remove unnecessary parenthesis
- cb3dfee refactor
- 8924b5a refactor: use relpath instead of do it manually
- d3060a5 refactor
- 5759a0e bugfix: fix file.directory clean=True when it require parent dir
- **PR #22977:** (*bersace*) Fix fileserver backends `__opts__` overwritten by `_pillar` @ 2015-04-30T15:24:56Z
  - **ISSUE #22941:** (*bersace*) `_pillar` func breaks fileserver globals | refs: #22977 #22942
  - **PR #22942:** (*bersace*) Fix fileserver backends global overwritten by `_pillar` | refs: #22977
  - f6c0728 Merge pull request #22977 from bersace/fix-fileserver-backends-pillar-side-effect
  - 5f451f6 Fix fileserver backends `__opts__` overwritten by `_pillar`
- **PR #23180:** (*jfindlay*) fix typos from 36841bdd in `masterapi.py` @ 2015-04-30T15:22:41Z
  - **ISSUE #23166:** (*claudiupopescu*) ``Error in function `_minion_event`" resulting in modules not loaded | refs: #23180
  - 34206f7 Merge pull request #23180 from jfindlay/remote\_event
  - 72066e1 fix typos from 36841bdd in `masterapi.py`
- **PR #23176:** (*jfindlay*) copy standard `cmd.run*` kwargs into `cmd.run_chroot` @ 2015-04-30T15:22:12Z
  - **ISSUE #23153:** (*cr1st1p*) `cmdmod : run_chroot` - broken in 2014.7.5 - missing kwargs | refs: #23176
  - b6b8216 Merge pull request #23176 from jfindlay/run\_chroot
  - 7dc3417 copy standard `cmd.run*` kwargs into `cmd.run_chroot`
- **PR #23193:** (*joejulian*) `supervisord.mod_watch` should accept `sfun` @ 2015-04-30T04:34:21Z
  - **ISSUE #23192:** (*joejulian*) `supervisord mod_watch` does not accept `sfun` | refs: #23193
  - effacbe Merge pull request #23193 from joejulian/2014.7\_supervisord\_accept\_sfun
  - efb59f9 `supervisord.mod_watch` should accept `sfun`
- **PR #23188:** (*basepi*) [2014.7] Work around bug in `salt-ssh` in `config.get` for `gpg` renderer | refs: #23272 @ 2015-04-30T04:34:10Z
  - **ISSUE #19114:** (*pykler*) `salt-ssh` and `gpg` pillar renderer | refs: #23188 #23272 #23347
  - 72fe88e Merge pull request #23188 from basepi/salt-ssh.function.wrapper.gpg.19114
  - d73979e Work around bug in `salt-ssh` in `config.get` for `gpg` renderer
- **PR #23154:** (*cachedout*) Re-establish channel on interruption in `fileclient` @ 2015-04-29T16:18:59Z
  - **ISSUE #21480:** (*msciciel*) `TypeError: string indices must be integers, not str` | refs: #23154
  - 168508e Merge pull request #23154 from cachedout/refresh\_channel
  - 9f8dd80 Re-establish channel on interruption in `fileclient`
- **PR #23146:** (*rallytime*) Backport #20779 to 2014.7 @ 2015-04-28T20:45:06Z
  - **ISSUE #20647:** (*ryan-lane*) `file.serialize` fails to serialize due to ordered dicts | refs: #20779
  - **PR #20779:** (*cachedout*) Use declared `yaml` options | refs: #23146
  - 3b53e04 Merge pull request #23146 from rallytime/bp-20779

- ffd1849 compare OrderedDicts in serializer unit test
- a221706 Just change serialize
- a111798 Use declared yaml options
- **PR #23145:** (*rallytime*) Backport #23089 to 2014.7 @ 2015-04-28T20:44:56Z
  - **PR #23089:** (*cachedout*) Stringify version number before lstrip | refs: #23145
  - 8bb4664 Merge pull request #23145 from rallytime/bp-23089
  - 93c41af Stringify version number before lstrip
- **PR #23144:** (*rallytime*) Backport #23124 to 2014.7 @ 2015-04-28T20:44:46Z
  - **ISSUE #16188:** (*drawks*) salt.modules.parted has various functions with bogus input validation. | refs: #23124
  - **PR #23124:** (*ether42*) fix parsing the output of parted in parted.list\_() | refs: #23144
  - c85d36f Merge pull request #23144 from rallytime/bp-23124-2014-7
  - 6b64da7 fix parsing the output of parted
- **PR #23120:** (*terminalmage*) Don't run os.path.relpath() if repo doesn't have a ``root" param set @ 2015-04-28T15:46:54Z
  - a27b158 Merge pull request #23120 from terminalmage/fix-gitfs-relpath
  - 1860fff Don't run os.path.relpath() if repo doesn't have a ``root" param set
- **PR #23132:** (*clinta*) Backport b27c176 @ 2015-04-28T15:00:30Z
  - fcba607 Merge pull request #23132 from clinta/patch-2
  - a824d72 Backport b27c176
- **PR #23114:** (*rallytime*) Adjust ZeroMQ 4 docs to reflect changes to Ubuntu 12 packages @ 2015-04-28T03:59:24Z
  - **ISSUE #18476:** (*Auha*) Upgrading salt on my master caused dependency issues | refs: #23114 #18610
  - **PR #18610:** (*rallytime*) Make ZMQ 4 installation docs for ubuntu more clear | refs: #23114
  - b0f4b28 Merge pull request #23114 from rallytime/remove\_ubuntu\_zmq4\_docs
  - f6cc7c8 Adjust ZeroMQ 4 docs to reflect changes to Ubuntu 12 packages
- **PR #23108:** (*rallytime*) Backport #23097 to 2014.7 @ 2015-04-28T03:58:05Z
  - **ISSUE #23085:** (*xenophonf*) Use ``s3fs" (not ``s3") in fileserver\_roots | refs: #23097
  - **PR #23097:** (*rallytime*) Change s3 to s3fs in fileserver\_roots docs example | refs: #23108
  - 399857f Merge pull request #23108 from rallytime/bp-23097
  - fa88984 Change s3 to s3fs in fileserver\_roots docs example
- **PR #23112:** (*basepi*) [2014.7] Backport #22199 to fix mysql returner save\_load errors @ 2015-04-28T03:55:44Z
  - **ISSUE #22171:** (*basepi*) We should only call returner.save\_load once per jid | refs: #22199
  - **PR #22199:** (*basepi*) [2015.2] Put a bandaid on the save\_load duplicate issue (mysql returner) | refs: #23112
  - 5541537 Merge pull request #23112 from basepi/mysql\_returner\_save\_load
  - 0127012 Put a bandaid on the save\_load duplicate issue

- **PR #23113:** (*rallytime*) Revert ``Backport #22895 to 2014.7" @ 2015-04-28T03:27:29Z
  - **PR #22925:** (*rallytime*) Backport #22895 to 2014.7 | refs: #23113
  - **PR #22895:** (*aletourneau*) pam\_tally counter was not reset to 0 after a successful login | refs: #22925
  - dfe2066 Merge pull request #23113 from saltstack/revert-22925-bp-22895
  - b957ea8 Revert ``Backport #22895 to 2014.7"
- **PR #23094:** (*terminalmage*) pygit2: disable cleaning of stale refs for authenticated remotes @ 2015-04-27T20:51:28Z
  - **ISSUE #23013:** (*markusr815*) gitfs regression with authenticated repos | refs: #23094
  - 21515f3 Merge pull request #23094 from terminalmage/issue23013
  - aaf7b04 pygit2: disable cleaning of stale refs for authenticated remotes
- **PR #23048:** (*jfindlay*) py-2.6 compat for utils/boto.py ElementTree exception @ 2015-04-25T16:56:45Z
  - d45aa21 Merge pull request #23048 from jfindlay/ET\_error
  - 64c42cc py-2.6 compat for utils/boto.py ElementTree exception
- **PR #23025:** (*jfindlay*) catch exceptions on bad system locales/encodings @ 2015-04-25T16:56:30Z
  - **ISSUE #22981:** (*syphernl*) Locale state throwing traceback when generating not (yet) existing locale | refs: #23025
  - d25a5c1 Merge pull request #23025 from jfindlay/fix\_sys\_locale
  - 9c4d62b catch exceptions on bad system locales/encodings
- **PR #22932:** (*hvnsweeting*) bugfix: also manipulate dir\_mode when source not defined @ 2015-04-25T16:54:58Z
  - 5e44b59 Merge pull request #22932 from hvnsweeting/file-append-bugfix
  - 3f368de do not use assert in execution module
  - 9d4fd4a bugfix: also manipulate dir\_mode when source not defined
- **PR #23055:** (*jfindlay*) prevent ps module errors on accessing dead procs @ 2015-04-24T22:39:49Z
  - **ISSUE #23021:** (*ether42*) ps.pgrep raises NoSuchProcess | refs: #23055
  - c2416a4 Merge pull request #23055 from jfindlay/fix\_ps
  - c2dc7ad prevent ps module errors on accessing dead procs
- **PR #23031:** (*jfindlay*) convert exception e.message to just e @ 2015-04-24T18:38:13Z
  - bfd9158 Merge pull request #23031 from jfindlay/exception
  - 856bad1 convert exception e.message to just e
- **PR #23015:** (*hvnsweeting*) if status of service is stop, there is not an error with it @ 2015-04-24T14:35:10Z
  - 7747f33 Merge pull request #23015 from hvnsweeting/set-non-error-lvl-for-service-status-log
  - 92ea163 if status of service is stop, there is not an error with it
- **PR #23000:** (*jfindlay*) set systemd service killMode to process for minion @ 2015-04-24T03:42:39Z
  - **ISSUE #22993:** (*jetpak*) salt-minion restart causes all spawned daemons to die on centos7 (systemd) | refs: #23000
  - 2e09789 Merge pull request #23000 from jfindlay/systemd\_kill
  - 3d575e2 set systemd service killMode to process for minion

- **PR #22999:** (*jtrand*) Added `retry_dns` to minion doc. @ 2015-04-24T03:30:24Z
  - **ISSUE #22707:** (*arthurlogilab*) `retry_dns` of master configuration is missing from the documentation | refs: #22999
  - b5c059a Merge pull request #22999 from jtrand/fix\_22707
  - 8486e17 Added `retry_dns` to minion doc.
- **PR #22990:** (*techhat*) Use the proper cloud conf variable @ 2015-04-23T17:48:07Z
  - 27dc877 Merge pull request #22990 from techhat/2014.7
  - d33bcbc Use the proper cloud conf variable
- **PR #22976:** (*multani*) Improve `state_output` documentation @ 2015-04-23T12:24:22Z
  - 13dff65 Merge pull request #22976 from multani/fix/state-output-doc
  - 19efd41 Improve `state_output` documentation
- **PR #22955:** (*terminalmage*) Fix regression introduced yesterday in `dockerio` module @ 2015-04-22T18:56:39Z
  - 89fa185 Merge pull request #22955 from terminalmage/dockerio-run-fix
  - b4472ad Fix regression introduced yesterday in `dockerio` module
- **PR #22954:** (*rallytime*) Backport #22909 to 2014.7 @ 2015-04-22T18:56:20Z
  - **PR #22909:** (*mguegan*) Fix compatibility with `pkgin > 0.7` | refs: #22954
  - 46ef227 Merge pull request #22954 from rallytime/bp-22909
  - 70c1cd3 Fix compatibility with `pkgin > 0.7`
- **PR #22856:** (*jfindlay*) increase timeout and decrease tries for `route53` records @ 2015-04-22T16:47:01Z
  - **ISSUE #18720:** (*Reiner030*) timeouts when setting `Route53` records | refs: #22856
  - c9ae593 Merge pull request #22856 from jfindlay/route53\_timeout
  - ba4a786 add `route53` record sync wait, default=False
  - ea2fd50 increase timeout and tries for `route53` records
- **PR #22946:** (*s0undt3ch*) Test with a more recent pip version to avoid a traceback @ 2015-04-22T16:25:17Z
  - a178d44 Merge pull request #22946 from s0undt3ch/2014.7
  - bc87749 Test with a more recent pip version to avoid a traceback
- **PR #22945:** (*garethgreenaway*) Fixes to scheduler @ 2015-04-22T16:25:00Z
  - **ISSUE #22571:** (*BoomerB*) same error message as on issue #18504 | refs: #22945
  - de339be Merge pull request #22945 from garethgreenaway/22571\_2014\_7\_schedule\_pillar\_refresh\_seconds\_exceptions
  - bfa6d25 Fixing a reported issue when using a scheduled job from pillar with `splay._seconds` element that acted as a backup of the actual seconds was being removed when pillar was refreshed and causing exceptions. This fix moves some `splay` related code out of the `if else` condition so it's checked whether the job is in the job queue or not.
- **PR #22887:** (*hvnsweeting*) fix #18843 @ 2015-04-22T15:47:05Z
  - **ISSUE #18843:** (*calvinhp*) `State` `user.present` will fail to create home if user exists and `homedir` doesn't
  - 12d2b91 Merge pull request #22887 from hvnsweeting/18843-fix-user-present-home
  - 7fe7b08 run `user.chhome` once to avoid any side-effect when run it twice

- 19de995 clarify the usage of home arg
- d6dc09a enhance doc, as usermod on ubuntu 12.04 will not CREATE home
- 0ce4d7f refactor: force to use boolean
- 849d19e log debug the creating dir process
- c4e95b9 fix #18843: usermod won't create a dir if old home does not exist
- **PR #22930:** (*jfindlay*) localemod.gen\_locale now always returns a boolean @ 2015-04-22T15:37:39Z
  - **ISSUE #21140:** (*holms*) locale.present state executed successfully, although originally fails | refs: #22930 #22829
  - **ISSUE #2417:** (*ffa*) Module standards | refs: #22829
  - **PR #22829:** (*F30*) Always return a boolean in gen\_locale() | refs: #22930
  - b7de7bd Merge pull request #22930 from jfindlay/localegen\_bool
  - 399399f localemod.gen\_locale now always returns a boolean
- **PR #22933:** (*hvnsweeting*) add test for #18843 @ 2015-04-22T15:27:18Z
  - **ISSUE #18843:** (*calvinhp*) State user.present will fail to create home if user exists and homedir doesn't
  - 11bcf14 Merge pull request #22933 from hvnsweeting/18843-test
  - b13db32 add test for #18843
- **PR #22925:** (*rallytime*) Backport #22895 to 2014.7 | refs: #23113 @ 2015-04-22T02:30:26Z
  - **PR #22895:** (*aletourneau*) pam\_tally counter was not reset to 0 after a successful login | refs: #22925
  - 6890752 Merge pull request #22925 from rallytime/bp-22895
  - 3852d96 Pylint fix
  - 90f7829 Fixed pylint issues
  - 5ebf159 Cleaned up pull request
  - a08ac47 pam\_tally counter was not reset to 0 after a successful login
- **PR #22914:** (*cachedout*) Call proper returner function in jobs.list\_jobs @ 2015-04-22T00:49:01Z
  - **ISSUE #22790:** (*whiteinge*) jobs.list\_jobs runner tracebacks on `missing` argument | refs: #22914
  - eca37eb Merge pull request #22914 from cachedout/issue\_22790
  - d828d6f Call proper returner function in jobs.list\_jobs
- **PR #22918:** (*JaseFace*) Add a note to the git\_pillar docs stating that GitPython is the only currently supported provider @ 2015-04-22T00:48:26Z
  - 44f3409 Merge pull request #22918 from JaseFace/git-pillar-provider-doc-note
  - 0aee5c2 Add a note to the git\_pillar docs stating that GitPython is the only currently supported provider
- **PR #22907:** (*techhat*) Properly merge cloud configs to create profiles @ 2015-04-21T22:02:44Z
  - 31c461f Merge pull request #22907 from techhat/cloudconfig
  - 3bf4e66 Properly merge cloud configs to create profiles
- **PR #22894:** (*0xf10e*) Fix issue #22782 @ 2015-04-21T18:55:18Z
  - f093975 Merge pull request #22894 from 0xf10e/2014.7
  - 58fa24c Clarify doc on kwarg `roles` for user\_present().

- f0ae2eb Improve readability by renaming tenant\_role
- **PR #22902:** (*rallytime*) Change state example to use proper kwarg @ 2015-04-21T18:50:47Z
  - **ISSUE #12003:** (*MarkusMuellerAU*) [state.dockerio] docker.run TypeError: run() argument after \*\* must be a mapping, not str | refs: #22902
  - c802ba7 Merge pull request #22902 from rallytime/docker\_doc\_fix
  - 8f70346 Change state example to use proper kwarg
- **PR #22898:** (*terminalmage*) dockerio: better error message for native exec driver @ 2015-04-21T18:02:58Z
  - 81771a7 Merge pull request #22898 from terminalmage/issue12003
  - c375309 dockerio: better error message for native exec driver
- **PR #22897:** (*rallytime*) Add param documentation for file.replace state @ 2015-04-21T17:31:04Z
  - **ISSUE #22825:** (*paolodina*) Issue using file.replace in state file | refs: #22897
  - e2ec4ec Merge pull request #22897 from rallytime/fix-22825
  - 9c51630 Add param documentation for file.replace state
- **PR #22850:** (*bersace*) Fix pillar and salt fileserver mixed @ 2015-04-21T17:04:33Z
  - **ISSUE #22844:** (*bersace*) LocalClient file cache confuse pillar and state files | refs: #22850
  - fd53889 Merge pull request #22850 from bersace/fix-pillar-salt-mixed
  - 31b98e7 Initialize state file client after pillar loading
  - f6bebb7 Use saltenv
- **PR #22818:** (*twangboy*) Added documentation regarding pip in windows @ 2015-04-21T03:58:59Z
  - 1380fec Merge pull request #22818 from twangboy/upd\_pip\_docs
  - cb999c7 Update pip.py
  - 3cc5c97 Added documentation regarding pip in windows
- **PR #22872:** (*rallytime*) Prevent stacktrace on os.path.exists in hosts module @ 2015-04-21T02:54:40Z
  - b2bf17f Merge pull request #22872 from rallytime/fix\_hosts\_stacktrace
  - c88a1ea Prevent stacktrace on os.path.exists in hosts module
- **PR #22853:** (*s0undt3ch*) Don't assume package installation order. @ 2015-04-21T02:42:41Z
  - 03af523 Merge pull request #22853 from s0undt3ch/2014.7
  - b62df62 Don't assume package installation order.
- **PR #22877:** (*s0undt3ch*) Don't fail on *make clean* just because the directory does not exist @ 2015-04-21T02:40:47Z
  - 9211e36 Merge pull request #22877 from s0undt3ch/hotfix/clean-docs-fix
  - 95d6887 Don't fail on *make clean* just because the directory does not exist
- **PR #22873:** (*thatch45*) Type check the version since it will often be numeric @ 2015-04-21T02:38:11Z
  - 5bdbd08 Merge pull request #22873 from thatch45/type\_check
  - 53b8376 Type check the version since it will often be numeric
- **PR #22870:** (*twangboy*) Added ability to send a version with a space in it @ 2015-04-20T23:18:28Z
  - c965b0a Merge pull request #22870 from twangboy/fix\_installer\_again

- 3f180cf Added ability to send a version with a space in it
- **PR #22863:** (*rallytime*) Backport #20974 to 2014.7 @ 2015-04-20T19:29:37Z
  - **PR #20974:** (*JohannesEbke*) Fix expr\_match usage in salt.utils.check\_whitelist\_blacklist | refs: #22863
  - 2973eb1 Merge pull request #22863 from rallytime/bp-20974
  - 14913a4 Fix expr\_match usage in salt.utils.check\_whitelist\_blacklist
- **PR #22578:** (*hvnsweeting*) gracefully handle when salt-minion cannot decrypt key @ 2015-04-20T15:24:45Z
  - c45b92b Merge pull request #22578 from hvnsweeting/2014-7-fix-compile-pillar
  - f75b24a gracefully handle when salt-minion cannot decrypt key
- **PR #22800:** (*terminalmage*) Improve error logging for pygit2 SSH-based remotes @ 2015-04-18T17:18:55Z
  - **ISSUE #21979:** (*yrdevops*) gitfs: error message not descriptive enough when libgit2 was compiled without libssh2 | refs: #22800
  - 900c7a5 Merge pull request #22800 from terminalmage/issue21979
  - 8f1c008 Clarify that for pygit2, receiving 0 objects means repo is up-to-date
  - 98885f7 Add information about libssh2 requirement for pygit2 ssh auth
  - 09468d2 Fix incorrect log message
  - 2093bf8 Adjust loglevels for gitfs errors
  - 9d394df Improve error logging for pygit2 SSH-based remotes
- **PR #22813:** (*twangboy*) Updated instructions for building salt @ 2015-04-18T04:10:07Z
  - e99f2fd Merge pull request #22813 from twangboy/win\_doc\_fix
  - adc421a Fixed some formatting issues
  - 8901b3b Updated instructions for building salt
- **PR #22810:** (*basepi*) [2014.7] More msgpack gating for salt-ssh @ 2015-04-17T22:28:24Z
  - **ISSUE #22708:** (*Bilge*) salt-ssh file.accumulated error: NameError: global name `msgpack' is not defined | refs: #22810
  - fe1de89 Merge pull request #22810 from basepi/salt-ssh.more.msgpack.gating
  - d4da8e6 Gate msgpack in salt/modules/saltutil.py
  - 02303b2 Gate msgpack in salt/modules/data.py
  - d7e8741 Gate salt.states.file.py msgpack
- **PR #22803:** (*rallytime*) Allow map file to work with softlayer @ 2015-04-17T20:34:42Z
  - **ISSUE #17144:** (*xpender*) salt-cloud -m fails with softlayer | refs: #22803
  - 11df71e Merge pull request #22803 from rallytime/fix-17144
  - ce88b6a Allow map file to work with softlayer
- **PR #22807:** (*rallytime*) Add 2014.7.5 links to windows installation docs @ 2015-04-17T20:32:13Z
  - cd43a95 Merge pull request #22807 from rallytime/windows\_docs\_update
  - 5931a58 Replace all 4s with 5s
  - eadaead Add 2014.7.5 links to windows installation docs
- **PR #22795:** (*rallytime*) Added release note for 2014.7.5 release @ 2015-04-17T18:05:36Z

- 0b295e2 Merge pull request #22795 from rallytime/release\_notes
- fde1fee Remove extra line
- b19b95d Added release note for 2014.7.5 release
- **PR #22759:** (*twangboy*) Final edits to the batch files for running salt @ 2015-04-17T04:31:15Z
  - **ISSUE #22740:** (*lorenogordon*) New Windows installer assumes salt is installed to the current directory | refs: #22759
  - **PR #22754:** (*twangboy*) Removed redundant \ and " | refs: #22759
  - 3c91459 Merge pull request #22759 from twangboy/fix\_bat\_one\_last\_time
  - 075f82e Final edits to the batch files for running salt
- **PR #22760:** (*thatch45*) Fix issues with the syndic @ 2015-04-17T04:30:48Z
  - 20d3f2b Merge pull request #22760 from thatch45/syndic\_fix
  - e2db624 Fix issues with the syndic not resolving the master when the interface is set
- **PR #22762:** (*twangboy*) Fixed version not showing in Add/Remove Programs @ 2015-04-17T04:29:46Z
  - 54c4584 Merge pull request #22762 from twangboy/fix\_installer
  - 4d25af8 Fixed version not showing in Add/Remove Programs

## 20.2.58 Salt 2014.7.8 Release Notes

### Changes for v2014.7.7..v2014.7.8

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

Generated at: 2016-03-11T21:18:48Z

Statistics:

- Total Merges: 7
- Total Issue references: 3
- Total PR references: 10

Changes:

- **PR #28839:** (*cachedout*) Revert #28740 @ 2015-11-12T22:54:28Z
  - **PR #28740:** (*MasterNayru*) Add missing S3 module import | refs: #28777
  - 4b8bdd0 Merge pull request #28839 from cachedout/revert\_28740
  - 215b26c Revert #28740
- **PR #28777:** (*rallytime*) Back-port #28740 to 2014.7 @ 2015-11-11T18:00:00Z
  - **PR #28740:** (*MasterNayru*) Add missing S3 module import | refs: #28777
  - 76e69b4 Merge pull request #28777 from rallytime/bp-28740-2014.7
  - da5fac2 Back-port #28740 to 2014.7
- **PR #28716:** (*rallytime*) Back-port #28705 to 2014.7 @ 2015-11-10T16:15:03Z
  - **PR #28705:** (*cachedout*) Account for new headers class in tornado 4.3 | refs: #28716
  - 45c73eb Merge pull request #28716 from rallytime/bp-28705

- 32e7bd3 Account for new headers class in tornado 4.3
- **PR #28717:** (*cachedout*) Add note about recommended umask @ 2015-11-09T23:26:20Z
  - **ISSUE #28199:** (*felskrone*) Non-standard umasks might break the master | refs: #28717
  - f4fe921 Merge pull request #28717 from cachedout/umask\_note
  - 1874300 Add note about recommended umask
- **PR #28461:** (*cachedout*) Wrap all cache calls in state.sls in correct umask @ 2015-11-02T17:11:02Z
  - **ISSUE #28455:** (*zmalone*) highstate.cache is world readable, and contains secrets | refs: #28461
  - 4bf56ca Merge pull request #28461 from cachedout/issue\_28455
  - 097838e Wrap all cache calls in state.sls in correct umask
- **PR #28407:** (*DmitryKuzmenko*) Don't request creds if auth with key. @ 2015-10-29T16:12:30Z
  - **ISSUE #24910:** (*bocig*) -T, --make-token flag does NOT work- LDAP Groups | refs: #28407
  - f3e61db Merge pull request #28407 from DSRCCompany/issues/24910\_token\_auth\_fix\_2014
  - b7b5bec Don't request creds if auth with key.
- **PR #27390:** (*JaseFace*) Ensure we pass on the enable setting if present, or use the default of True if not in build\_schedule\_item() @ 2015-10-05T18:09:33Z
  - d284eb1 Merge pull request #27390 from JaseFace/schedule-missing-enabled
  - 563db71 Ensure we pass on the enable setting if present, or use the default of True if not in build\_schedule\_item() Prior to this, when schedule.present compares the existing schedule to the one crafted by this function, enabled will actually be removed at each run. schedule.present sees a modification needs to be made, and invokes schedule.modify, which does so with enabled: True, creating and endless loop of an `enabled' removal and addition.

## 20.2.59 Salt 2014.7.9 Release Notes

### Changes for v2014.7.8..v2014.7.9

Extended changelog courtesy of Todd Stansell (<https://github.com/tjstansell/salt-changelogs>):

  - d73f70e Remove ability of authenticating user to specify pam service
- **PR #29392:** (*jacobhammons*) updated version number to not reference a specific build from the lat... @ 2015-12-03T15:54:31Z
  - 85aa70a Merge pull request #29392 from jacobhammons/2014.7

- d7f0db1 updated version number to not reference a specific build from the latest branch
- **PR #29296:** (*douardda*) Use process KillMode on Debian systems also @ 2015-12-01T16:00:16Z
  - **ISSUE #29295:** (*douardda*) systemd's service file should use the `process' KillMode option on Debian also | refs: #29296
  - d2fb210 Merge pull request #29296 from douardda/patch-3
  - d288539 Use process KillMode on Debian systems also

## 20.2.60 Salt 2014.1.0 Release Notes - Codename Hydrogen

---

**Note:** Due to a change in master to minion communication, 2014.1.0 minions are not compatible with older-version masters. Please upgrade masters first. More info on backwards-compatibility policy [here](#), under the ``Upgrading Salt'' subheading.

---

**Note:** A change in the grammar in the state compiler makes `module.run` in requisites illegal syntax. Its use is replaced simply with the word `module`. In other words you will need to change requisites like this:

```
require:
  module.run: some_module_name
```

to:

```
require:
  module: some_module_name
```

This is a breaking change. We apologize for the inconvenience, we needed to do this to remove some ambiguity in parsing requisites.

---

**release** 2014-02-24

The 2014.1.0 release of Salt is a major release which not only increases stability but also brings new capabilities in virtualization, cloud integration, and more. This release brings a great focus on the expansion of testing making roughly double the coverage in the Salt tests, and comes with many new features.

2014.1.0 is the first release to follow the new date-based release naming system. See the version numbers page for more details.

### Major Features

#### Salt Cloud Merged into Salt

Salt Cloud is a tool for provisioning salted minions across various cloud providers. Prior to this release, Salt Cloud was a separate project but this marks its full integration with the Salt distribution. A Getting Started guide and additional documentation for Salt Cloud can be found [here](#):

#### Google Compute Engine

Alongside Salt Cloud comes new support for the Google Compute Engine. Salt Stack can now deploy and control GCE virtual machines and the application stacks that they run.

For more information on Salt Stack and GCE, please see [this blog post](#).

Documentation for Salt and GCE can be found [here](#).

### Salt Virt

Salt Virt is a cloud controller that supports virtual machine deployment, inspection, migration, and integration with many aspects of Salt.

Salt Virt has undergone a major overhaul with this release and now supports many more features and includes a number of critical improvements.

### Docker Integration

Salt now ships with `states` and an `execution` module to manage Docker containers.

### Substantial Testing Expansion

Salt continues to increase its unit/regression test coverage. This release includes over 300 new tests.

### BSD Package Management

BSD package management has been entirely rewritten. FreeBSD 9 and older now default to using `pkg_add`, while FreeBSD 10 and newer will use `pkgng`. FreeBSD 9 can be forced to use `pkgng`, however, by specifying the following option in the minion config file:

```
providers:  
  pkg: pkgng
```

In addition, support for installing software from the ports tree has been added. See the documentation for the `state` and `execution` module for more information.

### Network Management for Debian/Ubuntu

Initial support for management of network interfaces on Debian-based distros has been added. See the documentation for the `network` state and the `debian_ip` for more information.

### IPv6 Support for iptables State/Module

The `iptables` state and module now have IPv6 support. A new parameter family has been added to the states and execution functions, to distinguish between IPv4 and IPv6. The default value for this parameter is `ipv4`, specifying `ipv6` will use `ip6tables` to manage firewall rules.

### GitFS Improvements

Several performance improvements have been made to the `Git` fileserver backend. Additionally, file states can now use any SHA1 commit hash as a fileserver environment:

```
/etc/httpd/httpd.conf:
file.managed:
- source: salt://webserver/files/httpd.conf
- saltenv: 45af879
```

This applies to the functions in the *cp module* as well:

```
salt '*' cp.get_file salt://readme.txt /tmp/readme.txt saltenv=45af879
```

## MinionFS

This new fileserver backend allows files which have been pushed from the minion to the master (using *cp.push*) to be served up from the salt fileserver. The path for these files takes the following format:

```
salt://minion-id/path/to/file
```

`minion-id` is the id of the ``source" minion, the one from which the files were pushed to the master. `/path/to/file` is the full path of the file.

The *MinionFS Walkthrough* contains a more thorough example of how to use this backend.

## saltenv

To distinguish between fileserver environments and execution functions which deal with environment variables, fileserver environments are now specified using the `saltenv` parameter. `env` will continue to work, but is deprecated and will be removed in a future release.

## Grains Caching

A caching layer has been added to the Grains system, which can help speed up minion startup. Disabled by default, it can be enabled by setting the minion config option `grains_cache`:

```
grains_cache: True

# Seconds before grains cache is considered to be stale.
grains_cache_expiration: 300
```

If set to `True`, the grains loader will read from/write to a msgpack-serialized file containing the grains data.

Additional command-line parameters have been added to `salt-call`, mainly for testing purposes:

- `--skip-grains` will completely bypass the grains loader when `salt-call` is invoked.
- `--refresh-grains-cache` will force the grains loader to bypass the grains cache and refresh the grains, writing a new grains cache file.

## Improved Command Logging Control

When using the *cmd module*, either on the CLI or when developing Salt execution modules, a new keyword argument `output_loglevel` allows for greater control over how (or even if) the command and its output are logged. For example:

```
salt '*' cmd.run 'tail /var/log/messages' output_loglevel=debug
```

The package management modules (`apt`, `yumpkg`, etc.) have been updated to log the copious output generated from these commands at `loglevel debug`.

---

**Note:** To keep a command from being logged, `output_loglevel=quiet` can be used.

Prior to this release, this could be done using `quiet=True`. This argument is still supported, but will be removed in a future Salt release.

---

### PagerDuty Support

Initial support for firing events via `PagerDuty` has been added. See the documentation for the `pagerduty` module.

### Virtual Terminal

Sometimes the subprocess module is not good enough, and, in fact, not even `askpass` is. This virtual terminal is still in it's infant childhood, needs quite some love, and was originally created to replace `askpass`, but, while developing it, it immediately proved that it could do so much more. It's currently used by `salt-cloud` when bootstrapping salt on clouds which require the use of a password.

### Proxy Minions

Initial basic support for Proxy Minions is in this release. Documentation can be found [here](#).

Proxy minions are a developing feature in Salt that enables control of devices that cannot run a minion. Examples include network gear like switches and routers that run a proprietary OS but offer an API, or "dumb" devices that just don't have the horsepower or ability to handle a Python VM.

Proxy minions can be difficult to write, so a simple REST-based example proxy is included. A Python bottle-based webserver can be found at <https://github.com/cro/salt-proxy-rest> as an endpoint for this proxy.

This is an ALPHA-quality feature. There are a number of issues with it currently, mostly centering around process control, logging, and inability to work in a masterless configuration.

### Additional Bugfixes (Release Candidate Period)

Below are many of the fixes that were implemented in salt during the release candidate phase.

- Fix `mount.mounted` leaving conflicting entries in `fstab` ([issue 7079](#))
- Fix `mysql` returner serialization to use `json` ([issue 9590](#))
- Fix `ZMQError: Operation cannot be accomplished in current state errors` ([issue 6306](#))
- `Rbenv` and `ruby` improvements
- Fix quoting issues with `mysql` port ([issue 9568](#))
- Update `mount` module/state to support multiple swap partitions ([issue 9520](#))
- Fix `archive` state to work with `bsdtar`
- Clarify logs for minion ID caching

- Add numeric revision support to git state ([issue 9718](#))
- Update `master_uri` with `master_ip` ([issue 9694](#))
- Add comment to Debian `mod_repo` ([issue 9923](#))
- Fix potential undefined loop variable in rabbitmq state ([issue 8703](#))
- Fix for `salt-virt` runner to delete key on VM deletion
- Fix for `salt-run -d` to limit results to specific runner or function ([issue 9975](#))
- Add tracebacks to jinja renderer when applicable ([issue 10010](#))
- Fix parsing in monit module ([issue 10041](#))
- Fix highstate output from syndic minions ([issue 9732](#))
- Quiet logging when dealing with passwords/hashes ([issue 10000](#))
- Fix for multiple remotes in `git_pillar` ([issue 9932](#))
- Fix `npm installed` command ([issue 10109](#))
- Add safeguards for utf8 errors in `zcbuildout` module
- Fix compound commands ([issue 9746](#))
- Add `systemd` notification when master is started
- Many doc improvements

### 20.2.61 Salt 2014.1.1 Release Notes

`release` 2014-03-18

Version 2014.1.1 is a bugfix release for [2014.1.0](#). The changes include:

- Various doc fixes, including up-to-date Salt Cloud installation documentation.
- Renamed `state.sls` runner to `state.orchestrate`, to reduce confusion with the `state.sls` execution function
- Fix various bugs in the `dig` module ([issue 10367](#))
- Add retry for query on certain EC2 status codes ([issue 10154](#))
- Fix various bugs in `mongodb_user` state module ([issue 10430](#))
- Fix permissions on `~/.salt_token` ([issue 10422](#))
- Add PyObjects support
- Fix `launchctl` module crash with missing files
- Fix `saltutil.find_job` for Windows ([issue 10581](#))
- Fix OS detection for OpenSolaris ([issue 10601](#))
- Fix broken `salt-ssh key_deploy`
- Add support for multiline cron comments ([issue 10721](#))
- Fix `timezone` module for Arch ([issue 10789](#))
- Fix symlink support for `file.recurse` ([issue 10809](#))
- Fix multi-master bugs ([issue 10732](#) and [issue 10969](#))
- Fix `file.patch` to error when source file is unavailable ([issue 10380](#))

- Fix pkg to handle packages set as purge in `pkg.installed` (issue 10719)
- Add `zmqversion` grain
- Fix highstate summary for masterless minions (issue 10945)
- Fix `saltutil.find_job` for 2014.1 masters talking to 0.17 minions (issue 11020)
- Fix `file.recurse` states with trailing slashes in source (issue 11002)
- Fix `pkg.states` to allow `pkgname.x86_64` (issue 7306)
- Make `iptables.states` set a default table for flush (issue 11037)
- Added `iptables --reject-with` after final `iptables` call in `iptables.states` (issue:10757)
- Fix improper passing of “family” in `iptables.states` (issue 10774)
- Fix traceback in `iptables.insert` states (issue 10988)
- Fix zombie processes (issue 10867 and others)
- Fix batch mode to obey `--return` settings (issue 9146)
- Fix localclient issue that was causing batch mode breakage (issue 11094, issue 10470, and others)
- Multiple salt-ssh fixes
- FreeBSD: look in `/usr/local/etc/salt` for configuration by default, if installed using `pip --editable`.
- Add a `skip_suggestions` parameter to `pkg.installed` states which allows pre-flight check to be skipped (issue 11106)
- Fixed tag-based gitfs fileservers environments regression (issue 10956)
- Yum: fix cache of available pkgs not cleared when repos are changed (issue 11001)
- Yum: fix for plugin-provided repositories (i.e. RHN/Spacewalk) (issue 11145)
- Fix regression in `chocolatey.bootstrap` (issue 10541)
- Fix fail on unknown target in `jobs.runner` (issue 11151)
- Don't log errors for commands which are expected to sometimes exit with non-zero exit status (issue 11154, issue 11090)
- Fix `test=True` CLI override of config option (issue 10877)
- Log `sysctl` key listing at loglevel TRACE (issue 10931)

## 20.2.62 Salt 2014.1.10 Release Notes

release 2014-08-01

---

**Note:** Version 2014.1.9 contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. This version contains the version detection fix, but is otherwise identical to 2014.1.9.

---

Version 2014.1.10 is another bugfix release for *2014.1.0*. Changes include:

- Ensure salt-ssh will not continue if permissions on a temporary directory are not correct.
- Use the bootstrap script distributed with Salt instead of relying on an external resource
- Remove unused testing code
- Ensure salt states are placed into the `.salt` directory in salt-ssh

- Use a randomized path for temporary files in a salt-cloud deployment
- Clean any stale directories to ensure a fresh copy of salt-ssh during a deployment

Salt 2014.1.10 fixes security issues documented by CVE-2014-3563: "Insecure tmp-file creation in seed.py, salt-ssh, and salt-cloud." Upgrading is recommended.

### 20.2.63 Salt 2014.1.11 Release Notes

release 2014-08-29

Version 2014.1.11 is another bugfix release for *2014.1.0*. Changes include:

- Fix for minion\_id with byte-order mark (BOM) ([issue 12296](#))
- Fix runas deprecation in at module
- Fix trailing slash behavior for file.makedirs\_ ([issue 14019](#))
- Fix chocolatey path ([issue 13870](#))
- Fix git\_pillar infinite loop issues ([issue 14671](#))
- Fix json outputter null case
- Fix for minion error if one of multiple masters are down ([issue 14099](#))

### 20.2.64 Salt 2014.1.12 Release Notes

release 2014-10-08

Version 2014.1.12 is another bugfix release for *2014.1.0*. Changes include:

- Fix scp\_file always failing (which broke salt-cloud) ([issue 16437](#))
- Fix regression in pillar in masterless ([issue 16210](#), [issue 16416](#), [issue 16428](#))

### 20.2.65 Salt 2014.1.13 Release Notes

release 2014-10-14

Version 2014.1.13 is another bugfix release for *2014.1.0*. Changes include:

- Fix sftp\_file by checking the exit status code of scp (which broke salt-cloud) ([issue 16599](#))

### 20.2.66 Salt 2014.1.2 Release Notes

release 2014-04-15

Version 2014.1.2 is another bugfix release for *2014.1.0*. The changes include:

- Fix username detection when su'ed to root on FreeBSD ([issue 11628](#))
- Fix minionfs backend for file.recurse states
- Fix 32-bit packages of different arches than the CPU arch, on 32-bit RHEL/CentOS ([issue 11822](#))
- Fix bug with specifying alternate home dir on user creation (FreeBSD) ([issue 11790](#))
- Don't reload site module on module refresh for MacOS

- Fix regression with running execution functions in Pillar SLS ([issue 11453](#))
- Fix some modules missing from Windows installer
- Don't log an error for yum commands that return nonzero exit status on non-failure ([issue 11645](#))
- Fix bug in rabbitmq state ([issue 8703](#))
- Fix missing ssh config options ([issue 10604](#))
- Fix top.sls ordering ([issue 10810](#) and [issue 11691](#))
- Fix `salt-key --list all` ([issue 10982](#))
- Fix `win_servermanager` install/remove function ([issue 11038](#))
- Fix interaction with tokens when running commands as root ([issue 11223](#))
- Fix overstate bug with `find_job` and `**kwargs` ([issue 10503](#))
- Fix `saltenv` for `aptpkg.mod_repo` from `pkgrepo` state
- Fix environment issue causing file caching problems ([issue 11189](#))
- Fix bug in `__parse_key` in registry state ([issue 11408](#))
- Add minion auth retry on rejection ([issue 10763](#))
- Fix `publish_session` updating the encryption key ([issue 11493](#))
- Fix for bad `AssertionError` raised by `GitPython` ([issue 11473](#))
- Fix `debian_ip` to allow disabling and enabling networking on Ubuntu ([issue 11164](#))
- Fix potential memory leak caused by saved (and unused) events ([issue 11582](#))
- Fix exception handling in the MySQL module ([issue 11616](#))
- Fix environment-related error ([issue 11534](#))
- Include `psutil` on Windows
- Add `file.replace` and `file.search` to Windows ([issue 11471](#))
- Add additional `file` module helpers to Windows ([issue 11235](#))
- Add `pid` to `netstat` output on Windows ([issue 10782](#))
- Fix Windows not caching new versions of installers in `winrepo` ([issue 10597](#))
- Fix hardcoded md5 hashing
- Fix `kwargs` in `salt-ssh` ([issue 11609](#))
- Fix file backup timestamps ([issue 11745](#))
- Fix `stacktrace` on `sys.doc` with invalid `eauth` ([issue 11293](#))
- Fix `git.latest` with `test=True` ([issue 11595](#))
- Fix `file.check_perms` hardcoded `follow_symlinks` ([issue 11387](#))
- Fix certain `pkg` states for RHEL5/Cent5 machines ([issue 11719](#))

## 20.2.67 Salt 2014.1.3 Release Notes

release 2014-04-15

Version 2014.1.3 is another bugfix release for [2014.1.0](#). It was created as a hotfix for a regression found in 2014.1.2, which was not distributed. The only change made was as follows:

- Fix regression that caused `saltutil.find_job` to fail, causing premature terminations of salt CLI commands.

Changes in the not-distributed 2014.1.2, also included in 2014.1.3:

- Fix username detection when su'ed to root on FreeBSD ([issue 11628](#))
- Fix minionfs backend for file.recurse states
- Fix 32-bit packages of different arches than the CPU arch, on 32-bit RHEL/CentOS ([issue 11822](#))
- Fix bug with specifying alternate home dir on user creation (FreeBSD) ([issue 11790](#))
- Don't reload `site` module on module refresh for MacOS
- Fix regression with running execution functions in Pillar SLS ([issue 11453](#))
- Fix some modules missing from Windows installer
- Don't log an error for yum commands that return nonzero exit status on non-failure ([issue 11645](#))
- Fix bug in rabbitmq state ([issue 8703](#))
- Fix missing ssh config options ([issue 10604](#))
- Fix top.sls ordering ([issue 10810](#) and [issue 11691](#))
- Fix `salt-key --list all` ([issue 10982](#))
- Fix `win_servermanager` install/remove function ([issue 11038](#))
- Fix interaction with tokens when running commands as root ([issue 11223](#))
- Fix overstate bug with `find_job` and `**kwargs` ([issue 10503](#))
- Fix `saltenv` for `aptpkg.mod_repo` from `pkgrepo` state
- Fix environment issue causing file caching problems ([issue 11189](#))
- Fix bug in `__parse_key` in registry state ([issue 11408](#))
- Add minion auth retry on rejection ([issue 10763](#))
- Fix `publish_session` updating the encryption key ([issue 11493](#))
- Fix for bad `AssertionError` raised by GitPython ([issue 11473](#))
- Fix `debian_ip` to allow disabling and enabling networking on Ubuntu ([issue 11164](#))
- Fix potential memory leak caused by saved (and unused) events ([issue 11582](#))
- Fix exception handling in the MySQL module ([issue 11616](#))
- Fix environment-related error ([issue 11534](#))
- Include `psutil` on Windows
- Add `file.replace` and `file.search` to Windows ([issue 11471](#))
- Add additional `file` module helpers to Windows ([issue 11235](#))
- Add `pid` to netstat output on Windows ([issue 10782](#))

- Fix Windows not caching new versions of installers in winrepo (issue 10597)
- Fix hardcoded md5 hashing
- Fix kwargs in salt-ssh (issue 11609)
- Fix file backup timestamps (issue 11745)
- Fix stacktrace on `sys.doc` with invalid eauth (issue 11293)
- Fix `git.latest` with `test=True` (issue 11595)
- Fix `file.check_perms` hardcoded `follow_symlinks` (issue 11387)
- Fix certain pkg states for RHEL5/Cent5 machines (issue 11719)

### 20.2.68 Salt 2014.1.4 Release Notes

release 2014-05-05

Version 2014.1.4 is another bugfix release for *2014.1.0*. Changes include:

- Fix setup.py dependency issue (issue 12031)
- Fix handling of IOError errors under certain circumstances (issue 11783 and issue 11853)
- Fix fatal exception when `/proc/1/cgroup` is not readable (issue 11619)
- Fix os grains for OpenSolaris (issue 11907)
- Fix `lvs.zero` module argument pass-through (issue 9001)
- Fix bug in `debian_ip` interaction with `network.system` state (issue 11164)
- Remove bad binary package verification code (issue 12177)
- Fix traceback in solaris package installation (issue 12237)
- Fix `file.directory` state symlink handling (issue 12209)
- Remove `external_ip` grain
- Fix `file.managed` makedirs issues (issue 10446)
- Fix hang on non-existent Windows drive letter for `file` module (issue 9880)
- Fix salt minion caching all users on the server (issue 9743)
- Add strftime formatting for `ps.boot_time` (issue 12428)

### 20.2.69 Salt 2014.1.5 Release Notes

release 2014-06-11

Version 2014.1.5 is another bugfix release for *2014.1.0*. Changes include:

- Add function for finding cached job on the minion
- Fix iptables save file location for Debian (issue 11730)
- Fix for minion caching jobs when master is down
- Bump default `syndic_wait` to 5 to fix syndic-related problems (issue 12262)
- Add OpenBSD, FreeBSD, and NetBSD support for `network.netstat` (issue 12121)
- Fix false positive error in logs for `makeconf` state (issue 9762)

- Fix for yum fromrepo package installs when repo is disabled by default ([issue 12466](#))
- Fix for extra blank lines in `file.blockreplace` ([issue 12422](#))
- Fix grain detection for OpenVZ guests ([issue 11877](#))
- Fix `get_dns_servers` function for Windows `win_dns_client`
- Use system locale for ports package installations
- Use correct stop/restart procedure for Debian networking in `debian_ip` ([issue 12614](#))
- Fix for `cmd_iter/cmd_iter_no_block` blocking issues ([issue 12617](#))
- Fix traceback when syncing custom types ([issue 12883](#))
- Fix cleaning directory symlinks in `file.directory`
- Add performance optimizations for `saltutil.sync_all` and `state.highstate`
- Fix possible error in `saltutil.running`
- Fix for kmod modules with dashes ([issue 13239](#))
- Fix possible race condition for Windows minions in state module reloading ([issue 12370](#))
- Fix bug with roster for `passwd` option that is loaded as a non-string object ([issue 13249](#))
- Keep duplicate version numbers from showing up in `pkg.list_pkgs` output
- Fixes for Jinja renderer, timezone `module/state` ([issue 12724](#))
- Fix `timedatectl` parsing for `systemd>=210` ([issue 12728](#))
- Fix `saltenv` being written to YUM repo config files ([issue 12887](#))
- Removed the deprecated external nodes classifier (originally accessible by setting a value for `external_nodes` in the master configuration file). Note that this functionality has been marked deprecated for some time and was replaced by the more general `master tops` system.
- More robust escaping of ldap filter strings.
- Fix trailing slash in `gitfs_root` causing files not to be available ([issue 13185](#))

### 20.2.70 Salt 2014.1.6 Release Notes

release 2014-07-08

Version 2014.1.6 is another bugfix release for [2014.1.0](#). Changes include:

- Fix extra `iptables --help` output (Sorry!) ([issue 13648](#), [issue 13507](#), [issue 13527](#), [issue 13607](#))
- Fix `mount.active` for Solaris
- Fix support for `allow-hotplug` statement in `debian_ip` network module
- Add `sqlite3` to esky builds
- Fix `jobs.active` output ([issue 9526](#))
- Fix the `virtual` grain for Xen ([issue 13534](#))
- Fix `_ext_nodes` unavailable on master ([issue 13535](#))
- Fix eauth for batch mode ([issue 9605](#))
- Fix force-related issues with `tomcat` support ([issue 12889](#))
- Fix `KeyError` when cloud mapping

- Fix salt-minion restart loop in Windows ([issue 12086](#))
- Fix detection of `service` virtual module on Fedora minions
- Fix traceback with missing `ipv4` grain ([issue 13838](#))
- Fix issue in roots backend with invalid data in `mtime_map` ([issue 13836](#))
- Fix traceback in `jobs.active` ([issue 11151](#))
- Fix `master_tops` and `_ext_nodes` issue ([issue 13535](#), [issue 13673](#))

### 20.2.71 Salt 2014.1.7 Release Notes

`release` 2014-07-09

Version 2014.1.7 is another bugfix release for [2014.1.0](#). Changes include:

- Fix batch mode regression ([issue 14046](#))

This release was a hotfix release for the regression listed above which was present in the 2014.1.6 release. The changes included in 2014.1.6 are listed below:

- Fix extra `iptables --help` output (Sorry!) ([issue 13648](#), [issue 13507](#), [issue 13527](#), [issue 13607](#))
- Fix `mount.active` for Solaris
- Fix support for `allow-hotplug` statement in `debian_ip` network module
- Add `sqlite3` to esky builds
- Fix `jobs.active` output ([issue 9526](#))
- Fix the `virtual` grain for Xen ([issue 13534](#))
- Fix `eauth` for batch mode ([issue 9605](#))
- Fix force-related issues with `tomcat` support ([issue 12889](#))
- Fix `KeyError` when cloud mapping
- Fix salt-minion restart loop in Windows ([issue 12086](#))
- Fix detection of `service` virtual module on Fedora minions
- Fix traceback with missing `ipv4` grain ([issue 13838](#))
- Fix issue in roots backend with invalid data in `mtime_map` ([issue 13836](#))
- Fix traceback in `jobs.active` ([issue 11151](#))
- Fix `master_tops` and `_ext_nodes` issue ([issue 13535](#), [issue 13673](#))

### 20.2.72 Salt 2014.1.8 Release Notes

`release` 2014-07-30

---

**Note:** This release contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. Please use version 2014.1.10 instead.

---

Version 2014.1.8 is another bugfix release for [2014.1.0](#). Changes include:

- Ensure `salt-ssh` will not continue if permissions on a temporary directory are not correct.

- Use the bootstrap script distributed with Salt instead of relying on an external resource
- Remove unused testing code
- Ensure salt states are placed into the `.salt` directory in salt-ssh
- Use a randomized path for temporary files in a salt-cloud deployment
- Clean any stale directories to ensure a fresh copy of salt-ssh during a deployment

### 20.2.73 Salt 2014.1.9 Release Notes

`release` 2014-07-31

---

**Note:** This release contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. Please use version 2014.1.10 instead.

---

---

**Note:** Version 2014.1.8 contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. This version contains the version detection fix, but is otherwise identical to 2014.1.8.

---

Version 2014.1.9 is another bugfix release for [2014.1.0](#). Changes include:

- Ensure salt-ssh will not continue if permissions on a temporary directory are not correct.
- Use the bootstrap script distributed with Salt instead of relying on an external resource
- Remove unused testing code
- Ensure salt states are placed into the `.salt` directory in salt-ssh
- Use a randomized path for temporary files in a salt-cloud deployment
- Clean any stale directories to ensure a fresh copy of salt-ssh during a deployment

### 20.2.74 Salt 0.10.0 Release Notes

`release` 2012-06-16

0.10.0 has arrived! This release comes with MANY bug fixes, and new capabilities which greatly enhance performance and reliability. This release is primarily a bug fix release with many new tests and many repaired bugs. This release also introduces a few new key features which were brought in primarily to repair bugs and some limitations found in some of the components of the original architecture.

#### Major Features

##### Event System

The Salt Master now comes equipped with a new event system. This event system has replaced some of the back end of the Salt client and offers the beginning of a system which will make plugging external applications into Salt. The event system relies on a local ZeroMQ publish socket and other processes can connect to this socket and listen for events. The new events can be easily managed via Salt's event library.

## Unprivileged User Updates

Some enhancements have been added to Salt for running as a user other than root. These new additions should make switching the user that the Salt Master is running as very painless, simply change the `user` option in the master configuration and restart the master, Salt will take care of all of the particulars for you.

## Peer Runner Execution

Salt has long had the peer communication system used to allow minions to send commands via the salt master. 0.10.0 adds a new capability here, now the master can be configured to allow for minions to execute Salt runners via the `peer_run` option in the salt master configuration.

## YAML Parsing Updates

In the past the YAML parser for sls files would return the incorrect numbers when the file mode was set with a preceding 0. The YAML parser used in Salt has been modified to no longer convert these number into octal but to keep them as the correct value so that sls files can be a little cleaner to write.

## State Call Data Files

It was requested that the minion keep a local cache of the most recent executed state run. This has been added and now with state runs the data is stored in a msgpack file in the minion's cachedir.

## Turning Off the Job Cache

A new option has been added to the master configuration file. In previous releases the Salt client would look over the Salt job cache to read in the minion return data. With the addition of the event system the Salt client can now watch for events directly from the master worker processes.

This means that the job cache is no longer a hard requirement. Keep in mind though, that turning off the job cache means that historic job execution data cannot be retrieved.

## Test Updates

### Minion Swarms Are Faster

To continue our efforts with testing Salt's ability to scale the minionswarm script has been updated. The minionswarm can now start up minions much faster than it could before and comes with a new feature allowing modules to be disabled, thus lowering the minion's footprint when making a swarm. These new updates have allows us to test

```
# python minionswarm.py -m 20 --master salt-master
```

## Many Fixes

To get a good idea for the number of bugfixes this release offers take a look at the closed tickets for 0.10.0, this is a very substantial update:

<https://github.com/saltstack/salt/issues?milestone=12&state=closed>

## Master and Minion Stability Fixes

As Salt deployments grow new ways to break Salt are discovered. 0.10.0 comes with a number of fixes for the minions and master greatly improving Salt stability.

### 20.2.75 Salt 0.10.1 Release Notes

release 2012-06-19

### 20.2.76 Salt 0.10.2 Release Notes

release 2012-07-30

0.10.2 is out! This release comes with enhancements to the pillar interface, cleaner ways to access the salt-call capabilities in the API, minion data caching and the event system has been added to salt minions.

There have also been updates to the ZeroMQ functions, many more tests (thanks to sponsors, the code sprint and many contributors) and a swath of bug fixes.

## Major Features

### Ext Pillar Modules

The ranks of available Salt modules directories sees a new member in 0.10.2. With the popularity of pillar a higher demand has arisen for `ext_pillar` interfaces to be more like regular Salt module additions. Now `ext_pillar` interfaces can be added in the same way as other modules, just drop it into the pillar directory in the salt source.

### Minion Events

In 0.10.0 an event system was added to the Salt master. 0.10.2 adds the event system to the minions as well. Now event can be published on a local minion as well.

The minions can also send events back up to the master. This means that Salt is able to communicate individual events from the minions back up to the Master which are not associated with command.

### Minion Data Caching

When pillar was introduced the landscape for available data was greatly enhanced. The minion's began sending grain data back to the master on a regular basis.

The new config option on the master called `minion_data_cache` instructs the Salt master to maintain a cache of the minion's grains and pillar data in the `cachedir`. This option is turned off by default to avoid hitting the disk more, but when enabled the cache is used to make grain matching from the salt command more powerful, since the minions that will match can be predetermined.

### Backup Files

By default all files replaced by the `file.managed` and `file.recurse` states we simply deleted. 0.10.2 adds a new option. By setting the backup option to `minion` the files are backed up before they are replaced.

The backed up files are located in the `cachedir` under the `file_backup` directory. On a default system this will be at: `/var/cache/salt/file_backup`

### Configuration files

`salt-master` and `salt-minion` automatically load additional configuration files from `master.d/*.conf` respective `minion.d/*.conf` where `master.d/minion.d` is a directory in the same directory as the main configuration file.

### Salt Key Verification

A number of users complained that they had inadvertently deleted the wrong salt authentication keys. 0.10.2 now displays what keys are going to be deleted and verifies that they are the keys that are intended for deletion.

### Key auto-signing

If `autosign_file` is specified in the configuration file incoming keys will be compared to the list of keynames in `autosign_file`. Regular expressions as well as globbing is supported.

The file must only be writable by the user otherwise the file will be ignored. To relax the permission and allow group write access set the `permissive_pki_access` option.

### Module changes

#### Improved OpenBSD support

New modules for managing services and packages were provided by Joshua Elsasser to further improve the support for OpenBSD.

Existing modules like the `disk` module were also improved to support OpenBSD.

#### SQL Modules

The MySQL and PostgreSQL modules have both received a number of additions thanks to the work of Avi Marcus and Roman Imankulov.

#### ZFS Support on FreeBSD

A new ZFS module has been added by Kurtis Velarde for FreeBSD supporting various ZFS operations like creating, extending or removing zpools.

#### Augeas

A new Augeas module by Ulrich Dangel for editing and verifying config files.

### Native Debian Service module

The support for the Debian was further improved with an new service module for Debian by Ahmad Khayyat supporting *disable* and *enable*.

### Cassandra

Cassandra support has been added by Adam Garside. Currently only status and diagnostic information are supported.

### Networking

The networking support for *RHEL* has been improved and supports bonding support as well as zeroconf configuration.

### Monit

Basic monit support by Kurtis Velarde to control services via monit.

### nzbget

Basic support for controlling nzbget by Joseph Hall

### Bluetooth

Basic bluez support for managing and controlling Bluetooth devices. Supports scanning as well as pairing/unpairing by Joseph Hall.

### Test Updates

#### Consistency Testing

Another testing script has been added. A bug was found in pillar when many minions generated pillar data at the same time. The new `consistent.py` script in the `tests` directory was created to reproduce bugs where data should always be consistent.

#### Many Fixes

To get a good idea for the number of bugfixes this release offers take a look at the closed tickets for 0.10.2, this is a very substantial update:

<https://github.com/saltstack/salt/issues?milestone=24&page=1&state=closed>

#### Master and Minion Stability Fixes

As Salt deployments grow new ways to break Salt are discovered. 0.10.2 comes with a number of fixes for the minions and master greatly improving Salt stability.

## 20.2.77 Salt 0.10.3 Release Notes

release 2012-09-30

The latest taste of Salt has come, this release has many fixes and feature additions. Modifications have been made to make ZeroMQ connections more reliable, the beginning of the ACL system is in place, a new command line parsing system has been added, dynamic module distribution has become more environment aware, the new *master\_finger* option and many more!

### Major Features

#### ACL System

The new ACL system has been introduced. The ACL system allows for system users other than root to execute salt commands. Users can be allowed to execute specific commands in the same way that minions are opened up to the peer system.

The configuration value to open up the ACL system is called `client_acl` and is configured like so:

```
client_acl:
  fred:
    - test.*
    - pkg.list_pkgs
```

Where *fred* is allowed access to functions in the test module and to the `pkg.list_pkgs` function.

#### Master Finger Option

The *master\_finger* option has been added to improve the security of minion provisioning. The *master\_finger* option allows for the fingerprint of the master public key to be set in the configuration file to double verify that the master is valid. This option was added in response to a motivation to pre-authenticate the master when provisioning new minions to help prevent man in the middle attacks in some situations.

#### Salt Key Fingerprint Generation

The ability to generate fingerprints of keys used by Salt has been added to `salt-key`. The new option *finger* accepts the name of the key to generate and display a fingerprint for.

```
salt-key -F master
```

Will display the fingerprints for the master public and private keys.

#### Parsing System

Pedro Algavio, aka `s0undt3ch`, has added a substantial update to the command line parsing system that makes the help message output much cleaner and easier to search through. Salt parsers now have `--versions-report` besides usual `--version` info which you can provide when reporting any issues found.

## Key Generation

We have reduced the requirements needed for *salt-key* to generate minion keys. You're no longer required to have salt configured and it's common directories created just to generate keys. This might prove useful if you're batch creating keys to pre-load on minions.

## Startup States

A few configuration options have been added which allow for states to be run when the minion daemon starts. This can be a great advantage when deploying with Salt because the minion can apply states right when it first runs. To use startup states set the `startup_states` configuration option on the minion to *highstate*.

## New Exclude Declaration

Some users have asked about adding the ability to ensure that other sls files or ids are excluded from a state run. The exclude statement will delete all of the data loaded from the specified sls file or will delete the specified id:

```
exclude:
  - sls: http
  - id: /etc/vimrc
```

## Max Open Files

While we're currently unable to properly handle ZeroMQ's abort signals when the max open files is reached, due to the way that's handled on ZeroMQ's, we have minimized the chances of this happening without at least warning the user.

## More State Output Options

Some major changes have been made to the state output system. In the past state return data was printed in a very verbose fashion and only states that failed or made changes were printed by default. Now two options can be passed to the master and minion configuration files to change the behavior of the state output. State output can be set to verbose (default) or non-verbose with the `state_verbose` option:

```
state_verbose: False
```

It is noteworthy that the `state_verbose` option used to be set to *False* by default but has been changed to *True* by default in 0.10.3 due to many requests for the change.

The next option to be aware of new and called `state_output`. This option allows for the state output to be set to *full* (default) or *terse*.

The *full* output is the standard state output, but the new *terse* output will print only one line per state making the output much easier to follow when executing a large state system.

```
state_output: terse
```

### *state.file.append* Improvements

The salt state *file.append()* tries *not* to append existing text. Previously the matching check was being made line by line. While this kind of check might be enough for most cases, if the text being appended was multi-line, the check would not work properly. This issue is now properly handled, the match is done as a whole ignoring any white space addition or removal except inside commas. For those thinking that, in order to properly match over multiple lines, salt will load the whole file into memory, that's not true. For most cases this is not important but an erroneous order to read a 4GB file, if not properly handled, like salt does, could make salt chew that amount of memory. Salt has a buffered file reader which will keep in memory a maximum of 256KB and iterates over the file in chunks of 32KB to test for the match, more than enough, if not, explain your usage on a ticket. With this change, also *salt.modules.file.contains()*, *salt.modules.file.contains\_regex()*, *salt.modules.file.contains\_glob()* and *salt.utils.find* now do the searching and/or matching using the buffered chunks approach explained above.

Two new keyword arguments were also added, *makedirs*, and *source*. The first, *makedirs* will create the necessary directories in order to append to the specified file, of course, it only applies if we're trying to append to a non-existing file on a non-existing directory:

```
/tmp/salttest/file-append-makedirs:
  file.append:
    text: foo
    makedirs: True
```

The second, *source*, allows one to append the contents of a file instead of specifying the text.

```
/tmp/salttest/file-append-source:
file.append:
  - source: salt://testfile
```

### Security Fix

A timing vulnerability was uncovered in the code which decrypts the AES messages sent over the network. This has been fixed and upgrading is strongly recommended.

## 20.2.78 Salt 0.10.4 Release Notes

release 2012-10-23

Salt 0.10.4 is a monumental release for the Salt team, with two new module systems, many additions to allow granular access to Salt, improved platform support and much more.

This release is also exciting because we have been able to shorten the release cycle back to under a month. We are working hard to keep up the aggressive pace and look forward to having releases happen more frequently!

This release also includes a serious security fix and all users are very strongly recommended to upgrade. As usual, upgrade the master first, and then the minion to ensure that the process is smooth.

### Major Features

#### External Authentication System

The new external authentication system allows for Salt to pass through authentication to any authentication system to determine if a user has permission to execute a Salt command. The Unix PAM system is the first supported system with more to come!

The external authentication system allows for specific users to be granted access to execute specific functions on specific minions. Access is configured in the master configuration file, and uses the new access control system:

```
external_auth:
  pam:
    thatch:
      - 'web*':
      - test.*
      - network.*
```

The configuration above allows the user *thatch* to execute functions in the test and network modules on minions that match the *web\** target.

## Access Control System

All Salt systems can now be configured to grant access to non-administrative users in a granular way. The old configuration continues to work. Specific functions can be opened up to specific minions from specific users in the case of external auth and client ACLs, and for specific minions in the case of the peer system.

Access controls are configured like this:

```
client_acl:
  fred:
    - web\*:
    - pkg.list_pkgs
    - test.*
    - apache.*
```

## Target by Network

A new matcher has been added to the system which allows for minions to be targeted by network. This new matcher can be called with the *-S* flag on the command line and is available in all places that the matcher system is available. Using it is simple:

```
$ salt -S '192.168.1.0/24' test.ping
$ salt -S '192.168.1.100' test.ping
```

## Nodegroup Nesting

Previously a nodegroup was limited by not being able to include another nodegroup, this restraint has been lifted and now nodegroups will be expanded within other nodegroups with the *N@* classifier.

## Salt Key Delete by Glob

The ability to delete minion keys by glob has been added to *salt-key*. To delete all minion keys whose minion name starts with *'web'*:

```
$ salt-key -d 'web*'
```

## Master Tops System

The *external\_nodes* system has been upgraded to allow for modular subsystems to be used to generate the top file data for a highstate run.

The *external\_nodes* option still works but will be deprecated in the future in favor of the new *master\_tops* option.

Example of using *master\_tops*:

```
master_tops:  
  ext_nodes: cobbler-external-nodes
```

## Next Level Solaris Support

A lot of work has been put into improved Solaris support by Romeo Theriault. Packaging modules (pkgadd/pkgrm and pkgutil) and states, cron support and user and group management have all been added and improved upon. These additions along with SMF (Service Management Facility) service support and improved Solaris grain detection in 0.10.3 add up to Salt becoming a great tool to manage Solaris servers with.

## Security

A vulnerability in the security handshake was found and has been repaired, old minions should be able to connect to a new master, so as usual, the master should be updated first and then the minions.

## Pillar Updates

The pillar communication has been updated to add some extra levels of verification so that the intended minion is the only one allowed to gather the data. Once all minions and the master are updated to salt 0.10.4 please activate pillar 2 by changing the *pillar\_version* in the master config to 2. This will be set to 2 by default in a future release.

## 20.2.79 Salt 0.10.5 Release Notes

release 2012-11-15

Salt 0.10.5 is ready, and comes with some great new features. A few more interfaces have been modularized, like the outputter system. The job cache system has been made more powerful and can now store and retrieve jobs archived in external databases. The returner system has been extended to allow minions to easily retrieve data from a returner interface.

As usual, this is an exciting release, with many noteworthy additions!

## Major Features

### External Job Cache

The external job cache is a system which allows for a returner interface to also act as a job cache. This system is intended to allow users to store job information in a central location for longer periods of time and to make the act of looking up information from jobs executed on other minions easier.

Currently the external job cache is supported via the mongo and redis returners:

```
ext_job_cache: redis
redis.host: salt
```

Once the external job cache is turned on the new *ret* module can be used on the minions to retrieve return information from the job cache. This can be a great way for minions to respond and react to other minions.

## OpenStack Additions

OpenStack integration with Salt has been moving forward at a blistering pace. The new *nova*, *glance*, and *keystone* modules represent the beginning of ongoing OpenStack integration.

The Salt team has had many conversations with core OpenStack developers and is working on linking to OpenStack in powerful new ways.

## Wheel System

A new API was added to the Salt Master which allows the master to be managed via an external API. This new system allows Salt API to easily hook into the Salt Master and manage configs, modify the state tree, manage the pillar and more. The main motivation for the wheel system is to enable features needed in the upcoming web UI so users can manage the master just as easily as they manage minions.

The wheel system has also been hooked into the external auth system. This allows specific users to have granular access to manage components of the Salt Master.

## Render Pipes

Jack Kuan has added a substantial new feature. The render pipes system allows Salt to treat the render system like unix pipes. This new system enables sls files to be passed through specific render engines. While the default renderer is still recommended, different engines can now be more easily merged. So to pipe the output of Mako used in YAML use this shebang line:

```
#!mako|yaml
```

## Salt Key Overhaul

The Salt Key system was originally developed as only a CLI interface, but as time went on it was pressed into becoming a clumsy API. This release marks a complete overhaul of Salt Key. Salt Key has been rewritten to function purely from an API and to use the outputter system. The benefit here is that the outputter system works much more cleanly with Salt Key now, and the internals of Salt Key can be used much more cleanly.

## Modular Outputters

The outputter system is now loaded in a modular way. This means that output systems can be more easily added by dropping a python file down on the master that contains the function *output*.

## Gzip from Fileserver

Gzip compression has been added as an option to the *cp.get\_file* and *cp.get\_dir* commands. This will make file transfers more efficient and faster, especially over slower network links.

## Unified Module Configuration

In past releases of Salt, the minions needed to be configured for certain modules to function. This was difficult because it required pre-configuring the minions. 0.10.5 changes this by making all module configs on minions search the master config file for values.

Now if a single database server is needed, then it can be defined in the master config and all minions will become aware of the configuration value.

## Salt Call Enhancements

The `salt-call` command has been updated in a few ways. Now, `salt-call` can take the `--return` option to send the data to a returner. Also, `salt-call` now reports executions in the minion proc system, this allows the master to be aware of the operation `salt-call` is running.

## Death to `pub_refresh` and `sub_timeout`

The old configuration values `pub_refresh` and `sub_timeout` have been removed. These options were in place to alleviate problems found in earlier versions of ZeroMQ which have since been fixed. The continued use of these options has proven to cause problems with message passing and have been completely removed.

## Git Revision Versions

When running Salt directly from git (for testing or development, of course) it has been difficult to know exactly what code is being executed. The new versioning system will detect the git revision when building and how many commits have been made since the last release. A release from git will look like this:

```
0.10.4-736-gec74d69
```

## Svn Module Addition

Anthony Cornehl (twinshadow) contributed a module that adds Subversion support to Salt. This great addition helps round out Salt's VCS support.

## Noteworthy Changes

### Arch Linux Defaults to Systemd

Arch Linux recently changed to use systemd by default and discontinued support for init scripts. Salt has followed suit and defaults to systemd now for managing services in Arch.

### Salt, Salt Cloud and Openstack

With the releases of Salt 0.10.5 and Salt Cloud 0.8.2, OpenStack becomes the first (non-OS) piece of software to include support both on the user level (with Salt Cloud) and the admin level (with Salt). We are excited to continue to extend support of other platforms at this level.

## 20.2.80 Salt 0.11.0 Release Notes

release 2012-12-14

Salt 0.11.0 is here, with some highly sought after and exciting features. These features include the new overstate system, the reactor system, a new state run scope component called `__context__`, the beginning of the search system (still needs a great deal of work), multiple package states, the MySQL returner and a better system to arbitrarily reference outputters.

It is also noteworthy that we are changing how we mark release numbers. For the life of the project we have been pushing every release with features and fixes as point releases. We will now be releasing point releases for only bug fixes on a more regular basis and major feature releases on a slightly less regular basis. This means that the next release will be a bugfix only release with a version number of 0.11.1. The next feature release will be named 0.12.0 and will mark the end of life for the 0.11 series.

### Major Features

#### OverState

The overstate system is a simple way to manage rolling state executions across many minions. The overstate allows for a state to depend on the successful completion of another state.

#### Reactor System

The new reactor system allows for a reactive logic engine to be created which can respond to events within a salted environment. The reactor system uses sls files to match events fired on the master with actions, enabling Salt to react to problems in an infrastructure.

Your load-balanced group of webservers is under extra load? Spin up a new VM and add it to the group. Your fileservers are filling up? Send a notification to your sysadmin on call. The possibilities are endless!

#### Module Context

A new component has been added to the module loader system. The module context is a data structure that can hold objects for a given scope within the module.

This allows for components that are initialized to be stored in a persistent context which can greatly speed up ongoing connections. Right now the best example can be found in the `cp` execution module.

#### Multiple Package Management

A long desired feature has been added to package management. By definition Salt States have always installed packages one at a time. On most platforms this is not the fastest way to install packages. Erik Johnson, aka terminalmage, has modified the package modules for many providers and added new capabilities to install groups of packages. These package groups can be defined as a list of packages available in repository servers:

```
python_pkgs:
  pkg.installed:
    - pkgs:
      - python-mako
      - whoosh
      - python-git
```

or specify based on the location of specific packages:

```
python_pkgs:
  pkg.installed:
    - sources:
      - python-mako: http://some-rpms.org/python-mako.rpm
      - whoosh: salt://whoosh/whoosh.rpm
      - python-git: ftp://companyserver.net/python-git.rpm
```

## Search System

The bones to the search system have been added. This is a very basic interface that allows for search backends to be added as search modules. The first supported search module is the whoosh search backend. Right now only the basic paths for the search system are in place, making this very experimental. Further development will involve improving the search routines and index routines for whoosh and other search backends.

The search system has been made to allow for searching through all of the state and pillar files, configuration files and all return data from minion executions.

## Notable Changes

All previous versions of Salt have shared many directories between the master and minion. The default locations for keys, cached data and sockets has been shared by master and minion. This has created serious problems with running a master and a minion on the same systems. 0.11.0 changes the defaults to be separate directories. Salt will also attempt to migrate all of the old key data into the correct new directories, but if it is not successful it may need to be done manually. If your keys exhibit issues after updating make sure that they have been moved from `/etc/salt/pki` to `/etc/salt/pki/{master,minion}`.

The old setup will look like this:

```
/etc/salt/pki
|-- master.pem
|-- master.pub
|-- minions
|   |-- ragnarok.saltstack.net
|-- minions_pre
|-- minion.pem
|-- minion.pub
|-- minion_master.pub
|-- minions_pre
|-- minions_rejected
```

With the accepted minion keys in `/etc/salt/pki/minions`, the new setup places the accepted minion keys in `/etc/salt/pki/master/minions`.

```
/etc/salt/pki
|-- master
|   |-- master.pem
|   |-- master.pub
|   |-- minions
|       |-- ragnarok.saltstack.net
|       |-- minions_pre
|       |-- minions_rejected
|-- minion
```

```
| | -- minion.pem  
| | -- minion.pub  
| `-- minion_master.pub
```

## 20.2.81 Salt 0.11.1 Release Notes

release 2012-12-19

## 20.2.82 Salt 0.12.0 Release Notes

release 2013-01-15

Another feature release of Salt is here! Some exciting additions are included with more ways to make salt modular and even easier management of the salt file server.

### Major Features

#### Modular Fileserver Backend

The new modular fileserver backend allows for any external system to be used as a salt file server. The main benefit here is that it is now possible to tell the master to directly use a git remote location, or many git remote locations, automatically mapping git branches and tags to salt environments.

#### Windows is First Class!

A new Salt Windows installer is now available! Much work has been put in to improve Windows support. With this much easier method of getting Salt on your Windows machines, we hope even more development and progress will occur. Please file bug reports on the Salt GitHub repo issue tracker so we can continue improving.

One thing that is missing on Windows that Salt uses extensively is a software package manager and a software package repository. The Salt pkg state allows sys admins to install software across their infrastructure and across operating systems. Software on Windows can now be managed in the same way. The SaltStack team built a package manager that interfaces with the standard Salt pkg module to allow for installing and removing software on Windows. In addition, a software package repository has been built on top of the Salt fileserver. A small YAML file provides the information necessary for the package manager to install and remove software.

An interesting feature of the new Salt Windows software package repository is that one or more remote git repositories can supplement the master's local repository. The repository can point to software on the master's fileserver or on an HTTP, HTTPS, or ftp server.

#### New Default Outputter

Salt displays data to the terminal via the outputter system. For a long time the default outputter for Salt has been the python pretty print library. While this has been a generally reasonable outputter, it did have many failings. The new default outputter is called ``nested'', it recursively scans return data structures and prints them out cleanly.

If the result of the new nested outputter is not desired any other outputter can be used via the --out option, or the output option can be set in the master and minion configs to change the default outputter.

## Internal Scheduler

The internal Salt scheduler is a new capability which allows for functions to be executed at given intervals on the minion, and for runners to be executed at given intervals on the master. The scheduler allows for sequences such as executing state runs (locally on the minion or remotely via an overstate) or continually gathering system data to be run at given intervals.

The configuration is simple, add the schedule option to the master or minion config and specify jobs to run, this in the master config will execute the state.over runner every 60 minutes:

```
schedule:
  overstate:
    function: state.over
    minutes: 60
```

This example for the minion configuration will execute a highstate every 30 minutes:

```
schedule:
  highstate:
    function: state.highstate
    minutes: 30
```

## Optional DSL for SLS Formulas

Jack Kuan, our renderer expert, has created something that is astonishing. Salt, now comes with an optional Python based DSL, this is a very powerful interface that makes writing SLS files in pure python easier than it was with the raw py renderer. As usual this can be used with the renderer shebang line, so a single sls can be written with the DSL if pure python power is needed while keeping other sls files simple with YAML.

## Set Grains Remotely

A new execution function and state module have been added that allows for grains to be set on the minion. Now grains can be set via a remote execution or via states. Use the *grains.present* state or the *grains.setval* execution functions.

## Gentoo Additions

Major additions to Gentoo specific components have been made. The encompasses executions modules and states ranging from supporting the make.conf file to tools like layman.

### 20.2.83 Salt 0.12.1 Release Notes

release 2013-01-21

### 20.2.84 Salt 0.13.0 Release Notes

release 2013-02-12

The lucky number 13 has turned the corner! From CLI notifications when quitting a salt command, to substantial improvements on Windows, Salt 0.13.0 has arrived!

## Major Features

### Improved file.recurse Performance

The file.recurse system has been deployed and used in a vast array of situations. Fixes to the file state and module have led towards opening up new ways of running file.recurse to make it faster. Now the file.recurse state will download fewer files and will run substantially faster.

### Windows Improvements

Minion stability on Windows has improved. Many file operations, including file.recurse, have been fixed and improved. The network module works better, to include network.interfaces. Both 32bit and 64bit installers are now available.

### Nodegroup Targeting in Peer System

In the past, nodegroups were not available for targeting via the peer system. This has been fixed, allowing the new nodegroup `expr_form` argument for the `publish.publish` function:

```
salt-call publish.publish group1 test.ping expr_form=nodegroup
```

### Blacklist Additions

Additions allowing more granular blacklisting are available in 0.13.0. The ability to blacklist users and functions in `client_acl` have been added, as well as the ability to exclude state formulas from the command line.

### Command Line Pillar Embedding

Pillar data can now be embedded on the command line when calling `state.sls` and `state.highstate`. This allows for on the fly changes or settings to pillar and makes parameterizing state formulas even easier. This is done via the `keyword` argument:

```
salt '*' state.highstate pillar='{"cheese": "spam"}'
```

The above example will extend the existing pillar to hold the `cheese` key with a value of `spam`. If the `cheese` key is already specified in the minion's pillar then it will be overwritten.

### CLI Notifications

In the past hitting `ctrl-C` and quitting from the `salt` command would just drop to a shell prompt, this caused confusion with users who expected the remote executions to also quit. Now a message is displayed showing what command can be used to track the execution and what the job id is for the execution.

### Version Specification in Multiple-Package States

Versions can now be specified within multiple-package `pkg.installed` states. An example can be found below:

```
mypkgs:
  pkg.installed:
    - pkgs:
      - foo
      - bar: 1.2.3-4
      - baz
```

## Noteworthy Changes

The configuration subsystem in Salt has been overhauled to make the `opts` dict used by Salt applications more portable, the problem is that this is an incompatible change with salt-cloud, and salt-cloud will need to be updated to the latest git to work with Salt 0.13.0. Salt Cloud 0.8.5 will also require Salt 0.13.0 or later to function.

The SaltStack team is sorry for the inconvenience here, we work hard to make sure these sorts of things do not happen, but sometimes hard changes get in.

### 20.2.85 Salt 0.13.1 Release Notes

release 2013-02-15

### 20.2.86 Salt 0.13.2 Release Notes

release 2013-03-13

### 20.2.87 Salt 0.13.3 Release Notes

release 2013-03-18

### 20.2.88 Salt 0.14.0 Release Notes

release 2013-03-23

Salt 0.14.0 is here! This release was held up primarily by PyCon, Scale, and illness, but has arrived! 0.14.0 comes with many new features and is breaking ground for Salt in the area of cloud management with the introduction of Salt providing basic cloud controller functionality.

## Major Features

### Salt - As a Cloud Controller

This is the first primitive inroad to using Salt as a cloud controller is available in 0.14.0. Be advised that this is alpha, only tested in a few very small environments.

The cloud controller is built using `kvm` and `libvirt` for the hypervisors. Hypervisors are autodetected as minions and only need to have `libvirt` running and `kvm` installed to function. The features of the Salt cloud controller are as follows:

- Basic vm discovery and reporting
- Creation of new virtual machines

- Seeding virtual machines with Salt via qemu-nbd or libguestfs
- Live migration (shared and non shared storage)
- Delete existing VMs

It is noteworthy that this feature is still Alpha, meaning that all rights are reserved to change the interface if needs be in future releases!

### Libvirt State

One of the problems with libvirt is management of certificates needed for live migration and cross communication between hypervisors. The new `libvirt` state makes the Salt Master hold a CA and manage the signing and distribution of keys onto hypervisors, just add a call to the libvirt state in the sls formulas used to set up a hypervisor:

```
libvirt_keys:
  libvirt.keys
```

### New get Functions

An easier way to manage data has been introduced. The pillar, grains, and config execution modules have been extended with the new `get` function. This function works much in the same way as the `get` method in a python dict, but with an enhancement, nested dict components can be extracted using a `:` delimiter.

If a structure like this is in pillar:

```
foo:
  bar:
    baz: quo
```

Extracting it from the raw pillar in an sls formula or file template is done this way:

```
{{ pillar['foo']['bar']['baz'] }}
```

Now with the new `get` function the data can be safely gathered and a default can be set allowing the template to fall back if the value is not available:

```
{{ salt['pillar.get']('foo:bar:baz', 'qux') }}
```

This makes handling nested structures much easier, and defaults can be cleanly set. This new function is being used extensively in the new formulae repository of salt sls formulas.

## 20.2.89 Salt 0.14.1 Release Notes

release 2013-04-13

## 20.2.90 Salt 0.15.0 Release Notes

release 2013-05-03

The many new features of Salt 0.15.0 have arrived! Salt 0.15.0 comes with many smaller features and a few larger ones.

These features range from better debugging tools to the new Salt Mine system.

## Major Features

### The Salt Mine

First there was the peer system, allowing for commands to be executed from a minion to other minions to gather data live. Then there was the external job cache for storing and accessing long term data. Now the middle ground is being filled in with the Salt Mine. The Salt Mine is a system used to execute functions on a regular basis on minions and then store only the most recent data from the functions on the master, then the data is looked up via targets.

The mine caches data that is public to all minions, so when a minion posts data to the mine all other minions can see it.

### IPV6 Support

0.13.0 saw the addition of initial IPV6 support but errors were encountered and it needed to be stripped out. This time the code covers more cases and must be explicitly enabled. But the support is much more extensive than before.

### Copy Files From Minions to the Master

Minions have long been able to copy files down from the master file server, but until now files could not be easily copied from the minion up to the master.

A new function called `cp.push` can push files from the minions up to the master server. The uploaded files are then cached on the master in the `master.cachedir` for each minion.

### Better Template Debugging

Template errors have long been a burden when writing states and pillar. 0.15.0 will now send the compiled template data to the debug log, this makes tracking down the intermittent stage templates much easier. So running `state.sls` or `state.highstate` with `-l debug` will now print out the rendered templates in the debug information.

### State Event Firing

The state system is now more closely tied to the master's event bus. Now when a state fails the failure will be fired on the master event bus so that the reactor can respond to it.

### Major Syndic Updates

The Syndic system has been basically re-written. Now it runs in a completely asynchronous way and functions primarily as an event broker. This means that the events fired on the syndic are now pushed up to the higher level master instead of the old method used which waited for the client libraries to return.

This makes the syndic much more accurate and powerful, it also means that all events fired on the syndic master make it up the pipe as well making a reactor on the higher level master able to react to minions further downstream.

## Peer System Updates

The Peer System has been updated to run using the client libraries instead of firing directly over the publish bus. This makes the peer system much more consistent and reliable.

## Minion Key Revocation

In the past when a minion was decommissioned the key needed to be manually deleted on the master, but now a function on the minion can be used to revoke the calling minion's key:

```
$ salt-call saltutil.revoke_auth
```

## Function Return Codes

Functions can now be assigned numeric return codes to determine if the function executed successfully. While not all functions have been given return codes, many have and it is an ongoing effort to fill out all functions that might return a non-zero return code.

## Functions in Overstate

The overstate system was originally created to just manage the execution of states, but with the addition of return codes to functions, requisite logic can now be used with respect to the overstate. This means that an overstate stage can now run single functions instead of just state executions.

## Pillar Error Reporting

Previously if errors surfaced in pillar, then the pillar would consist of only an empty dict. Now all data that was successfully rendered stays in pillar and the render error is also made available. If errors are found in the pillar, states will refuse to run.

## Using Cached State Data

Sometimes states are executed purely to maintain a specific state rather than to update states with new configs. This is grounds for the new cached state system. By adding `cache=True` to a state call the state will not be generated fresh from the master but the last state data to be generated will be used. If no previous state data is available then fresh data will be generated.

## Monitoring States

The new monitoring states system has been started. This is very young but allows for states to be used to configure monitoring routines. So far only one monitoring state is available, the `disk.status` state. As more capabilities are added to Salt UI the monitoring capabilities of Salt will continue to be expanded.

## 20.2.91 Salt 0.15.1 Release Notes

release 2013-05-08

The 0.15.1 release has been posted, this release includes fixes to a number of bugs in 0.15.1 and a three security patches.

### Security Updates

A number of security issues have been resolved via the 0.15.1 release.

#### Path Injection in Minion IDs

Salt masters did not properly validate the id of a connecting minion. This can lead to an attacker uploading files to the master in arbitrary locations. In particular this can be used to bypass the manual validation of new unknown minions. Exploiting this vulnerability does not require authentication.

This issue affects all known versions of Salt.

This issue was reported by Ronald Volgers.

#### Patch

The issue is fixed in Salt 0.15.1. Updated packages are available in the usual locations.

Specific commits:

<https://github.com/saltstack/salt/commit/5427b9438e452a5a8910d9128c6aafb45d8fd5d3>

<https://github.com/saltstack/salt/commit/7560908ee62351769c3cd43b03d74c1ca772cc52>

<https://github.com/saltstack/salt/commit/e200b8a7ff53780124e08d2bdefde7587e52bfca>

#### RSA Key Generation Fault

RSA key generation was done incorrectly, leading to very insecure keys. It is recommended to regenerate all RSA keys.

This issue can be used to impersonate Salt masters or minions, or decrypt any transferred data.

This issue can only be exploited by attackers who are able to observe or modify traffic between Salt minions and the legitimate Salt master.

A tool was included in 0.15.1 to assist in mass key regeneration, the `manage.regen_keys` runner.

This issue affects all known versions of Salt.

This issue was reported by Ronald Volgers.

#### Patch

The issue is fixed in Salt 0.15.1. Updated packages are available in the usual locations.

Specific commits:

<https://github.com/saltstack/salt/commit/5dd304276ba5745ec21fc1e6686a0b28da29e6fc>

## Command Injection Via `ext_pillar`

Arbitrary shell commands could be executed on the master by an authenticated minion through options passed when requesting a pillar.

Ext pillar options have been restricted to only allow safe external pillars to be called when prompted by the minion.

This issue affects Salt versions from 0.14.0 to 0.15.0.

This issue was reported by Ronald Volgers.

### Patch

The issue is fixed in Salt 0.15.1. Updated packages are available in the usual locations.

Specific commits:

<https://github.com/saltstack/salt/commit/43d8c16bd26159d827d1a945c83ac28159ec5865>

## 20.2.92 Salt 0.15.2 Release Notes

release 2013-05-29

## 20.2.93 Salt 0.15.3 Release Notes

release 2013-06-01

## 20.2.94 Salt 0.16.0 Release Notes

release 2013-07-01

The 0.16.0 release is an exciting one, with new features in master redundancy, and a new, powerful requisite.

### Major Features

#### Multi-Master

This new capability allows for a minion to be actively connected to multiple salt masters at the same time. This allows for multiple masters to send out commands to minions and for minions to automatically reconnect to masters that have gone down. A tutorial is available to help get started here:

*[Multi Master Tutorial](#)*

#### Prereq, the New Requisite

The new *prereq* requisite is very powerful! It allows for states to execute based on a state that is expected to make changes in the future. This allows for a change on the system to be preempted by another execution. A good example is needing to shut down a service before modifying files associated with it, allowing, for instance, a webserver to be shut down allowing a load balancer to stop sending requests while server side code is updated. In this case, the *prereq* will only run if changes are expected to happen in the prerequired state, and the prerequired state will always run after the *prereq* state and only if the *prereq* state succeeds.

## Peer System Improvements

The peer system has been revamped to make it more reliable, faster, and like the rest of Salt, async. The peer calls when an updated minion and master are used together will be much faster!

## Relative Includes

The ability to include an sls relative to the defined sls has been added, the new syntax is documented here:

*Includes*

## More State Output Options

The `state_output` option in the past only supported *full* and *terse*, 0.16.0 add the *mixed* and *changes* modes further refining how states are sent to users' eyes.

## Improved Windows Support

Support for Salt on Windows continues to improve. Software management on Windows has become more seamless with Linux/UNIX/BSD software management. Installed software is now recognized by the short names defined in the *repository SLS*. This makes it possible to run `salt '*' pkg.version firefox` and get back results from Windows and non-Windows minions alike.

When templating files on Windows, Salt will now correctly use Windows appropriate line endings. This makes it much easier to edit and consume files on Windows.

When using the `cmd` state the `shell` option now allows for specifying Windows Powershell as an alternate shell to execute `cmd.run` and `cmd.script`. This opens up Salt to all the power of Windows Powershell and its advanced Windows management capabilities.

Several fixes and optimizations were added for the Windows networking modules, especially when working with IPv6.

A system module was added that makes it easy to restart and shutdown Windows minions.

The Salt Minion will now look for its config file in `c:\salt\conf` by default. This means that it's no longer necessary to specify the `-c` option to specify the location of the config file when starting the Salt Minion on Windows in a terminal.

## Multiple Targets for `pkg.removed`, `pkg.purged` States

Both *pkg.removed* and *pkg.purged* now support the `pkgs` argument, which allow for multiple packages to be targeted in a single state. This, as in *pkg.installed*, helps speed up these states by reducing the number of times that the package management tools (`apt`, `yum`, etc.) need to be run.

## Random Times in Cron States

The temporal parameters in *cron.present* states (minute, hour, etc.) can now be randomized by using `random` instead of a specific value. For example, by using the `random` keyword in the `minute` parameter of a cron state, the same cron job can be pushed to hundreds or thousands of hosts, and they would each use a randomly-generated minute. This can be helpful when the cron job accesses a network resource, and it is not desirable for all hosts to run the job concurrently.

```
/path/to/cron/script:
cron.present:
- user: root
- minute: random
- hour: 2
```

Since Salt assumes a value of `*` for unspecified temporal parameters, adding a parameter to the state and setting it to `random` will change that value from `*` to a randomized numeric value. However, if that field in the cron entry on the minion already contains a numeric value, then using the `random` keyword will not modify it.

### Confirmation Prompt on Key Acceptance

When accepting new keys with `salt-key -a minion-id` or `salt-key -A`, there is now a prompt that will show the affected keys and ask for confirmation before proceeding. This prompt can be bypassed using the `-y` or `--yes` command line argument, as with other `salt-key` commands.

### Support for Setting Password Hashes on BSD Minions

FreeBSD, NetBSD, and OpenBSD all now support setting passwords in `user.present` states.

## 20.2.95 Salt 0.16.1 Release Notes

release 2013-07-29

## 20.2.96 Salt 0.16.2 Release Notes

release 2013-08-01

Version 0.16.2 is a bugfix release for *0.16.0*, and contains a number of fixes.

### Windows

- Only allow Administrator's group and SYSTEM user access to `C:\salt`. This eliminates a race condition where a non-admin user could modify a template or managed file before it is executed by the minion (which is running as an elevated user), thus avoiding a potential escalation of privileges. ([issue 6361](#))

### Grains

- Fixed detection of `virtual` grain on OpenVZ hardware nodes
- Gracefully handle `lsb_release` data when it is enclosed in quotes
- LSB grains are now prefixed with `lsb_distrib_` instead of simply `lsb_`. The old naming is not preserved, so SLS may be affected.
- Improved grains detection on MacOS

## Pillar

- Don't try to load *git\_pillar* if not enabled in master config (issue 6052)
- Functions *pillar.item* and *pillar.items* added for parity with *grains.item/grains.items*. The old function *pillar.data* is preserved for backwards compatibility.
- Fixed minion traceback when Pillar SLS is malformed (issue 5910)

## Peer Publishing

- More gracefully handle improperly quoted publish commands (issue 5958)
- Fixed traceback when timeout specified via the CLI fo *publish.publish*, *publish.full\_data* (issue 5959)
- Fixed unintended change in output of *publish.publish* (issue 5928)

## Minion

- Fixed salt-key usage in minionswarm script
- Quieted warning about **SALT\_MINION\_CONFIG** environment variable on minion startup and for CLI commands run via `salt-call` (issue 5956)
- Added minion config parameter *random\_reauth\_delay* to stagger re-auth attempts when the minion is waiting for the master to approve its public key. This helps prevent SYN flooding in larger environments.

## User/Group Management

- Implement previously-ignored `unique` option for *user.present* states in FreeBSD
- Report in state output when a *group.present* state attempts to use a gid in use by another group
- Fixed regression that prevents a *user.present* state to set the password hash to the system default (i.e. an unset password)
- Fixed multiple *group.present* states with the same group (issue 6439)

## File Management

- Fixed file.mkdir setting incorrect permissions (issue 6033)
- Fixed cleanup of source files for templates when `/tmp` is in `file_roots` (issue 6118)
- Fixed caching of zero-byte files when a non-empty file was previously cached at the same path
- Added HTTP authentication support to the cp module (issue 5641)
- Diffs are now suppressed when binary files are changed

## Package/Repository Management

- Fixed traceback when there is only one target for *pkg.latest* states
- Fixed regression in detection of virtual packages (apt)
- Limit number of pkg database refreshes to once per *state.sls/state.highstate*

- YUM: Allow 32-bit packages with arches other than i686 to be managed on 64-bit systems ([issue 6299](#))
- Fixed incorrect reporting in `pkgrepo.managed` states ([issue 5517](#))
- Fixed 32-bit binary package installs on 64-bit RHEL-based distros, and added proper support for 32-bit packages on 64-bit Debian-based distros ([issue 6303](#))
- Fixed issue where requisites were inadvertently being put into YUM repo files ([issue 6471](#))

### Service Management

- Fixed inaccurate reporting of results in `service.running` states when the service fails to start ([issue 5894](#))
- Fixed handling of custom initscripts in RHEL-based distros so that they are immediately available, negating the need for a second state run to manage the service that the initscript controls

### Networking

- Function `network.hwaddr` renamed to `network.hw_addr` to match `network.ip_addrs` and `network.ip_addrs6`. All three functions also now work without the underscore in the name, as well.
- Fixed traceback in `bridge.show` when interface is not present ([issue 6326](#))

### SSH

- Fixed incorrect result reporting for some `ssh_known_hosts.present` states
- Fixed inaccurate reporting when `ssh_auth.present` states are run with `test=True`, when `rsa/dss` is used for the `enc` param instead of `ssh-rsa/ssh-dss` ([issue 5374](#))

### pip

- Properly handle `-f` lines in pip freeze output
- Fixed regression in `pip.installed` states with specifying a requirements file ([issue 6003](#))
- Fixed use of `editable` argument in `pip.installed` states ([issue 6025](#))
- Deprecated `runas` parameter in execution function calls, in favor of `user`

### MySQL

- Allow specification of `MySQL` connection arguments via the CLI, overriding/bypassing minion config params
- Allow `mysql_user.present` states to set a passwordless login ([issue 5550](#))
- Fixed endless loop when `mysql.processlist` is run ([issue 6297](#))

### PostgreSQL

- Fixed traceback in `postgres.user_list` ([issue 6352](#))

## Miscellaneous

- Don't allow `npm states` to be used if `npm module` is not available
- Fixed `alternatives.install` states for which the target is a symlink (issue 6162)
- Fixed traceback in `sysbench module` (issue 6175)
- Fixed traceback in job cache
- Fixed tempfile cleanup for windows
- Fixed issue where SLS files using the `pydsl renderer` were not being run
- Fixed issue where returners were being passed incorrect information (issue 5518)
- Fixed traceback when numeric args are passed to `cmd.script` states
- Fixed bug causing `cp.get_dir` to return more directories than expected (issue 6048)
- Fixed traceback when `supervisord.running` states are run with `test=True` (issue 6053)
- Fixed tracebacks when Salt encounters problems running `rbenv` (issue 5888)
- Only make the `monit module` available if `monit` binary is present (issue 5871)
- Fixed incorrect behavior of `img.mount_image`
- Fixed traceback in `tomcat.deploy_war` in Windows
- Don't re-write `/etc/fstab` if mount fails
- Fixed tracebacks when Salt encounters problems running `gem` (issue 5886)
- Fixed incorrect behavior of `selinux.boolean` states (issue 5912)
- `RabbitMQ`: Quote passwords to avoid symbols being interpolated by the shell (issue 6338)
- Fixed tracebacks in `extfs.mkfs` and `extfs.tune` (issue 6462)
- Fixed a regression with the `module.run` state where the `m_name` and `m_fun` arguments were being ignored (issue 6464)

## 20.2.97 Salt 0.16.3 Release Notes

release 2013-08-09

Version 0.16.3 is another bugfix release for `0.16.0`. The changes include:

- Various documentation fixes
- Fix `proc` directory regression (issue 6502)
- Properly detect `Linaro Linux` (issue 6496)
- Fix regressions in `mount.mounted` (issue 6522, issue 6545)
- Skip malformed state requisites (issue 6521)
- Fix regression in `gitfs` from bad import
- Fix for watching `prereq` states (including recursive requisite error) (issue 6057)
- Fix `mod_watch` not overriding `prereq` (issue 6520)
- Don't allow functions which compile states to be called within states (issue 5623)
- Return error for malformed `top.sls` (issue 6544)

- Fix traceback in `mysql.query`
- Fix regression in binary package installation for 64-bit packages on Debian-based Linux distros (issue 6563)
- Fix traceback caused by running `cp.push` without having set `file_recv` in the master config file
- Fix scheduler configuration in pillar (issue 6201)

## 20.2.98 Salt 0.16.4 Release Notes

release 2013-09-07

Version 0.16.4 is another bugfix release for `0.16.0`, likely to be the last before 0.17.0 is released. The changes include:

- Multiple documentation improvements/additions
- Added the `osfinger` and `osarch` grains
- Properly handle 32-bit packages for `debian32` on `x86_64` (issue 6607)
- Fix regression in yum package installation in CentOS 5 (issue 6677)
- Fix bug in `hg.latest` state that would erroneously delete directories (issue 6661)
- Fix bug related to pid not existing for `ps.top` (issue 6679)
- Fix regression in `MySQL returner` (issue 6695)
- Fix IP addresses grains (`ipv4` and `ipv6`) to include all addresses (issue 6656)
- Fix regression preventing authenticated FTP (issue 6733)
- Fix setting password for windows users (issue 6824)
- Fix `file.contains` on values YAML parses as non-string (issue 6817)
- Fix `file.get_gid`, `file.get_uid`, and `file.chown` for broken symlinks (issue 6826)
- Fix comment for service reloads in service state (issue 6851)

## 20.2.99 Salt 0.17.0 Release Notes

release 2013-09-26

The 0.17.0 release is a very exciting release of Salt, this brings to Salt some very powerful new features and advances. The advances range from the state system to the test suite, covering new transport capabilities and making states easier and more powerful, to extending Salt Virt and much more!

The 0.17.0 release will also be the last release of Salt to follow the old 0.XX.X numbering system, the next release of Salt will change the numbering to be date based following this format:

<Year>.<Month>.<Minor>

So if the release happens in November of 2013 the number will be 13.11.0, the first bugfix release will be 13.11.1 and so forth.

## Major Features

### Halite

The new Halite web GUI is now available on PyPI. A great deal of work has been put into Halite to make it fully event driven and amazingly fast. The Halite UI can be started from within the Salt Master (after being installed from PyPI), or standalone, and does not require an external database to run. It is very lightweight!

This initial release of Halite is primarily the framework for the UI and the communication systems, making it easy to extend and build the UI up. It presently supports watching the event bus and firing commands over Salt.

At this time, Halite is not available as a package, but installation documentation is available at: <http://docs.saltstack.com/topics/tutorials/halite.html>

Halite is, like the rest of Salt, Open Source!

Much more will be coming in the future of Halite!

### Salt SSH

The new `salt-ssh` command has been added to Salt. This system allows for remote execution and states to be run over ssh. The benefit here being, that salt can run relying only on the ssh agent, rather than requiring a minion to be deployed.

The `salt-ssh` system runs states in a compatible way as Salt and states created and run with salt-ssh can be moved over to a standard salt deployment without modification.

Since this is the initial release of salt-ssh, there is plenty of room for improvement, but it is fully operational, not just a bootstrap tool.

### Rosters

Salt is designed to have the minions be aware of the master and the master does not need to be aware of the location of the minions. The new salt roster system was created and designed to facilitate listing the targets for salt-ssh.

The roster system, like most of Salt, is a plugin system, allowing for the list of systems to target to be derived from any pluggable backend. The rosters shipping with 0.17.0 are flat and scan. Flat is a file which is read in via the salt render system and the scan roster does simple network scanning to discover ssh servers.

### State Auto Order

This is a major change in how states are evaluated in Salt. State Auto Order is a new feature that makes states get evaluated and executed in the order in which they are defined in the sls file. This feature makes it very easy to see the finite order in which things will be executed, making Salt now, fully imperative AND fully declarative.

The requisite system still takes precedence over the order in which states are defined, so no existing states should break with this change. But this new feature can be turned off by setting `state_auto_order: False` in the master config, thus reverting to the old lexicographical order.

### state.sls Runner

The `state.sls` runner has been created to allow for a more powerful system for orchestrating state runs and function calls across the salt minions. This new system uses the state system for organizing executions.

This allows for states to be defined that are executed on the master to call states on minions via `salt-run state.sls`.

## Salt Thin

Salt Thin is an exciting new component of Salt, this is the ability to execute Salt routines without any transport mechanisms installed, it is a pure python subset of Salt.

Salt Thin does not have any networking capability, but can be dropped into any system with Python installed and then `salt-call` can be called directly. The Salt Thin system, is used by the `salt-ssh` command, but can still be used to just drop salt somewhere for easy use.

## Event Namespacing

Events have been updated to be much more flexible. The tags in events have all been namespaced allowing easier tracking of event names.

## Mercurial Fileserver Backend

The popular git fileserver backend has been joined by the mercurial fileserver backend, allowing the state tree to be managed entirely via mercurial.

## External Logging Handlers

The external logging handler system allows for Salt to directly hook into any external logging system. Currently supported are sentry and logstash.

## Jenkins Testing

The testing systems in Salt have been greatly enhanced, tests for salt are now executed, via `jenkins.saltstack.com`, across many supported platforms. Jenkins calls out to `salt-cloud` to create virtual machines on Rackspace, then the minion on the virtual machine checks into the master running on Jenkins where a state run is executed that sets up the minion to run tests and executes the test suite.

This now automates the sequence of running platform tests and allows for continuous destructive tests to be run.

## Salt Testing Project

The testing libraries for salt have been moved out of the main salt code base and into a standalone codebase. This has been done to ease the use of the testing systems being used in salt based projects other than Salt itself.

## StormPath External Authentication

The external auth system now supports the fantastic Stormpath cloud based authentication system.

### LXC Support

Extensive additions have been added to Salt for LXC support. This included the backend libs for managing LXC containers. Addition into the salt-virt system is still in the works.

### macOS User/Group Support

Salt is now able to manage users and groups on Minions running macOS. However, at this time user passwords cannot be managed.

### Django ORM External Pillar

Pillar data can now be derived from Django managed databases.

### Fixes from RC to release

- Multiple documentation fixes
- Add multiple source files + templating for *file.append* (issue 6905)
- Support sysctl configuration files in systemd $\geq$ 207 (issue 7351)
- Add *file.search* and *file.replace*
- Fix cross-calling execution functions in provider overrides
- Fix locale override for postgres (issue 4543)
- Fix Raspbian identification for service/pkg support (issue 7371)
- Fix *cp.push* file corruption (issue 6495)
- Fix ALT Linux password hash specification (issue 3474)
- Multiple salt-ssh-related fixes and improvements

## 20.2.100 Salt 0.17.1 Release Notes

release 2013-10-17

---

**Note:** THIS RELEASE IS NOT COMPATIBLE WITH PREVIOUS VERSIONS. If you update your master to 0.17.1, you must update your minions as well. Sorry for the inconvenience -- this is a result of one of the security fixes listed below.

---

The 0.17.1 release comes with a number of improvements to salt-ssh, many bugfixes, and a number of security updates.

Salt SSH has been improved to be faster, more featureful and more secure. Since the original release of Salt SSH was primarily a proof of concept, it has been very exciting to see its rapid adoption. We appreciate the willingness of security experts to review Salt SSH and help discover oversights and ensure that security issues only exist for such a tiny window of time.

## SSH Enhancements

### Shell Improvements

Improvements to Salt SSH's communication have been added that improve routine execution regardless of the target system's login shell.

### Performance

Deployment of routines is now faster and takes fewer commands to execute.

### Security Updates

Be advised that these security issues all apply to a small subset of Salt users and mostly apply to Salt SSH.

### Insufficient Argument Validation

This issue allowed for a user with limited privileges to embed executions inside of routines to execute routines that should be restricted. This applies to users using external auth or client ACL and opening up specific routines.

Be advised that these patches address the direct issue. Additional commits have been applied to help mitigate this issue from resurfacing.

### CVE

CVE-2013-4435

### Affected Versions

0.15.0 - 0.17.0

### Patches

### MITM SSH attack in salt-ssh

SSH host keys were being accepted by default and not enforced on future SSH connections. These patches set SSH host key checking by default and can be overridden by passing the `-i` flag to `salt-ssh`.

#### CVE

CVE-2013-4436

#### Affected Versions

0.17.0

#### Found By

Michael Scherer, Red Hat

### Insecure Usage of /tmp in salt-ssh

The initial release of `salt-ssh` used the `/tmp` directory in an insecure way. These patches not only secure usage of files under `/tmp` in `salt-ssh`, but also add checksum validation for all packages sent into the now secure locations on target systems.

### YAML Calling Unsafe Loading Routine

It has been argued that this is not a valid security issue, as the YAML loading that was happening was only being called after an initial gateway filter in Salt has already safely loaded the YAML and would fail if non-safe routines were embedded. Nonetheless, the CVE was filed and patches applied.

#### CVE

CVE-2013-4438

#### Patches

<https://github.com/saltstack/salt/commit/339b0a51befae6b6b218ebcb55daa9cd3329a1c5>

#### Found By

Michael Scherer, Red Hat

### Failure to Drop Supplementary Group on Salt Master

If a salt master was started as a non-root user by the root user, root's groups would still be applied to the running process. This fix changes the process to have only the groups of the running user.

#### CVE

CVE not considered necessary by submitter.

#### Affected Versions

0.11.0 - 0.17.0

#### Patches

<https://github.com/saltstack/salt/commit/b89fa9135822d029795ab1eecd68cce2d1ced715>

### Failure to Validate Minions Posting Data

This issue allowed a minion to pose as another authorized minion when posting data such as the mine data. All minions now pass through the id challenge before posting such data.

## CVE

CVE-2013-4439

## Affected Versions

0.15.0 - 0.17.0

## Patches

## Fix Reference

Version 0.17.1 is the first bugfix release for *0.17.0*. The changes include:

- Fix symbolic links in thin.tgz ([issue 7482](#))
- Pass env through to file.patch state ([issue 7452](#))
- Service provider fixes and reporting improvements ([issue 7361](#))
- Add `--priv` option for specifying salt-ssh private key
- Fix salt-thin's salt-call on setup tools installations ([issue 7516](#))
- Fix salt-ssh to support passwords with spaces ([issue 7480](#))
- Fix regression in wildcard includes ([issue 7455](#))
- Fix salt-call outputter regression ([issue 7456](#))
- Fix custom returner support for startup states ([issue 7540](#))
- Fix value handling in augeas ([issue 7605](#))
- Fix regression in apt ([issue 7624](#))
- Fix minion ID guessing to use `socket.getfqdn()` first ([issue 7558](#))
- Add minion ID caching ([issue 7558](#))
- Fix salt-key race condition ([issue 7304](#))
- Add `--include-all` flag to salt-key ([issue 7399](#))
- Fix custom grains in pillar (part of [issue 5716](#), [issue 6083](#))
- Fix race condition in salt-key ([issue 7304](#))
- Fix regression in minion ID guessing, prioritize `socket.getfqdn()` ([issue 7558](#))
- Cache minion ID on first guess ([issue 7558](#))
- Allow trailing slash in `file.directory` state

- Fix reporting of file\_roots in pillar return ([issue 5449](#) and [issue 5951](#))
- Remove pillar matching for mine.get ([issue 7197](#))
- Sanitize args for multiple execution modules
- Fix yumpkg mod\_repo functions to filter hidden args ([issue 7656](#))
- Fix conflicting IDs in state includes ([issue 7526](#))
- Fix mysql\_grants.absent string formatting issue ([issue 7827](#))
- Fix postgres.version so it won't return None ([issue 7695](#))
- Fix for trailing slashes in mount.mounted state
- Fix rogue AttributErrors in the outputter system ([issue 7845](#))
- Fix for incorrect ssh key encodings resulting in incorrect key added ([issue 7718](#))
- Fix for pillar/grains naming regression in python renderer ([issue 7693](#))
- Fix args/kwargs handling in the scheduler ([issue 7422](#))
- Fix logfile handling for *file://*, *tcp://*, and *udp://* ([issue 7754](#))
- Fix error handling in config file parsing ([issue 6714](#))
- Fix RVM using sudo when running as non-root user ([issue 2193](#))
- Fix client ACL and underlying logging bugs ([issue 7706](#))
- Fix scheduler bug with returner ([issue 7367](#))
- Fix user management bug related to default groups ([issue 7690](#))
- Fix various salt-ssh bugs ([issue 7528](#))
- Many various documentation fixes

### 20.2.101 Salt 0.17.2 Release Notes

release 2013-11-14

Version 0.17.2 is another bugfix release for *0.17.0*. The changes include:

- Add ability to delete key with grains.delval ([issue 7872](#))
- Fix possible state compiler stack trace ([issue 5767](#))
- Fix architecture regression in yumpkg ([issue 7813](#))
- Use correct ps on Debian to prevent truncating ([issue 5646](#))
- Fix grains targeting for new grains ([issue 5737](#))
- Fix bug with merging in git\_pillar ([issue 6992](#))
- Fix print\_jobs duplicate results
- Fix apt version specification for pkg.install
- Fix possible KeyError from ext\_job\_cache missing option
- Fix auto\_order for *-names* states ([issue 7649](#))
- Fix regression in new gitfs installs (directory not found error)
- Fix escape pipe issue on Windows for file.recurse ([issue 7967](#))

- Fix fileclient in case of master restart ([issue 7987](#))
- Try to output warning if CLI command malformed ([issue 6538](#))
- Fix `--out=quiet` to actually be quiet ([issue 8000](#))
- Fix for `state.sls` in `salt-ssh` ([issue 7991](#))
- Fix for MySQL grants ordering issue ([issue 5817](#))
- Fix traceback for certain missing CLI args ([issue 8016](#))
- Add ability to disable `lspci` queries on master ([issue 4906](#))
- Fail if `sls` defined in `topfile` does not exist ([issue 5998](#))
- Add ability to downgrade MySQL grants ([issue 6606](#))
- Fix `ssh_auth.absent` traceback ([issue 8043](#))
- Add upstart detection for Debian/Raspbian ([issue 8039](#))
- Fix ID-related issues ([issue 8052](#), [issue 8050](#), and others)
- Fix for `jinja` rendering issues ([issue 8066](#) and [issue 8079](#))
- Fix argument parsing in `salt-ssh` ([issue 7928](#))
- Fix some GPU detection instances ([issue 6945](#))
- Fix bug preventing includes from other environments in SLS files
- Fix for `kwargs` with dashes ([issue 8102](#))
- Fix `salt.utils.which` for windows `.exe` ([issue 7904](#))
- Fix `apache.adduser` without `apachectl` ([issue 8123](#))
- Fix issue with evaluating `test` kwarg in states ([issue 7788](#))
- Fix regression in `salt.client.Caller()` ([issue 8078](#))
- Fix `apt-key` silent failure
- Fix bug where `cmd.script` would try to run even if caching failed ([issue 7601](#))
- Fix `apt pkg.latest` regression ([issue 8067](#))
- Fix for mine data not being updated ([issue 8144](#))
- Fix for `noarch` packages in `yum`
- Fix a Xen detection edge case ([issue 7839](#))
- Fix windows `__opts__` dictionary persistence ([issue 7714](#))
- Fix version generation for when it's part of another git repo ([issue 8090](#))
- Fix `_handle_iorder` stacktrace so that the real syntax error is shown ([issue 8114](#) and [issue 7905](#))
- Fix `git.latest` state when a commit SHA is used ([issue 8163](#))
- Fix various small bugs in `yumpkg.py` ([issue 8201](#))
- Fix for specifying `identify` file in `git.latest` ([issue 8094](#))
- Fix for `--output-file` CLI arg ([issue 8205](#))
- Add ability to specify shutdown time for `system.shutdown` ([issue 7833](#))
- Fix for salt version using non-salt git repo info ([issue 8266](#))

- Add additional hints at impact of `pkgrepo` states when `test=True` ([issue 8247](#))
- Fix for `salt-ssh` files not being owned by root ([issue 8216](#))
- Fix retry logic and error handling in `filesrv` (related to [issue 7755](#))
- Fix `file.replace` with `test=True` ([issue 8279](#))
- Add flag for limiting file traversal in `filesrv` ([issue 6928](#))
- Fix for extra mine processes ([issue 5729](#))
- Fix for unloading custom modules ([issue 7691](#))
- Fix for `salt-ssh` opts ([issue 8005](#) and [issue 8271](#))
- Fix compound matcher for `grains` ([issue 7944](#))
- Improve error reporting in `ebuild` module (related to [issue 5393](#))
- Add `dir_mode` to `file.managed` ([issue 7860](#))
- Improve `traceroute` support for FreeBSD and macOS ([issue 4927](#))
- Fix for matching minions under `syndics` ([issue 7671](#))
- Improve exception handling for missing ID ([issue 8259](#))
- Fix grain mismatch for ScientificLinux ([issue 8338](#))
- Add configuration option for `minion_id_caching`
- Fix open mode auth errors ([issue 8402](#))

### 20.2.102 Salt 0.17.3 Release Notes

release 2013-12-08

---

**Note:** 0.17.3 had some regressions which were promptly fixed in the 0.17.4 release. Please use 0.17.4 instead.

---

Version 0.17.3 is another bugfix release for *0.17.0*. The changes include:

- Fix some `jinja` render errors ([issue 8418](#))
- Fix `file.replace` state changing file ownership ([issue 8399](#))
- Fix state ordering with the `PyDSL` renderer ([issue 8446](#))
- Fix for new `npm` version ([issue 8517](#))
- Fix for `pip` state requiring name even with requirements file ([issue 8519](#))
- Fix `yum` logging to open terminals ([issue 3855](#))
- Add sane `maxrunning` defaults for `scheduler` ([issue 8563](#))
- Fix states duplicate key detection ([issue 8053](#))
- Fix SUSE patch level reporting ([issue 8428](#))
- Fix managed file creation `umask` ([issue 8590](#))
- Fix `logstash` exception ([issue 8635](#))
- Improve argument exception handling for salt command ([issue 8016](#))
- Fix `pecl` success reporting ([issue 8750](#))

- Fix launchctl module exceptions ([issue 8759](#))
- Fix argument order in pw\_user module
- Add warnings for failing grains ([issue 8690](#))
- Fix hgfs problems caused by connections left open ([issue 8811](#) and [issue 8810](#))
- Add Debian iptables default for iptables-persistent package ([issue 8889](#))
- Fix installation of packages with dots in pkg name ([issue 8614](#))
- Fix noarch package installation on CentOS 6 ([issue 8945](#))
- Fix portage\_config.enforce\_nice\_config ([issue 8252](#))
- Fix salt.util.copyfile umask usage ([issue 8590](#))
- Fix rescheduling of failed jobs ([issue 8941](#))
- Fix pkg on Amazon Linux (uses yumpkg5 now) ([issue 8226](#))
- Fix conflicting options in postgres module ([issue 8717](#))
- Fix ps modules for psutil >= 0.3.0 ([issue 7432](#))
- Fix postgres module to return False on failure ([issue 8778](#))
- Fix argument passing for args with pound signs ([issue 8585](#))
- Fix pid of salt CLi command showing in status.pid output ([issue 8720](#))
- Fix rvm to run gem as the correct user ([issue 8951](#))
- Fix namespace issue in win\_file module ([issue 9060](#))
- Fix masterless state paths on windows ([issue 9021](#))
- Fix timeout option in master config ([issue 9040](#))

### 20.2.103 Salt 0.17.4 Release Notes

release 2013-12-10

Version 0.17.4 is another bugfix release for *0.17.0*. The changes include:

- Fix file.replace bug when replacement str is numeric ([issue 9101](#))
- Fix regression in file.managed ([issue 9131](#))
- Prevent traceback when job is None. ([issue 9145](#))

### 20.2.104 Salt 0.17.5 Release Notes

release 2014-01-27

Version 0.17.5 is another bugfix release for *0.17.0*. The changes include:

- Fix user.present states with non-string fullname ([issue 9085](#))
- Fix virt.init return value on failure ([issue 6870](#))
- Fix reporting of file.blockreplace state when test=True
- Fix network.interfaces when used in cron ([issue 7990](#))
- Fix bug in pkgrepo when switching to/from mirrorlist-based repo def ([issue 9121](#))

- Fix infinite recursion when cache file is corrupted
- Add checking for rev and mirror/bare args in `git.latest` (issue 9107)
- Add `cmd.watch` alias (points to `cmd.wait`) (issue 8612)
- Fix stacktrace when prereq is not formed as a list (issue 8235)
- Fix stdin issue with `lvsdisplay` command (issue 9128)
- Add pre-check function for range matcher (issue 9236)
- Add exception handling for `psutil` for processes that go missing (issue 9274)
- Allow `_in` requisites to match both on ID and name (issue 9061)
- Fix multiple client timeout issues (issue 7157 and issue 9302, probably others)
- Fix `ZMQError: Operation cannot be accomplished in current state errors` (issue 6306)
- Multiple optimization in minion auth routines
- Clarify logs for minion ID caching

### 20.2.105 Salt 0.6.0 release notes

The Salt remote execution manager has reached initial functionality! Salt is a management application which can be used to execute commands on remote sets of servers.

The whole idea behind Salt is to create a system where a group of servers can be remotely controlled from a single master, not only can commands be executed on remote systems, but salt can also be used to gather information about your server environment.

Unlike similar systems, like Func and MCollective, Salt is extremely simple to setup and use, the entire application is contained in a single package, and the master and minion daemons require no running dependencies in the way that Func requires Certmaster and MCollective requires activeMQ.

Salt also manages authentication and encryption. Rather than using SSL for encryption, salt manages encryption on a payload level, so the data sent across the network is encrypted with fast AES encryption, and authentication uses RSA keys. This means that Salt is fast, secure, and very efficient.

Messaging in Salt is executed with ZeroMQ, so the message passing interface is built into salt and does not require an external ZeroMQ server. This also adds speed to Salt since there is no additional bloat on the networking layer, and ZeroMQ has already proven itself as a very fast networking system.

The remote execution in Salt is "Lazy Execution", in that once the command is sent the requesting network connection is closed. This makes it easier to detach the execution from the calling process on the master, it also means that replies are cached, so that information gathered from historic commands can be queried in the future.

Salt also allows users to make execution modules in Python. Writers of these modules should also be pleased to know that they have access to the impressive information gathered from PuppetLabs' Facter application, making Salt module more flexible. In the future I hope to also allow Salt to group servers based on Facter information as well.

All in all Salt is fast, efficient, and clean, can be used from a simple command line client or through an API, uses message queue technology to make network execution extremely fast, and encryption is handled in a very fast and efficient manner. Salt is also VERY easy to use and VERY easy to extend.

You can find the source code for Salt on my GitHub page, I have also set up a few wiki pages explaining how to use and set up Salt. If you are using Arch Linux there is a package available in the Arch Linux AUR.

Salt 0.6.0 Source: <https://cloud.github.com/downloads/saltstack/salt/salt-0.6.0.tar.gz>

GitHub page: <https://github.com/saltstack/salt>

Wiki: <https://github.com/saltstack/salt/wiki>

Arch Linux Package: <https://aur.archlinux.org/packages/salt-git/>

I am very open to contributions, for instance I need packages for more Linux distributions as well as BSD packages and testers.

Give Salt a try, this is the initial release and is not a 1.0 quality release, but it has been working well for me! I am eager to get your feedback!

## **20.2.106 Salt 0.7.0 release notes**

I am pleased to announce the release of Salt 0.7.0!

This release marks what is the first stable release of salt, 0.7.0 should be suitable for general use.

0.7.0 Brings the following new features to Salt:

- Integration with Facter data from puppet labs
- Allow for matching minions from the salt client via Facter information
- Minion job threading, many jobs can be executed from the master at once
- Preview of master clustering support - Still experimental
- Introduce new minion modules for stats, virtualization, service management and more
- Add extensive logging to the master and minion daemons
- Add `sys.reload_functions` for dynamic function reloading
- Greatly improve authentication
- Introduce the `saltkey` command for managing public keys
- Begin backend development preparatory to introducing butter
- Addition of man pages for the core commands
- Extended and cleaned configuration

0.7.0 Fixes the following major bugs:

- Fix crash in minions when matching failed
- Fix configuration file lookups for the local client
- Repair communication bugs in encryption
- Numerous fixes in the minion modules

The next release of Salt should see the following features:

- Stabilize the cluster support
- Introduce a remote client for salt command tiers
- `salt-ftp` system for distributed file copies
- Initial support for ```butter```

Coming up next is a higher level management framework for salt called Butter. I want salt to stay as a simple and effective communication framework, and allow for more complicated executions to be managed via Butter.

Right now Butter is being developed to act as a cloud controller using salt as the communication layer, but features like system monitoring and advanced configuration control (a puppet manager) are also in the pipe.

Special thanks to Joseph Hall for the status and network modules, and thanks to Matthias Teege for tracking down some configuration bugs!

Salt can be downloaded from the following locations;

Source Tarball:

<https://cloud.github.com/downloads/saltstack/salt/salt-0.7.0.tar.gz>

Arch Linux Package:

<https://aur.archlinux.org/packages/salt-git/>

Please enjoy the latest Salt release!

### 20.2.107 Salt 0.8.0 release notes

Salt 0.8.0 is ready for general consumption! The source tarball is available on GitHub for download:

<https://cloud.github.com/downloads/saltstack/salt/salt-0.8.0.tar.gz>

A lot of work has gone into salt since the last release just 2 weeks ago, and salt has improved a great deal. A swath of new features are here along with performance and threading improvements!

The main new features of salt 0.8.0 are:

Salt-cp

Cython minion modules

Dynamic returners

Faster return handling

Lowered required Python version to 2.6

Advanced minion threading

Configurable minion modules

#### Salt-cp

The salt-cp command introduces the ability to copy simple files via salt to targeted servers. Using salt-cp is very simple, just call salt-cp with a target specification, the source file(s) and where to copy the files on the minions. For instance:

```
# salt-cp '*' /etc/hosts /etc/hosts
```

Will copy the local /etc/hosts file to all of the minions.

Salt-cp is very young, in the future more advanced features will be added, and the functionality will much more closely resemble the cp command.

#### Cython minion modules

Cython is an amazing tool used to compile Python modules down to c. This is arguably the fastest way to run Python code, and since pyzmq requires cython, adding support to salt for cython adds no new dependencies.

Cython minion modules allow minion modules to be written in cython and therefore executed in compiled c. Simply write the salt module in cython and use the file extension “.pyx” and the minion module will be compiled when the minion is started. An example cython module is included in the main distribution called cytest.pyx:

<https://github.com/saltstack/salt/blob/develop/salt/modules/cytest.pyx>

## Dynamic Returners

By default salt returns command data back to the salt master, but now salt can return command data to any system. This is enabled via the new returners modules feature for salt. The returners modules take the return data and sends it to a specific module. The returner modules work like minion modules, so any returner can be added to the minions.

This means that a custom data returner can be added to communicate the return data so anything from MySQL, Redis, MongoDB, and more!

There are 2 simple stock returners in the returners directory:

<https://github.com/saltstack/salt/blob/develop/salt/returners>

The documentation on writing returners will be added to the wiki shortly, and returners can be written in pure Python, or in cython.

## Configurable Minion Modules

Minion modules may need to be configured, now the options passed to the minion configuration file can be accessed inside of the minion modules via the `__opt__` dict.

Information on how to use this simple addition has been added to the wiki: [Writing modules](#)

The test module has an example of using the `__opts__` dict, and how to set default options:

<https://github.com/saltstack/salt/blob/develop/salt/modules/test.py>

## Advanced Minion Threading

In 0.7.0 the minion would block after receiving a command from the master, now the minion will spawn a thread or multiprocessing. By default Python threads are used because for general use they have proved to be faster, but the minion can now be configured to use the Python multiprocessing module instead. Using multiprocessing will cause executions that are CPU bound or would otherwise exploit the negative aspects of the Python GIL to run faster and more reliably, but simple calls will still be faster with Python threading. The configuration option can be found in the minion configuration file:

<https://github.com/saltstack/salt/blob/develop/conf/minion>

## Lowered Supported Python to 2.6

The requirement for Python 2.7 has been removed to support Python 2.6. I have received requests to take the minimum Python version back to 2.4, but unfortunately this will not be possible, since the ZeroMQ Python bindings do not support Python 2.4.

Salt 0.8.0 is a very major update, it also changes the network protocol slightly which makes communication with older salt daemons impossible, your master and minions need to be upgraded together!

I could use some help bringing salt to the people! Right now I only have packages for Arch Linux, Fedora 14 and Gentoo. We need packages for Debian and people willing to help test on more platforms. We also need help writing more minion modules and returner modules. If you want to contribute to salt please hop on the mailing list and send in patches, make a fork on GitHub and send in pull requests! If you want to help but are not sure where you can, please email me directly or post to the mailing list!

I hope you enjoy salt, while it is not yet 1.0 salt is completely viable and usable!

-Thomas S. Hatch

## 20.2.108 Salt 0.8.7 release notes

It has been a month since salt 0.8.0, and it has been a long month! But Salt is still coming along strong. 0.8.7 has a lot of changes and a lot of updates. This update makes Salt's ZeroMQ back end better, strips Facter from the dependencies, and introduces interfaces to handle more capabilities.

Many of the major updates are in the background, but the changes should shine through to the surface. A number of the new features are still a little thin, but the back end to support expansion is in place.

I also recently gave a presentation to the Utah Python users group in Salt Lake City, the slides from this presentation are available here: <https://cloud.github.com/downloads/saltstack/salt/Salt.pdf>

The video from this presentation will be available shortly.

The major new features and changes in Salt 0.8.7 are:

- Revamp ZeroMQ topology on the master for better scalability
- State enforcement
- Dynamic state enforcement managers
- Extract the module loader into salt.loader
- Make Job ids more granular
- Replace Facter functionality with the new salt grains interface
- Support for “virtual” salt modules
- Introduce the salt-call command
- Better debugging for minion modules

The new ZeroMQ topology allows for better scalability, this will be required by the need to execute massive file transfers to multiple machines in parallel and state management. The new ZeroMQ topology is available in the aforementioned presentation.

0.8.7 introduces the capability to declare states, this is similar to the capabilities of Puppet. States in salt are declared via state data structures. This system is very young, but the core feature set is available. Salt states work around rendering files which represent Salt high data. More on the Salt state system will be documented in the near future.

The system for loading salt modules has been pulled out of the minion class to be a standalone module, this has enabled more dynamic loading of Salt modules and enables many of the updates in 0.8.7 –

<https://github.com/saltstack/salt/blob/develop/salt/loader.py>

Salt Job ids are now microsecond precise, this was needed to repair a race condition unveiled by the speed improvements in the new ZeroMQ topology.

The new grains interface replaces the functionality of Facter, the idea behind grains differs from Facter in that the grains are only used for static system data, dynamic data needs to be derived from a call to a salt module. This makes grains much faster to use, since the grains data is generated when the minion starts.

Virtual salt modules allows for a salt module to be presented as something other than its module name. The idea here is that based on information from the minion decisions about which module should be presented can be made. The best example is the pacman module. The pacman module will only load on Arch Linux minions, and will be called pkg. Similarly the yum module will be presented as pkg when the minion starts on a Fedora/RedHat system.

The new salt-call command allows for minion modules to be executed from the minion. This means that on the minion a salt module can be executed, this is a great tool for testing Salt modules. The salt-call command can also be used to view the grains data.

In previous releases when a minion module threw an exception very little data was returned to the master. Now the stack trace from the failure is returned making debugging of minion modules MUCH easier.

Salt is nearing the goal of 1.0, where the core feature set and capability is complete!

Salt 0.8.7 can be downloaded from GitHub here: <https://cloud.github.com/downloads/saltstack/salt/salt-0.8.7.tar.gz>

-Thomas S Hatch

### 20.2.109 Salt 0.8.8 release notes

Salt 0.8.8 is here! This release adds a great deal of code and some serious new features. The latest release can be downloaded here: <https://cloud.github.com/downloads/saltstack/salt/salt-0.8.8.tar.gz>

Improved Documentation has been set up for salt using sphinx thanks to the efforts of Seth House. This new documentation system will act as the back end to the salt website which is still under heavy development. The new sphinx documentation system has also been used to greatly clean up the salt manpages. The salt 7 manpage in particular now contains extensive information which was previously only in the wiki. The new documentation can be found at: <http://docs.saltstack.com/> We still have a lot to add, and when the domain is set up I will post another announcement.

More additions have been made to the ZeroMQ setup, particularly in the realm of file transfers. Salt 0.8.8 introduces a built in, stateless, encrypted file server which allows salt minions to download files from the salt master using the same encryption system used for all other salt communications. The main motivation for the salt file server has been to facilitate the new salt state system.

Much of the salt code has been cleaned up and a new cleaner logging system has been introduced thanks to the efforts of Pedro Algarvio. These additions will allow for much more flexible logging to be executed by salt, and fixed a great deal of my poor spelling in the salt docstrings! Pedro Algarvio has also cleaned up the API, making it easier to embed salt into another application.

The biggest addition to salt found in 0.8.8 is the new state system. The salt module system has received a new front end which allows salt to be used as a configuration management system. The configuration management system allows for system configuration to be defined in data structures. The configuration management system, or as it is called in salt, the “salt state system” supports many of the features found in other configuration managers, but allows for system states to be written in a far simpler format, executes at blazing speeds, and operates via the salt minion matching system. The state system also operates within the normal scope of salt, and requires no additional configuration to use.

The salt state system can enforce the following states with many more to come: Packages Files Services Executing commands Hosts

The system used to define the salt states is based on a data structure, the data structure used to define the salt states has been made to be as easy to use as possible. The data structure is defined by default using a YAML file rendered via a Jinja template. This means that the state definition language supports all of the data structures that YAML supports, and all of the programming constructs and logic that Jinja supports. If the user does not like YAML or Jinja the states can be defined in yaml-mako, json-jinja, or json-mako. The system used to render the states is completely dynamic, and any rendering system can be added to the capabilities of Salt, this means that a rendering system that renders XML data in a cheetah template, or whatever you can imagine, can be easily added to the capabilities of salt.

The salt state system also supports isolated environments, as well as matching code from several environments to a single salt minion.

The feature base for Salt has grown quite a bit since my last serious documentation push. As we approach 0.9.0 the goals are becoming very clear, and the documentation needs a lot of work. The main goals for 0.9.0 are to further refine the state system, fix any bugs we find, get Salt running on as many platforms as we can, and get the documentation filled out. There is a lot more to come as Salt moves forward to encapsulate a much larger scope, while maintaining supreme usability and simplicity.

If you would like a more complete overview of Salt please watch the Salt presentation: Slides: <https://cloud.github.com/downloads/saltstack/salt/Salt.pdf>

-Thomas S Hatch

## 20.2.110 Salt 0.8.9 Release Notes

Salt 0.8.9 has finally arrived! Unfortunately this is much later than I had hoped to release 0.8.9, life has been very crazy over the last month. But despite challenges, Salt has moved forward!

This release, as expected, adds few new features and many refinements. One of the most exciting aspect of this release is that the development community for salt has grown a great deal and much of the code is from contributors.

Also, I have filled out the documentation a great deal. So information on States is properly documented, and much of the documentation that was out of date has been filled in.

### Download!

The Salt source can be downloaded from the salt GitHub site:

<https://cloud.github.com/downloads/saltstack/salt/salt-0.8.9.tar.gz>

Or from PyPI:

<https://pypi.python.org/packages/source/s/salt/salt-0.8.9.tar.gz>

Here s the md5sum:

```
7d5aca4633bc22f59045f59e82f43b56
```

For instructions on how to set up Salt please see the *Installation* instructions.

### New Features

#### Salt Run

A big feature is the addition of Salt run, the `salt-run` command allows for master side execution modules to be made that gather specific information or execute custom routines from the master.

Documentation for salt-run can be found [here](#)

#### Refined Outputters

One problem often complained about in salt was the fact that the output was so messy. Thanks to help from Jeff Schroeder a cleaner interface for the command output for the Salt CLI has been made. This new interface makes adding new printout formats easy and additions to the capabilities of minion modules makes it possible to set the printout mode or `outputter` for functions in minion modules.

#### Cross Calling Salt Modules

Salt modules can now call each other, the `__salt__` dict has been added to the predefined references in minion modules. This new feature is documented in the *modules documentation*.

## Watch Option Added to Salt State System

Now in Salt states you can set the watch option, this will allow watch enabled states to change based on a change in the other defined states. This is similar to subscribe and notify statements in puppet.

## Root Dir Option

Travis Cline has added the ability to define the option `root_dir` which allows the salt minion to operate in a subdir. This is a strong move in supporting the minion running as an unprivileged user

## Config Files Defined in Variables

Thanks again to Travis Cline, the master and minion configuration file locations can be defined in environment variables now.

## New Modules

Quite a few new modules, states, returners, and runners have been made.

### New Minion Modules

#### **apt**

Support for apt-get has been added, this adds greatly improved Debian and Ubuntu support to Salt!

#### **useradd and groupadd**

Support for manipulating users and groups on Unix-like systems.

#### **moosefs**

Initial support for reporting on aspects of the distributed file system, MooseFS. For more information on MooseFS please see: <http://www.moosefs.org>

Thanks to Joseph Hall for his work on MooseFS support.

#### **mount**

Manage mounts and the fstab.

#### **puppet**

Execute puppet on remote systems.

## **shadow**

Manipulate and manage the user password file.

## **ssh**

Interact with ssh keys.

## **New States**

### **user and group**

Support for managing users and groups in Salt States.

### **mount**

Enforce mounts and the fstab.

## **New Returners**

### **mongo\_return**

Send the return information to a MongoDB server.

## **New Runners**

### **manage**

Display minions that are up or down.

## **20.2.111 Salt 0.9.0 Release Notes**

**release** 2011-08-27

Salt 0.9.0 is here. This is an exciting release, 0.9.0 includes the new network topology features allowing peer salt commands and masters of masters via the syndic interface.

0.9.0 also introduces many more modules, improvements to the API and improvements to the ZeroMQ systems.

### **Download!**

The Salt source can be downloaded from the salt GitHub site:

<https://cloud.github.com/downloads/saltstack/salt/salt-0.9.0.tar.gz>

Or from PyPI:

<https://pypi.python.org/packages/source/s/salt/salt-0.9.0.tar.gz>

Here is the md5sum:

```
9a925da04981e65a0f237f2e77ddab37
```

For instructions on how to set up Salt please see the *Installation* instructions.

## New Features

### Salt Syndic

The new *Syndic interface* allows a master to be commanded via another higher level salt master. This is a powerful solution allowing a master control structure to exist, allowing salt to scale to much larger levels than before.

### Peer Communication

0.9.0 introduces the capability for a minion to call a publication on the master and receive the return from another set of minions. This allows salt to act as a communication channel between minions and as a general infrastructure message bus.

Peer communication is turned off by default but can be enabled via the `peer` option in the master configuration file. Documentation on the new *Peer interface*.

### Easily Extensible API

The minion and master classes have been redesigned to allow for specialized minion and master servers to be easily created. An example on how this is done for the master can be found in the `master.py` salt module:

<https://github.com/saltstack/salt/blob/develop/salt/master.py>

The `Master` class extends the `SMaster` class and set up the main master server.

The minion functions can now also be easily added to another application via the `SMinion` class, this class can be found in the `minion.py` module:

<https://github.com/saltstack/salt/blob/develop/salt/minion.py>

### Cleaner Key Management

This release changes some of the key naming to allow for multiple master keys to be held based on the type of minion gathering the master key.

The `-d` option has also been added to the `salt-key` command allowing for easy removal of accepted public keys.

The `--gen-keys` option is now available as well for `salt-key`, this allows for a salt specific RSA key pair to be easily generated from the command line.

### Improved 0MQ Master Workers

The 0MQ worker system has been further refined to be faster and more robust. This new system has been able to handle a much larger load than the previous setup. The new system uses the IPC protocol in 0MQ instead of TCP.

## New Modules

Quite a few new modules have been made.

### New Minion Modules

#### **apache**

Work directly with apache servers, great for managing balanced web servers

#### **cron**

Read out the contents of a systems crontabs

#### **mdadm**

Module to manage raid devices in Linux, appears as the `raid` module

#### **mysql**

Gather simple data from MySQL databases

#### **ps**

Extensive utilities for managing processes

#### **publish**

Used by the peer interface to allow minions to make publications

## 20.2.112 Salt 0.9.1 Release Notes

`release` 2011-08-29

## 20.2.113 Salt 0.9.2 Release Notes

`release` 2011-09-17

Salt 0.9.2 has arrived! 0.9.2 is primarily a bugfix release, the exciting component in 0.9.2 is greatly improved support for salt states. All of the salt states interfaces have been more thoroughly tested and the new salt-states git repo is growing with example of how to use states.

This release introduces salt states for early developers and testers to start helping us clean up the states interface and make it ready for the world!

0.9.2 also fixes a number of bugs found on Python 2.6.

### Download!

The Salt source can be downloaded from the salt GitHub site:

<https://cloud.github.com/downloads/saltstack/salt/salt-0.9.2.tar.gz>

Or from PyPI:

<https://pypi.python.org/packages/source/s/salt/salt-0.9.2.tar.gz>

For instructions on how to set up Salt please see the *Installation* instructions.

### New Features

#### Salt-Call Additions

The salt-call command has received an overhaul, it now hooks into the outputter system so command output looks clean, and the logging system has been hooked into salt-call, so the -l option allows the logging output from salt minion functions to be displayed.

The end result is that the salt-call command can execute the state system and return clean output:

```
# salt-call state.highstate
```

#### State System Fixes

The state system has been tested and better refined. As of this release the state system is ready for early testers to start playing with. If you are interested in working with the state system please check out the (still very small) salt-states GitHub repo:

<https://github.com/saltstack/salt-states>

This git repo is the active development branch for determining how a clean salt-state database should look and act. Since the salt state system is still very young a lot of help is still needed here. Please fork the salt-states repo and help us develop a truly large and scalable system for configuration management!

#### Notable Bug Fixes

##### Python 2.6 String Formatting

Python 2.6 does not support format strings without an index identifier, all of them have been repaired.

##### Cython Loading Disabled by Default

Cython loading requires a development tool chain to be installed on the minion, requiring this by default can cause problems for most Salt deployments. If Cython auto loading is desired it will need to be turned on in the minion config.

## 20.2.114 Salt 0.9.3 Release Notes

release 2011-11-05

Salt 0.9.3 is finally arrived. This is another big step forward for Salt, new features range from proper FreeBSD support to fixing issues seen when attaching a minion to a master over the Internet.

The biggest improvements in 0.9.3 though can be found in the state system, it has progressed from something ready for early testers to a system ready to compete with platforms such as Puppet and Chef. The backbone of the state system has been greatly refined and many new features are available.

## Download!

The Salt source can be downloaded from the salt GitHub site:

<https://cloud.github.com/downloads/saltstack/salt/salt-0.9.3.tar.gz>

Or from PyPI:

<https://pypi.python.org/packages/source/s/salt/salt-0.9.3.tar.gz>

For instructions on how to set up Salt please see the *Installation* instructions.

## New Features

### WAN Support

Recently more people have been testing Salt minions connecting to Salt Masters over the Internet. It was found that Minions would commonly lose their connection to the master when working over the internet. The minions can now detect if the connection has been lost and reconnect to the master, making WAN connections much more reliable.

### State System Fixes

Substantial testing has gone into the state system and it is ready for real world usage. A great deal has been added to the documentation for states and the modules and functions available to states have been cleanly documented.

A number of State System bugs have also been found and repaired, the output from the state system has also been refined to be extremely clear and concise.

Error reporting has also been introduced, issues found in sls files will now be clearly reported when executing Salt States.

### Extend Declaration

The Salt States have also gained the `extend` declaration. This declaration allows for states to be cleanly modified in a post environment. Simply said, if there is an `apache.sls` file that declares the `apache` service, then another `sls` can include `apache` and then extend it:

```
include:
  - apache

extend:
  apache:
    service:
      - require:
        - pkg: mod_python
```

```
mod_python:
  pkg:
    - installed
```

The notable behavior with the extend functionality is that it literally extends or overwrites a declaration set up in another sls module. This means that Salt will behave as though the modifications were made directly to the apache sls. This ensures that the apache service in this example is directly tied to all requirements.

## Highstate Structure Specification

This release comes with a clear specification of the Highstate data structure that is used to declare Salt States. This specification explains everything that can be declared in the Salt SLS modules.

The specification is extremely simple, and illustrates how Salt has been able to fulfill the requirements of a central configuration manager within a simple and easy to understand format and specification.

## SheBang Renderer Switch

It came to our attention that having many renderers means that there may be a situation where more than one State Renderer should be available within a single State Tree.

The method chosen to accomplish this was something already familiar to developers and systems administrators, a SheBang. The Python State Renderer displays this new capability.

## Python State Renderer

Until now Salt States could only be declared in yaml or json using Jinja or Mako. A new, very powerful, renderer has been added, making it possible to write Salt States in pure Python:

```
#!/py

def run():
    '''
    Install the python-mako package
    '''
    return {'include': ['python'],
            'python-mako': {'pkg': ['installed']}}
```

This renderer is used by making a run function that returns the Highstate data structure. Any capabilities of Python can be used in pure Python sls modules.

This example of a pure Python sls module is the same as this example in yaml:

```
include:
  - python

python-mako:
  pkg:
    - installed
```

## FreeBSD Support

Additional support has been added for FreeBSD, this is Salt's first branch out of the Linux world and proves the viability of Salt on non-Linux platforms.

Salt remote execution already worked on FreeBSD, and should work without issue on any Unix-like platform. But this support comes in the form of package management and user support, so Salt States also work on FreeBSD now.

The new `freebsd_pkg` module provides package management support for FreeBSD and the new `pw_user` and `pw_group` provide user and group management.

## Module and State Additions

### Cron Support

Support for managing the system crontab has been added, declaring a cron state can be done easily:

```
date > /tmp/datestamp:
cron:
  - present
  - user: fred
  - minute: 5
  - hour: 3
```

### File State Additions

The file state has been given a number of new features, primarily the directory, recurse, symlink, and absent functions.

**file.directory** Make sure that a directory exists and has the right permissions.

```
/srv/foo:
file:
  - directory
  - user: root
  - group: root
  - mode: 1755
```

**file.symlink** Make a symlink.

```
/var/lib/www:
file:
  - symlink
  - target: /srv/www
  - force: True
```

**file.recurse** The recurse state function will recursively download a directory on the master file server and place it on the minion. Any change in the files on the master will be pushed to the minion. The recurse function is very powerful and has been tested by pushing out the full Linux kernel source.

```
/opt/code:
file:
  - recurse
  - source: salt://linux
```

**file.absent** Make sure that the file is not on the system, recursively deletes directories, files, and symlinks.

```
/etc/httpd/conf.d/somebogusfile.conf:
file:
- absent
```

## Sysctl Module and State

The sysctl module and state allows for sysctl components in the kernel to be managed easily. the sysctl module contains the following functions:

**sysctl.show** Return a list of sysctl parameters for this minion

**sysctl.get** Return a single sysctl parameter for this minion

**sysctl.assign** Assign a single sysctl parameter for this minion

**sysctl.persist** Assign and persist a simple sysctl parameter for this minion

The sysctl state allows for sysctl parameters to be assigned:

```
vm.swappiness:
sysctl:
- present
- value: 20
```

## Kernel Module Management

A module for managing Linux kernel modules has been added. The new functions are as follows:

**kmod.available** Return a list of all available kernel modules

**kmod.check\_available** Check to see if the specified kernel module is available

**kmod.lsmod** Return a dict containing information about currently loaded modules

**kmod.load** Load the specified kernel module

**kmod.remove** Unload the specified kernel module

The kmod state can enforce modules be either present or absent:

```
kvm_intel:
kmod:
- present
```

## Ssh Authorized Keys

The ssh\_auth state can distribute ssh authorized keys out to minions. Ssh authorized keys can be present or absent.

```
AAAAB3NzaC1kc3MAAACBAL0sQ9fJ5bYTEyYvLRBsJdD0o49CNfhLWHXQRquL6rwL4KIuPrhY7hBw0tV7UNC7J9IZRN04iGod9C+
→xw6NtnQZVMcmZiRe5Elrw30KgxcDNomjYFNHu0YaQLBBMosy0++tJe1KTAr3A2zGj2xbW09JhEzu8xvSdF8jRu0N5SRXPpzSyU
→x75woLBDbVzeTlxWgxhafj7P6Ncdv25Wz9wvc6ko/puww0b3rcLNqK+XCNJlsM/
→7LB8Q26iK5mRZzNsGeGwGTyzNIMBekGYQ5MRdIcPv5dBIP/1M6fQDEsAXQ==:
ssh_auth:
- present
- user: frank
```

```
- enc: dsa
- comment: 'Frank's key'
```

## 20.2.115 Salt 0.9.4 Release Notes

release 2011-11-27

Salt 0.9.4 has arrived. This is a critical update that repairs a number of key bugs found in 0.9.3. But this update is not without feature additions as well! 0.9.4 adds support for Gentoo portage to the pkg module and state system. Also there are 2 major new state additions, the failhard option and the ability to set up finite state ordering with the order option.

This release also sees our largest increase in community contributions. These contributors have and continue to be the life blood of the Salt project, and the team continues to grow. I want to put out a big thanks to our new and existing contributors.

### Download!

The Salt source can be downloaded from the salt GitHub site:

<https://cloud.github.com/downloads/saltstack/salt/salt-0.9.4.tar.gz>

Or from PyPI:

<https://pypi.python.org/packages/source/s/salt/salt-0.9.4.tar.gz>

For instructions on how to set up Salt please see the *Installation* instructions.

### New Features

#### Failhard State Option

Normally, when a state fails Salt continues to execute the remainder of the defined states and will only refuse to execute states that require the failed state.

But the situation may exist, where you would want all state execution to stop if a single state execution fails. The capability to do this is called *failhard*.

#### State Level Failhard

A single state can have a failhard set, this means that if this individual state fails that all state execution will immediately stop. This is a great thing to do if there is a state that sets up a critical config file and setting a require for each state that reads the config would be cumbersome. A good example of this would be setting up a package manager early on:

```
/etc/yum.repos.d/company.repo:
file:
- managed
- source: salt://company/yumrepo.conf
- user: root
- group: root
- mode: 644
- order: 1
- failhard: True
```

In this situation, the yum repo is going to be configured before other states, and if it fails to lay down the config file, than no other states will be executed.

### Global Failhard

It may be desired to have failhard be applied to every state that is executed, if this is the case, then failhard can be set in the master configuration file. Setting failhard in the master configuration file will result in failing hard when any minion gathering states from the master have a state fail.

This is NOT the default behavior, normally Salt will only fail states that require a failed state.

Using the global failhard is generally not recommended, since it can result in states not being executed or even checked. It can also be confusing to see states failhard if an admin is not actively aware that the failhard has been set.

To use the global failhard set failhard: True in the master configuration

### Finite Ordering of State Execution

When creating salt sls files, it is often important to ensure that they run in a specific order. While states will always execute in the same order, that order is not necessarily defined the way you want it.

A few tools exist in Salt to set up the correct state ordering, these tools consist of requisite declarations and order options.

### The Order Option

Before using the order option, remember that the majority of state ordering should be done with requisite statements, and that a requisite statement will override an order option.

The order option is used by adding an order number to a state declaration with the option *order*:

```
vim:
  pkg:
    - installed
    - order: 1
```

By adding the order option to *1* this ensures that the vim package will be installed in tandem with any other state declaration set to the order *1*.

Any state declared without an order option will be executed after all states with order options are executed.

But this construct can only handle ordering states from the beginning. Sometimes you may want to send a state to the end of the line, to do this set the order to last:

```
vim:
  pkg:
    - installed
    - order: last
```

Substantial testing has gone into the state system and it is ready for real world usage. A great deal has been added to the documentation for states and the modules and functions available to states have been cleanly documented.

A number of State System bugs have also been founds and repaired, the output from the state system has also been refined to be extremely clear and concise.

Error reporting has also been introduced, issues found in sls files will now be clearly reported when executing Salt States.

### Gentoo Support

Additional experimental support has been added for Gentoo. This is found in the contribution from Doug Renn, aka nestegg.

## 20.2.116 Salt 0.9.5 Release Notes

release 2012-01-15

Salt 0.9.5 is one of the largest steps forward in the development of Salt.

0.9.5 comes with many milestones, this release has seen the community of developers grow out to an international team of 46 code contributors and has many feature additions, feature enhancements, bug fixes and speed improvements.

**Warning:** Be sure to [read the upgrade instructions](#) about the switch to msgpack before upgrading!

### Community

Nothing has proven to have more value to the development of Salt than the outstanding community that has been growing at such a great pace around Salt. This has proven not only that Salt has great value, but also the expandability of Salt is as exponential as I originally intended.

0.9.5 has received over 600 additional commits since 0.9.4 with a swath of new committers. The following individuals have contributed to the development of 0.9.5:

- Aaron Bull Schaefer
- Antti Kaihola
- Bas Tichelaar
- Brad Barden
- Brian Wagner
- Byron Clark
- Chris Scheller
- Christer Edwards
- Clint Savage
- Corey Quinn
- David Boucha
- Eivind Uggedal
- Eric Poelke
- Evan Borgstrom
- Jed Glazner

- Jeff Schroeder
- Jeffrey C. Ollie
- Jonas Buckner
- Kent Tenney
- Martin Schnabel
- Maxim Burgerhout
- Mitch Anderson
- Nathaniel Whiteinge
- Seth House
- Thomas S Hatch
- Thomas Schreiber
- Tor Hveem
- Izyeval
- syphernl

This makes 21 new developers since 0.9.4 was released!

To keep up with the growing community follow Salt on Ohloh (<http://www.ohloh.net/p/salt>), to join the Salt development community, fork Salt on GitHub, and get coding (<https://github.com/saltstack/salt>)!

### Major Features

#### SPEED! Pickle to msgpack

For a few months now we have been talking about moving away from Python pickles for network serialization, but a preferred serialization format had not yet been found. After an extensive performance testing period involving everything from JSON to protocol buffers, a clear winner emerged. Message Pack (<http://msgpack.org/>) proved to not only be the fastest and most compact, but also the most ``salt like''. Message Pack is simple, and the code involved is very small. The msgpack library for Python has been added directly to Salt.

This move introduces a few changes to Salt. First off, Salt is no longer a ``noarch'' package, since the msgpack lib is written in C. Salt 0.9.5 will also have compatibility issues with 0.9.4 with the default configuration.

We have gone through great lengths to avoid backwards compatibility issues with Salt, but changing the serialization medium was going to create issues regardless. Salt 0.9.5 is somewhat backwards compatible with earlier minions. A 0.9.5 master can command older minions, but only if the `serial` config value in the master is set to `pickle`. This will tell the master to publish messages in pickle format and will allow the master to receive messages in both msgpack and pickle formats.

Therefore **the suggested methods for upgrading** are either to just upgrade everything at once, or:

1. Upgrade the master to 0.9.5
2. Set `serial` to `pickle` in the master config
3. Upgrade the minions
4. Remove the `serial` option from the master config

Since pickles can be used as a security exploit the ability for a master to accept pickles from minions at all will be removed in a future release.

## C Bindings for YAML

All of the YAML rendering is now done with the YAML C bindings. This speeds up all of the sls files when running states.

## Experimental Windows Support

David Boucha has worked tirelessly to bring initial support to Salt for Microsoft Windows operating systems. Right now the Salt Minion can run as a native Windows service and accept commands.

In the weeks and months to come Windows will receive the full treatment and will have support for Salt States and more robust support for managing Windows systems. This is a big step forward for Salt to move entirely outside of the Unix world, and proves Salt is a viable cross platform solution. Big Thanks to Dave for his contribution here!

## Dynamic Module Distribution

Many Salt users have expressed the desire to have Salt distribute in-house modules, states, renderers, returners, and grains. This support has been added in a number of ways:

### Modules via States

Now when salt modules are deployed to a minion via the state system as a file, then the modules will be automatically loaded into the active running minion - no restart required - and into the active running state. So custom state modules can be deployed and used in the same state run.

### Modules via Module Environment Directories

Under the `file_roots` each environment can now have directories that are used to deploy large groups of modules. These directories sync modules at the beginning of a state run on the minion, or can be manually synced via the Salt module `salt.modules.saltutil.sync_all`.

The directories are named:

- `_modules`
- `_states`
- `_grains`
- `_renderers`
- `_returners`

The modules are pushed to their respective scopes on the minions.

### Module Reloading

Modules can now be reloaded without restarting the minion, this is done by calling the `salt.modules.sys.reload_modules` function.

But wait, there's more! Now when a salt module of any type is added via states the modules will be automatically reloaded, allowing for modules to be laid down with states and then immediately used.

Finally, all modules are reloaded when modules are dynamically distributed from the salt master.

## Enable / Disable Added to Service

A great deal of demand has existed for adding the capability to set services to be started at boot in the service module. This feature also comes with an overhaul of the service modules and initial systemd support.

This means that the `service state` can now accept `-enable: True` to make sure a service is enabled at boot, and `-enable: False` to make sure it is disabled.

## Compound Target

A new target type has been added to the lineup, the compound target. In previous versions the desired minions could only be targeted via a single specific target type, but now many target specifications can be declared.

These targets can also be separated by and/or operators, so certain properties can be used to omit a node:

```
salt -C 'webserv* and G@os:Debian or E@db.*' test.ping
```

will match all minions with ids starting with webserv via a glob and minions matching the `os:Debian` grain. Or minions that match the `db.*` regular expression.

## Node Groups

Often the convenience of having a predefined group of minions to execute targets on is desired. This can be accomplished with the new `nodegroups` feature. Nodegroups allow for predefined compound targets to be declared in the master configuration file:

```
nodegroups:
  group1: 'L@foo.domain.com,bar.domain.com,baz.domain.com and bl*.domain.com'
  group2: 'G@os:Debian and foo.domain.com'
```

And then used via the `-N` option:

```
salt -N group1 test.ping
```

## Minion Side Data Store

The data module introduces the initial approach into storing persistent data on the minions, specific to the minions. This allows for data to be stored on minions that can be accessed from the master or from the minion.

The Minion datastore is young, and will eventually provide an interface similar to a more mature key/value pair server.

## Major Grains Improvement

The Salt grains have been overhauled to include a massive amount of extra data. this includes hardware data, os data and salt specific data.

## Salt -Q is Useful Now

In the past the salt query system, which would display the data from recent executions would be displayed in pure Python, and it was unreadable.

0.9.5 has added the outputter system to the `-Q` option, thus enabling the salt query system to return readable output.

## Packaging Updates

Huge strides have been made in packaging Salt for distributions. These additions are thanks to our wonderful community where the work to set up packages has proceeded tirelessly.

### FreeBSD

Salt on FreeBSD? There a port for that:

<http://svnweb.freebsd.org/ports/head/sysutils/py-salt/>

This port was developed and added by Christer Edwards. This also marks the first time Salt has been included in an upstream packaging system!

### Fedora and Red Hat Enterprise

Salt packages have been prepared for inclusion in the Fedora Project and in EPEL for Red Hat Enterprise 5 and 6. These packages are the result of the efforts made by Clint Savage (herlo).

### Debian/Ubuntu

A team of many contributors have assisted in developing packages for Debian and Ubuntu. Salt is still actively seeking inclusion in upstream Debian and Ubuntu and the package data that has been prepared is being pushed through the needed channels for inclusion.

These packages have been prepared with the help of:

- Corey
- Aaron Toponce
- and`

### More to Come

We are actively seeking inclusion in more distributions. Primarily getting Salt into Gentoo, SUSE, OpenBSD, and preparing Solaris support are all turning into higher priorities.

### Refinement

Salt continues to be refined into a faster, more stable and more usable application. 0.9.5 comes with more debug logging, more bug fixes and more complete support.

### More Testing, More BugFixes

0.9.5 comes with more bugfixes due to more testing than any previous release. The growing community and the introduction a dedicated QA environment have unearthed many issues that were hiding under the covers. This has further refined and cleaned the state interface, taking care of things from minor visual issues to repairing misleading data.

## Custom Exceptions

A custom exception module has been added to throw salt specific exceptions. This allows Salt to give much more granular error information.

## New Modules

### **data**

The new data module manages a persistent datastore on the minion. Big thanks to bastichelaar for his help refining this module

### **freebsdmod**

FreeBSD kernel modules can now be managed in the same way Salt handles Linux kernel modules.

This module was contributed thanks to the efforts of Christer Edwards

### **gentoo\_service**

Support has been added for managing services in Gentoo. Now Gentoo services can be started, stopped, restarted, enabled, disabled, and viewed.

### **pip**

The pip module introduces management for pip installed applications. Thanks goes to whitinge for the addition of the pip module

### **rh\_service**

The rh\_service module enables Red Hat and Fedora specific service management. Now Red Hat like systems come with extensive management of the classic init system used by Red Hat

### **saltutil**

The saltutil module has been added as a place to hold functions used in the maintenance and management of salt itself. Saltutil is used to salt the salt minion. The saltutil module is presently used only to sync extension modules from the master server.

### **systemd**

Systemd support has been added to Salt, now systems using this next generation init system are supported on systems running systemd.

## **virtualenv**

The virtualenv module has been added to allow salt to create virtual Python environments. Thanks goes to whitinge for the addition of the virtualenv module

## **win\_disk**

Support for gathering disk information on Microsoft Windows minions The windows modules come courtesy of Utah\_Dave

## **win\_service**

The win\_service module adds service support to Salt for Microsoft Windows services

## **win\_useradd**

Salt can now manage local users on Microsoft Windows Systems

## **yumpkg5**

The yumpkg module introduced in 0.9.4 uses the yum API to interact with the yum package manager. Unfortunately, on Red Hat 5 systems salt does not have access to the yum API because the yum API is running under Python 2.4 and Salt needs to run under Python 2.6.

The yumpkg5 module bypasses this issue by shelling out to yum on systems where the yum API is not available.

## **New States**

### **mysql\_database**

The new mysql\_database state adds the ability to systems running a mysql server to manage the existence of mysql databases.

The mysql states are thanks to syphernl

### **mysql\_user**

The mysql\_user state enables mysql user management.

## **virtualenv**

The virtualenv state can manage the state of Python virtual environments. Thanks to Whitinge for the virtualenv state

## New Returners

### **cassandra\_returner**

A returner allowing Salt to send data to a cassandra server. Thanks to Byron Clark for contributing this returner

## 20.2.117 Salt 0.9.6 Release Notes

release 2012-01-21

Salt 0.9.6 is a release targeting a few bugs and changes. This is primarily targeting an issue found in the names declaration in the state system. But a few other bugs were also repaired, like missing support for grains in extmods.

Due to a conflict in distribution packaging msgpack will no longer be bundled with Salt, and is required as a dependency.

## New Features

### **HTTP and ftp support in files.managed**

Now under the source option in the file.managed state a HTTP or ftp address can be used instead of a file located on the salt master.

### **Allow Multiple Returners**

Now the returner interface can define multiple returners, and will also return data back to the master, making the process less ambiguous.

### **Minion Memory Improvements**

A number of modules have been taken out of the minion if the underlying systems required by said modules are not present on the minion system. A number of other modules need to be stripped out in this same way which should continue to make the minion more efficient.

### **Minions Can Locally Cache Return Data**

A new option, `cache_jobs`, has been added to the minion to allow for all of the historically run jobs to cache on the minion, allowing for looking up historic returns. By default `cache_jobs` is set to `False`.

### **Pure Python Template Support For file.managed**

Templates in the file.managed state can now be defined in a Python script. This script needs to have a `run` function that returns the string that needs to be in the named file.

## 20.2.118 Salt 0.9.7 Release Notes

release 2012-02-15

Salt 0.9.7 is here! The latest iteration of Salt brings more features and many fixes. This release is a great refinement over 0.9.6, adding many conveniences under the hood, as well as some features that make working with Salt much better.

A few highlights include the new Job system, refinements to the requisite system in states, the `mod_init` interface for states, external node classification, search path to managed files in the file state, and refinements and additions to dynamic module loading.

0.9.7 also introduces the long developed (and oft changed) unit test framework and the initial unit tests.

### Major Features

#### Salt Jobs Interface

The new jobs interface makes the management of running executions much cleaner and more transparent. Building on the existing execution framework the jobs system allows clear introspection into the active running state of the running Salt interface.

The Jobs interface is centered in the new minion side proc system. The minions now store msgpack serialized files under `/var/cache/salt/proc`. These files keep track of the active state of processes on the minion.

#### Functions in the saltutil Module

A number of functions have been added to the saltutil module to manage and view the jobs:

`running` - Returns the data of all running jobs that are found in the proc directory.

`find_job` - Returns specific data about a certain job based on job id.

`signal_job` - Allows for a given jid to be sent a signal.

`term_job` - Sends a termination signal (SIGTERM, 15) to the process controlling the specified job.

`kill_job` Sends a kill signal (SIGKILL, 9) to the process controlling the specified job.

#### The jobs Runner

A convenience runner front end and reporting system has been added as well. The jobs runner contains functions to make viewing data easier and cleaner.

The jobs runner contains a number of functions...

#### active

The active function runs `saltutil.running` on all minions and formats the return data about all running jobs in a much more usable and compact format. The active function will also compare jobs that have returned and jobs that are still running, making it easier to see what systems have completed a job and what systems are still being waited on.

## lookup\_jid

When jobs are executed the return data is sent back to the master and cached. By default is cached for 24 hours, but this can be configured via the `keep_jobs` option in the master configuration.

Using the `lookup_jid` runner will display the same return data that the initial job invocation with the salt command would display.

## list\_jobs

Before finding a historic job, it may be required to find the job id. `list_jobs` will parse the cached execution data and display all of the job data for jobs that have already, or partially returned.

## External Node Classification

Salt can now use external node classifiers like Cobbler's `cobbler-ext-nodes`.

Salt uses specific data from the external node classifier. In particular the `classes` value denotes which sls modules to run, and the `environment` value sets to another environment.

An external node classification can be set in the master configuration file via the `external_nodes` option: <https://salt.readthedocs.io/en/latest/ref/configuration/master.html#external-nodes>

External nodes are loaded in addition to the top files. If it is intended to only use external nodes, do not deploy any top files.

## State Mod Init System

An issue arose with the `pkg` state. Every time a package was run Salt would need to refresh the package database. This made systems with slower package metadata refresh speeds much slower to work with. To alleviate this issue the `mod_init` interface has been added to salt states.

The `mod_init` interface is a function that can be added to a state file. This function is called with the first state called. In the case of the `pkg` state, the `mod_init` function sets up a tag which makes the package database only refresh on the first attempt to install a package.

In a nutshell, the `mod_init` interface allows a state to run any command that only needs to be run once, or can be used to set up an environment for working with the state.

## Source File Search Path

The file state continues to be refined, adding speed and capabilities. This release adds the ability to pass a list to the `source` option. This list is then iterated over until the source file is found, and the first found file is used.

The new syntax looks like this:

```
/etc/httpd/conf/httpd.conf:
  file:
    - managed
    - source:
      - salt://httpd/httpd.conf
      - http://myserver/httpd.conf: md5=8c1fe119e6f1fd96bc06614473509bf1
```

The source option can take sources in the list from the salt file server as well as an arbitrary web source. If using an arbitrary web source the checksum needs to be passed as well for file verification.

### Refinements to the Requisite System

A few discrepancies were still lingering in the requisite system, in particular, it was not possible to have a `require` and a `watch` requisite declared in the same state declaration.

This issue has been alleviated, as well as making the requisite system run more quickly.

### Initial Unit Testing Framework

Because of the module system, and the need to test real scenarios, the development of a viable unit testing system has been difficult, but unit testing has finally arrived. Only a small amount of unit testing coverage has been developed, much more coverage will be in place soon.

A huge thanks goes out to those who have helped with unit testing, and the contributions that have been made to get us where we are. Without these contributions unit tests would still be in the dark.

### Compound Targets Expanded

Originally only support for `and` and `or` were available in the compound target. 0.9.7 adds the capability to negate compound targets with `not`.

### Nodegroups in the Top File

Previously the nodegroups defined in the master configuration file could not be used to match nodes for states. The nodegroups support has been expanded and the nodegroups defined in the master configuration can now be used to match minions in the top file.

## 20.2.119 Salt 0.9.8 Release Notes

release 2012-03-21

Salt 0.9.8 is a big step forward, with many additions and enhancements, as well as a number of precursors to advanced future developments.

This version of Salt adds much more power to the command line, making the old hard timeout issues a thing of the past and adds keyword argument support. These additions are also available in the salt client API, making the available API tools much more powerful.

The new pillar system allows for data to be stored on the master and assigned to minions in a granular way similar to the state system. It also allows flexibility for users who want to keep data out of their state tree similar to 'external lookup' functionality in other tools.

A new way to extend requisites was added, the `require in` statement. This makes adding `requires` or `watch` statements to external state decs much easier.

Additions to requisites making them much more powerful have been added as well as improved error checking for `sls` files in the state system. A new provider system has been added to allow for redirecting what modules run in the background for individual states.

Support for openSUSE has been added and support for Solaris has begun serious development. Windows support has been significantly enhanced as well.

The matcher and target systems have received a great deal of attention. The default behavior of grain matching has changed slightly to reflect the rest of salt and the compound matcher system has been refined.

A number of impressive features with keyword arguments have been added to both the CLI and to the state system. This makes states much more powerful and flexible while maintaining the simple configuration everyone loves.

The new batch size capability allows for executions to be rolled through a group of targeted minions a percentage or specific number at a time. This was added to prevent the "thundering herd" problem when targeting large numbers of minions for things like service restarts or file downloads.

### Upgrade Considerations

#### Upgrade Issues

There was a previously missed oversight which could cause a newer minion to crash an older master. That oversight has been resolved so the version incompatibility issue will no longer occur. When upgrading to 0.9.8 make sure to upgrade the master first, followed by the minions.

#### Debian/Ubuntu Packages

The original Debian/Ubuntu packages were called salt and included all salt applications. New packages in the ppa are split by function. If an old salt package is installed then it should be manually removed and the new split packages need to be freshly installed.

On the master:

```
# apt-get purge salt
# apt-get install salt-{master,minion}
```

On the minions:

```
# apt-get purge salt
# apt-get install salt-minion
```

And on any Syndics:

```
# apt-get install salt-syndic
```

The official Salt PPA for Ubuntu is located at: <https://launchpad.net/~saltstack/+archive/salt>

### Major Features

#### Pillar

*Pillar* offers an interface to declare variable data on the master that is then assigned to the minions. The pillar data is made available to all modules, states, sls files etc. It is compiled on the master and is declared using the existing renderer system. This means that learning pillar should be fairly trivial to those already familiar with salt states.

## CLI Additions

The `salt` command has received a serious overhaul and is more powerful than ever. Data is returned to the terminal as it is received, and the salt command will now wait for all running minions to return data before stopping. This makes adding very large `--timeout` arguments completely unnecessary and gets rid of long running operations returning empty `{}` when the timeout is exceeded.

When calling salt via sudo, the user originally running salt is saved to the log for auditing purposes. This makes it easy to see who ran what by just looking through the minion logs.

The `salt-key` command gained the `-D` and `--delete-all` arguments for removing all keys. Be careful with this one!

## Running States Without a Master

The addition of running states without a salt-master has been added to 0.9.8. This feature allows for the unmodified salt state tree to be read locally from a minion. The result is that the UNMODIFIED state tree has just become portable, allowing minions to have a local copy of states or to manage states without a master entirely.

This is accomplished via the new file client interface in Salt that allows for the `salt://` URI to be redirected to custom interfaces. This means that there are now two interfaces for the salt file server, calling the master or looking in a local, minion defined `file_roots`.

This new feature can be used by modifying the minion config to point to a local `file_roots` and setting the `file_client` option to `local`.

## Keyword Arguments and States

State modules now accept the `**kwargs` argument. This results in all data in a sls file assigned to a state being made available to the state function.

This passes data in a transparent way back to the modules executing the logic. In particular, this allows adding arguments to the `pkg.install` module that enable more advanced and granular controls with respect to what the state is capable of.

An example of this along with the new `debconf` module for installing ldap client packages on Debian:

```
ldap-client-packages:
  pkg:
    - debconf: salt://debconf/ldap-client.ans
    - installed
    - names:
      - nslcd
      - libpam-ldapd
      - libnss-ldapd
```

## Keyword Arguments and the CLI

In the past it was required that all arguments be passed in the proper order to the `salt` and `salt-call` commands. As of 0.9.8, keyword arguments can be passed in the form of `kwarg=argument`.

```
# salt -G 'type:dev' git.clone \
  repository=https://github.com/saltstack/salt.git cwd=/tmp/salt user=jeff
```

## Matcher Refinements and Changes

A number of fixes and changes have been applied to the Matcher system. The most noteworthy is the change in the grain matcher. The grain matcher used to use a regular expression to match the passed data to a grain, but now defaults to a shell glob like the majority of match interfaces in Salt. A new option is available that still uses the old style regex matching to grain data called `grain-pcre`. To use regex matching in compound matches use the letter *P*.

For example, this would match any ArchLinux or Fedora minions:

```
# salt --grain-pcre 'os:(Arch:Fed).*' test.ping
```

And the associated compound matcher suitable for `top.sls` is *P*:

```
P@os:(Arch|Fed).*
```

**NOTE:** Changing the grains matcher from `pcre` to `glob` is backwards incompatible.

Support has been added for matching minions with Yahoo's range library. This is handled by passing range syntax with `-R` or `--range` arguments to salt.

More information at: <https://github.com/ytoolshed/range/wiki/%22yamlfile%22-module-file-spec>

## Requisite `in`

A new means to updating requisite statements has been added to make adding watchers and requires to external states easier. Before 0.9.8 the only way to extend the states that were watched by a state outside of the `sls` was to use an `extend` statement:

```
include:
  - http
extend:
  apache:
    service:
      - watch:
        - pkg: tomcat
tomcat:
  pkg:
    - installed
```

But the new `Requisite in` statement allows for easier extends for requisites:

```
include:
  - http
tomcat:
  pkg:
    - installed
    - watch_in:
      - service: apache
```

`Requisite in` is part of the `extend` system, so still remember to always include the `sls` that is being extended!

## Providers

Salt predetermines what modules should be mapped to what uses based on the properties of a system. These determinations are generally made for modules that provide things like package and service management. The apt module maps to pkg on Debian and the yum module maps to pkg on Fedora for instance.

Sometimes in states, it may be necessary for a non-default module to be used for the desired functionality. For instance, an Arch Linux system may have been set up with systemd support. Instead of using the default service module detected for Arch Linux, the systemd module can be used:

```
http:
  service:
    - running
    - enable: True
    - provider: systemd
```

Default providers can also be defined in the minion config file:

```
providers:
  service: systemd
```

When default providers are passed in the minion config, then those providers will be applied to all functionality in Salt, this means that the functions called by the minion will use these modules, as well as states.

## Requisite Glob Matching

Requisites can now be defined with glob expansion. This means that if there are many requisites, they can be defined on a single line.

To watch all files in a directory:

```
http:
  service:
    - running
    - enable: True
    - watch:
      - file: /etc/http/conf.d/*
```

This example will watch all defined files that match the glob `/etc/http/conf.d/*`

## Batch Size

The new batch size option allows commands to be executed while maintaining that only so many hosts are executing the command at one time. This option can take a percentage or a finite number:

```
salt '*' -b 10 test.ping
salt -G 'os:RedHat' --batch-size 25% apache.signal restart
```

This will only run `test.ping` on 10 of the targeted minions at a time and then restart `apache` on 25% of the minions matching `os:RedHat` at a time and work through them all until the task is complete. This makes jobs like rolling web server restarts behind a load balancer or doing maintenance on BSD firewalls using `carp` much easier with salt.

## Module Updates

This is a list of notable, but non-exhaustive updates with new and existing modules.

Windows support has seen a flurry of support this release cycle. We've gained all new `file`, `network`, and `shadow` modules. Please note that these are still a work in progress.

For our ruby users, new `rvm` and `gem` modules have been added along with the `associated states`

The `virt` module gained basic Xen support.

The `yum` module gained Scientific Linux support.

The `pkg` module on Debian, Ubuntu, and derivatives force apt to run in a non-interactive mode. This prevents issues when package installation waits for confirmation.

A `pkg` module for OpenSUSE's zypper was added.

The `service` module on Ubuntu natively supports upstart.

A new `debconf` module was contributed by our community for more advanced control over deb package deployments on Debian based distributions.

The `mysql.user` state and `mysql` module gained a `password_hash` argument.

The `cmd` module and state gained a `shell` keyword argument for specifying a shell other than `/bin/sh` on Linux / Unix systems.

New `git` and `mercurial` modules have been added for fans of distributed version control.

## In Progress Development

### Master Side State Compiling

While we feel strongly that the advantages gained with minion side state compiling are very critical, it does prevent certain features that may be desired. 0.9.8 has support for initial master side state compiling, but many more components still need to be developed, it is hoped that these can be finished for 0.9.9.

The goal is that states can be compiled on both the master and the minion allowing for compilation to be split between master and minion. Why will this be great? It will allow storing sensitive data on the master and sending it to some minions without all minions having access to it. This will be good for handling ssl certificates on front-end web servers for instance.

### Solaris Support

Salt 0.9.8 sees the introduction of basic Solaris support. The daemon runs well, but grains and more of the modules need updating and testing.

### Windows Support

Salt states on windows are now much more viable thanks to contributions from our community! States for file, service, local user, and local group management are more fully fleshed out along with network and disk modules. Windows users can also now manage registry entries using the new `reg` module.

## 20.2.120 Salt 0.9.9 Release Notes

release 2012-04-27

0.9.9 is out and comes with some serious bug fixes and even more serious features. This release is the last major feature release before 1.0.0 and could be considered the 1.0.0 release candidate.

A few updates include more advanced kwarg support, the ability for salt states to more safely configure a running salt minion, better job directory management and the new state test interface.

Many new tests have been added as well, including the new minion swarm test that allows for easier testing of Salt working with large groups of minions. This means that if you have experienced stability issues with Salt before, particularly in larger deployments, that these bugs have been tested for, found, and killed.

### Major Features

#### State Test Interface

Until 0.9.9 the only option when running states to see what was going to be changed was to print out the highstate with `state.show_highstate` and manually look it over. But now states can be run to discover what is going to be changed.

Passing the option `test=True` to many of the state functions will now cause the salt state system to only check for what is going to be changed and report on those changes.

```
salt '*' state.highstate test=True
```

Now states that would have made changes report them back in yellow.

#### State Syntax Update

A shorthand syntax has been added to sls files, and it will be the default syntax in documentation going forward. The old syntax is still fully supported and will not be deprecated, but it is recommended to move to the new syntax in the future. This change moves the state function up into the state name using a dot notation. This is in-line with how state functions are generally referred to as well:

The new way:

```
/etc/sudoers:
  file.present:
    - source: salt://sudo/sudoers
    - user: root
    - mode: 400
```

#### Use and Use\_in Requisites

Two new requisite statements are available in 0.9.9. The `use` and `use_in` requisite and `requisite-in` allow for the transparent duplication of data between states. When a state ``uses" another state it copies the other state's arguments as defaults. This was created in direct response to the new network state, and allows for many network interfaces to be configured in the same way easily. A simple example:

```
root_file:
  file.absent:
    - name: /tmp/nothing
```

```
- user: root
- mode: 644
- group: root
- use_in:
  - file: /etc/vimrc

fred_file:
  file.absent:
    - name: /tmp/nothing
    - user: fred
    - group: marketing
    - mode: 660

/files/marketing/district7.rst:
  file.present:
    - source: salt://marketing/district7.rst
    - template: jinja
    - use:
      - file: fred_file

/etc/vimrc:
  file.present:
    - source: salt://edit/vimrc
```

This makes the 2 lower state decs inherit the options from their respectively ``used" state decs.

## Network State

The new network state allows for the configuration of network devices via salt states and the ip salt module. This addition has been given to the project by Jeff Hutchins and Bret Palsson from Jive Communications.

Currently the only network configuration backend available is for Red Hat based systems, like Red Hat Enterprise, CentOS, and Fedora.

## Exponential Jobs

Originally the jobs executed were stored on the master in the format: <cachedir>/jobs/jid/{minion ids} But this format restricted the number of jobs in the cache to the number of subdirectories allowed on the filesystem. Ext3 for instance limits subdirectories to 32000. To combat this the new format for 0.9.9 is: <cachedir>/jobs/jid\_hash[:2]/jid\_hash[2:]/{minion ids} So that now the number of maximum jobs that can be run before the cleanup cycle hits the job directory is substantially higher.

## ssh\_auth Additions

The original ssh\_auth state was limited to accepting only arguments to apply to a public key, and the key itself. This was restrictive due to the way the we learned that many people were using the state, so the key section has been expanded to accept options and arguments to the key that over ride arguments passed in the state. This gives substantial power to using ssh\_auth with names:

```
sshkeys:
  ssh_auth:
    - present
    - user: backup
```

```

- enc: ssh-dss
- options:
  - option1="value1"
  - option2="value2 flag2"
- comment: backup
- names:

```

## LocalClient Additions

To follow up the recent additions in 0.9.8 of additional kwargs support, 0.9.9 also adds the capability to send kwargs into commands via a dict. This addition to the LocalClient api can be used like so:

```

import salt.client

client = salt.client.LocalClient('/etc/salt/master')
ret = client.cmd('*', 'cmd.run', ['ls -l'], kwarg={'cwd': '/etc'})

```

This update has been added to all cmd methods in the LocalClient class.

## Better Self Salting

One problem faced with running Salt states, is that it has been difficult to manage the Salt minion via states, this is due to the fact that if the minion is called to restart while a state run is happening then the state run would be killed. 0.9.9 slightly changes the process scope of the state runs, so now when salt is executing states it can safely restart the salt-minion daemon.

In addition to daemonizing the state run, the apt module also daemonizes. This update makes it possible to cleanly update the salt-minion package on Debian/Ubuntu systems without leaving apt in an inconsistent state or killing

the active minion process mid-execution.

### Wildcards for SLS Modules

Now, when including sls modules in include statements or in the top file, shell globs can be used. This can greatly simplify listing matched sls modules in the top file and include statements:

```
base:
  '*':
    - files*
    - core*
```

```
include:
  - users.dev.*
  - apache.ser*
```

### External Pillar

Since the pillar data is just, data, it does not need to come expressly from the pillar interface. The external pillar system allows for hooks to be added making it possible to extract pillar data from any arbitrary external interface. The external pillar interface is configured via the `ext_pillar` option. Currently interfaces exist to gather external pillar data via hiera or via a shell command that sends yaml data to the terminal:

```
ext_pillar:
  - cmd_yaml: cat /etc/salt/ext.yaml
  - hiera: /etc/hiera.yaml
```

The initial external pillar interfaces and extra interfaces can be added to the file `salt/pillar.py`, it is planned to add more external pillar interfaces. If the need arises a new module loader interface will be created in the future to manage external pillar interfaces.

### Single State Executions

The new `state.single` function allows for single states to be cleanly executed. This is a great tool for setting up a small group of states on a system or for testing out the behavior of single states:

```
salt '*' state.single user.present name=wade uid=2000
```

The test interface functions here as well, so changes can also be tested against as:

```
salt '*' state.single user.present name=wade uid=2000 test=True
```

### New Tests

A few exciting new test interfaces have been added, the minion swarm allows not only testing of larger loads, but also allows users to see how Salt behaves with large groups of minions without having to create a large deployment.

## Minion Swarm

The minion swarm test system allows for large groups of minions to be tested against easily without requiring large numbers of servers or virtual machines. The minion swarm creates as many minions as a system can handle and roots them in the /tmp directory and connects them to a master.

The benefit here is that we were able to replicate issues that happen only when there are large numbers of minions. A number of elusive bugs which were causing stability issues in masters and minions have since been hunted down. Bugs that used to take careful watch by users over several days can now be reliably replicated in minutes, and fixed in minutes.

Using the swarm is easy, make sure a master is up for the swarm to connect to, and then use the minionswarm.py script in the tests directory to spin up as many minions as you want. Remember, this is a fork bomb, don't spin up more than your hardware can handle!

```
python minionswarm.py -m 20 --master salt-master
```

## Shell Tests

The new Shell testing system allows us to test the behavior of commands executed from a high level. This allows for the high level testing of salt runners and commands like salt-key.

## Client Tests

Tests have been added to test the aspects of the client APIs and ensure that the client calls work, and that they manage passed data, in a desirable way.

## Venafi Tools for Salt

---

### 21.1 Introduction

Before using these modules you need to register an account with Venafi, and configure it in your master configuration file.

First, you need to add a placeholder to the master file. This is because the module will not load unless it finds an `api_key` setting, valid or not. Open up `/etc/salt/master` and add:

```
venafi:  
  api_key: None
```

Then register your email address with Venafi using the following command:

```
salt-run venafi.register <youremail@yourdomain.com>
```

This command will not return an `api_key` to you; that will be send to you via email from Venafi. Once you have received that key, open up your master file and set the `api_key` to it:

```
venafi:  
  api_key: abcdef01-2345-6789-abcd-ef0123456789
```

To enable the ability for creating keys and certificates it is necessary to enable the external pillars. Open the `/etc/salt/master` file and add:

```
ext_pillar:  
  - venafi: True
```

To modify the URL being used for the Venafi Certificate issuance modify the file in `/etc/salt/master` and add the `base_url` information following under the `venafi` tag:

```
venafi:  
  base_url: http://newurl.venafi.com
```

### 21.2 Example Usage

Generate a CSR and submit it to Venafi for issuance, using the `'Internet'` zone: `salt-run venafi.request minion.example.com minion.example.com zone=Internet`

Retrieve a certificate for a previously submitted request with request ID aaa-bbb-ccc-dddd: salt-run venafi.pickup aaa-bbb-ccc-dddd

## 21.3 Runner Functions

### 21.3.1 gen\_key

Generate and return a `private_key`. If a `dns_name` is passed in, the `private_key` will be cached under that name.

The key will be generated based on the policy values that were configured by the Venafi administrator. A default Certificate Use Policy is associated with a zone; the key type and key length parameters associated with this value will be used.

```
salt-run venafi.gen_key minion.example.com minion.example.com zone=Internet \  
password=SecretSauce
```

**param str minion\_id** Required. The name of the minion which hosts the domain name in question.

**param str dns\_name** Required. The FQDN of the domain that will be hosted on the minion.

**param str zone** Required. Default value is ``default``. The zone on Venafi that the domain belongs to.

**param str password** Optional. If specified, the password to use to access the generated key.

### 21.3.2 gen\_csr

Generate a csr using the host's `private_key`. Analogous to:

```
salt-run venafi.gen_csr minion.example.com minion.example.com country=US \  
state=California loc=Sacramento org=CompanyName org_unit=DevOps \  
zone=Internet password=SecretSauce
```

**param str minion\_id** Required.

**param str dns\_name** Required.

**param str zone** Optional. Default value is ``default``. The zone on Venafi that the domain belongs to.

**param str country=None** Optional. The two-letter ISO abbreviation for your country.

**param str state=None** Optional. The state/county/region where your organisation is legally located. Must not be abbreviated.

**param str loc=None** Optional. The city where your organisation is legally located.

**param str org=None** Optional. The exact legal name of your organisation. Do not abbreviate your organisation name.

**param str org\_unit=None** Optional. Section of the organisation, can be left empty if this does not apply to your case.

**param str password=None** Optional. Password for the CSR.

### 21.3.3 request

Request a new certificate. Analogous to:

```
salt-run venafi.request minion.example.com minion.example.com country=US \
state=California loc=Sacramento org=CompanyName org_unit=DevOps \
zone=Internet password=SecretSauce
```

**param str minion\_id** Required.

**param str dns\_name** Required.

**param str zone** Required. Default value is ``default``. The zone on Venafi that the certificate request will be submitted to.

**param str country=None** Optional. The two-letter ISO abbreviation for your country.

**param str state=None** Optional. The state/county/region where your organisation is legally located. Must not be abbreviated.

**param str loc=None** Optional. The city where your organisation is legally located.

**param str org=None** Optional. The exact legal name of your organisation. Do not abbreviate your organisation name.

**param str org\_unit=None** Optional. Section of the organisation, can be left empty if this does not apply to your case.

**param str password=None** Optional. Password for the CSR.

**param str company\_id=None** Optional, but may be configured in master file instead.

### 21.3.4 register

Register a new user account

```
salt-run venafi.register username@example.com
```

**param str email** Required. The email address to use for the new Venafi account.

### 21.3.5 show\_company

Show company information, especially the company id

```
salt-run venafi.show_company example.com
```

**param str domain** Required. The domain name to look up information for.

### 21.3.6 show\_csrs

Show certificate requests for the configured API key.

```
salt-run venafi.show_csrs
```

### 21.3.7 show\_zones

Show zones for the specified company id.

```
salt-run venafi.show_zones
```

**param str company\_id** Optional. The company id to show the zones for.

### 21.3.8 pickup, show\_cert

Show certificate requests for the specified certificate id. Analogous to the VCert pickup command.

```
salt-run venafi.pickup 4295ebc0-14bf-11e7-b965-1df050017ec1
```

**param str id\_** Required. The id of the certificate to look up.

### 21.3.9 show\_rsa

Show a private RSA key.

```
salt-run venafi.show_rsa minion.example.com minion.example.com
```

**param str minion\_id** The name of the minion to display the key for.

**param str dns\_name** The domain name to display the key for.

### 21.3.10 list\_domain\_cache

List domains that have been cached on this master.

```
salt-run venafi.list_domain_cache
```

### 21.3.11 del\_cached\_domain

Delete a domain from this master's cache.

```
salt-run venafi.delete_domain_cache example.com
```

**param str domains** A domain name, or a comma-separated list of domain names, to delete from this master's cache.
